CASE Review Letter

LOIS SMITH
3176 CHARLOTTE HWY
YORK SC 29745

Re: Smith's Grocery, SC Hwy 49, York, SC
UST Permit #09322
Release reported June 30, 1993
Corrective Action Status Report received April 23, 2007
York County

Dear Ms. Smith:

The Underground Storage Tank (UST) Program has reviewed the report submitted by SEI Environmental, Inc. SEI Environmental received Corrective Action Plan approval in September 2001. The Corrective Action Solicitation Response estimated a cleanup time frame of 30 months. The corrective action has been ongoing for 60 months and the documented CoC concentration reduction to date is at 29.23%. The UST Program is extremely concerned about the lack of progress at the site. The next corrective action monitoring report is due on or before **July 30, 2007**.

Please remember that SEI is responsible for maintaining the granulated activated carbon units. For any well that has detection in post-GAC samples, the GAC filter should be changed immediately and such work documented in the submitted reports. SEI should establish a GAC filter change schedule such that the breakthrough is minimized. Documentation of all GAC filter changes should be documented in future CASE Reports.

On all correspondence regarding this site, please reference the UST Permit Number. Please feel free to contact me, at (803) 896-6397 or thomadl@dhec.sc.gov, if you have questions or need additional information.

Sincerely,

Debra L. Thoma

Re: Smith's Grocery, SC Hwy 49, York, SC
UST Permit #09322
Release reported June 30, 1993
Corrective Action Status Report received April 23, 2007
York County

Dear Mr. Hemphill

The Underground Storage Tank (UST) Program of the South Carolina Department of Health and Environmental Control has reviewed the referenced report submitted by SEI Environmental, Inc. SEI is currently conducting corrective action activities in response to groundwater contamination at the former Smith's Grocery. The next quarterly sampling will be conducted in approximately three months.

If you would like additional information regarding this corrective action or if you would like to review the monitoring report, please contact me by phone at (803) 896-6397, by fax at (803) 896-6245, or by e-mail at thomadl@dhec.sc.gov.

Sincerely,

Debra L Thoma

LIMITATIONS

This investigation is intended to be a non-biased assessment of on-site environmental conditions proximate to the location of the former UST system. Subsurface investigative methodologies are in accordance with all applicable state and federal regulatory requirements. The information presented in this report is based upon site-specific observations, generally accepted geological practices, and analytical results for environmental samples collected at the time of the field investigation. All data is believed to represent subsurface conditions at the facility, however, data may not be completely representative of all subsurface conditions.

This report has been prepared under the guidance of a Licensed Geologist registered in South Carolina to meet the requirements of the South Carolina Department of Health and Environmental Control. The information and conclusions expressed in this report are based upon normal standards of the profession and limited to information available at this time. Chemical analyses of the samples associated with this report were performed by a subcontracted, independent, and certified laboratory. All data have been reviewed for accuracy and, excepting obvious errors, have been accepted as correct. SEI Environmental, Inc. reserves the right to revise estimates of performances as required by changes in the data supplied by AccuTest Laboratories.

1.0 INTRODUCTION

Smith's Grocery is a convenience and retail fuel store located at 3176 Charlotte Highway (SC Highway 49) in York, York County, South Carolina. Figure 1 in Appendix A is a portion of the United States Geological Survey (USGS) 7.5-minute topographical quadrangle map identifying the location of the site.

The following is a brief summary of recent events occurring at the site:

- May 10, 2004 – Groundwater Sampling Event
- August 17, 2004 – Groundwater Sampling Event
- January 14, 2005 – Groundwater Sampling Event
- June 29, 2005 – Groundwater Sampling Event
- September 16, 2005 – Groundwater Sampling Event
- February 28, 2006 – Groundwater Sampling Event
- June 21, 2006 – Groundwater Sampling Event
- October 4, 2006 – Groundwater Sampling Event
- December 4, 2006 – Groundwater Sampling Event
- March 28, 2007 – Groundwater Sampling Event
- June 20, 2007- PTS injection
- June 28, 2007- Groundwater Sampling Event

On June 28, 2007 seventeen groundwater monitoring wells and four water supply wells were sampled in accordance with the requirements of the PFP contract. This report provides details of the groundwater sampling event.

2.0 FIELD MEASUREMENTS AND SAMPLING

2.1 Groundwater Sampling

On June 28, 2007, groundwater samples were collected from fifteen (MW-1, MW-2, MW-6 through MW-8, MW-10 through MW-15, MW-17 through 19, and TW-1 through TW-3) of twenty-three existing groundwater monitoring wells. Six (MW-3 through MW-5, MW-9, MW-16, and MW-20) have been removed from the sampling schedule.

Prior to sampling, groundwater monitoring wells were gauged utilizing an oil-water interface probe to measure depth to groundwater, and to detect any free product present. The depth to groundwater measurement is used to calculate the groundwater elevation used in determining the current groundwater potentiometric surface, along with hydraulic gradient, and groundwater flow direction. Figure 2 in Appendix A is a site map depicting monitoring well locations.

Free product was not currently and has not historically been detected in any of the monitoring wells. Figure 3 in Appendix A presents a groundwater potentiometric map for the current sampling event. Table 1 in Appendix B summarizes groundwater measurement data.

Representative groundwater samples were collected utilizing new, disposable bailers. Samples were placed in laboratory supplied containers, maintained at 4° Celsius, and shipped via FedEx under chain-of-custody to AccuTest, Inc. Laboratories in Orlando, Florida. The groundwater samples were analyzed by EPA Methods 8260B (for benzene, toluene, ethylbenzene, xylenes (BTEX), methyl-tert-butyl-ether (MTBE), and naphthalene), 8011 (for ethylene dibromide (EDB)), and 3030C for lead. Appendix C contains Field Data Information Sheets for Groundwater Sampling.

2.2 Water Supply Well Sampling

On June 28, 2007, groundwater samples were collected from four (Crook, Smith, Swift and Hill) water supply wells. Three water supply wells (Crook, Hill, and Swift) are fitted with granular activated carbon (GAC) filters. As such, samples were collected from the Swift and Hill wells before (pre) and after (post) the GAC filters. The Crook well was not sampled in this manner during the current sampling event. Prior to sampling, the water was allowed to run for at least ten minutes. The samples were placed into laboratory supplied containers, maintained at 4° Celsius, and shipped via FedEx under chain-of-custody to AccuTest, Inc. Laboratories in Orlando, Florida. The groundwater samples were analyzed by EPA Methods

8260B (for benzene, toluene, ethylbenzene, xylenes (BTEX), methyl-tert-butyl-ether (MTBE), and naphthalene), 8011 (for ethylene dibromide (EDB)), and 3030C for lead.

3.0 LABORATORY ANALYTICAL RESULTS

3.1 Groundwater Analytical Results

Chemicals of Concern (CoC) were detected in ten (MW-1, MW-2, MW-6, MW-7, MW-8, MW-10, MW-11, MW-12, MW-17 and TW-2) of the seventeen monitoring wells sampled at concentrations exceeding their respective SSTL. Figure 4 in Appendix A is a site map presenting monitoring well location and their CoC concentrations. Table 2 in Appendix B summarizes historical groundwater analytical results. A copy of the laboratory report and completed chain-of-custody form is included in Appendix C.

3.2 Water Supply Well Analytical Results

CoC were detected in two (Swift and Hill) of the pre-GAC filter samples collected at concentrations exceeding their respective SSTLs. Figure 4 in Appendix A is a site map presenting water supply well locations and their CoC concentrations. Table 2 in Appendix B summarizes historical water supply well analytical results. A copy of the laboratory report and completed chain-of-custody form is included in Appendix C.

3.3 Site Specific Target Levels

Site Specific Target Levels (SSTLs) have been designated for sixteen (MW-1, MW-2, MW-6 through MW-8, MW-10 through MW-15, MW-17 through MW-19, TW-2, and TW-3) monitoring wells and all four (Crook, Swift, Hill, and Smith) water supply wells. For three (Crook, Swift, and Hill) water supply wells with GAC filters, the SSTLs apply to the pre-GAC filter samples. Table 4 in Appendix B summarizes SSTL information.

4.0 REMEDIATION SYSTEM EFFECTIVENESS

In awarding the Pay-For-Performance (PFP) site remediation contract, the South Carolina Department of Health and Environmental Control (SCDHEC) set remediation goals for this site via site specific target levels (SSTLs). The monitoring wells have individual target

concentrations for seven (benzene, toluene, ethylbenzene, xylenes, MTBE, naphthalene, lead, and EDB) identified chemicals of concern (CoC).

Remediation system effectiveness can be calculated comparing the initial January 6, 2003, CoC concentrations that exceeded the SSTLs with the current CoC concentrations that exceeded the SSTLs. Monitoring well MW-1 was not located during the current sampling event. Consequently, SSTL data for monitoring well MW-1 from the September 16, 2005, groundwater sampling event was utilized for the concentration reduction calculation. The formula is a follows:

$$\left[\frac{\text{[01/06/03 Sample Concentration Above SSTL]} - \text{[Current Sample Concentration Above SSTL]}}{\text{[01/06/03 Sample Concentration Above SSTL]}}\right] * 100 = \% \text{ Reduction}$$

Using the current analytical results, the concentration reduction is -3.707 %.

5.0 CONCLUSIONS

Free product was not detected. CoC were detected in eight monitoring wells and two water supply wells above their respective SSTLs. The percent concentration reduction has been calculated at -3.707%.

SEI Environmental, Inc recommends continuing the quarterly monitoring to evaluate the continued reduction of chemicals of concern in the monitoring wells on site. The next sampling event will occur in June 2007. SEI initiated remediation using PTS injected in existing injection wells on June 20, 2007.

Re: **CASE Report Review**
Smith's Grocery, SC Hwy 49, York, SC
UST Permit #09322
Release reported June 30, 1993
Corrective Action Status Report received August 6, 2007
York County

Dear Mr. & Mrs. Hill:

The Underground Storage Tank (UST) Program of the South Carolina Department of Health and Environmental Control has reviewed the referenced report submitted by SEI Environmental, Inc. SEI is currently conducting corrective action activities in response to groundwater contamination at the former Smith's Grocery. The next quarterly sampling will be conducted in approximately three months.

If you would like additional information regarding this corrective action or if you would like to review the monitoring report, please contact me by phone at (803) 896-6397, by fax at (803) 896-6245, or by e-mail at thomadl@dhec.sc.gov.

Sincerely,

Debra L. Thoma

Re: **CASE Report Review**
Smith's Grocery, SC Hwy 49, York, SC
UST Permit #09322
Release reported June 30, 1993
Corrective Action Status Report received August 6, 2007
York County

Dear Ms. Smith:

The Underground Storage Tank (UST) Program has reviewed the report submitted by SEI Environmental, Inc. SEI Environmental received Corrective Action Plan approval in September 2001. The UST Program is extremely concerned about the lack of progress at the site, but is encouraged by the initiation of PTS injections at the site. The next corrective action monitoring report is due on or before October 30, 2007.

Please remember that SEI is responsible for maintaining the granulated activated carbon units. For any well that has detection in post-GAC samples, the GAC filter should be changed immediately and such work documented in the submitted reports. SEI should establish a GAC filter change schedule such that the breakthrough is minimized. Documentation of all GAC filter changes should be included in future CASE Reports.

On all correspondence regarding this site, please reference the UST Permit Number. Please feel free to contact me, at (803) 896-6397 or thomadl@dhec.sc.gov, if you have questions or need additional information.

Sincerely,

Debra L. Thoma

LIMITATIONS

This investigation is intended to be a non-biased assessment of on-site environmental conditions proximate to the location of the former UST system. Subsurface investigative methodologies are in accordance with all applicable state and federal regulatory requirements. The information presented in this report is based upon site-specific observations, generally accepted geological practices, and analytical results for environmental samples collected at the time of the field investigation. All data is believed to represent subsurface conditions at the facility, however, data may not be completely representative of all subsurface conditions.

This report has been prepared under the guidance of a Licensed Geologist registered in South Carolina to meet the requirements of the South Carolina Department of Health and Environmental Control. The information and conclusions expressed in this report are based upon normal standards of the profession and limited to information available at this time. Chemical analyses of the samples associated with this report were performed by a subcontracted, independent, and certified laboratory. All data have been reviewed for accuracy and, excepting obvious errors, have been accepted as correct. SEI Environmental, Inc. reserves the right to revise estimates of performances as required by changes in the data supplied by AccuTest Laboratories.

1.0 INTRODUCTION

Smith's Grocery is a convenience and retail fuel store located at 3176 Charlotte Highway (SC Highway 49) in York, York County, South Carolina. Figure 1 in Appendix A is a portion of the United States Geological Survey (USGS) 7.5-minute topographical quadrangle map identifying the location of the site.

The following is a brief summary of recent events occurring at the site:

- May 10, 2004 – Groundwater Sampling Event
- August 17, 2004 – Groundwater Sampling Event
- January 14, 2005 – Groundwater Sampling Event
- June 29, 2005 – Groundwater Sampling Event
- September 16, 2005 – Groundwater Sampling Event
- February 28, 2006 – Groundwater Sampling Event
- June 21, 2006 – Groundwater Sampling Event
- October 4, 2006 – Groundwater Sampling Event
- December 4, 2006 – Groundwater Sampling Event
- March 28, 2007 – Groundwater Sampling Event
- June 20, 2007- PTS injection
- June 28, 2007- Groundwater Sampling Event
- September 12, 2007 – Groundwater Sampling Event

On September 12, 2007 nineteen groundwater monitoring wells and four water supply wells were sampled in accordance with the requirements of the PFP contract. This report provides details of the groundwater sampling event.

2.0 FIELD MEASUREMENTS AND SAMPLING

2.1 Groundwater Sampling

On September 12, 2007, groundwater samples were collected from nineteen (MW-1 through 3, MW-5 through MW-8, MW-10 through MW-12, MW-14 through 19, and TW-1 through TW-3) of twenty-three existing groundwater monitoring wells.

Prior to sampling, groundwater monitoring wells were gauged utilizing an oil-water interface probe to measure depth to groundwater, and to detect any free product present. The depth to groundwater measurement is used to calculate the groundwater elevation used in determining the current groundwater potentiometric surface, along with hydraulic gradient, and groundwater flow direction. Figure 2 in Appendix A is a site map depicting monitoring well locations.

Free product was not currently and has not historically been detected in any of the monitoring wells. Figure 3 in Appendix A presents a groundwater potentiometric map for the current sampling event. Table 1 in Appendix B summarizes groundwater measurement data.

Representative groundwater samples were collected utilizing new, disposable bailers. Samples were placed in laboratory supplied containers, maintained at 4° Celsius, and shipped via FedEx under chain-of-custody to AccuTest, Inc. Laboratories in Orlando, Florida. The groundwater samples were analyzed by EPA Methods 8260B (for benzene, toluene, ethylbenzene, xylenes (BTEX), methyl-tert-butyl-ether (MTBE), and naphthalene), 8011 (for ethylene dibromide (EDB)), and 3030C for lead. Appendix C contains Field Data Information Sheets for Groundwater Sampling.

2.2 Water Supply Well Sampling

On September 12, 2007, groundwater samples were collected from four (Crook, Smith, Swift and Hill) water supply wells. Three water supply wells (Crook, Hill, and Swift) are fitted with granular activated carbon (GAC) filters. As such, samples were collected from the Swift and Hill wells before (pre) and after (post) the GAC filters. The Crook well was not sampled in this manner during the current sampling event. Prior to sampling, the water was allowed to run for at least ten minutes. The samples were placed into laboratory supplied containers, maintained at 4° Celsius, and shipped via FedEx under chain-of-custody to AccuTest, Inc. Laboratories in Orlando, Florida. The groundwater samples were analyzed by EPA Methods 8260B (for benzene, toluene, ethylbenzene, xylenes (BTEX),

methyl-tert-butyl-ether (MTBE), and naphthalene), 8011 (for ethylene dibromide (EDB)), and 3030C for lead.

3.0 LABORATORY ANALYTICAL RESULTS

3.1 Groundwater Analytical Results

Chemicals of Concern (CoC) were detected in ten (MW-1, MW-2, MW-6, MW-7, MW-8, MW-10, MW-14, MW-15, MW-17 and TW-2) of the nineteen monitoring wells sampled at concentrations exceeding their respective SSTL. Figure 4 in Appendix A is a site map presenting monitoring well location and their CoC concentrations. Table 2 in Appendix B summarizes historical groundwater analytical results. A copy of the laboratory report and completed chain-of-custody form is included in Appendix C.

3.2 Water Supply Well Analytical Results

CoC were detected in one (Hill) of the pre-GAC filter samples collected at concentrations exceeding their respective SSTLs. CoC were detected in the Swift post-GAC filter samples collected at concentrations exceeding their respective SSTLs in the lab results. However it is believed that the sample containers were reversed (pre for post); the corrected results are reflected in the Table 2. Figure 4 in Appendix A is a site map presenting water supply well locations and their CoC concentrations. Table 2 in Appendix B summarizes historical water supply well analytical results. A copy of the laboratory report and completed chain-of-custody form is included in Appendix C.

3.3 Site Specific Target Levels

Site Specific Target Levels (SSTLs) have been designated for sixteen (MW-1, MW-2, MW-6 through MW-8, MW-10 through MW-15, MW-17 through MW-19, TW-2, and TW-3) monitoring wells and all four (Crook, Swift, Hill, and Smith) water supply wells. For three (Crook, Swift, and Hill) water supply wells with GAC filters, the SSTLs apply to the pre-GAC filter samples. Table 4 in Appendix B summarizes SSTL information.

4.0 REMEDIATION SYSTEM EFFECTIVENESS

In awarding the Pay-For-Performance (PFP) site remediation contract, the South Carolina Department of Health and Environmental Control (SCDHEC) set remediation goals for this site via site specific target levels (SSTLs). The monitoring wells have individual target concentrations for seven (benzene, toluene, ethylbenzene, xylenes, MTBE, naphthalene, lead, and EDB) identified chemicals of concern (CoC).

Remediation system effectiveness can be calculated comparing the initial January 6, 2003, CoC concentrations that exceeded the SSTLs with the current CoC concentrations that exceeded the SSTLs. Monitoring well MW-1 was not located during the current sampling event. Consequently, SSTL data for monitoring well MW-1 from the September 16, 2005, groundwater sampling event was utilized for the concentration reduction calculation. The formula is a follows:

$$\left[\frac{\text{[01/06/03 Sample Concentration Above SSTL]} - \text{[Current Sample Concentration Above SSTL]}}{\text{[01/06/03 Sample Concentration Above SSTL]}}\right] * 100 = \% \text{ Reduction}$$

Using the current analytical results, the concentration reduction is 5.186 %.

5.0 CONCLUSIONS

Free product was not detected. CoC were detected in ten monitoring wells and two water supply wells above their respective SSTLs. The percent concentration reduction has been calculated at -5.186 %.

SEI Environmental, Inc recommends continuing the quarterly monitoring to evaluate the continued reduction of chemicals of concern in the monitoring wells on site. The next sampling event will occur in December 2007.

Historical Groundwater Analytical Results
Smith Grocery
176 Charlotte Highway (SC Highway 49)
York, York County, South Carolina
UST Permit Number: 09322
SEI Project Number: 300401

Well	Date	Benzene	Toluene	Ethyl-benzene	Xylenes	MTBE	Naph-thalene	Lead	EDB	Current Mass

Bold denotes concentrations over their respective SSTL or RBSL

* = 09/16/05 Sampling Event SSTL Data Utilized For Reduction Calculation

- Concentration Reduction Calculation is as follows:

$$\frac{\text{[Initial Sample Concentration Above SSTL] - [Subsequent Sample Concentration Above SSTL]}}{\text{[Initial Sample Concentration Above SSTL]}} \times 100 = \%\ \text{Reduction}$$

APPENDIX C
Field Data Sheets

SEI Environmental

SC Monitoring Well Gauging Data Sheet

Site Name: Smith Grocery WO# 300401

Date 9.12.07

Well ID	Total Depth (feet)	Well Dia. (in.)	Depth to Product (feet)	Product Thickness (feet)	Depth to Water (feet)	Notes
MW-1	35.00				29.89

Re: **CASE Report Review**
Smith's Grocery, SC Hwy 49, York, SC
UST Permit #09322
Release reported June 30, 1993
Corrective Action Status Report received November 26, 2007
York County

Dear Mr. Boggs:

The Underground Storage Tank (UST) Program of the South Carolina Department of Health and Environmental Control has reviewed the referenced document. The UST Program remains concerned about the high concentrations of petroleum chemicals present in MW-2, MW-8, TW-1, and TW-2. The recommendation by SEI to continue quarterly monitoring to evaluate the reduction of chemicals of concern in the monitoring wells is unacceptable to the UST Program as there has been no reduction in these wells. The UST Program requests that a more aggressive approach to the remediation be proposed and implemented or the UST Program may consider declaring SEI Environmental in default for non-performance. The next CASE report **(3 copies)** must be submitted by February 25, 2008.

Please remember that SEI is responsible for maintaining the granulated activated carbon units. For any well that has detection in post-GAC samples, the GAC filter should be changed immediately and such work documented in the submitted reports. SEI should establish a GAC filter change schedule such that the breakthrough is minimized. Documentation of all GAC filter changes should be included in future CASE Reports.

On all correspondence regarding this site, please reference the UST Permit Number. Please feel free to contact me, at (803) 896-6397 or thomadl@dhec.sc.gov, if you have questions or need additional information.

Sincerely,

Debra L Thoma

Smith's Grocery, SC Hwy 49, York, SC
UST Permit #09322
Release reported June 30, 1993
Corrective Action Status Report received November 26, 2007
York County

Dear Mr. Hemphill

The Underground Storage Tank (UST) Program of the South Carolina Department of Health and Environmental Control has reviewed the referenced report submitted by SEI Environmental, Inc. SEI is currently conducting corrective action activities in response to groundwater contamination at the former Smith's Grocery. The next quarterly sampling will be conducted in approximately three months.

If you would like additional information regarding this corrective action or if you would like to review the monitoring report, please contact me by phone at (803) 896-6397, by fax at (803) 896-6245, or by e-mail at thomadl@dhec.sc.gov.

Sincerely,

Debra L. Thoma

IT'S ALL IN THE CHEMISTRY

05/01/08

Technical Report for

SEI-Columbia, SC

Smith's Grocery; York, SC

300401

Accutest Job Number: F56791

Sampling Date: 04/09/08

Report to:

SEI-Daytona Beach, FL

dbrewster@sei-environmental.com

ATTN: David Brewster

Total number of pages in report: 70

ACCREDITED IN ACCORDANCE WITH nelac

Test results contained within this data package meet the requirements of the National Environmental Laboratory Accreditation Conference and/or state specific certification programs as applicable.

Harry Behzadi, Ph.D.
Laboratory Director

ACCUTEST LABORATORIES 50 YEARS 1956-2006

Client Service contact: Heather Wandrey 407-425-6700

Certifications: FL (DOH E83510), NC (573), NJ (FL002), MA (FL946), IA (366), LA (03051), KS (E-10327), SC, AK

This report shall not be reproduced, except in its entirety, without the written approval of Accutest Laboratories.

Test results relate only to samples analyzed.

RE: Corrective Action System Evaluation Report
Smith Grocery
176 Charlotte Highway (SC Highway 49)
York, York County, South Carolina
UST Permit Number: 09322
SEI Project Number: 300401

Dear Ms. Smith:

Enclosed is the quarterly Corrective Action System Evaluation (C.A.S.E.) Report for the April 9, 2008, sampling event at the above referenced site. A copy of this report has been sent to the Underground Storage Tank Program, Assessment & Corrective Action Division, of the South Carolina Department of Health and Environmental Control (DHEC) to satisfy their reporting requirements.

SEI Environmental, Inc. appreciates the opportunity to be of service to you. If you have any questions or comments, please do not hesitate to contact me at (919) 832-2535.

Sincerely,
SEI Environmental, Inc.

LIMITATIONS

This investigation is intended to be a non-biased assessment of on-site environmental conditions proximate to the location of the former UST system. Subsurface investigative methodologies are in accordance with all applicable state and federal regulatory requirements. The information presented in this report is based upon site-specific observations, generally accepted geological practices, and analytical results for environmental samples collected at the time of the field investigation. All data is believed to represent subsurface conditions at the facility, however, data may not be completely representative of all subsurface conditions.

This report has been prepared under the guidance of a Licensed Engineer registered in South Carolina to meet the requirements of the South Carolina Department of Health and Environmental Control. The information and conclusions expressed in this report are based upon normal standards of the profession and limited to information available at this time. Chemical analyses of the samples associated with this report were performed by a subcontracted, independent, and certified laboratory. All data have been reviewed for accuracy and, excepting obvious errors, have been accepted as correct. SEI Environmental, Inc. reserves the right to revise estimates of performances as required by changes in the data supplied by AccuTest Laboratories.

1.0 INTRODUCTION

Smith's Grocery is a convenience and retail fuel store located at 3176 Charlotte Highway (SC Highway 49) in York, York County, South Carolina. Figure 1 in Appendix A is a portion of the United States Geological Survey (USGS) 7.5-minute topographical quadrangle map identifying the location of the site.

The following is a brief summary of recent events occurring at the site:

- May 10, 2004 – Groundwater Sampling Event
- August 17, 2004 – Groundwater Sampling Event
- January 14, 2005 – Groundwater Sampling Event
- June 29, 2005 – Groundwater Sampling Event
- September 16, 2005 – Groundwater Sampling Event
- February 28, 2006 – Groundwater Sampling Event
- June 21, 2006 – Groundwater Sampling Event
- October 4, 2006 – Groundwater Sampling Event
- December 4, 2006 – Groundwater Sampling Event
- March 28, 2007 – Groundwater Sampling Event
- June 20, 2007- PTS injection
- June 28, 2007- Groundwater Sampling Event
- September 12, 2007 – Groundwater Sampling Event
- April 9, 2008 – Groundwater Sampling Event

On April 9, 2008, thirteen of the twenty-three groundwater monitoring wells and four water supply wells were sampled in accordance with the requirements of the PFP contract. This report provides details of the groundwater sampling event.

2.0 FIELD MEASUREMENTS AND SAMPLING

2.1 Groundwater Sampling

On April 9, 2008, groundwater samples were collected from thirteen (MW-1, MW-2, MW-6, MW-7, MW-8, MW-11, MW-12, MW-14, MW-17, MW-19, TW-1, TW-2, and TW-3) of twenty-three existing groundwater monitoring wells. Three (MW-10, MW-13, and MW-15)

of the twenty-three monitoring wells were either found to be dry or contained insufficient water for sampling. One (MW-18) of the twenty-three monitoring wells could not be located. Six (MW-3, MW-4, MW-5, MW-9, MW-16, and MW-20) of the twenty-three monitoring wells were removed from the sampling schedule.

Prior to sampling, groundwater monitoring wells were gauged utilizing an oil-water interface probe to measure depth to groundwater, and to detect any free product present. The depth to groundwater measurement is used to calculate the groundwater elevation used in determining the current groundwater potentiometric surface, along with hydraulic gradient, and groundwater flow direction. Figure 2 in Appendix A is a site map depicting monitoring well locations.

Free product was not currently and has not historically been detected in any of the monitoring wells. Figure 3 in Appendix A presents a groundwater potentiometric map for the current sampling event. Table 1 in Appendix B summarizes groundwater measurement data.

Representative groundwater samples were collected utilizing new, disposable bailers. Samples were placed in laboratory supplied containers, maintained at 4° Celsius, and shipped via FedEx under chain-of-custody to AccuTest, Inc. Laboratories in Orlando, Florida. The groundwater samples were analyzed by EPA Methods 8260B (for benzene, toluene, ethylbenzene, xylenes (BTEX), methyl-tert-butyl-ether (MTBE), and naphthalene), 8011 (for ethylene dibromide (EDB)), and 3030C for lead. Appendix C contains the Field Data Information Sheet for Groundwater Sampling.

2.2 Water Supply Well Sampling

On April 9, 2008, groundwater samples were collected from four (Crook, Smith, Swift and Hill) water supply wells. Two (Swift and Hill) of the four water supply wells (Crook are fitted with granular activated carbon (GAC) filters. As such, samples were collected from the Swift and Hill wells before (pre) and after (post) the GAC filters. The Crook GAC filter was removed at the property owner's request.

Prior to sampling, the water was allowed to run for at least ten minutes. The samples were placed into laboratory supplied containers, maintained at 4° Celsius, and shipped via FedEx under chain-of-custody to AccuTest, Inc. Laboratories in Orlando, Florida. The groundwater samples were analyzed by EPA Methods 8260B (for benzene, toluene, ethylbenzene, xylenes (BTEX), methyl-tert-butyl-ether (MTBE), and naphthalene), 8011 (for ethylene dibromide (EDB)), and 3030C for lead.

3.0 LABORATORY ANALYTICAL RESULTS

3.1 Groundwater Analytical Results

Chemicals of Concern (CoC) were detected in seven (MW-1, MW-2, MW-6, MW-7, MW-8, MW-17 and TW-2) of the thirteen monitoring wells sampled at concentrations exceeding their respective SSTL. Figure 4 in Appendix A is a site map presenting monitoring well location and their CoC concentrations. Table 2 in Appendix B summarizes historical groundwater analytical results. A copy of the laboratory report and completed chain-of-custody form is included in Appendix C.

3.2 Water Supply Well Analytical Results

CoC were detected in both the Hill and Swift pre-GAC filter samples at concentrations exceeding their respective SSTLs. CoC were detected in the both the Hill and Swift post-GAC filter samples collected at concentrations exceeding their respective SSTLs in the lab results.

Figure 4 in Appendix A is a site map presenting water supply well locations and their CoC concentrations. Table 2 in Appendix B summarizes historical water supply well analytical results. A copy of the laboratory report and completed chain-of-custody form is included in Appendix C.

3.3 Site Specific Target Levels

Site Specific Target Levels (SSTLs) have been designated for sixteen (MW-1, MW-2, MW-6 through MW-8, MW-10 through MW-15, MW-17 through MW-19, TW-2, and TW-3)

monitoring wells and all four (Crook, Swift, Hill, and Smith) water supply wells. For three (Crook, Swift, and Hill) water supply wells with GAC filters, the SSTLs apply to the pre-GAC filter samples. Table 4 in Appendix B summarizes SSTL information.

4.0 REMEDIATION SYSTEM EFFECTIVENESS

In awarding the Pay-For-Performance (PFP) site remediation contract, the South Carolina Department of Health and Environmental Control (SCDHEC) set remediation goals for this site via site specific target levels (SSTLs). The monitoring wells have individual target concentrations for seven (benzene, toluene, ethylbenzene, xylenes, MTBE, naphthalene, lead, and EDB) identified chemicals of concern (CoC).

Remediation system effectiveness can be calculated comparing the initial January 6, 2003, CoC concentrations that exceeded the SSTLs with the current CoC concentrations that exceeded the SSTLs. The formula is a follows:

$$\left[\frac{\text{[01/06/03 Sample Concentration Above SSTL]} - \text{[Current Sample Concentration Above SSTL]}}{\text{[01/06/03 Sample Concentration Above SSTL]}}\right] * 100 = \% \text{ Reduction}$$

Using the current analytical results, the concentration reduction is 41.20 %.

5.0 CONCLUSIONS

Free product was not detected. CoC were detected in seven monitoring wells and two water supply wells above their respective SSTLs. The percent concentration reduction has been calculated at 42.20%.

SEI Environmental, Inc recommends continuing the quarterly monitoring to evaluate the continued reduction of chemicals of concern in the monitoring wells on site. The next sampling event will occur in July 2008.

Re: **CASE Report Review**
Smith's Grocery, SC Hwy 49, York, SC
UST Permit #09322
Release reported June 30, 1993
Corrective Action Status Report received May 28, 2008
York County

Dear Mr. Casey:

The Underground Storage Tank (UST) Program of the South Carolina Department of Health and Environmental Control has reviewed the referenced document. The UST Program remains concerned about the high concentrations of petroleum chemicals present in MW-2, MW-8, TW-1, and TW-2. The recommendation by SEI to continue quarterly monitoring to evaluate the reduction of chemicals of concern in the monitoring wells is unacceptable to the UST Program due to the persistent high concentrations. The UST Program requests that a more aggressive approach to the remediation be proposed and implemented or the UST Program may consider declaring SEI Environmental in default for non-performance. The next CASE report must be submitted by August 28, 2008.

Please remember that SEI is responsible for maintaining the granulated activated carbon units. For any well that has detection in post-GAC samples, the GAC filter should be changed immediately and such work documented in the submitted reports. SEI should establish a GAC filter change schedule such that the breakthrough is minimized. Documentation of all GAC filter changes should be included in future CASE Reports. The CASE report noted that the Swift and Hill water supply wells had chemicals detected in the post-GAC samples. However, no mention was made in the report if the filters had been changed as a result of the detection.

On all correspondence regarding this site, please reference the UST Permit Number. Please feel free to contact me, at (803) 896-6397 or thomadl@dhec.sc.gov, if you have questions or need additional information.

Sincerely,

Debra L. Thoma

Dear Mr. Brewster:

The Underground Storage Tank Program has reviewed the files for the referenced pay-for-performance corrective action sites. All of the sites listed have Corrective Action Status Evaluation Reports that are past due. The contract for each site requires that reports be submitted on a quarterly basis. In order to reestablish the required schedule, a report for each site must be submitted within 45 days from the date of this letter

If you have any questions or need additional information, please feel free to contact me at (803) 896-6397 or via e-mail at thomadl@dhec.sc.gov.

Sincerely,

Debra L. Thoma

Dear Mr. Cooper:

Under the terms and conditions of the referenced contract, a GAC filter replacement has been approved for the Hill and Wiggam Residences residence located at 3049 and 3043 Clover Circle. The contact people are Tony Hill (803) 684-5425 and Gary Wiggam (803) 628-5464. This facility has been assigned an individual Cost Agreement (CA) number as listed above. Please reference the **CA number and Purchase Order #680378** on the invoice submitted for payment. Palmetto Environmental Group should complete the work in accordance with the contract specifications.

If you have any questions or need further assistance, please contact me at (803) 896-6397 or by email at thomadl@dhec.sc.gov.

MECI will perform services at the sites on behalf of the site's responsible party (RP); however, payment will be made from the SUPERB Account. The site's RP has no obligation for payment for this scope of work. Please coordinate access to the facility with the property owner. Contact information has been provided in the information packet. The Department grants pre-approval for transportation of virgin petroleum impacted soil and groundwater from the referenced site to a permitted treatment facility. There can be no spillage or leakage in transport. All investigation-derived waste (IDW) must be properly contained and labeled prior to disposal. A copy of the disposal manifest and/or acceptance letter from the receiving facility that clearly designates the quantity received must be included with the final report. The SUPERB Account will not reimburse for transportation or treatment of soil and/or groundwater with concentrations below RBSLs. **Please note, the final report is due within 3 weeks from the date the site is sampled. If the site is not sampled by the specified due date or the report is not received in the specified time period, a late fee may be imposed.**

UST DOCKET 17ee

Please contact me with the sampling schedule before commencing work at these facilities. If you have any questions or need further assistance, please contact me at (803) 896-6397 or thomadl@dhec.sc.gov.

Sincerely,

Debra L. Thoma

Subject: Report of Groundwater Sampling
Smith Grocery
York, South Carolina
SCDHEC Site ID Number 09322, CA # 36194
MECI Project Number 09-2322

Dear Ms. Thoma,

Midlands Environmental Consultants Inc. (MECI) is pleased to submit the attached Report of Sampling for the referenced site.

On July 1, 2009, twenty monitoring wells and six water supply wells (WSW-Hill (Pre-GAC), WSW-Hill (Post-GAC), WSW-Swift (Pre-GAC), WSW-Swift (Post-GAC), WSW-Crock and WSW-Smith) were sampled. Three monitoring wells (TW-1, TW-2, and TW-3) were purged prior to sampling. One monitoring well (MW-20) was gauged and determined to be obstructed. Two monitoring wells (MW-4 and MW-13) were not located at the time of sampling. Groundwater samples obtained were transported to Pace Analytical Services, Inc. of Huntersville, NC for analysis.

Purge water produced by the purging process was treated on-site utilizing a granular activated carbon unit. A total of 37.0 gallons of purge water was disposed of in this manner. A disposal manifest for the referenced purge water is attached at the end of this report.

If you have any question or comments please feel free to contact us at 803-808-2043.

Sincerely,
Midlands Environmental Consultants, Inc.

Midlands Environmental Consultants, Inc.

Re: Treatment of Purge Water
Smith Grocery
York, South Carolina
SCDHEC Site ID Number 09322
MECI Project Number 09-2322

To Whom It May Concern;

Midlands Environmental Consultants, Inc. is providing the following letter as certification that treatment of the referenced purge water complied with the conditions of "Proposed Conditions for Use of Portable Activated Carbon Units for the Treatment of Small Volumes of Petroleum Hydrocarbon Contaminated Groundwater", as described in the following:

Applicability:

Groundwater treated was obtained as a result development of wells and sampling.

Conditions:

1. The purge/bail water from all wells is mixed before usage of the Activated Carbon Unit.
2. No free-product was detected in any of the purge water drums.
3. Analytical results of from well sampling show average concentrations of petroleum hydrocarbon constituents less than 5000 parts per billion (ppb) Benzene and less than 20,000 ppb total BTEX.
4. The existing carbon pack will be replaced/reactivated every 5,000 gallons.
5. Record of usage is maintained by Contractor.
6. Any and all recommendations and conditions issued by the Manufacturer have been adhered to.
7. Any and all recommendations and conditions (even on a site by site basis) issued by the SCDHEC must be adhered to.

All purge waters were treated on-site using an up-flow treatment drum loaded with 30 pounds of activated carbon. Carbon will be loaded to a maximum of 3 pounds of total organic compounds or 5,000 gallons of development/purge water, whichever occurs first.

Post Office Box 854, Lexington SC 29071 • 235-B Dooley Road, Lexington, SC 29073
Telephone: (803) 808-2043 • fax: (803) 808-2048

A total of 37.0 gallons were treated on July 1, 2009 at the referenced site.

Midlands Environmental also tracks cumulative organic compounds adsorbed on the activated carbon to ensure the capacity of carbon mass is not over-charged. This data is available upon request.

Should you have any questions or comments, please contact the undersigned.

Sincerely,
Midlands Environmental Consultants, Inc.

RE: Project: SMITH'S GROC 09322
Pace Project No.: 9247805

Dear Ms. Thoma:
Enclosed are the analytical results for sample(s) received by the laboratory on July 02, 2009. The results relate only to the samples included in this report. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

Inorganic Wet Chemistry and Metals analyses were performed at our Pace Asheville laboratory and Organic testing was performed at our Pace Huntersville laboratory unless otherwise footnoted. All Microbiological analyses were performed at the laboratory where the samples were received.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Renee Spencer

QUALIFIERS

Project: SMITH'S GROC 09322
Pace Project No.: 9247805

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

Pace Analytical is NELAP accredited. Contact your Pace PM for the current list of accredited analytes.

U - Indicates the compound was analyzed for, but not detected.

ANALYTE QUALIFIERS

S2	Surrogate recovery outside laboratory control limits due to matrix interferences (confirmed by similar results from sample re-analysis).
S4	Surrogate recovery not evaluated against control limits due to sample dilution.

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, Inc..

Dear Mr. Cooper:

Under the terms and conditions of the referenced contract, a GAC filter replacement has been approved for the Hill and Wiggam Residences residence located at 3049 and 3043 Clover Circle. The contact people are Tony Hill (803) 684-5425 and Gary Wiggam (803) 628-5464. This facility has been assigned an individual Cost Agreement (CA) number as listed above. Please reference the **CA number and Purchase Order #680378** on the invoice submitted for payment. Palmetto Environmental Group should complete the work in accordance with the contract specifications.

If you have any questions or need further assistance, please contact me at (803) 896-6397 or by email at thomadl@dhec.sc.gov.

Sincerely,

Debra L. Thoma

Dear Mr. Cooper:

Under the terms and conditions of the referenced contract, a GAC filter replacement has been approved for the Hill and Wiggam Residences residence located at 3049 and 3043 Clover Circle. The contact people are Tony Hill (803) 684-5425 and Gary Wiggam (803) 628-5464. This facility has been assigned an individual Cost Agreement (CA) number as listed above. Please reference the **CA number and Purchase Order #680378** on the invoice submitted for payment. Palmetto Environmental Group should complete the work in accordance with the contract specifications.

If you have any questions or need further assistance, please contact me at (803) 896-6397 or by email at thomadl@dhec.sc.gov.

Sincerely,

Debra L. Thoma

DIVISION OF UST MANAGEMENT
BUREAU OF LAND AND WASTE MANAGEMENT
2600 Bull Street, Columbia, South Carolina 29201

TO: Underground Storage Tank (UST) Contractors

FROM: Larry G. Sorrell
Financial Section
UST Management Division

DATE: March 15, 2010

SUBJECT: Transition to New Financial Systems

Effective **May 3, 2010,** the South Carolina Department of Health and Environmental Control will be converting to a new statewide system, the South Carolina Enterprise Information System (SCEIS). The conversion to SCEIS is expected to improve services by state agencies and provide the citizens of the state with better services at reduced costs.

As part of this transition, we will be required to shut down our financial and purchasing functions in our existing system on **April 16, 2010.** The transition period could last as long as six weeks. During this time period, no purchasing, receiving or vendor payments can be processed.

In order to prepare for this conversion, we are taking every step possible to ensure that minimal delays occur in our payment process. All payable invoices received by **April 1, 2010,** will be processed into the accounting system we are currently using and forwarded to Accounts Payable for payment. Invoices received between **April 2 and May** 3 will not be processed to Accounts Payable until the first two weeks in May, at the earliest. At that time SCEIS will be used to process invoices received during the shut down period. We respectfully ask for patience and consideration during this transition period so that no services are interrupted.

If you have any questions regarding these changes, please contact me at sorrellg@dhec.sc.gov or 803.896.6391.

RE: Project: Smith Grocery #09322
Pace Project No.: 9265252

Dear Mr. Cooper:
Enclosed are the analytical results for sample(s) received by the laboratory on March 12, 2010. The results relate only to the samples included in this report. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

Inorganic Wet Chemistry and Metals analyses were performed at our Pace Asheville laboratory and Organic testing was performed at our Pace Huntersville laboratory unless otherwise footnoted. All Microbiological analyses were performed at the laboratory where the samples were received.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Renee Spencer

QUALIFIERS

Project: Smith Grocery
Pace Project No.: 9265252

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

Pace Analytical is NELAP accredited. Contact your Pace PM for the current list of accredited analytes.

U - Indicates the compound was analyzed for, but not detected.

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, Inc..

Re: **Notice to Proceed-Groundwater Sampling**
Bid # IFB-33335-3/11/08-EMW; PO# 719459

Dear Mr. Shane:

Based on the award of the referenced bid package, enclosed are the information packets to conduct twenty (20) groundwater-sampling events. The packets contain all necessary information for work to begin. The facility has been assigned an individual Cost Agreement (CA) number as listed below. Please reference the CA number and Purchase Order # 719459 on the appropriate invoice submitted for payment against the facility.

MECI will perform services at the sites on behalf of the site's responsible party (RP); however, payment will be made from the SUPERB Account. The site's RP has no obligation for payment for this scope of work. Please coordinate access to the facility with the property owner. Contact information has been provided in the information packet. The Department grants pre-approval for transportation of virgin petroleum impacted soil and groundwater from the referenced site to a permitted treatment facility. There can be no spillage or leakage in transport. All investigation-derived waste (IDW) must be properly contained and labeled prior to disposal. A copy of the disposal manifest and/or acceptance letter from the receiving facility that clearly designates the quantity received must be included with the final report. The SUPERB Account will not reimburse for transportation or treatment of soil and/or groundwater with concentrations below RBSLs. **Please note, the final report is due within 3 weeks from the date the site is sampled. If the site is not sampled by the specified due date or the report is not received in the specified time period, a late fee may be imposed.**

Please contact me with the sampling schedule before commencing work at these facilities. If you have any questions or need further assistance, please contact me at (803) 896-6397 or thomadl@dhec.sc.gov.

Re: Notice to Proceed-GAC Changes
IFB-318409-5/6/10-EMW; PO #809301

Dear Mr. Lowder:

Under the terms and conditions of the referenced contract, a GAC filter replacement has been approved for the following sites. Each facility has been assigned an individual Cost Agreement (CA) number as listed below. Please reference the **CA number and Purchase Order #809301** on the invoice submitted for payment. Emerald Inc. should complete the work in accordance with the contract specifications. For any samples submitted to PACE for analysis, please be sure to include the PACE CA number and PO#729210 on the chain of custody form. Pre- and Post-GAC Samples should be collected from all water supply wells and sampled for BTEX, Naphthalene, MtBE, and DCA by EPA Method 8260 and EDB by EPA Method 8011.

Smith Grocery
York, South Carolina
SCDHEC Site ID Number 09322, CA # 38682
MECI Project Number 10-2816
Certified Site Rehabilitation Contractor UCC-0009

Dear Ms. Thoma,

Midlands Environmental Consultants Inc. (MECI) is pleased to submit the attached Report of Sampling for the referenced site.

On July 19, 2010, seventeen monitoring wells (MW-2, MW-3, MW-5, MW-6, MW-7, MW-9 through MW-15, MW-17, MW-19, TW-1, TW-2 and TW-3) and six water supply wells (WSW-Smith (pre), WSW-Smith (post), WSW-Crock, WSW-Swift (pre) WSW-Swift (post) and WSW-Hill) were sampled. Three monitoring wells (TW-1, TW-2 and TW-3) were purged prior to sampling. Six monitoring wells (MW-1, MW-4, MW-8, MW-16, MW-18 and MW-20) were not located. Groundwater samples obtained were transported to Pace Analytical Services, Inc. of Huntersville, NC for analysis.

Purge water produced by the purging process was treated on-site utilizing a granular activated carbon unit. A total of 46.0 gallons of purge water was disposed of in this manner. A disposal manifest for the referenced purge water is attached at the end of this report.

If you have any question or comments please feel free to contact us at 803-808-2043.

Sincerely,
Midlands Environmental Consultants, Inc.

Re: Treatment of Purge Water
Smith Grocery
York, South Carolina
SCDHEC Site ID Number 09322
MECI Project Number 10-2816

To Whom It May Concern;

Midlands Environmental Consultants, Inc. is providing the following letter as certification that treatment of the referenced purge water complied with the conditions of "Proposed Conditions for Use of Portable Activated Carbon Units for the Treatment of Small Volumes of Petroleum Hydrocarbon Contaminated Groundwater", as described in the following:

Applicability:

Groundwater treated was obtained as a result development of wells and sampling.

Conditions:

1. The purge/bail water from all wells is mixed before usage of the Activated Carbon Unit.
2. No free-product was detected in any of the purge water drums.
3. Analytical results of from well sampling show average concentrations of petroleum hydrocarbon constituents less than 5000 parts per billion (ppb) Benzene and less than 20,000 ppb total BTEX.
4. The existing carbon pack will be replaced/reactivated every 5,000 gallons.
5. Record of usage is maintained by Contractor.
6. Any and all recommendations and conditions issued by the Manufacturer have been adhered to.
7. Any and all recommendations and conditions (even on a site by site basis) issued by the SCDHEC must be adhered to.

All purge waters were treated on-site using an up-flow treatment drum loaded with 30 pounds of activated carbon. Carbon will be loaded to a maximum of 3 pounds of total organic compounds or 5,000 gallons of development/purge water, whichever occurs first.

Post Office Box 854, Lexington SC 29071 • 235-B Dooley Road, Lexington, SC 29073
Telephone: (803) 808-2043 • fax: (803) 808-2048

A total of 46.0 gallons were treated on July 19, 2010 at the referenced site.

Midlands Environmental also tracks cumulative organic compounds adsorbed on the activated carbon to ensure the capacity of carbon mass is not over-charged. This data is available upon request.

Should you have any questions or comments, please contact the undersigned.

Sincerely,
Midlands Environmental Consultants, Inc.

Brendon P. Kelly

RE: Project: SMITH GROCERY ~~09332~~ 09322
Pace Project No.: 9273788

Dear Ms. Thoma:
Enclosed are the analytical results for sample(s) received by the laboratory on July 20, 2010. The results relate only to the samples included in this report. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

Inorganic Wet Chemistry and Metals analyses were performed at our Pace Asheville laboratory and Organic testing was performed at our Pace Huntersville laboratory unless otherwise footnoted. All Microbiological analyses were performed at the laboratory where the samples were received.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Renee Spencer

QUALIFIERS

Project: SMITH GROCERY 09332
Pace Project No.: 9273788

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is NELAP accredited. Contact your Pace PM for the current list of accredited analytes.

ANALYTE QUALIFIERS

P6	Matrix spike recovery was outside laboratory control limits due to a parent sample concentration notably higher than the spike level.
S4	Surrogate recovery not evaluated against control limits due to sample dilution.
S5	Surrogate recovery outside control limits due to matrix interferences (not confirmed by re-analysis).

RE: Project: Smiths Grocery 09322
Pace Project No.: 9274596

Dear Ms. Thoma:
Enclosed are the analytical results for sample(s) received by the laboratory on July 31, 2010. The results relate only to the samples included in this report. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

Inorganic Wet Chemistry and Metals analyses were performed at our Pace Asheville laboratory and Organic testing was performed at our Pace Huntersville laboratory unless otherwise footnoted. All Microbiological analyses were performed at the laboratory where the samples were received.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Renee Spencer

QUALIFIERS

Project: Smiths Grocery 09322
Pace Project No.: 9274596

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is NELAP accredited. Contact your Pace PM for the current list of accredited analytes.

ANALYTE QUALIFIERS

C3	Relative percent difference between results from each column was greater than 40%. The higher of the two results was reported.

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, Inc..

Re: Bid # IFB-34007-6/3/08-EMW; PO# 4500011317
Notice to Proceed

Dear Mr. Shane:

Based on the award of the referenced bid package, enclosed are the information packets to conduct assessments at several facilities. The packets contain the necessary approval for work to begin. The facilities have been assigned Cost Agreement (CA) numbers as listed below. Please reference the CA numbers and Purchase Order # 4500011317 on the appropriate invoices submitted for payment against the facilities. As specified in the referenced bid, **the completed invoice forms and associated reports (include contract certification number) are expected on or before the designated due date (see below).**

UST Permit#	Facility	County	Release #	Work Scope	Due Date*	CA #	Approved Amt
09322	Smiths Grocery	York	1	Monitoring Well Installation	60 Days	39705	$10,750.00
02233	Danny Melton Amoco	Chesterfield	1	Monitoring Well Installation	60 Days	39453	$325.00
05694	Copelands Service Station	Lauens	1	Monitoring Well Installation	60 Days	39770	$7,860.00
00332	Interstate Truck Stop	Allendale	2	Monitoring Well Installation	60 Days	39471	$2,000.00
11702	Colonel Creek Landing	Fairfield	1	Monitoring Well Installation	60 Days	39701	$2,841.00

*From receipt of letter

Midland's Environmental Consultants, Inc. will perform services at the sites on behalf of the site's UST owners; however, payments will be made from the SUPERB Account. The site's UST owners have no obligation for payment for this scope of work. **Please note, if there are any changes in the established cost agreement amounts (e.g., additional water supply wells sampled, additional well footage, etc.) contact the site's project manager for technical and/or financial approval. Failure to do so prior to submittal of invoice may result in delay of payment.**

The Bureau grants pre-approval for transportation of drums of virgin petroleum contaminated soil and drums of groundwater from the referenced site to a permitted treatment facility. The contaminated soil and/or groundwater must be properly stored in labeled 55-gallon drums or equivalent containers.

The contaminated soil and/or groundwater must be accepted by the approved treatment facility. There can be no spillage or leakage in transport. A copy of the disposal manifest from the receiving facility that clearly designates the quantity received must be included as an appendix to the final report. Please note, transportation of waste oil contaminated soil must receive pre-approval from the Division of Waste Assessment & Emergency Response.

Please provide this office with a schedule of drilling dates and coordinate all work with me before commencing work at the facility. If you have any questions or need further assistance, please contact me at (803) 896-6633.

Sincerely,

Monitoring Well Approval

Approval is hereby granted to: **Midlands Environmental Consultants, Inc.**

On behalf of: **Lois Smith**

Facility: **Smiths Grocery**
SC Hwy 49, York, SC

UST Permit #: **09322**

County: **York**

This approval is for the installation of six (6) groundwater monitoring wells. The monitoring wells are to be installed in the approved locations. Monitoring wells are to be installed following the South Carolina Well Standards, R.61-71, and the applicable guidance documents.

Please note that R.61-71 requires the following:

1. All wells shall be drilled, constructed, and abandoned by a South Carolina certified well driller per R.61-71.D.1.

2. All monitoring wells shall be labeled as required by R.61-71.H.2.c.

3. A Water Well Record Form or other form provided or approved by the Department shall be completed and submitted to the Department within 30 days after well completion or abandonment unless another schedule has been approved by the Department. The form should contain the "as-built" construction details and all other information required by R.61-71.H.1.f

4. All analytical data and water levels obtained from each monitoring well shall be submitted to the Department within 30 days of receipt of laboratory results unless another schedule has been approved by the Department as required by R.61-71.H.1.d.

thomadl@dhec.sc.gov) shall be provided a minimum of twenty-four (24) hours prior to well construction as required by R.61-71.H.1.a.

6. All temporary monitoring wells shall be abandoned within 5 days of borehole completion using appropriate methods as required by R.61-71.H.4.c. All other wells shall be properly developed per R.61-71.H.2.d.

7. Departmental approval is required prior to abandonment of all monitoring wells as required by R.61-71.H.1.a.

This approval is pursuant to the provisions of Section 44-55-40 of the 1976 South Carolina Code of Laws and R.61-71 of the South Carolina Well Standards and Regulations, dated April 26, 2002. A copy of this approval should be on the site during well installation.

Re: Notice to Proceed-GAC Changes
IFB-318409-5/6/10-EMW; PO #4500011951

Dear Mr. Lowder:

Under the terms and conditions of the referenced contract, a GAC filter replacement has been approved for the following sites. Each facility has been assigned an individual Cost Agreement (CA) number as listed below. Please reference the **CA number and Purchase Order #4500011951** on the invoice submitted for payment. Emerald Inc. should complete the work in accordance with the contract specifications. For any samples submitted to PACE for analysis, please be sure to include the PACE CA number and PO#729210 on the chain of custody form. Pre- and Post-GAC Samples should be collected from all water supply wells and sampled for BTEX, Naphthalene, MtBE, and DCA by EPA Method 8260 and EDB by EPA Method 8011.

UNDERGROUND STORAGE TANK (UST) OWNER/OPERATOR LEAD INFORMATION SHEET

1. CONTRACTOR OF CHOICE

As the UST Owner/Operator of UST Permit # 09322, I would like to use the contractor or person(s)* listed below and request that they represent me for: (check one)

( ) Initial Groundwater Assessment
( ) Other (please specify)_____
(X) all future assessment and corrective action scopes. **

Name of Contractor/Person(s): Midlands Environmental Consultants, Inc.

Address: 235-B Dooley Road, Lexington, SC 29073

Telephone Number: (803) 808-2043

Note: Site rehabilitation activities must be performed by a SCDHEC Certified Site Rehabilitation Contractor in accordance with R.61-98.

* indicate if the person listed is your own employee

** if you would like the contractor to perform all future assessment and corrective action activities at this and/or other facilities that have confirmed releases, please provide a list of all sites on your letterhead and provide the information requested in items 2 and 3 below within the context of the letter.

2. FINANCIAL OR FAMILIAL RELATIONSHIP

Does a financial or familial relationship, as defined below, exist between you and the contractor/person that you listed above? _____ Yes _X_ No (please initial) LBS

Financial Relationship: A connection or association through a material interest of sources of income which exceed five percent of annual gross income from a business entity.

Familial Relationship: A connection or association by family or relatives, in which a family member or relative has a material interest. Family or relatives include: father, mother, son, daughter, brother, sister, uncle, aunt, first cousin, nephew, niece, husband, wife, father-in-law, mother-in-law, son-in-law, daughter-in-law, stepfather, stepmother, stepson, stepdaughter, stepbrother, stepsister, half brother, half sister, grandparent, grandchild, great grandchild, step grandparent, step great grandparent, step grandchild, step great grandchild, or fiancee.

3. PAYMENT

You can pay the contractor and, upon the submittal of the canceled check (or a notarized statement from the contractor), be compensated from the SUPERB Account, or have payment issued directly from us to the contractor.

I request that payment be made to me after I have paid the contractor. _____ Yes LBS No (please initial)
I request that payment be made directly to the contractor. _X_ Yes LBS _____ No (please initial)

Note: All costs must receive prior financial approval from the Department regardless of payment option.

Underground Storage Tank Owner/Operator Signature Lou B Smith
Date 10/8/10

RE: Project: SMITH'S GROCERY 09322
Pace Project No.: 9281706

Dear Ms. Thoma:
Enclosed are the analytical results for sample(s) received by the laboratory on November 09, 2010. The results relate only to the samples included in this report. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

Analyses were performed at the Pace Analytical Services location indicated on the sample analyte page for analysis unless otherwise footnoted.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Erin R. Watts for

Renee Spencer

QUALIFIERS

Project: SMITH'S GROCERY 09322
Pace Project No.: 9281706

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is NELAP accredited. Contact your Pace PM for the current list of accredited analytes.

Subject: Report of Monitoring Well Installation, Groundwater Sampling and Chemical Analyses
Smith's Grocery
S.C. Highway 49
York, South Carolina
SCDHEC Site ID# 09322, CA # 39705
MECI Project Number 10-3035
Certified Site Rehabilitation Contractor UCC-0009

Dear Ms. Thoma,

Midlands Environmental Consultants Inc. (MECI) is pleased to submit the attached Report of Well Installation, Groundwater Sampling, and Chemical Analyses of Groundwater Samples for the referenced site. This report describes assessment activities conducted at the site in general accordance with South Carolina Department of Health and Environmental Control (SCDHEC) guidelines.

PROJECT INFORMATION

The subject site (Smith's Grocery) is located near the intersection of S.C. Highway 49 and Southern Pines Road, York, York County, South Carolina (see Figure 1). The site consists of an approximately 2.00 acre parcel of land (see Figure 2), and currently occupied by a convenience store. The site formerly maintained one 6,000 gallon gasoline UST and one 8,000 gallon gasoline UST. The South Carolina Department of Health and Environmental Control (SCDHEC) reported release of petroleum product from two single walled underground storage tanks (UST) at the subject site in June of 1993, which was confirmed in September of 1996.

The above project information is based on SCDHEC files.

Post Office Box 854, Lexington SC 29071 • 235-B Dooley Road, Lexington, SC 29073
Telephone: (803) 808-2043 • fax: (803) 808-2048

FIELD EXPLORATION

Field exploration conducted at the site include:

- construction of three groundwater monitoring wells;
- groundwater sampling; chemical analyses: and,
- a comprehensive survey of the subject site.

The monitoring well locations were selected based on SCDHEC project manager instructions, existing site conditions, and drilling accessibility.

Following monitoring well installation, a comprehensive survey (See Figure 2) was conducted by Construction Support Services of Columbia, SC (Jay S. Joshi PLS# 14811) dated November 9, 2010 to locate the vertical and horizontal positions of the monitoring wells and relevant structures

MONITORING WELL INSTALLATION

During a site reconnaissance performed October 8, 2010, monitoring wells MW-8, MW-16, MW-17, MW-18, and MW-20 were located by MECI personnel. These wells were determined to be functioning properly and were not replaced. Due to the quality of the maps provided by SCDHEC (Map produced by SEI Environmental, Inc, dated 1/4/05) and the amount of injection wells (See Figure 3) in the vicinity of MW-7 and MW-9, MECI feels that there might have been some confusion of the location of MW-9 and MW-20 during the July 19, 2010 sampling event. MECI came to the conclusion that MW-9, not MW-20 was in need of being replaced.

On October 22, 2010, three single cased, watertable bracketing monitoring wells were installed at the subject site to replace several wells that were unable to be located during prior sampling events. These wells were installed by Geologic Exploration, of Statesville, North Carolina (S.C. Driller Certification: Brian Thomas #B 01465). Monitoring wells MW-1R, MW-4R, and MW-9R were installed as single cased, watertable bracketing monitoring wells using a truck-mounted drilling rig employing 8.0-inch outer diameter hollow-stem augers to construct the borehole. The following table presents new well installation details:

Well Number	Screened Interval (ft)	Total Depth (ft)
MW-1R	29.0-39.0	39.0
MW-4R	24.0-34.0	34.0
MW-9R	28.0-38.0	38.0

The soils encountered during drilling activities consisted of micaceous clayey silts of the Piedmont Physiographic Province. Representative portions of soil samples were screened with an Photo Ionization Detector (PID) and classified by MECI personnel. Test boring records showing soil descriptions and screening result are attached.

Based on PID readings and lack on access to spread soils onsite, soil cuttings were transported to Waste Management/Richland Landfill, Elgin, SC by MECI. A total of 0.93 tons was disposed of in this manner. A disposal manifest for these soils is attached at the end of this report.

Following completion of the monitoring wells, the wells were developed by bailing until they were determined to be functioning properly and turbidity was reduced. Test Boring Records showing soil descriptions and monitoring well installation details are attached. The drummed purge water was treated by MECI personnel using a granular activated carbon drum. A total of one (1) drum of purge/development water was disposed of in this manner. A disposal manifest for the drummed purge water is attached at the end of this report.

MONITORING WELL SAMPLING AND CHEMICAL ANALYSES

On October 26 and 27, 2010, MECI personnel collected groundwater samples from twenty-two (22) monitoring wells at the subject site. Monitoring well MW-15 was gauged and determined to have insufficient water for sampling. Monitoring well MW-13 was unable to be sampled during the subject sampling event, due to the well being located inside a fenced in yard with dogs. MECI attempted on October 26 and October 27, 2010 to sample MW-13, but the property was not home either day to allow access to the well. Based on a request by SCDHEC personnel, not all of the wells were purged prior to sampling. Purging was completed by bailing at least three well volumes of water from the well or until pH, conductivity, dissolved oxygen stabilized to within 10%, whichever occurred first. Where applicable, field measurements of pH, conductivity, dissolved oxygen, dissolved carbon dioxide, and water temperature were obtained before well sampling process. Table 1 presents the results of the field measurements obtained. The wells were sampled in accordance with SCDHEC guidelines.

Groundwater samples obtained were sent to Pace Analytical Services, Inc. of Huntersville, NC (SCDHEC Laboratory Certification #99006) for analysis.

The following sampling matrix contains well development and requested analyses for each well:

Monitoring Well	Purge	No Purge	Gauge Only	BTEX, Naphthalene, MTBE (EPA Method 8260-B)	EDB (EPA Method 8011)	1,2 DCA (EPA Method 8260-B)	8 Oxygenates (EPA Method 8260-B)	Total Lead (EPA Method 6010)	Sulfate (EPA Method 375.2)	Nitrate (EPA Method 335.2)	Methane (RSK Method)	PAH's (EPA Method 8270)	Ferrous Iron (Field Test)
				Analyte Sampled									
MW-1R	X			X	X	X	X						
MW-2		X		X	X	X	X						
MW-3		X		X	X	X	X						
MW-4R	X			X	X	X	X

MW-7		X		X	X	X	X						
MW-8		X		X	X	X	X						
MW-9R	X			X	X	X	X						
MW-10		X		X	X	X	X						
MW-11		X		X	X	X	X						

Monitoring Well	Purge	No Purge	Gauge Only	BTEX, Naphthalene, MTBE (EPA Method 8260-B)	EDB (EPA Method 8011)	1,2 DCA (EPA Method 8260-B)	8 Oxygenates (EPA Method 8260-B)	Total Lead (EPA Method 6010)	Sulfate (EPA Method 375.2)	Nitrate (EPA Method 335.2)	Methane (RSK Method)	PAH's (EPA Method 8270)	Ferrous Iron (Field Test)
				Analyte Sampled									
MW-12		X		X	X	X	X						
MW-14		X		X	X	X	X						
MW-15			X										
MW-16		X		X	X	X	X						
MW-17		X		X	X	X	X						
MW-18		X		X	X	X	X						
MW-19		X		X	X	X	X						
MW-20		X		X	X	X	X						
IW-9		X		X	X	X	X						
TW-1	X			X	X	X	X						
TW-2	X			X	X	X	X						
MW-3	X			X	X	X	X						

Notes: BTEX = benzene, toluene, ethylbenzene, & total xylenes MTBE=methyl tertiary butyl ether 1,2 DCA = 1,2 dicloroethane PAH = polycyclic aromatic hydrocarbons

The results of the laboratory analyses are summarized in Table 2, and presented in the attached Analytical data.

WATER SUPPLY WELL SAMPLING AND CHEMICAL ANALYSES

On October 26, 2010, MECI personnel sampled four water supply wells. WSW-Hill and WSW-Swift both contain granular activated carbon units (GAC) (WSW-Smith does not have a GAC unit). Pre-Gac and Post-Gac samples were obtained from WSW-Hill and WSW-Swift. The following matrix contains well status, owner(s), and tax map identification numbers:

Water Supply Well Number	Well Owner	York County Tax Map Number:	Notes:	Well Status
WSW-Crock	Everette D. Crook Jr.	4890401001	3035 Clover Circle	Currently in Use
WSW-Hill	Tony H. Hill	4890401023	3049 Clover Circle	Currently in Use
WSW-Smith	Lois B. Smith	4560000005	3176 Charlotte Highway	Currently in Use
WSW-Swift	Gary A. Wiggam	4890401024	3043 Clover Circle	Currently in Use

The samples collected from WSW-Crock, WSW-Hill, WSW-Smith, and WSW-Swift were sent to Pace Analytical of Huntersville, North Carolina (SCDHEC Laboratory Certification #99006) for analysis. The samples collected were analyzed for BTEX, Naphthalene, MTBE, 1,2 DCA, 8 Oxygenates (EPA Method 8260B), and EDB (EPA Method 8011). The results of the laboratory analyses are summarized in Table 4, and presented in Appendix B.

GROUNDWATER ANALYTICAL RESULTS

As discussed above, groundwater samples obtained from the monitoring wells were analyzed for dissolved phase petroleum constituents. The analytical results indicate petroleum impact to the local groundwater with the highest dissolved concentrations detected in the area of monitoring well MW-8. The analytical results indicate dissolved total BTEX concentrations ranging from levels below detection limits (BDL) to 78,320 micrograms per liter in MW-8. The analytical results indicate dissolved MTBE concentrations ranging from levels below detection limits (BDL) to 217J micrograms per liter in monitoring well TW-2. The analytical results indicate dissolved Naphthalene concentrations ranging from levels below detection limits (BDL) to 1,190J micrograms per liter in monitoring well MW-1R. The analytical results indicate dissolved EDB concentrations ranging from levels below detection limits (BDL) to 48.9 micrograms per liter in monitoring well MW-10. The results of the analyses for each monitoring well and specific parameters are listed on Table 2 and Table 3. The detection limit for each parameter is provided in the attached laboratory reports.

WATER SUPPLY WELL ANALYTICAL RESULTS

Six samples were collected from water water supply wells located near the subject site. Analytical results indicate EBD concentrations at 0.039 micrograms per liter in the sample collected from WSW-Crock. Analytical results indicate Benzene concentrations at 14.0 micrograms per liter, 1,2, DCA concentrations at 1.6J micrograms per liter, and EDB concentration at 0.33 micrograms per liter in the Pre-GAC sample obtained from WSW-Hill. Analytical results indicate Benzene concentrations at 2.4J micrograms per liter, 1,2, DCA concentrations at 1.3J micrograms per liter, and EDB concentration at 0.034 micrograms per liter in the Post-GAC sample obtained from WSW-Hill. Analytical results indicate Benzene concentrations at 288 micrograms per liter, Total Xylenes concentrations at 67.6 micrograms per liter, Naphthalene concentrations at 11.8 micrograms per liter, 1,2, DCA concentrations at 23.5 micrograms per liter, and EDB concentration at 1.3 micrograms per liter in the Pre-GAC sample obtained from WSW-Swift. Analytical results indicate Benzene concentrations at 157 micrograms per liter, Ethylbenzene concentrations at 1.6J micrograms per liter, Total Xylenes concentrations at 46.7 micrograms per liter, MTBE concentrations at 3.0J micrograms per liter, Naphthalene concentrations at 13.6 micrograms per liter, 1,2, DCA concentrations at 12.5 micrograms per liter, and EDB concentration at 0.60 micrograms per liter in the Post-GAC sample obtained from WSW-Swift. Samples collected from WSW-Smith did not indicate petroleum impact. The results of the analyses are presented on Table 2 and Table 3. The detection limit for each parameter is provided in the attached laboratory reports.

ASSESSMENT SUMMARY

Groundwater elevation data for the October 26, 2010, gauging events was plotted, and points of equal elevation were interpolated between the monitoring wells. A groundwater contour map of the surficial aquifer was thus prepared and is presented on Figure 4.

The analytical results indicate dissolved total BTEX concentrations ranging from levels below detection limits (BDL) to 78,320 micrograms per liter in MW-8. The analytical results indicate dissolved MTBE concentrations ranging from levels below detection limits (BDL) to 217J micrograms per liter in monitoring well TW-2. The analytical results indicate dissolved Naphthalene concentrations ranging from levels below detection limits (BDL) to 1,190J micrograms per liter in monitoring well MW-1R. The analytical results indicate dissolved EDB concentrations ranging from levels below detection limits (BDL) to 48.9 micrograms per liter in monitoring well MW-10. The results of the analyses for each monitoring well and specific parameters are listed on Table 2 and

Table 3. The detection limit for each parameter is provided in the attached laboratory reports. Figure 5 depicts graphically the concentrations of Total BTEX (indicator for plume migration) dissolved in the groundwater at the site. Figure 6 depicts graphically the concentrations of Naphthalene dissolved in the groundwater at the site. Figure 7 depicts graphically the concentrations of EDB dissolved in the groundwater at the site.

QUALIFICATIONS OF REPORT

The activities and evaluative approaches used in this assessment are consistent with those normally employed in hydrogeological assessment and waste management projects of this type. Our evaluation of site conditions has been based on our understanding of the site, project information provided to us, and data obtained in our exploration. The general subsurface conditions utilized in our evaluation have been based on interpretation of subsurface data between borings. Contents of this report are intended for the sole use by the South Carolina Department of Health and Environmental Control, under mutually agreed upon terms and conditions. If other parties wish to rely on this report please contact MECI prior to their use of this information so that a mutual understanding and agreement of the terms and conditions of our services can be established.

Midlands Environmental appreciates the opportunity to offer our professional environmental services to you on this project. Please feel free to contact us at 803-808-2043 if you have any immediate questions or comments.

Sincerely,
Midlands Environmental Consultants, Inc.

RE: Project: SMITH GROCERY 10-3035
Pace Project No.: 9280772

Dear Mr. Shane:
Enclosed are the analytical results for sample(s) received by the laboratory between October 27, 2010 and October 28, 2010. The results relate only to the samples included in this report. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

Analyses were performed at the Pace Analytical Services location indicated on the sample analyte page for analysis unless otherwise footnoted.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Renee Spencer

QUALIFIERS

Project: SMITH GROCERY 10-3035
Pace Project No.: 9280772

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.
ND - Not Detected at or above adjusted reporting limit.
J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.
MDL - Adjusted Method Detection Limit.
S - Surrogate
1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.
Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.
LCS(D) - Laboratory Control Sample (Duplicate)
MS(D) - Matrix Spike (Duplicate)
DUP - Sample Duplicate
RPD - Relative Percent Difference
NC - Not Calculable.
U - Indicates the compound was analyzed for, but not detected.
N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.
Pace Analytical is NELAP accredited. Contact your Pace PM for the current list of accredited analytes.

ANALYTE QUALIFIERS

E	Analyte concentration exceeded the calibration range. The reported result is estimated.
L0	Analyte recovery in the laboratory control sample (LCS) was outside QC limits.
M0	Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.
P5	The EPA or method required sample preservation degrades this compound, therefore acceptable recoveries may not be achieved in sample matrix spikes.
R1	RPD value was outside control limits.
S4	Surrogate recovery not evaluated against control limits due to sample dilution.
S5	Surrogate recovery outside control limits due to matrix interferences (not confirmed by re-analysis).

WASTE DISPOSAL MANIFESTS

Midlands Environmental Consultants, Inc.

November 19, 2010

Re: Treatment of Purge Water
Smith's Grocery
York, South Carolina
SCDHEC Site ID Number 09322
MECI Project Number 10-3035

To Whom it May Concern;

Midlands Environmental Consultants, Inc. is providing the following letter as certification that treatment of the referenced purge water complied with the conditions of "Proposed Conditions for Use of Portable Activated Carbon Units for the Treatment of Small Volumes of Petroleum Hydrocarbon Contaminated Groundwater", as described in the following:

Applicability:

Groundwater treated was obtained as a result development of wells and sampling.

Conditions:

1. The purge/bail water from all wells is mixed before usage of the Activated Carbon Unit.
2. No free-product was detected in any of the purge water drums.
3. Analytical results of from well sampling show average concentrations of petroleum hydrocarbon constituents less than 5000 parts per billion (ppb) Benzene and less than 20,000 ppb total BTEX.
4. The existing carbon pack will be replaced/reactivated every 5,000 gallons.
5. Record of usage is maintained by Contractor.
6. Any and all recommendations and conditions issued by the Manufacturer have been adhered to.
7. Any and all recommendations and conditions (even on a site by site basis) issued by the SCDHEC must be adhered to.

Post Office Box 854, Lexington SC 29071 • 235-B Dooley Road, Lexington, SC 29073
Telephone: (803) 808-2043 • fax: (803) 808-2048

All purge waters were treated on-site using an up-flow treatment drum loaded with 30 pounds of activated carbon. Carbon will be loaded to a maximum of 3 pounds of total organic compounds or 5,000 gallons of development/purge water, whichever occurs first.

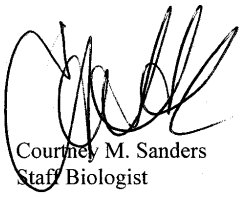
One 55-gallon drum was treated on October 26, 2010 at the referenced site.

A total of one (1) 55-gallon drum was treated at the referenced site.

Midlands Environmental also tracks cumulative organic compounds adsorbed on the activated carbon to ensure the capacity of carbon mass is not over-charged. This data is available upon request.

Should you have any questions or comments, please contact the undersigned.

Sincerely,
Midlands Environmental Consultants, Inc.



Courtney M. Sanders
Staff Biologist

Re: Groundwater Sampling and GAC Change Directive
Smith's Grocery, SC Hwy 49, York, SC
UST Permit #09322; CA#40784
Release reported June 30, 1993
Report of MW Installation and Groundwater Sampling received November 19, 2010
York County

Dear Ms. Smith

The Underground Storage Tank (UST) Management Division of the South Carolina Department of Health and Environmental Control (SCDHEC) recognizes your commitment to continue work at this site utilizing Midlands Environmental Consultants, Inc. (MECI). The next scope of work needed is a comprehensive groundwater sampling and granulated activated carbon (GAC) filter change

Cost Agreement #40784 has been approved in the amount shown on the enclosed cost agreement for the work to be completed. Groundwater samples from all monitoring wells associated with the release and water supply wells (Crock, Hill Pre- and Post-GAC, Smith, and Swift Pre- and Post-GAC) should be collected and analyzed for BTEX, Naphthalene, MTBE and 1,2-DCA by EPA method 8260B and EDB by EPA Method 8011. In addition, the GAC filter should be changed at the Hill and Swift water supply wells. Pre- and Post-GAC sampling must be conducted **prior** to the GAC filter change. Please note, previously installed monitoring wells that bracket the water table do not require purging prior to sample collection.

The report submitted at the completion of these activities should include the following:

- A narrative portion documenting the sampling event noting site conditions, the names of the field personnel, date, times the event started and ended, ambient air temperature, and general weather conditions during the sampling event. Wells containing free phase product should not be sampled.
- Well purging data, pH, specific conductivity, water temperature, PID readings (where applicable) and turbidity comments Please note that all previously installed wells that properly bracket the water table do not require purging prior to sample collection.
- Groundwater elevations, depth to groundwater, remaining measurable free product thickness (if any), total well depth and screened interval for all monitoring wells associated with the site, unless otherwise directed by the Department, shall be presented in tabular form. Groundwater laboratory analytical data for all monitoring wells shall be presented in tabular format.
- A groundwater elevation contour map of the site based on current groundwater potentiometric data.
- A CoC map based on current groundwater laboratory analytical data. The groundwater data should be adjacent to the relevant monitoring well.
- Manifests for any contaminated soil and/or groundwater removed from the site for treatment and/or disposal.
- The report must be signed and sealed by a professional geologist or engineer registered in the State of South Carolina.

MECI can submit an invoice for direct billing from the State Underground Petroleum Environmental Response Bank (SUPERB) Account. Please note that all applicable South Carolina certification requirements apply to the laboratory services, well installation, and report preparation. All site rehabilitation activities must be performed and submitted by a South Carolina Certified Underground Storage Tank Site Rehabilitation Contractor.

A Monitoring Report and Invoice are due within **60 days** from the date of this letter. If the invoice and completed report are not submitted within 120 days from the date of this letter, monies allocated to pay this invoice will be uncommitted. This means that the invoice will not be processed for payment until all other committed funds are paid or monies become available.

Please note that Sections 44-2-110(4) and 44-2-130 of the SUPERB Statute state that no costs will be allowed unless prior approval from the Division is obtained. If for any reason additional tasks will be completed, these additional tasks and the associated cost must be pre-approved by the Division for the cost to be paid. The SCDHEC reserves the authority to pay only for work properly performed and/or technically justified and will only pay rates in accordance with established criteria. Further, SCDHEC reserves the right to question and/or reject costs if deemed unreasonable and the right to audit project records at any time during the project or after completion of work.

The Department grants pre-approval for transportation of virgin petroleum impacted soil and groundwater from the referenced site to a permitted treatment facility. There can be no spillage or leakage in transport. All investigation-derived waste (IDW) must be properly contained and labeled prior to disposal. IDW should not be stored on-site longer than ninety (90) days. A copy of the disposal manifest and/or acceptance letter from the receiving facility that clearly designates the quantity received must be included as an appendix to the report. If the COC concentrations based on laboratory analysis is below Risk Based Screening Levels (RBSLs), please contact the project manager for approval to dispose of soil and/or groundwater on site. The SUPERB Account will not reimburse for transportation or treatment of soil and/or groundwater with concentrations below RBSLs.

On all correspondence or inquiries regarding this project, please reference **UST Permit #09322.** If you have any questions, please feel free to contact me by phone at (803) 896-6397, by fax at (803) 896-6245,or email at thomadl@dhec.sc.gov.

Sincerely,

Debra L. Thoma

Re: GAC Replacement Directive
Smith's Grocery, SC Hwy 49, York, SC
UST Permit #09322; CA#41174
Release reported June 30, 1993
York County

Dear Ms. Smith

The Underground Storage Tank (UST) Management Division of the South Carolina Department of Health and Environmental Control (SCDHEC) recognizes your commitment to continue work at this site utilizing Midlands Environmental Consultants, Inc. (MECI). The next scope of work needed is the removal of two Granulated Activated Carbon (GAC) Unit and the installation of replacement units. A report documenting the removal of the existing units and the installation of the new units is due within 60 days from the date of this letter. The report should also indude a schematic of the systems and pertinent model information (model number, serial number, etc).

MECI can submit an invoice for direct billing from the State Underground Petroleum Environmental Response Bank (SUPERB) Account. Please note that all applicable South Carolina certification requirements apply to the laboratory services, well installation, and report preparation. All site rehabilitation activities must be performed and submitted by a South Carolina Certified Underground Storage Tank Site Rehabilitation Contractor.

On all correspondence or inquiries regarding this project, please reference **UST Permit #09322.** If you have any questions, please feel free to contact me by phone at (803) 896-6397, by fax at (803) 896-6245,or email at thomadl@dhec.sc.gov.

Sincerely,

Debra L Thoma

SCDHEC Site ID# 09322, CA # 40784
MECI Project Number 11-3208
Certified Site Rehabilitation Contractor UCC-0009

Dear Ms. Thoma,

Midlands Environmental Consultants Inc. (MECI) is pleased to submit the attached Report of Well Installation, Groundwater Sampling, and Chemical Analyses of Groundwater Samples for the referenced site. This report describes assessment activities conducted at the site in general accordance with South Carolina Department of Health and Environmental Control (SCDHEC) guidelines.

PROJECT INFORMATION

The subject site (Smith's Grocery) is located near the intersection of S.C. Highway 49 and Southern Pines Road, York, York County, South Carolina (see Figure 1). The site consists of an approximately 2.00 acre parcel of land (see Figure 2), and currently occupied by a convenience store. The site formerly maintained one 6,000 gallon gasoline UST and one 8,000 gallon gasoline UST. The South Carolina Department of Health and Environmental Control (SCDHEC) reported release of petroleum product from two single walled underground storage tanks (UST) at the subject site in June of 1993, which was confirmed in September of 1996.

The above project information is based on SCDHEC files.

Post Office Box 854, Lexington SC 29071 • 235-B Dooley Road, Lexington, SC 29073
Telephone: (803) 808-2043 • fax: (803) 808-2048

FIELD EXPLORATION

Field exploration conducted at the site include:

- groundwater sampling; chemical analyses: and,
- water supply well sampling and chemical analyses.

MONITORING WELL SAMPLING AND CHEMICAL ANALYSES

On February 1, 2011, MECI personnel collected groundwater samples from twenty (20) monitoring wells at the subject site. Monitoring wells MW-6, MW-10, and MW-15 were gauged and determined to have insufficient water for sampling. Monitoring well MW-7 was gauged and determined to contain 0.09 feet of free phase petroleum product. Based on a request by SCDHEC personnel, not all of the wells were purged prior to sampling. Purging was completed by bailing at least three well volumes of water from the well or until pH, conductivity, dissolved oxygen stabilized to within 10%, whichever occurred first. Where applicable, field measurements of pH, conductivity, dissolved oxygen, dissolved carbon dioxide, and water temperature were obtained before well sampling process. Monitoring wells MW-3, MW-5, MW-11, MW-13, MW-14, MW-17, and MW-18 had insufficient water to collect field measurements, but were sampled. Table 1 presents the results of the field measurements obtained. The wells were sampled in accordance with SCDHEC guidelines.

Groundwater samples obtained were sent to Pace Analytical Services, Inc. of Huntersville, NC (SCDHEC Laboratory Certification #99006) for analysis.

The following sampling matrix contains well development and requested analyses for each well:

Monitoring Well	Purge	No Purge	Gauge Only	BTEX, Naphthalene, MTBE (EPA Method 8260-B)	EDB (EPA Method 8011)	1,2 DCA (EPA Method 8260-B)	8 Oxygenates (EPA Method 8260-B)	Total Lead (EPA Method 6010)	Sulfate (EPA Method 375.2)	Nitrate (EPA Method 335.2)	Methane (RSK Method)	PAH's (EPA Method 8270)	Ferrous Iron (Field Test)
				Analyte Sampled									
MW-1R		X		X	X	X							
MW-2		X		X	X	X							
MW-3		X		X	X	X							
MW-4R		X		X	X	X							
MW-5		X		X		X

MW-20		X		X	X	X							
IW-9		X		X	X	X							
TW-1	X			X	X	X							
TW-2	X			X	X	X							
TW-3	X			X	X	X							

Notes: BTEX = benzene, toluene, ethylbenzene, & total xylenes MTBE=methyl tertiary butyl ether 1,2 DCA = 1,2 dicloroethane PAH = polycyclic aromatic hydrocarbons

The results of the laboratory analyses are summarized in Table 2, and presented in the attached Analytical data.

WATER SUPPLY WELL SAMPLING AND CHEMICAL ANALYSES

On February 1, 2011, MECI personnel sampled four water supply wells. WSW-Hill and WSW-Swift both contain granular activated carbon units (GAC) (WSW-Smith does not have a GAC unit). Pre-Gac and Post-Gac samples were obtained from WSW-Hill and WSW-Swift. The following matrix contains well status, owner(s), and tax map identification numbers:

Water Supply Well Number	Well Owner	York County Tax Map Number:	Notes:	Well Status
WSW-Crock	Everette D. Crook Jr.	4890401001	3035 Clover Circle	Currently in Use
WSW-Hill	Tony H. Hill	4890401023	3049 Clover Circle	Currently in Use
WSW-Smith	Lois B. Smith	4560000005	3176 Charlotte Highway	Currently in Use
WSW-Swift	Gary A. Wiggam	4890401024	3043 Clover Circle	Currently in Use

The samples collected from WSW-Crock, WSW-Hill, WSW-Smith, and WSW-Swift were sent to Pace Analytical of Huntersville, North Carolina (SCDHEC Laboratory Certification #99006) for analysis. The samples collected were analyzed for BTEX, Naphthalene, MTBE, 1,2 DCA (EPA Method 8260B), and EDB (EPA Method 8011). The results of the laboratory analyses are summarized in Table 2, and presented in Appendix B.

On February 9, 2011, MECI personnel attempted to change the GAC filters on WSW-Swift and on WSW-Hill. During this attempt it was observed that the electronic head on both water supply wells were not functioning properly and read error messages. After consultation with the manufacturer (Ecowater Systems), it was the manufacturers suggestion that both the GAC units were in need of replacing and/or more in depth repair. After consultation with SCDHEC Project Manager, it was decided to replace the GAC units under a new cost agreement number at a later date.

GROUNDWATER ANALYTICAL RESULTS

As discussed above, groundwater samples obtained from the monitoring wells were analyzed for dissolved phase petroleum constituents. Monitoring well MW-7 was gauged and determined to contain 0.09 feet of free phase petroleum product. The analytical results indicate petroleum impact to the local groundwater with the highest dissolved concentrations detected in the area of monitoring well MW-8. The analytical results indicate dissolved total BTEX concentrations ranging from levels below detection limits (BDL) to 98,660 micrograms per liter in MW-8. The analytical results indicate dissolved MTBE concentrations ranging from levels below detection limits (BDL) to 191J micrograms per liter in monitoring well TW-2. The analytical results indicate dissolved Naphthalene concentrations ranging from levels below detection limits (BDL) to 978J micrograms per liter in monitoring well MW-8. The analytical results indicate dissolved EDB concentrations ranging from levels below detection limits (BDL) to 20.1 micrograms per liter in monitoring well MW-1R. The results of the analyses for each monitoring well and specific parameters are listed on Table 2. The detection limit for each parameter is provided in the attached laboratory reports.

WATER SUPPLY WELL ANALYTICAL RESULTS

Six samples were collected from water water supply wells located near the subject site. Analytical results indicate EBD concentrations at 0.022 micrograms per liter in the sample collected from WSW-Crock. Analytical results indicate Benzene concentrations at 27.4 micrograms per liter, 1,2, DCA concentrations at 6.0 micrograms per liter, total Xylenes concentrations at 5.9J micrograms per liter, and EDB concentration at 0.33 micrograms per liter in the Pre-GAC sample obtained from WSW-Hill. Analytical results indicate Benzene concentrations at 3.7J micrograms per liter and EDB concentration at 0.062 micrograms per liter in the Post-GAC sample obtained from WSW-Hill. Analytical results indicate Benzene concentrations at 7.5 micrograms per liter, 1,2 DCA concentrations at 6.7 micrograms per liter, total Xylenes concentrations at 9.7J micrograms per liter, and EDB concentration at 0.45 micrograms per liter in the Pre-GAC sample obtained from WSW-Swift. Analytical results indicate Benzene concentrations at 7.8 micrograms per liter, total Xylenes concentrations at 8.8J micrograms per liter, and EDB concentration at 0.45 micrograms per liter in the Post-GAC sample obtained from WSW-Swift. Samples collected from WSW-Smith did not indicate petroleum impact. The results of the analyses are presented on Table 2 and in the attached laboratory reports.

ASSESSMENT SUMMARY

Groundwater elevation data for the February 1, 2011, gauging events was plotted, and points of equal elevation were interpolated between the monitoring wells. A groundwater contour map of the surficial aquifer was thus prepared and is presented on Figure 3.

Monitoring well MW-7 was gauged and determined to contain 0.09 feet of free phase petroleum product. The analytical results indicate petroleum impact to the local groundwater with the highest

dissolved concentrations detected in the area of monitoring well MW-8. The analytical results indicate dissolved total BTEX concentrations ranging from levels below detection limits (BDL) to 98,660 micrograms per liter in MW-8. The analytical results indicate dissolved MTBE concentrations ranging from levels below detection limits (BDL) to 191J micrograms per liter in monitoring well TW-2. The analytical results indicate dissolved Naphthalene concentrations ranging from levels below detection limits (BDL) to 978J micrograms per liter in monitoring well MW-8. The analytical results indicate dissolved EDB concentrations ranging from levels below detection limits (BDL) to 20.1 micrograms per liter in monitoring well MW-1R. . The results of the analyses for each monitoring well and specific parameters are listed on Table 2 and in the attached laboratory reports. Figure 4 depicts graphically the concentrations of Total BTEX (indicator for plume migration) dissolved in the groundwater at the site. Figure 5 depicts graphically the concentrations of Naphthalene dissolved in the groundwater at the site. Figure 6 depicts graphically the concentrations of EDB dissolved in the groundwater at the site.

QUALIFICATIONS OF REPORT

The activities and evaluative approaches used in this assessment are consistent with those normally employed in hydrogeological assessment and waste management projects of this type. Our evaluation of site conditions has been based on our understanding of the site, project information provided to us, and data obtained in our exploration. The general subsurface conditions utilized in our evaluation have been based on interpretation of subsurface data between borings. Contents of this report are intended for the sole use by the South Carolina Department of Health and Environmental Control, under mutually agreed upon terms and conditions. If other parties wish to rely on this report please contact MECI prior to their use of this information so that a mutual understanding and agreement of the terms and conditions of our services can be established.

Midlands Environmental appreciates the opportunity to offer our professional environmental services to you on this project. Please feel free to contact us at 803-808-2043 if you have any immediate questions or comments.

Sincerely,
Midlands Environmental Consultants, Inc.

Notes:

1. mg/l = milligrams per liter.
2. Groundwater depths were measured from the top of the PVC riser pipe.
3. Stabalized groundwater levels measured 2/1/11.
4. NT = Not Tested.
5. INS = Insufficient Water for Field Measurements
6. DRY = Monitoring well Dry at time of Sampling
7. NS = Not Sampled
8. TD = Total Depth
9. PROD = Free Phase Petroleum Product
10. Dissolved oxygen, dissolved carbon dioxide, initial pH, initial conductivity, and temperature measurements obtained on 02/01/11.
11. Groundwater elevation for MW-7 corrected for the presence of free phase petroleum product using a specific gravity for fuel of 0.85.

RE: Project: SMITH'S GROCERY
Pace Project No.: 9287042

Dear Mr. Shane:
Enclosed are the analytical results for sample(s) received by the laboratory on February 02, 2011. The results relate only to the samples included in this report. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

Analyses were performed at the Pace Analytical Services location indicated on the sample analyte page for analysis unless otherwise footnoted.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kevin Godwin for
Renee Spencer

QUALIFIERS

Project: SMITH'S GROCERY
Pace Project No.: 9287042

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.
ND - Not Detected at or above adjusted reporting limit.
J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.
MDL - Adjusted Method Detection Limit.
S - Surrogate
1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.
Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.
LCS(D) - Laboratory Control Sample (Duplicate)
MS(D) - Matrix Spike (Duplicate)
DUP - Sample Duplicate
RPD - Relative Percent Difference
NC - Not Calculable.
SG - Silica Gel - Clean-Up
U - Indicates the compound was analyzed for, but not detected.
N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.
Pace Analytical is NELAP accredited. Contact your Pace PM for the current list of accredited analytes.

LABORATORIES

PASI-C	Pace Analytical Services - Charlotte

ANALYTE QUALIFIERS

HS	Results are from sample aliquot taken from VOA vial with headspace (air bubble greater than 6 mm diameter).
S4	Surrogate recovery not evaluated against control limits due to sample dilution.
T3	Insufficient sample received from client to perform the analysis per EPA method requirements.

F-ALL-Q-020rev.07, 15-May-2007

WASTE DISPOSAL MANIFESTS

Midlands Environmental Consultants, Inc.

February 24, 2011

Re: Treatment of Purge Water
Smith's Grocery
York, South Carolina
SCDHEC Site ID Number 09322
MECI Project Number 11-3208

To Whom it May Concern;

Midlands Environmental Consultants, Inc. is providing the following letter as certification that treatment of the referenced purge water complied with the conditions of "Proposed Conditions for Use of Portable Activated Carbon Units for the Treatment of Small Volumes of Petroleum Hydrocarbon Contaminated Groundwater", as described in the following:

Applicability:

Groundwater treated was obtained as a result development of wells and sampling.

Conditions:

1. The purge/bail water from all wells is mixed before usage of the Activated Carbon Unit.
2. No free-product was detected in any of the purge water drums.
3. Analytical results of from well sampling show average concentrations of petroleum hydrocarbon constituents less than 5000 parts per billion (ppb) Benzene and less than 20,000 ppb total BTEX.
4. The existing carbon pack will be replaced/reactivated every 5,000 gallons.
5. Record of usage is maintained by Contractor.
6. Any and all recommendations and conditions issued by the Manufacturer have been adhered to.
7. Any and all recommendations and conditions (even on a site by site basis) issued by the SCDHEC must be adhered to.

Post Office Box 854, Lexington SC 29071 • 235-B Dooley Road, Lexington, SC 29073
Telephone: (803) 808-2043 • fax: (803) 808-2048

All purge waters were treated on-site using an up-flow treatment drum loaded with 30 pounds of activated carbon. Carbon will be loaded to a maximum of 3 pounds of total organic compounds or 5,000 gallons of development/purge water, whichever occurs first.

One 55-gallon drum was treated on February 1, 2011 at the referenced site.

A total of one (1) 55-gallon drum was treated at the referenced site.

Midlands Environmental also tracks cumulative organic compounds adsorbed on the activated carbon to ensure the capacity of carbon mass is not over-charged. This data is available upon request.

Should you have any questions or comments, please contact the undersigned.

Sincerely,
Midlands Environmental Consultants, Inc.

SCANNED

Dear Ms. Thoma,

On behalf of Ms. Lois Smith, Midlands Environmental Consultants Inc. (MECI) is pleased to submit the attached Report of Well Installation, Groundwater Sampling, and Chemical Analyses of Groundwater Samples for the referenced site. This report describes assessment activities conducted at the site in general accordance with South Carolina Department of Health and Environmental Control (SCDHEC) guidelines.

PROJECT INFORMATION

The subject site (Smith's Grocery) is located near the intersection of S.C. Highway 49 and Southern Pines Road, York, York County, South Carolina (see Figure 1). The site consists of an approximately 2.00 acre parcel of land (see Figure 2), and currently occupied by a convenience store. The site formerly maintained one 6,000 gallon gasoline UST and one 8,000 gallon gasoline UST. The South Carolina Department of Health and Environmental Control (SCDHEC) reported release of petroleum product from two single walled underground storage tanks (UST) at the subject site in June of 1993, which was confirmed in September of 1996.

The above project information is based on SCDHEC files.

Post Office Box 854, Lexington SC 29071 • 235-B Dooley Road, Lexington, SC 29073
Telephone: (803) 808-2043 • fax: (803) 808-2048

FIELD EXPLORATION

Field exploration conducted at the site include:

- Granular Activated Carbon (GAC) Unit Filter Change and Repair; and
- water supply well sampling and chemical analyses.

GRANULAR ACTIVATED CARBON (GAC) UNIT FILTER CHANGE AND REPAIR

On March 15, 2011, MECI personnel and Mr. James Barker of Barker Filtration, Inc. mobilized to the subject site to change the GAC filters and repair any problems on two water supply wells (WSW-Swift and WSW-Hill).

Upon initial investigation of the GAC units associated with WSW-Swift and WSW-Hill, several problems were noted and repaired. Problems with the GAC unit associated with WSW-Swift include: the electronic component of the GAC read "Error 1", there was no Riser Tube O-Ring, and there was no gravel placed in the bottom of the carbon vessel. Problems with the GAC unit associated with WSW-Hill include: the top distributor basket was broken, there was no Riser Tube O-Ring, there was no flow washer, and there was no gravel in the bottom of the carbon vessel. Mr. Barker repaired all problems associated with both GAC units and changed the carbon/gravel media in both units. Please see the attached paperwork obtained from Barker Filtration, Inc. documenting the discussed problems and repair.

WATER SUPPLY WELL SAMPLING AND CHEMICAL ANALYSES

After the GAC units were properly repaired and the carbon/gravel media was replaced, MECI collected Pre-GAC and Post-GAC samples from both WSW-Swift and WSW-Hill. The following matrix contains well status, owner(s), and tax map identification numbers:

Water Supply Well Number	Well Owner	York County Tax Map Number:	Notes:	Well Status
WSW-Hill	Tony H. Hill	4890401023	3049 Clover Circle	Currently in Use
WSW-Swift	Gary A. Wiggam	4890401024	3043 Clover Circle	Currently in Use

The samples collected from WSW-Hill and WSW-Swift were sent to Pace Analytical of Huntersville, North Carolina (SCDHEC Laboratory Certification #99006) for analysis. The samples collected were analyzed for BTEX, Naphthalene, MTBE, 1,2 DCA (EPA Method 8260B), and EDB (EPA Method 8011). The results of the laboratory analyses are summarized in Table 1 (See Page 3 of 3), and presented in the attached laboratory reports.

WATER SUPPLY WELL ANALYTICAL RESULTS

As discussed above, Pre-GAC and Post-GAC samples were obtained from WSW-Swift and WSW-Hill following the GAC unit repair and media change. Analytical results indicate Benzene concentrations at 22.7 micrograms per liter, Total Xylene concentrations at 17.0 micrograms per liter, Naphthalene concentrations at 3.5J micrograms per liter, 1,2 DCA concentrations at 8.0 micrograms

per liter, and EDB concentration at 0.57 micrograms per liter in the Pre-GAC sample obtained from WSW-Swift. Analytical results indicate Benzene concentrations at 63.2 micrograms per liter, Total Xylene concentrations at 12.5 micrograms per liter, 1,2 DCA concentrations at 6.8 micrograms per liter, and EDB concentration at 0.60 micrograms per liter in the Pre-GAC sample obtained from WSW-Hill. Additionally, analytical results indicate samples obtained from the Post-GAC samples from both WSW-Swift and WSW-Hill are below detection limits. The results of the analyses are presented on Table 1 (See Page 3 of 3) and in the attached laboratory reports.

QUALIFICATIONS OF REPORT

The activities and evaluative approaches used in this assessment are consistent with those normally employed in hydrogeological assessment and waste management projects of this type. Our evaluation of site conditions has been based on our understanding of the site, project information provided to us, and data obtained in our exploration. Contents of this report are intended for the sole use by Ms. Lois Smith and the South Carolina Department of Health and Environmental Control, under mutually agreed upon terms and conditions. If other parties wish to rely on this report please contact MECI prior to their use of this information so that a mutual understanding and agreement of the terms and conditions of our services can be established.

Midlands Environmental appreciates the opportunity to offer our professional environmental services to you on this project. Please feel free to contact us at 803-808-2043 if you have any immediate questions or comments.

Sincerely,
Midlands Environmental Consultants, Inc.

RE: Project: SMITH'S GROCERY 11-3264
Pace Project No.: 9289987

Dear Mr. Shane:
Enclosed are the analytical results for sample(s) received by the laboratory on March 16, 2011. The results relate only to the samples included in this report. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

Analyses were performed at the Pace Analytical Services location indicated on the sample analyte page for analysis unless otherwise footnoted.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Brandon Helton

QUALIFIERS

Project: SMITH'S GROCERY 11-3264
Pace Project No.: 9289987

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.
ND - Not Detected at or above adjusted reporting limit.
J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.
MDL - Adjusted Method Detection Limit.
S - Surrogate
1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.
Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.
LCS(D) - Laboratory Control Sample (Duplicate)
MS(D) - Matrix Spike (Duplicate)
DUP - Sample Duplicate
RPD - Relative Percent Difference
NC - Not Calculable.
SG - Silica Gel - Clean-Up
U - Indicates the compound was analyzed for, but not detected.
N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.
Pace Analytical is NELAP accredited. Contact your Pace PM for the current list of accredited analytes.

Re: QAPP Contractor Addendum Directive
Smith's Grocery, SC Hwy 49, York, SC
UST Permit #09322
Release reported June 30, 1993
Groundwater Sampling Report received March 10, 2011
York County

Dear Ms. Smith:

The Underground Storage Tank (UST) Management Division of the South Carolina Department of Health and Environmental Control (SCDHEC) has reviewed the referenced report. The report indicates the presence of chemicals of concern in the groundwater.

To determine what risk the referenced release may pose to the environment and public health, and in accordance with Section 280.65 of the South Carolina Underground Storage Tank Control Regulations, implementation of a groundwater sampling event as outlined in the UST Quality Assurance Program Plan (QAPP) is necessary. A groundwater sampling event for BTEX, Naphthalene, MtBE, 1,2-DCA, and EDB should be conducted in accordance with the UST Quality Assurance Program Plan and must be conducted in compliance with all applicable regulations. A copy of SCDHEC QAPP for the Underground Storage Tank Division is available at http://www.dhec.sc.gov/environment/lwm/html/ust.htm

Please have your contractor complete and submit the QAPP Contractor Addendum and Cost Agreement within thirty days of the date of this letter. Every component may not be necessary to complete the above scope of work. The State Underground Petroleum Environmental Response Bank (SUPERB) Account allowable cost for each component is included on the Assessment Component Cost Agreement Form. **Please note that technical and financial preapproval from the Department must be issued before work begins**.

On all correspondence regarding this site, please reference UST Permit #09322. If you have questions or need additional information, feel free to call me at (803) 896-6397.

Sincerely,

Debra L. Thoma

UST DOCKET

Re: Corrective Action Options
Smith's Grocery, SC Hwy 49, York, SC
UST Permit #09322
Release reported June 30, 1993
York County

Dear Ms. Smith:

The Underground Storage Tank (UST) Management Division (Division) of the South Carolina Department of Health and Environmental Control (SCDHEC) has reviewed the technical file and determined that active corrective action is necessary at the site to mitigate petroleum impact and ensure that there is no detrimental exposure to human health or the environment.

Funds from the State Underground Petroleum Environmental Response Bank (SUPERB) Account will soon be available for active corrective action. The selected technology must reduce the petroleum chemicals of concern (CoC) concentrations to site-specific target levels (SSTLs) determined by the Division.

The SUPERB Site Rehabilitation and Fund Access Regulations R.61-98 require the UST owner/operator to develop and implement a reasonable, cost-effective corrective action to be performed by a SCDHEC-certified site rehabilitation contractor. As the owner/operator for the release reported on June 30, 1993 you may choose one of two options as to how to proceed with this requirement: state lead or owner/operator lead.

State Lead Option:

- If you choose the state lead option, the Division will procure a certified site rehabilitation contractor to perform corrective action on your behalf. The SCDHEC will enter into an enforceable contract with the awarded contractor. As long as you do not interfere with or prohibit the work at your site, you will not be responsible in the event the state selected contractor does not perform appropriately or does not make satisfactory progress towards achieving the established corrective action goals. To utilize the state lead option, please sign and return the Permission form within 15 days of the date of this letter.

Owner/Operator Lead Option:

- If you select the owner/operator lead option, you will be required to select a contractor to perform the corrective action. In order to assist you in determining the clean-up technology, time frame, clean-up levels, and associated costs, the Division will prepare a technical specification package and provide you copies to send to contractors of your choice. In addition, the Division will announce the request for solicitations in the South Carolina Business Opportunities, a bi-weekly state government publication, to ensure that an adequate solicitation response is obtained so that a fair and competitive price can be established. This announcement will clearly indicate that you will select the contractor to implement the corrective action.
- Compensation to the contractor will be from the SUPERB Account, but you may have the obligation to pay your selected contractor for any costs not approved by the SCDHEC.

- The Division strongly suggests that a written contract between you and the selected contractor be developed following the completion of the solicitation process. The parties to this contract would be you and the contractor you choose; SCDHEC would not be a party to this contract. The Division's function would be to monitor and ensure progress of corrective action activities.
- If the contractor you select does not or cannot complete the required activities, you will be required to find another certified contractor to complete the required activities for the remainder of the existing financial approval amount. No additional funding from the SUPERB Account may be allowed. Under R.61-92, Part 280: Underground Storage Tank Control Regulations, you as the owner/operator are ultimately responsible to SCDHEC for the actions of your contractor. The SCDHEC will pursue enforcement actions against you if the contractor you select does not make satisfactory progress towards achieving established corrective actions goals. To utilize the owner/operator lead option, please sign and return the enclosed Active Corrective Action Options Form within 15 days of the date of this letter.

On all correspondence or inquiries regarding this project, please reference UST Permit #09322. If you have any questions, please contact me at (803) 896-6397 or thomadl@dhec.sc.gov.

Sincerely,

Debra L. Thoma

Re: GAC Change Directive
Smith's Grocery, SC Hwy 49, York, SC
UST Permit #09322; CA#42129
Release reported June 30, 1993
York County

Dear Ms. Smith

The Underground Storage Tank (UST) Management Division of the South Carolina Department of Health and Environmental Control (SCDHEC) recognizes your commitment to continue work at this site utilizing Midlands Environmental Consultants, Inc. (MECI). The next scope of work needed is the changing of the filters of the Granulated Activated Carbon (GAC) Units. A report documenting the changing of the GAC filters is due within 30 days from the date of this letter.

MECI can submit an invoice for direct billing from the State Underground Petroleum Environmental Response Bank (SUPERB) Account. Please note that all applicable South Carolina certification requirements apply to the laboratory services, well installation, and report preparation. All site rehabilitation activities must be performed and submitted by a South Carolina Certified Underground Storage Tank Site Rehabilitation Contractor.

On all correspondence or inquiries regarding this project, please reference **UST Permit #09322.** If you have any questions, please feel free to contact me by phone at (803) 896-6397, by fax at (803) 896-6245,or email at thomadl@dhec.sc.gov.

Sincerely,

Debra L. Thoma

PERMISSION FORM

UNDERGROUND STORAGE TANK AND PROPERTY OWNER

UST Permit #09322

If you are both the owner of the former or existing underground storage tanks for the release reported on June 30, 1993 and the current property owner, please complete this form.

I, Lois B. Smith, certify that I am the identified legal owner of the abandoned underground storage tanks for the release reported on June 30, 1993 and property located at the facility identified below or serve as the authorized representative for the owner. I grant permission to the South Carolina Department of Health and Environmental Control (SCDHEC) to secure on my behalf contractor services to conduct assessment and corrective action activities as required, and authorize SCDHEC, or a contractor selected by SCDHEC, to enter this property at reasonable times only to accomplish these site rehabilitation tasks. The contractor(s) will be designated as my contractor for only the required site rehabilitation activities. Compensation to the contractor(s) will be from the SUPERB Account and I will have no obligation to pay the contractor(s). I understand that SCDHEC or its contractor will be responsible for notifying me of all activities that are necessary prior to their initiation and will promptly provide to me a copy of each environmental report. I understand that I may choose to select my own contractor at the completion of any phase of work by notifying the Division of Underground Storage Tank Management in writing.

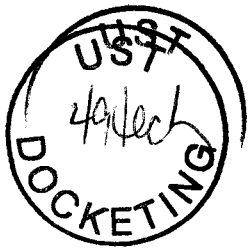
UNDERGROUND STORAGE TANK (UST) OWNER/OPERATOR LEAD INFORMATION SHEET

1. CONTRACTOR OF CHOICE

As the UST Owner/Operator of UST Permit # 09322, I would like to use the contractor or person(s)* listed below and request that they represent me for: (check one)

( ) Initial Groundwater Assessment
( ) Other (please specify)_____
(X) all future assessments and remedial scopes. **



Name of Contractor/Person(s): Midlands Environmental Consultants, Inc.

Address: 235-B Dooley Road, Lexington, SC 29073

Telephone Number: (803) 808-2043

Note: Site rehabilitation activities must be performed by a SCDHEC Certified Site Rehabilitation Contractor in accordance with R.61-98.

*indicate if the person listed is your own employee

** if you would like the contractor to perform all future assessment activities at this and/or other facilities that have confirmed releases, please provide a list of all sites on your letterhead and provide the information requested in items 2 and 3 below within the context of the letter.

2. FINANCIAL OR FAMILIAL RELATIONSHIP

Does a financial or familial relationship, as defined below, exist between you and the contractor/person that you listed above? _____ Yes _X_ No (please initial)

Financial Relationship: A connection or association through a material interest of sources of income which exceed five percent of annual gross income from a business entity.

Familial Relationship: A connection or association by family or relatives, in which a family member or relative has a material interest. Family or relatives include: father, mother, son, daughter, brother, sister, uncle, aunt, first cousin, nephew, niece, husband, wife, father-in-law, mother-in-law, son-in-law, daughter-in-law, stepfather, stepmother, stepson, stepdaughter, stepbrother, stepsister, half brother, half sister, grandparent, grandchild, great grandchild, step grandparent, step great grandparent, step grandchild, step great grandchild, or fiancee.

3. PAYMENT

You can pay the contractor and, upon the submittal of the canceled check (or a notarized statement from the contractor), be compensated from the SUPERB Account, or have payment issued directly from us to the contractor.

I request that payment be made to me after I have paid the contractor. _____ Yes _____ No (please initial)
I request that payment be made directly to the contractor. _X_ Yes _____ No (please initial)

Note: All costs must receive prior financial approval from the Department regardless of payment option.

Subject: Report of Granular Activation Carbon (GAC) Unit Filter Change
Smith's Grocery
S.C. Highway 49
York, South Carolina
SCDHEC Site ID# 09322, CA # 42129
MECI Project Number 11-3533
Certified Site Rehabilitation Contractor UCC-0009

Dear Ms. Thoma,

On behalf of Ms. Lois Smith, Midlands Environmental Consultants Inc. (MECI) is pleased to submit the attached Report of Well Installation, Groundwater Sampling, and Chemical Analyses of Groundwater Samples for the referenced site. This report describes assessment activities conducted at the site in general accordance with South Carolina Department of Health and Environmental Control (SCDHEC) guidelines.

PROJECT INFORMATION

The subject site (Smith's Grocery) is located near the intersection of S.C. Highway 49 and Southern Pines Road, York, York County, South Carolina (see Figure 1). The site consists of an approximately 2.00 acre parcel of land (see Figure 2), and currently occupied by a convenience store. The site formerly maintained one 6,000 gallon gasoline UST and one 8,000 gallon gasoline UST. The South Carolina Department of Health and Environmental Control (SCDHEC) reported release of petroleum product from two single walled underground storage tanks (UST) at the subject site in June of 1993, which was confirmed in September of 1996.

The above project information is based on SCDHEC files.

Post Office Box 854, Lexington SC 29071 • 235-B Dooley Road, Lexington, SC 29073
Telephone: (803) 808-2043 • fax: (803) 808-2048

FIELD EXPLORATION

Field exploration conducted at the site include:

- Granular Activated Carbon (GAC) Unit Filter Change.

GRANULAR ACTIVATED CARBON (GAC) UNIT FILTER CHANGE AND REPAIR

MECI was contacted by SCDHEC on August 8, 2011 to discuss a concern that had been brought to their attention by Mr. Thomas Hill (WSW-Hill). It was reported that Mr. Hill's water was exhibiting foul odors. It was determined that due to the high priority of the filter change that the Contractors Addendum (UST Management Division Quality Assurance Program Plan, June 2011, Appendix B) would not be necessary to conduct the GAC filter change. Additionally, it was decided that pre and post GAC samples would not need to be collected following the GAC filter change due to the lack of the contractor's addendum. Futhermore, it was discussed that a comprehensive groundwater sampling event at the subject site would be requested in the near future to obtain analytical data from the subject water supply wells.

On August 9, 2011, MECI personnel mobilized to the subject site to change the GAC filters on two water supply wells (WSW-Swift and WSW-Hill). Both GAC filters were changed in accordance with SCDHEC regulations and the manufacturers (EcoWater Systems) guidelines. The spent gravel/carbon media was removed from both GAC units and the inside the carbon vessels were thouroughly cleaned. Both GAC units were refilled with 24 lbs of gravel (covering the bottom distributor) and completed with an approximate two cubic feet of new liquid phase activated carbon or until there was an approximate 12" inches of freeboard space between the top of activated carbon and the top distributor. After the filter change, each unit was allowed to properly backwash and the electronic component was reset to reflect appropriate time/backwash cycle (3 day -1,000 gallon cycle). As discussed above, pre and post GAC water samples were not collected following the GAC filter changes.

Midlands Environmental appreciates the opportunity to offer our professional environmental services to you on this project. Please feel free to contact us at 803-808-2043 if you have any immediate questions or comments.

Sincerely,
Midlands Environmental Consultants, Inc.

Dear Ms. Thoma,

Midlands Environmental Consultants Inc. (MECI) is pleased to submit the attached QAPP Contractor Addendum for the referenced site.

On August 24, 2011, MECI personnel performed a site visit to the subject site to evaluate site conditions, locate monitoring wells and identify potential problems for future sampling activities.

If you have any question or comments please feel free to contact us at 803-808-2043.

Sincerely,
Midlands Environmental Consultants, Inc.

Table 2A Addendum Role Identification and Contact Information

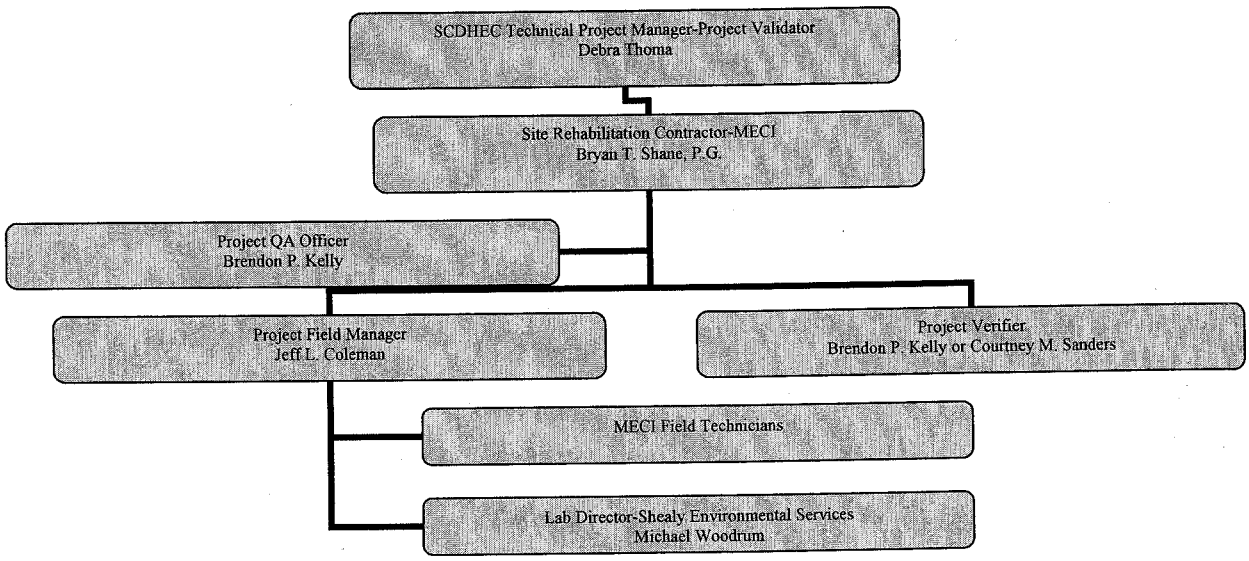

Figure 1A Organizational Chart

A5 Problem Definition/Background

Discuss the background (as much as is known) of the site and appropriate historical information, and why this site is being assessed.

The subject site (Smith's Grocery) is located at 3176 Charlotte Highway, York, York County, South Carolina. The subject site previously maintained one 6,000 gallon gasoline underground storage tank (UST) and one 8,000 gallon gasoline UST. These UST's were abandoned by removal from ground in March of 1996. The South Carolina Department of Health and Environmental Control (SCDHEC) reported a release of petroleum product from these UST's in June of 1993 and confirmed the release in September of 1996. The subject site is currently rated a Class 1D.

A comprehensive sampling event is being conducted on the network of monitoring wells installed in relation with the release of petroleum product and injection wells installed in association with prior remediation attempts at the site. Additionally, four water supply wells will be sampled to determine petroleum impact to the groundwater.

Please answer the following: Does this project fall under UST or Brownfields area?

Underground Storage Tank Division

A6 Project/Task Description

1. ***Summarize what is known about the work to be done. This can be a short sentence indicating what the Scope of this project is (see Master QAPP Section A6).***

A comprehensive sampling event will be conducted at the subject site (Smith's Grocery) to determine current site conditions, and use the analytical data as a baseline for Active Corrective Action (ACA).

2. ***The work will begin within*** fourteen (14) days of receipt of approved QAPP contractors addendum ***after cost approval and sampling should be complete by*** twenty-one (21) days of receipt of approved QAPP contractors addendum.

3. ***Are there are time or resource constraints? Include those factors that may interfere with the tentative schedule.***

Factors that may prevent schedule work will be, but not limited to, inclement weather, equipment malfunction, and machine failure.

A7 Data Quality Objectives (DQOs) and Data Quality Indicators (DQIs)

The subject site is located at 3176 Charlotte Highway, York, York County, South Carolina. The site is currently Smith's Grocery.

A8 Training and Certificates

Table 5A Sampling Activities

B2 Sampling Methods

Please note: The contractor must follow sampling protocols as given in the UST QAPP.

***Estimate* the number of samples of each matrix that are expected to be collected:**

Soil	_____
Ground Water from monitoring wells	_____34____
From Drinking/Irrigation water wells	_____6____
Field Duplicate Collection	_____2____
Field Blank Collection	_____1____
Trip Blank	_____1____
From surface water features	_____0____
Total number of Water samples	_____44____

Notes:
During the August 24, 2011 site visit, thirty-four (34) monitoring wells were located. Additionally, four water supply wells (WSW-Smith, WSW-Crock, WSW-Swift (Pre and Post GAC), and WSW-Hill (Pre and Post GAC) were located and determined to be operational.

During the site visit, it was noted that monitoring wells IW-2, IW-3, IW-4, IW-6, IW-8, IW-9, IW-10, IW-16, IW-18, MW-2, MW-5, MW-7, MW-11, MW-12, MW-13, MW-14, MW-15, MW-16, MW-17, MW-18, MW-19, MW-20, TW-1, and TW-3 need a combined fifty two (52) bolts to secure the wells in place. Total Bolts Needed: **52 Bolts**

Samples will be analyzed by Shealy Environmental Services, Inc. for BTEX, Napth, MTBE, 1,2 DCA, (8260B), and EDB (8011).

For the sample matrices indicated above, please describe how samples will be collected and the equipment needed.

Monitoring Well Sampling

Water Level Measurement

-MECI personnel utilize Electronic Water Level Indicators for Water Level Measurements. Each sampling crew carries an electronic water level indicator for use on downgradient monitoring wells and an Oil/Water Interface probe for use on source area wells or wells that have historically contained measurable free phase petroleum product.

-Prior to usage, the indicator is decontaminated with isopropanol applied by a Teflon squeeze bottle and rinsed with analyte free water. This rinse water is collected and run through a portable GAC (granulated activated carbon) unit.

-The indicator is slowly lowered into the water table, and the water level is recorded to the nearest 0.01 feet.

-When free phase petroleum product is encountered, the Oil-Water Interface probe is slowly lowered into the monitoring well until product is encountered; this measurement is recorded to the nearest 0.01 feet. The meter is then lowered through the product until water is encountered. The probe is then pulled back up through the well until product is encountered again; this measurement is recorded to the nearest 0.01 feet.

-If the total depth of a monitoring well is required, after a groundwater level is recorded, the indicator probe is lowered until the bottom of the monitoring well is encountered. This depth is recorded to the nearest 0.01 feet. Following a total depth measurement, the entire length of probe tape is decontaminated with isopropanol and rinsed with analyte free water.

-All measurements will be taken from the top of the well casing.

Monitoring Well Purging

-Where necessary, monitoring wells will be purged prior to sampling if: the well screen does not bracket the watertable, if a screened interval is not known, purging is specifically asked for by the SCDHEC project manager, or a monitoring well has not previously been sampled.

-Purging will be completed utilizing a prepackaged, clear, disposable polyethylene bailer and nylon rope. Following purging/sampling of a well, the bailer and rope will be properly disposed.

-A new set of Nitrile gloves will be worn at each monitoring well, and at any time samples are handled.

-Prior to purging, the water level of the well will be determined using an electronic water level indicator. The water level, total well depth and well diameter will be used to determine the amount of water standing in the water column. The following table presents gallons of water per foot of water column in selected diameters of wells:

Well Diameter (inches)	Gallons of Water/Foot	Well Diameter (inches)	Gallons of Water/Foot
1	0.047	8	2.611
2	0.163	10	4.08
4	0.653	12	5.875

6	1.469		

-The length of the water column multiplied by the gallons of water per foot will provide the number of gallons in one well volume of water.
-Purging will continue until three well volumes of water are evacuated, or where field measurements of pH, Specific Conductivity (uS) and Temperature (°C) have stabilized to within 10% of previous values or until all accessible well water is evacuated (purged dry). Field measurements of these parameters will be taken and recorded in field notes, prior to purging and after each well volume of water has been purged.
-When purging a well with a diameter larger than 2", a submersible Redi-Flo2 pump can be used.
-Prior to usage, the pump assembly will be cleaned using a laboratory grade detergent and rinsed with analyte free water.
-The pump is lowered into the water column utilizing an attached nylon rope. DO NOT LOWER THE PUMP USING THE ELECTRICAL CORD OR HOSE.
-Once the pump has been lowered to the desired depth, the nylon rope is securely attached to an anchor at the ground surface (i.e. metal stake, truck bumper, etc). The power cord is attached to the speed controller which is attached to the generator.
-Slowly increase the speed of the controller until a desired flow rate is achieved. The pump should not be allowed to run dry.
-Purge water will be treated on-site utilizing a GAC unit.

Monitoring Well Sampling

-No-purge sampling will be conducted in previously sampled monitoring wells if: the water level is within the screened interval of the well or specifically asked for by the SCDHEC project manager.
-Immediately prior to sampling, laboratory provided labels will be placed on all sample vials and containers. These labels will include the site name, sample ID, analysis to be completed, date and time.
-Sampling will be conducted utilizing prepackaged, clear, disposable polyethylene bailers and nylon rope. Following sampling of a well, the bailer and rope will be properly disposed. A new set of Nitrile gloves will be worn at each monitoring well, and at any time samples are handled.
-The bailer is lowered into the well until it encounters the watertable, the bailer is then allowed to fill with water and is extracted from the well. Samples are placed in laboratory provided and approved sampling containers. Following sample collection, the samples are immediately placed in laboratory provided coolers, pre-filled with wet ice obtained from the MECI office.
-When requested by the SCDHEC project manager, passive diffusion bags (PDB) can be used to obtain no purge samples from discreet intervals within a water column or from wells were it is not possible to treat purge water on-site (i.e. DNAPL contamination).
-Prior to installation of a PDB, all equipment used should be washed with isopropanol and rinsed with analyte free water (weights, PDB clamps, etc.).
-Wearing Nitrile gloves, the PDB is filled with analyte free water, sealed with a PDB clamp according to the manufacturer and attached to a nylon rope. The PDB is then lowered into the well to a specified depth.
-After a minimum of two weeks in the well, the PDB is removed from the well and a sample taken using a disposable, prepackaged, sealed sampling straw to puncture the bag and fill sample vials.

-Once the samples are taken, they are to be immediately placed in laboratory provided coolers, pre-filled with wet ice obtained from the MECI office.

-One field duplicate will be taken for every twenty (20) monitoring wells sampled at a site. This blank is a duplicate sample taken from a monitoring well near the source area, and is sampled in accordance with MECI Standard Operating Procedures.

-One field blank will be prepared for each day a site is sampled. A field blank is prepared using lab provided DI water placed into laboratory provided sample containers.

-One trip blank per cooler used in sampling will be used at each site. The trip blank is prepared by the laboratory.

-Once a sample has been taken, a sample time will be recorded in the field notes, along with any information about monitoring well condition that should be brought to the attention of the project manager.

Water Supply Well (WSW) and Surface Water Sampling

-Before sampling any WSW, an attempt should be made to speak with the owner of the well, to inform them of the work requested by SCDHEC.

-WSW's should be sampled at the well head, or as close to the well head as possible. If it is not possible to obtain the sample from the well head, field notes should record exactly were the sample was taken (spigot on side of well house, spigot on home, etc.)

-The WSW should be purged prior to sampling by allowing the WSW to run until the holding tank has emptied or the well pump turns on. Wearing Nitrile gloves, the sample should be placed in approved, laboratory provided sampling containers. Following sample collection, the samples are immediately placed in laboratory provided coolers, pre-filled with wet ice obtained from the MECI office.

-Surface waters will be sampled near the location requested on the SCDHEC provided map. When sampling a moving water body, an attempt should be made to obtain the sample from an area of lower flow. Wearing Nitrile gloves, the sample will be collected and placed in approved, laboratory provided sampling containers. Following sample collection, the samples are immediately placed in laboratory proved coolers, pre-filled with wet ice obtained from the MECI office.

Will Sampling Equipment have to be cleaned and decontaminated or is everything disposable?

All equipment, excluding electronic water level indicators and field probes, is disposable.

If sampling equipment must be cleaned please give a detailed description of how this is done and the disposal of by-products from the cleaning and decontamination.

Prior to usage of non-disposable equipment, it is decontaminated with isopropanol applied by a Teflon squeeze bottle and rinsed with analyte free water. This rinse water is collected and run through a portable GAC (granulated activated carbon) unit.

Identify any equipment and support facilities needed. This may include such things as Fed-ex to ship the samples, a Geoprobe, field analysis done by another contractor (who must be certified), and electricity to run sampling equipment.

All samples will be shipped to the lab via courier or overnight shipping company.

Address the actions to be taken when problems occur in the field, and the person responsible for taking corrective action and how the corrective action will be documented.

Failure	Response	Documentation	Individual Responsible
Water level indicator not working properly	Attempt to clean probe, change battery, use back-up indicator if need be.	Record on field sheets, notify office staff. Take indicator out of rotation until problem identified and corrected.	Field Staff, Field Manager
Field meters not working	Attempt to clean probes, recalibrate in the field.	Record on field sheets, notify office staff. Take meters out of rotation until problem identified and corrected.	Field Staff, Field Manager
Wells not located	Use metal detector, measure from known points, contact project manager for additional information.	Record method used to attempt to locate the well on field sheets, and possibly reasoning for the well to be missing	Field Staff

Table 6A Field Corrective Action

B3 Sample Handling and Custody

1. ***How will the samples get from the Site to the Lab to ensure holding requirements are met?***

Following sample collection, the samples are immediately place in a laboratory provided cooler, pre-filled with wet ice obtained from the MECI office. Samples are transported to the MECI office once a sampling event is complete. A Chain of Custody (CoC) is filled out following the sampling event by the field staff. See attached CoC. If a lab provided courier is scheduled to visit the MECI offices the day following a sampling event, sampling coolers are repacked with wet ice, and left at the office for pick-up the following morning. If no courier is schedule to visit the MECI office the day following a sampling event, all sampling coolers are repacked with ice and are dropped off at a lab approved shipping company for overnight delivery to the lab.

2. ***How will the contactors cool the samples and keep the samples cool?***

All samples are kept on wet ice, obtained from MECI office.

3. ***How will the lab determine the temperature of the samples upon receipt? Will they be using a temperature blank?***

A calibrated thermometer and temperature blank will be used to document sample temperature. The temperature blank is immediately checked by the sample receiving technician upon arrival at the laboratory.

4. ***Where will the samples be stored in the Lab once they are received?***

All samples are stored in clean refrigeration units monitored and maintained at 4 degrees C + or – 2 degrees. Volatile organic samples are stored separately form all other samples.

5. ***Describe the chain of custody procedure and attach a copy of each chain of custody that will be used. If a Chain of Custody SOP exists from the Lab and the Contractor is willing to adhere to it, then this may be attached.***

A chain of custody (COC) will be filled out for each sampling event at each project site. COC to be signed by MECI and Shealy Environmental technician at time physical transfer of samples occurs to courier. Shealy uses the following COC procedures to protect sample integrity following pickup by their courier: A full time Sample Receiving Technician receives all samples and completes a Sample Receipt Checklist (SRC), which will identify any anomalies, if any exist the Sample Receiving Technician or Project Manager must resolve the deviation internally and/or notify the client to resolve the anomaly

B4 Analytical Methods

1. ***Identify the SOPs which will be used to analyze the samples, the method which the SOP references and the equipment or instrumentation that is needed:***

Parameter	SOP ID*	Method Referenced	Equipment	Comments
BTEX+Naph+MTBE+Oxygentaes	S-VO-002	8260B	GC/MS	
PAH's	S-SV-021	8270D	GC/MS	
EDB	S-SV-012	8011	GC	
Lead,T.	S-IM-022	6010C	ICP	
Ferrous Iron	S-IN-009	SM 3500-FED	Spectrophotometer	
Nitrate	S-IN-042	353.2	Auto-analyzer/Lachate	
Sulfate	S-IN-010	300.0	Ion Chromatograph	
Methane	S-VO-004	RSK-175	GC	
TOC	S-IN-030	Walkley-Black	N/A	
DRO - TPH	S-SV-001	8015C	GC	
pH	MECI SOP 4.3.6	*	YSI 63	
Conductivity	MECI SOP 4.3.6	*	YSI 63	
Dissolved Oxygen	MECI SOP 4.3.6	*	YSI 550A	
Temperature	MECI SOP 4.3.6	*	YSI 550A	

Table 7A Analytical SOPs and Referenced Methods

- **This can be a full name of a SOP, an abbreviation, or a number. In the latter two cases, the abbreviation or number must be associated with the full name of the SOP. See also Table 8A SOP Abbreviation Key.**

Abbreviation	Lab Identification of this SOP	Full Name of the SOP
S-VO-002	S-VO-002	GC/MS VOLATILES ANALYSIS BASED ON EPA METHODS 8260B AND 624 PREPARED BY EPA METHODS 5030B, 5035 AND 3585
S-SV-021	S-SV-021	GC/MS ANALYSIS BASED ON EPA METHOD 8270D PREPARED BY EPA METHODS 3520C, 3550C AND 3580A
S-SV-012	S-SV-012	GC/ECD ANALYSIS OF EDB AND DBCP BASED ON METHOD 8011 & 504.1
S-IM-022	S-IM-022	INDUCTIVELY COUPLED PLASMA ATOMIC EMISSION SPECTROSCOPY-PECTROMETRIC METHOD for TRACE ELEMENT ANALYSES METHOD 6010C
S-IN-009	S-IN-009	FERROUS IRON (PHENANTHROLINE METHOD) STANDARD METHOD 3500-Fe D
S-IN-042	S-IN-042	NITRATE+NITRITE NITROGEN BY EPA METHOD 353.2, NITRATE NITROGEN BY 353.2 SUBTRACTION, AND NITRITE NITROGEN BY EPA METHOD 353.2
S-IN-010	S-IN-010	INORGANIC ANIONS BY ION CHROMATOGRAPHY EPA METHOD 300.0 and SW-846 9056 and 9056A
S-VO-004	S-VO-004	STANDARD OPERATING PROCEDURE GC ANALYSIS BASED ON METHOD RSKSOP-175
S-IN-030	S-IN-030	TOTAL ORGANIC CARBON (TOC) WALKLEY-BLACK PROCEDURE
S-SV-001	S-SV-001	GC/FID DIESEL RANGE ORGANICS ANALYSIS BASED ON METHOD 8015B and/or 8015C PREPARED BY EPA METHODS 3520C, 3550C and 3580A
MECI SOP 4.3.6	MECI SOP 4.3.6	Sampling Standard operating procedures

Table 8A SOP Abbreviation Key

2. Identify procedures to follow when failures occur, identify the individual responsible for corrective action and appropriate documentation:

Failure	Response	Documented Where?	Individual Responsible
Field meters not working	Attempt to clean probes, recalibrate in the field.	Record on field sheets, notify office staff. Take meters out of rotation until problem identified and corrected.	Field Staff, Field Manager
COC or Sample Receiving issues	Call Client	Sample Receiving Checklist (SRC)	PM – Kelly Maberry kmaberry@shealylab.com
Analytical errors	Corrective Action Form (CAF)	CAF filled out by PM	Lab Director –Michael Woodrum mwoodrum@shealylab.com
QA/QC	Corrective Action Form	CAF filled out by PM	Lab Director –Michael

Failure	(CAF)		Woodrum mwoodrum@shealylab.com QA/QC Officer – Jami Savje Jsavje@shealylab.com
On time delivery	Corrective Action Form (CAF)	CAF filled out by PM	Lab Director –Michael Woodrum mwoodrum@shealylab.com QA/QC Officer – Jami Savje Jsavje@shealylab.com

Table 9A Corrective Action Procedures

3. Identify sample disposal procedures.

Analysis	Matrix	Schedule for disposal	Method for disposal	Comments
BTEX+Naph+MTBE+Oxygenates	Waters/Soils	Six Weeks	Tested for Hazardous Constituents and disposed as Hazardous or non-Hazardous waste.	
PAH's	Waters/Soils	Six Weeks	Tested for Hazardous Constituents and disposed as Hazardous or non-Hazardous waste.	
EDB	Waters/Soils	Six Weeks	Tested for Hazardous Constituents and disposed as Hazardous or non-Hazardous waste.	
Lead	Waters/Soils	Six Weeks	Tested for Hazardous Constituents and disposed as Hazardous or non-Hazardous waste.	
Ferrous Iron	Waters/Soils	Six Weeks	Tested for Hazardous Constituents and disposed as	

			Hazardous or non-Hazardous waste.	
Nitrate,Sulfate	Waters/Soils	Six Weeks	Tested for Hazardous Constituents and disposed as Hazardous or non-Hazardous waste.	
Methane	Waters/Soils	Six Weeks	Tested for Hazardous Constituents and disposed as Hazardous or non-Hazardous waste.	
All	Water	On-Site	Portable Granulated Activated Carbon (GAC) Unit	All waste water produced from sampling and decontamination activities will be run through a GAC unit

Table 10A Sample Disposal Procedures

4. Provide SOPs for the Kerr Method or the Ferrous Iron Method if these are parameters for this study. This can be attached or written here. If attached please note that it is an attachment and where it is located (if applicable).

B5 Quality Control Requirements:

All QC will follow the requirements laid out in Section B5 of the UST Programmatic QAPP.

B6 Field Instrument and Equipment Testing, Inspection and Maintenance

1. Identify all field and laboratory equipment needing periodic maintenance, the schedule for this, and the person responsible. Note the availability and location of spare parts.

Instrument	Serial Number	Type of Maintenance	Frequency	Parts needed/Location	Person responsible
Volatiles Mass Spec	ALL	Change traps, clean ion source, replace filaments	Periodic	Laboratory	MSV Analyst
Semivolatile Mass	ALL	Injection port	Periodic	Laboratory	MSSV Analyst

Specc		maintenance, ion source maintenance, column replacement			
ECD GC	ALL	Injection port maintenance, column replacement	Periodic	Laboratory	GC Analyst
Dionex IC	ALL	Replace auto sampler filter, tubing, line filter, sample Line and Waste Line, as needed. Check Reagent levels, flow rate, waste line.	Periodic	Laboratory	IC Analyst
ICP	ALL	Clean Sample introduction system , auto sampler, torch, Change spray chamber, torch tubing, tubing	Periodic	Laboratory	ICP Analyst
Leeman Mercury Analyzer	ALL	Clean GLS, Change Pump tubing, Nafion Dryer, Lamp	Periodic	Laboratory	Mercury Analyst
Flow Injection Analysis – Lachat 8000	ALL	Replace sample and reagent lines, replace light source, re-wrap heating coil, replace column	Periodic/As Needed	Laboratory	Nitrate Analyst
YSI 63	All	Replace probe tip	Yearly	Order from YSI	B. Kelly
YSI 63	All	Replace batteries	As Needed	In stock at office	Field Staff
YSI 63	All	General inspection for wear and tear on equipment	Daily	Major fixes will be done out of office	Field Staff
YSI 63	All	Check buffer solutions for expiration	Weekly	In stock at office	B. Kelly
YSI 550A	All	Replace membrane	4 to 8 weeks	In stock at office	Field Staff
YSI 550A	All	Replace batteries	As Needed	In stock at office	Field Staff
YSI 550A	All	General inspection for wear and tear on equipment	Daily	Major fixes will be done out of office	Field Staff

Table 11A Instrument and Equipment Maintenance

2. Identify the testing criteria for each lab or field instrument that is used to ensure the equipment is performing properly. Indicate how deficiencies, if found, will be resolved, re-inspections performed, and effectiveness of corrective action determined and documented. Give the person responsible for this

Instrument/Equipment & Serial Number	Type of Inspection	Requirement	Individual Responsible	Resolution of Deficiencies
Volatiles Mass Spec	Daily calibration check	Method Requirements	MSV Analyst	Recalibration or instrument

				maintenance
Semi-volatiles Mass Spec	Daily calibration check	Method Requirements	MSSV Analyst	Recalibration or instrument maintenance
ECD GC	Daily calibration check	Method Requirements	GC Analyst	Recalibration or instrument maintenance
Dionex IC	Daily calibration check	Method Requirements	Nitrate Analyst	Recalibration or instrument maintenance
ICP	Daily calibration check	Method Requirements	ICP Analyst	Recalibration or instrument maintenance
Leeman Mercury Analyzer	Daily calibration check	Method Requirements	Mercury Analyst	Recalibration or instrument maintenance
Flow Injection Analysis – Lachat 8000	Daily and continuing calibration check	See calibration criteria	INM Analyst	Recalibration or instrument maintenance
YSI 63	Daily calibration check	See calibration criteria	Field Staff	Recalibrate, general maintenance then recalibrate. Ship off for service by manufacturer
YSI 550A	Daily calibration check	See calibration criteria	Field Staff	Recalibrate, general maintenance then recalibrate. Ship off for service by manufacturer

Table 12A Instrument and Equipment Inspection

B7 Instrument Calibration and Frequency

1. Identify equipment, tools, and instruments for field or lab work that should be calibrated and the frequency.
2. Describe how the calibrations should be performed and documented, indicating test criteria and standards or certified equipment.
3. Identify how deficiencies should be resolved and documented. Identify the person responsible for corrective action.

Instrument	Calibration Procedure	Frequency of Calibration	Acceptance Criteria	Corrective Action (CA)	Person Responsible for CA	SOP Reference*
Volatiles Mass Spec	Minimum of 5 calibration	When indicated by continuous	Method Criteria	Detailed in SOP	MSV Analyst	S-VO-002

Instrument	Calibration Procedure	Frequency of Calibration	Acceptance Criteria	Corrective Action (CA)	Person Responsible for CA	SOP Reference*
	standards for all compounds	calibration verification standard				
Semi-volatile Mass Spec	Minimum of 5 calibration standards for all compounds	When indicated by calibration verification standard	Method Criteria	Detailed in SOP	MSSV Analyst	S-SV-021
GC ECD	Minimum of 5 calibration standards for all compounds	When indicated by calibration verification standard	Method Criteria	Detailed in SOP	GC Analyst	S-SV-012
Dionex IC	Minimum of 5 calibration standards for all compounds	When indicated by calibration verification standard	Method Criteria	Detailed in SOP	IC Analyst	S-IN-010
ICP	Minimum of 3 calibration standards for all compounds	When indicated by calibration verification standard	Method Criteria	Detailed in SOP	ICP Analyst	S-IM-022
Cetac Mercury Analyzer	Minimum of 5 calibration standards for all compounds	When indicated by calibration verification standard	Method Criteria	Detailed in SOP	Mercury Analyst	S-IM-006
Lacaht QuickChem 8000	Minimum of 5 calibration standards	Daily or when indicated by calibration verification standard	Method Criteria	Detailed in SOP	Nitrate Analyst	S-IN-042
YSI 63	pH Calibration	Daily	+/- 0.2 pH units	clean/replace probe tip, recalibrate	Field Staff	6a & 6b
YSI 63	Conductivity Calibration	As directed by manufacturer	+/- 10 uS	clean/replace probe tip, recalibrate	Field Staff	6a & 6b
YSI 550A	DO calibration	Daily	+/- 0.25 mg/l	clean/replace probe tip, recalibrate	Field Staff	6a & 6b
YSI 550A	Temperature Calibration	Daily	+/- 1 °C	clean/replace probe tip, recalibrate	Field Staff	6a & 6b
Electronic Water Level Indicator	Checked vs. Standard	Monthly	+/- 0.01 foot per 10 foot length	Replace probe tape	Field Staff	***
Oil/Water Interface probe	Checked vs. Standard	Monthly	+/- 0.01 foot per 10 foot length	Replace probe tape	Field Staff	***

Table 13A Instrument Calibration Criteria and Corrective Action

*** This can be a full name of a SOP, an abbreviation, or a number. In the latter two cases, the abbreviation or number must be associated with the full name of the SOP. See also Table 8A SOP Abbreviation Key.**

B8 Inspection/Acceptance Requirements for Supplies and Consumables

1. Identify critical supplies and consumables for field and laboratory, noting supply source, acceptance criteria, and procedures for tracking, storing and retrieving these materials.
2. Identify the individual(s) responsible for this.

Item	Vendor	Acceptance criteria	Handling/Storage Conditions	Person responsible for inspection and tracking.
Laboratory Chemicals	Fisher,VWR	Certificates of analysis and laboratory testing	Laboratory storage	Receiving and laboratory personnel
Laboratory standards	O2Si, Restek, High Purity, VHG, Supelco	Certificates of analysis and laboratory verifications	Vendor specific storage conditions	Laboratory Analysts
Sample Containers	Daniels Scientific, QEC	Certificates of analysis and laboratory testing	Bottle storage area	Sample receiving personnel
Clear, Disposable polyethylene Bailers	Preferred Pump	Individual sleeves intact, ball valve operational	Stored in Vehicle Bay, Off of the ground	B. Kelly, Field Staff
Nylon Rope	Preferred Pump	Covered with plastic	Stored in Vehicle Bay, Off of the ground	B. Kelly, Field Staff
Nitrile Gloves	Preferred Pump	Unopened box, no holes	Stored in Vehicle Bay, Off of the ground	B. Kelly, Field Staff
40 mL HCL preserved amber vials	Shealy Environmental Services	Custody seal intact	Stored in Vehicle Bay, Off of the ground	B. Kelly, Field Staff
250 mL HNO3 preserved metals vials	Shealy Environmental Services	Custody seal intact	Stored in Vehicle Bay, Off of the ground	B. Kelly, Field Staff
Coolers	Shealy Environmental Services	Intact	Stored in Vehicle Bay, Off of the ground	B. Kelly, Field Staff
pH Buffer	TRS Environmental, Enviroequipment	Within expiration date	Stored in calibration room	B. Kelly, Field Staff
Conductivity Standard	TRS Environmental, Enviroequipment	Within expiration date	Stored in calibration room	B. Kelly, Field Staff
DO Membranes	YSI, Enviroequipment	Clean, in box	Stored in calibration room	B. Kelly, Field Staff
Batteries	Any Store	Not previously used	Stored in calibration room	B. Kelly, Field Staff

Table 14A List of Consumables and Acceptance Criteria

B9 Data Acquisition Requirements (Non-Direct Measurements)

1. Identify data sources, for example, computer databases or literature files, or models that should be accessed or used.
2. Describe the intended use of this information and the rationale for their selection, i.e., its relevance to project.
3. Indicate the acceptance criteria for these data sources and/or models.

Data Source	Used for	Justification for use in this project	Comments

Table 15A Non-Direct Measurements

4. Identify key resources/support facilities needed.

There are no non-direct measurements in this project

B10 Data Management

1. Describe the data management scheme from field to final use and storage.

Following sample collection and chain of custody production, samples are shipped to the lab. Field work from the field staff is reviewed by the MECI project manager, and converted into digital form. All data entry is subsequently checked to validate the data entry. The original copies of the field work are stored in MECI files for a minimum of 5 years. Digital copies of the work are stored on the MECI server, which is backed up weekly, and stored for a minimum of 5 years. The digital copy of the field work is presented to SCDHEC with the final report.

2. How does the lab and field staff ensure that no unauthorized changes are made to the chain of custody, sampling notebooks, laboratory notebooks and computer records?

The laboratory maintains comprehensive Quality Control and Training Programs. All sample receipt data, sample log-in, and analytical data is peer reviewed, including review for inappropriate changes. Data management, review procedures and the Quality Systems Program are documented in the laboratory's Quality Manual and Standard Operating Procedures. The Quality Assurance Department oversees adherence to and review of these programs.

All MECI field work is produced using ink-pens. Any attempt to alter field data, after sampling is complete, can be readily identified. MECI keeps a carbon copy of the chain of custody after it is shipped to the lab. This copy is kept with the field work. If any change to the CoC are suspected, this original carbon copy can be use to identify potential changes.

3. How does the lab ensure that there are no errors in samples records including times when sample information is compiled, data calculated and/or transmitted?

Sample data acquisition software is reviewed periodically. The LIMS database is backed up daily and is able to be restored in the event of a system failure. These procedures are documented in laboratory SOP S-AD-003, LIMS. The IT Manager is responsible for these systems and procedures."

4. How will the data be archived once the report is produced? How can it be retrieved? (This applies to both electronic and hard copies).

Laboratory Hardcopy data stored off site is logged, maintained and archived by the Quality Assurance Department. Laboratory Electronic Data Reports are maintained through IT back up under the responsibility of the IT Systems Manager.

MECI keeps all field work and paper copies of reports in its in-house filing system. All paper copies are stored for a minimum of 5 years. Any file can be retrieved easily by going to the correct filing cabinet/box.

All electronic copies of reports generated are kept on the MECI server. This server is backed-up on a weekly basis. Any file stored on the MECI server can be retrieved instantly, by accessing the server. All electronic files are stored for a minimum of 5 years on the server.

Section C Assessment and Oversight

C1 Assessment and Response Actions

1. *The Contractor is supposed to observe field personnel daily during sampling activities to ensure samples are collected and handled properly and report problems to DHEC within 24 hours. . Please state who is responsible for doing this and what observations will be made. Will this person have the authority to stop work if severe problems are seen?*

Field audits can be conducted on any field personnel at any time. MECI field audits can be conducted by the Field Manger, who will be responsible for ensuring that field personnel adhere to the QAPP. If during a random field audit, severe problems are found, work will be stopped by the field manager and the QA officer contacted to determine corrective action. All problems must be corrected prior to any additional work being performed. Should it be requested, an On-site Field Audit can be scheduled with the SCDHEC project manager.

2. *The SCDHEC UST QAPP states that the Lab will receive an Offsite Technical System Audit. For this project, what assessments will be done on the Commercial Lab(s) that are being used—other than their certification audit? When or how often are these done? Who will the results be given to and who has the ability to stop work if problems are severe?*

The laboratory participates in annual Proficiency Testing through an approved vendor, Wibby Environmental. Proficiency Testing results are provided to the Office of Environmental Laboratory Certification.

C2 Reports to Management

UST 52 tech DOCKETING

Re: Groundwater Sampling Directive
Smith's Grocery, SC Hwy 49, York, SC
UST Permit #09322; CA#42131
Release reported June 30, 1993
Site-Specific QAPP Contractor Addendum & Cost Agreement received September 15, 2011
York County

Dear Ms. Smith:

The Underground Storage Tank (UST) Management Division of the South Carolina Department of Health and Environmental Control (SCDHEC) has reviewed the referenced addendum submitted on your behalf by Midlands Environmental Consultants, Inc (MECI). The groundwater sampling event should be conducted in accordance with the UST Quality Assurance Division Plan and must be conducted in compliance with all applicable regulations. A copy of SCDHEC QAPP for the UST Management Division is available at http://www.scdhec.gov/environment/lwm/html/ust.htm.

Groundwater sampling activities at the site should begin immediately upon receipt of this letter. Cost agreement number 42131 has been approved for the amount shown on the enclosed cost agreement form. Samples should be analyzed for BTEXMN, DCA, Oxygenates, and EDB. A **no-purge** groundwater sample should be collected from all monitoring wells associated with this facility unless the well screen does not bracket the water table then the well should be purged before sampling.

The Groundwater Sampling Report, contractor checklist, and invoice are due within 90 days from the date of this letter. The report (a signed .pdf copy on CD is preferred) submitted at the completion of these activities should include information as required in Section A9 of the UST Program QAPP.

MECI can submit an invoice for direct payment from State Underground Petroleum Environmental Response Bank (SUPERB) Account for preapproved costs. By law, the SUPERB Account cannot compensate any costs that are not pre-approved. Please note that applicable South Carolina certification requirements regarding laboratory services and report preparation must be satisfied. If the invoice is not submitted within 120 days from the date of this letter, monies allocated to pay this invoice will be uncommitted. This means that the invoice will not be processed for payment until all other committed funds are paid or monies become available. The UST Management Division, because of unnecessary dilution, cannot make decisions if the reporting limit of individual petroleum CoC exceeds Risk-Based Screening Levels (RBSLs). The UST Management Division encourages the use of 'J' values as necessary so the appropriate action can be determined for a release. Note that the Division may deny payment for any non-detect analysis where the reporting limit exceeds the RBSL. The Division cannot make closure decisions based on elevated reporting limits and the SUPERB Account will not reimburse for erroneously elevated detection limits.

Please note that Sections 44-2-110(4) and 44-2-130 of the SUPERB Statute state that no costs will be allowed unless prior approval from the Department is obtained. If for any reason additional tasks will be completed, these additional tasks and the associated costs must be pre-approved by the Department for the costs to be paid. The SCDHEC reserves the authority to pay only for work properly performed and/or technically justified and will only pay rates in accordance with established

criteria. Further, SCDHEC reserves the right to question and/or reject costs if deemed unreasonable and to audit project records at any time during the project or after completion of work. All work must be conducted by well drillers, laboratories, and contractors that are licensed by the state of South Carolina and SCDHEC.

The Department grants pre-approval for transportation of virgin petroleum impacted soil and groundwater from the referenced site to a permitted treatment facility. There can be no spillage or leakage in transport. All investigation-derived waste (IDW) must be properly contained and labeled prior to disposal. IDW should not be stored on-site longer than ninety (90) days. A copy of the disposal manifest and/or acceptance letter from the receiving facility that clearly designates the quantity received must be included as an appendix to the report. If the COC concentrations, based on laboratory analysis, are below Risk Based Screening Levels (RBSLs), please contact the project manager for approval to dispose of soil and/or groundwater on site. The SUPERB Account will not reimburse for transportation or treatment of soil and/or groundwater with concentrations below RBSLs.

On all correspondence regarding this site, please reference UST Permit #09322. Should you have any questions regarding this correspondence, please feel free to contact me at (803) 896-6397, fax me at (803) 896-6245, or e-mail me at thomadl@dhec.sc.gov.

Sincerely,

Debra L. Thoma

Re: GAC Change Directive
Smith's Grocery, SC Hwy 49, York, SC
UST Permit #09322; CA#42511
Release reported June 30, 1993
York County

Dear Ms. Smith

The Underground Storage Tank (UST) Management Division of the South Carolina Department of Health and Environmental Control (SCDHEC) recognizes your commitment to continue work at this site utilizing Midlands Environmental Consultants, Inc. (MECI). The next scope of work needed is the changing of the filters of the Granulated Activated Carbon (GAC) Units. A report documenting the changing of the GAC filters is due within 30 days from the date of this letter.

MECI can submit an invoice for direct billing from the State Underground Petroleum Environmental Response Bank (SUPERB) Account. Please note that all applicable South Carolina certification requirements apply to the laboratory services, well installation, and report preparation. All site rehabilitation activities must be performed and submitted by a South Carolina Certified Underground Storage Tank Site Rehabilitation Contractor.

On all correspondence or inquiries regarding this project, please reference **UST Permit #09322.** If you have any questions, please feel free to contact me by phone at (803) 896-6397, by fax at (803) 896-6245,or email at thomadl@dhec.sc.gov.

Sincerely,

Debra L. Thoma

Subject: Report of Groundwater Sampling and Chemical Analyses
Smith's Grocery
S.C. Highway 49
York, South Carolina
SCDHEC Site ID# 09322, CA # 42131
MECI Project Number 11-3516
Certified Site Rehabilitation Contractor UCC-0009

Dear Ms. Thoma,

On behalf of Ms. Lois Smith, Midlands Environmental Consultants Inc. (MECI) is pleased to submit the attached Report of Well Installation, Groundwater Sampling, and Chemical Analyses of Groundwater Samples for the referenced site. This report describes assessment activities conducted at the site in general accordance with South Carolina Department of Health and Environmental Control (SCDHEC) guidelines.

PROJECT INFORMATION

The subject site (Smith's Grocery) is located near the intersection of S.C. Highway 49 and Southern Pines Road, York, York County, South Carolina (see Figure 1). The site consists of an approximately 2.00 acre parcel of land (see Figure 2), and currently occupied by a convenience store. The site formerly maintained one 6,000 gallon gasoline UST and one 8,000 gallon gasoline UST. The South Carolina Department of Health and Environmental Control (SCDHEC) reported release of petroleum product from two single walled underground storage tanks (UST) at the subject site in June of 1993, which was confirmed in September of 1996.

The above project information is based on SCDHEC files.

Post Office Box 854, Lexington SC 29071 • 235-B Dooley Road, Lexington, SC 29073
Telephone: (803) 808-2043 • fax: (803) 808-2048

FIELD EXPLORATION

Field exploration conducted at the site includes:

- groundwater sampling; chemical analyses: and,
- water supply well sampling and chemical analyses.

MONITORING WELL SAMPLING AND CHEMICAL ANALYSES

On October 3, 2011, MECI personnel collected groundwater samples from twenty-five (25) wells at the subject site. Eleven (11) wells were gauged and determined to have insufficient water for sampling. Based on a request by SCDHEC personnel, not all of the wells were purged prior to sampling. Three (3) wells were purged prior to sampling. Purging was completed by bailing at least three well volumes of water from the well or until pH, conductivity, dissolved oxygen stabilized to within 10%, whichever occurred first. Sampling/purging was completed utilizing a prepackaged, clear, disposable polyethylene bailer and nylon rope. A new set of nitrile gloves were worn at each monitoring well, and at all time samples were handled. Field measurements of pH, conductivity, dissolved oxygen, and water temperature were obtained before well sampling process. MECI utilized YSI550A meter for DO (mg/L) and temperature readings (°C) and YSI63 meters for pH and conductivity (uS) readings. The attached Field Data Information Sheets and Table 1 presents the results of the field measurements obtained from the monitoring wells prior to sampling. The wells were sampled in accordance with SCDHEC's Quality Assurance Program Plan for the Underground Storage Tank Management Division (QAPP, Dated June 2011).

Groundwater samples obtained were sent to Shealy Environmental Services, Inc. of West Columbia, SC (SCDHEC Laboratory Certification #32010) for analysis.

The following sampling matrix contains well development and requested analyses for each well:

Monitoring Well	Purge	No Purge	Gauge Only	BTEX, Naphthalene, MTBE (EPA Method 8260-B)	EDB (EPA Method 8011)	1,2 DCA (EPA Method 8260-B)	8 Oxygenates (EPA Method 8260-B)	Total Lead (EPA Method 6010)	Sulfate (EPA Method 375.2)	Nitrate (EPA Method 335.2)	Methane (RSK Method)	PAH's (EPA Method 8270)	Ferrous Iron (Field Test)

***IW-3 (2)**				X	X	X	X						

Notes: BTEX = benzene, toluene, ethylbenzene, & total xylenes MTBE=methyl tertiary butyl ether 1,2 DCA = 1,2 dicloroethane
PAH = polycyclic aromatic hydrocarbons

***Indicates Field Duplicate**

The results of the laboratory analyses are summarized in Table 2, Table 3, and presented in the attached Analytical data.

During sampling activities, a total of 39 locking bolts were replaced on several monitoring wells at the subject site. Several bolts were not replaced at the subject site, due to the vault "wings" being broken. A locking cap was also replaced on well IW-19. The drummed purge water was treated on-site by MECI personnel utilizing an activated carbon drum. A total of 36.0 gallons of purge/development water were disposed of in this manner. A disposal manifest for the drummed purge water is attached at the end of this report.

WATER SUPPLY WELL SAMPLING AND CHEMICAL ANALYSES

On October 3, 2011, MECI personnel sampled four water supply wells. WSW-Hill and WSW-Swift both contain granular activated carbon units (GAC) (WSW-Smith does not have a GAC unit). Pre-Gac and Post-Gac samples were obtained from WSW-Hill and WSW-Swift. The following matrix contains well status, owner(s), and tax map identification numbers:

Water Supply Well Number	Well Owner	York County Tax Map Number:	Notes:	Well Status
WSW-Crock	Everette D. Crook Jr.	4890401001	3035 Clover Circle	Currently in Use
WSW-Hill	Tony H. Hill	4890401023	3049 Clover Circle	Currently in Use
WSW-Smith	Lois B. Smith	4560000005	3176 Charlotte Highway	Currently in Use
WSW-Swift	Gary A. Wiggam	4890401024	3043 Clover Circle	Currently in Use

The samples collected from WSW-Crock, WSW-Hill, WSW-Smith, and WSW-Swift were sent to Shealy Environmental Services, Inc. of West Columbia, SC (SCDHEC Laboratory Certification #32010) for analysis. The samples collected were analyzed for BTEX, Naphthalene, MTBE, 1, 2 DCA, 8 Oxygenates (EPA Method 8260B), and EDB (EPA Method 8011). The results of the laboratory analyses are summarized in Table 2, Table 3, and presented in Appendix B.

GROUNDWATER ANALYTICAL RESULTS

As discussed above, groundwater samples obtained from the monitoring wells were analyzed for dissolved phase petroleum constituents. The analytical results indicate petroleum impact to the local groundwater with the highest dissolved concentrations detected in the area of well IW-2. The analytical results indicate dissolved total BTEX concentrations ranging from levels below detection limits (BDL) to 109,800 micrograms per liter in IW-2. The analytical results indicate dissolved MTBE concentrations ranging from levels below detection limits (BDL) to 570J micrograms per liter in monitoring well MW-2. The analytical results indicate dissolved Naphthalene concentrations ranging from levels below detection limits (BDL) to 970J micrograms per liter in monitoring well MW-8. The analytical results indicate dissolved EDB concentrations ranging from levels below detection limits (BDL) to 120 micrograms per liter in monitoring well IW-3. The results of the analyses for each monitoring well and specific parameters are listed on Table 2, Table 3, and in the attached laboratory reports.

WATER SUPPLY WELL ANALYTICAL RESULTS

Six samples were collected from water supply wells located near the subject site. Analytical results indicate EBD concentrations at 0.034 micrograms per liter in the sample collected from WSW-Crock. Analytical results indicate Benzene concentrations at 120 micrograms per liter, total Xylenes concentrations at 22 micrograms per liter, Naphthalene concentrations at 2.4J micrograms per liter, 1,2 DCA concentrations at 13 micrograms per liter and EDB concentration at 0.68 micrograms per liter in the Pre-GAC sample obtained from WSW-Hill. Analytical results indicate Benzene concentrations at 3.4J micrograms per liter, 1,2 DCA concentrations at 1.0J micrograms per liter, and EDB concentration at 0.035 micrograms per liter in the Post-GAC sample obtained from WSW-Hill. Analytical results indicate Benzene concentrations at 190 micrograms per liter, total Xylenes concentrations at 75 micrograms per liter, MTBE concentrations at 0.49J micrograms per liter,

Naphthalene concentrations at 19 micrograms per liter, 1,2 DCA concentrations at 22 micrograms per liter, and EDB concentration at 0.71 micrograms per liter in the Pre-GAC sample obtained from WSW-Swift. Analytical results indicate Benzene concentrations at 1.2J micrograms per liter and 1,2 DCA concentrations at 1.2J micrograms per liter in the Post-GAC sample obtained from WSW-Swift. Samples collected from WSW-Smith did not indicate petroleum impact. The results of the analyses are presented on Table 2, Table 3, and in the attached laboratory reports.

ASSESSMENT SUMMARY

Groundwater elevation data for the October 13, 2011, gauging events was plotted, and points of equal elevation were interpolated between the monitoring wells. A groundwater contour map of the surficial aquifer was thus prepared and is presented on Figure 3. The current groundwater flow direction is to the east towards the Big Branch Creek.

The analytical results indicate petroleum impact to the local groundwater with the highest dissolved concentrations detected in the area of well IW-2. The analytical results indicate dissolved total BTEX concentrations ranging from levels below detection limits (BDL) to 109,800 micrograms per liter in IW-2. The analytical results indicate dissolved MTBE concentrations ranging from levels below detection limits (BDL) to 570J micrograms per liter in monitoring well MW-2. The analytical results indicate dissolved Naphthalene concentrations ranging from levels below detection limits (BDL) to 970J micrograms per liter in monitoring well MW-8. The analytical results indicate dissolved EDB concentrations ranging from levels below detection limits (BDL) to 120 micrograms per liter in monitoring well IW-3. The results of the analyses for each monitoring well and specific parameters are listed on Table 2, Table 3, and in the attached laboratory reports. Figure 4 depicts graphically the concentrations of Total BTEX (indicator for plume migration) dissolved in the groundwater at the site. Figure 5 depicts graphically the concentrations of Naphthalene dissolved in the groundwater at the site. Figure 6 depicts graphically the concentrations of EDB dissolved in the groundwater at the site.

CoC concentrations in the monitoring wells have generally remained constant since the February 1, 2010 sampling event. An approximate one-half foot decline in watertable elevation has occurred since the February 2011 sampling event and has contributed to eleven monitoring wells having insufficient water for sampling purposes. Furthermore, current analytical results indicate that "break through" is occurring from the GAC units installed on WSW-Hill and WSW-Swift. As discussed above, analytical results indicate Benzene concentrations at 1.2J micrograms per liter and 1,2 DCA concentrations at 1.2J micrograms per liter in the Post-GAC sample obtained from WSW-Swift. Analytical results indicate Benzene concentrations at 3.4J micrograms per liter, 1,2 DCA concentrations at 1.0J micrograms per liter, and EDB concentration at 0.035 micrograms per liter in the Post-GAC sample obtained from WSW-Hill. MECI recommends the carbon filters be changed on both WSW-Hill and WSW-Swift.

It is MECI's professional opinion that additional assessment is necessary to define the vertical and horizontal extent of contamination downgradient of the source area. MECI proposes replacing monitoring wells MW-10, MW-14, MW-15, MW-17, and MW-18 and to conduct vertical field screening/well installation. This proposed additional assessment would aid in determining the correct zone of infiltration into the rock interface which may be contributing to the contamination detected in WSW-Hill and WSW-Swift, and to insure adequate data points are installed to continue to monitor the contaminant plume effectively. MECI also recommends that several well vaults and pads should be replaced to insure that the wells are able to be properly secured. As discussed above, only 39 locking bolts of the 52 bolts noted during the QAPP preparation were able to be replaced during the

subject sampling event. Additionally, MECI recommends a series of AFVR events be conducted on monitoring wells MW-1R, MW-2, MW-8, IW-2, IW-3, and IW-5 to reduce dissolved CoC concentrations and to mitigate the spread of off-site contamination.

QUALIFICATIONS OF REPORT

The activities and evaluative approaches used in this assessment are consistent with those normally employed in hydrogeological assessment and waste management projects of this type. Our evaluation of site conditions has been based on our understanding of the site, project information provided to us, and data obtained in our exploration. The general subsurface conditions utilized in our evaluation have been based on interpretation of subsurface data between borings. Contents of this report are intended for the sole use by Ms. Lois Smith and the South Carolina Department of Health and Environmental Control, under mutually agreed upon terms and conditions. If other parties wish to rely on this report please contact MECI prior to their use of this information so that a mutual understanding and agreement of the terms and conditions of our services can be established.

Midlands Environmental appreciates the opportunity to offer our professional environmental services to you on this project. Please feel free to contact us at 803-808-2043 if you have any immediate questions or comments.

Sincerely,
Midlands Environmental Consultants, Inc.

35	Have the aquifer characteristics been provided and summarized on the appropriate form?			X
36	Have the Site conceptual model tables been included? (Tier 1 Risk Evaluation)			X
37	Has the topographic map been provided with all required elements? (Figure 1)	X		
38	Has the site base map been provided with all required elements? (Figure 2)	X		
39	Have the CoC site maps been provided? (Figure 4, Figure 5, and Figure 6)	X		
40	Has the site potentiometric map been provided? (Figure 3)	X		
41	Have the geologic cross-sections been provided? (Figure 6)			X
42	Have maps showing the predicted migration of the CoCs through time been provided? (Tier 2 Risk Evaluation)			X
43	Has the site survey been provided and include all necessary elements? (Appendix A)			X
44	Have the sampling logs, chain of custody forms, and the analytical data package been included with all required elements? (Appendix B)	X		
45	Is the laboratory performing the analyses properly certified?	X		
46	Has the tax map been included with all necessary elements? (Appendix C)			X
47	Have the soil boring/field screening logs been provided? (Appendix D)			X
48	Have the well completion logs and SCDHEC Form 1903 been provided? (Appendix E)			X
49	Have the aquifer evaluation forms, data, graphs, equations, etc. been provided? (Appendix F)			X
50	Have the disposal manifests been provided? See attached	X		
51	Has a copy of the local zoning regulations been provided? (Appendix H)			X
52	Has all fate and transport modeling been provided? (Appendix I)			X
53	Have copies of all access agreements obtained by the contractor been provided? (Appendix J)			X
54	Has a copy of this form been attached to the final report and are explanations for any missing or incomplete data been provided?	X

JOB NO. 11-3516
DATE October 13, 2011
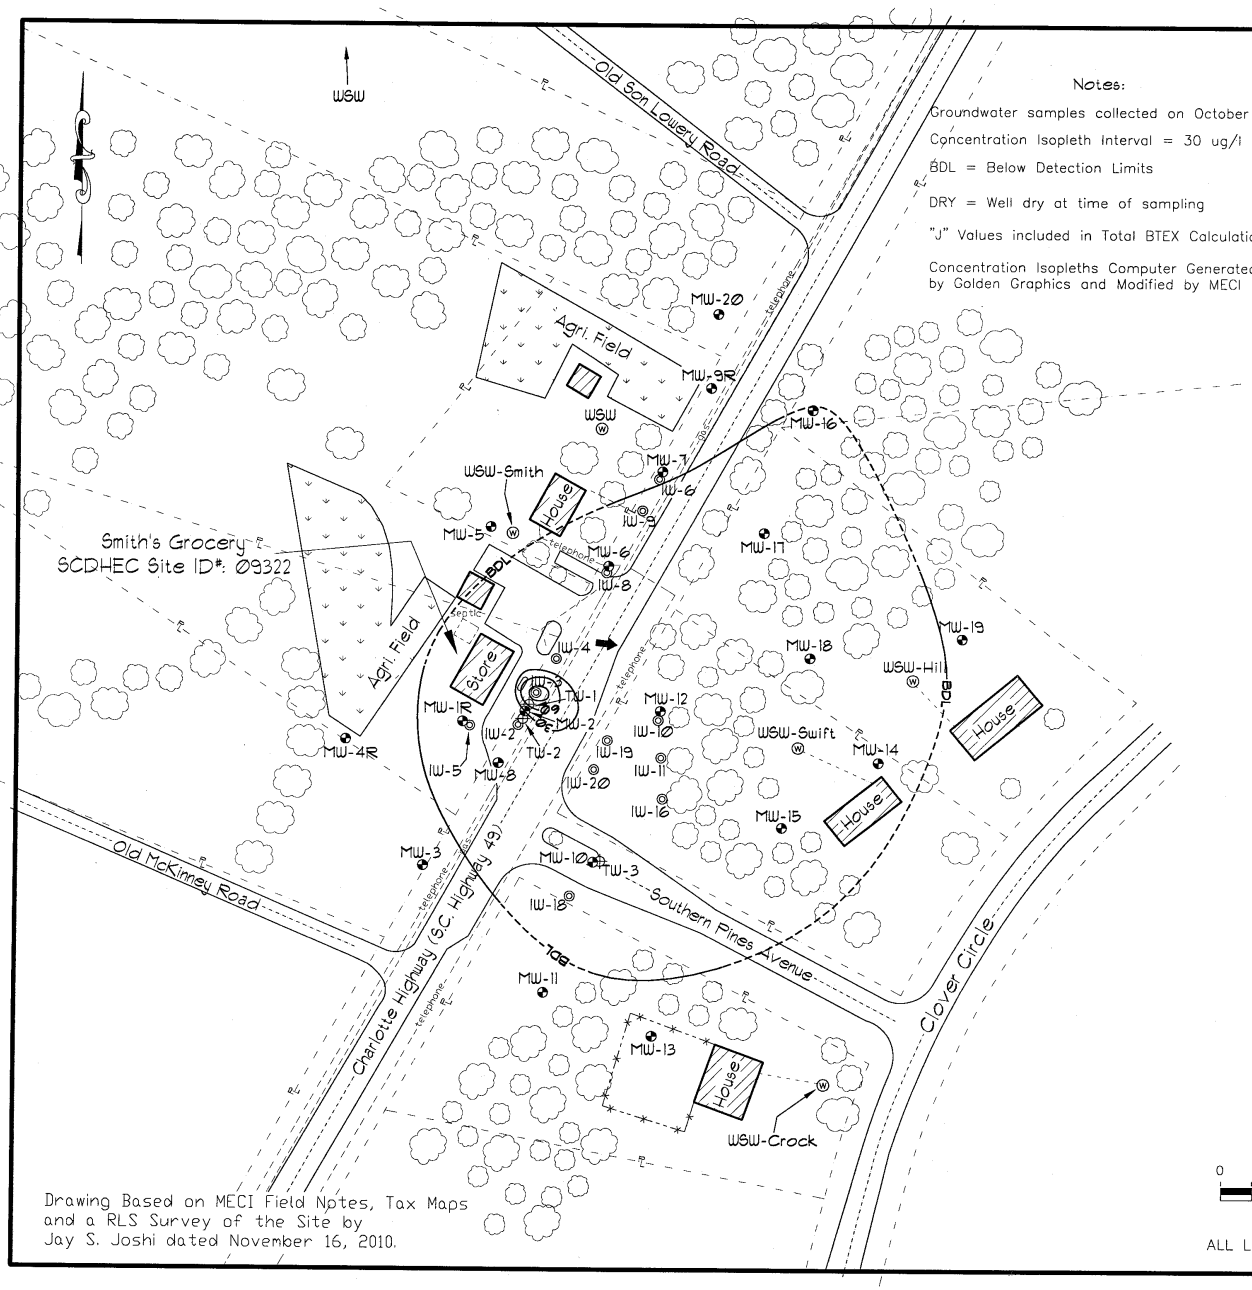
FIGURE 5



Drawing Based on MECI Field Notes, Tax Maps and a RLS Survey of the Site by Jay S. Joshi dated November 16, 2010.

Notes:

Groundwater samples collected on October 3, 2011.

Concentration Isopleth Interval = 30 ug/l

BDL = Below Detection Limits

DRY = Well dry at time of sampling

"J" Values included in Total BTEX Calculations

Concentration Isopleths Computer Generated using Surfer by Golden Graphics and Modified by MECI Personnel.

Explanation:

- Location of Watertable Bracketing Monitoring Well
- Location of Injection Well
- Location of Double Cased Monitoring Well
- Location of Water Supply Well
- Estimated Groundwater Flow Direction
- EDB Concentration Isopleth (ug/l)

COC Concentration Data

ANALYTICAL RESULTS

SHEALY ENVIRONMENTAL SERVICES, INC.

Report of Analysis

Midlands Environmental Consultants, Inc.
235 Dooley Rd
Lexington, SC 29073
Attention: Bryan Shane

Project Name: **Smith's Grocery**

Project Number: **11-3516**

Lot Number: **MJ04045**

Date Completed: **10/12/2011**

Kelly M. Maberry
Project Manager

This report shall not be reproduced, except in its entirety, without the written approval of Shealy Environmental Services, Inc.

The following non-paginated documents are considered part of this report: Chain of Custody Record and Sample Receipt Checklist.

Case Narrative
Midlands Environmental Consultants, Inc.
Lot Number: MJ04045

This Report of Analysis contains the analytical result(s) for the sample(s) listed on the Sample Summary following this Case Narrative. The sample receiving date is documented in the header information associated with each sample.

All results listed in this report relate only to the samples that are contained within this report.

Sample receipt, sample analysis, and data review have been performed in accordance with the most current approved NELAC standards, the Shealy Environmental Services, Inc. ("Shealy") Quality Assurance Management Plan (QAMP), standard operating procedures (SOPs), and Shealy policies. Any exceptions to the NELAC standards, the QAMP, SOPs or policies are qualified on the results page or discussed below.

Shealy is not NELAC certified for Phosphorus by 365.1 but is certified in SC and NC.

Shealy is not NELAC certified for VPH, but is certified for VPH in NC.

If you have any questions regarding this report please contact the Shealy Project Manager listed on the cover page.

Sample Receiving

Sample -035 for volatiles analysis contained two vials with air bubbles greater than ¼" or 6mm in diameter. The laboratory uses these vials for screening and the vials without bubbles for analysis whenever possible. Condition of samples is documented on the Sample Receipt Checklist (SRC).

GC/MS Volatiles

The LCS/LCSD associated with batch 69136 had tert-Butyl formate recovered above the acceptance limits. This demonstrates a high bias on analytical results. There were no detections for this compound in the samples associated with this batch; therefore, data quality is not impacted.

The method blank associated with sample -023 had ethanol detected at a concentration that was above the MDL but below the PQL. All samples associated with this method blank that have detections for ethanol have been flagged with a "B".

EDB/DBCP

Due to high detections for target compounds, samples -005, -012, -015, -016, -032 and -033 were diluted 50X, 20X, 40X, 200X, 50X and 200X, respectively. As a result, the associated surrogate was recovered outside of the acceptance limits. No corrective action was required, as dilutions of 5X and greater may impact surrogate recoveries.

The MS/MSD associated with sample -001 had EDB recovered outside of the acceptance limits. This demonstrates a matrix effect and data quality is not impacted.

Sample Summary

Midlands Environmental Consultants, Inc.

Lot Number: MJ04045

PQL = Practical quantitation limit

ND = Not detected at or above the MDL

Where applicable, all soil sample analysis are reported on a dry weight basis unless flagged with a "W"

B = Detected in the method blank

J = Estimated result < PQL and ≥ MDL

E = Quantitation of compound exceeded the calibration range

P = The RPD between two GC columns exceeds 40%

N = Recovery is out of criteria

H = Out of holding time

Parameter	CAS Number	Analytical Method	Result	Q	PQL	MDL	Units	Run

PQL = Practical quantitation limit

ND = Not detected at or above the MDL

Where applicable, all soil sample analysis are reported on a dry weight basis unless flagged with a "W"

B = Detected in the method blank

J = Estimated result < PQL and ≥ MDL

E = Quantitation of compound exceeded the calibration range

P = The RPD between two GC columns exceeds 40%

N = Recovery is out of criteria

H = Out of holding time

PQL = Practical quantitation limit

ND = Not detected at or above the MDL

Where applicable, all soil sample analysis are reported on a dry weight basis unless flagged with a "W"

B = Detected in the method blank

J = Estimated result < PQL and ≥ MDL

E = Quantitation of compound exceeded the calibration range

P = The RPD between two GC columns exceeds 40%

N = Recovery is out of criteria

H = Out of holding time

Re: Treatment of Purge Water
Smith Grocery
York, South Carolina
SCDHEC Site ID Number 09322
MECI Project Number 11-3516

To Whom It May Concern;

Midlands Environmental Consultants, Inc. is providing the following letter as certification that treatment of the referenced purge water complied with the conditions of "Proposed Conditions for Use of Portable Activated Carbon Units for the Treatment of Small Volumes of Petroleum Hydrocarbon Contaminated Groundwater", as described in the following:

Applicability:

Groundwater treated was obtained as a result development of wells and sampling.

Conditions:

1. The purge/bail water from all wells is mixed before usage of the Activated Carbon Unit.
2. No free-product was detected in any of the purge water drums.
3. Analytical results of from well sampling show average concentrations of petroleum hydrocarbon constituents less than 5000 parts per billion (ppb) Benzene and less than 20,000 ppb total BTEX.
4. The existing carbon pack will be replaced/reactivated every 5,000 gallons.
5. Record of usage is maintained by Contractor.
6. Any and all recommendations and conditions issued by the Manufacturer have been adhered to.
7. Any and all recommendations and conditions (even on a site by site basis) issued by the SCDHEC must be adhered to.

All purge waters were treated on-site using an up-flow treatment drum loaded with 30 pounds of activated carbon. Carbon will be loaded to a maximum of 3 pounds of total organic compounds or 5,000 gallons of development/purge water, whichever occurs first.

Post Office Box 854, Lexington SC 29071 • 235-B Dooley Road, Lexington, SC 29073
Telephone: (803) 808-2043 • fax: (803) 808-2048

A total of 36.0 gallons were treated on October 03, 2011 at the referenced site.

Midlands Environmental also tracks cumulative organic compounds adsorbed on the activated carbon to ensure the capacity of carbon mass is not over-charged. This data is available upon request.

Should you have any questions or comments, please contact the undersigned.

Sincerely,
Midlands Environmental Consultants, Inc.

Courtney M. Sanders

MECI Project Number 11-3643
Certified Site Rehabilitation Contractor UCC-0009

Dear Ms. Thoma,

On behalf of Ms. Lois Smith, Midlands Environmental Consultants Inc. (MECI) is pleased to submit the attached Report of Granular Activation Carbon (GAC) Unit Filter Change for the referenced site. This report describes assessment activities conducted at the site in general accordance with South Carolina Department of Health and Environmental Control (SCDHEC) guidelines.

PROJECT INFORMATION

The subject site (Smith's Grocery) is located near the intersection of S.C. Highway 49 and Southern Pines Road, York, York County, South Carolina (see Figure 1). The site consists of an approximately 2.00 acre parcel of land (see Figure 2), and currently occupied by a convenience store. The site formerly maintained one 6,000 gallon gasoline UST and one 8,000 gallon gasoline UST. The South Carolina Department of Health and Environmental Control (SCDHEC) reported release of petroleum product from two single walled underground storage tanks (UST) at the subject site in June of 1993, which was confirmed in September of 1996.

The above project information is based on SCDHEC files.

Post Office Box 854, Lexington SC 29071 • 235-B Dooley Road, Lexington, SC 29073
Telephone: (803) 808-2043 • fax: (803) 808-2048

FIELD EXPLORATION

Field exploration conducted at the site include:

- Granular Activated Carbon (GAC) Unit Filter Change.

GRANULAR ACTIVATED CARBON (GAC) UNIT FILTER CHANGE AND REPAIR

Analytical results from the October 3, 2011 sampling event indicate that "break through" is occurring on the GAC units installed on both WSW-Swift and WSW-Hill. These analytical results indicated Benzene concentrations at 1.2J micrograms per liter and 1,2 DCA concentrations at 1.2J micrograms per liter in the Post-GAC samples obtained from WSW-Swift. Furthermore, analytical results from the Post-GAC samples obtained from WSW-Hill indicated Benzene concentrations at 3.4J micrograms per liter, 1,2 DCA concentrations at 1.0J micrograms per liter, and EDB concentration at 0.035 micrograms per liter.

On October 26, 2011, MECI personnel mobilized to the subject site to change the GAC filters on two water supply wells (WSW-Swift and WSW-Hill). Both GAC filters were changed in accordance with SCDHEC regulations and the manufacturers (EcoWater Systems) guidelines. The spent gravel/carbon media was removed from both GAC units and the inside the carbon vessels were thoroughly cleaned. Both GAC units were refilled with 24 lbs of gravel (covering the bottom distributor) and completed with an approximate two cubic feet of new liquid phase activated carbon or until there was an approximate 12" inches of freeboard space between the top of activated carbon and the top distributor. After the filter change, each unit was allowed to properly backwash and the electronic component was reset to reflect appropriate time/backwash cycle (3 day -1,000 gallon cycle).

Prior to the October 26, 2011 GAC filter change, the most recent GAC unit filter change was completed on August 9, 2011. Based on time frame between the August 9, 2011 GAC filter change and the analytical results obtained during the October 3, 2011 sampling event, MECI recommends changing the GAC unit filters on a two month schedule.

Midlands Environmental appreciates the opportunity to offer our professional environmental services to you on this project. Please feel free to contact us at 803-808-2043 if you have any immediate questions or comments.

Sincerely,
Midlands Environmental Consultants, Inc.

Re: QAPP Contractor Addendum Directive for Additional Assessment
Smith's Grocery, SC Hwy 49, York, SC
UST Permit #09322
Release reported June 30, 1993
Groundwater Sampling Report received October 26, 2011
York County

Dear Mrs. Smith:

The Underground Storage Tank (UST) Management Division of the South Carolina Department of Health and Environmental Control (SCDHEC) reviewed the referenced report. The report indicates presence of chemicals of concern in the groundwater and the extent of the plume is not defined.

In accordance with Section 280.65 of the South Carolina Underground Storage Tank Control Regulations, sampling of the existing monitoring wells, replacement of dry monitoring wells, and the installation of additional monitoring wells as outlined in the UST Quality Assurance Program Plan (QAPP) is necessary. The additional assessment must be conducted in accordance with the UST Management Division QAPP and must be conducted in compliance with all applicable regulations. A copy of SCDHEC QAPP for the Underground Storage Tank Division is available at http://www.dhec.sc.gov/environment/lwm.

Please have your contractor complete and submit the QAPP Contractor Addendum and Cost Agreement within thirty (30) days of the date of this letter. The cost agreement should include sampling of all water supply wells within 1,000 feet of this facility. Every component may not be necessary to complete the above scope of work. The State Underground Petroleum Environmental Response Bank (SUPERB) Account allowable cost for each component is included on the Assessment Component Cost Agreement Form. **Please note that approval from the Department must be issued before work begins.**

On all correspondence regarding this site, please reference UST Permit #09322. Should you have any questions regarding this correspondence, please feel free to contact me at (803) 896-6397, fax me at (803) 896-6245, or e-mail me at thomadl@dhec.sc.gov.

Sincerely,

Debra L. Thoma

Dear Ms. Thoma,

Midlands Environmental Consultants Inc. (MECI) is pleased to submit the attached QAPP Contractor Addendum for the referenced site.

On December 7, 2011, MECI personnel performed a site visit to the subject site to evaluate site conditions, locate water supply wells and identify potential problems for future sampling activities.

If you have any question or comments please feel free to contact us at 803-808-2043.

Sincerely,
Midlands Environmental Consultants, Inc.

Table 2A Addendum Role Identification and Contact Information

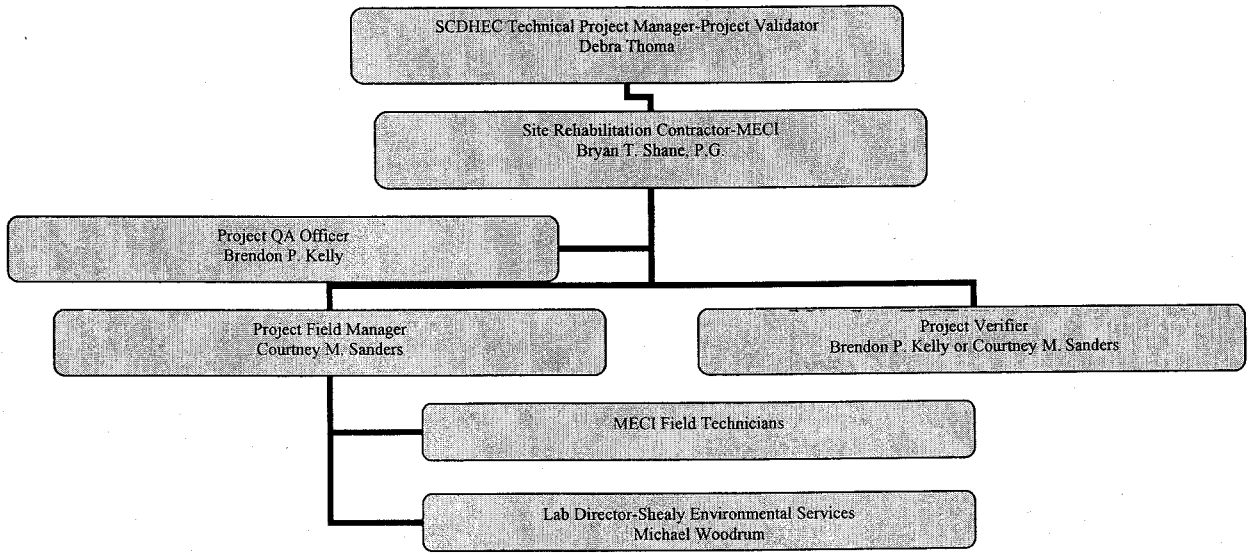

Figure 1A Organizational Chart

A5 Problem Definition/Background

Discuss the background (as much as is known) of the site and appropriate historical information, and why this site is being assessed.

The subject site (Smith's Grocery) is located near the intersection of S.C. Highway 49 and Southern Pines Road, York, York County, South Carolina (see Figure 1). The site consists of an approximately 2.00 acre parcel of land (see Figure 2), and currently occupied by a convenience store. The site formerly maintained one 6,000 gallon gasoline UST and one 8,000 gallon gasoline UST. The South Carolina Department of Health and Environmental Control (SCDHEC) reported release of petroleum product from two single walled underground storage tanks (UST) at the subject site in June of 1993, which was confirmed in September of 1996.

Previous sampling events show petroleum contamination in WSW-Hill and WSW-Swift. These water supply wells have been fitted with granulated activated carbon (GAC) units, but break through has been documented. In addition to the four known water supply wells (WSW-Smith, WSW-Crock, WSW-Hill & WSW-Swift), twenty-six (26) additional water supply wells were identified during our site visit.

Please answer the following: Does this project fall under UST or Brownfields area?

Underground Storage Tank Division

A6 Project/Task Description

1. ***Summarize what is known about the work to be done. This can be a short sentence indicating what the Scope of this project is (see Master QAPP Section A6).***

Due to known breakthrough in the GAC units on WSW-Hill and WSW-Smith, MECI proposes changing the carbon in these units. Additionally, to gather more information for an additional assessment at the subject site, MECI proposes sampling all known water supply wells located within 1,000 feet of the subject site. This sampling event will help determine if any other water supply wells have been impacted, and if they have, will help define the area that requires additional assessment at the subject site.

2. ***The work will begin within*** fourteen (14) days of receipt of approved QAPP contractors addendum ***after cost approval and sampling should be complete by*** twenty-one (21) days of receipt of approved QAPP contractors addendum.

3. ***Are there are time or resource constraints? Include those factors that may interfere with the tentative schedule.***

Factors that may prevent schedule work will be, but not limited to, inclement weather, equipment malfunction, and machine failure.

A7 Data Quality Objectives (DQOs) and Data Quality Indicators (DQIs)

The subject site (Smith's Grocery) is located near the intersection of S.C. Highway 49 and Southern Pines Road, York, York County, South Carolina. The proposed work will be conducted on numerous properties surrounding the subject site. (Please see attached Tax Map for WSW information)

A8 Training and Certificates

Required training and licenses:

Table 5A Sampling Activities

B2 Sampling Methods

Please note: The contractor must follow sampling protocols as given in the UST QAPP.

***Estimate* the number of samples of each matrix that are expected to be collected:**

Soil _____

Ground Water from monitoring wells _____0____

From Drinking/Irrigation water wells _____40____

Field Duplicate Collection _____2____

Field Blank Collection _____1____

Trip Blank _____1____

From surface water features _____0____

Total number of Water samples _____44____

Notes:
During the December 7, 2011 site visit, thirty-eight (38) water supply wells were located (WSW-Swift & WSW-Hill have GAC units, and will be sampled pre- and post- GAC).

Samples will be analyzed by Shealy Environmental Services, Inc. for BTEX, Napth, MTBE, 8-Oxygenates (8260B), and EDB (8011).

For the sample matrices indicated above, please describe how samples will be collected and the equipment needed.

Water Supply Well (WSW) and Surface Water Sampling

-Before sampling any WSW, an attempt should be made to speak with the owner of the well, to inform them of the work requested by SCDHEC.
-WSW's should be sampled at the well head, or as close to the well head as possible. If it is not possible to obtain the sample from the well head, field notes should record exactly were the sample was taken (spigot on side of well house, spigot on home, etc.)
-The WSW should be purged prior to sampling by allowing the WSW to run until the holding tank has emptied or the well pump turns on. Wearing Nitrile gloves, the sample should be placed in approved, laboratory provided sampling containers. Following sample collection, the samples are immediately placed in laboratory provided coolers, pre-filled with wet ice obtained from the MECI office.
-One field duplicate will be taken for every twenty (20) monitoring wells/water supply wells sampled at a site. This blank is a duplicate sample taken from water supply well WSW-4, and is sampled in accordance with MECI Standard Operating Procedures.
-One field blank will be prepared for each day a site is sampled. A field blank is prepared using lab provided DI water placed into laboratory provided sample containers.
-One trip blank per cooler used in sampling will be used at each site. The trip blank is prepared by the laboratory.
-Once a sample has been taken, a sample time will be recorded in the field notes, along with any information about monitoring well condition that should be brought to the attention of the project manager.

Will Sampling Equipment have to be cleaned and decontaminated or is everything disposable?

All equipment, excluding electronic water level indicators and field probes, is disposable.

If sampling equipment must be cleaned please give a detailed description of how this is done and the disposal of by-products from the cleaning and decontamination.

Prior to usage of non-disposable equipment, it is decontaminated with isopropanol applied by a Teflon squeeze bottle and rinsed with analyte free water. This rinse water is collected and run through a portable GAC (granulated activated carbon) unit.

Identify any equipment and support facilities needed. This may include such things as Fed-ex to ship the samples, a Geoprobe, field analysis done by another contractor (who must be certified), and electricity to run sampling equipment.

All samples will be shipped to the lab via courier or overnight shipping company. Please see MECI Monitoring Well Sampling SOP for sample shipping procedures.

Address the actions to be taken when problems occur in the field, and the person responsible for taking corrective action and how the corrective action will be documented.

Failure	Response	Documentation	Individual Responsible
Water level indicator not working properly	Attempt to clean probe, change battery, use back-up indicator if need be.	Record on field sheets, notify office staff. Take indicator out of rotation until problem identified and corrected.	Field Staff, Field Manager
Field meters not working	Attempt to clean probes, recalibrate in the field.	Record on field sheets, notify office staff. Take meters out of rotation until problem identified and corrected.	Field Staff, Field Manager
Wells not located	Use metal detector, measure from known points, contact project manager for additional information.	Record method used to attempt to locate the well on field sheets, and possibly reasoning for the well to be missing	Field Staff

Table 6A Field Corrective Action

B3 Sample Handling and Custody

1. ***How will the samples get from the Site to the Lab to ensure holding requirements are met?***

Following sample collection, the samples are immediately place in a laboratory provided cooler, pre-filled with wet ice obtained from the MECI office. Samples are transported to the MECI office once a sampling event is complete. A Chain of Custody (CoC) is filled out following the sampling event by the field staff. See attached CoC. If a lab provided courier is scheduled to visit the MECI offices the day following a sampling event, sampling coolers are repacked with wet ice, and left at the office for pick-up the following morning. If no courier is schedule to visit the MECI office the day following a sampling event, all sampling coolers are repacked with ice and are dropped off at a lab approved shipping company for overnight delivery to the lab.

2. ***How will the contactors cool the samples and keep the samples cool?***

All samples are kept on wet ice, obtained from MECI office.

3. ***How will the lab determine the temperature of the samples upon receipt? Will they be using a temperature blank?***

A calibrated thermometer and temperature blank will be used to document sample temperature. The temperature blank is immediately checked by the sample receiving technician upon arrival at the laboratory.

4. ***Where will the samples be stored in the Lab once they are received?***

All samples are stored in clean refrigeration units monitored and maintained at 4 degrees C + or – 2 degrees. Volatile organic samples are stored separately form all other samples.

5. ***Describe the chain of custody procedure and attach a copy of each chain of custody that will be used. If a Chain of Custody SOP exists from the Lab and the Contractor is willing to adhere to it, then this may be attached.***

A chain of custody (COC) will be filled out for each sampling event at each project site. COC to be signed by MECI and Shealy Environmental technician at time physical transfer of samples occurs to courier. Shealy uses the following COC procedures to protect sample integrity following pickup by their courier: A full time Sample Receiving Technician receives all samples and completes a Sample Receipt Checklist (SRC), which will identify any anomalies, if any exist the Sample Receiving Technician or Project Manager must resolve the deviation internally and/or notify the client to resolve the anomaly

B4 Analytical Methods

1. ***Identify the SOPs which will be used to analyze the samples, the method which the SOP references and the equipment or instrumentation that is needed:***

Parameter	SOP ID*	Method Referenced	Equipment	Comments
BTEX+Naph+MTBE+Oxygentaes	S-VO-002	8260B	GC/MS	
PAH's	S-SV-021	8270D	GC/MS

2. Identify procedures to follow when failures occur, identify the individual responsible for corrective action and appropriate documentation:

Failure	Response	Documented Where?	Individual Responsible
Field meters not working	Attempt to clean probes, recalibrate in the field.	Record on field sheets, notify office staff. Take meters out of rotation until problem identified and corrected.	Field Staff, Field Manager
COC or Sample Receiving	Call Client	Sample Receiving Checklist (SRC)	PM – Kelly Maberry kmaberry@shealylab.com

issues			
Analytical errors	Corrective Action Form (CAF)	CAF filled out by PM	Lab Director –Michael Woodrum mwoodrum@shealylab.com
QA/QC Failure	Corrective Action Form (CAF)	CAF filled out by PM	Lab Director –Michael Woodrum mwoodrum@shealylab.com QA/QC Officer – Jami Savje Jsavje@shealylab.com
On time delivery	Corrective Action Form (CAF)	CAF filled out by PM	Lab Director –Michael Woodrum mwoodrum@shealylab.com QA/QC Officer – Jami Savje Jsavje@shealylab.com

Table 9A Corrective Action Procedures

3. Identify sample disposal procedures.

Analysis	Matrix	Schedule for disposal	Method for disposal	Comments
BTEX+Naph+MTBE+Oxygenates	Waters/Soils	Six Weeks	Tested for Hazardous Constituents and disposed as Hazardous or non-Hazardous waste.	
PAH's	Waters/Soils	Six Weeks	Tested for Hazardous Constituents and disposed as Hazardous or non-Hazardous waste.	
EDB	Waters/Soils	Six Weeks	Tested for Hazardous Constituents and disposed as Hazardous or non-Hazardous waste.	
Lead	Waters/Soils	Six Weeks	Tested for Hazardous Constituents and disposed as Hazardous or non-Hazardous	

			waste.	
Ferrous Iron	Waters/Soils	Six Weeks	Tested for Hazardous Constituents and disposed as Hazardous or non-Hazardous waste.	
Nitrate,Sulfate	Waters/Soils	Six Weeks	Tested for Hazardous Constituents and disposed as Hazardous or non-Hazardous waste.	
Methane	Waters/Soils	Six Weeks	Tested for Hazardous Constituents and disposed as Hazardous or non-Hazardous waste.	
All	Water	On-Site	Portable Granulated Activated Carbon (GAC) Unit	All waste water produced from sampling and decontamination activities will be run through a GAC unit

Table 10A Sample Disposal Procedures

4. Provide SOPs for the Kerr Method or the Ferrous Iron Method if these are parameters for this study. This can be attached or written here. If attached please note that it is an attachment and where it is located (if applicable).

B5 Quality Control Requirements:

All QC will follow the requirements laid out in Section B5 of the UST Programmatic QAPP.

B6 Field Instrument and Equipment Testing, Inspection and Maintenance

1. Identify all field and laboratory equipment needing periodic maintenance, the schedule for this, and the person responsible. Note the availability and location of spare parts.

Instrument	Serial Number	Type of Maintenance	Frequency	Parts	Person responsible

				needed/Location	
Volatiles Mass Spec	ALL	Change traps, clean ion source, replace filaments	Periodic	Laboratory	MSV Analyst
Semivolatile Mass Specc	ALL	Injection port maintenance, ion source maintenance, column replacement	Periodic	Laboratory	MSSV Analyst
ECD GC	ALL	Injection port maintenance, column replacement	Periodic	Laboratory	GC Analyst
Dionex IC	ALL	Replace auto sampler filter, tubing, line filter, sample Line and Waste Line, as needed. Check Reagent levels, flow rate, waste line.	Periodic	Laboratory	IC Analyst
ICP	ALL	Clean Sample introduction system , auto sampler, torch, Change spray chamber, torch tubing, tubing	Periodic	Laboratory	ICP Analyst
Leeman Mercury Analyzer	ALL	Clean GLS, Change Pump tubing, Nafion Dryer, Lamp	Periodic	Laboratory	Mercury Analyst
Flow Injection Analysis – Lachat 8000	ALL	Replace sample and reagent lines, replace light source, re-wrap heating coil, replace column	Periodic/As Needed	Laboratory	Nitrate Analyst
YSI 63	All	Replace probe tip	Yearly	Order from YSI	B. Kelly
YSI 63	All	Replace batteries	As Needed	In stock at office	Field Staff
YSI 63	All	General inspection for wear and tear on equipment	Daily	Major fixes will be done out of office	Field Staff
YSI 63	All	Check buffer solutions for expiration	Weekly	In stock at office	B. Kelly
YSI 550A	All	Replace membrane	4 to 8 weeks	In stock at office	Field Staff
YSI 550A	All	Replace batteries	As Needed	In stock at office	Field Staff
YSI 550A	All	General inspection for wear and tear on equipment	Daily	Major fixes will be done out of office	Field Staff

Table 11A Instrument and Equipment Maintenance

2. Identify the testing criteria for each lab or field instrument that is used to ensure the equipment is performing properly. Indicate how deficiencies, if found, will be resolved, re-inspections performed, and effectiveness of corrective action determined and documented. Give the person responsible for this

Instrument/Equipment & Serial Number	Type of Inspection	Requirement	Individual Responsible	Resolution of Deficiencies
Volatiles Mass Spec	Daily calibration check	Method Requirements	MSV Analyst	Recalibration or instrument maintenance
Semi-volatiles Mass Spec	Daily calibration check	Method Requirements	MSSV Analyst	Recalibration or instrument maintenance
ECD GC	Daily calibration check	Method Requirements	GC Analyst	Recalibration or instrument maintenance
Dionex IC	Daily calibration check	Method Requirements	Nitrate Analyst	Recalibration or instrument maintenance
ICP	Daily calibration check	Method Requirements	ICP Analyst	Recalibration or instrument maintenance
Leeman Mercury Analyzer	Daily calibration check	Method Requirements	Mercury Analyst	Recalibration or instrument maintenance
Flow Injection Analysis – Lachat 8000	Daily and continuing calibration check	See calibration criteria	INM Analyst	Recalibration or instrument maintenance
YSI 63	Daily calibration check	See calibration criteria	Field Staff	Recalibrate, general maintenance then recalibrate. Ship off for service by manufacturer
YSI 550A	Daily calibration check	See calibration criteria	Field Staff	Recalibrate, general maintenance then recalibrate. Ship off for service by manufacturer

Table 12A Instrument and Equipment Inspection

B7 Instrument Calibration and Frequency

1. Identify equipment, tools, and instruments for field or lab work that should be calibrated and the frequency.
2. Describe how the calibrations should be performed and documented, indicating test criteria and standards or certified equipment.

3. Identify how deficiencies should be resolved and documented. Identify the person responsible for corrective action.

Instrument	Calibration Procedure	Frequency of Calibration	Acceptance Criteria	Corrective Action (CA)	Person Responsible for CA	SOP Reference*
Volatiles Mass Spec	Minimum of 5 calibration standards for all compounds	When indicated by continuous calibration verification standard	Method Criteria	Detailed in SOP	MSV Analyst	S-VO-002
Semi-volatile Mass Spec	Minimum of 5 calibration standards for all compounds	When indicated by calibration verification standard	Method Criteria	Detailed in SOP	MSSV Analyst	S-SV-021
GC ECD	Minimum of 5 calibration standards for all compounds	When indicated by calibration verification standard	Method Criteria	Detailed in SOP	GC Analyst	S-SV-012
Dionex IC	Minimum of 5 calibration standards for all compounds	When indicated by calibration verification standard	Method Criteria	Detailed in SOP	IC Analyst	S-IN-010
ICP	Minimum of 3 calibration standards for all compounds	When indicated by calibration verification standard	Method Criteria	Detailed in SOP	ICP Analyst	S-IM-022
Cetac Mercury Analyzer	Minimum of 5 calibration standards for all compounds	When indicated by calibration verification standard	Method Criteria	Detailed in SOP	Mercury Analyst	S-IM-006
Lacaht QuickChem 8000	Minimum of 5 calibration standards	Daily or when indicated by calibration verification standard	Method Criteria	Detailed in SOP	Nitrate Analyst	S-IN-042
YSI 63	pH Calibration	Daily	+/- 0.2 pH units	clean/replace probe tip, recalibrate	Field Staff	6a & 6b
YSI 63	Conductivity Calibration	As directed by manufacturer	+/- 10 uS	clean/replace probe tip, recalibrate	Field Staff	6a & 6b
YSI 550A	DO calibration	Daily	+/- 0.25 mg/l	clean/replace probe tip, recalibrate	Field Staff	6a & 6b
YSI 550A	Temperature Calibration	Daily	+/- 1 °C	clean/replace probe tip, recalibrate	Field Staff	6a & 6b
Electronic Water Level	Checked vs. Standard	Monthly	+/- 0.01 foot per 10 foot length	Replace probe tape	Field Staff	***

Instrument	Calibration Procedure	Frequency of Calibration	Acceptance Criteria	Corrective Action (CA)	Person Responsible for CA	SOP Reference*
Indicator						
Oil/Water Interface probe	Checked vs. Standard	Monthly	+/- 0.01 foot per 10 foot length	Replace probe tape	Field Staff	***

Table 13A Instrument Calibration Criteria and Corrective Action

*** This can be a full name of a SOP, an abbreviation, or a number. In the latter two cases, the abbreviation or number must be associated with the full name of the SOP. See also Table 8A SOP Abbreviation Key.**

B8 Inspection/Acceptance Requirements for Supplies and Consumables

1. Identify critical supplies and consumables for field and laboratory, noting supply source, acceptance criteria, and procedures for tracking, storing and retrieving these materials.
2. Identify the individual(s) responsible for this.

Item	Vendor	Acceptance criteria	Handling/Storage Conditions	Person responsible for inspection and tracking.
Laboratory Chemicals	Fisher,VWR	Certificates of analysis and laboratory testing	Laboratory storage	Receiving and laboratory personnel
Laboratory standards	O2Si, Restek, High Purity, VHG, Supelco	Certificates of analysis and laboratory verifications	Vendor specific storage conditions	Laboratory Analysts
Sample Containers	Daniels Scientific, QEC	Certificates of analysis and laboratory testing	Bottle storage area	Sample receiving personnel
Clear, Disposable polyethylene Bailers	Preferred Pump	Individual sleeves intact, ball valve operational	Stored in Vehicle Bay, Off of the ground	B. Kelly, Field Staff
Nylon Rope	Preferred Pump	Covered with plastic	Stored in Vehicle Bay, Off of the ground	B. Kelly, Field Staff
Nitrile Gloves	Preferred Pump	Unopened box, no holes	Stored in Vehicle Bay, Off of the ground	B. Kelly, Field Staff
40 mL HCL preserved amber vials	Shealy Environmental Services	Custody seal intact	Stored in Vehicle Bay, Off of the ground	B. Kelly, Field Staff
250 mL HNO3 preserved metals vials	Shealy Environmental Services	Custody seal intact	Stored in Vehicle Bay, Off of the ground	B. Kelly, Field Staff
Coolers	Shealy Environmental Services	Intact	Stored in Vehicle Bay, Off of the ground	B. Kelly, Field Staff
pH Buffer	TRS Environmental, Enviroequipment	Within expiration date	Stored in calibration room	B. Kelly, Field Staff
Conductivity Standard	TRS Environmental, Enviroequipment	Within expiration date	Stored in calibration room	B. Kelly, Field Staff

DO Membranes	YSI, Enviroequipment	Clean, in box	Stored in calibration room	B. Kelly, Field Staff
Batteries	Any Store	Not previously used	Stored in calibration room	B. Kelly, Field Staff

Table 14A List of Consumables and Acceptance Criteria

B9 Data Acquisition Requirements (Non-Direct Measurements)

1. Identify data sources, for example, computer databases or literature files, or models that should be accessed or used.
2. Describe the intended use of this information and the rationale for their selection, i.e., its relevance to project.
3. Indicate the acceptance criteria for these data sources and/or models.

Data Source	Used for	Justification for use in this project	Comments
Small scope assessment sampling and monitoring well installation reports	Historic groundwater and CoC concentration data. Lithology and well construction data from previous MWI's	Establish the type of drilling rig required, time for sampling and any other potential problems that may be encountered.	Previous assessment reports will be used to determine the amount of carbon required to change the GAC unit.

Table 15A Non-Direct Measurements

4. Identify key resources/support facilities needed.

There are no non-direct measurements in this project

B10 Data Management

1. Describe the data management scheme from field to final use and storage.

Following sample collection and chain of custody production, samples are shipped to the lab. Field work from the field staff is reviewed by the MECI project manager, and converted into digital form. All data entry is subsequently checked to validate the data entry. The original copies of the field work are stored in MECI files for a minimum of 5 years. Digital copies of the work are stored on the MECI server, which is backed up weekly, and stored for a minimum of 5 years. The digital copy of the field work is presented to SCDHEC with the final report.

2. How does the lab and field staff ensure that no unauthorized changes are made to the chain of custody, sampling notebooks, laboratory notebooks and computer records?

The laboratory maintains comprehensive Quality Control and Training Programs. All sample receipt data, sample log-in, and analytical data is peer reviewed, including review for inappropriate changes. Data management, review procedures and the Quality Systems Program are documented in the laboratory's Quality Manual and Standard Operating Procedures. The Quality Assurance Department oversees adherence to and review of these programs.

All MECI field work is produced using ink-pens. Any attempt to alter field data, after sampling is complete, can be readily identified. MECI keeps a carbon copy of the chain of custody after it is shipped to the lab. This copy is kept with the field work. If any change to the CoC are suspected, this original carbon copy can be use to identify potential changes.

3. How does the lab ensure that there are no errors in samples records including times when sample information is compiled, data calculated and/or transmitted?

Sample data acquisition software is reviewed periodically. The LIMS database is backed up daily and is able to be restored in the event of a system failure. These procedures are documented in laboratory SOP S-AD-003, LIMS. The IT Manager is responsible for these systems and procedures."

4. How will the data be archived once the report is produced? How can it be retrieved? (This applies to both electronic and hard copies).

Laboratory Hardcopy data stored off site is logged, maintained and archived by the Quality Assurance Department. Laboratory Electronic Data Reports are maintained through IT back up under the responsibility of the IT Systems Manager.

MECI keeps all field work and paper copies of reports in its in-house filing system. All paper copies are stored for a minimum of 5 years. Any file can be retrieved easily by going to the correct filing cabinet/box.

All electronic copies of reports generated are kept on the MECI server. This server is backed-up on a weekly basis. Any file stored on the MECI server can be retrieved instantly, by accessing the server. All electronic files are stored for a minimum of 5 years on the server.

Section C Assessment and Oversight

C1 Assessment and Response Actions

1. *The Contractor is supposed to observe field personnel daily during sampling activities to ensure samples are collected and handled properly and report problems to DHEC within 24 hours. . Please state who is responsible for doing this and what observations will be made. Will this person have the authority to stop work if severe problems are seen?*

Field audits can be conducted on any field personnel at any time. MECI field audits can be conducted by the Field Manger, who will be responsible for ensuring that field personnel adhere to the QAPP. If during a random field audit, severe problems are found, work will be stopped by the field manager and the QA officer contacted to determine corrective action. All problems must be corrected prior to any additional

work being performed. Should it be requested, an On-site Field Audit can be scheduled with the SCDHEC project manager.

2. *The SCDHEC UST QAPP states that the Lab will receive an Offsite Technical System Audit. For this project, what assessments will be done on the Commercial Lab(s) that are being used—other than their certification audit? When or how often are these done? Who will the results be given to and who has the ability to stop work if problems are severe?*

The laboratory participates in annual Proficiency Testing through an approved vendor, Wibby Environmental. Proficiency Testing results are provided to the Office of Environmental Laboratory Certification.

LOIS SMITH
3176 CHARLOTTE HWY
YORK SC 29745

JAN 2 0 2012

Re: Groundwater Sampling Directive
Smith's Grocery, SC Hwy 49, York, SC
UST Permit #09322; CA#42585
Release reported June 30, 1993
Site-Specific QAPP Contractor Addendum & Cost Agreement received January 9, 2012
York County

Dear Ms. Smith:

The Underground Storage Tank (UST) Management Division of the South Carolina Department of Health and Environmental Control (SCDHEC) has reviewed the referenced addendum submitted on your behalf by Midlands Environmental Consultants, Inc (MECI). The groundwater sampling event should be conducted in accordance with the UST Quality Assurance Division Plan and must be conducted in compliance with all applicable regulations. A copy of SCDHEC QAPP for the UST Management Division is available at http://www.scdhec.gov/environment/lwm/html/ust.htm.

Groundwater sampling activities at the site should begin immediately upon receipt of this letter. Cost agreement number 42585 has been approved for the amount shown on the enclosed cost agreement form. Samples should be analyzed for BTEXMN, DCA, Oxygenates, and EDB.

The Groundwater Sampling Report, contractor checklist, and invoice are due within 90 days from the date of this letter. The report (a signed .pdf copy on CD is preferred) submitted at the completion of these activities should include information as required in Section A9 of the UST Program QAPP.

MECI can submit an invoice for direct payment from State Underground Petroleum Environmental Response Bank (SUPERB) Account for preapproved costs. By law, the SUPERB Account cannot compensate any costs that are not pre-approved. Please note that applicable South Carolina certification requirements regarding laboratory services and report preparation must be satisfied. If the invoice is not submitted within 120 days from the date of this letter, monies allocated to pay this invoice will be uncommitted. This means that the invoice will not be processed for payment until all other committed funds are paid or monies become available. The UST Management Division, because of unnecessary dilution, cannot make decisions if the reporting limit of individual petroleum CoC exceeds Risk-Based Screening Levels (RBSLs). The UST Management Division encourages the use of 'J' values as necessary so the appropriate action can be determined for a release. Note that the Division may deny payment for any non-detect analysis where the reporting limit exceeds the RBSL. The Division cannot make closure decisions based on elevated reporting limits and the SUPERB Account will not reimburse for erroneously elevated detection limits.

Please note that Sections 44-2-110(4) and 44-2-130 of the SUPERB Statute state that nc costs will be allowed unless prior approval from the Department is obtained. If for any reason additional tasks will be completed, these additional tasks and the associated costs must be pre-approved by the Department for the costs to be paid. The SCDHEC reserves the authority to pay only for work properly performed and/or technically justified and will only pay rates in accordance with established criteria. Further, SCDHEC reserves the right to question and/or reject costs if deemed unreasonable and to audit project

records at any time during the project or after completion of work. All work must be conducted by well drillers, laboratories, and contractors that are licensed by the state of South Carolina and SCDHEC.

The Department grants pre-approval for transportation of virgin petroleum impacted soil and groundwater from the referenced site to a permitted treatment facility. There can be no spillage or leakage in transport. All investigation-derived waste (IDW) must be properly contained and labeled prior to disposal. IDW should not be stored on-site longer than ninety (90) days. A copy of the disposal manifest and/or acceptance letter from the receiving facility that clearly designates the quantity received must be included as an appendix to the report. If the COC concentrations, based on laboratory analysis, are below Risk Based Screening Levels (RBSLs), please contact the project manager for approval to dispose of soil and/or groundwater on site. The SUPERB Account will not reimburse for transportation or treatment of soil and/or groundwater with concentrations below RBSLs.

On all correspondence regarding this site, please reference UST Permit #09322. Should you have any questions regarding this correspondence, please feel free to contact me at (803) 896-6397, fax me at (803) 896-6245, or e-mail me at thomadl@dhec.sc.gov.

Sincerely,

Debra L. Thoma

Subject: QAPP Contractor Addendum – Revision 0
Smith's Grocery
York, South Carolina
SCDHEC Site ID Number 09322
MECI Project Number 12-3850
Certified Site Rehabilitation Contractor UCC-0009

Dear Ms. Thoma,

Midlands Environmental Consultants Inc. (MECI) is pleased to submit the attached QAPP Contractor Addendum for the referenced site.

On December 7, 2011, MECI personnel performed a site visit to the subject site to evaluate site conditions, locate monitoring wells, obtain drilling access and identify potential problems for future assessment activities.

If you have any question or comments please feel free to contact us at 803-808-2043.

Sincerely,
Midlands Environmental Consultants, Inc.

Courtney M. Sanders
Staff Biologist

Table 2A Addendum Role Identification and Contact Information

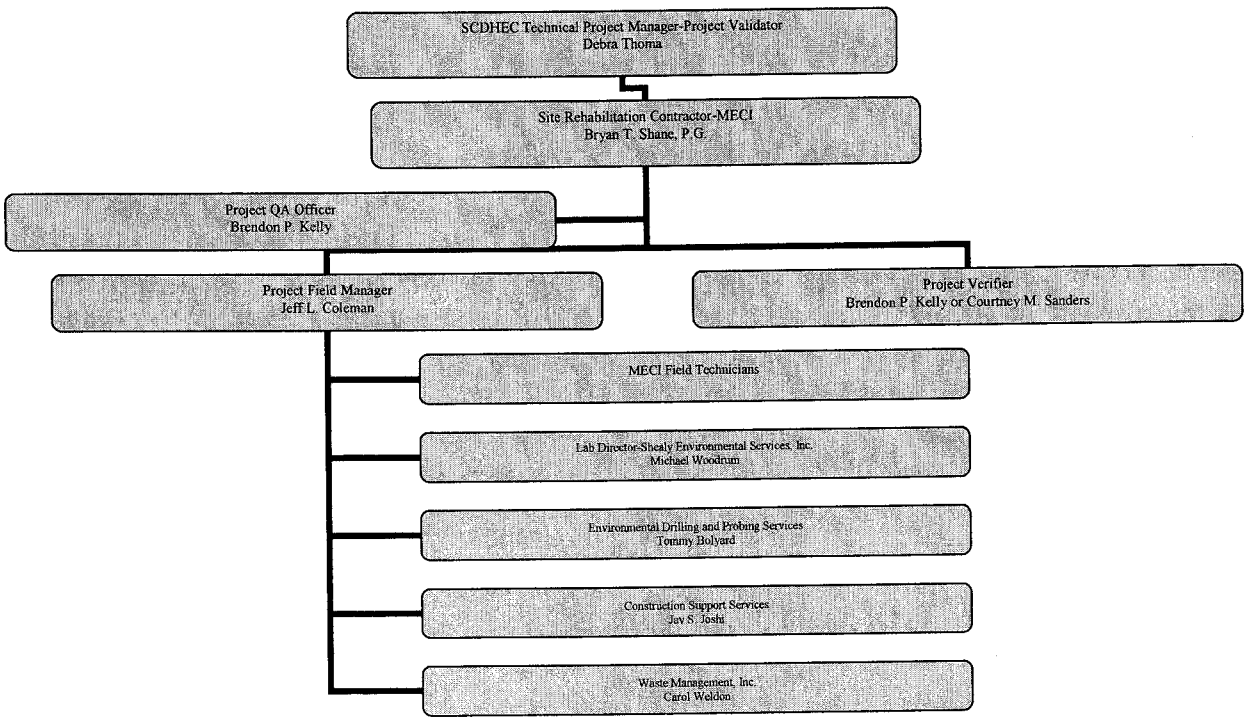

Figure 1A Organizational Chart

Project Manager (Debra Thoma) – The project manager is responsible for direct oversight of contractors conducting assessment and site rehabilitation of releases at UST sites.

Site Rehabilitation Contractor (Bryan T. Shane, P.G.) – The Site Rehabilitation Contractor is an independent contractor responsible for managing and coordinating field and office activities needed for assessments or cleanup.

-Final Review of all work produced for a scope of work.
-Final say on technical interpretation of data.

Quality Assurance Officer (Brendon P. Kelly) – The Quality Assurance Officer is responsible for the oversight of all quality assurance activities associated with projects performed by the Site Rehabilitation Contractor.

-In charge of producing and maintaining the QAPPA for MECI.
-Reviews (and Audits, if necessary) all work produced in conjunction with a scope of work.
-Quality control of data entry and report preparation.

Field Manager (Jeff L. Coleman) –The field manager will oversee all work done on any given project.

-Assign, direct and oversee all field personnel working on each project.
-Responsible for coordinating with the SCDHEC project manager, should any problems or clarifications arise.
-Responsible for all reporting done in conjunction with field work.

Project Verifier (Courtney M. Sanders) – The project verifier is responsible for verifying the quality of data produced during a scope of work. This includes review of field work and laboratory reports for potential quality issues.

Well Driller (Tommy Bolyard) – The well driller is responsible for installing monitoring wells according to South Carolina Well Standards, R.61-71. The well driller is a subcontractor for MECI.

Field Technicians (various employees) – Responsible for all field activities for a given scope of work.

-Conduct all initial site visit, and record findings
-Conduct all field activities associated with a scope of work. All work will be conducted according to the MECI SOP. Will be responsible for reporting any potential problems are inconsistencies found during assessment activities.
-Completes the chain of custody upon completion of sampling event and delivers samples to lab or office for later lab pick-up

A5 Problem Definition/Background

Discuss the background (as much as is known) of the site and appropriate historical information, and why this site is being assessed.

The subject site (Smith's Grocery) is located at 3176 Charlotte Highway, York, York County, South Carolina. The subject site previously maintained one 6,000 gallon gasoline underground storage tank (UST) and one 8,000 gallon gasoline UST. These UST's were abandoned by removal from ground in

March of 1996. The South Carolina Department of Health and Environmental Control (SCDHEC) reported a release of petroleum product from these UST's in June of 1993 and confirmed the release in September of 1996. The subject site is currently rated a Class 1D.

Following a comprehensive sampling event conducted by MECI in October of 2011, it was determined that additional assessment would be required at the site to adequately define the contaminant plume. The additional assessment will include replacement of dry monitoring wells, field screening to determine the extent of the contaminant plume, and installation of additional permanent monitoring wells.

Please answer the following: Does this project fall under UST or Brownfields area?

Underground Storage Tank Division

A6 Project/Task Description

1. ***Summarize what is known about the work to be done. This can be a short sentence indicating what the Scope of this project is (see Master QAPP Section A6).***

Additional assessment will be conducted at the subject site to define the contaminant plume. This assessment will include replacement of dry monitoring wells, field screening and installation of additional permanent monitoring wells. MECI proposes a three phase process to define the contaminant plume. First, MECI proposes conducting fractured rock field screening at the subject site to determine the appropriate fracture zone in which contamination is flowing within the rock interface. Do accomplish this, MECI proposes inserting a down-hole camera in both WSW-Swift and in WSW-Hill. Based on the results of the down-hole camera, MECI proposes conducting additional field screening/fractured rock field screening inside the existing plume and down-gradient of the WSW-Swift and WSW-Hill. Based on the results of the additional fractured rock, additional "Deep" monitoring wells will be installed. Please see the attached Figure 3 for proposed field screening points and monitoring well locations. Theses proposed locations are based only on current information, and will most likely change once field screening activities have been initiated.

Following field screening and monitoring well installation a comprehensive survey will be conducted to locate newly installed monitoring wells and additional water supply wells located in the area.

2. ***The work will begin within*** fourteen (14) days of receipt of approved QAPP contractors addendum ***after cost approval and the scope of work should be complete by*** one hundred and twenty (120) days of receipt of approved QAPP contractors addendum.

3. ***Are there are time or resource constraints? Include those factors that may interfere with the tentative schedule.***

Factors that may prevent schedule work will be, but not limited to, inclement weather, equipment malfunction, and machine failure.

A7 Data Quality Objectives (DQOs) and Data Quality Indicators (DQIs)

The subject site (Smith's Grocery) is located at 3176 Charlotte Highway, York, York County, South Carolina. Assessment will be conducted on the subject property, and on properties located North and East of the subject site. Prior to work being conducted, property access will be obtained by MECI personnel to enter these properties and conduct assessment activities.

A8 Training and Certificates

Required training and licenses:

Title/Job	Name	Training Required	Date training received	Type of License	License Number

Table 3A Required Training and Licenses

Brendon P. Kelly of Midlands Environmental Consultants, Inc. is responsible to ensuring that personnel participating in this project receive the proper training. All training records will be stored in the following location:235-B Dooley Road, Lexington, SC 29073.

It is understood that training records will be produced if requested by SC DHEC.

The Following Laboratory(ies) will be used for this Project:

Commercial Lab(s)

Full Name of the Laboratory___Shealy Environmental Services, Inc.____
Name of Lab Director_____Michael Woodrum_____
SC DHEC Certification Number_____32010_____
Parameters this Lab will analyze for this project:

BTEX, Napth, MTBE, 1,2 DCA, 8-Oxygenates (EPA Method 8260-B), and EDB (EPA Method 8011).

Full Name of the Laboratory___Schnabel Engineering____
Name of Lab Director_____Mickey Edwards_____
SC DHEC Certification Number_____N/A_____
Parameters this Lab will analyze for this project:

Grain size distribution test will be performed by Schnabel Engineering in accordance with ASTM Method D-422.

Please note: SC DHEC may require that the contractor submit some or all of the Laboratory's SOPs as part of this QAPP.

A9 Documents and Records

Personnel will receive the most current version of the QAPP Addendum via:
(Check all that apply)

Report Preparation	5/21/12	6/11/12	Three weeks to prepare/submit report

Table 5A Sampling Activities

B2 Sampling Methods

Please note: The contractor must follow sampling protocols as given in the UST QAPP.

***Estimate* the number of samples of each matrix that are expected to be collected:**

Soil	2
Ground Water from monitoring wells	43
From Drinking/Irrigation water wells	32
Field Duplicate Collection	4
Field Blank Collection	3
Trip Blank	3
From surface water features	0
Total number of Water samples	85

Notes:
During the December 7, 2011 site visit, thirty-four (34) monitoring and injection wells were located. Additionally, thirty-two water supply wells (including GAC unit samples) were located and determined to be operational within 1,000 feet of the subject site. Of the monitoring wells located, 9 were determined to be dry during the previous sampling event and will be replaced. Eight (8) additional monitoring wells are currently proposed to be installed.

Samples will be analyzed by Shealy Environmental Services, Inc. for BTEX, Napth, MTBE, 1,2 DCA, (8260B), and EDB (8011).

For the sample matrices indicated above, please describe how samples will be collected and the equipment needed.

Monitoring Well Sampling

Water Level Measurement

-MECI personnel utilize Electronic Water Level Indicators for Water Level Measurements. Each sampling crew carries an electronic water level indicator for use on downgradient monitoring wells

and an Oil/Water Interface probe for use on source area wells or wells that have historically contained measurable free phase petroleum product.

-Prior to usage, the indicator is decontaminated with isopropanol applied by a Teflon squeeze bottle and rinsed with analyte free water. This rinse water is collected and run through a portable GAC (granulated activated carbon) unit.

-The indicator is slowly lowered into the water table, and the water level is recorded to the nearest 0.01 feet.

-When free phase petroleum product is encountered, the Oil-Water Interface probe is slowly lowered into the monitoring well until product is encountered; this measurement is recorded to the nearest 0.01 feet. The meter is then lowered through the product until water is encountered. The probe is then pulled back up through the well until product is encountered again; this measurement is recorded to the nearest 0.01 feet.

-If the total depth of a monitoring well is required, after a groundwater level is recorded, the indicator probe is lowered until the bottom of the monitoring well is encountered. This depth is recorded to the nearest 0.01 feet. Following a total depth measurement, the entire length of probe tape is decontaminated with isopropanol and rinsed with analyte free water.

-All measurements will be taken from the top of the well casing.

Monitoring Well Purging

-Where necessary, monitoring wells will be purged prior to sampling if: the well screen does not bracket the watertable, if a screened interval is not known, purging is specifically asked for by the SCDHEC project manager, or a monitoring well has not previously been sampled.

-Purging will be completed utilizing a prepackaged, clear, disposable polyethylene bailer and nylon rope. Following purging/sampling of a well, the bailer and rope will be properly disposed.

-A new set of Nitrile gloves will be worn at each monitoring well, and at any time samples are handled.

-Prior to purging, the water level of the well will be determined using an electronic water level indicator. The water level, total well depth and well diameter will be used to determine the amount of water standing in the water column. The following table presents gallons of water per foot of water column in selected diameters of wells:

Well Diameter (inches)	Gallons of Water/Foot	Well Diameter (inches)	Gallons of Water/Foot
1	0.047	8	2.611
2	0.163	10	4.08
4	0.653	12	5.875
6	1.469		

-The length of the water column multiplied by the gallons of water per foot will provide the number of gallons in one well volume of water.

-Purging will continue until three well volumes of water are evacuated, or where field measurements of pH, Specific Conductivity (uS) and Temperature (°C) have stabilized to within 10% of previous values or until all accessible well water is evacuated (purged dry). Field measurements of these parameters will be taken and recorded in field notes, prior to purging and after each well volume of water has been purged.

-When purging a well with a diameter larger than 2", a submersible Redi-Flo2 pump can be used.

-Prior to usage, the pump assembly will be cleaned using a laboratory grade detergent and rinsed with analyte free water.

-The pump is lowered into the water column utilizing an attached nylon rope. DO NOT LOWER THE PUMP USING THE ELECTRICAL CORD OR HOSE.

-Once the pump has been lowered to the desired depth, the nylon rope is securely attached to an anchor at the ground surface (i.e. metal stake, truck bumper, etc). The power cord is attached to the speed controller which is attached to the generator.

-Slowly increase the speed of the controller until a desired flow rate is achieved. The pump should not be allowed to run dry.

-Purge water will be treated on-site utilizing a GAC unit.

Monitoring Well Sampling

-No-purge sampling will be conducted in previously sampled monitoring wells if: the water level is within the screened interval of the well or specifically asked for by the SCDHEC project manager.

-Immediately prior to sampling, laboratory provided labels will be placed on all sample vials and containers. These labels will include the site name, sample ID, analysis to be completed, date and time.

-Sampling will be conducted utilizing prepackaged, clear, disposable polyethylene bailers and nylon rope. Following sampling of a well, the bailer and rope will be properly disposed. A new set of Nitrile gloves will be worn at each monitoring well, and at any time samples are handled.

-The bailer is lowered into the well until it encounters the watertable, the bailer is then allowed to fill with water and is extracted from the well. Samples are placed in laboratory provided and approved sampling containers. Following sample collection, the samples are immediately placed in laboratory provided coolers, pre-filled with wet ice obtained from the MECI office.

-When requested by the SCDHEC project manager, passive diffusion bags (PDB) can be used to obtain no purge samples from discreet intervals within a water column or from wells were it is not possible to treat purge water on-site (i.e. DNAPL contamination).

-Prior to installation of a PDB, all equipment used should be washed with isopropanol and rinsed with analyte free water (weights, PDB clamps, etc.).

-Wearing Nitrile gloves, the PDB is filled with analyte free water, sealed with a PDB clamp according to the manufacturer and attached to a nylon rope. The PDB is then lowered into the well to a specified depth.

-After a minimum of two weeks in the well, the PDB is removed from the well and a sample taken using a disposable, prepackaged, sealed sampling straw to puncture the bag and fill sample vials.

-Once the samples are taken, they are to be immediately placed in laboratory provided coolers, pre-filled with wet ice obtained from the MECI office.

-One field duplicate will be taken for every twenty (20) monitoring wells sampled at a site. This blank is a duplicate sample taken from a monitoring well near the source area, and is sampled in accordance with MECI Standard Operating Procedures.

-One field blank will be prepared for each day a site is sampled. A field blank is prepared using lab provided DI water placed into laboratory provided sample containers.

-One trip blank per cooler used in sampling will be used at each site. The trip blank is prepared by the laboratory.

-Once a sample has been taken, a sample time will be recorded in the field notes, along with any information about monitoring well condition that should be brought to the attention of the project manager.

Water Supply Well (WSW) and Surface Water Sampling

-Before sampling any WSW, an attempt should be made to speak with the owner of the well, to inform them of the work requested by SCDHEC.
-WSW's should be sampled at the well head, or as close to the well head as possible. If it is not possible to obtain the sample from the well head, field notes should record exactly were the sample was taken (spigot on side of well house, spigot on home, etc.)
-The WSW should be purged prior to sampling by allowing the WSW to run until the holding tank has emptied or the well pump turns on. Wearing Nitrile gloves, the sample should be placed in approved, laboratory provided sampling containers. Following sample collection, the samples are immediately placed in laboratory provided coolers, pre-filled with wet ice obtained from the MECI office.
-Surface waters will be sampled near the location requested on the SCDHEC provided map. When sampling a moving water body, an attempt should be made to obtain the sample from an area of lower flow. Wearing Nitrile gloves, the sample will be collected and placed in approved, laboratory provided sampling containers. Following sample collection, the samples are immediately placed in laboratory proved coolers, pre-filled with wet ice obtained from the MECI office.

Will Sampling Equipment have to be cleaned and decontaminated or is everything disposable?

All equipment, excluding electronic water level indicators and field probes, is disposable.

If sampling equipment must be cleaned please give a detailed description of how this is done and the disposal of by-products from the cleaning and decontamination.

Prior to usage of non-disposable equipment, it is decontaminated with isopropanol applied by a Teflon squeeze bottle and rinsed with analyte free water. This rinse water is collected and run through a portable GAC (granulated activated carbon) unit.

Identify any equipment and support facilities needed. This may include such things as Fed-ex to ship the samples, a Geoprobe, field analysis done by another contractor (who must be certified), and electricity to run sampling equipment.

EDPS will mobilize a combination auger/air-rotary drilling rig to the subject site. All drilling activities will be performed under the supervision of a South Carolina Certified Well Driller and MECI field personnel.

All samples will be shipped to the lab via lab courier or delivered directly to the lab by MECI personnel.

Address the actions to be taken when problems occur in the field, and the person responsible for taking corrective action and how the corrective action will be documented.

Failure	Response	Documentation	Individual Responsible
Water level indicator not working properly	Attempt to clean probe, change battery, use back-up indicator if need be.	Record on field sheets, notify office staff. Take indicator out of rotation until problem identified and corrected.	Field Staff, Field Manager
Field meters not working	Attempt to clean probes, recalibrate in the field.	Record on field sheets, notify office staff. Take meters out of rotation until problem identified and corrected.	Field Staff, Field Manager
Wells not located	Use metal detector, measure from known points, contact project manager for additional information.	Record method used to attempt to locate the well on field sheets, and possibly reasoning for the well to be missing	Field Staff

Table 6A Field Corrective Action

B3 Sample Handling and Custody

1. ***How will the samples get from the Site to the Lab to ensure holding requirements are met?***

Following sample collection, the samples are immediately place in a laboratory provided cooler, pre-filled with wet ice obtained from the MECI office. Samples are transported to the MECI office once a sampling event is complete. A Chain of Custody (CoC) is filled out following the sampling event by the field staff. See attached CoC. If a lab provided courier is scheduled to visit the MECI offices the day following a sampling event, sampling coolers are repacked with wet ice, and left at the office for pick-up the following morning. If no courier is schedule to visit the MECI office the day following a sampling event, all sampling coolers are repacked with ice and are dropped off at a lab approved shipping company for overnight delivery to the lab.

2. ***How will the contactors cool the samples and keep the samples cool?***

All samples are kept on wet ice, obtained from MECI office.

3. ***How will the lab determine the temperature of the samples upon receipt? Will they be using a temperature blank?***

A calibrated thermometer and temperature blank will be used to document sample temperature. The temperature blank is immediately checked by the sample receiving technician upon arrival at the laboratory.

4. ***Where will the samples be stored in the Lab once they are received?***

All samples are stored in clean refrigeration units monitored and maintained at 4 degrees C + or – 2 degrees. Volatile organic samples are stored separately form all other samples.

5. ***Describe the chain of custody procedure and attach a copy of each chain of custody that will be used. If a Chain of Custody SOP exists from the Lab and the Contractor is willing to adhere to it, then this may be attached.***

A chain of custody (COC) will be filled out for each sampling event at each project site. COC to be signed by MECI and Shealy Environmental technician at time physical transfer of samples occurs to courier. Shealy uses the following COC procedures to protect sample integrity following pickup by their courier: A full time Sample Receiving Technician receives all samples and completes a Sample Receipt Checklist (SRC), which will identify any anomalies, if any exist the Sample Receiving Technician or Project Manager must resolve the deviation internally and/or notify the client to resolve the anomaly.

B4 Analytical Methods

1. *Identify the SOPs which will be used to analyze the samples, the method which the SOP references and the equipment or instrumentation that is needed:*

Parameter	SOP ID*	Method Referenced	Equipment	Comments
BTEX+Naph+MTBE+Oxygentaes	S-VO-002	8260B	GC/MS	
PAH's	S-SV-021	8270D	GC/MS	
EDB	S-SV-012	8011	GC	
Lead,T.	S-IM-022	6010C	ICP	
Ferrous Iron	S-IN-009	SM 3500-FED	Spectrophotometer	
Nitrate	S-IN-042	353.2	Auto-analyzer/Lachate	
Sulfate	S-IN-010	300.0	Ion Chromatograph	
Methane	S-VO-004	RSK-175	GC	
TOC	S-IN-030	Walkley-Black	N/A	
DRO - TPH	S-SV-001	8015C	GC	
pH	Standard	MECI SOP 4.3.6	YSI 63	Place probe in sample and allow to equilibrate before recording reading
Conductivity	Standard	MECI SOP 4.3.6	YSI 63	
Dissolved Oxygen	Standard	MECI SOP 4.3.6	YSI 550A	
Temperature	Standard	MECI SOP 4.3.6	YSI 550A	

Table 7A Analytical SOPs and Referenced Methods

- **This can be a full name of a SOP, an abbreviation, or a number. In the latter two cases, the abbreviation or number must be associated with the full name of the SOP. See also Table 8A SOP Abbreviation Key.**

Abbreviation	Lab Identification of this SOP	Full Name of the SOP
S-VO-002	S-VO-002	GC/MS VOLATILES ANALYSIS BASED ON EPA METHODS 8260B AND 624 PREPARED BY EPA METHODS 5030B, 5035 AND 3585
S-SV-021	S-SV-021	GC/MS ANALYSIS BASED ON EPA METHOD 8270D PREPARED BY EPA METHODS 3520C, 3550C AND 3580A
S-SV-012	S-SV-012	GC/ECD ANALYSIS OF EDB AND DBCP BASED ON METHOD 8011 & 504.1
S-IM-022	S-IM-022	INDUCTIVELY COUPLED PLASMA ATOMIC EMISSION SPECTROSCOPY-PECTROMETRIC METHOD for TRACE ELEMENT ANALYSES

		METHOD 6010C
S-IN-009	S-IN-009	FERROUS IRON (PHENANTHROLINE METHOD) STANDARD METHOD 3500-Fe D
S-IN-042	S-IN-042	NITRATE+NITRITE NITROGEN BY EPA METHOD 353.2, NITRATE NITROGEN BY 353.2 SUBTRACTION, AND NITRITE NITROGEN BY EPA METHOD 353.2
S-IN-010	S-IN-010	INORGANIC ANIONS BY ION CHROMATOGRAPHY EPA METHOD 300.0 and SW-846 9056 and 9056A
S-VO-004	S-VO-004	STANDARD OPERATING PROCEDURE GC ANALYSIS BASED ON METHOD RSKSOP-175
S-IN-030	S-IN-030	TOTAL ORGANIC CARBON (TOC) WALKLEY-BLACK PROCEDURE
S-SV-001	S-SV-001	GC/FID DIESEL RANGE ORGANICS ANALYSIS BASED ON METHOD 8015B and/or 8015C PREPARED BY EPA METHODS 3520C, 3550C and 3580A
MECI SOP 4.3.6	MECI SOP 4.3.6	Sampling Standard operating procedures

Table 8A SOP Abbreviation Key

2. Identify procedures to follow when failures occur, identify the individual responsible for corrective action and appropriate documentation:

Failure	Response	Documented Where?	Individual Responsible
Field meters not working	Attempt to clean probes, recalibrate in the field.	Record on field sheets, notify office staff. Take meters out of rotation until problem identified and corrected.	Field Staff, Field Manager
COC or Sample Receiving issues	Call Client	Sample Receiving Checklist (SRC)	PM – Kelly Maberry kmaberry@shealylab.com
Analytical errors	Corrective Action Form (CAF)	CAF filled out by PM	Lab Director –Michael Woodrum mwoodrum@shealylab.com
QA/QC Failure	Corrective Action Form (CAF)	CAF filled out by PM	Lab Director –Michael Woodrum mwoodrum@shealylab.com QA/QC Officer – Jami Savje Jsavje@shealylab.com
On time delivery	Corrective Action Form (CAF)	CAF filled out by PM	Lab Director –Michael Woodrum mwoodrum@shealylab.com QA/QC Officer – Jami Savje Jsavje@shealylab.com

Table 9A Corrective Action Procedures

3. Identify sample disposal procedures.

Analysis	Matrix	Schedule for disposal	Method for disposal	Comments
BTEX+Naph+MTBE+Oxygenates	Waters/Soils	Six Weeks	Tested for Hazardous Constituents and disposed as Hazardous or non-Hazardous waste.	
PAH's	Waters/Soils	Six Weeks	Tested for Hazardous Constituents and disposed as Hazardous or non-Hazardous waste.	
EDB	Waters/Soils	Six Weeks	Tested for Hazardous Constituents and disposed as Hazardous or non-Hazardous waste.	
Lead	Waters/Soils	Six Weeks	Tested for Hazardous Constituents and disposed as Hazardous or non-Hazardous waste.	
Ferrous Iron	Waters/Soils	Six Weeks	Tested for Hazardous Constituents and disposed as Hazardous or non-Hazardous waste.	
Nitrate,Sulfate	Waters/Soils	Six Weeks	Tested for Hazardous Constituents and disposed as Hazardous or non-Hazardous waste.	

Methane	Waters/Soils	Six Weeks	Tested for Hazardous Constituents and disposed as Hazardous or non-Hazardous waste.	
All	Water	On-Site	Portable Granulated Activated Carbon (GAC) Unit	All waste water produced from sampling and decontamination activities will be run through a GAC unit

Table 10A Disposal Procedures

4. Provide SOPs for the Kerr Method or the Ferrous Iron Method if these are parameters for this study. This can be attached or written here. If attached please note that it is an attachment and where it is located (if applicable).

B5 Quality Control Requirements:

All QC will follow the requirements laid out in Section B5 of the UST Programmatic QAPP.

B6 Field Instrument and Equipment Testing, Inspection and Maintenance

1. Identify all field and laboratory equipment needing periodic maintenance, the schedule for this, and the person responsible. Note the availability and location of spare parts.

Instrument	Serial Number	Type of Maintenance	Frequency	Parts needed/Location	Person responsible
Volatiles Mass Spec	ALL	Change traps, clean ion source, replace filaments	Periodic	Laboratory	MSV Analyst
Semivolatile Mass Specc	ALL	Injection port maintenance, ion source maintenance, column replacement	Periodic	Laboratory	MSSV Analyst
ECD GC	ALL	Injection port maintenance, column replacement	Periodic	Laboratory	GC Analyst
Dionex IC	ALL	Replace auto sampler filter, tubing, line filter, sample Line and Waste	Periodic	Laboratory	IC Analyst

		Line, as needed. Check Reagent levels, flow rate, waste line.			
ICP	ALL	Clean Sample introduction system , auto sampler, torch, Change spray chamber, torch tubing, tubing	Periodic	Laboratory	ICP Analyst
Leeman Mercury Analyzer	ALL	Clean GLS, Change Pump tubing, Nafion Dryer, Lamp	Periodic	Laboratory	Mercury Analyst
Flow Injection Analysis – Lachat 8000	ALL	Replace sample and reagent lines, replace light source, re-wrap heating coil, replace column	Periodic/As Needed	Laboratory	Nitrate Analyst
YSI 63	09C 101302, 10K 101895, 07M 100905	Replace probe tip	Yearly	Order from YSI	B. Kelly
YSI 63	09C 101302, 10K 101895, 07M 100905	Replace batteries	As Needed	In stock at office	Field Staff
YSI 63	09C 101302, 10K 101895, 07M 100905	General inspection for wear and tear on equipment	Daily	Major fixes will be done out of office	Field Staff
YSI 63	09C 101302, 10K 101895, 07M 100905	Check buffer solutions for expiration	Weekly	In stock at office	B. Kelly
YSI 550A	04L 2026AK, 08B 101407, 04A 0912AI	Replace membrane	4 to 8 weeks	In stock at office	Field Staff
YSI 550A	04L 2026AK, 08B 101407, 04A 0912AI	Replace batteries	As Needed	In stock at office	Field Staff
YSI 550A	04L 2026AK, 08B 101407, 04A 0912AI	General inspection for wear and tear on equipment	Daily	Major fixes will be done out of office	Field Staff

Table 11A Instrument and Equipment Maintenance

2. Identify the testing criteria for each lab or field instrument that is used to ensure the equipment is performing properly. Indicate how deficiencies, if found, will be resolved, re-inspections performed, and effectiveness of corrective action determined and documented. Give the person responsible for this

Instrument/Equipment & Serial Number	Type of Inspection	Requirement	Individual Responsible	Resolution of Deficiencies
Volatiles Mass Spec	Daily calibration check	Method Requirements	MSV Analyst	Recalibration or instrument maintenance
Semi-volatiles Mass Spec	Daily calibration	Method Requirements	MSSV	Recalibration or

	check		Analyst	instrument maintenance
ECD GC	Daily calibration check	Method Requirements	GC Analyst	Recalibration or instrument maintenance
Dionex IC	Daily calibration check	Method Requirements	Nitrate Analyst	Recalibration or instrument maintenance
ICP	Daily calibration check	Method Requirements	ICP Analyst	Recalibration or instrument maintenance
Leeman Mercury Analyzer	Daily calibration check	Method Requirements	Mercury Analyst	Recalibration or instrument maintenance
Flow Injection Analysis – Lachat 8000	Daily and continuing calibration check	See calibration criteria	INM Analyst	Recalibration or instrument maintenance
YSI 63 - 09C 101302, 10K 101895, 07M 100905	Daily calibration check	pH within 0.20 of pH 7.00 standard buffer, conductivity within 10% of standard	Field Staff	Recalibrate, general maintenance then recalibrate. Ship off for service by manufacturer
YSI 550A - 04L 2026AK, 08B 101407, 04A 0912AI	Daily calibration check	Temperature within +/- 1°C vs. mercury thermometer, dissolved oxygen within 0.25 mg/l	Field Staff	Recalibrate, general maintenance then recalibrate. Ship off for service by manufacturer

Table 12A Instrument and Equipment Inspection

B7 Instrument Calibration and Frequency

1. Identify equipment, tools, and instruments for field or lab work that should be calibrated and the frequency.
2. Describe how the calibrations should be performed and documented, indicating test criteria and standards or certified equipment.
3. Identify how deficiencies should be resolved and documented. Identify the person responsible for corrective action.

Instrument	Calibration Procedure	Frequency of Calibration	Acceptance Criteria	Corrective Action (CA)	Person Responsible for CA	SOP Reference*
Volatiles Mass Spec	Minimum of 5 calibration standards for all compounds	When indicated by continuous calibration verification standard	Method Criteria	Detailed in SOP	MSV Analyst	S-VO-002

Instrument	Calibration Procedure	Frequency of Calibration	Acceptance Criteria	Corrective Action (CA)	Person Responsible for CA	SOP Reference*
Semi-volatile Mass Spec	Minimum of 5 calibration standards for all compounds	When indicated by calibration verification standard	Method Criteria	Detailed in SOP	MSSV Analyst	S-SV-021
GC ECD	Minimum of 5 calibration standards for all compounds	When indicated by calibration verification standard	Method Criteria	Detailed in SOP	GC Analyst	S-SV-012
Dionex IC	Minimum of 5 calibration standards for all compounds	When indicated by calibration verification standard	Method Criteria	Detailed in SOP	IC Analyst	S-IN-010
ICP	Minimum of 3 calibration standards for all compounds	When indicated by calibration verification standard	Method Criteria	Detailed in SOP	ICP Analyst	S-IM-022
Cetac Mercury Analyzer	Minimum of 5 calibration standards for all compounds	When indicated by calibration verification standard	Method Criteria	Detailed in SOP	Mercury Analyst	S-IM-006
Lacaht QuickChem 8000	Minimum of 5 calibration standards	Daily or when indicated by calibration verification standard	Method Criteria	Detailed in SOP	Nitrate Analyst	S-IN-042
YSI 63	pH Calibration	Daily	+/- 0.2 pH units	clean/replace probe tip, recalibrate	Field Staff	4.3.6
YSI 63	Conductivity Calibration	As directed by manufacturer	+/- 10 uS	clean/replace probe tip, recalibrate	Field Staff	4.3.6
YSI 550A	DO calibration	Daily	+/- 0.25 mg/l	clean/replace probe tip, recalibrate	Field Staff	4.3.6
YSI 550A	Temperature Calibration	Daily	+/- 1 °C	clean/replace probe tip, recalibrate	Field Staff	4.3.6
Electronic Water Level Indicator	Checked vs. Standard	Monthly	+/- 0.01 foot per 10 foot length	Replace probe tape	Field Staff	***
Oil/Water Interface probe	Checked vs. Standard	Monthly	+/- 0.01 foot per 10 foot length	Replace probe tape	Field Staff	***

Table 13A Instrument Calibration Criteria and Corrective Action

*** This can be a full name of a SOP, an abbreviation, or a number. In the latter two cases, the abbreviation or number must be associated with the full name of the SOP. See also Table 8A SOP Abbreviation Key.**

B8 Inspection/Acceptance Requirements for Supplies and Consumables

1. Identify critical supplies and consumables for field and laboratory, noting supply source, acceptance criteria, and procedures for tracking, storing and retrieving these materials.
2. Identify the individual(s) responsible for this.

Item	Vendor	Acceptance criteria	Handling/Storage Conditions	Person responsible for inspection and tracking.
Laboratory Chemicals	Fisher,VWR	Certificates of analysis and laboratory testing	Laboratory storage	Receiving and laboratory personnel
Laboratory standards	O2Si, Restek, High Purity, VHG, Supelco	Certificates of analysis and laboratory verifications	Vendor specific storage conditions	Laboratory Analysts
Sample Containers	Daniels Scientific, QEC	Certificates of analysis and laboratory testing	Bottle storage area	Sample receiving personnel
Clear, Disposable polyethylene Bailers	Preferred Pump	Individual sleeves intact, ball valve operational	Stored in Vehicle Bay, Off of the ground	B. Kelly, Field Staff
Nylon Rope	Preferred Pump	Covered with plastic	Stored in Vehicle Bay, Off of the ground	B. Kelly, Field Staff
Nitrile Gloves	Preferred Pump	Unopened box, no holes	Stored in Vehicle Bay, Off of the ground	B. Kelly, Field Staff
40 mL HCL preserved amber vials	Shealy Environmental Services	Custody seal intact	Stored in Vehicle Bay, Off of the ground	B. Kelly, Field Staff
250 mL HNO3 preserved metals vials	Shealy Environmental Services	Custody seal intact	Stored in Vehicle Bay, Off of the ground	B. Kelly, Field Staff
Coolers	Shealy Environmental Services	Intact	Stored in Vehicle Bay, Off of the ground	B. Kelly, Field Staff
pH Buffer	TRS Environmental, Enviroequipment	Within expiration date	Stored in calibration room	B. Kelly, Field Staff
Conductivity Standard	TRS Environmental, Enviroequipment	Within expiration date	Stored in calibration room	B. Kelly, Field Staff
DO Membranes	YSI, Enviroequipment	Clean, in box	Stored in calibration room	B. Kelly, Field Staff
Batteries	Any Store	Not previously used	Stored in calibration room	B. Kelly, Field Staff

Table 14A List of Consumables and Acceptance Criteria

B9 Data Acquisition Requirements (Non-Direct Measurements)

1. Identify data sources, for example, computer databases or literature files, or models that should be accessed or used.
2. Describe the intended use of this information and the rationale for their selection, i.e., its relevance to project.
3. Indicate the acceptance criteria for these data sources and/or models.

Data Source	Used for	Justification for use in this project	Comments
Tier 1 and Tier 2 sampling and monitoring well installation reports	Historic groundwater and CoC concentration data. Lithology and well construction data from previous MWI's	Establish the type of drilling rig required, time for sampling and any other potential problems that may be encountered.	1903 forms from previous monitoring well installations will be used to estimate depth of the outer casing for the new double cased well.

Table 15A Non-Direct Measurements

4. Identify key resources/support facilities needed.

B10 Data Management

1. Describe the data management scheme from field to final use and storage.

Following sample collection and chain of custody production, samples are shipped to the lab. Field work from the field staff is reviewed by the MECI project manager, and converted into digital form. All data entry is subsequently checked to validate the data entry. The original copies of the field work are stored in MECI files for a minimum of 5 years. Digital copies of the work are stored on the MECI server, which is backed up weekly, and stored for a minimum of 5 years. The digital copy of the field work is presented to SCDHEC with the final report.

2. How does the lab and field staff ensure that no unauthorized changes are made to the chain of custody, sampling notebooks, laboratory notebooks and computer records?

The laboratory maintains comprehensive Quality Control and Training Programs. All sample receipt data, sample log-in, and analytical data is peer reviewed, including review for inappropriate changes. Data management, review procedures and the Quality Systems Program are documented in the laboratory's Quality Manual and Standard Operating Procedures. The Quality Assurance Department oversees adherence to and review of these programs.

All MECI field work is produced using ink-pens. Any attempt to alter field data, after sampling is complete, can be readily identified. MECI keeps a carbon copy of the chain of custody after it is shipped to the lab. This copy is kept with the field work. If any change to the CoC are suspected, this original carbon copy can be use to identify potential changes.

3. How does the lab ensure that there are no errors in samples records including times when sample information is compiled, data calculated and/or transmitted?

Sample data acquisition software is reviewed periodically. The LIMS database is backed up daily and is able to be restored in the event of a system failure. These procedures are documented in laboratory SOP S-AD-003, LIMS. The IT Manager is responsible for these systems and procedures."

4. How will the data be archived once the report is produced? How can it be retrieved? (This applies to both electronic and hard copies).

Laboratory Hardcopy data stored off site is logged, maintained and archived by the Quality Assurance Department. Laboratory Electronic Data Reports are maintained through IT back up under the responsibility of the IT Systems Manager.

MECI keeps all field work and paper copies of reports in its in-house filing system. All paper copies are stored for a minimum of 5 years. Any file can be retrieved easily by going to the correct filing cabinet/box.

All electronic copies of reports generated are kept on the MECI server. This server is backed-up on a weekly basis. Any file stored on the MECI server can be retrieved instantly, by accessing the server. All electronic files are stored for a minimum of 5 years on the server.

Section C Assessment and Oversight

C1 Assessment and Response Actions

1. *The Contractor is supposed to observe field personnel daily during sampling activities to ensure samples are collected and handled properly and report problems to DHEC within 24 hours. . Please state who is responsible for doing this and what observations will be made. Will this person have the authority to stop work if severe problems are seen?*

Field audits can be conducted on any field personnel at any time. MECI field audits can be conducted by the Field Manger, who will be responsible for ensuring that field personnel adhere to the QAPP. If during a random field audit, severe problems are found, work will be stopped by the field manager and the QA officer contacted to determine corrective action. All problems must be corrected prior to any additional work being performed. Should it be requested, an On-site Field Audit can be scheduled with the SCDHEC project manager.

2. *The SCDHEC UST QAPP states that the Lab will receive an Offsite Technical System Audit. For this project, what assessments will be done on the Commercial Lab(s) that are being used—other than their certification audit? When or how often are these done? Who will the results be given to and who has the ability to stop work if problems are severe?*

The laboratory participates in annual Proficiency Testing through an approved vendor, Wibby Environmental. Proficiency Testing results are provided to the Office of Environmental Laboratory Certification.

C2 Reports to Management

See the SC DHEC UST Programmatic QAPP (UST Master QAPP).

Section D Data Validation and Usability

All field and laboratory data will be checked and verified by the project verifier (Brendon Kelly) prior to submission to SCDHEC.

CoC is shipped with the samples to the lab, and a copy is kept by MECI in the work folder.

4.3.5.2.A lab provided transport blank will be stored in each cooler for transport to the laboratory.

4.3.5.3.Samples will be transported to the laboratory by shipment with a lab provided courier or with a lab approved shipping company. If a courier is scheduled to visit the MECI offices the day following a sampling event, sampling coolers will be repacked with wet ice, and left at the office for pick-up. If no courier is scheduled to visit the MECI office the day following a sampling event, all sampling coolers are to be dropped off at the lab or at an approved shipping company for overnight delivery to the lab immediately following the sampling event.

4.3.6. Field Measurements and Instrument Calibration

4.3.6.1.Prior-to all sampling events equipment for field measurements should be calibrated. MECI utilizes YSI550A meters for DO (mg/L) and temperature readings (^{o}C) and YSI63 meters for pH and conductivity (uS) readings. These meters are calibrated according to the manufacturers instructions (please see attached calibration instructions)

4.3.6.2.Calibration readings will be recorded on field notes, and should be within +/- 1°C for temperature, +/- 0.2 pH units of 7.00 buffer for pH and within 10% of 100 uS buffer for conductivity.

4.3.6.3.MECI utilizes a 60 cm calibrated turbidity tube for turbidity measurements. The tube is marked with a 60 cm tape that has been calibrated into Nephelometric Turbidity Units (NTU). Turbidity is measured by filling the Turbidity Tube with purge water. The water is drained from the bottom of the tube while the user looks towards to bottom of the tube. Once the Secchi disk pattern at the bottom of the tube is visible, the drain tube is closed, and a reading is taken according to the amount of purge water remaining in the tube.

4.3.6.4.Field Measurements are taken by fully submerging the probes from the YSI550A and YSI63 into water taken from the well. Readings are allowed to equilibrate, then the measurement is recorded.

4.3.6.5.Meters are to be stored in waterproof cases inside of the office when not in use, to prevent possible exposure damage.

4.4. Aquifer Characterization

Aquifer specific data will be collected using methods appropriate to the local geology of the facility. MECI will primarily utilize slug tests to obtain specific aquifer data. This data, combined with sieve analysis and hydrometer data will be utilized in aquifer calculations.

4.4.1. Slug Test

A normal characterization for a Tier II assessment will require slug tests on two watertable bracketing monitoring wells and one deep monitoring well. Other scopes of work will require a varying number of slug tests.

4.4.1.1.Slug tests will be completed utilizing prepackaged, clear, disposable polyethylene bailers, nylon rope, stop-watch and previously decontaminated electronic water level indicator.

4.4.1.2.Prior to starting the Slug test, a static groundwater measurement will be taken.

4.4.1.3.Water is removed from the well until the water level in the well has been reduced at least one foot.

4.4.1.4.The stopwatch is started as soon as the last bail of water is removed from the well.

4.4.1.5.The water level indicator is lowered into the well and groundwater elevation readings are taken at 15-second intervals for the first two minutes. This interval can be expanded as the test continues.

4.4.1.6.Water level measurements are taken until the water level in the well has returned to within 90 percent of the static level, or one hour has elapsed.

UST 60Yeah DOCKETING

Re: Assessment Directive/QAPP Approval
Smith's Grocery, 3176 Charlotte Hwy , York, SC
UST Permit #09322; CA#43397; UMW-24493
Release reported June 30, 1993
Site-Specific QAPP Contractor Addendum & Cost Agreement received March 5, 2012
York County

Dear Ms. Smith:

The Underground Storage Tank (UST) Management Division of the South Carolina Department of Health and Environmental Control (SCDHEC) has reviewed the referenced addendum submitted on your behalf by Midlands Environmental Consultants, Inc. The additional assessment should be conducted in accordance with the UST Quality Assurance Program Plan (QAPP) and in compliance with all applicable regulations. A copy of SCDHEC QAPP for the UST Management Division is available at http://www.scdhec.gov/environment/lwm/html/ust.htm.

Assessment activities at the site should begin immediately upon receipt of this letter. Cost agreement number 43397 has been approved for the amount shown on the enclosed cost agreement form for installation of up to fourteen temporary, eight monitoring wells plus sampling the entire monitoring well network/the newly installed monitoring wells to define the horizontal and vertical extent of dissolved CoC. Please be aware that the July 1, 2011 State Underground Petroleum Environmental Response Bank (SUPERB) Allowable Costs sheet states that "If the vertical and horizontal extent of chemicals of concern is not fully defined by the tier report, the Department may not approve additional future mobilizations for additional screening or well installation." Screening points that are converted to a permanent monitoring well will be reimbursed at the approved well installation rate. **Please contact the Department prior to well installation for concurrence regarding the final well locations. All shallow wells are to be installed with screen intervals that bracket the water table.** Shallow wells should have a 10-foot screen. **The SUPERB Account cannot reimburse costs for any shallow well with a screen that does not properly bracket the water table.**

A groundwater sample from any water supply wells within 1,000 feet of the facility should be collected and analyzed for BTEX, MtBE, naphthalene, 8 oxygenates, 1,2 DCA, and EDB. Groundwater samples from existing groundwater monitoring wells with screens that bracket the water table do not need to be purged before a sample is collected. Groundwater samples from the newly installed wells/ existing monitoring well network should be collected and analyzed for BTEX, MtBE, naphthalene, 8 oxygenates, 1,2 DCA, and EDB. Analyses should be in accordance with Appendix E of the QAPP For the Underground Storage Tank Management Division to include duplicate samples, field and trip blanks.

The Assessment Report, contractor checklist, and invoice are due within 90 days from the date of this letter. The report (a signed .pdf copy on CD is preferred) submitted at the completion of these activities should include information outlined in the UST Quality Assurance Program Plan (QAPP).

Midlands Environmental Consultants, Inc. can submit an invoice for direct payment from State Underground Petroleum Environmental Response Bank (SUPERB) Account for preapproved costs. An interim well drilling invoice may be submitted for this scope of work. By law, the SUPERB Account cannot compensate any costs that are not pre-approved. Please note

that applicable South Carolina certification requirements regarding laboratory services, well installation, and report preparation must be satisfied. If the invoice is not submitted within 120 days from the date of this letter, monies allocated to pay this invoice will be uncommitted. This means that the invoice will not be processed for payment until all other committed funds are paid or monies become available. The UST Management Division, because of unnecessary dilution, cannot make decisions if the reporting limit of individual petroleum CoC exceeds Risk-Based Screening Levels (RBSLs). The UST Management Division encourages the use of 'J' values as necessary so the appropriate action can be determined for a release. Note that the Division may deny payment for any non-detect analysis where the reporting limit exceeds the RBSL.

The UST Management Division requires that laboratories be certified through the SCDHEC Office of Environmental Laboratory Certification for the oxygenate compounds.

Please note that you and/or your contractor are responsible for obtaining all off-site access agreements and/or encroachment permits necessary for this scope of work.

The Department grants pre-approval for transportation of virgin petroleum impacted soil and groundwater from the referenced site to a permitted treatment facility. There can be no spillage or leakage in transport. All investigation-derived waste (IDW) must be properly contained and labeled prior to disposal. IDW should not be stored on-site longer than ninety (90) days. A copy of the disposal manifest and/or acceptance letter from the receiving facility that clearly designates the quantity received must be included as an appendix to the report. If the CoC concentrations based on laboratory analysis are below RBSLs, please contact the project manager for approval to dispose of soil and/or groundwater on site. The SUPERB Account will not reimburse for transportation or treatment of soil and/or groundwater with concentrations below RBSLs.

On all correspondence regarding this site, please reference UST Permit #09322. Should you have any questions regarding this correspondence, please feel free to contact me at (803) 896-6397, fax me at (803) 896-6245, or e-mail me at thomadl@dhec.sc.gov.

Sincerely,

Debra L. Thoma

Monitoring Well Approval

Approval is hereby granted to:	Midlands Environmental Consultants Inc.
Facility:	Smith's Grocery, 3176 Charlotte Hwy , York
UST Permit Number:	09322
County:	York

This approval is for the installation of up to fourteen temporary monitoring wells and eight groundwater monitoring wells. The monitoring wells are to be installed in the approved locations. The monitoring wells are to be installed following the South Carolina Well Standards, R.61-71 and the applicable guidance documents.

Please note that R.61-71 requires the following:

1. All wells shall be drilled, constructed and abandoned by a South Carolina certified well driller per R.61-71.D.1.

2. All monitoring wells shall be labeled as required by R.61-71.H.2.c.

3. A Water Well Record Form or other form provided or approved by the Department shall be completed and submitted to the Department within 30 days after well completion or abandonment unless another schedule has been approved by the Department. The form should contain the "as-built" construction details and all other information required by R.61-71.H.1.f

4. All analytical data and water levels obtained from each monitoring well shall be submitted to the Department within 30 days of receipt of laboratory results unless another schedule has been approved by the Department as required by R.61-71.H.1.d.

5. If any of the information provided to the Department changes, notification to Debra Thoma (tel: (803) 896-6397 or e-mail: thomadl@dhec.sc.gov) shall be provided a minimum of twenty-four (24) hours prior to well construction as required by R.61-71.H.1.a.

6. All temporary monitoring wells shall be abandoned within 5 days of borehole completion using appropriate methods as required by R.61-71.H.4.c. All other wells shall be properly developed per R.61-71.H.2.d.

7. Departmental approval is required prior to abandonment of all monitoring wells as required by R.61-71.H.1.a.

This approval is pursuant to the provisions of Section 44-55-40 of the 1976 South Carolina Code of Laws and R.61-71 of the South Carolina Well Standards and Regulations, dated April 26, 2002. A copy of this approval should be on the site during well installation.

Date of Issuance: **March 8, 2012** **Approval #:** **UMW-24493**

Dear Ms. Thoma,

Midlands Environmental Consultants Inc. (MECI) is pleased to submit the attached Report of Water Supply Well Sampling and Chemical Analyses, and Granulated Activated Carbon (GAC) Unit Installation for the referenced site. This report describes assessment activities conducted at the site and results of those activities in general accordance with South Carolina Department of Health and Environmental Control (SCDHEC) guidelines, including adherence to the UST Division Programmatic Quality Assurance Program Plan (QAPP).

Midlands Environmental appreciates the opportunity to offer our professional environmental services to you on this project. Please feel free to contact us at 803-808-2043 if you have any immediate questions or comments.

Sincerely,
Midlands Environmental Consultants, Inc.

1.1 QAPP STATEMENT

This report conforms to the SCDHEC UST Management Division Programmatic QAPP. The Report, Tables (Table 1-Soil Analytical Data, Table 2-Field Parameters, Table 3-Groundwater Analytical Results, Table 4-Aquifer Characteristics, and Table 5-Site Conceptual Model), Figures (Figure 1-Topographic Map, Figure 2-Site Features, Figure 3-Soil CoC Site Map, Figure 4-Groundwater CoC Site Map, Figure 5-Groundwater Contour Map, and Figure 6-Geologic Cross Section) , and Appendices are presented in accordance with formatting requirements set forth in section A9 of the UST Management Division Programmatic QAPP, Revision 1, June 2011. Some or all of the tables and figures in this report were not applicable to the scope of services presented, however have been included in order to conform to the SCDHEC UST Management Division Programmatic QAPP.

1.2 PROJECT INFORMATION

The subject site (Smith's Grocery) is located near the intersection of S.C. Highway 49 and Southern Pines Road, York, York County, South Carolina (see Figure 1). The site consists of an approximately 2.00 acre parcel of land (see Figure 2), and currently occupied by a convenience store. The site formerly maintained one 6,000 gallon gasoline UST and one 8,000 gallon gasoline UST. The South Carolina Department of Health and Environmental Control (SCDHEC) reported release of petroleum product from two single walled underground storage tanks (UST) at the subject site in June of 1993, which was confirmed in September of 1996.

Prior to commencement of the field activities described in this document, a QAPP Contractors Addendum was completed by MECI personnel, submitted to SCDHEC and approved by the SCDHEC project manager.

Previous assessment activities at the subject site failed to identify a number of water supply wells in the vicinity of the subject site. Prior to additional assessment at the site, MECI proposed to sample all water supply wells in the area to help focus future assessment activities. Following the water supply well sampling event, several additional water supply wells were found to be impacted, and GAC units were installed.

The above project information is based on MECI field notes and SCDHEC files.

2.0 SURROUNDING PROPERTY USAGE

The subject site is located near York, York County, South Carolina. SC Highway 49, Charlotte Highway, forms the eastern border of the site, beyond which is a residential subdivision, The Pines. North of the subject site are residential properties. South and west of the site are agricultural and undeveloped properties.

3.0 FIELD EXPLORATION

Field exploration conducted at the site included:

- sampling of thirty-six (36) nearby water supply wells;
- Granular Activated Carbon (GAC) Unit Filter Change; and,
- installation of three GAC units.

Two of the newly installed GAC units were installed in-line with previous GAC units on water supply wells WSW-2 and WSW-3 and a new GAC unit was installed on water supply well WSW-24.

3.1 WATER SUPPLY WELL SAMPLING AND CHEMICAL ANALYSES

During the initial site visit prior to QAPP preparation, MECI personnel identified thirty-eight (38) monitoring wells on, and surrounding the subject site.

On February 2, 2012, MECI personnel collected thirty-eight (38) water supply well samples from thirty-six (36) monitoring wells at the subject site. Water supply wells WSW-2 and WSW-3 were sampled Pre- and Post- GAC unit. Water supply wells WSW-34 and WSW-38 were not able to be

sampled, due to property access issues. The following matrix contains well status, owner(s), and tax map identification numbers:

Water Supply Well Number	Well Owner	York County Tax Map Number:	Notes:	Well Status
WSW-1	Reid Smith	4560000043	3176 Charlotte Highway (On-Site)	Active
WSW-2	Gary A. Wiggam	4890401024	3043 Clover Circle	Active / GAC Unit
WSW-3	Susan W. & Tony H. Hill	4890401023	3049 Clover Circle	Active / GAC Unit
WSW-4	Michelle Belcher	4890401022	2101 Pinewild Court	Active
WSW-5	Henry Ray Emser	4890401019	2106 Pinewild Court	Active
WSW-6	Clyde W. & Iris R. Dooley	4890401018	2100 Pinewild Court	Active
WSW-7	Susan K. Trear & John A. Okain	4890401017	3071 Clover Circle	Active
WSW-8	Lewis F. & Lana D. Hefner III	4890401016	3077 Clover Circle	Active
WSW-9	Richard J. Bdener Jr.	4890401015	3085 Clover Circle	Active
WSW-10	Paul & Irene Caltagirone	4890401013	3140 Tallamore Lane	Active
WSW-11	Robert C. & Jetta L. Baumgardner	4890401012	3130 Tallamore Lane	Active
WSW-12	Victor & Evelyn Bresg	4890401011	3124 Tallamore Lane	Active
WSW-13	Albert B. Small	4890401010	3118 Tallamore Lane	Active
WSW-14	Richad W. & Vince L. Judy	4890401009	3112 Tallamore Lane	Active
WSW-15	William L. & Leah H. Youngblood	4890401008	3106 Tallamore Lane	Active
WSW-16	Scott A. Reed	4890401007	3100 Tallamore Lane	Active
WSW-17	Steve A. & Layliona T. Edison	4890401006	3001 Clover Circle	Active
WSW-18	Jeff C. & Marcy A. Buck	4890401005	3011 Clover Circle	Active
WSW-19	Ramon L. Guzman	4890401004	3017 Clover Cirlce	Active
WSW-20	Kevin A. & Ursula A. Shuler	4890401003	3023 Clover Circle	Active
WSW-21	Joseph J. Galambos	4890401002	3029 Clover Circle	Active
WSW-22	Everette D. & Janet E. Crook	4890401001	3035 Clover Circle	Active
WSW-23	Michael V. McCarter	4890401027	3032 Clover Cirlce	Active / Impacted EDB above RBSL's
WSW-24	Christopher D. Jeter	4890401028	3040 Clover Circle	Active / Impacted EDB Detected
WSW-25	Kenny L. & Tamara L. Beasley	4890401029	3050 Clover Circle	Active
WSW-26	Michael D. & Leann R. Lowrey	4890401030	3060 Clover Circle	Active

WSW-34	Frontis T. & Etta H. Hemphill	4560000003	2146 Old McKinney Road	Not Sampled / Could not access well
WSW-35	William & Daisy Lowery	4560000007	2143 Old Son Lowery Road	Active
WSW-36	Frontis Tyree Hemphill	4560000008	2140Old Son Lowery Road	Active
WSW-37	Frontis Tyree Hemphill	4560000040	SAA	Active
WSW-38	Forest L. & Helen W. Montgomery	4560000010	3243 Charlotte Highway	Not Sampled / Could not access well

The samples obtained from WSW-1, WSW-2 Pre, WSW-2 Post, WSW-3 Pre, WSW-3 Post, WSW-4 through WSW-33, WSW-35, WSW-36 and WSW-37 were analyzed for volatile organic compounds including BTEX, naphthalene, methyl-tertiary-butyl-ether (EPA Method 8260B), and EDB (EPA Method 8011). Results of the laboratory analyses are discussed in Section 4.1 and summarized in Table 3. The analytical results are also presented in Appendix B.

3.1 GRANULAR ACTIVATED CARBON (GAC) UNIT FILTER CHANGE AND REPAIR

On February 2, 2012, MECI personnel mobilized to the subject site to change the GAC filters on two water supply wells (WSW-2 and WSW-3). Both GAC filters were changed in accordance with SCDHEC regulations and the manufacturers (EcoWater Systems) guidelines. The spent gravel/carbon media was removed from both GAC units and the inside the carbon vessels were thoroughly cleaned. Both GAC units were refilled with 24 lbs of gravel (covering the bottom distributor) and completed with an approximate two cubic feet of new liquid phase activated carbon or until there was an approximate 12" inches of freeboard space between the top of activated carbon and the top distributor. After the filter change, each unit was allowed to properly backwash and the electronic component was reset to reflect appropriate time/backwash cycle (3 day-1,000 gallon cycle).

At the time of the February 2, 2012 GAC change, Pre- and Post- GAC samples were taken from WSW-2 and WSW-3. Analytical results indicated "break-though" of petroleum constituents immediately following the GAC carbon change. On February 29, 2012, MECI personnel mobilized to the subject site to change the GAC filters on WSW-2 and WSW-3. These filters were changed immediately following the installation of new, in-line, GAC units on WSW-2 and WSW-3.

3.2 GAC UNIT INSTALLATION

During the water supply well sampling event on February 2, 2012, Mr. Tony Hill, owner of WSW-3, expressed concern that immediately following a GAC unit carbon change, he could still smell petroleum odors in his tap water. The load of petroleum constituents is too high for one GAC unit, and breakthrough is occurring immediately following a carbon change. MECI recommended adding a second GAC unit, in-line with the original unit, to account for high petroleum constituent loads in both WSW-2 and WSW-3.

Analytical results indicated that two additional water supply wells, WSW-23 and WSW-24, were impacted with EDB concentrations above RBSL's. The SCDHEC project managed approved GAC unit installation on both of these water supply wells.

On February 29, 2012, an additional GAC unit was installed on WSW-2 and WSW-3. Due to property owner access issues, a GAC unit was not installed on WSW-24 until March 16th, 2012. Efforts are still underway to contact and gain access to install a GAC unit on WSW-23. These GAC units were installed by Brad Kimberlin of B.K. Plumbing, Inc. of Kannapolis, NC. (North Carolina Plumbing Certification #: 23265).

New Clack Corporation 1.5 cubic foot carbon tanks (holding 50 pounds of activated carbon) were installed with new Clack Corporation Model WS1 Control Valves. All Clack components have a 5 year warranty on the control valves and a lifetime warranty on the media tanks. A new GAC housing was installed with the GAC unit on WSW-24. Larger GAC housings were installed on WSW-2 and

WSW-3 to accommodate the additional GAC unit. A copy of the keys for these GAC housings will be included with this report.

4.0 TEST RESULTS AND EVALUATION

The following sections discuss groundwater test results for the subject site.

4.1 WATER SUPPLY WELL ANALYTICAL RESULTS

The samples obtained from WSW-1, WSW-2 Pre, WSW-2 Post, WSW-3 Pre, WSW-3 Post, WSW-4 through WSW-33, WSW-35, WSW-36 and WSW-37 were analyzed for petroleum constituents. The laboratory analytical results from the groundwater samples obtained indicate petroleum impact to water supply wells WSW-2 Pre, WSW-2 Post, WSW-3 Pre, WSW-3 Post, WSW-7, WSW-16, WSW-23 and WSW-24. Water supply wells WSW-2 and WSW-3 have historically been impacted, but the results from WSW-2 Post and WSW-3 Post indicate immediate petroleum constituent breakthrough following a GAC filter change. WSW-23 and WSW-24 analytical results indicated EDB impact at 0.071 micrograms per liter and 0.049 micrograms per liter, respectively. Analytical data for WSW-7 indicated MTBE concentrations at 0.93J micrograms per liter and data for WSW-16 indicated Benzene concentrations at 0.25J micrograms per liter. CoC concentrations in these wells are very low, and below RBSL's for each constituent. The results of the analysis for the water supply well and specific parameters are listed on Table 3, and the detection limits for each parameter are provided in the laboratory reports (Appendix B)

5.0 ASSESSMENT SUMMARY & RECOMMENDATIONS

The laboratory analytical results from the groundwater samples obtained indicate petroleum impact to water supply wells WSW-2 Pre, WSW-2 Post, WSW-3 Pre, WSW-3 Post, WSW-7, WSW-16, WSW-23 and WSW-24. Water supply wells WSW-2 and WSW-3 have historically been impacted, but the results from WSW-2 Post and WSW-3 Post indicate immediate petroleum constituent breakthrough following a GAC filter change. An additional GAC unit was installed, in line with the original GAC unit on these water supply wells as part of this assessment. WSW-23 and WSW-24 analytical results indicated EDB impact at 0.071 micrograms per liter and 0.049 micrograms per liter, respectively. MECI installed a GAC unit on WSW-24, and will installed a GAC unit on WSW-23 once contact with the property owner is made. Analytical data for WSW-7 indicated MTBE concentrations at 0.93J micrograms per liter and data for WSW-16 indicated Benzene concentrations at 0.25J micrograms per liter. CoC concentrations in these wells are below RBSL's for each constituent.

Prior to the February 2, 2012 GAC filter change, the most recent GAC unit filter change was completed on October 26, 2011. Based on time frame between the October 26, 2011 GAC filter change and the analytical results obtained during the February 2, 2012 sampling event, MECI recommends changing the GAC unit filters on a two month schedule.

6.0 QUALIFICATIONS OF REPORT

The activities and evaluative approaches used in this assessment are consistent with those normally employed in hydrogeological assessment and waste management projects of this type. Our evaluation of site conditions has been based on our understanding of the site, project information provided to us, and data obtained in our exploration. The general subsurface conditions utilized in our evaluation have been based on interpretation of subsurface data between borings. Contents of

this report are intended for the sole use of SCDHEC under mutually agreed upon terms and conditions. If other parties wish to rely on this report please contact MECI prior to their use of this information so that a mutual understanding and agreement of the terms and conditions of our services can be established.

TABLE 4 - AQUIFER CHARACTERISTICS (Page 1 of 2)

SOUTH CAROLINA
Department of Health and Environmental Control (DHEC)

Site Data

SITE ID # _____ COUNTY _____

FACILITY NAME _____

SLUG DATA

See Appendix _____ Table _____ Figure _____ for a list of all data measurements.
(water level logs, etc.)(Complete as appropriate).
Water Level Recovery Data was measured by ORS Interface Probe .
(Hermit Data Logger, Manually with Water Level Indicator, etc.)(List Method)
Complete the following table for each well tested.
COMPLETE A SECOND SHEET IF MORE THAN FOUR WELLS ARE TESTED

Aquifer Characteristics were not obtained as part of this assessment. In order to conform with formatting guidelines provided by the SCDHEC UST Management Division Programmatic Quality Assurance Program Plan (QAPP), this filler table is included to provide report continuity.

Calculations

See Appendix _____ Table _____ Figure _____ for calculations
The method for aquifer calculations was NAVFAC
Calculated values by well were as follows:

Slug Test Conducted in Well(s) number				
Hydraulic Conductivity				cm/sec

Thickness of the aquifer used to calculate hydraulic conductivity was N/A feet.
The aquifer is _____ confined _____ semi-confined _____ water table (Check as Appropriate).
SEE SHEET 3
The estimated seepage velocity is _____ feet per year based on a hydraulic conductivity of _____ cm/sec, a hydraulic gradient of _____ ft/ft, and a porosity of _____ percent for _____ soil.

SUMMARY of SLUG TEST

Report of Analysis

Midlands Environmental Consultants, Inc.
235 Dooley Rd
Lexington, SC 29073
Attention: Bryan Shane

Project Name: **Smiths Grocery**

Project Number: **11-3700**

Lot Number: **NB06033**

Date Completed: **02/16/2012**

Kelly M. Maberry
Project Manager

This report shall not be reproduced, except in its entirety, without the written approval of Shealy Environmental Services, Inc.

The following non-paginated documents are considered part of this report: Chain of Custody Record and Sample Receipt Checklist.

Case Narrative
Midlands Environmental Consultants, Inc.
Lot Number: NB06033

This Report of Analysis contains the analytical result(s) for the sample(s) listed on the Sample Summary following this Case Narrative. The sample receiving date is documented in the header information associated with each sample.

All results listed in this report relate only to the samples that are contained within this report.

Sample receipt, sample analysis, and data review have been performed in accordance with the most current approved NELAC standards, the Shealy Environmental Services, Inc. ("Shealy") Quality Assurance Management Plan (QAMP), standard operating procedures (SOPs), and Shealy policies. Any exceptions to the NELAC standards, the QAMP, SOPs or policies are qualified on the results page or discussed below.

If you have any questions regarding this report please contact the Shealy Project Manager listed on the cover page.

Sample Receiving
Samples -036 and -040 were listed on the chain of custody, but no sample containers were received. Per the client, disregard these samples.

Samples -003, -005, -010, -011, -015, -017, -027 and -032 for volatiles analysis contained vials with air bubbles greater than ¼" or 6mm in diameter. The laboratory uses these vials for screening and the vials without bubbles for analysis whenever possible. Condition of samples is documented on the Sample Receipt Checklist (SRC).

1,1,1,2-Tetrachloroethane		103	57-137

PQL = Practical quantitation limit
ND = Not detected at or above the MDL
Where applicable, all soil sample analysis are reported on a dry weight basis unless flagged with a "W"
B = Detected in the method blank
J = Estimated result < PQL and ≥ MDL
E = Quantitation of compound exceeded the calibration range
P = The RPD between two GC columns exceeds 40%
* = Reportable result (only when report all runs)
H = Out of holding time
N = Recovery is out of criteria

Surrogate	Q	Run 1 % Recovery	Acceptance Limits
1,1,1,2-Tetrachloroethane		98	57-137

PQL = Practical quantitation limit
ND = Not detected at or above the MDL
B = Detected in the method blank
J = Estimated result < PQL and ≥ MDL
E = Quantitation of compound exceeded the calibration range
P = The RPD between two GC columns exceeds 40%
H = Out of holding time
N = Recovery is out of criteria
Where applicable, all soil sample analysis are reported on a dry weight basis unless flagged with a "W"
* = Reportable result (only when report all runs)

PQL = Practical quantitation limit
ND = Not detected at or above the MDL
B = Detected in the method blank
J = Estimated result < PQL and ≥ MDL
E = Quantitation of compound exceeded the calibration range
P = The RPD between two GC columns exceeds 40%
H = Out of holding time
N = Recovery is out of criteria
Where applicable, all soil sample analysis are reported on a dry weight basis unless flagged with a "W"
* = Reportable result (only when report all runs)

Client: **Midlands Environmental Consultants, Inc.**
Description: **Duplicate WSW-3 (PRE)**
Date Sampled: **02/02/2012 1210**
Date Received: **02/06/2012**

Contractor Checklist

Item#	Item	Yes	No	N/A
1	Are Facility Name, Permit #, and address provided?	X		
2	Is UST Owner/Operator name, address, & phone number provided?	X		
3	Is name, address, & phone number of current property owner provided?	X		
4	Is the DHEC Certified UST Site Rehabilitation Contractor's Name, Address, telephone number, and certification number provided?	X		
5	Is the name, address, telephone number, and certification number of the well driller that installed borings/monitoring wells provided?			X
6	Is the name, address, telephone number, and certification number of the certified laboratory(ies) performing analytical analyses provided?	X		
7	Has the facility history been summarized?			X
8	Has the regional geology and hydrogeology been described?			X
9	Are the receptor survey results provided as required?	X		
10	Has current use of the site and adjacent land been described?	X		
11	Has the site-specific geology and hydrogeology been described?			X
12	Has the primary soil type been described?			X
13	Have field screening results been described?			X
14	Has a description of the soil sample collection and preservation been detailed?			X
15	Has the field screening methodology and procedure been detailed?			X
16	Has the monitoring well installation and development dates been provided?			X
17	Has the method of well development been detailed?			X
18	Has justification been provided for the locations of the monitoring wells?			X
19	Have the monitoring wells been labeled in accordance with the UST QAPP guidelines?	X		
20	Has the groundwater sampling methodology been detailed?	X		
21	Have the groundwater sampling dates and groundwater measurements been provided? (Table 2 & Figure 5)			X
22	Has the purging methodology been detailed?			X
23	Has the volume of water purged from each well been provided along with measurements to verify that purging is complete? (Appendix B)			X
24	If free-product is present, has the thickness been provided?			X
25	Does the report include a brief discussion of the assessment done and the results?	X		
26	Does the report include a brief discussion of the aquifer evaluation and results?			X
27	Does the report include a brief discussion of the fate & transport models used?			X

Item#	Item	Yes	No	N/A
28	Are the site-conceptual model tables included? (Tier 1 Risk Evaluation)			X
29	Have the exposure pathways been analyzed? (Tier 2 Risk Evaluation)			X
30	Have the SSTLs for each compound and pathway been calculated? (Tier 2 Risk Evaluation)			X
31	Have recommendations for further action been provided and explained?	X		
32	Has the soil analytical data for the site been provided in tabular format? (Table 1)			X
33	Has the potentiometric data for the site been provided in tabular format? (Table 2)			X
34	Has the current and historical laboratory data been provided in tabular format? (Table 3)	X		
35	Have the aquifer characteristics been provided and summarized on the appropriate form? (Appendix F)			X
36	Have the Site conceptual model tables been included? (Tier 1 Risk Evaluation)			X
37	Has the topographic map been provided with all required elements? (Figure 1)	X		
38	Has the site base map been provided with all required elements? (Figure 2, 2A, 2B)	X		
39	Have the CoC site maps been provided? (Figures 3, 4, 4A, 4B)			X
40	Has the site potentiometric map been provided? (Figure 5)			X
41	Have the geologic cross-sections been provided? (Figure 6)			X
42	Have maps showing the predicted migration of the CoCs through time been provided? (Tier 2 Risk Evaluation)			X
43	Has the site survey been provided and include all necessary elements? (Appendix A)			X
44	Have the sampling logs, chain of custody forms, and the analytical data package been included with all required elements? (Appendix B)	X		
45	Is the laboratory performing the analyses properly certified?	X		
46	Has the tax map been included with all necessary elements? (Appendix C)	X		
47	Have the soil boring/field screening logs been provided? (Appendix E)			X
48	Have the well completion logs and SCDHEC Form 1903 been provided? (Appendix E)			X
49	Have the aquifer evaluation forms, data, graphs, equations, etc. been provided? (Appendix F)			X
50	Have the disposal manifests been provided? (Appendix G)			X
51	Has a copy of the local zoning regulations been provided? (Appendix H)			X
52	Has all fate and transport modeling been provided? (Appendix I)			X
53	Have copies of all access agreements obtained by the contractor been provided? (Appendix J)			X
54	Has a copy of this form been attached to the final report and are explanations for any missing or incomplete data been provided? (Appendix K)	X

Operation and Instruction Manual for OEM Only.

Please Note: This operation and instruction manual is for the training of the OEM and for the OEM to use to train their customers. This document is not to be used as the complete system manual.

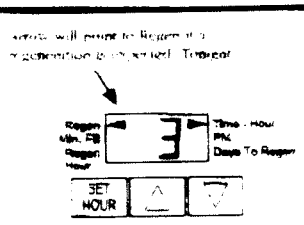
MANUAL REGENERATION

NOTE: For softeners, if brine tank does not contain salt, fill with salt and wait at least 2 hours before regeneration.

If you need to initiate a manual regeneration, either immediately, or tonight at the preprogrammed time (typically 2 a.m.), complete the following steps:

For Immediate Regeneration:

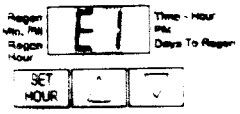
Press and hold UP and DOWN simultaneously until valve motor starts (typically 3 seconds).



For Regeneration Tonight:

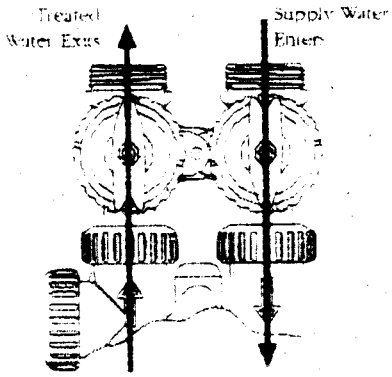
Press and release UP and DOWN simultaneously (notice that arrow points to Regen).

If the display shows "E1," "E2" or "E3" for error, call a service technician.

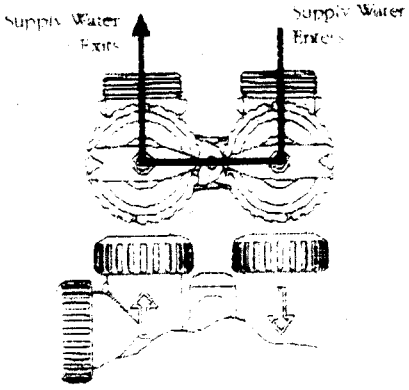


To **shut off water** to the system, please position arrow handles as shown in the **bypass operation** diagram below. If your valve doesn't look like the diagram below, contact your service technician for instructions on how to shut off water.

NORMAL OPERATION

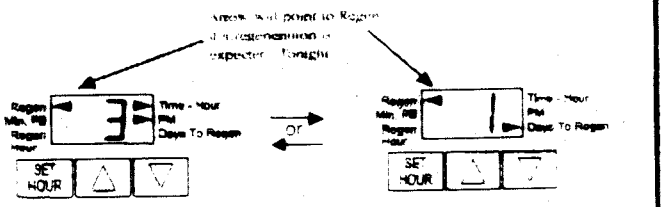


BYPASS OPERATION



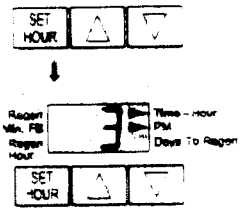
GENERAL OPERATION

When the system is operating, one of two displays will be shown: time of day or days until the next regeneration. Pressing UP or DOWN will toggle between the two choices.



TO SET TIME OF DAY

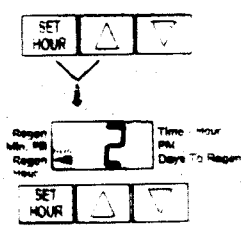
In the event of a power outage, time of day needs to be reset. All other information will be stored in memory no matter how long the power outage. Please complete the steps as shown to the right. To access this mode, press SET HOUR.



1. Accessed by pressing SET HOUR.
2. Adjust to the nearest hour using UP or DOWN. An arrow points to PM during p.m. hours.
3. Press SET HOUR to complete and return to normal operation.

TO SET TIME OF REGENERATION

For initial set-up or to make adjustments, please complete the steps as shown to the right. Access this mode by pressing SET HOUR and UP simultaneously for 5 seconds.



1. Accessed by pressing SET HOUR and UP simultaneously for 5 seconds.
2. Adjust time of regeneration hour using the UP or DOWN. An arrow points to PM during p.m. hours. Simultaneously press SET HOUR and DOWN to return to normal operation.

Control Valve Function and Cycles of Operation

This glass filled Noryl* (or equivalent) fully automatic control valve is designed as the primary control center to direct and regulate all cycles of a downflow regeneration water softener or filter.

The time clock control valve can be set to perform downflow regeneration or simply backwash. The time clock control valve has two calendar options for regeneration frequency:
1. an option where the user can choose the number of days (1-99) between each regeneration; and
2. a seven-day option where the user can choose which day(s) of the week a regeneration should occur.

The control valve is compatible with a variety of regenerants and resin cleaners. The control valve is capable of routing the flow of water in the necessary paths to regenerate or backwash water treatment systems. The injector regulates the flow of brine or other regenerants. The control valve regulates the flow rates for backwashing, rinsing, and the replenishing of treated water into a regenerant tank, when applicable.

The control valve uses no traditional fasteners (e.g. screws); instead clips, threaded caps and nuts and snap type latches are used. Caps and nuts only need to be firmly hand tightened because radial seals are used. Tools required to service the valve include one small blade screw driver, one large blade screw driver, pliers and a pair of hands. A plastic wrench is available which eliminates the need for screwdrivers and pliers. Disassembly for servicing takes much less time than comparable products currently on the market. Control valve installation is made easy because the distributor tube can be cut ½" above to ½" below the top of tank thread. The distributor tube is held in place by an o-ring seal and the control valve also has a bayonet lock feature for upper distributor baskets.

The AC adapter power pack comes with a 15 foot power cord and is designed for use with the control valve. The AC adapter power pack is for dry location use only. If the power goes out, only the time of day needs to be reset. All other values are permanently stored in the nonvolatile memory.

Table 1 shows the time for the backwash, regenerative, and rinse cycles for the ten available programming options. Six different programs are available for a softener, one for a regenerative filter, and three programs for backwash only filters. When the control valve is used as a:
1. softener, one or two backwashes occur and refill always occurs after the rinse cycle (P0 through P5);
2. regenerative filter, one backwash occurs and refill always occurs after the rinse cycle (P6); and
3. backwashing filter, one backwash occurs (P7 through P9).

Table 1
Regeneration Cycles and Times for Different Programs

Program	All times in Minutes				
	C1 1st Backwash	C2 Regenerate	C3 2nd Backwash	C4 Rinse	C5 Fill
P0	3	50	3	3	1-99
P1	8	50	8	4	1-99
P2	8	70	10	6	1-99
P3	12	70	12	8	1-99
P4	10	50	Skipped	8	1-99
P5	4	50	Skipped	4	1-99
P6	12	6	Skipped	12	1-99
P7	6	Skipped	Skipped	4	Skipped
P8	10	Skipped	Skipped	6	Skipped
P9	14	Skipped	Skipped	8	Skipped

NOTE: During regeneration the display will show C1, C2, etc. If the cycle is skipped, that cycle number will not be displayed.

*Noryl is a trademark of General Electric

The user can initiate manual regeneration. The user has the option to request the manual regeneration at the delayed regeneration time or to have the regeneration occur immediately. Simultaneously press the UP + DOWN buttons to start a regeneration at the next delayed regeneration time. If a regeneration is to occur today an arrow will point to regeneration. For immediate regeneration, simultaneously press and hold the UP + DOWN buttons for three seconds.

When in regeneration, step through the different regeneration cycles by simultaneously pressing the UP + DOWN buttons.

OEM General Instructions

The control valve offers multiple procedures that allow the valve to be modified to suit the needs of the installation. These **procedures are:**

- OEM System Setup
- Installer Displays & Settings (either 1-99 Days Between Regeneration option or 7-Day option)
- User Displays

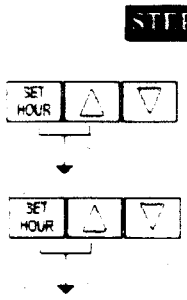
These procedures can be accessed in any order. Details on each of the procedures are provided below and on the following pages

When in operation, normal user displays show the time of day or days remaining before regeneration. When stepping through a procedure, if no buttons are pressed within five minutes the display returns to a normal user display. Any changes made prior to the five minute time out are incorporated

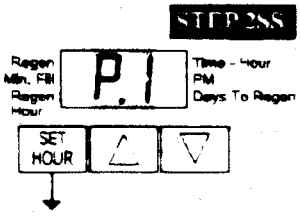
To quickly exit Installer Displays & Settings or OEM Setup, simultaneously press SET HOUR + DOWN. Any changes made prior to the exit are incorporated.

To reinitialize the control valve, check to make sure the valve is in the User Display. Then simultaneously press SET HOUR + DOWN or unplug power source plug (black wire) on the circuit board, and plug back in

OEM System Setup



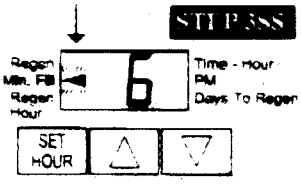
STEP 1SS – From normal mode, press SET HOUR + UP buttons simultaneously for 3 seconds and release. Then press SET HOUR + UP buttons simultaneously for 3 seconds and release.



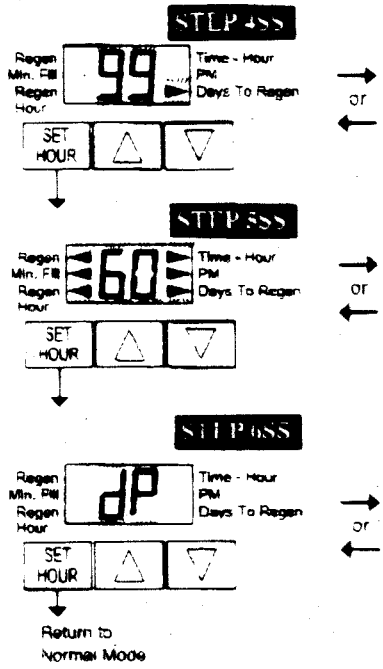
STEP 2SS – Choose the desired program by pressing the UP or DOWN buttons. Prior to selecting a program, verify the correct valve body, main piston, regenerant piston, and stack are being used, and that the injector or injector plug(s) are in the correct locations. See Compliance Table in Service Instructions under Injector Cap, Screen, Injector Plug and Injector section and Figure 6. Press SET HOUR button to go to Step 3SS

Regeneration Cycles and Times for Different Programs

Program	All times in Minutes				
	C1 1st Backwash	C2 Regenerate	C3 2nd Backwash	C4 Rinse	C5 Fill
P0	3	50	7	5	1-99
P1	5	50	7	4	1-99
P2	8	70	10	6	1-99
P3	12	70	12	8	1-99
P4	10	50	Skipped	8	1-99
P5	4	50	Skipped	4	1-99
P6	12	5	Skipped	12	1-99
P7	3	Skipped	Skipped	4	Skipped
P8	10	Skipped	Skipped	6	Skipped
P9	4	Skipped	Skipped	5	Skipped



STEP 3SS – If program P0 through P6 was selected, enter in the minutes of fill using the UP or DOWN buttons. The allowable values vary from a low of 1 to a high of 99. If program P7, P8 or P9 was selected, dashes will appear for minutes of fill. Press SET HOUR button to go to Step 4SS. Note: For each minute of fill 0.5 gallons of water is added to the solution tank. With salt (sodium chloride) this equates to approximately 4.2 pounds of salt per minute of fill.



STEP 4SS — Use UP or DOWN buttons to switch between

- 1-99 Days Between Regen, or
- 7-Day

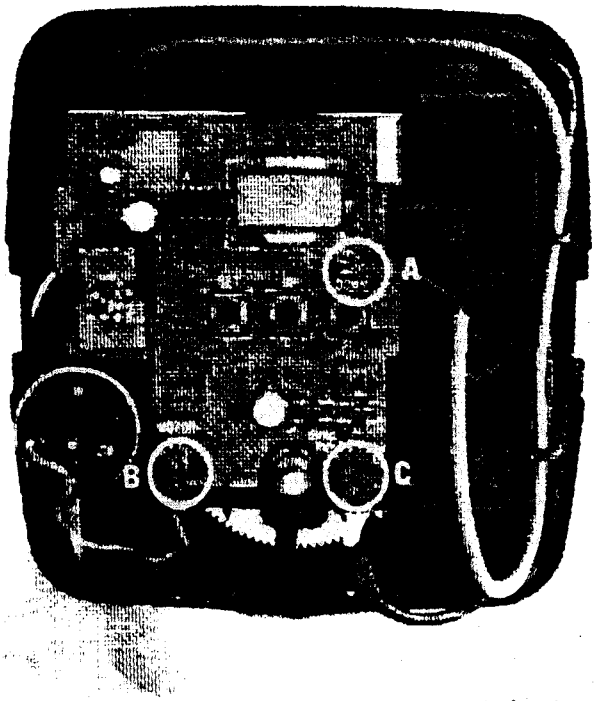
Press SET HOUR button to go to Step 5SS.

STEP 5SS — Use UP or DOWN buttons to switch between 60 Hz or 50 Hz option. Press SET HOUR button to go to Step 6SS

STEP 6SS — If a differential pressure switch is installed and actuated

- a regeneration will occur immediately if no arrow points at Regen Hour; or
- a regeneration will occur at the delayed regeneration hour if an arrow points at Regen Hour.

Use UP or DOWN buttons to switch between the two choices. If a differential switch is not installed the settings in this display are ignored. Press SET HOUR to exit OEM system setup.



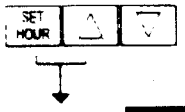
NOTE: A regeneration will be initiated or scheduled after the control has received a signal for two minutes.

A. Differential pressure switch connection

B. Motor wire connection

C. AC adapter wire connection

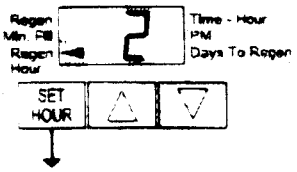
STEP 1ID



Installer Displays & Settings (1-99 Days Between Regeneration option)

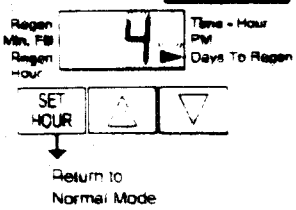
STEP 1ID – From normal mode, press SET HOUR + UP buttons simultaneously for 3 seconds and release.

STEP 2ID



STEP 2ID – Regeneration Time. Set the clock to the hour the regeneration should occur by using the UP or DOWN buttons. An arrow points to PM after 12. Press SET HOUR to go to STEP 3ID

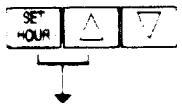
STEP 3ID



STEP 3ID – Days To Regen. Set the number of days between regenerations. The allowable range is 1 to 99. Press SET HOUR to exit Installer Displays & Settings

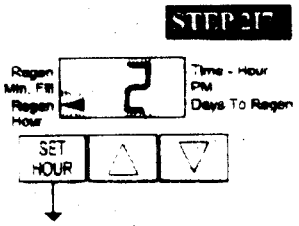
Installer Displays & Settings (7 day option)

STEP 1I7



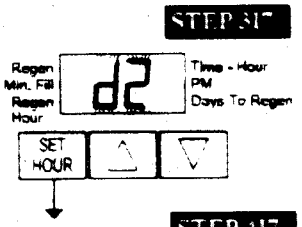
STEP 1I7 – From normal mode, press SET HOUR + UP buttons simultaneously for 3 seconds and release.

STEP 2I7



STEP 2I7 – Regeneration Time. Set the clock to the hour the regeneration should occur by using the UP or DOWN buttons. An arrow points to PM after 12. Press SET HOUR to go to STEP 3I7

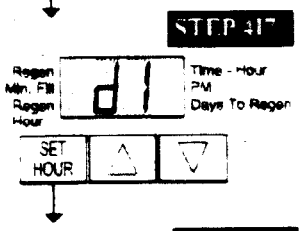
STEP 3I7



STEP 3I7 – Current Day of Week: Set the current day of the week by using the UP or DOWN buttons (See chart at right for date codes). Press SET HOUR to go to STEP 4I7

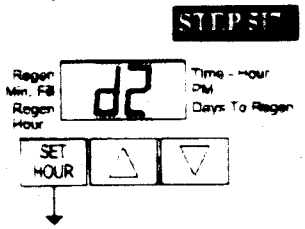
Display	Day of Week
d1	Sunday
d2	Monday
d3	Tuesday
d4	Wednesday
d5	Thursday
d6	Friday
d7	Saturday

STEP 4I7

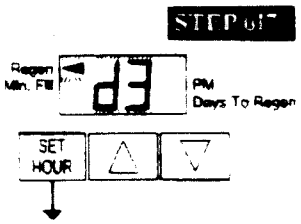


STEP 4I7 – Sunday Regeneration. To regenerate on Sunday use the UP or DOWN button until the arrow points to Regen. If the arrow does not point to Regen a regeneration will not occur on Sunday. Press SET HOUR to go to STEP 5I7

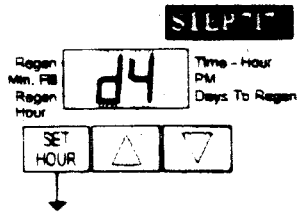
STEP 5I7



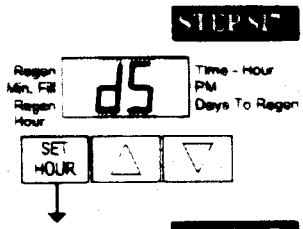
STEP 5I7 – Monday Regeneration. To regenerate on Monday use the UP or DOWN button until the arrow points to Regen. If the arrow does not point to Regen a regeneration will not occur on Monday. Press SET HOUR to go to STEP 6I7



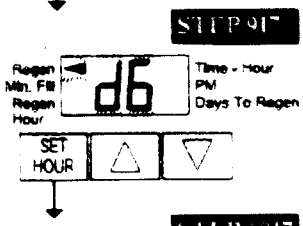
STEP 6I7 – Tuesday Regeneration. To regenerate on Tuesday use the UP or DOWN button until the arrow points to Regen. If the arrow does not point to Regen a regeneration will not occur on Tuesday. Press SET HOUR to go to STEP 7I"



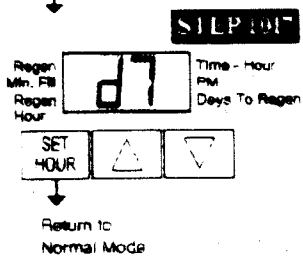
STEP 7I7 – Wednesday Regeneration: To regenerate on Wednesday use the UP or DOWN button until the arrow points to Regen. If the arrow does not point to Regen a regeneration will not occur on Wednesday. Press SET HOUR to go to STEP 8I"



STEP 8I7 – Thursday Regeneration: To regenerate on Thursday use the UP or DOWN button until the arrow points to Regen. If the arrow does not point to Regen a regeneration will not occur on Thursday. Press SET HOUR to go to STEP 9I"



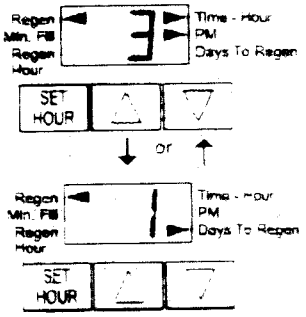
STEP 9I7 – Friday Regeneration: To regenerate on Friday use the UP or DOWN button until the arrow points to Regen. If the arrow does not point to Regen a regeneration will not occur on Friday. Press SET HOUR to go to STEP 10I"



STEP 10I7 – Saturday Regeneration. To regenerate on Saturday use the UP or DOWN button until the arrow points to Regen. If the arrow does not point to Regen a regeneration will not occur on Saturday. Press SET HOUR to exit Installer Displays & Settings.
NOTE: If all arrows are turned off in d1-d7, Days to Regen in the User Displays will always read " and a regeneration will never occur.

User Displays

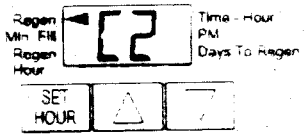
General Operation



When the system is operating one of two displays will be shown. Pressing UP or DOWN button will alternate between the displays. One of the displays is always the current time of day (to the nearest hour). The second display is the days remaining until the next regeneration. If the days remaining is equal to one, a regeneration will occur at the next preset regeneration time. The user can scroll between displays as desired.

If the system has called for a regeneration that will occur at the preset time of regeneration, the arrow will point to Regen.

Regeneration Mode

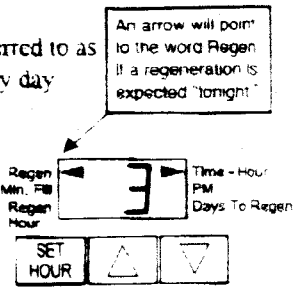


Typically a system is set to regenerate at a time of low water usage. An example of a time with low water usage is when a household is asleep. If there is a demand for water when the system is regenerating, untreated water will be used.

When the system begins to regenerate, the display will change to indicate the cycle of the regeneration process (see Table 3) that is occurring and an arrow will also point to Regen. The system will run through the steps automatically and will reset itself to provide treated water when the regeneration is completed.

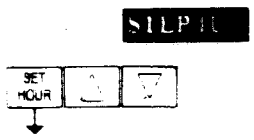
Manual Regeneration

Sometimes there is a need to regenerate the system sooner than when the system calls for it, usually referred to as a manual regeneration. There may be a period of heavy water usage because of guests or a heavy laundry day.



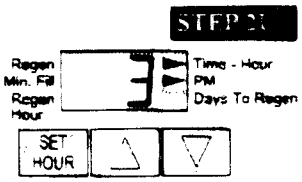
To initiate a manual regeneration at the preset delayed regeneration time, simultaneously press UP + DOWN buttons together and release. The arrow will point to the word Regen if a regeneration is expected "tonight." To cancel the regeneration simultaneously press UP – DOWN buttons and release.

To initiate a manual regeneration immediately, simultaneously press UP – DOWN buttons together for three seconds. The system will begin to regenerate immediately. The request cannot be cancelled.
Note: For softeners, if brine tank does not contain salt, fill with salt and wait at least two hours before regenerating.



Set Time of Day

STEP 1U – Press SET HOUR

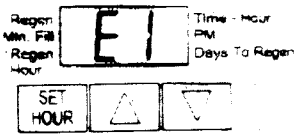


STEP 2U – Current time: Set the clock to the closest hour by using the UP and DOWN button. An arrow points to PM after 12. After a power outage, the time of day will need to be reset. Press SET HOUR to exit.

Power Loss

If the power goes out current time of day will need to be reset. If the power goes out while the system is regenerating, the cycle picks up where it was interrupted when the power returns.

Error Message



If "E1," "E2" or "E3" appears on the display contact the OEM for help. This indicates that the valve did not function properly.

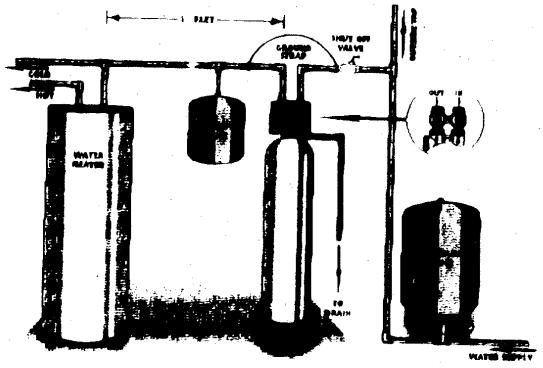
The nuts and caps are designed to be unscrewed or tightened by hand or with the special plastic Service Wrench, #CV3193-01. If necessary, pliers can be used to unscrew the nut or cap. Do not use a pipe wrench to tighten nuts or caps. *Do not place screwdriver in slots on caps and/or tap with a hammer.*

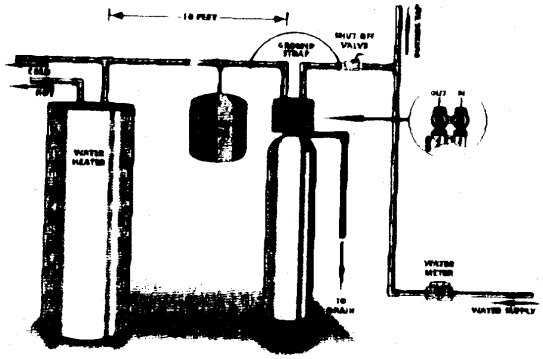
SITE REQUIREMENTS

- water pressure – 25-100 psi
- water temperature – 33-100°F (0.5-37.7°C)
- electrical – 115/120V, 60Hz uninterrupted outlet
- the tank should be on a firm level surface
- current draw is 0.5 amperes
- the plug-in transformer is for dry locations only

WELL WATER INSTALLATION



MUNICIPAL INSTALLATION



1. The distance between the drain and the water filter should be as short as possible.

2. Do not install any water filter with less than 10 feet of piping between its outlet and the inlet of a water heater. For an IMS or IMB filter, an expansion tank on the outlet side of the system is recommended.

***CAUTION:* To protect the unit in the event of a hot water heater backup, the manufacturer recommends the use of an expansion tank on the outlet side of the unit.**

3. Do not locate unit where it or its connections (including the drain and overflow lines) will ever be subjected to room temperatures under 33° F.

Re: Bottle Water Service from Hill residence
Smith's Grocery, 3176 Charlotte Hwy , York, SC
UST Permit #09322; CA#43618
Release reported June 30, 1993
Price Quote received April 16, 2012
York County

Dear Ms. Smith:

The Underground Storage Tank (UST) Management Division of the South Carolina Department of Health and Environmental Control (SCDHEC) has reviewed the price quote submitted by Midlands Environmental Consultants, Inc. to provide bottled water service for the Hill residence until a replacement water supply well can be installed. Cost agreement number 43618 has been approved for the amount shown on the enclosed cost agreement form for bottled water service. The cost agreement was set up for a three-month period.

Documentation regarding the water service and invoice are due within 90 days from the date of this letter. Midlands Environmental Consultants, Inc. can submit an invoice for direct payment from State Underground Petroleum Environmental Response Bank (SUPERB) Account for preapproved costs. Receipts from the bottled water company will be required for reimbursement of actual costs. If the invoice is not submitted within 120 days from the date of this letter, monies allocated to pay this invoice will be uncommitted. This means that the invoice will not be processed for payment until all other committed funds are paid or monies become available.

On all correspondence regarding this site, please reference UST Permit #09322. Should you have any questions regarding this correspondence, please feel free to contact me at (803) 896-6397, fax me at (803) 896-6245, or e-mail me at thomadl@dhec.sc.gov.

Sincerely,

Debra L Thoma

SCDHEC Site ID# 09322, CA # 43397
MECI Project Number 12-3850
Certified Site Rehabilitation Contractor UCC-0009

Dear Ms. Thoma,

On Behalf of Ms. Lois ~~Smith~~, ~~Midlands~~ Environmental Consultants Inc. (MECI) is pleased to submit the attached Tier II Report for the referenced site. This report describes assessment activities conducted at the site and results of those activities in general accordance with South Carolina Department of Health and Environmental Control (SCDHEC) guidelines, including adherence to the UST Division Programmatic Quality Assurance Program Plan (QAPP).

Midlands Environmental appreciates the opportunity to offer our professional environmental services to you on this project. Please feel free to contact us at 803-808-2043 if you have any immediate questions or comments.

Sincerely,
Midlands Environmental Consultants, Inc.

1.1 QAPP STATEMENT

This report conforms to the SCDHEC UST Management Division Programmatic QAPP. The Report, Tables (Table 1-Soil Analytical Data, Table 2-Field Parameters, Table 3-Groundwater Analytical Results, Table 4-Aquifer Characteristics, and Table 5-Site Conceptual Model), Figures (Figure 1-Topographic Map, Figure 2-Site Features, Figure 3-Soil CoC Site Map, Figure 4-Groundwater CoC Site Map, Figure 5-Groundwater Contour Map, and Figure 6-Geologic Cross Section) , and Appendices are presented in accordance with formatting requirements set forth in section A9 of the UST Management Division Programmatic QAPP, Revision 1, June 2011. Some or all of the tables

and figures in this report were not applicable to the scope of services presented, however have been included in order to conform to the SCDHEC UST Management Division Programmatic QAPP.

1.2 PROJECT INFORMATION

The subject site (Smith's Grocery) is located at 3176 Charlotte Highway (S.C. Highway 49), near the intersection of Charlotte Highway and Southern Pines Road in York, York County, South Carolina (see Figure 1). The site consists of an approximately 2.00 acre parcel of land (see Figure 2), and currently occupied by a vacant convenience store. The site formerly maintained one 6,000 gallon gasoline UST and one 8,000 gallon gasoline UST. The South Carolina Department of Health and Environmental Control (SCDHEC) reported release of petroleum product from two single walled underground storage tanks (UST) at the subject site in June of 1993, which was confirmed in September of 1996. The site is currently ranked a Class 1D.

Previous assessments at the referenced site were conducted by CBM Environmental Services, Inc. (CBM) of Fort Mill, SC. CBM completed a Rapid Assessment at the site in January of 2000. This assessment included field screening of groundwater and soil, aquifer slug test, and installation of groundwater monitoring wells. In September of 2001, SEI Environmental of Columbia, SC implemented corrective action efforts at the site. During the implementation process, SEI Environmental installed eighteen injection wells surrounding the property.

In November of 2010, MECI completed additional assessment activities at the site. This additional assessment included replacing three monitoring wells which were determined to be dry during previous groundwater sampling events. During assessment activities it was observed that there were several undocumented water supply wells located at properties within 1000' feet of the site. Based on this observance, MECI proposed to sample all water supply wells in the area to help focus future assessment activities. Following the water supply well sampling event in February of 2012, several water supply wells were found to be impacted, and GAC units were installed.

Prior to commencement of the field activities described in this document, a QAPP Contractors Addendum was completed by MECI personnel, submitted to SCDHEC and approved by the SCDHEC project manager.

The above project information is based on MECI field notes and SCDHEC files.

2.0 POTENTIAL RECEPTOR SURVEY

During the Tier II Assessment MECI personnel conducted a survey of potential receptors within a 1,000-foot radius of the site. During this survey, thirty-nine water supply wells were identified within 1,000' feet of the subject site. Detailed information regarding the located water supply wells are discussed in Section 3.5, and water supply well locations are presented in Appendix A, Appendix C, Figure 4H, and Figure 4I.

Drainage ditches run along South Carolina Highway 49. At the time of sampling, these drainage ditches were dry.

Telephone, water (Water Supply Well), and gas lines were identified on and surrounding the site. Utilities at the site are buried approximately three to six feet below ground surface (BGS). Given the burial depth of the utilities and the depth to groundwater, it is unlikely that utilities would serve as receptors or preferential pathways dependant upon groundwater fluctuation.

2.1 SURROUNDING PROPERTY USAGE

The subject site is located near York, York County, South Carolina. SC Highway 49, Charlotte Highway, forms the eastern border of the site, beyond which is a residential subdivision; "The Pines". North of the subject site are residential properties. South and west of the site are agricultural and undeveloped properties.

3.0 FIELD EXPLORATION

Field exploration conducted at the site included:

- Field screening of groundwater collected from the site utilizing direct push techniques, and laboratory analysis of samples;
- fractured rock field screening utilizing a downhole camera in conjunction laboratory analysis of groundwater samples;
- construction of ten (10) shallow monitoring wells;
- construction of six (6) nested deep monitoring wells;
- collection of soil samples;
- abandonment of monitoring wells;
- hydrologic testing of selected monitoring wells;
- sampling and chemical analyses of the entire monitoring well network and thirty-eight (38) nearby water supply wells; and,
- a comprehensive survey of subject site.

The monitoring well locations were selected based on the results of our field screening of groundwater samples, existing site conditions, estimated groundwater flow direction, and drilling accessibility. The field screening points are illustrated on Figure 3A, Figure 3B, and well locations are presented on Figure 2 and Appendix A.

3.1 GROUNDWATER FIELD SCREENING

The following section discusses groundwater field screening conducted at the referenced site.

3.1.1 Direct Push Groundwater Field Screening

From April 16 & 17, 2012, eleven direct push field screening locations (GPW-1 through GPW-11) were advanced at the site to collect groundwater samples to define the petroleum constituents in the saprolite aquifer. These borings were advanced by Environmental Drilling and Probing Services of Charlotte, North Carolina (S.C. Drilling Certification: Tommy Bolyard #B 01846). The sampling depth for each location was based on the water table depth, the yield of the water bearing zone as evidenced by flow of water into the direct push apparatus, and the ability to reach the desired depth

below ground surface. Direct push samples were collected at depths (Probe Refusal) to determine the impact of contamination in the saprolite aquifer and its potential relation to petroleum constituents infiltrating downgradient water supply wells.

The total footage for the direct push/temporary borings was 698 feet. The sample locations are presented on Figure 3A. To prevent cross-contamination between borings the reusable down-hole portion of the direct push sampling device and augers were cleaned between borings. New Teflon tubing was utilized at each location. Following the collection of the groundwater samples, the hole left open by the direct push sampling device was abandoned with a bentonite/portland grout slurry.

The groundwater samples obtained were transported to Shealy Environmental Services, Inc of West Columbia, SC (SCDHEC Laboratory Certification #32010) for analysis for BTEX, naphthalene, and methyl-tertiary butyl ether (EPA Method 8260B). Selected samples were and analyzed for EDB (EPA Method 8011). Analytical results for laboratory samples collected from the direct push borings are summarized in Table 1A, Figure 3A, and laboratory reports are included in Appendix B.

3.1.2 Fractured Rock Field Screening (Downhole Camera)

Water Supply Wells Screening & Observations

On April 25, 2012, a submersible downhole camera was placed in WSW-2 and WSW-24 to inspect the water supply wells for potential structural issues and to aid in determining proper depths for further field screening into the rock interface. The downhole camera event was conducted under the supervision of Mr. Travis Franklin of A-1 Well & Pump Service, Asheville, North Carolina.

- WSW-2 is located approximately 230' feet east of the source area on a residential property owned by Mr. Gary Wiggam (3043 Clover Circle/York County Tax Map# 4890401024). The well inspection reveals that WSW-2 is cased with 6" PVC casing which appears to extend to approximately 100' feet from the top of casing (TOC). From 0.0' to 46.0' the casing appears to be intact with no structural issues. At approximately 46.2' the casing appears to be impaired and evidence of streaky flow features are evident. This impairment in the casing of WSW-2 may be a potential area of inflow into the well. Groundwater was encountered at 49.0' feet from the TOC and appears to have significantly high bacterial growth, creating unclear images from 49.0' until 100.0' from the TOC. The clarity of the water at 100.0' appears to indicate the approximate depth of which the casing extends into the bore, however the exact depth of the casing is unknown. At approximately 132.0' and 168.0', there are is visible evidence of enlarged areas which may be hydraulically significant. There appears to be a rock transition at 169.4' which is stable until 176.0'. At 176.0' feet, there is visual evidence of another potential hydraulically significant fracture. The camera was seated in soft sediment at 193.0' from the TOC and is likely the total depth of the well.

- WSW-24 is located approximately 500' feet east-southeast of the source area on a residential property owned by Mr. Christopher Jeter (3040 Clover Circle/York County Tax Map# 4890401028). The well inspection reveals that WSW-24 is cased with 6" PVC casing which extends to 110.8' feet from the top of casing (TOC) and the casing appears to be stable. Groundwater was encountered at 42.2' feet from the TOC. At approximately 117.5', 132.0', 167.0', and from 197.0' to 202.0' there are is visible evidence of enlarged areas which may be hydraulically significant. The camera was seated in soft sediment at 228.0' from the TOC and is likely the total depth of the well.

Open Rock Bore Screening & Observations

From July 10 through 13, 2012, six open rock borings were advanced at the site to screen the groundwater with in the rock interface. These borings were advanced by James Darby Drilling of Rock Hill, SC (S.C. Drilling Certification: Chad Julian #A 01422). The following table presents bore details to include the bore ID, casing depth, and total depth.

Bore ID#	Casing Depth (ft.)	Total Depth (ft.)
FR-1	99.8	188.5
FR-2	120.8	204.2
FR-3	107.7	203.8
FR-4	100.7	200.3
FR-5	111.1	203.8
FR-6	101.5	204.1

From July 18-25, 2012, a downhole camera was utilized in each of the referenced bores to determine potentially hydraulically significant fractures with in the fractured rock aquifer. A combination downhole and side-view dual lens color camera was used for the inspection of each bore and was conducted under the direct supervision of Mr. Mike L. Vaught, P.G. of EGIS, PA.

- **FR-1** is located approximately 70.0' feet east of MW-2, along the eastern shoulder of Charlotte Highway. The well inspection reveals that FR-1 is cased with 6" PVC casing which extends to 99.8' feet from lowest point at the top of TOC. Groundwater was encountered at 41.8' feet from the TOC. At approximate depths of 116.0' and 160.0', visible evidence of enlarged fracture zones were observed. These enlarged areas within the bore may be hydraulically significant. The camera was seated in soft sediment at 188.5' from the TOC.

- **FR-2** is located approximately 190.0' feet northeast of MW-2. FR-2 is cased with 6.25" PVC well casing to 120.8' feet from the lowest point at the top of TOC. Groundwater was encountered at 44.2' feet from the TOC. Potentially significant fracture zones were observed at 135.0', 150.0', and at 202.0'. The fracture zones observed at 135.0' and 202.0' appear to be the result of the presence of a quartz vein deposit. The camera was seated in soft sediment at 204.2' from the TOC.

- **FR-3** is located approximately 180.0' feet south of MW-2. FR-3 is cased with a 6.25" PVC well casing to 107.7' feet from the lowest point at the TOC. Groundwater was encountered at 41.7' feet from the TOC. Potentially significant fracture zones were observed at 130.0', 160.0', and at 190.0'. The camera was seated in soft sediment at 203.8' from the lowest point at the TOC.

- **FR-4** is located approximately 360.0' feet east-southeast of MW-2, at the intersection of Southern Pines Road and Clover Circle. FR-4 is cased with a 6.25" PVC well casing to 100.7' feet from the lowest point at the TOC. Groundwater was encountered at 43.5 feet from the TOC. On July 18, 2012, the downhole camera was advanced to approximately 139.0' feet and was unable to be lowered any further due to a collapse in the bore. In the open borehole, visually there are corners, enlarged/rough areas, and high angle vertical

fractures that could indicate interconnected fractures throughout the borehole of FR-4. On July 24, 2012, EDPS mobilized to the site to clear the fallen rock from the bore. Additionally on July 24, 2012, an second attempt to advance the downhole camera was conducted to visualize the bore from 139.0'-200.3'. Potentially significant fracture zones were observed at 139.0', 166.0', and at 190.0'. The camera was seated in soft sediment at 200.3' from the lowest point at the TOC.

- **FR-5** is located approximately 400.0' feet east of MW-2, located in front 3043 Clover Circle. FR-5 is cased with 6.25" PVC well casing to 111.1' feet from the lowest point at the TOC. Groundwater was encountered at 47.2' feet from the TOC. Potentially significant fracture zones were observed at 118.0', 154.0', and at 188.0'. The camera was seated in soft sediment at 203.8' from the lowest point at the TOC.

- **FR-6** is located approximately 490.0' feet east of MW-2, located in front 3049 Clover Circle. FR-6 is cased with 6.25" PVC well casing to 101.5' feet from the lowest point at the TOC. Groundwater was encountered at 46.7' feet from the TOC. Potentially significant fracture zones were observed at 110.0', 150.0', and at 191.0'. The camera was seated in soft sediment at 204.1' from the lowest point at the TOC.

Following the review of each downhole camera video, MECI strategically developed a plan to install passive diffusion bags (PDB's) into the fractured rock bores at levels to bracket each hydraulically significant fracture zone documented from the visual interpretation. The PDB's were installed into the bore on August 13, 2012 and samples were collected August 28, 2012. The groundwater samples obtained were transported to Shealy Environmental Services, Inc of West Columbia, SC (SCDHEC Laboratory Certification #32010) for analysis for BTEX, naphthalene, methyl-tertiary butyl ether, 1,2 DCA, 8 Oxygenates (EPA Method 8260B) and EDB (EPA Method 8011). Following the collection of the groundwater samples, the open face rock bores were abandoned with a bentonite/portland grout slurry, via tremie pipe by James Darby Drilling of Rock Hill, SC (S.C. Drilling Certification: Chad Julian #A 01422). Analytical results for laboratory samples collected from the fractured rock borings are summarized in Table 1B, Figure 3B, and laboratory reports are included in Appendix B. Copies of the downhole camera videos are additionally included as part of this report.

3.2 MONITORING WELL INSTALLATION

The following section discusses monitoring well installation activities conducted at the subject site.

3.2.1 Conventional Monitoring Well Installation

From August 21 through 30, 2012, ten (10) monitoring wells were installed at the subject site to replace monitoring wells which have historically been vacant of sufficient water for sampling purposes. These wells were installed by Environmental Drilling and Probing Services, LLC. of Rock Hill, SC (S.C. Driller Certification: Tommy Bolyard # B 01846, Joseph Smith #B 01648, and David Brown #B 02053). A track-mounted drilling rig, employing 8.0-inch outer diameter hollow stem augers was utilized for the construction of the referenced wells. Monitoring wells MW-5R, MW-6R, MW-7R, MW-10R, MW-11R, MW-14R, MW-15R, MW-17R, MW-18R, and MW-21 were installed as single cased watertable bracketing monitoring wells.

The following table presents well installation details:

Well ID	Screened Interval (ft)	Total Depth (ft)
MW-5R	30.5-40.5	40.5
MW-6R	34.0-44.0	44.0
MW-7R	34.0-44.0	44.0
MW-10R	40.5-50.5	50.5
MW-11R	44.0-54.0	54.0
MW-14R	48.0-58.0	58.0
MW-15R	48.0-58.0	58.0
MW-17R	38.0-48.0	48.0
MW-18R	45.0-55.0	55.0
MW-21	44.0-54.0	54.0

3.2.2 Multi-Port Sampling Monitoring Well Installation

On September 3 through 7, 2012, six nested monitoring wells, containing three isolated sampling ports, were installed at the referenced site. The multi-port sampling well installation was conducted by Environmental Drilling and Probing Services, LLC. of Rock Hill, SC (S.C. Driller Certification: Tommy Bolyard # B 01846). During construction, a 6.25" outer casing was advanced to the desired depth and grouted in-place. The grout was allowed to cure and the remainder of the depth of the borehole was achieved using air-rotary techniques.

Based on the results of the fractured rock field screening (downhole camera), multi-port sampling wells were installed in at three discrete sampling intervals to isolate potential hydraulically significant fracture zones. During construction, a layer of sand was placed at the base of each bore to bring the base of the deepest screened interval to the correct depth. Starting with the deepest interval first, sand was placed around the screen to form a filter pack extending approximately 2.0' feet above the top of the screen. Following the installation of filter pack, an approximate 2.0' foot transitional seal of bentonite was placed on top and hydrated, followed by an annular seal of grout that was extended until 2.0' feet from the bottom of the next deepest interval. The grout was allowed to cure and the process was repeated until the shallowest interval was completed. The following table presents well installation details:

Well ID	Interval ID	Well Diameter (Inches)	Screen Interval (ft.)
TW-1ABC	A	1"	110.0-120.0
	B	2"	151.0-161.0
	C	2"	190.0-200.0
TW-2ABC	A	1"	127.0-137.0
	B	2"	150.0-160.0
	C	2"	193.0-203.0
TW-3ABC	A	1"	125.0-135.0
	B	2"	157.0-167.0
	C	2"	188.0-198.0
TW-4ABC	A	1"	130.0-140.0
	B	2"	160.0-170.0
	C	2"	190.0-200.0
TW-5ABC	A	1"	110.0-120.0
	B	2"	147.0-157.0
	C	2"	187.0-197.0
TW-6ABC	A	1"	108.0-118.0
	B	2"	143.0-153.0
	C	2"	190.0-200.0

The soils encountered during drilling activities consisted of micaceous clays and silts of the Piedmont Physiographic Province, underlain by saprolite and competent bedrock. Representative portions of soil samples were screened with a Photo Ionization Detector (PID) and classified by MECI personnel. Test boring records showing soil descriptions and screening result are attached in Appendix E.

Drill cuttings were containerized and transported to Waste Management/Richland County Landfill, Elgin, SC by MECI personnel. A total of 7.12 tons was disposed of in this manner. A disposal manifest for these soils is attached at the end of this report.

Following completion of the monitoring wells, the wells were developed by purging until they were determined to be functioning properly and turbidity was reduced. These wells were developed utilizing a Grunfos Redi-flo2 well pump. The drum of purge water was treated by MECI personnel using a granular activated carbon drum. A total of 682.0 gallons of development water was disposed of in this manner. A disposal manifest for the treated purge water is presented in Appendix G.

3.3 MONITORING WELL ABANDONMENT

Ten (10) monitoring wells were abandoned from August 21 through 30, 2012 at the subject site according to South Carolina Well Standards and Regulations R.61-71.H. The well abandonment was conducted under the direction of Mr. Tommy Bolyard (SC Driller's License # B 01846) of Environmental Drilling and Probing Services of Charlotte, NC. The following matrix presents the well identification numbers, surface coverings, well diameter, and total well depth:

Well ID	Well Diameter (Inches)	Total Depth (ft)
MW-5	2"	30.00
MW-6	2"	37.00
MW-7	2"	36.00
MW-10	2"	44.00
MW-11	2"	44.00
MW-14	2"	50.00
MW-15	2"	50.00
MW-17	2"	40.00
MW-18	2"	46.00
IW-16	2"	45.00
Total Footage of Abandoned Wells		**422.0**

The monitoring wells were abandoned with portland bentonite slurry utilizing tremie pipe. A total of 422.0 feet of monitoring wells were abandoned by the methods described above. Following the abandonment, the well pads, vault, and cover were removed from wells located in unpaved areas and the resulting space was filled with backfill to the level of the surrounding land surface. Please find the attached SCDHEC 1903 Water Well Records in Appendix E.

3.4 SOIL SAMPLING AND ANALYSES

Soil samples were collected from split discrete samples collected during the installation of monitoring wells MW-7R and MW-11R. These soil samples collected were analyzed for grain size/hydrometer. The soils were sampled in accordance with SCDHEC's Quality Assurance Program Plan for the

Underground Storage Tank Management Division (QAPP, Dated June 2011) and MECI's Standard Operating Procedures (MECI SOP, Dated August, 2011). The results of the laboratory analyses are the attached laboratory reports (Appendix B).

Soil samples obtained were sent to Shealy Environmental Services, Inc. of West Columbia, SC (SCDHEC Laboratory Certification #32010) for analysis.

The following sampling matrix contains soil sampling details:

SAMPLE ID#	Matrix: Solid	Matrix: Water	BTEX, Naphth, MTBE (EPA Method 8260B)	Total Lead (EPA Method 6010)	PAH's (EPA Method 8270)	TPH (EPA Method 8015)	8 RCRA METALS (EPA Method 6010)	Grainsize/Hydrometer (ASTM D1140)
			Analyte Sampled					
MW-7R	X							X
MW-11R	X							X

Notes: BTEX = benzene, toluene, ethylbenzene, & total xylenes, MTBE=methyl tertiary butyl ether, PAH = polycyclic aromatic hydrocarbons

3.5 MONITORING WELL SAMPLING AND CHEMICAL ANALYSES

On September 25 through 27, 2012, MECI personnel collected groundwater samples from the forty-seven (47) monitoring wells at the subject site. Six (6) monitoring wells (MW-2, MW-3, MW-12, MW-13, MW-19, and IW-11) were gauged and determined to be dry during sampling activities. All newly installed monitoring wells and pre-existing monitoring wells which contained sufficient water were purged prior to sample collection. Six (2) monitoring wells (MW-9R, MW-16, MW-20, IW-10, IW-18, and IW-20) did not contain sufficient water for purging prior to sample collection and were collected as no-purge samples. Forty-one (41) monitoring wells were purged prior to sampling. Sampling/purging of all monitoring wells was completed utilizing a prepackaged, clear, disposable polyethylene bailer and nylon rope. Purging was completed by bailing three to five well volumes of water from the well, until pH, conductivity, dissolved oxygen, and turbidity stabilized to within 10%, or until all available water was evacuated from the well, whichever occurred first. A new set of nitrile gloves were worn at each monitoring well, and at all times samples were handled. Field measurements of turbidity, pH, conductivity, dissolved oxygen, and water temperature were obtained before the well sampling process. MECI utilized YSI550A meters for DO (mg/L) and temperature readings (°C), YSI63 meters for pH and conductivity (uS) readings, and a turbidity tube for turbidity readings (NTU). The attached Field Data Information Sheets presents the results of the field measurements obtained during sampling processes. All wells were sampled in accordance with SCDHEC's Quality Assurance Program Plan for the Underground Storage Tank Management Division (QAPP, Dated June 2011) and MECI's Standard Operating Procedures (MECI SOP, Dated February 2012). Groundwater samples obtained were sent to Shealy Environmental Services, Inc. of West Columbia, SC (SCDHEC Laboratory Certification #32010) for analysis.

The following sampling matrix contains well development and requested analyses for each well:

Monitoring Well	Purge	No Purge	Gauge Only	Not Located	BTEX, Naphthalene, MTBE (EPA Method 8260-B)	EDB (EPA Method 8011)	1,2 DCA (EPA Method 8260-B)	8 Oxygenates (EPA Method 8260-B)	Total Lead (EPA Method 6010)	Sulfate (EPA Method 375.2)	Nitrate (EPA Method 335.2)	Methane (RSK Method)	PAH's (EPA Method 8270)	Ferrous Iron (Field Test)

The results of the laboratory analyses are summarized in Table 3 & 3A and presented in Appendix B.

Purge water produced by the purging process was treated on-site utilizing a granular activated carbon unit. A total of 700.0 gallons of purge water was disposed of in this manner. A disposal manifest for the referenced purge water is presented in Appendix G.

3.6 WATER SUPPLY WELL SAMPLING AND CHEMICAL ANALYSES

On September 25-26, 2012, MECI personnel collected forty-one (41) water supply well samples. The samples obtained from were analyzed for volatile organic compounds including BTEX, naphthalene, methyl-tertiary-butyl-ether, 1,2 DCA, Oxygenates (EPA Method 8260B), and EDB (EPA Method 8011). Results of the laboratory analyses are discussed in Section 5.2 and summarized in Table 3 & 3A. The analytical results are also presented in Appendix B.

The following matrix contains well status, owner(s), and tax map identification numbers:

Water Supply Well Number	Well Owner	York County Tax Map Number:	Notes:	Well Status
WSW-1	Byrum Boyd (Life Estate)	4560000043	3176 Charlotte Highway (On-Site)	Active

WSW	Byrum Boyd (Life Estate)	4560000043	3176 Charlotte Highway (On-Site)	Inactive

The results of the laboratory analyses are summarized in Table 3 & 3A and presented in Appendix B.

3.7 INFLOW PERMEABILITY TESTS

Inflow permeability tests were performed on monitoring wells MW-7R and MW-11R on September 26, 2012 to estimate the hydraulic conductivity of the formation materials exposed to the well screen at each location. Inflow test methodology and calculations are included in Appendix C.

3.8 SITE SURVEY

Following the well installation, a comprehensive survey was conducted by Construction Support Services of Columbia, SC (Jay S. Joshi PLS# 14811) dated October 18, 2012 to locate the vertical and horizontal positions of the monitoring wells and relevant structures. A signed/stamped copy of the comprehensive survey is attached in Appendix A. See Table 2 and Figure 5 for monitoring well elevation data.

4.0 AREA GEOLOGY AND HYDROGEOLOGY

The mean elevation of the property, as depicted on the local USGS quadrangle (Clover, South Carolina), appears to be approximately 226.5 meters (743 feet) above sea level. The site is located in the Piedmont Physiographic Province of South Carolina, an area underlain by ancient igneous and metamorphic rocks. The soils in this province are generally residual soils that are underlain by rock at highly varying depths.

The soils encountered in this area are the product of in-place weathering of rocks similar to the rocks underlying the site. In areas not altered by erosion or disturbed by the activities of man, the typical residual soil profile consists of near surface clayey soils and underlying sandy silt and sand. The boundary between soil and rock is gradational. A transitional zone termed "weathered rock" is normally found overlying the parent bedrock. This zone is typically the most transmissive zone for groundwater movement. Consequently, the topography of the bedrock surface is uneven, even over short horizontal distances. It is not unusual to find lenses and boulders of hard rock and zones of weathered rock within the soil mantle well above the general bedrock level.

Local precipitation is the source of practically all of the groundwater in York County. A portion of the precipitation infiltrates into the ground and moves under the influence of gravity to the surficial aquifer. After the water has reached the surficial aquifer, the direction of movement is generally parallel to the hydraulic gradient. In the Piedmont Province, the slope of the surficial aquifer's surface under static conditions (no pumping interference) approximates the topography of an area. Thus, the movement of groundwater within the soil mantel is typically in the direction of the topographic slope. Local groundwater flow patterns may be affected by disturbed areas such as tank pits, utility trenches, building foundations, borings, wells, etc. Groundwater flow in fractured rock is often difficult to interpret due to the variability of fracture connectivity and orientation.

Locally, in the surficial aquifer, groundwater discharges into streams, lakes or springs where the groundwater table intersects lows occupied by these water bodies. The apparent direction (based on hydraulic gradient) of groundwater flow from the release is to the east towards an intermittent stream associated with the Big Branch.

4.1 LOCAL SUBSURFACE CONDITIONS

Piedmont soils were encountered during drilling activities conducted at the site. The soils encountered in our borings generally consisted of micaceous clays and silts of the Piedmont

Physiographic Province, underlain by saprolite and competent bedrock. Test Boring Records, which depict the materials encountered in each boring, are located in Appendix B.

Generalized subsurface conditions encountered in selected borings are illustrated in profile on Figures 4 and 5. The locations of the profile lines are shown on Figure 3.

On September 26, 2012 stabilized groundwater levels were measured in the surrounding monitoring wells. Depth to groundwater ranged from 31.40 to 49.13 feet below top of casing in the wells measured. The groundwater measurements are summarized in tabular form in Table 2 and on Figure 5. A groundwater contour map illustrating the groundwater flow direction within the surficial aquifer at the site is also depicted on Figure 5. Groundwater levels may fluctuate several feet with seasonal and rainfall variations and with change in the water level of adjacent drainage features. Normally, the highest groundwater levels occur in late winter and spring. The lowest levels occur in late summer and fall.

The above descriptions provide a general summary of the subsurface conditions encountered. The attached Test Boring Records (Appendix E) contain detailed information recorded at each new monitoring well location. The Test Boring Records represent our interpretation of the field logs based on examination of the field samples. The lines designating the interfaces between various strata represent approximate boundaries, and the transition between strata may be gradational.

5.0 TEST RESULTS AND EVALUATION

The following sections discuss groundwater test results for the subject site.

5.1 GROUNDWATER ANALYTICAL RESULTS

As discussed in Section 3.4, groundwater samples obtained from the monitoring wells were analyzed for dissolved phase petroleum constituents. The analytical results indicate petroleum impact to the surficial aquifer (Shallow Zone), with the highest dissolved concentrations being detected in the area east of the former dispenser island. The analytical results indicate dissolved Total BTEX concentrations ranged from levels below detection limits (BDL) to 114,600 micrograms per liter in IW-2. Dissolved Benzene concentrations range from levels below detection limits (BDL) to 25,000 micrograms per liter in IW-2. Dissolved Toluene concentrations range from levels below detection limits (BDL) to 60,000 micrograms per liter in IW-2 and IW-5. Dissolved Ethylbenzene concentrations range from levels below detection limits (BDL) to 5,800 micrograms per liter in MW-1R. Dissolved Total Xylenes concentrations range from levels below detection limits (BDL) to 33,000 micrograms per liter in MW-1R. Dissolved Naphthalene concentrations range from levels below detection limits (BDL) to 1,000 micrograms per liter in MW-1R. Dissolved MTBE concentrations range from levels below detection limits (BDL) to 410 micrograms per liter in IW-3. Dissolved 1,2 DCA concentrations range from levels below detection limits (BDL) to 260 micrograms per liter in MW-10R. Dissolved EDB concentrations range from levels below detection limits (BDL) to 90 micrograms per liter in IW-3.

Based on the review of historical test boring logs completed by CBM Environmental Services in January and September of 2000, monitoring wells TW-1, TW-2, and TW-3 appear to have been completed to depths to monitor the saprolite aquifer at the site. The highest concentrations of dissolved petroleum constituents from these monitoring wells ranged from 406.3 micrograms per liter of Total BTEX in TW-3 to 41,000 micrograms per liter in TW-1.

Analytical results from the wells installed to monitor fractured rock aquifer indicate petroleum impact with the highest concentrations detected in TW-1ABC. Benzene concentrations were detected above Risk Based Screening Levels (RBSL's) in wells TW-1ABC and in TW-2B. Additionally, Naphthalene concentrations were detected above RBSL's in TW-1A. Benzene concentrations were detected at 1,700 micrograms per liter in TW-1A (110.0'-120.0'), 17 micrograms per liter in TW-1B (151.0'-161.0'), 25 micrograms per liter in TW-1C (190.0'-200.0'), and in TW-2B (150.0'-160.0') at 8.7 micrograms per liter. Naphthalene concentration were detected in TW-1A at 84 micrograms per liter. All other petroleum constituents analyzed from the wells installed into the fractured rock aquifer indicated results below RBSL's.

The results of the analyses for each monitoring well and specific parameters are listed on Tables 3, 3A, and the detection limit for each parameter is provided in the laboratory reports (Appendix B).

5.2 WATER SUPPLY WELL ANALYTICAL RESULTS

The samples obtained from WSW-1 through WSW-38 were analyzed for petroleum constituents. Analytical data indicates potential petroleum impact to water supply wells WSW-2 (WSW-Swift), WSW-3 (WSW-Hill), WSW-4, WSW-5, WSW-22, WSW-23, WSW-24, WSW-28, and WSW-38. The laboratory analytical results from the water supply well samples obtained from the remainder of the water supply wells samples do not indicate petroleum impact.

The following table presents petroleum constituents detected in the water supply wells sampled:
The results of the analysis for the water supply wells and specific parameters are listed on Table 3 and Table 3A, and the detection limits for each parameter are provided in the laboratory reports (Appendix B).

WSW ID	Benzene (ug/l)	Ethylbenzene (ug/l)	Total Xylenes (ug/l)	Naphthalene (ug/l)	MTBE (ug/l)	1,2 DCA (ug/l)	EDB (ug/l)
WSW-2 (Pre-Gac)	400	0.47J	81	28B	0.64J	34	0.63
WSW-2 (Post-Gac)	0.47J	<1.0	<1.0	0.99BJ	<1.0	1.8	<0.020
WSW-3 (Pre-Gac)	<1.0	<1.0	<1.0	<1.0	<1.0	0.82J	<0.020
WSW-4	<1.0	<1.0	<1.0	<1.0	<1.0	<1.0	0.028

WSW-38	<1.0	<1.0	<1.0	<1.0	0.62J	<1.0	<0.019S

5.3 HYDRAULIC CONDUCTIVITY

Hydraulic gradient at the site was determined to be 2.14 x 10^{-2} ft/ft in the local aquifer based on data recorded during field testing. The average shallow zone hydraulic conductivity for the site was 1.51 x 10^{-1} cm/sec in the shallow aquifer. The test results are as follows:

Well Number	Type of Material Exposed to Screened Interval	Hydraulic Conductivity (K) (cm/sec)
MW-7R	Sandy SILT	2.32 x 10^{-6}
MW-11R	Sandy SILT	1.04 x 10^{-4}

Notes: Field tests were reduced and the hydraulic conductivities computed using Techniques described in NAVFAC Soil Mechanics Design Manual 7.1, May, 1982
MW-7R & MW-11R Condition A

5.4 GROUNDWATER MOVEMENT

Groundwater movement is often related to topography, lithology, and elevation of recharge and discharge areas and man-made influences. Referenced groundwater elevations were determined by measuring the top of the monitoring well casing relative to a nearby datum elevation (see Figure 5) measuring the water level in the monitoring well, and computing the reference elevation of the groundwater at the time of measurement. Groundwater levels typically fluctuate with seasonal and rainfall variations.

Directions of groundwater flow were interpolated between monitoring wells by comparing the groundwater elevations at those locations considering the factors listed above. Locally, in the surficial aquifer, groundwater discharges into streams, lakes or springs where the groundwater table intersects lows occupied by these water bodies.

Groundwater elevation data from the September 26, 2012 gauging event was plotted and a groundwater contour map of the surficial aquifer was prepared. The data used to prepare the groundwater contour map (groundwater elevations in site monitoring wells) are summarized on Figure 5.

The average hydraulic gradient at the site was computed to be approximately 2.14 x 10^{-2} ft/ft for the shallow aquifer. In addition to hydraulic gradients (i), the rates of groundwater movement (v) are a function of hydraulic conductivity (k) and effective porosity (ne), as indicated by the equation v = ki/ne. The effective porosity can be expected to be approximately thirty percent for Sandy SILT. Based on those parameters, the average lateral groundwater movement in the shallow aquifer at the site can be expected to be approximately 3.93 feet per year in surficial aquifer. The rate of migration of the dissolved organic constituent(s), however, may be substantially slower than groundwater itself, due to retardation (Freeze and Cherry, 1979, pp. 402-408) and intrinsic aerobic biodegredation (Bucheck et. al., 1993). The hydraulic gradient and groundwater velocity calculations are provided in Appendix F.

6.0 ASSESSMENT SUMMARY

Based on the results of our assessment activities, it appears that impact to the surficial aquifer has occurred due to a release of petroleum hydrocarbons. The analytical results indicate petroleum

impact to the surficial aquifer (Shallow Zone), with the highest dissolved concentrations being detected in the area east of the former dispenser island. Groundwater appears to be moving in an easterly direction towards an intermittent stream associated with the Big Branch and the plume appears to have moved off the subject property.

Observations from the downhole camera advanced in WSW-2 (WSW-Swift) revealed that the casing is impaired at approximately 46.2' from the top of casing. The downhole camera also showed evidence of "streaky flow features" visible at this impairment in the casing. This evidence may indicate that contaminants within the surficial aquifer are infiltrating into the rock interface through the damaged casing.

Analytical results from the wells installed to monitor fractured rock aquifer indicate petroleum constituents with the highest concentrations detected in TW-1ABC. Benzene concentrations were detected above Risk Based Screening Levels (RBSL's) in wells TW-1A, TW-1B, TW-1C and in TW-2B. Additionally, Naphthalene concentrations were detected above RBSL's in TW-1A. Benzene concentrations were detected at 1,700 micrograms per liter in TW-1A (110.0'-120.0'), 17 micrograms per liter in TW-1B (151.0'-161.0), 25 micrograms per liter in TW-1C (190.0'-200.0'), and in TW-2B (150.0'-160.0') at 8.7 micrograms per liter. Naphthalene concentrations were detected in TW-1A at 84 micrograms per liter. All other petroleum constituents analyzed from the wells installed into the fractured rock aquifer indicated results below RBSL's.

Review of historical test boring logs completed by CBM Environmental Services in January and September of 2000 reveal that monitoring wells TW-1, TW-2, and TW-3 appear to have been completed to depths to monitor the saprolite aquifer at the site. The highest concentrations of dissolved petroleum constituents from these monitoring wells ranged from 406.3 micrograms per liter of Total BTEX in TW-3 to 41,000 micrograms per liter in TW-1. Furthermore, direct push field screening data advanced in the saprolite aquifer indicate that the plume does not appear to be traveling within this zone at a significant rate; however the presence of elevated petroleum concentrations in TW-1, TW-2, and TW-3 may be interconnected with vertical fractures within the upper rock interface allowing vertical migration to occur. Visual evidence from the downhole camera advanced into the six open rock wells show that there is potential for vertical migration to occur within the upper portion of the rock interface.

The analytical results indicate dissolved Total BTEX concentrations ranged from levels below detection limits (BDL) to 114,600 micrograms per liter in IW-2 in shallow, surficial aquifer. Dissolved Benzene concentrations range from levels below detection limits (BDL) to 25,000 micrograms per liter in IW-2. Dissolved Toluene concentrations range from levels below detection limits (BDL) to 60,000 micrograms per liter in IW-2 and IW-5. Dissolved Ethylbenzene concentrations range from levels below detection limits (BDL) to 5,800 micrograms per liter in MW-1R. Dissolved Total Xylenes concentrations range from levels below detection limits (BDL) to 33,000 micrograms per liter in MW-1R. Dissolved Naphthalene concentrations range from levels below detection limits (BDL) to 1,000 micrograms per liter in MW-1R. Dissolved MTBE concentrations range from levels below detection limits (BDL) to 410 micrograms per liter in IW-3. Dissolved 1,2 DCA concentrations range from levels below detection limits (BDL) to 260 micrograms per liter in MW-10R. Dissolved EDB concentrations range from levels below detection limits (BDL) to 90 micrograms per liter in IW-3.

Based on the current analytical results, the extent of Benzene, Toluene, Ethylbenzene, Total Xylenes, Naphthalene, 1,2 DCA, and MTBE concentrations in surficial aquifer appear to be defined in relation

to RBSL's. EDB concentrations detected in the eastern and southeast quadrant of the contaminant plume does not appear to be defined in relation to RBSL's at this time. Analytical results indicate EDB concentrations in MW-11R at 0.051 micrograms per liter and in MW-15R at 0.76 micrograms per liter. It is MECI's professional opinion that the current EDB results may be spurious in nature and that additional groundwater sampling events should be conducted to verify these results.

Figure 4 depicts graphically the concentrations of Total BTEX in the monitoring wells at the site. Figure 4A depicts graphically the concentrations of Benzene in the monitoring wells at the site. Figure 4B depicts graphically the concentrations of Toluene in the monitoring wells at the site. Figure 4C depicts graphically the concentrations of Ethylbenzene in the monitoring wells at the site. Figure 4D depicts graphically the concentrations of Total Xylenes in the monitoring wells at the site. Figure 4E depicts graphically the concentrations of Naphthalene in the monitoring wells at the site. Figure 4F depicts graphically the concentrations of EDB in the monitoring wells at the site. Figure 4G depicts the concentrations of Oxygenates dissolved in the groundwater at the site.

7.0 RECOMMENDATIONS AND CLASSIFICATION

Based on our Tier II Site Evaluation, corrective action appears necessary at the subject site. MECI recommends that the impacted soil in the area of the former UST basin be treated and that a groundwater remediation program be initiated to stem the off-site spread of dissolved phase petroleum product. The recommended remediation at the site should include the treatment of the source area groundwater to the SSTL's as developed by SCDHEC and the clean-up of the impacted soils associated with this release.

Prior to the initiation of correct action efforts, MECI recommends abandoning and replacing water supply wells WSW-2 and WSW-3. Furthermore, MECI recommends conducting additional sampling events to confirm results detected in several water supply wells which currently do not have GAC units installed.

Based on the SCDHEC document "Risk-Based Corrective Action for Petroleum Releases" dated May 15, 2001, Appendix A - RBCA Classification/Priority System, MECI classifies the site as 1. This classification is due CoC concentrations being detected in several water supply wells.

8.0 QUALIFICATIONS OF REPORT

The activities and evaluative approaches used in this assessment are consistent with those normally employed in hydrogeological assessment and waste management projects of this type. Our evaluation of site conditions has been based on our understanding of the site, project information provided to us, and data obtained in our exploration. The general subsurface conditions utilized in our evaluation have been based on interpretation of subsurface data between borings. Contents of this report are intended for the sole use of Ms. Lois Smith and SCDHEC under mutually agreed upon terms and conditions. If other parties wish to rely on this report please contact MECI prior to their use of this information so that a mutual understanding and agreement of the terms and conditions of our services can be established.

Notes:

1. mg/l = milligrams per liter.
2. Groundwater depths were measured from the top of the PVC riser pipe.
3. Stabalized groundwater levels measured Sept. 25-27, 2012
4. NT = Not Tested
5. INS = Insufficient Water for Field Measurements
6. DRY = Monitoring well Dry at time of Sampling
7. NS = Not Sampled
8. TD = Total Depth
9. PROD = Free Phase Petroleum Product
10. NL = Not Located
11. Dissolved oxygen, dissolved carbon dioxide, initial pH, initial conductivity, and temperature measurements obtained on Sept. 25-27, 2012.
12. Groundwater elevation for MW-7 corrected for the presence of free phase petroleum product using a specific gravity for fuel of 0.85.

Notes:

1. BDL = Below Practical Quantitative Limits
2. µg/l = micrograms per liter
3. mg/l = milligrams per liter
4. MTBE = Methyl-Tertiary-Butyl Ether
5. See Appendix for Laboratory Detection Limits
6. NS = Not Sampled
7. DRY = Well was Dry at time of Sampling
8. EDB = Ethylene Dibromide
9. 1,2 DCA = 1,2-Dichloroethane
10. "J" Values used in Total BTEX Calculations
11. "B" Indicates Parametes Detected in Method Blank
12. NT = Not Tested
13. "Q" Indicates Surrogate Failure
14. "J" values report concentrations above the method detection limits (MDL) and below actual reporting limit (RL).
15. "P" values = The Relative Percent Difference between Two Gas Chromatograph columns Exceeds 40%.

SUMMARY of SLUG TEST (Page 1 of 2)

SOUTH CAROLINA
Department of Health and Environmental Control (DHEC)

Site Data

SITE ID # 09322 COUNTY York

FACILITY NAME Smith's Grocery

SLUG DATA

See Appendix _____ Table _____ Figure _____ for a list of all data measurements.
(water level logs, etc.)(Complete as appropriate).
Water Level Recovery Data was measured by ORS Interface Probe .
(Hermit Data Logger, Manually with Water Level Indicator, etc.)(List Method)
Complete the following table for each well tested.
COMPLETE A SECOND SHEET IF MORE THAN FOUR WELLS ARE TESTED

Slug Test Conducted in well(s) number	MW-7R	MW-11R		
Initial Rise/Drawdown in well (feet)	4.32	0.96		
Radius of well casing (feet)	0.083	0.083		
Effective Radius of Well (feet)	0.33	0.33		
Static Saturated Aquifer Thickness (feet)	6.60	8.67		
Length of Well Screen (feet)	10	10		
Static Height of Water Column in Well (ft)	6.60	8.67		

Calculations

See Appendix _____ Table _____ Figure _____ for calculations
The method for aquifer calculations was NAVFAC
Calculated values by well were as follows:

Slug Test Conducted in Well(s) number	MW-7R	MW-11R		
Hydraulic Conductivity	2.32E-06	1.04E-04		cm/sec

Thickness of the aquifer used to calculate hydraulic conductivity was N/A feet.
The aquifer is _____ confined _____ semi-confined _____ water table (Check as Appropriate).
SEE SHEET 3
The estimated seepage velocity is 3.93 feet per year based on a hydraulic conductivity of 5.32E-05 cm/sec, a hydraulic gradient of 2.14E-02 ft/ft, and a porosity of 30 percent for SILT soil.

SUMMARY of SLUG TEST

Groundwater Seepage Velocity Calculations (Page 2 of 2)

SOUTH CAROLINA
Department of Health and Environmental Control (DHEC)

Site Data

SITE ID # 09322 COUNTY York

FACILITY NAME Smith's Grocery

Hydraulic Conductivity (average)

Hydraulic Conductivity Average = 5.32E-05 cm/sec
(MW-1 & MW-3)
1.51E-01 ft./day

1.05E-04 ft./min

Groundwater Seepage Velocity

V = (Ki)/(Ne)
(ft./day)

* Enter Values in Shaded Areas Only

where:

K = Hydraulic Conductivity (ft./day)
I = Hydraulic Gradient (ft./ft.)
Ne = Effective Permeability

K = 1.51E-01 ft./day
I = 2.14E-02 ft./ft.
Ne = 0.30

V = **1.1E-02** ft./day **3.93** ft./year

Groundwater Seepage Velocity Calculations

TABLE 5
SITE CONCEPTUAL MODEL AND POSSIBLE EXPOSURE POINTS
(CURRENT LAND USE)

Potentially Exposed Population	Exposure Route, Medium, and Exposure Point	Pathway Selected for Evaluation?	Reason for Selection or Nonselection
Off-site Resident	Ingestion of groundwater from impacted water well	Yes	Water supply wells identified within search radius
	Direct contact with surface soil	Yes	Some potentially impacted soil not covered with pavement
	Inhalation while showering	Yes	Water supply wells identified within search radius
	Dermal contact while showering	Yes	Water supply wells identified within search radius
	Inhalation of volatiles	Yes	Volatile emissions possible from buried utility conduits
	Ignition of vapors	Yes	Ignition of vapors emanating from buried utility conduits
	Dermal contact with surface water	Yes	Surface waters identified within search radius
On-site Resident	Ingestion of groundwater	No	Site is not residential
	Direct contact with surface soil	No	N/A
	Inhalation while showering	No	N/A
	Dermal contact while showering	No	N/A
	Inhalation of volatiles	No	N/A
	Ignition of vapors	No	N/A
Worker	Ingestion of ground water	Yes	Water supply wells identified within search radius

Groundwater CoC Site Map
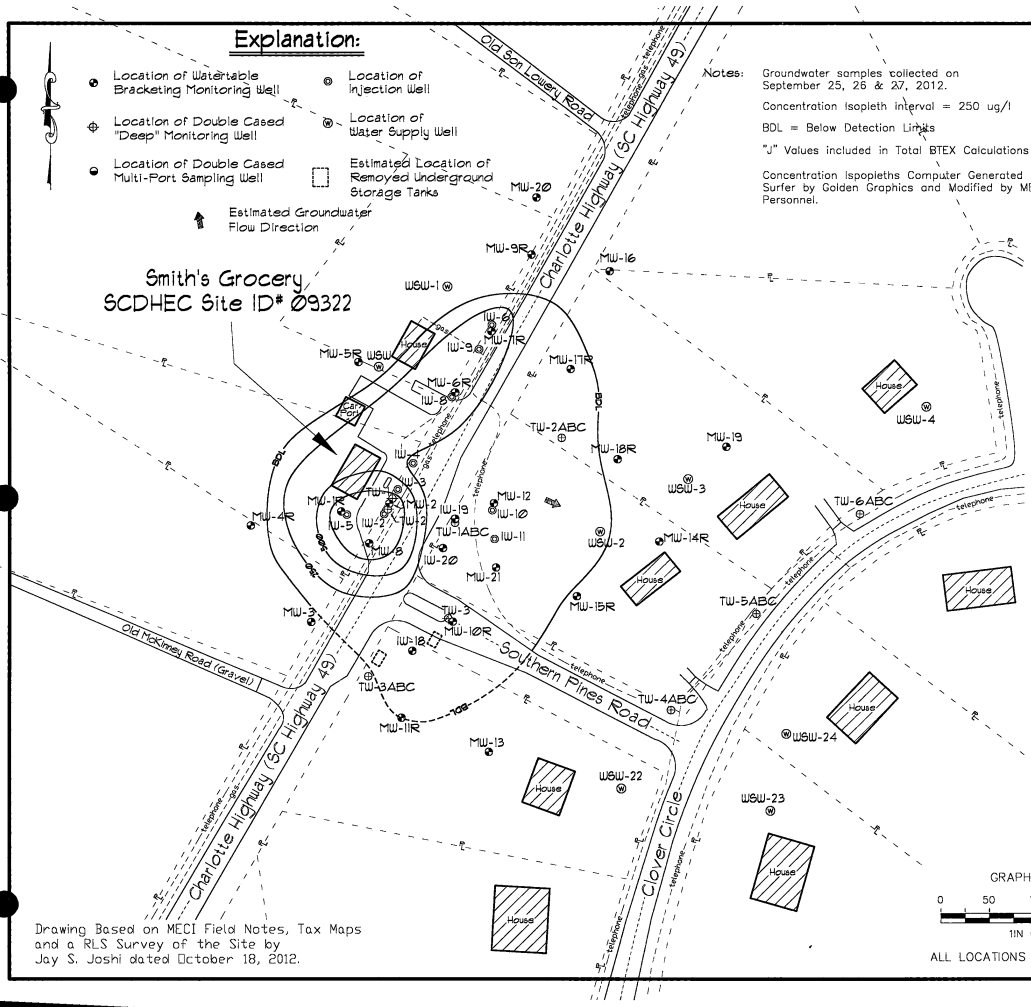
(Total Xylenes Isopleth)

Smith's Grocery
3176 Charlotte Highway
York, South Carolina
SCDHEC Site ID 09322

Midlands Environmental Consultants, Inc.

JOB NO. 12-3850
DATE October 23, 2012
FIGURE 4D



Notes:

Groundwater samples collected on September 25, 26 & 27, 2012.

Concentration Isopleth interval = 250 ug/l

BDL = Below Detection Limits

"J" Values included in Total BTEX Calculations

Concentration Isopleths Computer Generated using Surfer by Golden Graphics and Modified by MECI Personnel.

GRAPHIC SCALE

0 50 100 150 200

1IN = 100FT

ALL LOCATIONS ARE APPROXIMATE

Report of Analysis

Midlands Environmental Consultants, Inc.
235 Dooley Rd
Lexington, SC 29073
Attention: Bryan Shane

Project Name: **Smith's Grocery**

Project Number: **12-3850**

Lot Number: **ND17012**

Date Completed: **04/18/2012**

Kelly M. Maberry
Project Manager

This report shall not be reproduced, except in its entirety, without the written approval of Shealy Environmental Services, Inc.

The following non-paginated documents are considered part of this report: Chain of Custody Record and Sample Receipt Checklist.

Case Narrative
Midlands Environmental Consultants, Inc.
Lot Number: ND17012

This Report of Analysis contains the analytical result(s) for the sample(s) listed on the Sample Summary following this Case Narrative. The sample receiving date is documented in the header information associated with each sample.

All results listed in this report relate only to the samples that are contained within this report.

Sample receipt, sample analysis, and data review have been performed in accordance with the most current approved NELAC standards, the Shealy Environmental Services, Inc. ("Shealy") Quality Assurance Management Plan (QAMP), standard operating procedures (SOPs), and Shealy policies. Any exceptions to the NELAC standards, the QAMP, SOPs or policies are qualified on the results page or discussed below.

If you have any questions regarding this report please contact the Shealy Project Manager listed on the cover page.

GC/MS Volatiles
The LCS/LCSD associated with batch 82659 had ethanol recovered above the acceptance limits. This demonstrates a high bias on analytical results. There were no detections for this compound in the samples associated with this batch; therefore, data quality is not impacted.

1,2-Dichloroethane-d4		119	70-130
Toluene-d8		107	70-130

EDB & DBCP by Microextraction

Run	Prep Method	Analytical Method	Dilution	Analysis Date	Analyst	Prep Date	Batch
1	8011	8011	1	04/17/2012 1947	MSM	04/17/2012 1335	82703

Parameter	CAS Number	Analytical Method	Result	Q	PQL	MDL	Units	Run

PQL = Practical quantitation limit
ND = Not detected at or above the MDL
B = Detected in the method blank
J = Estimated result < PQL and ≥ MDL
E = Quantitation of compound exceeded the calibration range
P = The RPD between two GC columns exceeds 40%
H = Out of holding time
N = Recovery is out of criteria
[redacted]re applicable, all soil sample analysis are reported on a dry weight basis unless flagged with a "W"
* = Reportable result (only when report all runs)

Client: Midlands Environmental Consultants, Inc.
Description: **GPW-Hillwsw Post 1**
Date Sampled: **04/16/2012 1430**
Date Received: **04/17/2012**

Laboratory ID: **ND17012-002**
Matrix: **Aqueous**
