Sample Receipt Checklist (SRC)

Client: Pace Cooler Inspected by/date: EZ 4/17/12 Lot #: ND1730 12

Means of receipt: ☑ SESI ☐ Client ☐ UPS ☐ FedEx ☐ Airborne Exp ☐ Other

Yes ☐	No ☑		1. Were custody seals present on the cooler?
Yes ☐	No ☐		2. If custody seals were present, were they intact and unbroken?

Cooler ID/temperature upon receipt: 1 / 0.1 °C / °C / °C / °C
Method: ☐ Temperature Blank ☑ Against Bottles
Method of coolant: ☐ Wet Ice ☐ Blue Ice ☐ Dry Ice ☐ None

If response is No (or Yes for 14, 15, 16), an explanation/resolution must be provided.

Yes ☐	No ☐	NA ☑	3. If temperature of any cooler exceeded 6.0°C, was Project Manager notified? PM notified by SRC, phone, note (circle one), other: _____ (For coolers received via commercial courier, PMs are to be notified immediately.
Yes ☐	No ☐	NA ☑	4. Is the commercial courier's packing slip attached to this form?
Yes ☑	No ☐		5. Were proper custody procedures (relinquished/received) followed?
Yes ☐	No ☐	NA ☑	5a Were samples relinquished by client to commercial courier?
Yes ☑	No ☐		6. Were sample IDs listed?
Yes ☑	No ☐		7. Was collection date & time listed?
Yes ☑	No ☐		8. Were tests to be performed listed on the COC?
Yes ☑	No ☐		9. Did all samples arrive in the proper containers for each test?
Yes ☑	No ☐		10. Did all container label information (ID, date, time) agree with COC?
Yes ☑	No ☐		11. Did all containers arrive in good condition (unbroken, lids on, etc.)?
Yes ☑	No ☐		12. Was adequate sample volume available?
Yes ☑	No ☐		13. Were all samples received within ½ the holding time or 48 hours, whichever comes first?
Yes ☐	No ☑		14. Were any samples containers missing?
Yes ☐	No ☑		15. Were there any excess samples not listed on COC?
Yes ☐	No ☑	NA ☐	16. Were bubbles present >"pea-size" (¼" or 6mm in diameter) in any VOA vials?
Yes ☐	No ☐	NA ☑	17. Were all metals/O&G/TPH/nutrient samples received at a pH of <2?
Yes ☐	No ☐	NA ☑	18. Were all cyanide and/or sulfide samples received at a pH >12?
Yes ☐	No ☐	NA ☑	19. Were all applicable NH3/TKN/cyanide/phenol/BNA/pest/PCB/herb (<0.2mg/L) samples free of residual chlorine?
Yes ☐	No ☐	NA ☑	20. Were collection temperatures documented on the COC for NC samples?
Yes ☐	No ☐	NA ☑	21. Were client remarks/requests (i.e. requested dilutions, MS/MSD designations, etc...) correctly transcribed from the COC into the comment section in LIMS?

Sample Preservation (Must be completed for any sample(s) incorrectly preserved or with headspace.)

Sample(s) _____ were received incorrectly preserved and were adjusted accordingly in sample receiving with _____ (H_2SO_4,HNO_3,HCl,NaOH) with the SR # (number) _____

Sample(s) _____ were received with bubbles >6 mm in diameter.

Sample(s) _____ were received with TRC >0.2 mg/L for NH3/TKN/cyanide/BN/pest/PCB/herb.

Corrective Action taken, if necessary:

Was client notified: Yes ☐ No ☐ Did client respond: Yes ☐ No ☐

SESI employee: _____ Date of response: _____

Comments: _____

ACCREDITED IN ACCORDANCE WITH nelac

This report shall not be reproduced, except in its entirety, without the written approval of Shealy Environmental Services, Inc.

The following non-paginated documents are considered part of this report: Chain of Custody Record and Sample Receipt Checklist.

Case Narrative

Midlands Environmental Consultants, Inc.

Lot Number: ND17013

This Report of Analysis contains the analytical result(s) for the sample(s) listed on the Sample Summary following this Case Narrative. The sample receiving date is documented in the header information associated with each sample.

All results listed in this report relate only to the samples that are contained within this report.

Sample receipt, sample analysis, and data review have been performed in accordance with the most current approved NELAC standards, the Shealy Environmental Services, Inc. ("Shealy") Quality Assurance Management Plan (QAMP), standard operating procedures (SOPs), and Shealy policies. Any exceptions to the NELAC standards, the QAMP, SOPs or policies are qualified on the results page or discussed below.

If you have any questions regarding this report please contact the Shealy Project Manager listed on the cover page.

The data is screening only. Laboratory QC may not pass and samples may be analyzed outside of tune time.

SHEALY ENVIRONMENTAL SERVICES, INC.

SHEALY ENVIRONMENTAL SERVICES, INC.

Sample Receipt Checklist (SRC)

Client: MEC Cooler Inspected by/date: CC 4/3/12 Lot #: KDN13

Means of receipt: ☑ SESI ☐ Client ☐ UPS ☐ FedEx ☐ Airborne Exp ☐ Other

Yes ☐	No ☑	1. Were custody seals present on the cooler?
Yes ☐	No ☐	2. If custody seals were present, were they intact and unbroken?

Cooler ID/temperature upon receipt 1 - 0 / ____ °C ____ / ____ °C ____ / ____ °C ____ / ____ °C
Method: ☐ Temperature Blank ☑ Against Bottles
Method of coolant: ☐ Wet Ice ☐ Blue Ice ☐ Dry Ice ☐ None

If response is No (or Yes for 14, 15, 16), an explanation/resolution must be provided.

Yes ☐	No ☐	NA ☑	3. If temperature of any cooler exceeded 6.0°C, was Project Manager notified? PM notified by SRC, phone, note (circle one), other: _____. (For coolers received via commercial courier, PMs are to be notified immediately.
Yes ☐	No ☐	NA ☑	4. Is the commercial courier's packing slip attached to this form?
Yes ☐	No ☐		5. Were proper custody procedures (relinquished/received) followed?
Yes ☐	No ☐	NA ☑	5a Were samples relinquished by client to commercial courier?
Yes ☑	No ☐		6. Were sample IDs listed?
Yes ☑	No ☐		7. Was collection date & time listed?
Yes ☑	No ☐		8. Were tests to be performed listed on the COC?
Yes ☑	No ☐		9. Did all samples arrive in the proper containers for each test?
Yes ☑	No ☐		10. Did all container label information (ID, date, time) agree with COC?
Yes ☑	No ☐		11. Did all containers arrive in good condition (unbroken, lids on, etc.)?
Yes ☑	No ☐		12. Was adequate sample volume available?
Yes ☑	No ☐		13. Were all samples received within ½ the holding time or ≤48 hours, whichever comes first?
Yes ☐	No ☑		14. Were any samples containers missing?
Yes ☐	No ☑		15. Were there any excess samples not listed on COC?
Yes ☐	No ☑	NA ☐	16. Were bubbles present >"pea-size" (¼"or 6mm in diameter) in any VOA vials?
Yes ☐	No ☐	NA ☑	17. Were all metals/O&G/HEM/nutrient samples received at a pH of <2?
Yes ☐	No ☐	NA ☑	18. Were all cyanide and/or sulfide samples received at a pH >12?
Yes ☐	No ☐	NA ☑	19. Were all applicable NH3/TKN/cyanide/phenol/BNA/pest/PCB/herb (<0.2mg/L) samples free of residual chlorine?
Yes ☐	No ☐	NA ☑	20. Were collection temperatures documented on the COC for NC samples?
Yes ☐	No ☐	NA ☑	21. Were client remarks/requests (i.e. requested dilutions, MS/MSD designations, etc...) correctly transcribed from the COC into the comment section in LIMS?

Sample Preservation (Must be completed for any sample(s) incorrectly preserved or with headspace.)

Sample(s) _____ were received incorrectly preserved and were adjusted accordingly in sample receiving with _____ (H_2SO_4,HNO_3,HCl,NaOH); with the SR # (number)

Sample(s) _____ were received with bubbles >6 mm in diameter.

Sample(s) _____ were received with TRC >0.2 mg/L for NH3/TKN/cyanide/BNA/pest/PCB/herb

Corrective Action taken, if necessary:

Was client notified: Yes ☐ No ☐ Did client respond: Yes ☐ No ☐

SESI employee: Date of response: _____

Report of Analysis

Midlands Environmental Consultants, Inc.
235 Dooley Rd
Lexington, SC 29073
Attention: Bryan Shane

Project Name: **Smith's Grocery**

Project Number: **12-3850**

Lot Number: **ND18031**

Date Completed: **04/23/2012**

Kelly M. Maberry
Project Manager

This report shall not be reproduced, except in its entirety, without the written approval of Shealy Environmental Services, Inc.

The following non-paginated documents are considered part of this report: Chain of Custody Record and Sample Receipt Checklist.

Case Narrative

Midlands Environmental Consultants, Inc.

Lot Number: ND18031

This Report of Analysis contains the analytical result(s) for the sample(s) listed on the Sample Summary following this Case Narrative. The sample receiving date is documented in the header information associated with each sample.

All results listed in this report relate only to the samples that are contained within this report.

Sample receipt, sample analysis, and data review have been performed in accordance with the most current approved NELAC standards, the Shealy Environmental Services, Inc. ("Shealy") Quality Assurance Management Plan (QAMP), standard operating procedures (SOPs), and Shealy policies. Any exceptions to the NELAC standards, the QAMP, SOPs or policies are qualified on the results page or discussed below.

If you have any questions regarding this report please contact the Shealy Project Manager listed on the cover page.

The data in this report is screening only. Laboratory QC may not pass and samples may be analyzed outside of tune time.

LAB USE ONLY: Received on Ice (Check) ☐ Yes ☐ No ☐ Ice Pack — Receipt Temp 1.8 °C — Temp Blank Y / N

Note: All samples are retained for six weeks from receipt unless other arrangements are made.

SHEALY ENVIRONMENTAL SERVICES, INC.

Sample Receipt Checklist (SRC)

Client: MEC Cooler Inspected by/date: [illegible] 4/18/12 Lot #: ND18031

Means of receipt: ☑ SESI ☐ Client ☐ UPS ☐ FedEx ☐ Airborne Exp ☐ Other			
Yes ☐	No ☑		1. Were custody seals present on the cooler?
Yes ☐	No ☐		2. If custody seals were present, were they intact and unbroken?
Cooler ID/temperature upon receipt: 1.8 °C ___/___ °C ___/___ °C ___/___ °C Method: ☑ Temperature Blank ☑ Against Bottles Method of coolant: ☑ Wet Ice ☐ Blue Ice ☐ Dry Ice ☐ None			
If response is No (or Yes for 14, 15, 16), an explanation/resolution must be provided.			
Yes ☐	No ☐	NA ☑	3. If temperature of any cooler exceeded 6.0°C, was Project Manager notified? PM notified by SRC, phone, note (circle one), other: _____. (For coolers received via commercial courier, PMs are to be notified immediately.
Yes ☐	No ☐	NA ☑	4. Is the commercial courier's packing slip attached to this form?
Yes ☑	No ☐		5. Were proper custody procedures (relinquished/received) followed?
Yes ☐	No ☐	NA ☑	5a Were samples relinquished by client to commercial courier?
Yes ☑	No ☐		6. Were sample IDs listed?
Yes ☑	No ☐		7. Was collection date & time listed?
Yes ☑	No ☐		8. Were tests to be performed listed on the COC?
Yes ☑	No ☐		9. Did all samples arrive in the proper containers for each test?
Yes ☑	No ☐		10. Did all container label information (ID, date, time) agree with COC?
Yes ☑	No ☐		11. Did all containers arrive in good condition (unbroken, lids on, etc.)?
Yes ☑	No ☐		12. Was adequate sample volume available?
Yes ☑	No ☐		13. Were all samples received within ½ the holding time or 48 hours, whichever comes first?
Yes ☐	No ☑		14. Were any samples containers missing?
Yes ☐	No ☑		15. Were there any excess samples not listed on COC?
Yes ☐	No ☐	NA ☐	16. Were bubbles present >"pea-size" (¼" or 6mm in diameter) in any VOA vials?
Yes ☐	No ☐	NA ☑	17. Were all metals/O&G/HEM/nutrient samples received at a pH of <2?
Yes ☐	No ☐	NA ☑	18. Were all cyanide and/or sulfide samples received at a pH >12?
Yes ☐	No ☐	NA ☑	19. Were all applicable NH3/TKN/cyanide/phenol/BNA/pest/PCB/herb (<0.2mg/L) samples free of residual chlorine?
Yes ☐	No ☐	NA ☑	20. Were collection temperatures documented on the COC for NC samples?
Yes ☐	No ☐	NA ☑	21. Were client remarks/requests (i.e. requested dilutions, MS/MSD designations, etc…) correctly transcribed from the COC into the comment section in LIMS?

Sample Preservation (Must be completed for any sample(s) incorrectly preserved or with headspace.)

Sample(s) _____ were received incorrectly preserved and were adjusted accordingly in sample receiving with _____ (H_2SO_4,HNO_3,HCl,NaOH) with the SR # (number)

Sample(s) _____ were received with bubbles >6 mm in diameter.

Sample(s) _____ were received with TRC >0.2 mg/L for NH3/TKN/cyanide/BNA/pest/PCB/herb.

Corrective Action taken, if necessary:

Was client notified: Yes ☐ No ☐ Did client respond: Yes ☐ No ☐

SESI employee: _____ Date of response: _____

Comments: _____

Report of Analysis

Midlands Environmental Consultants, Inc.
235 Dooley Rd
Lexington, SC 29073
Attention: Bryan Shane

Project Name: **Smith's Grocery**

Project Number: **12-3946**

Lot Number: **NH30049**

Date Completed: **09/11/2012**

Kelly M. Maberry
Project Manager

This report shall not be reproduced, except in its entirety, without the written approval of Shealy Environmental Services, Inc.

The following non-paginated documents are considered part of this report: Chain of Custody Record and Sample Receipt Checklist.

Case Narrative

Midlands Environmental Consultants, Inc.

Lot Number: NH30049

This Report of Analysis contains the analytical result(s) for the sample(s) listed on the Sample Summary following this Case Narrative. The sample receiving date is documented in the header information associated with each sample.

All results listed in this report relate only to the samples that are contained within this report.

Sample receipt, sample analysis, and data review have been performed in accordance with the most current approved NELAC standards, the Shealy Environmental Services, Inc. ("Shealy") Quality Assurance Management Plan (QAMP), standard operating procedures (SOPs), and Shealy policies. Any exceptions to the NELAC standards, the QAMP, SOPs or policies are qualified on the results page or discussed below.

If you have any questions regarding this report please contact the Shealy Project Manager listed on the cover page.

Sample Receiving

3 Field Blanks and a Trip Blank were received but not listed on the chain of custody.

Samples -004, -013, -015, -016 and -024 for volatiles analysis contained vials with air bubbles greater than ¼" or 6mm in diameter. The laboratory uses these vials for screening and the vials without bubbles for analysis whenever possible. Condition of samples is documented on the Sample Receipt Checklist (SRC).

GC/MS Volatiles

The LCS/LCSD associated with batches 92933 and 92935 had ethanol recovered above the acceptance limits. This demonstrates a high bias on analytical results. There were no detections for this compound in the samples associated with these batches; therefore, data quality is not impacted.

The LCS/LCSD associated with batch 92980 had ethanol and tert-butyl alcohol recovered above the acceptance limits. This demonstrates a high bias on analytical results. There were no detections for these compounds in the samples associated with this batch; therefore, data quality is not impacted.

The MS associated with sample -020 had several compounds and the surrogate 1,2-dichloroethane-d4 recovered outside of the acceptance limits. This demonstrates a matrix effect and data quality is not impacted.

The surrogate 1,2-dichloroethane-d4 in the duplicate associated with sample -020 was recovered outside of the acceptance limits. The sample had all surrogates recovered within the required acceptance limits. Insufficient sample volume remained for re-analysis.

Samples -010, -011 and -012 had the surrogate 1,2-dichloroethane-d4 recovered above the acceptance limits. This reflects a high bias for compounds associated with this surrogate. There were no detections for this compound in the samples; therefore, there is no impact on data quality and no corrective action is required.

EDB/DBCP

The sample result for -001 has a P qualifier because the relative percent difference (RPD) between the two dissimilar phase GC columns exceeds 40%. Section 7.10.4 of SW-846 method 8000B states the higher of the two results is reported; however the lower result is reported for this sample. The higher result for sample -001 was 0.068 ug/L.

Samples -005, -007, -017 and -024 had a layer of sediment in the sample vial that altered the final volume.

Parameter	CAS Number	Analytical Method	Result	Q	PQL	MDL	Units	Run

PQL = Practical quantitation limit
ND = Not detected at or above the MDL
B = Detected in the method blank
J = Estimated result < PQL and ≥ MDL
E = Quantitation of compound exceeded the calibration range
P = The RPD between two GC columns exceeds 40%
H = Out of holding time
N = Recovery is out of criteria
Q = Surrogate failure
L = LCS/LCSD failure
S = MS/MSD failure
Where applicable, all soil sample analysis are reported on a dry weight basis unless flagged with a "W"
* = Reportable result (only when report all runs)

B = Detected in the method blank
J = Estimated result < PQL and ≥ MDL
E = Quantitation of compound exceeded the calibration range
P = The RPD between two GC columns exceeds 40%
H = Out of holding time
N = Recovery is out of criteria
Q = Surrogate failure
L = LCS/LCSD failure
S = MS/MSD failure
Where applicable, all soil sample analysis are reported on a dry weight basis unless flagged with a "W"
* = Reportable result (only when report all runs)

QC Summary

Volatile Organic Compounds by GC/MS - MB

Sample ID: NQ92933-001
Batch: 92933
Analytical Method: 8260B
Matrix: Aqueous
Prep Method: 5030B

Parameter	Result	Q	Dil	PQL	MDL	Units	Analysis Date
tert-Amyl alcohol (TAA)	ND		1	100	6.7	ug/L	09/08/2012 0437
tert-Amyl methyl ether (TAME)	ND		1	10	0.20	ug/L	09/08/2012 0437
tert-Butyl formate (TBF)	ND		1	100	1.0	ug/L	09/08/2012 0437
Diisopropyl ether (IPE)	ND		1	10	0.40	ug/L	09/08/2012 0437
3,3-Dimethyl-1-butanol	ND		1	100	1.0	ug/L	09/08/2012 0437
Ethanol	ND		1	1000	33	ug/L	09/08/2012 0437
Ethyl-tert-butyl ether (ETBE)	ND		1	100	0.20	ug/L	09/08/2012 0437
tert-butyl alcohol (TBA)	ND		1	100	6.7	ug/L	09/08/2012 0437

Surrogate	Q	% Rec	Acceptance Limit
Bromofluorobenzene		95	70-130
1,2-Dichloroethane-d4		95	70-130

Sample Receipt Checklist (SRC)

Client: ARCE Cooler Inspected by/date: [illegible] 8/30/12 Lot #: NH30049

Means of receipt: ☐ SESI ☒ Client ☐ UPS ☐ FedEx ☐ Airborne Exp ☐ Other

Yes ☐	No ☒	1. Were custody seals present on the cooler?
Yes ☐	No ☒	2. If custody seals were present, were they intact and unbroken?

Cooler ID/temperature upon receipt 1 2.0 °C / °C / °C / °C

Method: ☐ Temperature Blank ☒ Against Bottles TRIP BLANK

Method of coolant: ☒ Wet Ice ☐ Blue Ice ☐ Dry Ice ☐ None

If response is No (or Yes for 14, 15, 16), an explanation/resolution must be provided.

Yes ☐	No ☐	NA ☒	3. If temperature of any cooler exceeded 6.0°C, was Project Manager notified? PM notified by SRC, phone, note (circle one), other: _____ (For coolers received via commercial courier, PMs are to be notified immediately.
Yes ☐	No ☐	NA ☒	4. Is the commercial courier's packing slip attached to this form?
Yes ☐	No ☐		5. Were proper custody procedures (relinquished/received) followed?
Yes ☐	No ☐	NA ☒	5a Were samples relinquished by client to commercial courier?
Yes ☐	No ☐		6. Were sample IDs listed?
Yes ☐	No ☐	[illegible]	7. Was collection date & time listed? Not Listed on COC or Labels
Yes ☐	No ☐		8. Were tests to be performed listed on the COC?
Yes ☐	No ☐		9. Did all samples arrive in the proper containers for each test?
Yes ☐	No ☐		10. Did all container label information (ID, date, time) agree with COC?
Yes ☐	No ☐		11. Did all containers arrive in good condition (unbroken, lids on, etc.)?
Yes ☐	No ☐		12. Was adequate sample volume available?
Yes ☐	No ☒		13. Were all samples received within ½ the holding time or 48 hours, whichever comes first?
Yes ☐	No ☐		14. Were any samples containers missing? -10 -011 -012
Yes ☐	No ☒	[illegible]	15. Were there any excess samples not listed on COC?
Yes ☒	No ☐	NA ☐	16. Were bubbles present >"pea-size" (¼" or 6mm in diameter) in any VOA vials?
Yes ☐	No ☐	NA ☒	17. Were all metals/O&G/TPH/nutrient samples received at a pH of <2?
Yes ☐	No ☐	NA ☒	18. Were all cyanide and/or sulfide samples received at a pH >12?
Yes ☐	No ☐	NA ☒	19. Were all applicable NH3/TKN/cyanide/phenol/BNA/pest/PCB/herb (<0.2mg/L) samples free of residual chlorine?
Yes ☐	No ☐	NA ☐	20. Were collection temperatures documented on the COC for NC samples?
Yes ☐	No ☐	NA ☒	21. Were client remarks/requests (i.e. requested dilutions, MS/MSD designations, etc...) correctly transcribed from the COC into the comment section in LIMS?

Sample Preservation (Must be completed for any sample(s) incorrectly preserved or with headspace.)

Sample(s) _____ were received incorrectly preserved and were adjusted accordingly in sample receiving with _____ (H_2SO_4,HNO_3,HCl,NaOH) with the SR # (number)

Sample(s): -001 -010 -010(3) -012 (2) were received with bubbles >6 mm in diameter.

Sample(s): _____ were received with TRC >0.2 mg/L for NH3/ TKN/cyanide/BNA/pest/PCB/herb

Corrective Action taken, if necessary:

Was client notified: Yes ☐ No ☐ Did client respond: Yes ☐ No ☐

SESI employee: _____ Date of response: _____

Comments: Samples FB-4 140(-010) FB-4 170(-011) FB-4 200(-012) were not received in coolers.

Sample Receipt Checklist (SRC)

Client: MECC Cooler Inspected by/date: [illegible] 8/31/12 Lot #: NH30049

Means of receipt: [ ] SESI [X] Client [ ] UPS [ ] FedEx [ ] Airborne Exp [ ] Other

Yes	No	NA	Question
[ ]	[X]		1. Were custody seals present on the cooler?
[ ]	[X]		2. If custody seals were present, were they intact and unbroken?

Cooler ID/temperature upon receipt 2.1 °C ___/___ °C ___/___ °C ___/___ °C

Method: [ ] Temperature Blank [X] Against Bottles

Method of coolant: [X] Wet Ice [ ] Blue Ice [ ] Dry Ice [ ] None

If response is No (or Yes for 14, 15, 16), an explanation/resolution must be provided.

Yes	No	NA	Question
[ ]	[ ]	[X]	3. If temperature of any cooler exceeded 6.0°C, was Project Manager notified? PM notified by SRC, phone, note (circle one), other: ________. (For coolers received via commercial courier, PMs are to be notified immediately.)
[ ]	[ ]	[X]	4. Is the commercial courier's packing slip attached to this form?
[X]	[ ]		5. Were proper custody procedures (relinquished/received) followed?
[ ]	[ ]	[X]	5a Were samples relinquished by client to commercial courier?
[X]	[ ]		6. Were sample IDs listed?
[X]	[ ]		7. Was collection date & time listed?
[X]	[ ]		8. Were tests to be performed listed on the COC?
[X]	[ ]		9. Did all samples arrive in the proper containers for each test?
[X]	[X]	8/31/12	10. Did all container label information (ID, date, time) agree with COC?
[X]	[ ]		11. Did all containers arrive in good condition (unbroken, lids on, etc.)?
[X]	[ ]		12. Was adequate sample volume available?
[ ]	[X]		13. Were all samples received within ½ the holding time or 48 hours, whichever comes first?
[ ]	[X]		14. Were any samples containers missing?
[X]	[ ]		15. Were there any excess samples not listed on COC? FIELD BLANK 8/31/12
[ ]	[X]	[ ]	16. Were bubbles present >"pea-size" (¼" or 6mm in diameter) in any VOA vials?
[ ]	[ ]	[X]	17. Were all metals/O&G/HEM/nutrient samples received at a pH of <2?
[ ]	[ ]	[X]	18. Were all cyanide and/or sulfide samples received at a pH >12?
[ ]	[ ]	[X]	19. Were all applicable NH3/TKN/cyanide/phenol/BNA/pest/PCB/herb (<0.2mg/L) samples free of residual chlorine?
[ ]	[ ]	[X]	20. Were collection temperatures documented on the COC for NC samples?
[ ]	[ ]	[ ]	21. Were client remarks/requests (i.e. requested dilutions, MS/MSD designations, etc...) correctly transcribed from the COC into the comment section in LIMS?

Sample Preservation (Must be completed for any sample(s) incorrectly preserved or with headspace.)

Sample(s) ________ were received incorrectly preserved and were adjusted accordingly in sample receiving with ________ (H_2SO_4, HNO_3, HCl, NaOH) with the SR # (number)

Sample(s) ________ were received with bubbles >6 mm in diameter.

Sample(s) ________ were received with TRC >0.2 mg/L for NH3/TKN/cyanide/BNA/pest/PCB/herb.

Corrective Action taken, if necessary:

Was client notified: Yes [ ] No [ ] Did client respond: Yes [ ] No [ ]

SESI employee: ________ Date of response: ________

Comments: Received missing samples FR-4 140 were labeled FR-4 141 on containers, [illegible] samples were dated 8-30-12 with no time. FR-4 141, FR-4 170 and Field Blank (which was extra, FR-4 200 (8/31/12)) [illegible] received

Report of Analysis

Midlands Environmental Consultants, Inc.
235 Dooley Rd
Lexington, SC 29073
Attention: Bryan Shane

Project Name: **Smith's Grocery**

Project Number: **12-3946**

Lot Number: **NI28064**

Date Completed: **10/12/2012**

Kelly M. Maberry
Project Manager

This report shall not be reproduced, except in its entirety, without the written approval of Shealy Environmental Services, Inc.

The following non-paginated documents are considered part of this report: Chain of Custody Record and Sample Receipt Checklist.

Case Narrative
Midlands Environmental Consultants, Inc.
Lot Number: NI28064

This Report of Analysis contains the analytical result(s) for the sample(s) listed on the Sample Summary following this Case Narrative. The sample receiving date is documented in the header information associated with each sample.

All results listed in this report relate only to the samples that are contained within this report.

Sample receipt, sample analysis, and data review have been performed in accordance with the most current approved NELAC standards, the Shealy Environmental Services, Inc. ("Shealy") Quality Assurance Management Plan (QAMP), standard operating procedures (SOPs), and Shealy policies. Any exceptions to the NELAC standards, the QAMP, SOPs or policies are qualified on the results page or discussed below.

If you have any questions regarding this report please contact the Shealy Project Manager listed on the cover page.

Sample Receiving
Samples -001 and -004 for volatiles analysis contained vials with air bubbles greater than ¼" or 6mm in diameter. The laboratory uses these vials for screening and the vials without bubbles for analysis whenever possible. Condition of samples is documented on the Sample Receipt Checklist (SRC).

GC/MS Volatiles
The RPD for ethanol exceeded method control limits in batch 94612; however, all other QA/QC criteria for this compound in the LCS/LCSD were within acceptance criteria and method control limits. The associated sample results were reported and no corrective action was required.

The MS associated with sample -012 had compounds recovered outside of the acceptance limits. This demonstrates a matrix effect and data quality is not impacted.

EDB/DBCP
Sample -007 had a layer of sediment in the sample vial that altered the final volume.

1	8011	8011	1	10/04/2012 2128	MPM	10/02/2012 1130	94472

Parameter	CAS Number	Analytical Method	Result	Q	PQL	MDL	Units	Run

PQL = Practical quantitation limit
ND = Not detected at or above the MDL
B = Detected in the method blank
J = Estimated result < PQL and ≥ MDL
E = Quantitation of compound exceeded the calibration range
P = The RPD between two GC columns exceeds 40%
H = Out of holding time
N = Recovery is out of criteria
Q = Surrogate failure
L = LCS/LCSD failure
S = MS/MSD failure
Where applicable, all soil sample analysis are reported on a dry weight basis unless flagged with a "W"
* = Reportable result (only when report all runs)

PQL = Practical quantitation limit
B = Detected in the method blank
E = Quantitation of compound exceeded the calibration range
H = Out of holding time
Q = Surrogate failure
ND = Not detected at or above the MDL
J = Estimated result < PQL and ≥ MDL
P = The RPD between two GC columns exceeds 40%
N = Recovery is out of criteria
L = LCS/LCSD failure
Where applicable, all soil sample analysis are reported on a dry weight basis unless flagged with a "W"
* = Reportable result (only when report all runs)
S = MS/MSD failure

PQL = Practical quantitation limit
ND = Not detected at or above the MDL
B = Detected in the method blank
J = Estimated result < PQL and ≥ MDL
E = Quantitation of compound exceeded the calibration range
P = The RPD between two GC columns exceeds 40%
H = Out of holding time
N = Recovery is out of criteria
Q = Surrogate failure
L = LCS/LCSD failure
S = MS/MSD failure
Where applicable, all soil sample analysis are reported on a dry weight basis unless flagged with a "W"
* = Reportable result (only when report all runs)

Sample Receipt Checklist (SRC)

Client: [illegible] Cooler Inspected by/date: [illegible] 9/28/[illegible] Lot #: [illegible] 28864

Means of receipt: ☑ SESI ☐ Client ☐ UPS ☐ FedEx ☐ Airborne Exp ☐ Other

Yes ☐	No ☑	1. Were custody seals present on the cooler?
Yes ☐	No ☐	2. If custody seals were present, were they intact and unbroken?

Cooler ID temperature upon receipt 1.0 °C

Method: ☑ Temperature Blank ☐ Against Bottles

Method of coolant: ☑ Wet Ice ☐ Blue Ice ☐ Dry Ice ☐ None

If response is No (or Yes for 14, 15, 16), an explanation/resolution must be provided.

Yes ☐	No ☐	NA ☑	3. If temperature of any cooler exceeded 6.0°C, was Project Manager notified? PM notified by SRC, phone, note (circle one), other [illegible]. (For coolers received via commercial courier, PMs are to be notified immediately.)
Yes ☐	No ☐	NA ☑	4. Is the commercial courier's packing slip attached to this form?
Yes ☑	No ☐		5. Were proper custody procedures (relinquished/received) followed?
Yes ☐	No ☐	NA ☑	5a. Were samples relinquished by client to commercial courier?
Yes ☑	No ☐		6. Were sample IDs listed?
Yes ☑	No ☐		7. Was collection date & time listed?
Yes ☑	No ☐		8. Were tests to be performed listed on the COC?
Yes ☑	No ☐		9. Did all samples arrive in the proper containers for each test?
Yes ☑	No ☐		10. Did all container label information (ID, date, time) agree with COC?
Yes ☑	No ☐		11. Did all containers arrive in good condition (unbroken, lids on, etc.)?
Yes ☑	No ☐		12. Was adequate sample volume available?
Yes ☐	No ☑		13. Were all samples received within ½ the holding time or 48 hours, whichever comes first?
Yes ☐	No ☑		14. Were any samples containers missing?
Yes ☐	No ☑		15. Were there any excess samples not listed on COC?
Yes ☑	No ☐	NA ☐	16. Were bubbles present >"pea-size" (¼" or 6mm in diameter) in any VOA vials?
Yes ☐	No ☐	NA ☑	17. Were all metals/O&G/HEM/nutrient samples received at a pH of <2?
Yes ☐	No ☐	NA ☑	18. Were all cyanide and/or sulfide samples received at a pH >12?
Yes ☐	No ☐	NA ☑	19. Were all applicable NH3/TKN/cyanide/phenol/BNA/pest/PCB/herb (<0.2mg/L) samples free of residual chlorine?
Yes ☐	No ☐	NA ☑	20. Were collection temperatures documented on the COC for NC samples?
Yes ☐	No ☐	NA ☑	21. Were client remarks/requests (i.e. requested dilutions, MS/MSD designations, etc.) correctly transcribed from the COC into the comment section in LIMS?

Sample Preservation (Must be completed for any sample(s) incorrectly preserved or with headspace.)

Sample(s) ________ were received incorrectly preserved and were adjusted accordingly in sample receiving with ________ (H_2SO_4, HNO_3, HCl, NaOH) with the SR # number.

Sample(s) -003(2) 004(6) were received with bubbles >6 mm in diameter.

Sample(s) ________ were received with TRC >0.2 mg/L for NH3/TKN/cyanide/BNA/pest/PCB/herb.

Corrective Action taken, if necessary:

Was client notified: Yes ☐ No ☐ Did client respond: Yes ☐ No ☐

SESI employee: ________ Date of response: ________

Comments: ________

Date Completed: **10/16/2012**
Date Revised: **10/24/2012**

Kelly M. Maberry
Project Manager

This report shall not be reproduced, except in its entirety, without the written approval of Shealy Environmental Services, Inc.

The following non-paginated documents are considered part of this report: Chain of Custody Record and Sample Receipt Checklist.

Case Narrative
Midlands Environmental Consultants, Inc.
Lot Number: NI27063

This Report of Analysis contains the analytical result(s) for the sample(s) listed on the Sample Summary following this Case Narrative. The sample receiving date is documented in the header information associated with each sample.

All results listed in this report relate only to the samples that are contained within this report.

Sample receipt, sample analysis, and data review have been performed in accordance with the most current approved NELAC standards, the Shealy Environmental Services, Inc. ("Shealy") Quality Assurance Management Plan (QAMP), standard operating procedures (SOPs), and Shealy policies. Any exceptions to the NELAC standards, the QAMP, SOPs or policies are qualified on the results page or discussed below.

If you have any questions regarding this report please contact the Shealy Project Manager listed on the cover page.

Sample Receiving
Page 8 of the chain of custody forms does not have tests listed. The tests were logged in according to the bottles received.

Several sample IDs were revised to include "R" at the client's request. Sample -027 was revised to "MW-21" at the client's request.

Several samples for volatiles analysis contained vials with air bubbles greater than ¼" or 6mm in diameter. The laboratory uses these vials for screening and the vials without bubbles for analysis whenever possible. Condition of samples is documented on the Sample Receipt Checklist (SRC).

GC/MS Volatiles
The method blank associated with samples -034, -035, -036, -039 and -040 had naphthalene detected at a concentration that was above the MDL but below ½ the PQL. All samples associated with this method blank that have detections for this compound have been flagged with a "B".

The LCS/LCSD associated with batches 94478, 94513, 94571 and 94822 had ethanol recovered above the acceptance limits. This demonstrates a high bias on analytical results. There were no detections for this compound in the samples associated with these batches; therefore, data quality is not impacted.

The MS associated with samples -008, -011, -050, -060 and -062 had compounds recovered outside of the acceptance limits. This demonstrates a matrix effect and data quality is not impacted.

The RPD for benzene, ethylbenzene and toluene in the duplicate associated with sample -009 exceeded method control limits. This is most likely a matrix effect. Insufficient sample volume remained for re-analysis.

EDB/DBCP
The sample result for -024 has a P qualifier because the relative percent difference (RPD) between the two dissimilar phase GC columns exceeds 40%. Section 7.10.4 of SW-846 method 8000B states the higher of the two results is reported; however the lower result is reported for this sample. The higher result for sample -024 was 2.1 ug/L.

The MS/MSD associated with samples -017, -022, -058 and -078 had EDB recovered outside of the acceptance limits and the RPD exceeded method control limits. This demonstrates a matrix effect and data quality is not impacted.

The MS associated with samples -058 and -078 had the surrogate recovered outside of the acceptance limits. The sample and MSD has the surrogate recovered within the acceptance limits, demonstrating this is isolated to the MS. The sample results are reported and no corrective action is required.

Due to high detections for target compounds, samples -001, -019, -020, -024 and -032 were diluted 50X, 50X, 100X, 5X and 20X, respectively. As a result, the associated surrogates were recovered outside of the acceptance limits. No corrective action was required, as dilutions of 5X and greater may impact surrogate recoveries.

Samples -007, -008 and -024 had a layer of sediment in the sample vials that altered the final volume.

Sample Summary

ND = Not detected at or above the MDL
B = Detected in the method blank
J = Estimated result < PQL and ≥ MDL
E = Quantitation of compound exceeded the calibration range
P = The RPD between two GC columns exceeds 40%
H = Out of holding time
N = Recovery is out of criteria
Q = Surrogate failure
L = LCS/LCSD failure
S = MS/MSD failure
Where applicable, all soil sample analysis are reported on a dry weight basis unless flagged with a "W"
* = Reportable result (only when report all runs)

PQL = Practical quantitation limit
B = Detected in the method blank
E = Quantitation of compound exceeded the calibration range
H = Out of holding time
Q = Surrogate failure
ND = Not detected at or above the MDL
J = Estimated result < PQL and ≥ MDL
P = The RPD between two GC columns exceeds 40%
N = Recovery is out of criteria
L = LCS/LCSD failure
Where applicable, all soil sample analysis are reported on a dry weight basis unless flagged with a "W"
* = Reportable result (only when report all runs)
S = MS/MSD failure

Parameter	CAS Number	Analytical Method	Result	Q	PQL	MDL	Units	Run

PQL = Practical quantitation limit
ND = Not detected at or above the MDL
B = Detected in the method blank
J = Estimated result < PQL and ≥ MDL
E = Quantitation of compound exceeded the calibration range
P = The RPD between two GC columns exceeds 40%
H = Out of holding time
N = Recovery is out of criteria
Q = Surrogate failure
L = LCS/LCSD failure
S = MS/MSD failure
Where applicable, all soil sample analysis are reported on a dry weight basis unless flagged with a "W"
* = Reportable result (only when report all runs)

Parameter	CAS Number	Analytical Method	Result	Q	PQL	MDL	Units	Run

PQL = Practical quantitation limit
B = Detected in the method blank
E = Quantitation of compound exceeded the calibration range
H = Out of holding time
Q = Surrogate failure
ND = Not detected at or above the MDL
J = Estimated result < PQL and ≥ MDL
P = The RPD between two GC columns exceeds 40%
N = Recovery is out of criteria
L = LCS/LCSD failure
Where applicable, all soil sample analysis are reported on a dry weight basis unless flagged with a "W"
* = Reportable result (only when report all runs)
S = MS/MSD failure

PQL = Practical quantitation limit
ND = Not detected at or above the MDL
B = Detected in the method blank
J = Estimated result < PQL and ≥ MDL
E = Quantitation of compound exceeded the calibration range
P = The RPD between two GC columns exceeds 40%
H = Out of holding time
N = Recovery is out of criteria
Q = Surrogate failure
L = LCS/LCSD failure
S = MS/MSD failure
Where applicable, all soil sample analysis are reported on a dry weight basis unless flagged with a "W"
* = Reportable result (only when report all runs)

Parameter	CAS Number	Analytical Method	Result	Q	PQL	MDL	Units	Run

PQL = Practical quantitation limit
ND = Not detected at or above the MDL
B = Detected in the method blank
J = Estimated result < PQL and ≥ MDL
E = Quantitation of compound exceeded the calibration range
P = The RPD between two GC columns exceeds 40%
H = Out of holding time
N = Recovery is out of criteria
Q = Surrogate failure
L = LCS/LCSD failure
S = MS/MSD failure
Where applicable, all soil sample analysis are reported on a dry weight basis unless flagged with a "W"
* = Reportable result (only when report all runs)

Client: **Midlands Environmental Consultants, Inc.**
Description: **WSW-38**
Date Sampled: **09/25/2012 1156**
Date Received: **09/27/2012**

Laboratory ID: **NI27063-078**
Matrix: **Aqueous**

Effective Date: 10/11/12

Sample Receipt Checklist (SRC)

Client: Mr. CJ Cooler Inspected by/date: ECC 9/27/12 Lot #: NI27063

Means of receipt: ☑ SESI ☐ Client ☐ UPS ☐ FedEx ☐ Airborne Exp ☐ Other

Yes ☐	No ☑		1. Were custody seals present on the cooler?
Yes ☐	No ☐		2. If custody seals were present, were they intact and unbroken?

Cooler ID/temperature upon receipt: 1 @ °C 1 @ °C / °C / °C
Method: ☐ Temperature Blank ☑ Against Bottles (Trip Blank)
Method of coolant: ☑ Wet Ice ☐ Blue Ice ☐ Dry Ice ☐ None

If response is No (or Yes for 4, 15, 16), an explanation/resolution must be provided.

Yes ☐	No ☐	NA ☑	3. If temperature of any cooler exceeded 6.0°C, was Project Manager notified? PM notified by SRC, phone, note (circle one), other: _____. (For coolers received via commercial courier, PMs are to be notified immediately.)
Yes ☐	No ☐	NA ☑	4. Is the commercial courier's packing slip attached to this form?
Yes ☑	No ☐		5. Were proper custody procedures (relinquished/received) followed?
Yes ☐	No ☐	NA ☑	5a Were samples relinquished by client to commercial courier?
Yes ☑	No ☐		6. Were sample IDs listed?
Yes ☑	No ☐		7. Was collection date & time listed?
Yes ☑	No ☐		8. Were tests to be performed listed on the COC?
Yes ☑	No ☐		9. Did all samples arrive in the proper containers for each test?
Yes ☑	No ☐		10. Did all container label information (ID, date, time) agree with COC?
Yes ☑	No ☐		11. Did all containers arrive in good condition (unbroken, lids on, etc.)?
Yes ☑	No ☐		12. Was adequate sample volume available?
Yes ☐	No ☑		13. Were all samples received within ½ the holding time or 48 hours, whichever comes first?
Yes ☐	No ☑		14. Were any samples containers missing?
Yes ☐	No ☑		15. Were there any excess samples not listed on COC?
Yes ☑	No ☐	NA ☐	16. Were bubbles present >"pea-size" (¼" or 6mm in diameter) in any VOA vials?
Yes ☐	No ☐	NA ☑	17. Were all metals/O&G/HEM/nutrient samples received at a pH of <2?
Yes ☐	No ☐	NA ☑	18. Were all cyanide and/or sulfide samples received at a pH >12?
Yes ☐	No ☐	NA ☑	19. Were all applicable NH3/TKN/cyanide/pheno/BNA/pest/PCB/herb (<0.2mg/L) samples free of residual chlorine?
Yes ☐	No ☐	NA ☑	20. Were collection temperatures documented on the COC for NC samples?
Yes ☐	No ☐	NA ☑	21. Were client remarks/requests (i.e. requested dilutions, MS/MSD designations, etc.) correctly transcribed from the COC into the comment section in LIMS?

Sample Preservation (Must be completed for any sample(s) incorrectly preserved or with headspace.)

Sample(s) _____ were received incorrectly preserved and were adjusted accordingly in sample receiving with _____ (H_2SO_4,HNO_3,HCl,NaOH) with the SR # (number)

Sample(s) See list below were received with bubbles >6 mm in diameter.

Sample(s) _____ were received with TRC >0.2 mg/L for NH3/TKN/cyanide/BNA/pest/PCB/herb.

Corrective Action taken, if necessary:

Was client notified: Yes ☐ No ☐ Did client respond: Yes ☐ No ☐

SESI employee: _____ Date of response: _____

Kelly M. Maberry
Project Manager

ACCREDITED IN ACCORDANCE WITH nelac

This report shall not be reproduced, except in its entirety, without the written approval of Shealy Environmental Services, Inc.

The following non-paginated documents are considered part of this report: Chain of Custody Record and Sample Receipt Checklist.

Case Narrative

Midlands Environmental Consultants, Inc.

Lot Number: NI28028

This Report of Analysis contains the analytical result(s) for the sample(s) listed on the Sample Summary following this Case Narrative. The sample receiving date is documented in the header information associated with each sample.

All results listed in this report relate only to the samples that are contained within this report.

Sample receipt, sample analysis, and data review have been performed in accordance with the most current approved NELAC standards, the Shealy Environmental Services, Inc. ("Shealy") Quality Assurance Management Plan (QAMP), standard operating procedures (SOPs), and Shealy policies. Any exceptions to the NELAC standards, the QAMP, SOPs or policies are qualified on the results page or discussed below.

If you have any questions regarding this report please contact the Shealy Project Manager listed on the cover page.

Sample Receipt Checklist (SRC)

Client: MCI Cooler Inspected by/date: ECE 9/26/12 Lot #: NI28028

Means of receipt: ☑ SESI ☐ Client ☐ UPS ☐ FedEx ☐ Airborne Exp ☐ Other			
Yes ☐	No ☑		1. Were custody seals present on the cooler?
Yes ☐	No ☐		2. If custody seals were present, were they intact and unbroken?
Cooler ID/temperature upon receipt: / °C / °C (Trip Blank °C from VOA lot) / °C			
Method: ☐ Temperature Blank ☑ Against Bottles ☐ Wet Ice ☐ Blue Ice ☐ Dry Ice ☐ None			
If response is No (or Yes for 14, 15, 16), an explanation/resolution must be provided.			
Yes ☐	No ☐	NA ☑	3. If temperature of any cooler exceeded 6.0°C, was Project Manager notified? PM notified by SRC, phone, note (circle one), other _____. (For coolers received via commercial courier, PMs are to be notified immediately.
Yes ☐	No ☐	NA ☑	4. Is the commercial courier's packing slip attached to this form?
Yes ☑	No ☐		5. Were proper custody procedures (relinquished/received) followed?
Yes ☐	No ☐	NA ☑	5a Were samples relinquished by client to commercial courier?
Yes ☑	No ☐		6. Were sample IDs listed?
Yes ☑	No ☐		7. Was collection date & time listed?
Yes ☑	No ☐		8. Were tests to be performed listed on the COC?
Yes ☑	No ☐		9. Did all samples arrive in the proper containers for each test?
Yes ☑	No ☐		10. Did all container label information (ID, date, time) agree with COC?
Yes ☑	No ☐		11. Did all containers arrive in good condition (unbroken, lids on, etc.)?
Yes ☑	No ☐		12. Was adequate sample volume available?
Yes ☑	No ☐		13. Were all samples received within ½ the holding time or 48 hours, whichever comes first?
Yes ☐	No ☑		14. Were any samples containers missing?
Yes ☐	No ☑		15. Were there any excess samples not listed on COC?
Yes ☐	No ☐	NA ☑	16. Were bubbles present >"pea-size" (¼" or 6mm in diameter) in any VOA vials?
Yes ☐	No ☐	NA ☑	17. Were all metals/O&G/TRPH/nutrient samples received at a pH of <2?
Yes ☐	No ☐	NA ☑	18. Were all cyanide and/or sulfide samples received at a pH >12?
Yes ☐	No ☐	NA ☑	19. Were all applicable NH3/TKN/cyanide/phenol/BNA/pest/PCB/herb (<0.2mg/L) samples free of residual chlorine?
Yes ☐	No ☐	NA ☑	20. Were collection temperatures documented on the COC for NC samples?
Yes ☐	No ☐	NA ☑	21. Were client remarks/requests (i.e. requested dilutions, MS/MSD designations, etc…) correctly transcribed from the COC into the comment section in LIMS?

Sample Preservation (Must be completed for any sample(s) incorrectly preserved or with headspace.)

Sample(s) _____ were received incorrectly preserved and were adjusted accordingly in sample receiving with _____ (H_2SO_4,HNO_3,HCl,NaOH) with the SR # (number) _____

Sample(s) _____ were received with bubbles >6 mm in diameter.

Sample(s) _____ were received with TRC >0.2 mg/L for NH3/TKN/cyanide/BNA/pest/PCB/herb

Corrective Action taken, if necessary:

Was client notified: Yes ☐ No ☐ Did client respond: Yes ☐ No ☐

SESI employee: _____ Date of response: _____

Comments: _____

3. PUBLIC SYSTEM NAME: FR-2 **PUBLIC SYSTEM NUMBER:** 09322

4. ABANDONMENT: ☑ Yes ☐ No
Give Details Below
Grouted Depth: from 0.0 ft. to 204.2 ft.

Formation Description	*Thickness of Stratum	Depth to Bottom of Stratum
Fractured Rock Boring		
Abandoned by James Darby		
Well Drilling, LLC via tremie		
pipe with approximately 34.03		
Gallons of Portlant Bentonite		
Cement Slurry on 08/29/2012.		
*Indicate Water Bearing Zones (Use a 2nd sheet if needed)		

5. REMARKS:
FR-2

6. TYPE: ☐ Mud Rotary ☐ Jetted ☐ Bored ☐ Dug ☐ Air Rotary ☐ Driven ☐ Cable tool ☐ Other

7. PERMIT NUMBER: UMW-24493

8. USE:
☐ Residential ☐ Public Supply ☐ Process
☐ Irrigation ☐ Air Conditioning ☐ Emergency
☐ Test Well ☐ Monitor Well ☐ Replacement

9. WELL DEPTH (completed) 204.2 ft. Date Started: 07/10/2012 Date Completed: 07/13/2012

10. CASING: ☑ Threaded ☐ Welded
Diam.: 6.25 Inch
Type: ☑ PVC ☐ Galvanized ☐ Steel ☐ Other
6.25 in. to 120.8 ft. depth
_____ in. to _____ ft. depth
Height: Above/Below Surface _____ ft.
Weight _____ lb./ft.
Drive Shoe? ☐ Yes ☐ No

11. SCREEN:
Type: _____ Diam.: _____
Slot/Gauge: _____ Length: _____
Set Between: _____ ft. and _____ ft.
_____ ft. and _____ ft.
NOTE: MULTIPLE SCREENS USE SECOND SHEET
Sieve Analysis ☐ Yes (please enclose) ☐ No

12. STATIC WATER LEVEL 44.2 ft. below land surface after 24 hours

13. PUMPING LEVEL Below Land Surface.
_____ ft. after _____ hrs. Pumping _____ G.P.M.
Pumping Test: ☐ Yes (please enclose) ☐ No
Yield: _____

14. WATER QUALITY
Chemical Analysis ☐ Yes ☐ No Bacterial Analysis ☐ Yes ☐ No
Please enclose lab results.

15. ARTIFICIAL FILTER (filter pack) ☐ Yes ☐ No
Installed from _____ ft. to _____ ft.
Effective size _____ Uniformity Coefficient _____

16. WELL GROUTED? ☑ Yes ☐ No
☐ Neat Cement ☐ Bentonite ☐ Bentonite/Cement ☐ Other _____
Depth: From 0.0 ft. to 204.2 ft.

17. NEAREST SOURCE OF POSSIBLE CONTAMINATION: _____ ft. _____ direction
Type _____
Well Disinfected ☐ Yes ☐ No Type: _____ Amount: _____

18. PUMP: Date installed: _____ Not installed ☐
Mfr. Name: _____ Model No.: _____
H.P._____ Volts_____ Length of drop pipe_____ ft. Capacity ____ gpm
TYPE: ☐ Submersible ☐ Jet (shallow) ☐ Turbine ☐ Jet (deep) ☐ Reciprocating ☐ Centrifugal

1. WELL OWNER INFORMATION:
Name: Smith Lois (last) (first)
Address: 3176 Charlotte Highway
City: York State: SC Zip: 29745-7609
Telephone: Work: (803) 684-6289 Home:

2. LOCATION OF WELL: York **COUNTY:** York
Name: Smith's Grocery
Street Address: 3176 Charlotte Highway
City: York Zip: 29745-7609
Latitude: Longitude:

3. PUBLIC SYSTEM NAME: 09322 **PUBLIC SYSTEM NUMBER:** TW-2C

4. ABANDONMENT: ☐ Yes ☑ No
Grouted Depth: from _____ ft. to _____ ft.

Formation Description	*Thickness of Stratum	Depth to Bottom of Stratum
Topsoil	0.5	0.5
Brown & Red, Clayey SILT	7.5	8.0
Brown & Tan, Silty CLAY	29.0	37.0
Tan & White, Silty SAND	30.0	67.0
Partially Weathered Rock: SAND	36.0	103.0
ROCK: Mica Gneiss	100.0	203.0
Note: Monitoring Wells TW-2A,		
TW-2B, and TW-2C were installed		
in one borehole.		
*Indicate Water Bearing Zones (Use a 2nd sheet if needed)		

5. REMARKS: TW-2C

6. TYPE: ☐ Mud Rotary ☐ Jetted ☐ Bored ☐ Dug ☑ Air Rotary ☐ Driven ☐ Cable tool ☐ Other

7. PERMIT NUMBER: UMW-24493

8. USE: ☐ Residential ☐ Public Supply ☐ Process ☐ Irrigation ☐ Air Conditioning ☐ Emergency ☐ Test Well ☑ Monitor Well ☐ Replacement

9. WELL DEPTH (completed) 203.0 ft. Date Started: 09/03/2012 Date Completed: 09/07/2012

10. CASING: ☑ Threaded ☐ Welded
Diam.: 6 Inch & 2 Inch
Type: ☑ PVC ☐ Galvanized ☐ Steel ☐ Other
6.0 in. to 117.0 ft. depth
2.0 in. to 193.0 ft. depth
Height: Above /Below
Surface 0.0 ft.
Weight _____ lb./ft.
Drive Shoe? ☐ Yes ☐ No

11. SCREEN:
Type: Schedule 40 PVC Diam.: 2 Inch
Slot/Gauge: 0.010 Length: 10.0 Feet
Set Between: 193.0 ft. and 203.0 ft. **NOTE: MULTIPLE SCREENS**
_____ ft. and _____ ft. **USE SECOND SHEET**
Sieve Analysis ☐ Yes (please enclose) ☑ No

12. STATIC WATER LEVEL 41.88 ft. below land surface after 24 hours

13. PUMPING LEVEL Below Land Surface.
_____ ft. after _____ hrs. Pumping _____ G.P.M.
Pumping Test: ☐ Yes (please enclose) ☐ No
Yield: _____

14. WATER QUALITY
Chemical Analysis ☐ Yes ☐ No Bacterial Analysis ☐ Yes ☐ No
Please enclose lab results.

15. ARTIFICIAL FILTER (filter pack) ☑ Yes ☐ No
Installed from 191.0 ft. to 203.0 ft.
Effective size _____ Uniformity Coefficient _____

16. WELL GROUTED? ☑ Yes ☐ No
☐ Neat Cement ☐ Bentonite ☑ Bentonite/Cement ☐ Other _____
Depth: From 0.0 ft. to 189.0 ft.

17. NEAREST SOURCE OF POSSIBLE CONTAMINATION: _____ ft. _____ direction
Type _____
Well Disinfected ☐ Yes ☐ No Type: _____ Amount: _____

18. PUMP: Date installed: _____ Not installed ☐
Mfr. Name: _____ Model No.: _____
H.P._____ Volts_____ Length of drop pipe ___ ft. Capacity ___ gpm
TYPE: ☐ Submersible ☐ Jet (shallow) ☐ Turbine ☐ Jet (deep) ☐ Reciprocating ☐ Centrifugal

AQUIFER EVALUATION SUMMARY FORMS, DATA, GRAPHS, EQUATIONS

SUMMARY of SLUG TEST (Page 1 of 2)

SOUTH CAROLINA
Department of Health and Environmental Control (DHEC)

Site Data

SITE ID # 09322 COUNTY York

FACILITY NAME Smith's Grocery

SLUG DATA

See Appendix _____ Table _____ Figure _____ for a list of all data measurements.
(water level logs, etc.)(Complete as appropriate).
Water Level Recovery Data was measured by ORS Interface Probe .
(Hermit Data Logger, Manually with Water Level Indicator, etc.)(List Method)
Complete the following table for each well tested.
COMPLETE A SECOND SHEET IF MORE THAN FOUR WELLS ARE TESTED

Slug Test Conducted in well(s) number	MW-7R	MW-11R		
Initial Rise/Drawdown in well (feet)	4.32	0.96		
Radius of well casing (feet)	0.083	0.083		
Effective Radius of Well (feet)	0.33	0.33		
Static Saturated Aquifer Thickness (feet)	6.60	8.67		
Length of Well Screen (feet)	10	10		
Static Height of Water Column in Well (ft)	6.60	8.67		

Calculations

See Appendix _____ Table _____ Figure _____ for calculations
The method for aquifer calculations was NAVFAC
Calculated values by well were as follows:

Slug Test Conducted in Well(s) number	MW-7R	MW-11R			
Hydraulic Conductivity	2.32E-06	1.04E-04			cm/sec

Thickness of the aquifer used to calculate hydraulic conductivity was N/A feet.
The aquifer is _____ confined _____ semi-confined _____ water table (Check as Appropriate).
SEE SHEET 3
The estimated seepage velocity is 3.93 feet per year based on a hydraulic conductivity of 5.32E-05 cm/sec, a hydraulic gradient of 2.14E-02 ft/ft, and a porosity of 30 percent for SILT soil.

October 29, 2012

Re: Treatment of Purge Water
Smith's Grocery
York, South Carolina
SCDHEC Site ID Number 09322
MECI Project Number 12-3850

To Whom it May Concern;

Midlands Environmental Consultants, Inc. is providing the following letter as certification that treatment of the referenced purge water complied with the conditions of "Proposed Conditions for Use of Portable Activated Carbon Units for the Treatment of Small Volumes of Petroleum Hydrocarbon Contaminated Groundwater", as described in the following:

Applicability:

Groundwater treated was obtained as a result development of wells and sampling.

Conditions:

1. The purge/bail water from all wells is mixed before usage of the Activated Carbon Unit.
2. No free-product was detected in any of the purge water drums.
3. Analytical results of from well sampling show average concentrations of petroleum hydrocarbon constituents less than 5000 parts per billion (ppb) Benzene and less than 20,000 ppb total BTEX.
4. The existing carbon pack will be replaced/reactivated every 5,000 gallons.
5. Record of usage is maintained by Contractor.
6. Any and all recommendations and conditions issued by the Manufacturer have been adhered to.
7. Any and all recommendations and conditions (even on a site by site basis) issued by the SCDHEC must be adhered to.

Post Office Box 854, Lexington SC 29071 • 235-B Dooley Road, Lexington, SC 29073
Telephone: (803) 808-2043 • fax: (803) 808-2048

All purge waters were treated on-site using an up-flow treatment drum loaded with 30 pounds of activated carbon. Carbon will be loaded to a maximum of 3 pounds of total organic compounds or 5,000 gallons of development/purge water, whichever occurs first.

682.0 Gallons were treated on June 27 and August 30, 2012 during the development of the newly installed monitoring wells at the referenced site.

700.0 Gallons were treated on September 25 & 26, 2012 during the comprehensive groundwater sampling event conducted at the referenced site.

A total 1,382.0 Gallons was treated during the subject assessment.

Midlands Environmental also tracks cumulative organic compounds adsorbed on the activated carbon to ensure the capacity of carbon mass is not over-charged. This data is available upon request.

Should you have any questions or comments, please contact the undersigned.

Sincerely,
Midlands Environmental Consultants, Inc.

John C. Bryant
Staff Geologist

Application for Encroachment Permit

S.C. Department of Transportation
Form 637 (Rev 11/2003)

Permit Nbr: 125339

Applicant: Midlands Environmental Cons.	County: York
Street: P.O. Box 854	Enter Road/Route And then the corresponding Road Name below:
City: Lexington	1. SC HWY 49 — 1. Charlotte Highway
State & Zip: SC 29071	2. — 2.
Phone: 803-808-2043	3. — 3.
	4. — 4.
	5. — 5.

1. The undersigned applicant hereby applies to the South Carolina Department of Transportation (SCDOT) for a permit for encroachment on State Highway Right of Way as shown and described below:

2. Type of Encroachment:
Installation of four groundwater monitoring wells within the SCDOT Rigt of Way.

3. Description of Location:
Along Charlotte Highway(SC 49), off roadside, in the SCDOT Right of Way.
From the intersection with Southern Pines Avenue towards Old Son Lowery Road.
See attached Figure 2 for proposed well locations.

(Attach sketch indicating roadway features such as: pavement width, shoulder width, sidewalk and curb and gutter location, significant drainage structure, north arrow, right of way width, and loction of the proposed encroachment with respect to the roadway centerline and the nearest intersecting road on the State system.)

4. The undersigned applicant hereby requests the SCDOT to permit encroachment on the SCDOT right of way as described herein. It is expressly understood that the encroachment, if and when constructed, shall be installed in accordance with the sketch attached hereto and made a part hereof.

The applicant agrees to comply with and be bound by the SCDOT's "A Policy for Accommodating Utilities on Highways Rights of way", "Standard Specifications for Highway Construction", the "General Provisions" and "Special Provisions", attached hereto or made a part hereof by reference, during the installation, operation and maintenance of said encroachment within the SCDOT's Right of Way.

The applicant hereby further agrees, and binds his/her/its heirs, personal representatives, successors, assigns, to assume any and all liability for accidents or injuries to persons, or damage to property, including the highway, that may be caused by the construction, maintenance, use, moving or removing of the physical appurtenances contemplated herein, and the applicant agrees to indemnify and hold SCDOT harmless from and against any and all claims for personal injury and/or property damage which may be sustained by any person by reason of the construction, maintenance or existence of said encroachment on the SCDOT's right of way.

Applicant's Name: John C. Bryant (Please print or type) Date: 3/26/12

Applicant's Sig: Title: Staff Geologist

In accordance with your request and subject to all the provisions, terms, conditions and restrictions stated in the application and the general and special provisions attached hereto, the SCDOT hereby approves your application for an encroachment permit. This permit shall become null and void unless the work contemplated herein shall have been completed prior to: 4/30/13

3/29/12

Application for Encroachment Permit
General Provisions

Permit Nbr: _____

1. DEFINITIONS: The word "Permittee" used herein shall mean the name of the person, firm, or corporation to whom this permit is addressed, his, her, its, heirs, personal representatives, successors and assigns. The word "DEPARTMENT" shall mean the South Carolina Department of Transportation.

2. NOTICE PRIOR TO STARTING WORK: Before starting the work contemplated herein within the limits of the highway right of way, the Department's Resident Maintenance Engineer in the county in which the proposed work is located shall be notified 24 hours in advance so that he may be present while the work is under way.

3. PERMIT SUBJECT TO INSPECTION: This permit shall be kept at the site of the work at all times while said work is under way and must be shown to any representative of the Department or law enforcement officer on demand.

4. PROTECTION OF HIGHWAY TRAFFIC: The applicant shall be responsible for the protection of the highway traffic at all times during the construction, maintenance, removing or moving of the encroachment permitted herein. Detours, barricades, warning signs and flagmen, as necessary, shall be provided by and at the expense of the Permittee and shall be in accordance with the "Manual on Uniform Traffic Control Devices" (MUTCD). The work shall be planned and carried out so that there will be the least possible inconvenience to the motoring public. The Permittee agrees to observe all rules and regulations of the Department while carrying on the work contemplated herein and take all other precautions that circumstances warrant.

5. STANDARDS OF CONSTRUCTION: All work shall conform to the Department's standards of construction and shall be performed in a workman-like manner. The applicant shall make adequate provisions for maintaining the proper drainage of the highway as it may be affected by the encroachment permitted herein. All work shall be subject to the supervision and satisfaction of the Department.

6. FUTURE MOVING OF PHYSICAL APPURTENANCES: If, in the opinion of the State Highway Engineer, it should ever become necessary to move or remove the physical appurtenances, or any part thereof contemplated herein, on account of change in location of the highway, widening of the highway, or for any other sufficient reason, such moving shall be done on demand of the Department at the expense of the Permittee.

7. RESTORATION OF HIGHWAY FACILITIES UPON MOVING OR REMOVING OF PHYSICAL APPUTENANCES: If, and when, the physical appurtenances contemplated herein shall be moved or removed, either on the demand of the Department or at the option of the Permittee, the highway and facilities shall immediately be restored to their original condition at the expense of the Permittee.

8. COSTS: All work in connection with the construction, maintenance, moving or removing of the physical appurtenances contemplated herein shall be done by and at the expense of the permittee.

9. ADDITIONAL PERMISSIONS:
   (a) It is distinctly understood that this permit does not in any way grant or release any rights lawfully possessed by the abutting property owners. The Permittee shall secure any such rights, as necessary, from said abutting property owners.
   (b) The Permittee shall be responsible for obtaining all other approvals or permits necessary for installation of the encroachment from other government entities.
   (c) There shall be no excavation of soil nearer than two feet to any public utility line or appurtenant facility except with the consent of the owner thereof, or except upon special permission of this Department after an opportunity to be heard is given the owner of such line or appurtenant facility.

10. ADDITIONAL WORK PERFORMANCE:
   (a) All crossings over the highway shall be constructed in accordance with "Specifications for Overhead Crossings of Light and Power Transmission Lines and Telegraph Lines over each other and over Highway Rights of Way in South Carolina," as approved by the Public Service Commission of South Carolina and effective as of date of this permit.
   (b) All tunneling, boring, or jacking shall be done in such a way as not to disturb the highway surfacing.
   (c) No pavement shall be cut unless specifically authorized herein.
   (d) No excavation shall be nearer than three feet to the edge of pavement unless specifically authorized herein.
   (e) Underground facilities will be located at minimum depths as defined in the "Utility Accommodations Manual" for the transmittant, generally as follows: 4 feet minimum for hazardous or dangerous transmittant, 3 feet minimum for other lines. The Department may approve shallower depths if adequate protection is provided. Such approval must be obtained in writing.
   (f) Service and other small diameter pipes shall be jacked, driven, or otherwise forced underneath the pavements on any surfaced road without disturbing the pavement. The section under the highway pavement and within a distance of three (3) feet on either side shall be continuous without joints.

11. ACCESS:
   (a) Permittee is responsible for maintaining reasonable access to private driveways during construction.
   (b) It is expressly provided that, with respect to any limited access highway, the Permittee shall not have or gain access from the main traveled way of the highway, or the on or off ramps to such facility, except upon approval by the Department.

12. DRIVEWAYS:
   (a) The existing crown of the highway shall be continued to the outside shoulder line of the highway.
   (b) If the driveway or approach is concrete pavement, the pavement shall be constructed at least 6 inches thick and with a minimum of class 2500 concrete. There shall be a bituminous expansion joint, not less than 3/4 inches in thickness, placed between the highway paving and the paving of the approach for the full width of the approach.

13. BEAUTIFICATION:
   (a) All trees, plants, flowers, etc. shall be placed in accordance with the provisions specifically stipulated herein.
   (b) All trees, plants, flowers, etc. shall be maintained by, and at the expense of, the Permittee and the provisions of this permit shall become null and void, if and when said Permittee ceases to maintain said trees, plants, flowers, etc.

14. AS-BUILT PLANS:
   (a) The applicant shall provide the Department with survey-quality as-built plans in accordance with the requirements set forth in the Department's "A Policy for Accommodating Utilities on Highway Rights of Way".

PERMIT IS FOR THE INSTALLATION OF FOUR GROUNDWATER MONITORING WELLS ALONG SC-49 NEAR THE INTERSECTION WITHSOUTHERN PINES AVE.

Special Provisions

101 - SHOULDER SOD DESTROYED BY THIS INSTALLATION TO BE REPLACED FOR THE ENTIRE AREA. THE AREA SHALL BE RE-SHAPED AND ROLLED TO THE CROSS SECTION EXISTING PRIOR TO THIS WORK.

123 - ALL WORK PERFORMED IN CONNECTION WITH THIS PERMIT SHALL CONFORM TO THE SCDOT "A POLICY FOR ACCOMODATING UTILITIES ON HIGHWAY RIGHT-OF-WAY" MOST CURRENT EDITION.

301 - THE DITCHES AND/OR SHOULDERS DISTURBED DURING THE INSTALLATION SHALL BE RE-ESTABLISHED TO PROPER GRADE, ORIGINAL CROSS SECTION, STABILIZED, AND ALL DRAIN PIPES CLEARED.

306 - TRAFFIC CONTROL, LIGHTS, SIGNS AND FLAG-MEN WILL BE FURNISHED BY APPLICANT AND WILL CONFORM TO PART VI OF THE MANUAL ON UNIFORM TRAFFIC CONTROL DEVICES.

315 - TEST WELL SHALL BE LOCATED OUTSIDE OF WHEEL PATH.

318 - THE APPLICANT SHALL BE RESPONSIBLE FOR IMMEDIATE REMOVAL OF SUCH TRAFFIC HAZARDS AS MUD, DEBRIS, LOOSE STONE, AND TRASH AS MAY BE WASHED OR SPILLED ON THE TRAVELED ROADWAY AS A RESULT OF THE PROPOSED WORK.

4 - SCDOT SHALL BE NOTIFIED WHEN WORK DEFINED IN THE PERMIT STARTS AS WELL AS WHEN THE WORK IS COMPLETED. REFERENCE SHALL BE MADE BY PERMIT NUMBER.

FORM 742 (REV. 1997)

COUNTY _____

ROUTE

NAME OF APPLICANT:

SPECIAL PROVISIONS

All work including pavement repairs and bridge attachments to be in accordance with SCDHPT Manual (A Policy for Accommodating Utilities on Highway Rights-of-Way) dated March 1987. A copy of which may be obtained from the State Utilities Engineer's office in Columbia.

Signing of construction area will comply with the 1982 SCDHPT Manual on Uniform Traffic Control Devices for Streets and Highways Revised 1988, and all subsequent addendums.

All materials and construction methods are to be in accordance with SCDHPT Standard Specifications for Highway Construction, Edition 1986. All work shall be maintained for a period of two (2) years from the date of expiration of the permit. Where pavement is cut longitudinally, entire roadway is to be resurfaced one year after cut is made for its entire length.

The erosion and sediment control are to be in accordance with the Erosion and Sediment Reduction Act of 1983. Roadway drainage will be maintained at all times. Permittee will take whatever measures necessary to control erosion and to minimize silting of streams.

Shoulders and ditches that are disturbed shall be replanted in accordance with Section 810 of the Standard Specifications noted above, and a satisfactory stand of grass achieved.

Traffic to be maintained where open cuts are made with no trenches to be left unattended or open overnight.

No excavation material is to be placed on pavement surface without permission from the SCDHPT.

All water meters, air valves, fire hydrants, electric transformers, telephone and cable TV pedestals will be placed 1' inside right-of-way, unless prior written approval given by SCDHPT.

SCDHPT will furnish no labor, materials, or incidentals in connection with this work unless otherwise stated.

No work is to be performed on Highway Rights-of-Ways that encroach on Government owned lands, Railroad Rights-of-Way, or other designated lands without the written permission of the entity or property owner.

All concrete driveways are to be constructed with 6" thickness concrete with curb and ramps installed at all intersections.

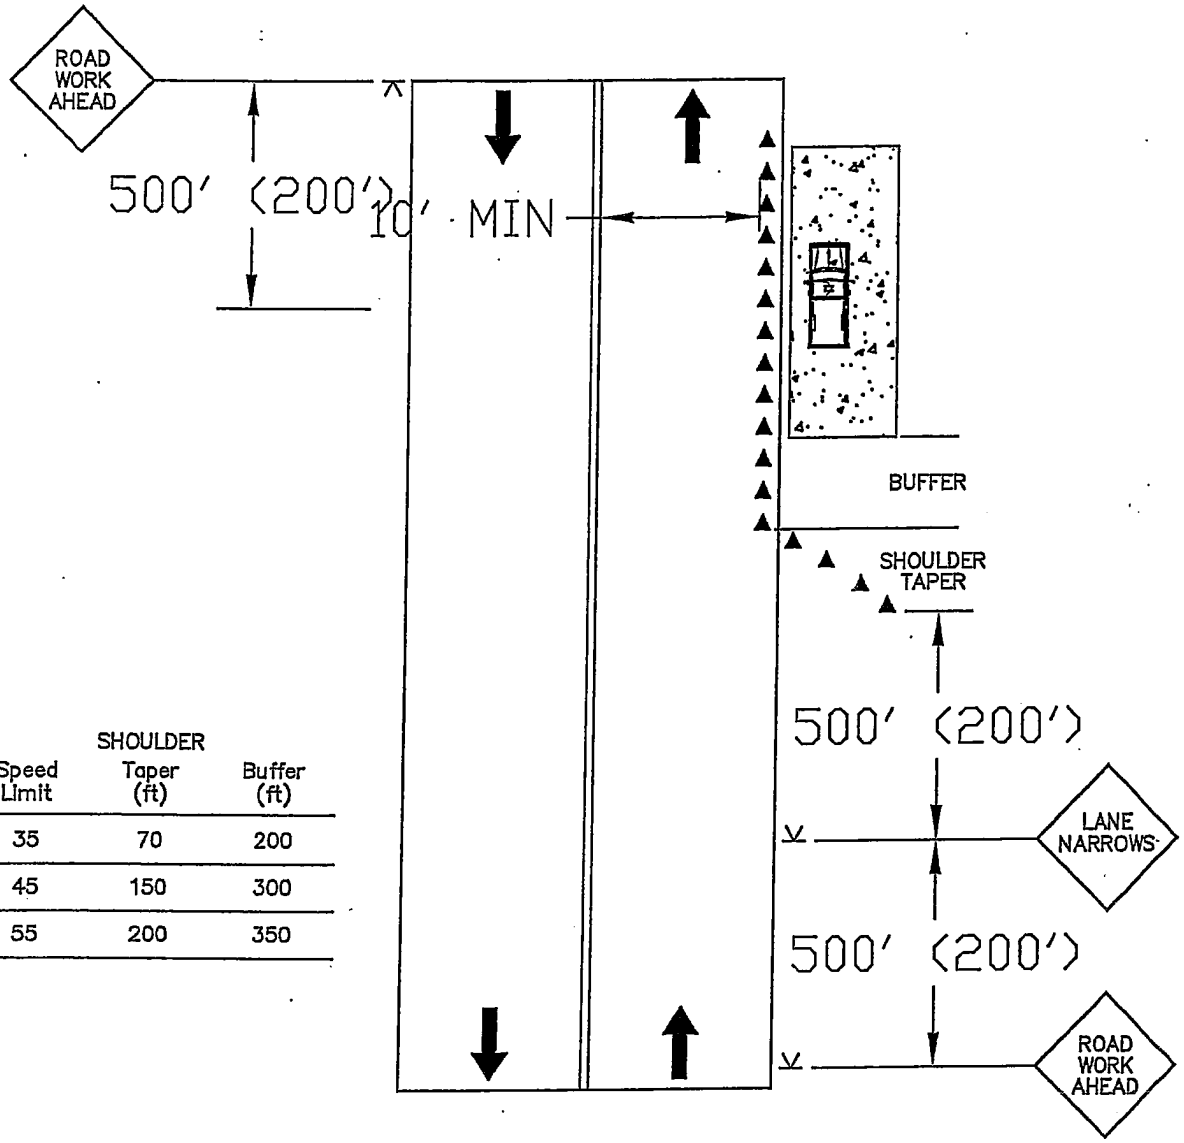
SHOULDER WORK WITH MINOR ENCROACHMENT

(WITHIN 2' OF THE EDGE OF PAVEMENT)



Speed Limit	SHOULDER Taper (ft)	Buffer (ft)
35	70	200
45	150	300
55	200	350

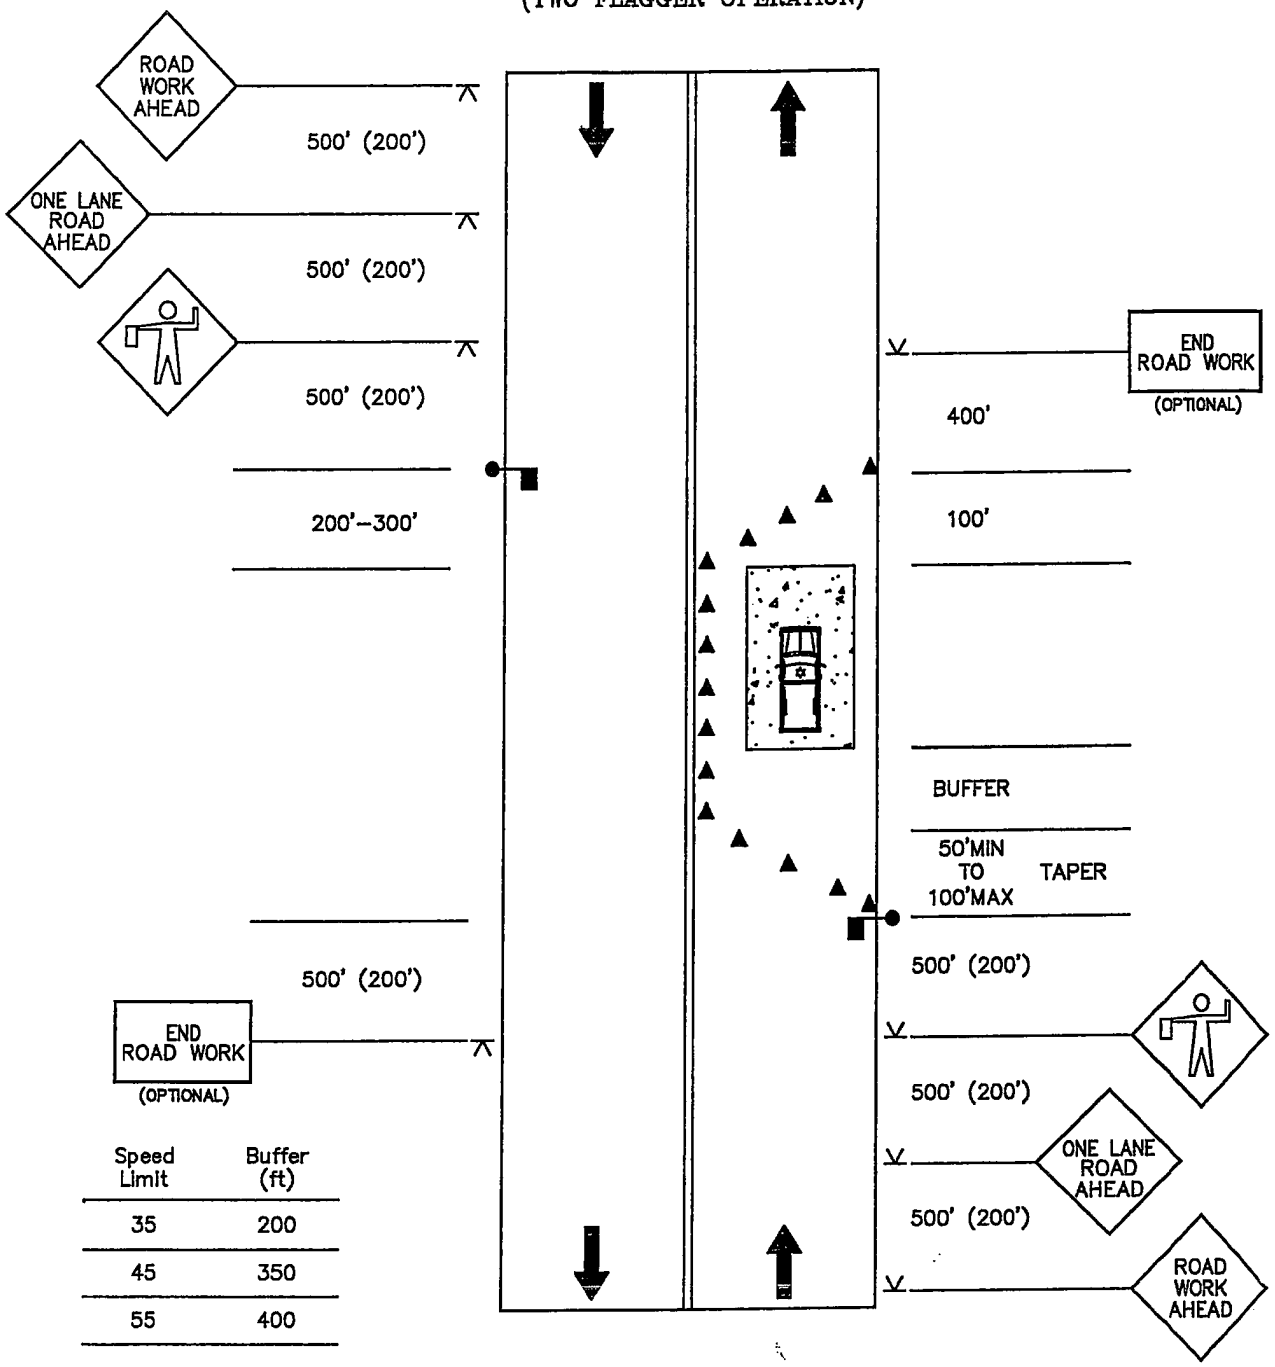
NOTES

1. For traffic conditions with speeds greater that 35 MPH, a lane closure should be considered (see pages 17 and 18).
2. The lane encroachment should either permit a remaining lane width of 10', or the lane should be closed. However, 9-foot width is acceptable for use in low volume, low speed roadways, provided the traffic does not include long and/or wide heavy commercial vehicles.
3. For two-lane, low speed (35 MPH or less) urban streets, a 200-foot sign spacing may be used.
4. The "LANE NARROWS" sign may be deleted on low-volume, low-speed roads.
5. Another acceptable advance warning sign is "UTILITY WORK AHEAD".

	TRAFFIC CONTROL	DATE : SCALE : JOB NO.:

LANE CLOSURE ON A TWO-LANE ROAD

(TWO FLAGGER OPERATION)



Speed Limit	Buffer (ft)
35	200
45	350
55	400

NOTES

1. For two-lane, low speed (35 MPH or less) urban streets, a 200-foot sign spacing may be used.
2. Generally, the use of the "END ROAD WORK" signs is optional for short duration work sites. However, if the work site, itself, is long, or the beginning and end of the work site are not visible to a driver passing through it, the "END ROAD WORK" sign should be used.

NOV 16 2012

Re: Water Supply Well Replacement
Smith's Grocery, 3176 Charlotte Hwy , York, SC
UST Permit #09322; CA#44869
Release reported June 30, 1993
Price Quotes received November 2, 2012
York County

Dear Ms. Smith:

The Underground Storage Tank (UST) Management Division of the South Carolina Department of Health and Environmental Control (SCDHEC) has reviewed the price quotes submitted by Midlands Environmental Consultants, Inc. to replace two water supply wells. Cost agreement number 44869 has been approved for the amount shown on the enclosed cost agreement form.

The report, contractor checklist, and invoice should be submitted to the Division within ninety (90) days of the date of this correspondence. Midlands Environmental Consultants, Inc. can submit an invoice for direct payment from State Underground Petroleum Environmental Response Bank (SUPERB) Account for preapproved costs. By law, the SUPERB Account cannot compensate any costs that are not pre-approved. Please note that applicable South Carolina certification requirements regarding laboratory services, well installation, and report preparation must be satisfied. If the invoice is not submitted within 120 days from the date of this letter, monies allocated to pay this invoice will be uncommitted. This means that the invoice will not be processed for payment until all other committed funds are paid or monies become available.

The Agency grants pre-approval for transportation of virgin petroleum impacted soil and groundwater from the referenced site to a permitted treatment facility. There can be no spillage or leakage in transport. All investigation-derived waste (IDW) must be properly contained and labeled prior to disposal. IDW should not be stored on-site longer than ninety (90) days. A copy of the disposal manifest and/or acceptance letter from the receiving facility that clearly designates the quantity received must be included as an appendix to the report. If the CoC concentrations based on laboratory analysis is below Risk Based Screening Levels (RBSLs), please contact the project manager for approval to dispose of soil and/or groundwater on site.

On all correspondence regarding this site, please reference UST Permit #09322. Should you have any questions regarding this correspondence, please feel free to contact me at (803) 896-6397, fax me at (803) 896-6245, or e-mail me at thomadl@dhec.sc.gov.

Sincerely,

Debra L. Thoma

Dear Ms. Thoma,

On behalf of Ms. Louis Smith, Midlands Environmental Consultants, Inc. (MECI) is pleased to submit this letter report outlining the replacement and abandonment of two water supply wells at the referenced site. This report describes the activities conducted at the site in general accordance with South Carolina Department of Health and Environmental Control guidelines.

Midlands Environmental appreciates the opportunity to offer our professional environmental services to you on this project. Please feel free to contact us at 803-808-2043 if you have any immediate questions or comments.

Sincerely,
Midlands Environmental Consultants, Inc.

PROJECT INFORMATION

The subject site (Smith's Grocery) is located near the intersection of S.C. Highway 49 and Southern Pines Road, York, York County, South Carolina (see Figure 1). The site consists of an approximately 2.00 acre parcel of land (see Figure 2), and currently occupied by a convenience store. The site formerly maintained one 6,000 gallon gasoline UST and one 8,000 gallon gasoline UST. The South Carolina Department of Health and Environmental Control (SCDHEC) reported release of petroleum product from two single walled underground storage tanks (UST) at the subject site in June of 1993, which was confirmed in September of 1996.

Further assessment activities in 2012 including; adding second GAC units to water wells WSW-2 and WSW-3, down hole camera events on WSW-2 and WSW-24, and open rock field screening activities took place. From these assessment activities it was determined by SCDHEC and MECI personnel that the water supply wells for the Hill and Wiggam residence needed to be replaced and the old water supply wells abandoned.

The above project information is based on MECI field notes and SCDHEC files

FIELD EXPLORATION

Field exploration conducted at the site included:

- construction of two water supply wells; and,
- abandonment of two water supply wells.

The water supply well locations were selected based on SCDHEC and MECI project manager instructions, existing site conditions, and drilling accessibility.

WATER SUPPLY WELL INSTALLATION

From January 28 through January 31, 2012, two water supply wells were installed on the Hill and Wiggam properties. These wells were installed by Mullis Well Drilling of Monroe, NC (N.C. Driller Certification: Chad Mullis # C01678) using a Truck-mounted drilling rig employing 12.0-inch outer diameter air hammer to construct the borehole. The following table presents the new water supply well installation details:

Well Number	Total Depth (ft)	Steel Casing Depth (ft)	PVC Casing Depth (ft)	Pump Depth (ft)
WSW-Hill	345.0	177.0	220.0	320.0
WSW-Wiggam	885.0	148.0	220.0	800.0

Following completion of the water supply wells, the wells were developed on February 2, 2013 by pump test until a satisfied capacity was met. During the pump test WSW-Hill produced a 17.0 gallon per minute (GPM) capacity. WSW-Wiggam produced a 15.0 GPM capacity. Please find the attached SCDHEC 1903 Water Well Drilling Records.

Drill cuttings were containerized and transported to York County Landfill, York, SC by MECI personnel.

MONITORING WELL ABANDONMENT

As requested by SCDHEC, water supply well WSW-2 and WSW-3 were abandoned on February 1, 2013 at the subject site according to South Carolina Well Standards and Regulations R.61-71.H. The water supply well abandonment was conducted under the direction of Mr. Tommy Bolyard (SC Driller's License # B 01846) of EDPS of Rock Hill, SC. The following matrix presents the well identification numbers, surface coverings, well diameter, and total well depth:

Well Number	Surface Covering	Well Diameter (Inches)	Total Depth (Feet)
WSW-2 (Wiggam)	Grass	6"	**200.0**
WSW-3 (Hill)	Grass	6"	**200.0**
Total Footage of Abandoned Water Wells			**400.0**

The monitoring well was abandoned with portland bentonite slurry utilizing tremie pipe. A total of 400.0 feet of water supply wells were abandoned by the methods described above. Please find the attached SCDHEC 1903 Water Well Abandonment Records.

QUALIFICATIONS OF REPORT

The activities and evaluative approaches used in this assessment are consistent with those normally employed in hydrogeological assessment and waste management projects of this type. Our evaluation of site conditions has been based on our understanding of the site, project information provided to us, and data obtained in our exploration. The general subsurface conditions utilized in our evaluation have been based on interpretation of subsurface data between borings. Contents of this report are intended for the sole use of SCDHEC under mutually agreed upon terms and conditions. If other parties wish to rely on this report please contact MECI prior to their use of this information so that a mutual understanding and agreement of the terms and conditions of our services can be established.

Re: **Notice to Proceed-Groundwater Sampling/QAPP Contractor Addendum Approval**
Groundwater Sampling Contract
Solicitation # IFB-5400002759, PO#4600088529
Smith's Grocery, 3176 Charlotte Hwy., York
UST Permit #09322
York County

Dear Mr. Shane:

In accordance with bid solicitation # IFB-5400002759 and the UST Management Division Quality Assurance Program Plan (QAPP), the Site-Specific Contractor Addendum has been reviewed and approved. In accordance with the QAPP, a status report of the project should be provided on a weekly basis via e-mail. If any quality assurance problems arise, you must contact me within 24 hours via phone or e-mail. In addition, a discussion of the problem(s) encountered, including quality assurance problems, the actions taken, and the results must be included in the final report submitted to the UST Management Division.

MECI will perform services at the site on behalf of the site's responsible party (RP); however, payment will be made from the SUPERB Account. The site's RP has no obligation for payment for this scope of work. Please coordinate access to the facility with the property owner. The Department grants pre-approval for transportation of virgin petroleum impacted soil and groundwater from the referenced site to a permitted treatment facility. There can be no spillage or leakage in transport. All investigation-derived waste (IDW) must be properly contained and labeled prior to disposal. A copy of the disposal manifest and/or cceptance letter from the receiving facility that clearly designates the quantity received must be included with the final report. The SUPERB Account will not reimburse for transportation or treatment of soil and/or groundwater with concentrations below RBSLs. **Please note, the final report is due within 3 weeks from the date the site is sampled. If the site is not sampled by the specified due date or the report is not received in the specified time period, a late fee may be imposed.**

The final report should contain the requirements of Section III.2.15 of the bid solicitation. The final report should be submitted to my attention. If you have any questions, please contact me at (803) 896-6397 or via e-mail at thomadl@dhec.sc.gov.

Sincerely,

Debra L. Thoma

Dear Ms. Thoma,

Midlands Environmental Consultants Inc. (MECI) is pleased to submit the attached QAPP Contractor Addendum for the referenced site.

On April 05, 2013, MECI personnel performed a site visit to the subject site to evaluate site conditions, locate monitoring wells and identify potential problems for future sampling activities.

If you have any question or comments please feel free to contact us at 803-808-2043.

Sincerely,
Midlands Environmental Consultants, Inc.

Table 2A Addendum Role Identification and Contact Information

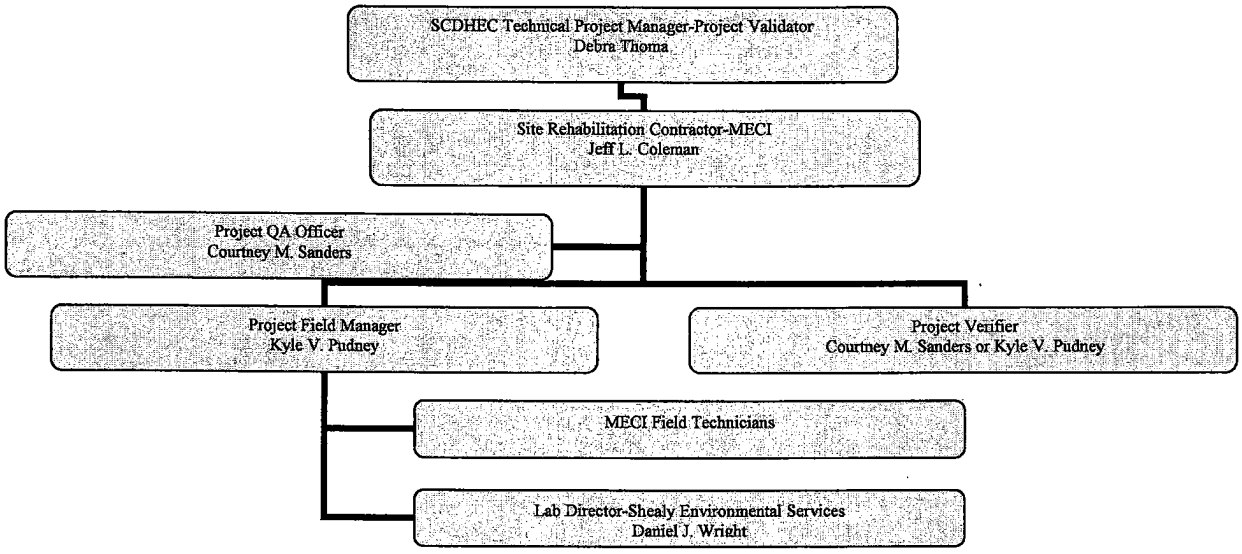

Figure 1A Organizational Chart

Project Manager (Debra Thoma) – The project manager is responsible for direct oversight of contractors conducting assessment and site rehabilitation of releases at UST sites.

Site Rehabilitation Contractor (Jeff L. Coleman) – The Site Rehabilitation Contractor is an independent contractor responsible for managing and coordinating field and office activities needed for assessments or cleanup.

-Final Review of all work produced for a scope of work.
-Final say on technical interpretation of data.

Quality Assurance Officer (Courtney M. Sanders) – The Quality Assurance Officer is responsible for the oversight of all quality assurance activities associated with projects performed by the Site Rehabilitation Contractor.

-In charge of producing and maintaining the QAPPA for MECI.
-Reviews (and Audits, if necessary) all work produced in conjunction with a scope of work.
-Quality control of data entry and report preparation.

Field Manager (Kyle Pudney) –The field manager will oversee all work done on any given project.

-Assign, direct and oversee all field personnel working on each project.
-Responsible for coordinating with the SCDHEC project manager, should any problems or clarifications arise.
-Responsible for all reporting done in conjunction with field work.

Analytical Laboratory Director (Daniel J. Wright) – The Laboratory Director is directly responsible for the Analytical Laboratory used during a scope of work. The Analytical Laboratory receives the soil and water samples from the site rehabilitation contractor, performs the requested analyses, and provides analytical reports.

Project Verifier (Courtney M. Sanders) – The project verifier is responsible for verifying the quality of data produced during a scope of work. This includes review of field work and laboratory reports for potential quality issues.

Field Technicians (various employees) – Responsible for all field activities for a given scope of work.

-Conduct all initial site visit, and record findings
-Conduct all field activities associated with a scope of work. All work will be conducted according to the MECI SOP. Will be responsible for reporting any potential problems are inconsistencies found during assessment activities.
-Completes the chain of custody upon completion of sampling event and delivers samples to lab or office for later lab pick-up.

A5 Problem Definition/Background

Discuss the background (as much as is known) of the site and appropriate historical information, and why this site is being assessed.

The subject site (Smith's Grocery) is located at 3176 Charlotte Highway, York, York County, South Carolina. The subject site previously maintained one 6,000 gallon gasoline underground storage tank (UST) and one 8,000 gallon gasoline UST. These UST's were abandoned by removal from ground in March of 1996. The South Carolina Department of Health and Environmental Control (SCDHEC) reported a release of petroleum product from these UST's in June of 1993 and confirmed the release in September of 1996. The subject site is currently rated a Class 1D.

The site is being sampled in conjunction with the SCDHEC Groundwater Sampling Contract (Solicitation # IFB-5400002759, PO# 4600088529).

Please answer the following: Does this project fall under UST or Brownfields area?

Underground Storage Tank Division

A6 Project/Task Description

1. ***Summarize what is known about the work to be done. This can be a short sentence indicating what the Scope of this project is (see Master QAPP Section A6).***

The subject site (Smith's Grocery) will be sampled in conjunction with the SCDHEC Groundwater Sampling Contract (Solicitation # IFB-5400002759, PO# 4600088529). During assessment activities monitoring wells will be sampled for petroleum constituents.

2. ***The work will begin within*** fourteen (14) days of receipt of approved QAPP contractors addendum ***after cost approval and sampling should be complete by*** twenty-one (21) days of receipt of approved QAPP contractors addendum.

3. ***Are there are time or resource constraints? Include those factors that may interfere with the tentative schedule.***

Factors that may prevent schedule work will be, but not limited to, inclement weather, equipment malfunction, and machine failure.

A7 Data Quality Objectives (DQOs) and Data Quality Indicators (DQIs)

The subject site is located at 3176 Charlotte Highway, York, York County, South Carolina. The site is currently occupied by an abandoned store front.

A8 Training and Certificates

Required training and licenses:

Title/Job	Name	Training Required	Date training received	Type of License	License Number
Principal Geologist	Bryan T. Shane, P.G.	Professional Geologist	10/30/1993	State of South Carolina	1102
Senior Scientist	Jeff Coleman	OSHA 40 hr HAZWOPER	7/27/2007	N/A	N/A
		OSHA 8 hr HAZWOPER refresher	12/10/2012	N/A	N/A
Staff Geologist	John Bryant	OSHA 40 hr HAZWOPER	4/17/2009	N/A	N/A
		OSHA 8 hr HAZWOPER refresher	12/102012	N/A	N/A
Staff Biologist	Courtney Sanders	OSHA 40 hr HAZWOPER	12/10/2010	N/A	N/A

Title/Job	Name	Training Required	Date training received	Type of License	License Number
		OSHA 8 hr HAZWOPER refresher	12/10/2012	N/A	N/A
Staff Biologist	Kyle Pudney	OSHA 40 hr HAZWOPER	12/10/2010	N/A	N/A
		OSHA 8 hr HAZWOPER refresher	12/10/2012	N/A	N/A
Staff Biologist	Chris Lashley	OSHA 40 hr HAZWOPER	12/10/2010	N/A	N/A
		OSHA 8 hr HAZWOPER refresher	12/10/2012	N/A	N/A
Staff Biologist	Gavin Globensky	OSHA 40 hr HAZWOPER	7/29/2011	N/A	N/A
		OSHA 8 hr HAZWOPER refresher	12/10/2012	N/A	N/A
Staff Biologist	Ryan Ariail	OSHA 40 hr HAZWOPER	9/23/2011	N/A	N/A
		OSHA 8 hr HAZWOPER refresher	12/10/2012	N/A	N/A
Staff Geologist	Patrick Boylan	OSHA 40 hr HAZWOPER	07/20/2012	N/A	N/A
Lab Manager	Daniel J. Wright	***	***	Lab Certification	SC 32010

Table 3A Required Training and Licenses

Courtney M. Sanders of Midlands Environmental Consultants, Inc. is responsible to ensuring that personnel participating in this project receive the proper training. All training records will be stored in the following location:235-B Dooley Road, Lexington, SC 29073.

It is understood that training records will be produced if requested by SC DHEC.

The Following Laboratory(ies) will be used for this Project:

Commercial Lab(s)

Full Name of the Laboratory___Shealy Environmental Services, Inc.____
Name of Lab Director_____Daniel J. Wright_____
SC DHEC Certification Number_____32010_____
Parameters this Lab will analyze for this project:

All samples will be analyzed for BTEX, Naphthalene, MTBE, 1,2 DCA, 8-Oxygenates (EPA Method 8260-B), and EDB (EPA Method 8011).

Please note: SC DHEC may require that the contractor submit some or all of the Laboratory's SOPs as part of this QAPP.

A9 Documents and Records

Personnel will receive the most current version of the QAPP Addendum via: (Check all that apply)

____US Mail ____Courier __X__ Hand delivered

Other (please specify):____E-mailed electronic copies___

Record	Produced By	Hardcopy/ Electronic	Storage Location For how long?	Archival
Instrument Raw Data	Target, Thermospec, or Iteva software	Hardcopy and Electronic	Hardcopy: Offsite storage for 7 yrs Electronic: Two external storage device backups – one offsite, one onsite storage for 10 yrs	Yes
Final Reports	LIMS	Electronic	Electronic: Two external storage device backups – one offsite, one onsite storage for 10 years	Yes
Field Work	Field Staff	Hardcopy	MECI office: 235/B Dooley Road / Min. 5 years	Yes
Chain of Custody	Field Staff	Hardcopy	MECI office: 235B Dooley Road / Min. 5 years	Yes
QAPP Addendum	Courtney Sanders	Hardcopy & Electronic	MECI office: 235B Dooley Road / Min. 5 years	Yes
Internal QC record	Courtney Sanders	Hardcopy	MECI office: 235B Dooley Road / Min. 5 years	Yes
Sampling Report	Courtney Sanders	Hardcopy & Electronic	MECI office: 235B Dooley Road / Min. 5 years	Yes

Table 4A Record Identification, Storage, and Disposal

Section B Measurement/Data Acquisition

B1 Sampling Process/Experimental Design

Item	Start Date	End Date	Comments
Site Reconnaissance	4/5/13	4/5/13	Already Completed
QAPP preparation	4/8/13	4/8/13	In progress
QAPP approval	4/9/13	4/30/13	Assuming three week turnaround
Monitoring well Sampling	5/1/13	5/15/13	Sampled within 2 weeks of QAPP approval
Report Preparation	5/16/13	6/6/13	Three weeks to prepare/submit report

Item	Start Date	End Date	Comments

Table 5A Sampling Activities

B2 Sampling Methods

Please note: The contractor must follow sampling protocols as given in the UST QAPP.

***Estimate* the number of samples of each matrix that are expected to be collected:**

Soil	_____
Ground Water from monitoring wells	_____
From Drinking/Irrigation water wells	_____1____
Field Duplicate Collection	_____1____
Field Blank Collection	_____1____
Trip Blank	_____1____
From surface water features	_____
Total number of Water samples	_____4____

Notes:
During the April 05, 2013 site visit, one (1) water supply well was located was located.

Please note this scope of work was approved verbally on April 04, 2013 and the work was conducted on April 05, 2013.

All water supply well samples will be analyzed by BTEX, Naphthalene, MTBE, 1,2 DCA, 8-Oxygenates (EPA Method 8260-B), and EDB (EPA Method 8011).

For the sample matrices indicated above, please describe how samples will be collected and the equipment needed.

Please see MECI Monitoring Well Sampling SOP for sampling procedures and type of materials used for sampling.

Will Sampling Equipment have to be cleaned and decontaminated or is everything disposable?

All equipment, excluding electronic water level indicators, field probes and turbidity tubes, is disposable.

If sampling equipment must be cleaned please give a detailed description of how this is done and the disposal of by-products from the cleaning and decontamination.

Please see MECI Monitoring Well Sampling SOP for decontamination procedures.

Identify any equipment and support facilities needed. This may include such things as Fed-ex to ship the samples, a Geoprobe, field analysis done by another contractor (who must be certified), and electricity to run sampling equipment.

All samples will be shipped to the lab via courier or overnight shipping company. Please see MECI Monitoring Well Sampling SOP for sample shipping procedures.

Address the actions to be taken when problems occur in the field, and the person responsible for taking corrective action and how the corrective action will be documented.

Failure	Response	Documentation	Individual Responsible
Water level indicator not working properly	Attempt to clean probe, change battery, use back-up indicator if need be.	Record on field sheets, notify office staff. Take indicator out of rotation until problem identified and corrected.	Field Staff, Field Manager
Field meters not working	Attempt to clean probes, recalibrate in the field.	Record on field sheets, notify office staff. Take meters out of rotation until problem identified and corrected.	Field Staff, Field Manager
Wells not located	Use metal detector, measure from known points, contact project manager for additional information.	Record method used to attempt to locate the well on field sheets, and possibly reasoning for the well to be missing	Field Staff

Table 6A Field Corrective Action

B3 Sample Handling and Custody

1. ***How will the samples get from the Site to the Lab to ensure holding requirements are met?***

Following sample collection, the samples are immediately place in a laboratory provided cooler, pre-filled with wet ice obtained from the MECI office. Samples are transported to the MECI office once a sampling event is complete. A Chain of Custody (CoC) is filled out following the sampling event by the field staff. See attached CoC. If a lab provided courier is scheduled to visit the MECI offices the day following a sampling event, sampling coolers are repacked with wet ice, and left at the office for pick-up the following morning. If no courier is schedule to visit the MECI office the day following a sampling event, all sampling coolers are repacked with ice and are dropped off at a lab approved shipping company for overnight delivery to the lab.

2. ***How will the contactors cool the samples and keep the samples cool?***

All samples are kept on wet ice, obtained from MECI office.

3. ***How will the lab determine the temperature of the samples upon receipt? Will they be using a temperature blank?***

A calibrated thermometer and temperature blank will be used to document sample temperature. The temperature blank is immediately checked by the sample receiving technician upon arrival at the laboratory.

4. ***Where will the samples be stored in the Lab once they are received?***

All samples are stored in clean refrigeration units monitored and maintained at 4 degrees C + or – 2 degrees. Volatile organic samples are stored separately form all other samples.

5. ***Describe the chain of custody procedure and attach a copy of each chain of custody that will be used. If a Chain of Custody SOP exists from the Lab and the Contractor is willing to adhere to it, then this may be attached.***

A chain of custody (COC) will be filled out for each sampling event at each project site. COC to be signed by MECI and Shealy Environmental technician at time physical transfer of samples occurs to courier. Shealy uses the following COC procedures to protect sample integrity following pickup by their courier: A full time Sample Receiving Technician receives all samples and completes a Sample Receipt Checklist (SRC), which will identify any anomalies, if any exist the Sample Receiving Technician or Project Manager must resolve the deviation internally and/or notify the client to resolve the anomaly

B4 Analytical Methods

1. ***Identify the SOPs which will be used to analyze the samples, the method which the SOP references and the equipment or instrumentation that is needed:***

Parameter	SOP ID*	Method Referenced	Equipment	Comments
BTEX+Naph+MTBE+Oxygentaes	S-VO-002	8260B	GC/MS	
PAH's	S-SV-021	8270D	GC/MS	
EDB	S-SV-012	8011	GC	
Lead,T.	S-IM-022	6010C	ICP	
Ferrous Iron	S-IN-009	SM 3500-FED	Spectrophotometer	
Nitrate	S-IN-042	353.2	Auto-analyzer/Lachate	
Sulfate	S-IN-010	300.0	Ion Chromatograph	
Methane	S-VO-004	RSK-175	GC	
TOC	S-IN-030	Walkley-Black	N/A

Table 9A Corrective Action Procedures

3. Identify sample disposal procedures.

Analysis	Matrix	Schedule for disposal	Method for disposal	Comments
BTEX+Naph+MTBE+Oxygenates	Waters/Soils	Six Weeks	Tested for Hazardous Constituents and disposed as Hazardous or non-Hazardous waste.	
PAH's	Waters/Soils	Six Weeks	Tested for Hazardous Constituents and disposed as Hazardous or non-Hazardous waste.	
EDB	Waters/Soils	Six Weeks	Tested for Hazardous Constituents and disposed as Hazardous or non-Hazardous waste.	
Lead	Waters/Soils	Six Weeks	Tested for Hazardous Constituents and disposed as Hazardous or non-Hazardous	

			waste.	
Ferrous Iron	Waters/Soils	Six Weeks	Tested for Hazardous Constituents and disposed as Hazardous or non-Hazardous waste.	
Nitrate,Sulfate	Waters/Soils	Six Weeks	Tested for Hazardous Constituents and disposed as Hazardous or non-Hazardous waste.	
Methane	Waters/Soils	Six Weeks	Tested for Hazardous Constituents and disposed as Hazardous or non-Hazardous waste.	
All	Water	On-Site	Portable Granulated Activated Carbon (GAC) Unit	All waste water produced from sampling and decontamination activities will be run through a GAC unit

Table 10A Sample Disposal Procedures

4. Provide SOPs for the Kerr Method or the Ferrous Iron Method if these are parameters for this study. This can be attached or written here. If attached please note that it is an attachment and where it is located (if applicable).

B5 Quality Control Requirements:

All QC will follow the requirements laid out in Section B5 of the UST Programmatic QAPP.

B6 Field Instrument and Equipment Testing, Inspection and Maintenance

1. Identify all field and laboratory equipment needing periodic maintenance, the schedule for this, and the person responsible. Note the availability and location of spare parts.

Instrument	Serial Number	Type of Maintenance	Frequency	Parts needed/Location	Person responsible
Volatiles Mass Spec	Shealy SOP S-SV-021 Page 7	Change traps, clean ion source, replace filaments	Periodic	Laboratory	MSV Analyst

Semivolatile Mass Specc	Shealy SOP S-SV-021 Page 7	Injection port maintenance, ion source maintenance, column replacement	Periodic	Laboratory	MSSV Analyst
ECD GC	Shealy SOP S-SV-012 Page 5	Injection port maintenance, column replacement	Periodic	Laboratory	GC Analyst
Dionex IC	Shealy SOP S-IN-010 Page 6	Replace auto sampler filter, tubing, line filter, sample Line and Waste Line, as needed. Check Reagent levels, flow rate, waste line.	Periodic	Laboratory	IC Analyst
ICP	Shealy SOP S-IM-005 Page 6 & 7	Clean Sample introduction system , auto sampler, torch, Change spray chamber, torch tubing, tubing	Periodic	Laboratory	ICP Analyst
Leeman Mercury Analyzer	Shealy SOP S-IM-006 Page 5	Clean GLS, Change Pump tubing, Nafion Dryer, Lamp	Periodic	Laboratory	Mercury Analyst
Flow Injection Analysis – Lachat 8000	Shealy SOP S-IN-042 Page 5	Replace sample and reagent lines, replace light source, re-wrap heating coil, replace column	Periodic/As Needed	Laboratory	Nitrate Analyst
YSI 63	09C 101302, 10K 101895, 07M 100905	Replace probe tip	Yearly	Order from YSI	C. Sanders
YSI 63	09C 101302, 10K 101895, 07M 100905	Replace batteries	As Needed	In stock at office	Field Staff
YSI 63	09C 101302, 10K 101895, 07M 100905	General inspection for wear and tear on equipment	Daily	Major fixes will be done out of office	Field Staff
YSI 63	09C 101302, 10K 101895, 07M 100905	Check buffer solutions for expiration	Weekly	In stock at office	C. Sanders
YSI 550A	04L 2026AK, 08B 101407, 04A 0912AI	Replace membrane	4 to 8 weeks	In stock at office	Field Staff
YSI 550A	04L 2026AK, 08B 101407, 04A 0912AI	Replace batteries	As Needed	In stock at office	Field Staff
YSI 550A	04L 2026AK, 08B 101407, 04A 0912AI	General inspection for wear and tear on equipment	Daily	Major fixes will be done out of office	Field Staff
Turbidity Tube	#1, #2, #3	General inspection for wear and tear on equipment, clarity of	Daily	Tubes will be cleaned/fixed in office	Field Staff

		Secchi Disk			

Table 11A Instrument and Equipment Maintenance

2. Identify the testing criteria for each lab or field instrument that is used to ensure the equipment is performing properly. Indicate how deficiencies, if found, will be resolved, re-inspections performed, and effectiveness of corrective action determined and documented. Give the person responsible for this

Instrument/Equipment & Serial Number	Type of Inspection	Requirement	Individual Responsible	Resolution of Deficiencies
Volatiles Mass Spec Shealy SOP S-SV-021 Page 7	Daily calibration check	Method Requirements	MSV Analyst	Recalibration or instrument maintenance
Semi-volatiles Mass Spec Shealy SOP S-SV-021 Page 7	Daily calibration check	Method Requirements	MSSV Analyst	Recalibration or instrument maintenance
ECD GC Shealy SOP S-SV-012 Page 5	Daily calibration check	Method Requirements	GC Analyst	Recalibration or instrument maintenance
Dionex IC Shealy SOP S-IN-010 Page 6	Daily calibration check	Method Requirements	IC Analyst	Recalibration or instrument maintenance
ICP Shealy SOP S-IM-005 Page 6 & 7	Daily calibration check	Method Requirements	ICP Analyst	Recalibration or instrument maintenance
Leeman Mercury Analyzer Shealy SOP S-IM-006 Page 5	Daily calibration check	Method Requirements	Mercury Analyst	Recalibration or instrument maintenance
Flow Injection Analysis – Lachat 8000 Shealy SOP S-IN-042 Page 5	Daily and continuing calibration check	See calibration criteria	Nitrate Analyst	Recalibration or instrument maintenance
YSI 63 - 09C 101302, 10K 101895, 07M 100905	Daily calibration check	See calibration criteria	Field Staff	Recalibrate, general maintenance then recalibrate. Ship off for service by manufacturer
YSI 550A - 04L 2026AK, 08B 101407, 04A 0912AI	Daily calibration check	See calibration criteria	Field Staff	Recalibrate, general maintenance then recalibrate. Ship off for service by manufacturer

Table 12A Instrument and Equipment Inspection

B7 Instrument Calibration and Frequency

1. Identify equipment, tools, and instruments for field or lab work that should be calibrated and the frequency.
2. Describe how the calibrations should be performed and documented, indicating test criteria and standards or certified equipment.
3. Identify how deficiencies should be resolved and documented. Identify the person responsible for corrective action.

Instrument	Calibration Procedure	Frequency of Calibration	Acceptance Criteria	Corrective Action (CA)	Person Responsible for CA	SOP Reference*
Volatiles Mass Spec	Minimum of 5 calibration standards for all compounds	When indicated by continuous calibration verification standard	Method Criteria	Detailed in SOP	MSV Analyst	S-VO-002
Semi-volatile Mass Spec	Minimum of 5 calibration standards for all compounds	When indicated by calibration verification standard	Method Criteria	Detailed in SOP	MSSV Analyst	S-SV-021

*** This can be a full name of a SOP, an abbreviation, or a number. In the latter two cases, the abbreviation or number must be associated with the full name of the SOP. See also Table 8A SOP Abbreviation Key.**

B8 Inspection/Acceptance Requirements for Supplies and Consumables

1. Identify critical supplies and consumables for field and laboratory, noting supply source, acceptance criteria, and procedures for tracking, storing and retrieving these materials.
2. Identify the individual(s) responsible for this.

Item	Vendor	Acceptance criteria	Handling/Storage Conditions	Person responsible for inspection and tracking.
Laboratory Chemicals	Fisher,VWR	Certificates of analysis and laboratory testing	Laboratory storage	Receiving and laboratory personnel
Laboratory standards	O2Si, Restek, High Purity, VHG, Supelco	Certificates of analysis and laboratory verifications	Vendor specific storage conditions	Laboratory Analysts
Sample Containers	Daniels Scientific, QEC	Certificates of analysis and laboratory testing	Bottle storage area	Sample receiving personnel
Clear, Disposable polyethylene Bailers	Preferred Pump	Individual sleeves intact, ball valve operational	Stored in Vehicle Bay, Off of the ground	C. Sanders, Field Staff
Nylon Rope	Preferred Pump	Covered with plastic	Stored in Vehicle Bay, Off of the ground	C. Sanders, Field Staff
Nitrile Gloves	Preferred Pump	Unopened box, no holes	Stored in Vehicle Bay, Off of the ground	C. Sanders, Field Staff
40 mL HCL preserved amber vials	Shealy Environmental Services	Custody seal intact	Stored in Vehicle Bay, Off of the ground	C. Sanders, Field Staff
250 mL HNO3 preserved metals vials	Shealy Environmental Services	Custody seal intact	Stored in Vehicle Bay, Off of the ground	C. Sanders, Field Staff
Coolers	Shealy Environmental Services	Intact	Stored in Vehicle Bay, Off of the ground	C. Sanders, Field Staff
pH Buffer	TRS Environmental, Enviroequipment	Within expiration date	Stored in calibration room	C. Sanders, Field Staff

Conductivity Standard	TRS Environmental, Enviroequipment	Within expiration date	Stored in calibration room	C. Sanders, Field Staff
DO Membranes	YSI, Enviroequipment	Clean, in box	Stored in calibration room	C. Sanders, Field Staff
Batteries	Any Store	Not previously used	Stored in calibration room	C. Sanders, Field Staff

Table 14A List of Consumables and Acceptance Criteria

B9 Data Acquisition Requirements (Non-Direct Measurements)

1. Identify data sources, for example, computer databases or literature files, or models that should be accessed or used.
2. Describe the intended use of this information and the rationale for their selection, i.e., its relevance to project.
3. Indicate the acceptance criteria for these data sources and/or models.

Data Source	Used for	Justification for use in this project	Comments
Historical Data	Site Maps and Well Construction Information	Well Location and Detail	

Table 15A Non-Direct Measurements

4. Identify key resources/support facilities needed.

There are no non-direct measurements in this project

B10 Data Management

1. Describe the data management scheme from field to final use and storage.

Following sample collection and chain of custody production, samples are shipped to the lab. Field work from the field staff is reviewed by the MECI project manager, and converted into digital form. All data entry is subsequently checked to validate the data entry. The original copies of the field work are stored in MECI files for a minimum of 5 years. Digital copies of the work are stored on the MECI server, which is backed up weekly, and stored for a minimum of 5 years. The digital copy of the field work is presented to SCDHEC with the final report.

2. How does the lab and field staff ensure that no unauthorized changes are made to the chain of custody, sampling notebooks, laboratory notebooks and computer records?

The laboratory maintains comprehensive Quality Control and Training Programs. All sample receipt data, sample log-in, and analytical data is peer reviewed, including review for inappropriate changes. Data management, review procedures and the Quality Systems Program are documented in the laboratory's Quality Manual and Standard Operating Procedures. The Quality Assurance Department oversees adherence to and review of these programs.

All MECI field work is produced using ink-pens. Any attempt to alter field data, after sampling is complete, can be readily identified. MECI keeps a carbon copy of the chain of custody after it is shipped to the lab. This copy is kept with the field work. If any change to the CoC are suspected, this original carbon copy can be use to identify potential changes.

3. How does the lab ensure that there are no errors in samples records including times when sample information is compiled, data calculated and/or transmitted?

Sample data acquisition software is reviewed periodically. The LIMS database is backed up daily and is able to be restored in the event of a system failure. These procedures are documented in laboratory SOP S-AD-003, LIMS. The IT Manager is responsible for these systems and procedures."

4. How will the data be archived once the report is produced? How can it be retrieved? (This applies to both electronic and hard copies).

Laboratory Hardcopy data stored off site is logged, maintained and archived by the Quality Assurance Department. Laboratory Electronic Data Reports are maintained through IT back up under the responsibility of the IT Systems Manager.

MECI keeps all field work and paper copies of reports in its in-house filing system. All paper copies are stored for a minimum of 5 years. Any file can be retrieved easily by going to the correct filing cabinet/box.

All electronic copies of reports generated are kept on the MECI server. This server is backed-up on a weekly basis. Any file stored on the MECI server can be retrieved instantly, by accessing the server. All electronic files are stored for a minimum of 5 years on the server.

Section C Assessment and Oversight

C1 Assessment and Response Actions

1. *The Contractor is supposed to observe field personnel daily during sampling activities to ensure samples are collected and handled properly and report problems to DHEC within 24 hours. . Please state who is responsible for doing this and what observations will be made. Will this person have the authority to stop work if severe problems are seen?*

Field audits can be conducted on any field personnel at any time. MECI field audits can be conducted by the Field Manger, who will be responsible for ensuring that field personnel adhere to the QAPP. If during a random field audit, severe problems are found, work will be stopped by the field manager and the QA officer contacted to determine corrective action. All problems must be corrected prior to any additional

work being performed. Should it be requested, an On-site Field Audit can be scheduled with the SCDHEC project manager. If severe problems are identified by the SCDHEC project manager, the project manager can stop the work until the problems are corrected.

2. *The SCDHEC UST QAPP states that the Lab will receive an Offsite Technical System Audit. For this project, what assessments will be done on the Commercial Lab(s) that are being used—other than their certification audit? When or how often are these done? Who will the results be given to and who has the ability to stop work if problems are severe?*

The laboratory participates in annual Proficiency Testing through an approved vendor, Wibby Environmental. If during a random audit, severe problems are found, work will be stopped by the according Wibby Environmental representative and the QA officer contacted to determine corrective action. Proficiency Testing results are provided to the Office of Environmental Laboratory Certification.

SCDHEC Site ID Number 09322, CA# 45754
MECI Project Number 13-4414
Certified Site Rehabilitation Contractor UCC-0009

Dear Ms. Thoma,

Midlands Environmental Consultants Inc. (MECI) is pleased to submit the attached Report of Groundwater Sampling for the referenced site. This report describes site activities conducted at the site in general accordance with South Carolina Department of Health and Environmental Control's (SCDHEC) Quality Assurance Program Plan for the Underground Storage Tank Management Division (QAPP).

PROJECT INFORMATION

The subject site (Smith's Grocery) is located at 3176 Charlotte Highway, York, York County, South Carolina. The subject site previously maintained one 6,000 gallon gasoline underground storage tank (UST) and one 8,000 gallon gasoline UST. These UST's were abandoned by removal from ground in March of 1996. The South Carolina Department of Health and Environmental Control (SCDHEC) reported a release of petroleum product from these UST's in June of 1993 and confirmed the release in September of 1996. The subject site is currently rated a Class 1D.

MONITORING WELL SAMPLING AND CHEMICAL ANALYSIS

On April 5, 2013, MECI personnel collected samples from one (1) water supply well at the subject site. MECI personnel utilized an electronic water level indicator for water level measurements and an oil/water interface probe for free phase petroleum product level measurements. Based on a request by SCDHEC personnel, not all monitoring wells were to be purged prior to sample collection. Sampling/purging was completed utilizing a prepackaged, clear, disposable polyethylene bailer and nylon rope. A new set of nitrile gloves were worn at each monitoring well, and at all time samples were handled. Field measurements of pH, conductivity, dissolved oxygen, and water temperature

Post Office Box 854, Lexington SC 29071 • 235-B Dooley Road, Lexington, SC 29073
Telephone: (803) 808-2043 • fax: (803) 808-2048

were obtained before well sampling process. MECI utilized YSI550A meter for DO (mg/L) and temperature readings (°C) and YSI63 meters for pH and conductivity (uS) readings. The attached Field Data Information Sheets presents the results of the field measurements obtained. The wells were sampled in accordance with SCDHEC's Quality Assurance Program Plan for the Underground Storage Tank Management Division (QAPP, Dated June 2011) and MECI's Standard Operating Procedures (MECI SOP, Dated August, 2011).

Groundwater samples obtained were sent to Shealy Environmental Services, Inc. of West Columbia, SC (SCDHEC Laboratory Certification #32010) for analysis.

The following sampling matrix contains well development and requested analyses for each well:

Monitoring Well	Purge	No Purge	Gauge Only	Not Located	BTEX, Naphthalene, MTBE (EPA Method 8260-B)	EDB (EPA Method 8011)	1,2 DCA (EPA Method 8260-B)	8 Oxygenates (EPA Method 8260-B)	Total Lead (EPA Method 6010)	Sulfate (EPA Method 375.2)	Nitrate (EPA Method 335.2)	Methane (RSK Method)	PAH's (EPA Method 8270)	Ferrous Iron (Field Test)
					Analyte Sampled									
WSW-1					X	X	X	X						
WSW-1 Dup.					X	X	X	X						
Field Blank					X	X	X	X						
Trip Blank					X		X	X						

Notes: BTEX = benzene, toluene, ethylbenzene, & total xylenes MTBE=methyl tertiary butyl ether 1,2 DCA = 1,2 dicloroethane PAH = polycyclic aromatic hydrocarbons

No purged water was produced during sampling activities.

Please feel free to contact us at 803-808-2043 if you have any immediate questions or comments.

Sincerely,
Midlands Environmental Consultants, Inc.

Jeff L. Coleman

Contractor Checklist

Item#	Item	Yes	No	N/A
1	Is Facility Name, Permit #, and address provided?	X		
2	Is UST Owner/Operator name, address, & phone number provided?			X
3	Is name, address, & phone number of current property owner provided?			X
4	Is the DHEC Certified UST Site Rehabilitation Contractor's Name, Address, telephone number, and certification number provided?	X		
5	Is the name, address, telephone number, and certification number of the well driller that installed borings/monitoring wells provided?			X
6	Is the name, address, telephone number, and certification number of the certified laboratory(ies) performing analytical analyses provided?	X		
7	Has the facility history been summarized?	X		
8	Has the regional geology and hydrogeology been described?			X
9	Are the receptor survey results provided as required?			X
10	Has current use of the site and adjacent land been described?			X
11	Has the site-specific geology and hydrogeology been described?			X
12	Has the primary soil type been described?			X
13	Have field screening results been described?			X
14	Has a description of the soil sample collection and preservation been detailed?			X
15	Has the field screening methodology and procedure been detailed?			X
16	Has the monitoring well installation and development dates been provided?			X
17	Has the method of well development been detailed?			X
18	Has justification been provided for the locations of the monitoring wells?			X
19	Have the monitoring wells been labeled in accordance with the UST QAPP guidelines?			X
20	Has the groundwater sampling methodology been detailed? (For detailed specifics, See MECI's SOP on file with SCDHEC)	X		
21	Have the groundwater sampling dates and groundwater measurements been provided? See attached Site Activity Summary Sheet	X		
22	Has the purging methodology been detailed? (For detailed specifics, See MECI's SOP on file with SCDHEC)	X		
23	Has the volume of water purged from each well been provided along with measurements to verify that purging is complete? See attached Field Data Information Sheets	X		
24	If free-product is present, has the thickness been provided? See attached Site Activity Summary Sheets	X		
25	Does the report include a brief discussion of the assessment done and the results?			X
26	Does the report include a brief discussion of the aquifer evaluation and results?			X
27	Does the report include a brief discussion of the fate & transport models used?			X

Item#	Item	Yes	No	N/A
28	Are the site-conceptual model tables included? (Tier 1 Risk Evaluation)			X
29	Have the exposure pathways been analyzed? (Tier 2 Risk Evaluation)			X
30	Have the SSTLs for each compound and pathway been calculated? (Tier 2 Risk Evaluation)			X
31	Have recommendations for further action been provided and explained?			X
32	Has the soil analytical data for the site been provided in tabular format? (Table 1)			X
33	Has the potentiometric data for the site been provided in tabular format? (Table 2)			X
34	Has the current and historical laboratory data been provided in tabular format?			X
35	Have the aquifer characteristics been provided and summarized on the appropriate form?			X
36	Have the Site conceptual model tables been included? (Tier 1 Risk Evaluation)			X
37	Has the topographic map been provided with all required elements? (Figure 1)		X	
38	Has the site base map been provided with all required elements? (Figure 2)	X		
39	Have the CoC site maps been provided? (Figure 3 & Figure 4)			X
40	Has the site potentiometric map been provided? (Figure 5)			X
41	Have the geologic cross-sections been provided? (Figure 6)			X
42	Have maps showing the predicted migration of the CoCs through time been provided? (Tier 2 Risk Evaluation)			X
43	Has the site survey been provided and include all necessary elements? (Appendix A)			X
44	Have the sampling logs, chain of custody forms, and the analytical data package been included with all required elements? (Appendix B)	X		
45	Is the laboratory performing the analyses properly certified?	X		
46	Has the tax map been included with all necessary elements? (Appendix C)			X
47	Have the soil boring/field screening logs been provided? (Appendix D)			X
48	Have the well completion logs and SCDHEC Form 1903 been provided? (Appendix E)			X
49	Have the aquifer evaluation forms, data, graphs, equations, etc. been provided? (Appendix F)			X
50	Have the disposal manifests been provided? See attached	X		
51	Has a copy of the local zoning regulations been provided? (Appendix H)			X
52	Has all fate and transport modeling been provided? (Appendix I)			X
53	Have copies of all access agreements obtained by the contractor been provided? (Appendix J)			X
54	Has a copy of this form been attached to the final report and are explanations for any missing or incomplete data been provided?	X

Case Narrative
Midlands Environmental Consultants, Inc.
Lot Number: OD05031

This Report of Analysis contains the analytical result(s) for the sample(s) listed on the Sample Summary following this Case Narrative. The sample receiving date is documented in the header information associated with each sample.

All results listed in this report relate only to the samples that are contained within this report.

Sample receipt, sample analysis, and data review have been performed in accordance with the most current approved NELAC standards, the Shealy Environmental Services, Inc. ("Shealy") Quality Assurance Management Plan (QAMP), standard operating procedures (SOPs), and Shealy policies. Any exceptions to the NELAC standards, the QAMP, SOPs or policies are qualified on the results page or discussed below.

If you have any questions regarding this report please contact the Shealy Project Manager listed on the cover page.

Volatiles
The RPD for ethanol exceeded method control limits in batch 17860; however, all other QA/QC criteria for this compound in the LCS/LCSD were within acceptance criteria and method control limits. The associated sample results were reported and no corrective action was required.

Sample Receipt Checklist (SRC)

Client: MCC Cooler Inspected by/date: ECC 4/5/13 Lot #: OD050 31

Means of receipt: ☑ SESI ☐ Client ☐ UPS ☐ FedEx ☐ Airborne Exp ☐ Other

Yes ☐	No ☑		1. Were custody seals present on the cooler?
Yes ☐	No ☐		2. If custody seals were present, were they intact and unbroken?

Cooler ID/temperature upon receipt: 0.8/1.0 °C 1 °C 1 °C 1 °C
Method: ☐ Temperature Blank ☑ Against Bottles Trip Blank
Method of coolant: ☐ Wet Ice ☐ Blue Ice ☐ Dry Ice ☐ None

If response is No (or Yes for 14, 15, 16), an explanation/resolution must be provided.

Yes ☐	No ☐	NA ☑	3. If temperature of any cooler exceeded 6.0°C, was Project Manager notified? PM notified by SRC, phone, note (circle one), other: _____. (For coolers received via commercial courier, PMs are to be notified immediately.
Yes ☐	No ☐	NA ☑	4. Is the commercial courier's packing slip attached to this form?
Yes ☑	No ☐		5. Were proper custody procedures (relinquished/received) followed?
Yes ☐	No ☐	NA ☑	5a Were samples relinquished by client to commercial courier?
Yes ☑	No ☐		6. Were sample IDs listed?
Yes ☑	No ☐		7. Was collection date & time listed?
Yes ☑	No ☐		8. Were tests to be performed listed on the COC?
Yes ☑	No ☐		9. Did all samples arrive in the proper containers for each test?
Yes ☑	No ☐		10. Did all container label information (ID, date, time) agree with COC?
Yes ☑	No ☐		11. Did all containers arrive in good condition (unbroken, lids on, etc.)?
Yes ☑	No ☐		12. Was adequate sample volume available?
Yes ☑	No ☐		13. Were all samples received within ½ the holding time or 48 hours, whichever comes first?
Yes ☐	No ☑		14. Were any samples containers missing?
Yes ☐	No ☑		15. Were there any excess samples not listed on COC?
Yes ☐	No ☑	NA ☐	16. Were bubbles present >"pea-size" (¼"or 6mm in diameter) in any VOA vials?
Yes ☐	No ☐	NA ☑	17. Were all metals/O&G/HEM/nutrient samples received at a pH of <2?
Yes ☐	No ☐	NA ☑	18. Were all cyanide and/or sulfide samples received at a pH >12?
Yes ☐	No ☐	NA ☑	19. Were all applicable NH3/TKN/cyanide/phenol/BNA/pest/PCB/herb (<0.2mg/L) samples free of residual chlorine?
Yes ☐	No ☐	NA ☑	20. Were collection temperatures documented on the COC for NC samples?
Yes ☐	No ☐	NA ☐	21. Were client remarks/requests (i.e. requested dilutions, MS/MSD designations, etc…) correctly transcribed from the COC into the comment section in LIMS?

Sample Preservation (Must be completed for any sample(s) incorrectly preserved or with headspace.)

Sample(s) _____ were received incorrectly preserved and were adjusted accordingly in sample receiving with _____ (H_2SO_4,HNO_3,HCl,NaOH) with the SR # (number)

Sample(s) _____ were received with bubbles >6 mm in diameter.

Sample(s) _____ were received with TRC >0.2 mg/L for NH3/ TKN/cyanide/BNA/pest/PCB/herb.

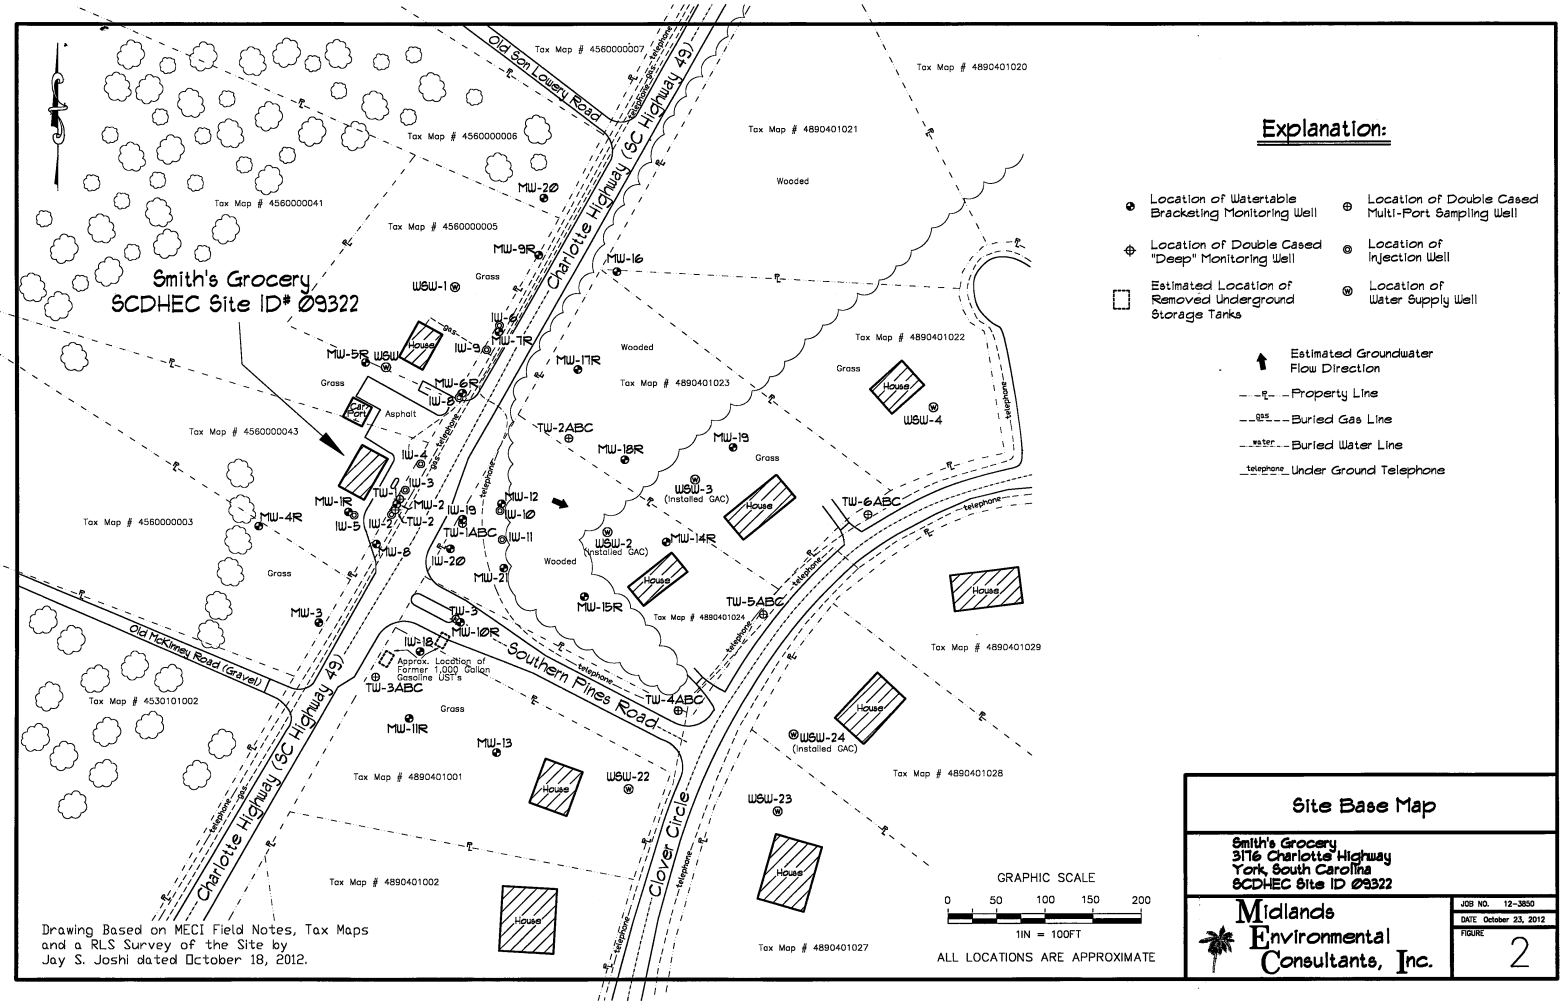
Sample labels verified by: _____ Date: 4-5-13

Corrective Action taken, if necessary:

Was client notified: Yes ☐ No ☐ Did client respond: Yes ☐ No ☐

SESI employee: _____ Date of response: _____

Comments: _____



Explanation:

- Location of Watertable Bracketing Monitoring Well
- Location of Double Cased Multi-Port Sampling Well
- Location of Double Cased "Deep" Monitoring Well
- Location of Injection Well
- Estimated Location of Removed Underground Storage Tanks
- Location of Water Supply Well
- Estimated Groundwater Flow Direction
- Property Line
- Buried Gas Line
- Buried Water Line
- Under Ground Telephone

Drawing Based on MECI Field Notes, Tax Maps and a RLS Survey of the Site by Jay S. Joshi dated October 18, 2012.

Report of Analysis

Midlands Environmental Consultants, Inc.
235 Dooley Rd
Lexington, SC 29073
Attention: Bryan Shane

Project Name: **Smith's Grocery**

Project Number: **12-3946**

Lot Number: **OD05031**

Date Completed: **04/08/2013**

Kelly M. Maberry
Project Manager

This report shall not be reproduced, except in its entirety, without the written approval of Shealy Environmental Services, Inc.

The following non-paginated documents are considered part of this report: Chain of Custody Record and Sample Receipt Checklist.

OD05031

Case Narrative
Midlands Environmental Consultants, Inc.
Lot Number: OD05031

This Report of Analysis contains the analytical result(s) for the sample(s) listed on the Sample Summary following this Case Narrative. The sample receiving date is documented in the header information associated with each sample.

All results listed in this report relate only to the samples that are contained within this report.

Sample receipt, sample analysis, and data review have been performed in accordance with the most current approved NELAC standards, the Shealy Environmental Services, Inc. ("Shealy") Quality Assurance Management Plan (QAMP), standard operating procedures (SOPs), and Shealy policies. Any exceptions to the NELAC standards, the QAMP, SOPs or policies are qualified on the results page or discussed below.

If you have any questions regarding this report please contact the Shealy Project Manager listed on the cover page.

Volatiles
The RPD for ethanol exceeded method control limits in batch 17860; however, all other QA/QC criteria for this compound in the LCS/LCSD were within acceptance criteria and method control limits. The associated sample results were reported and no corrective action was required.

Sample Summary

Midlands Environmental Consultants, Inc.

Lot Number: OD05031

Sample Number	Sample ID	Matrix	Date Sampled	Date Received

Re: **QAPP Contractor Addendum Request**
Groundwater Sampling Contract
Solicitation # IFB-5400002759, PO#4600088529

Dear Mr. Shane:

In accordance with bid solicitation # IFB-5400002759 and the UST Management Division Quality Assurance Program Plan (QAPP), it is requested that you submit a Contractor Addendum for each site listed below. The Addendums must be submitted within 15 business days in my attention. The project manager for each site will issue a notice to proceed once the Addendum has been reviewed and approved. Please note, site reconnaissance should be conducted during the Addendum review so that any issues that arise may be addressed prior to commencing work at the site.

UST Permit #	Site Name	County	# samples and requested analysis*	Project Manager
07318	Reva of Clinton	Pickens	16-BTEXMN, DCA, & Oxygenates	J. Padgett
19550	Frm George Jackson	York	44-BTEXMN, DCA, Oxygenates, & EDB	D. Thoma
~~11972~~	Pilot Travel Center	Kershaw	20-BTEXMN, DCA, & Oxygenates	D. Thoma
09322	Smiths Grocery	York	106-BTEXMN, DCA, Oxygenates, & EDB	D. Thoma
13004	Rogers & Sons	Charleston	5-BTEXMN & DCA	A. Shrader
09355	Fort Mill Gulf	York	37-BTEXMN, DCA, Oxygenates, EDB & Lead	D. Orgain
03699	Wells Gulf	Georgetown	4-BTEXMN	J. Ford
03426	Perry's Grocery	Colleton	13-BTEXMN, DCA, & Oxygenates	J. Martin
08932	HQ Heath Self Serve	Sumter	48-BTEXMN, DCA, Oxygenates, & EDB	C. Ridgley

* The number of samples may not include trip blanks, field blanks, or field duplicates.

Please contact me with the sampling schedule before commencing work at these facilities. In addition, a weekly update for each site is required to be submitted via e-mail to the site's project manager and myself. If you have any questions or need further assistance, please contact me at (803) 896-6397 or thomadl@dhec.sc.gov.

Sincerely,

Debra L. Thoma

Re: Water Supply Well Replacement and Tier II Assessment Report
Smith's Grocery, 3176 Charlotte Hwy., York, SC
UST Permit #09322
Telephone conversation on April 19, 2013
York County

Dear Mr. Hill:

In response to our telephone conversation on April 19, 2013, the following information is provided.

Our records indicate that two Underground Storage Tanks (USTs) were registered with the Agency by Ms. Lois Smith. The registered USTs were removed from the ground in March 1996. An assessment report received in June 1993 documented a release of petroleum products in the vicinity of the UST. Our records indicate that Ms. Smith complied with the regulatory requirements and stopped the leak from the tanks. Corrective action was initiated in December 2001 by SEI Environmental. Corrective action continued until March 2010 when SEI Environmental went out of business. In April 2010, the UST Division then directed Ms. Smith to conduct a groundwater sampling event so that the current conditions could be determined. That report received August 2010 indicated that numerous monitoring wells were missing. In October 2010, the UST Division directed Ms. Smith to replace the missing monitoring wells. The assessment report documenting the replacement of the monitoring wells was submitted in November 2010. In August 2011, the UST Division directed Ms. Smith to conduct a comprehensive sampling event. The sampling report received in October 2011 indicated that the groundwater plume was not defined and additional monitoring wells were required before corrective action could be initiated again. The UST Division directed Ms. Smith to conduct the additional assessment in November 2011. In addition, in November 2012, the UST Division directed Ms. Smith to replace two impacted water supply wells. A groundwater sampling event is currently ongoing to obtain current data so that corrective action may be initiated.

The UST Division was not aware that Ms. Smith's contractor was not providing you with copies of the reports documenting work that was conducted on your property. A copy of the most recent assessment report, the water supply well replacement report, and the sampling report for your water supply well have been enclosed for your records. In addition, the warranty information and the estimated replacement costs for the pump installed in your replacement well is enclosed. The UST Division has been informed that Ms. Smith has passed away. As such, any future work will be procured directly by the UST Division. Copies of all reports submitted to the Agency will be forwarded to you.

Upon completion of the assessment activities, this release will proceed to corrective action. The Agency will require access to your property during reasonable hours to perform necessary rehabilitation activities. You will be contacted by letter before corrective action is initiated

The Agency is not aware of any laws or regulations that prohibit the use or development of adjacent properties and properties where a petroleum release has occurred. However, the Agency advises against installing a water supply well for drinking, cooking, or bathing purposes until active corrective action is completed. If you should choose to install a water supply well for these purposes at this time, it is at your discretion. As stated above, active corrective action measures will be implemented to rehabilitate affected ground water to acceptable levels.

Any future work required by the Agency should not cause any damage to buildings, disrupt deliveries, prevent access to customers, or block main access routes. To further assure you, any required activities associated with the petroleum release would be performed by a SC Certified Site Rehabilitation Contractor who maintains specific levels of insurance coverage for General and Professional Liability and Pollution/Property Damage. Such coverage is required by Section IV of the SUPERB Site Rehabilitation and Fund Access Regulations R. 61-98.

On all correspondence concerning this site, please reference UST Permit # 09322. If there are any questions concerning this project, please contact me at (803) 896-6397 or by email at thomadl@dhec.sc.gov. The manager of the Corrective Action Section is Lee Monts and he can be reached at (803) 896-6677 or montsla@dhec.sc.gov.

Sincerely,

Debra L. Thoma

Dear Ms. Thoma,

Midlands Environmental Consultants Inc. (MECI) is pleased to submit the attached QAPP Contractor Addendum for the referenced site.

On April 29, 2013, MECI personnel performed a site visit to the subject site to evaluate site conditions, locate monitoring wells and identify potential problems for future sampling activities.

If you have any question or comments please feel free to contact us at 803-808-2043.

Sincerely,
Midlands Environmental Consultants, Inc.

Table 2A Addendum Role Identification and Contact Information

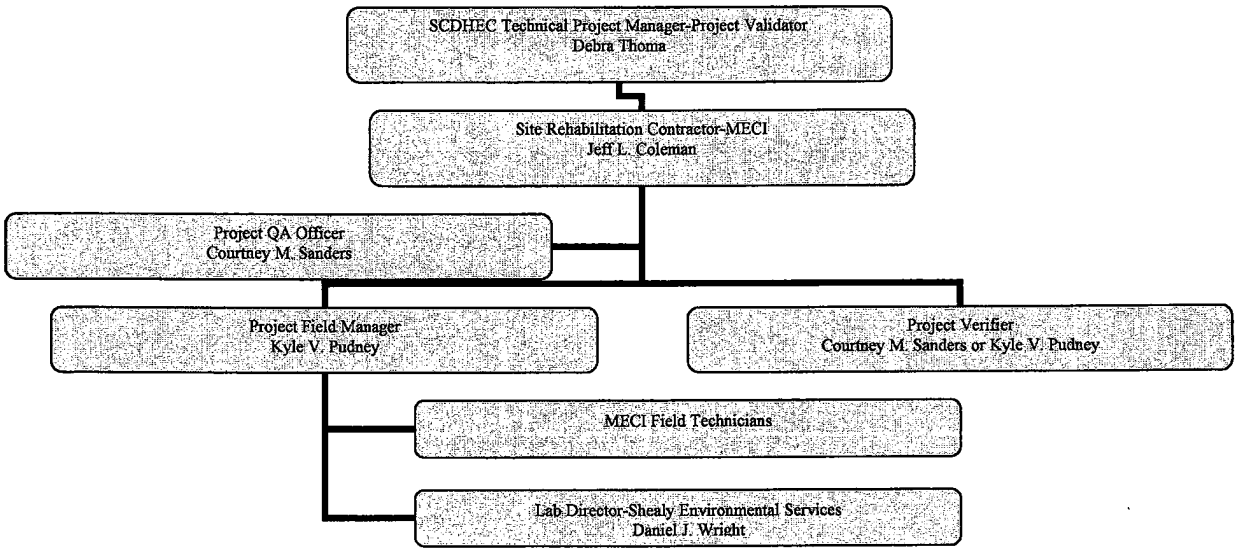

Figure 1A Organizational Chart

Project Manager (Debra Thoma) – The project manager is responsible for direct oversight of contractors conducting assessment and site rehabilitation of releases at UST sites.

Site Rehabilitation Contractor (Jeff L. Coleman) – The Site Rehabilitation Contractor is an independent contractor responsible for managing and coordinating field and office activities needed for assessments or cleanup.

-Final Review of all work produced for a scope of work.
-Final say on technical interpretation of data.

Quality Assurance Officer (Courtney M. Sanders) – The Quality Assurance Officer is responsible for the oversight of all quality assurance activities associated with projects performed by the Site Rehabilitation Contractor.

-In charge of producing and maintaining the QAPPA for MECI.
-Reviews (and Audits, if necessary) all work produced in conjunction with a scope of work.
-Quality control of data entry and report preparation.

Field Manager (Kyle Pudney) –The field manager will oversee all work done on any given project.

-Assign, direct and oversee all field personnel working on each project.
-Responsible for coordinating with the SCDHEC project manager, should any problems or clarifications arise.
-Responsible for all reporting done in conjunction with field work.

Analytical Laboratory Director (Daniel J. Wright) – The Laboratory Director is directly responsible for the Analytical Laboratory used during a scope of work. The Analytical Laboratory receives the soil and water samples from the site rehabilitation contractor, performs the requested analyses, and provides analytical reports.

Project Verifier (Courtney M. Sanders) – The project verifier is responsible for verifying the quality of data produced during a scope of work. This includes review of field work and laboratory reports for potential quality issues.

Field Technicians (various employees) – Responsible for all field activities for a given scope of work.

-Conduct all initial site visit, and record findings
-Conduct all field activities associated with a scope of work. All work will be conducted according to the MECI SOP. Will be responsible for reporting any potential problems are inconsistencies found during assessment activities.
-Completes the chain of custody upon completion of sampling event and delivers samples to lab or office for later lab pick-up.

A5 Problem Definition/Background

Discuss the background (as much as is known) of the site and appropriate historical information, and why this site is being assessed.

The subject site (Smith's Grocery) is located at 3176 Charlotte Highway, York, York County, South Carolina. The subject site previously maintained one 6,000 gallon gasoline underground storage tank (UST) and one 8,000 gallon gasoline UST. These UST's were abandoned by removal from ground in March of 1996. The South Carolina Department of Health and Environmental Control (SCDHEC) reported a release of petroleum product from these UST's in June of 1993 and confirmed the release in September of 1996. The subject site is currently rated a Class 1D.

The site is being sampled in conjunction with the SCDHEC Groundwater Sampling Contract (Solicitation # IFB-5400002759, PO# 4600088529).

Please answer the following: Does this project fall under UST or Brownfields area?

Underground Storage Tank Division

A6 Project/Task Description

1. ***Summarize what is known about the work to be done. This can be a short sentence indicating what the Scope of this project is (see Master QAPP Section A6).***

The subject site (Smith's Grocery) will be sampled in conjunction with the SCDHEC Groundwater Sampling Contract (Solicitation # IFB-5400002759, PO# 4600088529). During assessment activities monitoring wells will be sampled for petroleum constituents.

2. ***The work will begin within*** fourteen (14) days of receipt of approved QAPP contractors addendum ***after cost approval and sampling should be complete by*** twenty-one (21) days of receipt of approved QAPP contractors addendum.

3. ***Are there are time or resource constraints? Include those factors that may interfere with the tentative schedule.***

Factors that may prevent schedule work will be, but not limited to, inclement weather, equipment malfunction, and machine failure.

A7 Data Quality Objectives (DQOs) and Data Quality Indicators (DQIs)

The subject site is located at 3176 Charlotte Highway, York, York County, South Carolina. The site is currently occupied by an abandoned store front.

Lab Manager	Daniel J. Wright	***	***	Lab Certification	SC 32010

Table 3A Required Training and Licenses

Courtney M. Sanders of Midlands Environmental Consultants, Inc. is responsible to ensuring that personnel participating in this project receive the proper training. All training records will be stored in the following location:235-B Dooley Road, Lexington, SC 29073.

It is understood that training records will be produced if requested by SC DHEC.

The Following Laboratory(ies) will be used for this Project:

Commercial Lab(s)

Full Name of the Laboratory___Shealy Environmental Services, Inc.____
Name of Lab Director_____Daniel J. Wright_____
SC DHEC Certification Number_____32010_____
Parameters this Lab will analyze for this project:

All samples will be analyzed for BTEX, Naphthalene, MTBE, 1,2 DCA, 8-Oxygenates (EPA Method 8260-B), and EDB (EPA Method 8011).

Please note: SC DHEC may require that the contractor submit some or all of the Laboratory's SOPs as part of this QAPP.

A9 Documents and Records

Personnel will receive the most current version of the QAPP Addendum via: (Check all that apply)

____US Mail ____Courier __X__ Hand delivered

Other (please specify):____E-mailed electronic copies___

Record	Produced By	Hardcopy/ Electronic	Storage Location For how long?	Archival
Instrument Raw Data	Target, Thermospec, or Iteva software	Hardcopy and Electronic	Hardcopy: Offsite storage for 7 yrs Electronic: Two external storage device backups – one offsite, one onsite storage for 10 yrs	Yes
Final Reports	LIMS	Electronic	Electronic: Two external storage device backups – one offsite, one onsite storage for 10 years	Yes
Field Work	Field Staff	Hardcopy	MECI office: 235/B Dooley Road / Min. 5 years	Yes

Section B Measurement/Data Acquisition

B1 Sampling Process/Experimental Design

Item	Start Date	End Date	Comments
Site Reconnaissance	4/29/13	4/29/13	Already Completed
QAPP preparation	5/1/13	5/1/13	In progress
QAPP approval	5/2/13	5/22/13	Assuming three week turnaround
Monitoring well Sampling	5/23/13	6/06/13	Sampled within 2 weeks of QAPP approval
Report Preparation	6/07/13	6/28/13	Three weeks to prepare/submit report

Item	Start Date	End Date	Comments

Table 5A Sampling Activities

B2 Sampling Methods

Please note: The contractor must follow sampling protocols as given in the UST QAPP.

***Estimate* the number of samples of each matrix that are expected to be collected:**

Soil	_____
Ground Water from monitoring wells	____53____
From Drinking/Irrigation water wells	____40____
Field Duplicate Collection	_____5____
Field Blank Collection	_____1____
Trip Blank	_____3____
From surface water features	_____
Total number of Water samples	____102____

Notes:
During the April 29, 2013 site visit, fifty three (53) monitoring wells and forty (40) water supply wells were located. Monitoring well MW-18R was not located at the time of the initial site visit. If the monitoring well is located during sampling activities, the newly located monitoring well will be sampled accordingly.

During the site visit it was noted all located monitoring wells were in good condtion.

All monitoring well samples will be analyzed by BTEX, Naphthalene, MTBE, 1,2 DCA, 8-Oxygenates (EPA Method 8260-B), and EDB (EPA Method 8011).

For the sample matrices indicated above, please describe how samples will be collected and the equipment needed.

Please see MECI Monitoring Well Sampling SOP for sampling procedures and type of materials used for sampling.

Will Sampling Equipment have to be cleaned and decontaminated or is everything disposable?

All equipment, excluding electronic water level indicators, field probes and turbidity tubes, is disposable.

If sampling equipment must be cleaned please give a detailed description of how this is done and the disposal of by-products from the cleaning and decontamination.

Please see MECI Monitoring Well Sampling SOP for decontamination procedures.

Identify any equipment and support facilities needed. This may include such things as Fed-ex to ship the samples, a Geoprobe, field analysis done by another contractor (who must be certified), and electricity to run sampling equipment.

All samples will be shipped to the lab via courier or overnight shipping company. Please see MECI Monitoring Well Sampling SOP for sample shipping procedures.

Address the actions to be taken when problems occur in the field, and the person responsible for taking corrective action and how the corrective action will be documented.

Failure	Response	Documentation	Individual Responsible
Water level indicator not working properly	Attempt to clean probe, change battery, use back-up indicator if need be.	Record on field sheets, notify office staff. Take indicator out of rotation until problem identified and corrected.	Field Staff, Field Manager
Field meters not working	Attempt to clean probes, recalibrate in the field.	Record on field sheets, notify office staff. Take meters out of rotation until problem identified and corrected.	Field Staff, Field Manager
Wells not located	Use metal detector, measure from known points, contact project manager for additional information.	Record method used to attempt to locate the well on field sheets, and possibly reasoning for the well to be missing	Field Staff

Table 6A Field Corrective Action

B3 Sample Handling and Custody

1. ***How will the samples get from the Site to the Lab to ensure holding requirements are met?***

Following sample collection, the samples are immediately place in a laboratory provided cooler, pre-filled with wet ice obtained from the MECI office. Samples are transported to the MECI office once a sampling event is complete. A Chain of Custody (CoC) is filled out following the sampling event by the field staff. See attached CoC. If a lab provided courier is scheduled to visit the MECI offices the day following a sampling event, sampling coolers are repacked with wet ice, and left at the office for pick-up the following morning. If no courier is schedule to visit the MECI office the day following a sampling event, all sampling coolers are repacked with ice and are dropped off at a lab approved shipping company for overnight delivery to the lab.

2. ***How will the contactors cool the samples and keep the samples cool?***

All samples are kept on wet ice, obtained from MECI office.

3. ***How will the lab determine the temperature of the samples upon receipt? Will they be using a temperature blank?***

A calibrated thermometer and temperature blank will be used to document sample temperature. The temperature blank is immediately checked by the sample receiving technician upon arrival at the laboratory.

4. ***Where will the samples be stored in the Lab once they are received?***

All samples are stored in clean refrigeration units monitored and maintained at 4 degrees C + or – 2 degrees. Volatile organic samples are stored separately form all other samples.

5. ***Describe the chain of custody procedure and attach a copy of each chain of custody that will be used. If a Chain of Custody SOP exists from the Lab and the Contractor is willing to adhere to it, then this may be attached.***

A chain of custody (COC) will be filled out for each sampling event at each project site. COC to be signed by MECI and Shealy Environmental technician at time physical transfer of samples occurs to courier. Shealy uses the following COC procedures to protect sample integrity following pickup by their courier: A full time Sample Receiving Technician receives all samples and completes a Sample Receipt Checklist (SRC), which will identify any anomalies, if any exist the Sample Receiving Technician or Project Manager must resolve the deviation internally and/or notify the client to resolve the anomaly

B4 Analytical Methods

1. ***Identify the SOPs which will be used to analyze the samples, the method which the SOP references and the equipment or instrumentation that is needed:***

Parameter	SOP ID*	Method Referenced	Equipment	Comments
BTEX+Naph+MTBE+Oxygentaes	S-VO-002	8260B	GC/MS	
PAH's	S-SV-021	8270D	GC/MS	
EDB	S-SV-012	8011	GC	
Lead,T.	S-IM-022	6010C	ICP	
Ferrous Iron	S-IN-009	SM 3500-FED	Spectrophotometer	
Nitrate	S-IN-042	353.2	Auto-analyzer/Lachate	
Sulfate	S-IN-010	300.0	Ion Chromatograph	
Methane	S-VO-004	RSK-175	GC	
TOC	S-IN-030	Walkley-Black	N/A	
DRO - TPH	S-SV-001	8015C	GC	
pH	MECI SOP 4.3.6	*	YSI 63	
Conductivity	MECI SOP 4.3.6	*	YSI 63	

Dissolved Oxygen	MECI SOP 4.3.6	*	YSI 550A	
Temperature	MECI SOP 4.3.6	*	YSI 550A	
Turbidity	MECI SOP 4.3.6	*	60 cm Turbidity Tube	

Table 7A Analytical SOPs and Referenced Methods

- **This can be a full name of a SOP, an abbreviation, or a number. In the latter two cases, the abbreviation or number must be associated with the full name of the SOP. See also Table 8A SOP Abbreviation Key.**

Abbreviation	Lab Identification of this SOP	Full Name of the SOP
S-VO-002	S-VO-002	GC/MS VOLATILES ANALYSIS BASED ON EPA METHODS 8260B AND 624 PREPARED BY EPA METHODS 5030B, 5035 AND 3585
S-SV-021	S-SV-021	GC/MS ANALYSIS BASED ON EPA METHOD 8270D PREPARED BY EPA METHODS 3520C, 3550C AND 3580A
S-SV-012	S-SV-012	GC/ECD ANALYSIS OF EDB AND DBCP BASED ON METHOD 8011 & 504.1
S-IM-022	S-IM-022	INDUCTIVELY COUPLED PLASMA ATOMIC EMISSION SPECTROSCOPY-PECTROMETRIC METHOD for TRACE ELEMENT ANALYSES METHOD 6010C

Table 9A Corrective Action Procedures

3. Identify sample disposal procedures.

Analysis	Matrix	Schedule for disposal	Method for disposal	Comments
BTEX+Naph+MTBE+Oxygenates	Waters/Soils	Six Weeks	Tested for Hazardous Constituents and disposed as Hazardous or non-Hazardous waste.	
PAH's	Waters/Soils	Six Weeks	Tested for Hazardous Constituents and disposed as Hazardous or non-Hazardous waste.	
EDB	Waters/Soils	Six Weeks	Tested for Hazardous Constituents and disposed as Hazardous or non-Hazardous waste.	
Lead	Waters/Soils	Six Weeks	Tested for Hazardous Constituents and disposed as Hazardous or	

			non-Hazardous waste.	
Ferrous Iron	Waters/Soils	Six Weeks	Tested for Hazardous Constituents and disposed as Hazardous or non-Hazardous waste.	
Nitrate,Sulfate	Waters/Soils	Six Weeks	Tested for Hazardous Constituents and disposed as Hazardous or non-Hazardous waste.	
Methane	Waters/Soils	Six Weeks	Tested for Hazardous Constituents and disposed as Hazardous or non-Hazardous waste.	
All	Water	On-Site	Portable Granulated Activated Carbon (GAC) Unit	All waste water produced from sampling and decontamination activities will be run through a GAC unit

Table 10A Sample Disposal Procedures

4. Provide SOPs for the Kerr Method or the Ferrous Iron Method if these are parameters for this study. This can be attached or written here. If attached please note that it is an attachment and where it is located (if applicable).

B5 Quality Control Requirements:

All QC will follow the requirements laid out in Section B5 of the UST Programmatic QAPP.

B6 Field Instrument and Equipment Testing, Inspection and Maintenance

1. Identify all field and laboratory equipment needing periodic maintenance, the schedule for this, and the person responsible. Note the availability and location of spare parts.

Instrument	Serial Number	Type of Maintenance	Frequency	Parts needed/Location	Person responsible
Volatiles Mass Spec	Shealy SOP S-SV-021 Page 7	Change traps, clean ion source, replace	Periodic	Laboratory	MSV Analyst

		filaments			
Semivolatile Mass Specc	Shealy SOP S-SV-021 Page 7	Injection port maintenance, ion source maintenance, column replacement	Periodic	Laboratory	MSSV Analyst
ECD GC	Shealy SOP S-SV-012 Page 5	Injection port maintenance, column replacement	Periodic	Laboratory	GC Analyst
Dionex IC	Shealy SOP S-IN-010 Page 6	Replace auto sampler filter, tubing, line filter, sample Line and Waste Line, as needed. Check Reagent levels, flow rate, waste line.	Periodic	Laboratory	IC Analyst
ICP	Shealy SOP S-IM-005 Page 6 & 7	Clean Sample introduction system , auto sampler, torch, Change spray chamber, torch tubing, tubing	Periodic	Laboratory	ICP Analyst
Leeman Mercury Analyzer	Shealy SOP S-IM-006 Page 5	Clean GLS, Change Pump tubing, Nafion Dryer, Lamp	Periodic	Laboratory	Mercury Analyst
Flow Injection Analysis – Lachat 8000	Shealy SOP S-IN-042 Page 5	Replace sample and reagent lines, replace light source, re-wrap heating coil, replace column	Periodic/As Needed	Laboratory	Nitrate Analyst
YSI 63	09C 101302, 10K 101895, 07M 100905	Replace probe tip	Yearly	Order from YSI	C. Sanders
YSI 63	09C 101302, 10K 101895, 07M 100905	Replace batteries	As Needed	In stock at office	Field Staff
YSI 63	09C 101302, 10K 101895, 07M 100905	General inspection for wear and tear on equipment	Daily	Major fixes will be done out of office	Field Staff
YSI 63	09C 101302, 10K 101895, 07M 100905	Check buffer solutions for expiration	Weekly	In stock at office	C. Sanders
YSI 550A	04L 2026AK, 08B 101407, 04A 0912AI	Replace membrane	4 to 8 weeks	In stock at office	Field Staff
YSI 550A	04L 2026AK, 08B 101407, 04A 0912AI	Replace batteries	As Needed	In stock at office	Field Staff
YSI 550A	04L 2026AK, 08B 101407, 04A 0912AI	General inspection for wear and tear on equipment	Daily	Major fixes will be done out of office	Field Staff
Turbidity Tube	#1, #2, #3	General inspection for wear and tear on	Daily	Tubes will be cleaned/fixed in	Field Staff

		equipment, clarity of Secchi Disk		office	

Table 11A Instrument and Equipment Maintenance

2. Identify the testing criteria for each lab or field instrument that is used to ensure the equipment is performing properly. Indicate how deficiencies, if found, will be resolved, re-inspections performed, and effectiveness of corrective action determined and documented. Give the person responsible for this

Instrument/Equipment & Serial Number	Type of Inspection	Requirement	Individual Responsible	Resolution of Deficiencies
Volatiles Mass Spec Shealy SOP S-SV-021 Page 7	Daily calibration check	Method Requirements	MSV Analyst	Recalibration or instrument maintenance
Semi-volatiles Mass Spec Shealy SOP S-SV-021 Page 7	Daily calibration check	Method Requirements	MSSV Analyst	Recalibration or instrument maintenance
ECD GC Shealy SOP S-SV-012 Page 5	Daily calibration check	Method Requirements	GC Analyst	Recalibration or instrument maintenance
Dionex IC Shealy SOP S-IN-010 Page 6	Daily calibration check	Method Requirements	IC Analyst	Recalibration or instrument maintenance
ICP Shealy SOP S-IM-005 Page 6 & 7	Daily calibration check	Method Requirements	ICP Analyst	Recalibration or instrument maintenance
Leeman Mercury Analyzer Shealy SOP S-IM-006 Page 5	Daily calibration check	Method Requirements	Mercury Analyst	Recalibration or instrument maintenance
Flow Injection Analysis – Lachat 8000 Shealy SOP S-IN-042 Page 5	Daily and continuing calibration check	See calibration criteria	Nitrate Analyst	Recalibration or instrument maintenance
YSI 63 - 09C 101302, 10K 101895, 07M 100905	Daily calibration check	See calibration criteria	Field Staff	Recalibrate, general maintenance then recalibrate. Ship off for service by manufacturer
YSI 550A - 04L 2026AK, 08B 101407, 04A 0912AI	Daily calibration check	See calibration criteria	Field Staff	Recalibrate, general maintenance then recalibrate. Ship off for service by manufacturer

Table 12A Instrument and Equipment Inspection

B7 Instrument Calibration and Frequency

1. Identify equipment, tools, and instruments for field or lab work that should be calibrated and the frequency.
2. Describe how the calibrations should be performed and documented, indicating test criteria and standards or certified equipment.
3. Identify how deficiencies should be resolved and documented. Identify the person responsible for corrective action.

Instrument	Calibration Procedure	Frequency of Calibration	Acceptance Criteria	Corrective Action (CA)	Person Responsible for CA	SOP Reference*
Volatiles Mass Spec	Minimum of 5 calibration standards for all compounds	When indicated by continuous calibration verification standard	Method Criteria	Detailed in SOP	MSV Analyst	S-VO-002
Semi-volatile Mass Spec	Minimum of 5 calibration standards for all compounds	When indicated by calibration verification standard	Method Criteria	Detailed in SOP	MSSV Analyst	S-SV-021
GC ECD	Minimum of 5 calibration standards for all compounds	When indicated by calibration verification standard	Method Criteria	Detailed in SOP	GC Analyst	S-SV-012
Dionex IC	Minimum of 5 calibration standards for all compounds	When indicated by calibration verification standard	Method Criteria	Detailed in SOP	IC Analyst	S-IN-010
ICP	Minimum of 3 calibration standards for all compounds	When indicated by calibration verification standard	Method Criteria	Detailed in SOP	ICP Analyst	S-IM-022
Cetac Mercury Analyzer	Minimum of 5 calibration standards for all compounds	When indicated by calibration verification standard	Method Criteria	Detailed in SOP	Mercury Analyst	S-IM-006
Lacaht QuickChem 8000	Minimum of 5 calibration standards	Daily or when indicated by calibration verification standard	Method Criteria	Detailed in SOP	Nitrate Analyst	S-IN-042
YSI 63	pH Calibration	Daily	+/- 0.2 pH units	clean/replace probe tip, recalibrate	Field Staff	4.3.6
YSI 63	Conductivity Calibration	As directed by manufacturer	+/- 10 uS	clean/replace probe tip, recalibrate	Field Staff	4.3.6
YSI 550A	DO calibration	Daily	+/- 0.25 mg/l	clean/replace probe tip,	Field Staff	4.3.6

Instrument	Calibration Procedure	Frequency of Calibration	Acceptance Criteria	Corrective Action (CA)	Person Responsible for CA	SOP Reference*
				recalibrate		
YSI 550A	Temperature Calibration	Daily	+/- 1 °C	clean/replace probe tip, recalibrate	Field Staff	4.3.6
Electronic Water Level Indicator	Checked vs. Standard	Monthly	+/- 0.01 foot per 10 foot length	Replace probe tape	Field Staff	***
Oil/Water Interface probe	Checked vs. Standard	Monthly	+/- 0.01 foot per 10 foot length	Replace probe tape	Field Staff	***

Table 13A Instrument Calibration Criteria and Corrective Action

*** This can be a full name of a SOP, an abbreviation, or a number. In the latter two cases, the abbreviation or number must be associated with the full name of the SOP. See also Table 8A SOP Abbreviation Key.**

B8 Inspection/Acceptance Requirements for Supplies and Consumables

1. Identify critical supplies and consumables for field and laboratory, noting supply source, acceptance criteria, and procedures for tracking, storing and retrieving these materials.
2. Identify the individual(s) responsible for this.

Item	Vendor	Acceptance criteria	Handling/Storage Conditions	Person responsible for inspection and tracking.
Laboratory Chemicals	Fisher,VWR	Certificates of analysis and laboratory testing	Laboratory storage	Receiving and laboratory personnel
Laboratory standards	O2Si, Restek, High Purity, VHG, Supelco	Certificates of analysis and laboratory verifications	Vendor specific storage conditions	Laboratory Analysts
Sample Containers	Daniels Scientific, QEC	Certificates of analysis and laboratory testing	Bottle storage area	Sample receiving personnel
Clear, Disposable polyethylene Bailers	Preferred Pump	Individual sleeves intact, ball valve operational	Stored in Vehicle Bay, Off of the ground	C. Sanders, Field Staff
Nylon Rope	Preferred Pump	Covered with plastic	Stored in Vehicle Bay, Off of the ground	C. Sanders, Field Staff
Nitrile Gloves	Preferred Pump	Unopened box, no holes	Stored in Vehicle Bay, Off of the ground	C. Sanders, Field Staff
40 mL HCL preserved amber vials	Shealy Environmental Services	Custody seal intact	Stored in Vehicle Bay, Off of the ground	C. Sanders, Field Staff
250 mL HNO3 preserved metals vials	Shealy Environmental Services	Custody seal intact	Stored in Vehicle Bay, Off of the ground	C. Sanders, Field Staff
Coolers	Shealy Environmental Services	Intact	Stored in Vehicle Bay, Off of the ground	C. Sanders, Field Staff
pH Buffer	TRS	Within expiration date	Stored in	C. Sanders, Field Staff

	Environmental, Enviroequipment		calibration room	
Conductivity Standard	TRS Environmental, Enviroequipment	Within expiration date	Stored in calibration room	C. Sanders, Field Staff
DO Membranes	YSI, Enviroequipment	Clean, in box	Stored in calibration room	C. Sanders, Field Staff
Batteries	Any Store	Not previously used	Stored in calibration room	C. Sanders, Field Staff

Table 14A List of Consumables and Acceptance Criteria

B9 Data Acquisition Requirements (Non-Direct Measurements)

1. Identify data sources, for example, computer databases or literature files, or models that should be accessed or used.
2. Describe the intended use of this information and the rationale for their selection, i.e., its relevance to project.
3. Indicate the acceptance criteria for these data sources and/or models.

Data Source	Used for	Justification for use in this project	Comments
Historical Data	Site Maps and Well Construction Information	Well Location and Detail	

Table 15A Non-Direct Measurements

4. Identify key resources/support facilities needed.

There are no non-direct measurements in this project

B10 Data Management

1. Describe the data management scheme from field to final use and storage.

Following sample collection and chain of custody production, samples are shipped to the lab. Field work from the field staff is reviewed by the MECI project manager, and converted into digital form. All data entry is subsequently checked to validate the data entry. The original copies of the field work are stored in MECI files for a minimum of 5 years. Digital copies of the work are stored on the MECI server, which is backed up weekly, and stored for a minimum of 5 years. The digital copy of the field work is presented to SCDHEC with the final report.

2. How does the lab and field staff ensure that no unauthorized changes are made to the chain of custody, sampling notebooks, laboratory notebooks and computer records?

The laboratory maintains comprehensive Quality Control and Training Programs. All sample receipt data, sample log-in, and analytical data is peer reviewed, including review for inappropriate changes. Data management, review procedures and the Quality Systems Program are documented in the laboratory's Quality Manual and Standard Operating Procedures. The Quality Assurance Department oversees adherence to and review of these programs.

All MECI field work is produced using ink-pens. Any attempt to alter field data, after sampling is complete, can be readily identified. MECI keeps a carbon copy of the chain of custody after it is shipped to the lab. This copy is kept with the field work. If any change to the CoC are suspected, this original carbon copy can be use to identify potential changes.

3. How does the lab ensure that there are no errors in samples records including times when sample information is compiled, data calculated and/or transmitted?

Sample data acquisition software is reviewed periodically. The LIMS database is backed up daily and is able to be restored in the event of a system failure. These procedures are documented in laboratory SOP S-AD-003, LIMS. The IT Manager is responsible for these systems and procedures."

4. How will the data be archived once the report is produced? How can it be retrieved? (This applies to both electronic and hard copies).

Laboratory Hardcopy data stored off site is logged, maintained and archived by the Quality Assurance Department. Laboratory Electronic Data Reports are maintained through IT back up under the responsibility of the IT Systems Manager.

MECI keeps all field work and paper copies of reports in its in-house filing system. All paper copies are stored for a minimum of 5 years. Any file can be retrieved easily by going to the correct filing cabinet/box.

All electronic copies of reports generated are kept on the MECI server. This server is backed-up on a weekly basis. Any file stored on the MECI server can be retrieved instantly, by accessing the server. All electronic files are stored for a minimum of 5 years on the server.

Section C Assessment and Oversight

C1 Assessment and Response Actions

1. *The Contractor is supposed to observe field personnel daily during sampling activities to ensure samples are collected and handled properly and report problems to DHEC within 24 hours. . Please state who is responsible for doing this and what observations will be made. Will this person have the authority to stop work if severe problems are seen?*

Field audits can be conducted on any field personnel at any time. MECI field audits can be conducted by the Field Manger, who will be responsible for ensuring that field personnel adhere to the QAPP. If during a random field audit, severe problems are found, work will be stopped by the field manager and the QA

officer contacted to determine corrective action. All problems must be corrected prior to any additional work being performed. Should it be requested, an On-site Field Audit can be scheduled with the SCDHEC project manager. If severe problems are identified by the SCDHEC project manager, the project manager can stop the work until the problems are corrected.

2. *The SCDHEC UST QAPP states that the Lab will receive an Offsite Technical System Audit. For this project, what assessments will be done on the Commercial Lab(s) that are being used—other than their certification audit? When or how often are these done? Who will the results be given to and who has the ability to stop work if problems are severe?*

The laboratory participates in annual Proficiency Testing through an approved vendor, Wibby Environmental. If during a random audit, severe problems are found, work will be stopped by the according Wibby Environmental representative and the QA officer contacted to determine corrective action. Proficiency Testing results are provided to the Office of Environmental Laboratory Certification.

C2 Reports to Management

See the SC DHEC UST Programmatic QAPP (UST Master QAPP).

Re: **Notice to Proceed-Groundwater Sampling/QAPP Contractor Addendum Approval**
Groundwater Sampling Contract
Solicitation # IFB-5400002759, PO#4600088529
Smith's Grocery, SC Hwy 49, York, SC
UST Permit #09322; CA#45790
York County

Dear Mr. Shane:

In accordance with bid solicitation # IFB-5400002759 and the UST Management Division Quality Assurance Program Plan (QAPP), the Site-Specific Contractor Addendum has been reviewed and approved. In accordance with the QAPP, a status report of the project should be provided on a weekly basis via e-mail. If any quality assurance problems arise, you must contact me within 24 hours via phone or e-mail. In addition, a discussion of the problem(s) encountered, including quality assurance problems, the actions taken, and the results must be included in the final report submitted to the UST Management Division.

MECI will perform services at the site on behalf of the site's responsible party (RP); however, payment will be made from the SUPERB Account. The site's RP has no obligation for payment for this scope of work. Please coordinate access to the facility with the property owner. The Department grants pre-approval for transportation of virgin petroleum impacted soil and groundwater from the referenced site to a permitted treatment facility. There can be no spillage or leakage in transport. All investigation-derived waste (IDW) must be properly contained and labeled prior to disposal. A copy of the disposal manifest and/or cceptance letter from the receiving facility that clearly designates the quantity received must be included with the final report. The SUPERB Account will not reimburse for transportation or treatment of soil and/or groundwater with concentrations below RBSLs. **Please note, the final report is due within 3 weeks from the date the site is sampled. If the site is not sampled by the specified due date or the report is not received in the specified time period, a late fee may be imposed.**

The final report should contain the requirements of Section III.2.15 of the bid solicitation. The final report should be submitted to my attention. If you have any questions, please contact me at (803) 896-6397 or via e-mail at thomadl@dhec.sc.gov.

Sincerely,

Debra L. Thoma

Mrs. Thoma,

Please find the attached QAPP Contractor's Addendum, example chain of custody for pre and post granular activated carbon filter (GAC) sampling and site map. These GAC units are associated with the McCarter residence located at 3032 Clover Circle in York, SC and Jeter residence located at 3040 Clover Circle in York, SC. If you have any questions or concerns please feel free to contact Emerald, Inc. at 803-469-5454.

Sincerely,

William C. McClary, P.G.
Project Manager

Table 2A Addendum Role Identification and Contact Information

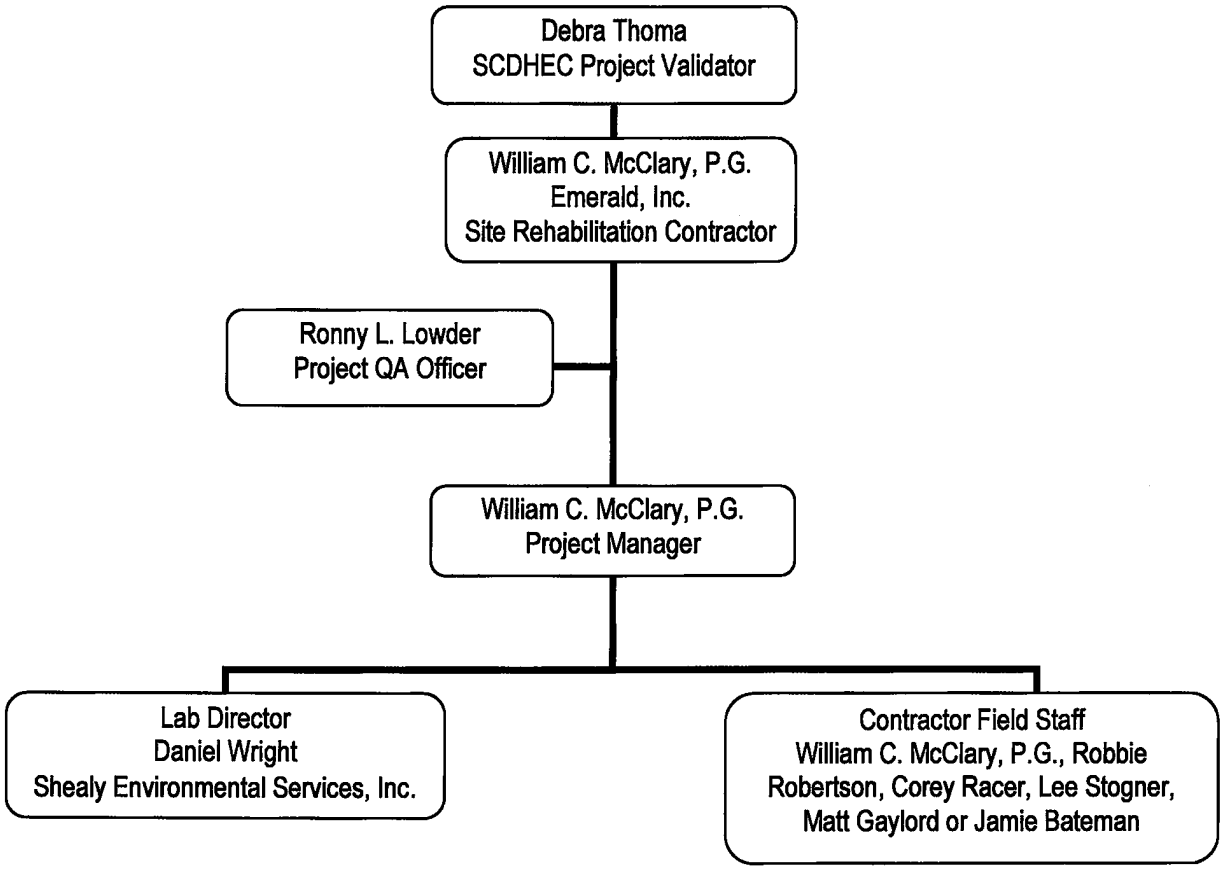

Figure 1A Organizational Chart

Definitions of Project Roles

Project QA Officer

The project QA officer (Mr. Ronny Lowder) provides review of field work, documentation of calibration for field instruments, laboratory data, and technical review of reports produced utilizing this data. The QA officer will independently review data generated from this project and determine if the data meets QA/QC criteria as set forth in the SC DHEC UST Programmatic QAPP.

Project Manager

The project manager (Mr. William C. McClary, P.G.) will be responsible for work conducted during this scope of work and the primary point of contact. His duties will include development of the site specific QAPP, supervising field work, documenting any QA failures, determining corrective actions to QA failures, and preparing reports for submission to SCDHEC. The Project Manager is responsible for overseeing adherence to the site specific QAPP during all phases of work.

Contractor Field Staff

The contractor field staff will perform sampling and field activities per the QAPP document under the direction of the Project Manager. Field staff will be responsible for drilling supervision, collection of sampling related data and calibration of field instruments. The Project Manager, in certain situations, may also be a member of the Field Staff.

A5 Problem Definition/Background

Discuss the background (as much as is known) of the site and appropriate historical information, and why this site is being assessed.

The subject site (Smith's Grocery) is located at 3176 Charlotte Hwy., in York, SC. The subject site formerly maintained one 8,000 gallon gasoline underground storage tank (UST) and one 6,000 gallon gasoline UST. These USTs were abandoned by removal in March 1996. A release of petroleum product was reported in June 30, 1993 and confirmed September 25, 1996. Two nearby water supply wells, WSW-23 (McCarter) and WSW-24 (Jeter) have been impacted by petroleum contamination. These water supply wells have each been attached to a granular activated carbon filter (GAC) to aid in removal of petroleum contaminants.

The above information was obtained from SCDHEC Files.

Please answer the following: Does this project fall under UST or Brownfields area?

UST Area

A6 Project/Task Description

1. ***Summarize what is known about the work to be done. This can be a short sentence indicating what the Scope of this project is (see Master QAPP Section A6).***
   In conjunction with GAC filter changes for water supply wells WSW-23 and WSW-24, Emerald, Inc. will collect pre and post samples from the GAC filter currently installed on the water supply well prior to the filter change. This work will be conducted under Solicitation #IFB-54200005822-5/3/13-EMW and PO# 4600254190.

2. ***The work will begin with 14 after cost approval and sampling should be complete in 60 Days .***

3. ***Are there are time or resource constraints? Include those factors that may interfere with the tentative schedule.***
   The proposed schedule may be affected by weather, and coordination of filter change and sampling with the property owners.

A7 Data Quality Objectives (DQOs) and Data Quality Indicators (DQIs)

The subject site (Smith's Grocery) is located at 3176 Charlotte Hwy., York, SC. There is currently one granular activated carbon filter (GAC) unit filtering water for the McCarter residence (3032 Clover Circle, York, SC) and the Jeter residence (3040 Clover Circle, York, SC). Prior to a carbon change of the GAC unit located at each residence, samples will be collected before filtering and after passing through the GAC filter (before entering residence). The duplicate sample will be collected from the pre-GAC sampling port.

A8 Training and Certificates

Required training and licenses:

Title/Job	Name	Training Required	Date training received	Type of License	License Number
Project Manager/Contractor	William C. McClary, P.G.			Certified Contractor	67
		Professional Geologist	2004	P.G.	2386
		OSHA 8hr Refresher	May 16, 2013		
Field Staff	Robbie Robertson	OSHA 8hr Refresher	August 14, 2012		
Field Staff	Corey Racer	OSHA 40hr	October 12, 2012		
Field Staff	Lee Stogner	OSHA 40hr	March 1, 2013		
Field Staff	Matt Gaylord	OSHA 40hr	March 29, 2013		
Field Staff	Jamie Bateman	OSHA 8hr Refresher	May 16, 2013		
Lab Manager	Daniel Wright	BS Biology	June 1986	Lab Certification	SC 32010

Table 3A Required Training and Licenses

William C. McClary of Emerald, Inc. is responsible to ensuring that personnel participating in this project receive the proper training. All training records will be stored in the following location: 2520 Tahoe Drive, Sumter, SC.

It is understood that training records will be produced if requested by SC DHEC.

The Following Laboratory(ies) will be used for this Project: Shealy Environmental Services, Inc.

Commercial Lab(s)

Full Name of the Laboratory Shealy Environmental Services, Inc.
Name of Lab Director Daniel Wright
SC DHEC Certification Number 32010
Parameters this Lab will analyze for this project:

BTEX, Naphthalene, MTBE, 1,2-DCA and Oxygenates by EPA Method 8260B
EDB by EPA Method 8011
(Low detection limits will be requested)

Please note: SC DHEC may require that the contractor submit some or all of the Laboratory's SOPs as part of this QAPP.

A9 Documents and Records

Personnel will receive the most current version of the QAPP Addendum via: (Check all that apply)

__X__US Mail ____Courier __X__Hand delivered

Record	Produced By	Hardcopy/ Electronic	Storage Location For how long?	Archival
Instrument Raw Data	Target Thermospec, or Iteva Software	Hardcopy and Electronic	Hardcopy: offsite storage for 7 years; Electronic: Two external storage device backups for 10 years	Yes
Final Report	LIMS	Electronic	Two external storage device backups for 10 years	Yes
Monitoring Report	Emerald, Inc.	Hardcopy/Electronic	At Office/minimum 5 years	Electronic Copy
Field Work	Emerald, Inc.	Hardcopy	At Office/minimum 5 years	5 years after project completion

Table 4A Record Identification, Storage, and Disposal

Section B Measurement/Data Acquisition

B1 Sampling Process/Experimental Design

Item	Start Date	End Date	Comments
QAPP Preparation	5/15/13	5/20/13	
QAPP Approval	5/20/13	5/24/13	Approximately one week turnaround
Sample Collection	6/3/13	6/3/13	
Samples Delivered to Laboratory	6/3/13	6/4/13	Delivered by Emerald, Inc. personnel or Shealy courier pickup from Emerald office
Samples are Analyzed by Laboratory	6/4/13	6/11/13	Analyzed under DHEC PO# 4600254190
Report submitted to SCDHEC project manager	6/11/13		

Table 5A Sampling Activities

B2 Sampling Methods

Please note: The contractor must follow sampling protocols as given in the UST QAPP.

***Estimate* the number of samples of each matrix that are expected to be collected:**

Water Supply Well Samples	4
Duplicate Samples	2
Field Blanks	1
Trip Blanks	1 (1 per cooler)
Total number of Water samples	8

The samples will be (check as many as apply): X Homogenized ____Split

If any of the above are circled please indicate how will it be done and the equipment needed.

For the sampling matrices indicated above, please describe how samples will be collected and the equipment needed.
The water supply well samples will be collected from the pre and post GAC sampling ports prior to the GAC filter change. The samples will be collected after opening the spigot for approximately 10 minutes or until the well pump turns on. Samples will be collected by allowing the well water to pour directly into laboratory supplied sampling containers. The duplicate sample will be collected from the pre GAC sampling port.

Will Sampling Equipment have to be cleaned and decontaminated or is everything disposable?

Nitrile gloves used during sample collection will be disposed of properly following collection of each sample.

If sampling equipment must be cleaned please give a detailed description of how this is done and the disposal of by-products from the cleaning and decontamination.

Not applicable.

Identify any equipment and support facilities needed. This may include such things as Fed-ex to ship the samples, a Geoprobe, field analysis done by another contractor (who must be certified), and electricity to run sampling equipment.
Samples will be placed in laboratory supplied coolers filled with wet ice obtained from the Emerald, Inc. office. Samples will be transported to Shealy Environmental Services, Inc. in West Columbia, SC by a Shealy Environmental, Inc. courier or Emerald, Inc. personnel.

Address the actions to be taken when problems occur in the field, and the person responsible for taking corrective action and how the corrective action will be documented.

Failure	Response	Documentation	Individual Responsible
Water Supply Well not functional	Contact William McClary and attempt to contact well owner. If well owner not available contact SCDHEC project manager.	Document possible problem in field notes and report	William C. McClary

Table 6A Field Corrective Action

B3 Sample Handling and Custody

1. ***How will the samples get from the Site to the Lab to ensure holding requirements are met?***
After sample collection, samples will be placed in an ice filled cooler for transport to the laboratory. If possible, Emerald, Inc. personnel will deliver the samples to the laboratory on the day of sample collection. If delivery is not possible, a courier pickup will be scheduled for the following day.

2. ***How will the contactors cool the samples and keep the samples cool?***
Wet ice, obtained from the Emerald, Inc. office will be used to maintain the proper sample temperatures. Ice levels will be monitored throughout the day to ensure proper sample temperatures are maintained.

3. ***How will the lab determine the temperature of the samples upon receipt? Will they be using a temperature blank?***
A calibrated thermometer and temperature blank will be used to document sample temperature. The temperature blank is immediately checked by the sample receiving technician upon arrival at the laboratory.

4. ***Where will the samples be stored in the Lab once they are received?***
All samples are stored in clean refrigeration units monitored and maintained at 4 degrees C + or – 2 degrees. Volatile organic samples are stored separately from all other samples.

5. ***Describe the chain of custody procedure and attach a copy of each chain of custody that will be used. If a Chain of Custody SOP exists from the Lab and the Contractor is willing to adhere to it, then this may be attached.***
A chain of custody (COC) will be filled out for each sampling event. COC will be reviewed by the Emerald, Inc. project manager and signed by Emerald, Inc. field staff. Shealy Environmental lab staff will sign the COC at time physical transfer of samples occurs to courier. Following COC signature by the Shealy representative, Emerald, Inc. will retain one copy of the COC for our records. Shealy uses the following COC procedures to protect sample integrity following pickup by their courier: A full time Sample Receiving Technician receives all samples and completes a Sample Receipt Checklist (SRC), which will identify any anomalies, if any exist the Sample Receiving Technician or Project Manager must resolve the deviation internally and/or notify the client to resolve the anomaly.

B4 Analytical Methods

1. ***Identify the SOPs which will be used to analyze the samples, the method which the SOP references and the equipment or instrumentation that is needed:***

Parameter	SOP ID*	Method Referenced	Equipment	Comments
BTEX+Naph+MTBE +Oxygenates	S-VO-002	8260B	GC/MS	
PAH's	S-SV-021	8270D	GC/MS	
EDB	S-SV-012	8011	GC	
Lead,T.	S-IM-022	6010C	ICP	

Table 7A Analytical SOPs and Referenced Methods

- **This can be a full name of a SOP, an abbreviation, or a number. In the latter two cases, the abbreviation or number must be associated with the full name of the SOP. See also Table 8A SOP Abbreviation Key.**

Abbreviation	Lab Identification of this SOP	Full Name of the SOP
S-VO-002	S-VO-002	GC/MS VOLATILES ANALYSIS BASED ON EPA METHODS 8260B AND 624 PREPARED BY EPA METHODS 5030B, 5035 AND 3585
S-SV-021	S-SV-021	GC/MS ANALYSIS BASED ON EPA METHOD 8270D PREPARED BY EPA METHODS 3520C, 3550C AND 3580A
S-SV-012	S-SV-012	GC/ECD ANALYSIS OF EDB AND DBCP BASED ON METHOD 8011 & 504.1
S-IM-022	S-IM-022	INDUCTIVELY COUPLED PLASMA ATOMIC EMISSION SPECTROSCOPY-PECTROMETRIC METHOD for TRACE ELEMENT ANALYSES METHOD 6010C

Table 8A SOP Abbreviation Key

2. Identify procedures to follow when failures occur, identify the individual responsible for corrective action and appropriate documentation:

All laboratory corrective actions are outlined in Shealy Environmental Services QAMP (Quality Assurance Management Plan), revision 9 dated 3/18/11.

Failure	Response	Documented Where?	Individual Responsible
COC or Sample Receiving issues	Call Client	Sample Receiving Checklist (SRC)	PM – Kelly Maberry kmaberry@shealylab.com
Analytical errors	Corrective Action Form (CAF)	CAF filled out by PM	Lab Director –Daniel Wright dwright@shealylab.com
QA/QC Failure	Corrective Action Form (CAF)	CAF filled out by PM	Lab Director –Daniel Wright dwright@shealylab.com QA/QC Officer – Jami Savje Jsavje@shealylab.com
On time delivery	Corrective Action Form (CAF)	CAF filled out by PM	Lab Director –Daniel Wright dwright@shealylab.com QA/QC Officer – Jami Savje Jsavje@shealylab.com
Sample accident in Transit	Contact Emerald, Inc. and SCDHEC Project Manager	Field notes and report	William C. McClary cmcclary@emeraldinc-us.com

Table 9A Corrective Action Procedures

3. Identify sample disposal procedures.

Analysis	Matrix	Schedule for disposal	Method for disposal
BTEX+Naph+MTBE +Oxygenates	Waters/Soils	Six Weeks	Tested for Hazardous Constituents and disposed as Hazardous or non-Hazardous waste.
PAH's	Waters/Soils	Six Weeks	Tested for Hazardous Constituents and disposed as Hazardous or non-Hazardous waste.
EDB	Waters/Soils	Six Weeks	Tested for Hazardous Constituents and disposed as Hazardous or non-Hazardous waste.
Lead	Waters/Soils	Six Weeks	Tested for Hazardous Constituents and disposed as Hazardous or non-Hazardous waste.

Table 10A Sample Disposal

4. Provide SOPs for the Kerr Method or the Ferrous Iron Method if these are parameters for this study. This can be attached or written here. If attached please note that it is an attachment and where it is located (if applicable).

B5 Quality Control Requirements:

All QC will follow the requirements laid out in Section B5 of the UST Programmatic QAPP.

B6 Field Instrument and Equipment Testing, Inspection and Maintenance

1. Identify field and laboratory equipment needing periodic maintenance, the schedule for this, and the person responsible. Not the availability and location of spare parts.

Instrument	Serial Number	Type of Maintenance	Frequency	Parts needed/Location	Person responsible
Volatiles Mass Spec	ALL	Change traps, clean ion source, replace filaments	Periodic	Laboratory	MSV Analyst
Semivolatile Mass Specc	ALL	Injection port maintenance, ion source maintenance, column replacement	Periodic	Laboratory	MSSV Analyst
ECD GC	ALL	Injection port maintenance, column replacement	Periodic	Laboratory	GC Analyst
Dionex IC	ALL	Replace auto sampler filter, tubing, line filter, sample Line and Waste Line, as needed. Check Reagent levels, flow rate, waste line.	Periodic	Laboratory	IC Analyst
ICP	ALL	Clean Sample introduction system , auto sampler, torch, Change spray chamber, torch tubing, tubing	Periodic	Laboratory	ICP Analyst

Table 11A Instrument and Equipment Maintenance

2. Identify the testing criteria for each lab or field instrument that is used to ensure the equipment is performing properly. Indicate how deficiencies, if found, will be resolved, re-inspections performed, and effectiveness of corrective action determined and documented. Give the person responsible for this.

Instrument/Equipment & Serial Number	Type of Inspection	Requirement	Individual Responsible	Resolution of Deficiencies
Volatiles Mass Spec	Daily calibration check	Method Requirements	MSV Analyst	Recalibration or instrument maintenance
Semi-volatiles Mass Spec	Daily calibration check	Method Requirements	MSSV Analyst	Recalibration or instrument maintenance
ECD GC	Daily calibration check	Method Requirements	GC Analyst	Recalibration or instrument maintenance
ICP	Daily calibration check	Method Requirements	ICP Analyst	Recalibration or instrument maintenance
Flow Injection Analysis – Lachat 8000	Daily and continuing calibration check	See calibration criteria	INM Analyst	Recalibration or instrument maintenance

Table 12A Instrument and Equipment Inspection

B7 Instrument Calibration and Frequency

1. Identify equipment, tools, and instruments for field or lab work that should be calibrated and the frequency.
2. Describe how the calibrations should be performed and documented, indicating test criteria and standards or certified equipment.
3. Identify how deficiencies should be resolved and documented. Identify the person responsible for corrective action.

Instrument	Calibration Procedure	Frequency of Calibration	Acceptance Criteria	Corrective Action (CA)	Person Responsible for CA	SOP Reference*
Volatiles Mass Spec	Minimum of 5 calibration standards for all compounds	When indicated by continuous calibration verification standard	Method Criteria	Detailed in SOP	MSV Analyst	S-VO-002
Semi-volatile Mass Spec	Minimum of 5 calibration standards for all compounds	When indicated by calibration verification standard	Method Criteria	Detailed in SOP	MSSV Analyst	S-SV-021
GC ECD	Minimum of 5 calibration standards for all compounds	When indicated by calibration verification standard	Method Criteria	Detailed in SOP	GC Analyst	S-SV-012
Dionex IC	Minimum of 5 calibration standards for all compounds	When indicated by calibration verification standard	Method Criteria	Detailed in SOP	IC Analyst	S-IN-010

Instrument	Calibration Procedure	Frequency of Calibration	Acceptance Criteria	Corrective Action (CA)	Person Responsible for CA	SOP Reference*
ICP	Minimum of 3 calibration standards for all compounds	When indicated by calibration verification standard	Method Criteria	Detailed in SOP	ICP Analyst	S-IM-022

Table 13A Instrument Calibration Criteria and Corrective Action

*** This can be a full name of a SOP, an abbreviation, or a number. In the latter two cases, the abbreviation or number must be associated with the full name of the SOP. See also Table 8A SOP Abbreviation Key.**

B8 Inspection/Acceptance Requirements for Supplies and Consumables

1. Identify critical supplies and consumables for field and laboratory, noting supply source, acceptance criteria, and procedures for tracking, storing and retrieving these materials.
2. Identify the individual(s) responsible for this.

Consumables are things like disposable bailers, nitrile gloves, sample containers, and so on.

Item	Vendor	Acceptance criteria	Handling/Storage Conditions	Person responsible for inspection and tracking
Laboratory Chemicals	Fisher,VWR	Certificates of analysis and laboratory testing	Laboratory storage	Receiving and laboratory personnel
Laboratory standards	O2Si, Restek, High Purity, VHG, Supelco	Certificates of analysis and laboratory verifications	Vendor specific storage conditions	Laboratory Analysts
Sample Containers	Daniels Scientific, QEC	Certificates of analysis and laboratory testing	Bottle storage area	Bottle Room Personnel/ B. Fedorick, Field Staff
Sample Containers	Shealy Environmental Services	Certificates of analysis and laboratory testing	Warehouse/dry and cool	William C. McClary
Nitrile Gloves	Preferred Pump	Unopened box, no holes	Laboratory Storage	Bottle Room Personnel/ B. Fedorick/Laboratory Analysts
40 mL HCL preserved amber vials	QEC	Custody seal intact	Bottle Storage Area	Bottle Room Personnel/ B. Fedorick
Coolers	Shealy Environmental Services	Intact	Warehouse/dry and cool	William C. McClary
Nitrile Gloves	Preferred Pump	Unopened box, no holes	Warehouse	William C. McClary

Table 14A List of Consumables and Acceptance Criteria

B9 Data Acquisition Requirements (Non-Direct Measurements)

This section discusses data that was not generated by this project. This includes historical data, information Tax Maps, computer data bases, weather data from the National Weather Service, Scientific Literature, and so on. This discussion must include information about why this data is usable for this project.

1. Identify data sources, for example, computer databases or literature files, or models that should be accessed or used.
2. Describe the intended use of this information and the rationale for their selection, i.e., its relevance to project.
3. Indicate the acceptance criteria for these data sources and/or models.

Data Source	Used for	Justification for use in this project	Comments
SCDHEC Directive	Determining scope of work	Determining scope of work	Information includes site and address where samples are to be collected

Table 15A Non-Direct Measurements

4. Identify key resources/support facilities needed. Not Applicable.

B10 Data Management

1. Describe the data management scheme from field to final use and storage.

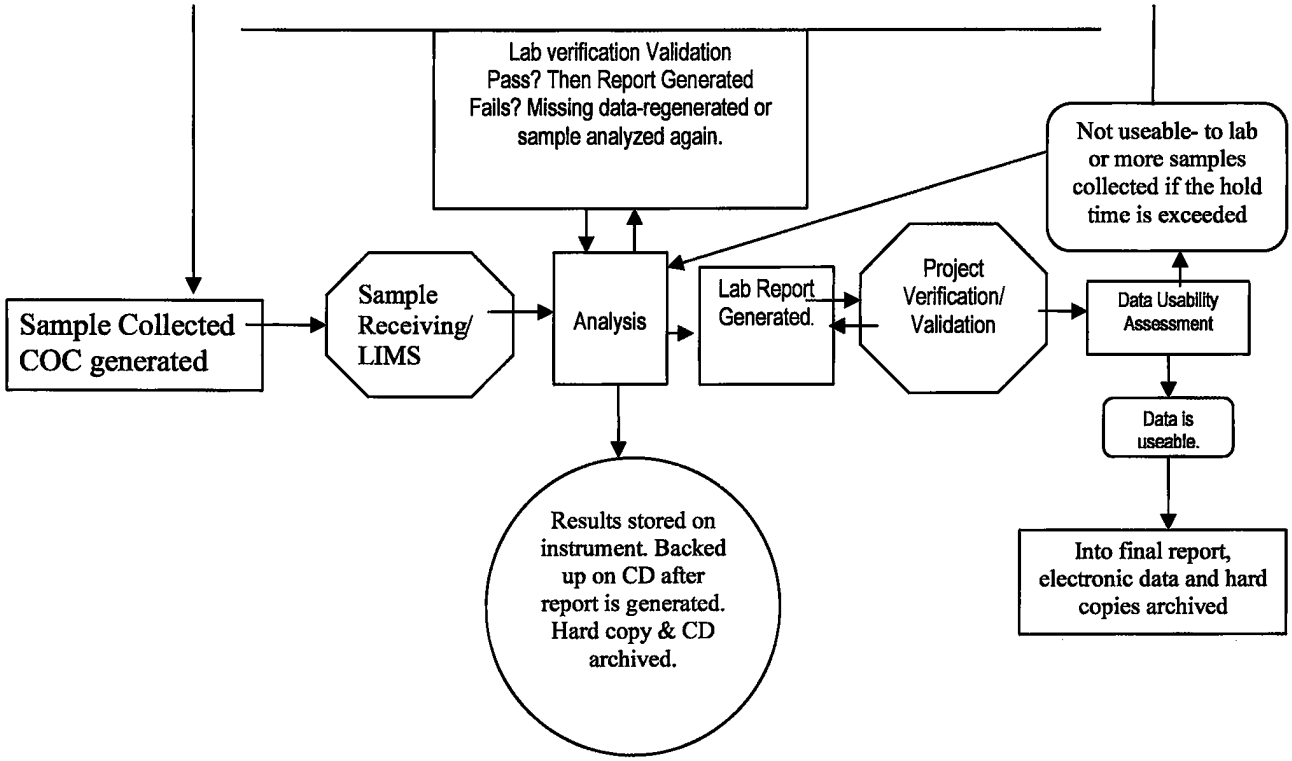

Figure 2 Example of a Data Management Scheme

2. How does the lab and field staff ensure that no unauthorized changes are made to the chain of custody, sampling notebooks, laboratory notebooks and computer records?

The laboratory maintains comprehensive Quality Control and Training Programs. All sample receipt data, sample log-in, and analytical data is peer reviewed, including review for inappropriate changes. Data management, review procedures, and Quality Systems Program are documented in the laboratory's Quality Manual and Standard Operating Procedures. The Quality Assurance Department oversees adherence to and review of these programs.

Emerald, Inc. field notes will be written in pencil on dedicated field sheets documenting field activities. Any changes to field notes will be changed with a single line strikeout and must be initialed and dated by the Emerald, Inc. personnel with any comments noted in the comments section of the field sheet. Field notes will be filed in the appropriate folder upon return from field activities and archived in filing cabinets. Data obtained from field activities (laboratory reports and final reports) will be saved on the company server which is backed up on a weekly basis to preserve data. The project QA/QC officer will be responsible for oversight

3. How does the lab ensure that there are no errors in samples records including times when sample information is compiled, data calculated and/or transmitted?

Sample data acquisition software is reviewed periodically. The LIMS database is backed up daily and is able to be restored in the event of a system failure. These procedures are documented in the laboratory SOP S-AD-003, LIMS. The IT Manager is responsible for these systems and procedures.

4. How will the data be archived once the report is produced? How can it be retrieved? (This applies to both electronic and hard copies).

Laboratory Hardcopy data stored offsite is logged, maintained, and archived by the Quality Assurance Department. Laboratory Electronic Data Reports are maintained through IT back up under the responsibility of the IT Systems Manager.

Emerald, Inc. will archive field notes and paper copies in an on-site filing cabinet. Paper copies will be stored for a minimum of five years. Electronic copies of reports will be stored on the Emerald, Inc. server for future retrieval. Electronic copies will be maintained for a minimum of five years.

Section C Assessment and Oversight

C1 Assessment and Response Actions

1. The Contractor is supposed to observe field personnel daily during sampling activities to ensure samples are collected and handled properly and report problems to DHEC within 24 hours. Please state who is responsible for doing this and what observations will be made. Will this person have the authority to stop work if severe problems are seen?

Field audits will be conducted on a regular basis by Ronny Lowder Project QA officer, to ensure field personnel adherence to the QAPP. If problems are identified during the field audit, Ronny Lowder has the authority to suspend field activities until the problems are addressed. Audit results will be reviewed by William McClary, Project Manager and Ronny Lowder, Project QA officer.

2. The SCDHEC UST QAPP states that the Lab will receive an Offsite Technical System Audit. For this project, what assessments will be done on the Commercial Lab(s) that are being used—other than their certification audit? When or how often are these done? Who will the results be given to and who has the ability to stop work if problems are severe?

The laboratory participates in annual Proficiency Testing through an approved vendor, Environmental Resources Associates. Proficiency Testing results are provided to the Office of Environmental Laboratory Certification. Laboratory reports will include full QA/QC data and the data will be reviewed for quality control issues. Quality issues will be brought to the attention of the Laboratory Director for explanation and resolution. The Emerald, Inc. Project QA officer and Project Manager will have authority to stop work and, upon approval from SCDHEC, chose an alternate laboratory.

C2 Reports to Management

See the SC DHEC UST Programmatic QAPP (UST Master QAPP).

Section D Data Validation and Usability

All data produced during these work activities will be validated by Ronny Lowder of Emerald, Inc. before submission to SCDHEC. See the SC DHEC UST Programmatic QAPP (UST Master QAPP).

Dear Mr. Lowder:

Under the terms and conditions of the referenced contract, GAC removal has been approved for the Hill and Wiggam Residences residence located at 3049 and 3043 Clover Circle. The contact people are Tony Hill (803) 684-5425 and Gary Wiggam (803) 628-5464 or Nicolette Wiggam (704) 281-7719. This facility has been assigned an individual Cost Agreement (CA) number as listed above. Please reference the **CA number and Purchase Order #4600254190** on the invoice submitted for payment. Emerald Inc. should complete the work in accordance with the contract specifications.

If you have any questions or need further assistance, please contact me at (803) 896-6397 or by email at thomadl@dhec.sc.gov.

Sincerely,

Debra L Thoma

Dear Mr. Lowder:

Under the terms and conditions of the referenced contract, collection of pre- and post- GAC unit groundwater samples has been approved for the McCarter residence, 3032 Clover Cir and the Jeter residence, 3040 Clover Cir. The contact people are Michael McCarter (803) and Christopher Jeter (803) 628-5914. The pre and post GAC unit groundwater samples should be collected and submitted to Shealy Environmental Services, Inc. for analysis.

This facility has been assigned individual Cost Agreement (CA) numbers as listed above. Please reference the **cost agreement number and the purchase order number** on the invoice submitted for payment for the sampling. Emerald Inc. should complete the work in accordance with the contract specifications and established schedule. The work must be conducted as outlined in the UST Quality Assurance Program Plan (QAPP) and in compliance with all applicable regulation. A GAC Unit Installation and Maintenance record should be submitted within thirty (30) days from the date of Notice to Proceed.

If you have any questions, please contact me at (803) 896-6397 or via e-mail at thomadl@dhec.sc.gov.

Sincerely,

Re: Underground Injection Control Permit #563M
Smith's Grocery Site 09322
York County

Dear Ms. Smith:

Enclosed is a Permit to Operate eighteen (18) Class VA-I (Aquifer Remediation) injection wells at the Smith's Grocery Site, York County, SC.

Notice of Appeal Procedure

This decision of the S.C. Department of Health and Environmental Control (Department) becomes the final agency decision 15 days after notice of the decision has been mailed to the applicant or respondent, unless a written request for final review is filed with the Department by the applicant, permittee, licensee, or affected person.

An applicant, permittee, licensee, or affected person who wishes to appeal this decision must file a written request for final review with the Clerk of the Board at the following address or by facsimile at 803-898-3323.

Clerk of the Board
SC DHEC
2600 Bull Street
Columbia, SC 29201

The request for final review should include the following:
- the grounds on which the Department's decision is challenged and the specific changes sought in the decision
- a statement of any significant issues or factors the Board should consider in deciding how to handle the matter
- a copy of the Department's decision or action under review

In order to be timely, a request for final review must be received by the Clerk of the Board within 15 days after notice of the decision has been mailed to the applicant or respondent. If the 15th day occurs on a weekend or State holiday, the request is due to be received by the Clerk of the Board on the next working day. The request for final review must be received by the Clerk of the Board by 5:00 p.m. on the date it is due.

If a timely request for final review is filed with the Clerk of the Board, the Clerk will provide additional information regarding procedures.

The Board of Health and Environmental Control has 60 days from the date of receipt of a request for final review to conduct a final review conference. The conference may be conducted by the Board, its designee, or a committee of three members of the Board appointed by the chair.

UST DOCKET 10

If a final review conference is not conducted within 60 days, the Department decision becomes the final agency decision, and a party may request a contested case hearing before the Administrative Law Court within 30 days after the deadline for the final review conference.

The above information is provided as a courtesy; parties are responsible for complying with all applicable legal requirements.

If you have any questions, please call Christopher Wargo at (803) 898-3799.

Sincerely,

Christopher Wargo, Hydrogeologist

Injection Well Operating Approval

for

Class II, III, and V.A. Injection Well(s)

Permit #563M

Date of Issue: May 3, 2007

In accordance with the provisions of Title 48, Chapter 1, South Carolina Code of Laws, 1976, as amended, and pursuant to receiving a Permit to Operate eighteen (18) Class VA-I (Aquifer Remediation) injection wells, authorization is granted to Lois Smith to operate eighteen (18) Class VA-I (Aquifer Remediation) injection wells located at the Smith's Grocery Site, York County, SC, and are subject to the attached provisos noted for the operator.

The Class VA-I injection wells are two (2) inches in diameter and approximately thirty to forty (30-40) feet deep

Pursuant to Title 48, Chapter 1, South Carolina Code of Laws, 1976, as amended, this authorization may be rescinded if these injection wells should, at any time, contaminate, pollute, or otherwise adversely affect other water in the vicinity or for any other conditions contained in R61-87, Title 48, Chapter 1, South Carolina Code of Laws, 1976, as amended.

Expires: May 3, 2010

Date May 3, 2007

Rob Devlin, Manager

Provisions to the Injection Well Operating Approval
for
Underground Injection Well Permit #563M
Smith's Grocery
York County, S.C.
May 3, 2007

1) Construction of new or abandonment of existing wells must be reported to the Department within thirty (30) days of completion.

2) Only Potassium Triple Salt (PTS) as described in the corrective action plan may be injected into the subsurface at the eighteen (18) Class VA-I (Aquifer Remediation) injection wells. Any changes in the system operation other than as presented in the UIC Permit Application must be reported to the Department prior to implementation.

LIMITATIONS

This investigation is intended to be a non-biased assessment of on-site environmental conditions proximate to the location of the former UST system. Subsurface investigative methodologies are in accordance with all applicable state and federal regulatory requirements. The information presented in this report is based upon site-specific observations, generally accepted geological practices, and analytical results for environmental samples collected at the time of the field investigation. All data is believed to represent subsurface conditions at the facility, however, data may not be completely representative of all subsurface conditions.

This report has been prepared under the guidance of a Licensed Geologist registered in South Carolina to meet the requirements of the South Carolina Department of Health and Environmental Control. The information and conclusions expressed in this report are based upon normal standards of the profession and limited to information available at this time. Chemical analyses of the samples associated with this report were performed by a subcontracted, independent, and certified laboratory. All data have been reviewed for accuracy and, excepting obvious errors, have been accepted as correct. SEI Environmental, Inc. reserves the right to revise estimates of performances as required by changes in the data supplied by AccuTest Laboratories.

1.0 INTRODUCTION

Smith's Grocery is a convenience and retail fuel store located at 3176 Charlotte Highway (SC Highway 49) in York, York County, South Carolina. Figure 1 in Appendix A is a portion of the United States Geological Survey (USGS) 7.5-minute topographical quadrangle map identifying the location of the site.

The following is a brief summary of recent events occurring at the site:

- May 10, 2004 – Groundwater Sampling Event
- August 17, 2004 – Groundwater Sampling Event
- January 14, 2005 – Groundwater Sampling Event
- June 29, 2005 – Groundwater Sampling Event
- September 16, 2005 – Groundwater Sampling Event
- February 28, 2006 – Groundwater Sampling Event
- June 21, 2006 – Groundwater Sampling Event
- October 4, 2006 – Groundwater Sampling Event
- December 4, 2006 – Groundwater Sampling Event
- March 4, 2007 – Groundwater Sampling Event

On March 28, 2007 fifteen groundwater monitoring wells and four water supply wells were sampled in accordance with the requirements of the PFP contract. This report provides details of the groundwater sampling event.

2.0 FIELD MEASUREMENTS AND SAMPLING

2.1 Groundwater Sampling

On March 28, 2007, groundwater samples were collected from fifteen (MW-1, MW-2, MW-6 through MW-8, MW-10 through MW-15, MW-17, and TW-1 through TW-3) of twenty-three existing groundwater monitoring wells. Six (MW-3 through MW-5, MW-9, MW-16, and MW-20) have been removed from the sampling schedule.

Prior to sampling, groundwater monitoring wells were gauged utilizing an oil-water interface probe to measure depth to groundwater, and to detect any free product present. The depth to groundwater measurement is used to calculate the groundwater elevation used in determining the current groundwater potentiometric surface, along with hydraulic gradient, and groundwater flow direction. Figure 2 in Appendix A is a site map depicting monitoring well locations.

Free product was not currently and has not historically been detected in any of the monitoring wells. Figure 3 in Appendix A presents a groundwater potentiometric map for the current sampling event. Table 1 in Appendix B summarizes groundwater measurement data.

Representative groundwater samples were collected utilizing new, disposable bailers. Samples were placed in laboratory supplied containers, maintained at 4° Celsius, and shipped via FedEx under chain-of-custody to AccuTest, Inc. Laboratories in Orlando, Florida. The groundwater samples were analyzed by EPA Methods 8260B (for benzene, toluene, ethylbenzene, xylenes (BTEX), methyl-tert-butyl-ether (MTBE), and naphthalene), 8011 (for ethylene dibromide (EDB)), and 3030C for lead. Appendix C contains Field Data Information Sheets for Groundwater Sampling.

2.2 Water Supply Well Sampling

On March 28, 2007, groundwater samples were collected from four (Crook, Smith, Swift and Hill) water supply wells. Three water supply wells (Crook, Hill, and Swift) are fitted with granular activated carbon (GAC) filters. As such, samples were collected from the Swift and Hill wells before (pre) and after (post) the GAC filters. The Crook well was not sampled in this manner during the current sampling event. Prior to sampling, the water was allowed to run for at least ten minutes. The samples were placed into laboratory supplied containers, maintained at 4° Celsius, and shipped via FedEx under chain-of-custody to AccuTest, Inc. Laboratories in Orlando, Florida. The groundwater samples were analyzed by EPA Methods 8260B (for benzene, toluene, ethylbenzene, xylenes (BTEX), methyl-tert-butyl-ether (MTBE), and naphthalene), 8011 (for ethylene dibromide (EDB)), and 3030C for lead.

3.0 LABORATORY ANALYTICAL RESULTS

3.1 Groundwater Analytical Results

Chemicals of Concern (CoC) were detected in ten (MW-1, MW-2, MW-6, MW-7, MW-8, MW-10, MW-11, MW-12, MW-17 and TW-2) of the seventeen monitoring wells sampled at concentrations exceeding their respective SSTL. Figure 4 in Appendix A is a site map presenting monitoring well location and their CoC concentrations. Table 2 in Appendix B summarizes historical groundwater analytical results. A copy of the laboratory report and completed chain-of-custody form is included in Appendix C.

3.2 Water Supply Well Analytical Results

CoC were detected in two (Swift and Hill) of the pre-GAC filter samples collected at concentrations exceeding their respective SSTLs. The post-GAC filter sample for the Swift water supply well exceeded SSTLs for benzene. Figure 4 in Appendix A is a site map presenting water supply well locations and their CoC concentrations. Table 2 in Appendix B summarizes historical water supply well analytical results. A copy of the laboratory report and completed chain-of-custody form is included in Appendix C.

3.3 Site Specific Target Levels

Site Specific Target Levels (SSTLs) have been designated for sixteen (MW-1, MW-2, MW-6 through MW-8, MW-10 through MW-15, MW-17 through MW-19, TW-2, and TW-3) monitoring wells and all four (Crook, Swift, Hill, and Smith) water supply wells. For three (Crook, Swift, and Hill) water supply wells with GAC filters, the SSTLs apply to the pre-GAC filter samples. Table 4 in Appendix B summarizes SSTL information.

4.0 REMEDIATION SYSTEM EFFECTIVENESS

In awarding the Pay-For-Performance (PFP) site remediation contract, the South Carolina Department of Health and Environmental Control (SCDHEC) set remediation goals for this site via site specific target levels (SSTLs). The monitoring wells have individual target

concentrations for seven (benzene, toluene, ethylbenzene, xylenes, MTBE, naphthalene, lead, and EDB) identified chemicals of concern (CoC).

Remediation system effectiveness can be calculated comparing the initial January 6, 2003, CoC concentrations that exceeded the SSTLs with the current CoC concentrations that exceeded the SSTLs. Monitoring well MW-1 was not located during the current sampling event. Consequently, SSTL data for monitoring well MW-1 from the September 16, 2005, groundwater sampling event was utilized for the concentration reduction calculation. The formula is a follows:

$$\left[\frac{\text{[01/06/03 Sample Concentration Above SSTL]} - \text{[Current Sample Concentration Above SSTL]}}{\text{[01/06/03 Sample Concentration Above SSTL]}}\right] * 100 = \%\ \text{Reduction}$$

Using the current analytical results, the concentration reduction is %.

5.0 CONCLUSIONS

Free product was not detected. CoC were detected in eight monitoring wells and two water supply wells above their respective SSTLs. The percent concentration reduction has been calculated at 29.23%.

SEI Environmental, Inc recommends continuing the quarterly monitoring to evaluate the continued reduction of chemicals of concern in the monitoring wells on site. The next sampling event will occur in June 2007. SEI is currently evaluating alternative methods of active corrective action to be implemented at the site in order to proceed with the remediation effort.

TOTAL SSTL MASS		117.00	10,972.00	7,769.00	80,330.00	503.00	391.00	199.00	63.33	100,082.00
INITIAL MASS ABOVE SSTL										217,876.56
CURRENT MASS ABOVE SSTL										154,196.611
PERCENT TOTAL MASS REDUCTION ABOVE SSTL										29.228

µg/l - micrograms per liter
ND = Not Detected
NE = Not Established
NA = Not Analyzed
RBSL = Risk Based Screen Level
SSTL = Site Specific Target Levels
Bold denotes concentrations over their respective SSTL or RBSL
* = 09/16/05 Sampling Event SSTL Data Utilized For Reduction Calculation

- Concentration Reduction Calculation is as follows:

$$\frac{\text{[Initial Sample Concentration Above SSTL]} - \text{[Subsequent Sample Concentration Above SSTL]}}{\text{[Initial Sample Concentration Above SSTL]}} \times 100 = \%\ \text{Reduction}$$

Re: **CORECTIVE ACTION PLAN ADDENDUM**
Smith Grocery
SC Highway 49
York, York County, South Carolina
Facility ID: 09322

Dear Ms Thoma;

SEI proposes changing the reagent in the injection system for the above referenced site from hydrogen peroxide to Potassium Triple Salt (PTS). This will be a gravity fed system. The system will utilize the existing injection wells at the site. Below is a summary of properties and nature of the PTS injection solution.

Chemistry Overview

Chemical oxidation as a groundwater remediation methodology has been in use for several years at sites across the country, and is an accepted technology. In-situ chemical oxidation is based on the delivery of a chemical oxidant to contaminated soil and/or groundwater to effectively remove contaminants by converting them to innocuous compounds commonly found in nature – in this case water, carbon dioxide, and low-level potassium salts. The primary oxidants that have been used historically are hydrogen peroxide and potassium permanganate.

SEI believes that the proprietary oxidant PTS provided by Arrius Environmental Inc. has both the effective oxidation strength and residence time to saturate and effectively remediate the site.

RECEIVED
JAN 16 2007
UNDERGROUND STORAGE
TANK PROGRAM

A chemical comparison of the proprietary oxidizer, PTS, to potassium permanganate is included in Appendix A. Briefly, PTS is an oxidizer that is 10 times more effective than potassium permanganate, has a solubility of 26%, and most importantly lasts for 14 months in a groundwater environment.

Should you need additional information or have any questions, please feel free to call us at (919) 832-2535.

Sincerely,

SEI ENVIRONMENTAL, INC.

ATTACHMENT A

COMPARISON OF OXIDANT CHEMICAL PROPERTIES

During the past 15 years there have only been two widely available in-situ chemical oxidation treatment (groundwater chemical injection remediation) options:

- Hydrogen Peroxide (commonly in the form of Fenton's Reagent)
- Potassium Permanganate

Potassium Triple Salt (PTS) is a potassium based oxidizer that has superior chemical properties to either of the above oxidants. PTS is a patent pending, proprietary technology developed by and Mark Martin. A comparison of PTS to potassium permanganate and hydrogen peroxide is provided in the following sections.

Potassium Permanganate vs. PTS

Potassium permanganate is currently the most widely used material for chemical oxidation. In comparing the solubility of potassium permanganate to Potassium Triple Salt (PTS), potassium permanganate has a maximum solubility of 6% and PTS has a solubility of 25% at 20°C. PTS delivers 4.1 times more oxidizing agent to the contamination than potassium permanganate. A summary table of key chemical properties is provided below.

Chemical / Physical Properties	Potassium Permanganate	Potassium Triple Salt
Density (g/cm^3)	2.7	1.15
Solubility at (20°C g/l)	65	256
Standard Electrode Potential (E^o) V	+0.59	-1.44
Thermal Conductivity (Btu ft/h ft^2 F)	0.0782	0.093

The most important difference between PTS and potassium permanganate is the Standard Electrode Potential. The Standard Electrode Potential is the ability of an oxidizer / reducing agent to decompose organic or inorganic matter. The strength of potassium permanganate is 0.59 and the strength of PTS is 1.44. When we compare the decomposition strength of PTS to potassium permanganate, PTS is 2.44 times more reactive than potassium permanganate.

When comparing the actual strength of reactive agent that can be delivered by PTS relative to potassium permanganate, the superior solubility and reaction strength of PTS means that PTS delivers **10** times more reactive strength to the contamination. PTS lasts

RECEIVED
JAN 16 20
UNDERGROUND STORAGE
TANK PROGRAM

for 14 months in a groundwater environment. Potassium permanganate last for approximately 6 months in a groundwater environment. This means that PTS can travel farther distances than potassium permanganates, thereby requiring fewer wells and less expense. PTS will not clog fractures in groundwater. Potassium permanganate produces manganese dioxide. Manganese dioxide adheres to rock and can clog fractures, thereby trapping contaminants and failing to decompose them.

PTS has other advantages; it has specific gravity that is almost the same as groundwater, while potassium permanganate is nearly three times heavier than groundwater. This means that PTS will track with the groundwater and contaminant plume better than potassium permanganate.

Another advantage is that PTS has a low thermal conductivity and therefore just like potassium permanganate does not pose a risk for surface failure due to violent reactivity.

Equally important is the fact that PTS will not violate either the primary or secondary drinking water standards. Whereas potassium permanganate is likely to violate the secondary drinking water standard for manganese.

Re: Smith's Grocery, SC Hwy 49, York, SC
UST Permit #09322
Release reported June 30, 1993
Corrective Action Status Report received December 27, 2006
York County

Dear Ms. Smith:

The Underground Storage Tank (UST) Program has reviewed the report submitted by SEI Environmental, Inc. SEI Environmental received Corrective Action Plan approval in September 2001. The Corrective Action Solicitation Response estimated a cleanup time frame of 30 months. The corrective action has been ongoing for 60 months and the documented CoC concentration reduction to date is at –0.676%. The UST Program is extremely concerned about the lack of progress at the site and requests that SEI Environmental, Inc. submit a CAP addendum outlining proposed remedial actions that will be taken to expedite closure of this site. The UST Program requests a CAP addendum be submitted before **February 28, 2006**. The next corrective action monitoring report is due on or before **April 30, 2007**.

Please remember that SEI is responsible for maintaining the granulated activated carbon units. For any well that has detection in post-GAC samples, the GAC filter should be changed immediately and such work documented in the submitted reports. SEI should establish a GAC filter change schedule such that the breakthrough is minimized. Documentation of all GAC filter changes should be documented in future CASE Reports.

On all correspondence regarding this site, please reference the UST Permit Number. Please feel free to contact me, at (803) 896-6397 or thomadl@dhec.sc.gov, if you have questions or need additional information.

Sincerely,

Debra L. Thoma

Re: Smith's Grocery, SC Hwy 49, York, SC
UST Permit #09322
Release reported June 30, 1993
Corrective Action Status Report received October 23, 2006
York County

Dear Ms. Smith:

The Underground Storage Tank (UST) Program has reviewed the report submitted by SEI Environmental, Inc. SEI Environmental received Corrective Action Plan approval in September 2001. Based on the proposed time frame of 30 months, corrective action activities were estimated to have been completed by March 2004. SEI should evaluate the current remediation methodology and propose any necessary modifications in order to expedite the remediation.

The Corrective Action Solicitation Response estimated a cleanup time frame of 30 months. The corrective action has been ongoing for 60 months and the documented CoC concentration reduction to date is at –22%. The UST Program is extremely concerned about the lack of progress at the site and requests that SEI Environmental, Inc. submit a CAP addendum outlining proposed remedial actions that will be taken to expedite closure of this site. The CAP addendum must be submitted before **November 30, 2006**. The next corrective action monitoring report is due on or before **January 31, 2007**.

Please remember that SEI is responsible for maintaining the granulated activated carbon units. For any well that has detection in post-GAC samples, the GAC filter should be changed immediately and such work documented in the submitted reports. SEI should establish a GAC filter change schedule such that the breakthrough is minimized. Documentation of all GAC filter changes should be documented in future CASE Reports.

On all correspondence regarding this site, please reference the UST Permit Number. Please feel free to contact me, at (803) 896-6397 or thomadl@dhec.sc.gov, if you have questions or need additional information.

LIMITATIONS

This investigation is intended to be a non-biased assessment of on-site environmental conditions proximate to the location of the former UST system. Subsurface investigative methodologies are in accordance with all applicable state and federal regulatory requirements. The information presented in this report is based upon site-specific observations, generally accepted geological practices, and analytical results for environmental samples collected at the time of the field investigation. All data is believed to represent subsurface conditions at the facility, however, data may not be completely representative of all subsurface conditions.

This report has been prepared under the guidance of a Licensed Geologist registered in South Carolina to meet the requirements of the South Carolina Department of Health and Environmental Control. The information and conclusions expressed in this report are based upon normal standards of the profession and limited to information available at this time. Chemical analyses of the samples associated with this report were performed by a subcontracted, independent, and certified laboratory. All data have been reviewed for accuracy and, excepting obvious errors, have been accepted as correct. SEI Environmental, Inc. reserves the right to revise estimates of performances as required by changes in the data supplied by AccuTest Laboratories.

1.0 INTRODUCTION

Smith's Grocery is a convenience and retail fuel store located at 3176 Charlotte Highway (SC Highway 49) in York, York County, South Carolina. Figure 1 in Appendix A is a portion of the United States Geological Survey (USGS) 7.5-minute topographical quadrangle map identifying the location of the site.

The following is a brief summary of recent events occurring at the site:

- May 10, 2004 – Groundwater Sampling Event
- August 17, 2004 – Groundwater Sampling Event
- January 14, 2005 – Groundwater Sampling Event
- June 29, 2005 – Groundwater Sampling Event
- September 16, 2005 – Groundwater Sampling Event
- February 28, 2006 – Groundwater Sampling Event
- June 21, 2006 – Groundwater Sampling Event
- October 4, 2006 – Groundwater Sampling Event
- December 4, 2006 – Groundwater Sampling Event

On Decemberber 4, 2006, seventeen groundwater monitoring wells and four water supply wells were sampled in accordance with the requirements of the PFP contract. This report provides details of the groundwater sampling event.

2.0 FIELD MEASUREMENTS AND SAMPLING

2.1 Groundwater Sampling

On December 4, 2006, groundwater samples were collected from seventeen (MW-1, MW-2, MW-6 through MW-8, MW-10 through MW-15, MW-17 ~~through~~ MW-19, and TW-1 through TW-3) of twenty-three existing groundwater monitoring wells. Six (MW-3 through MW-5, MW-9, MW-16, and MW-20) have been removed from the sampling schedule.

Prior to sampling, groundwater monitoring wells were gauged utilizing an oil-water interface probe to measure depth to groundwater, and to detect any free product present. The depth to

groundwater measurement is used to calculate the groundwater elevation used in determining the current groundwater potentiometric surface, along with hydraulic gradient, and groundwater flow direction. Figure 2 in Appendix A is a site map depicting monitoring well locations.

Free product was not currently and has not historically been detected in any of the monitoring wells. Figure 3 in Appendix A presents a groundwater potentiometric map for the current sampling event. Table 1 in Appendix B summarizes groundwater measurement data.

Representative groundwater samples were collected utilizing new, disposable bailers. Samples were placed in laboratory supplied containers, maintained at 4° Celsius, and shipped via FedEx under chain-of-custody to AccuTest, Inc. Laboratories in Orlando, Florida. The groundwater samples were analyzed by EPA Methods 8260B (for benzene, toluene, ethylbenzene, xylenes (BTEX), methyl-tert-butyl-ether (MTBE), and naphthalene), 8011 (for ethylene dibromide (EDB)), and 3030C for lead. Appendix C contains Field Data Information Sheets for Groundwater Sampling.

2.2 Water Supply Well Sampling

On December 4, 2006, groundwater samples were collected from four (Crook, Smith, Swift and Hill) water supply wells. Three water supply wells (Crook, Hill, and Swift) are fitted with granular activated carbon (GAC) filters. As such, samples were collected from the Swift and Hill wells before (pre) and after (post) the GAC filters. The Crook well was not sampled in this manner during the current sampling event. Prior to sampling, the water was allowed to run for at least ten minutes. The samples were placed into laboratory supplied containers, maintained at 4° Celsius, and shipped via FedEx under chain-of-custody to AccuTest, Inc. Laboratories in Orlando, Florida. The groundwater samples were analyzed by EPA Methods 8260B (for benzene, toluene, ethylbenzene, xylenes (BTEX), methyl-tert-butyl-ether (MTBE), and naphthalene), 8011 (for ethylene dibromide (EDB)), and 3030C for lead.

3.0 LABORATORY ANALYTICAL RESULTS

3.1 Groundwater Analytical Results

Chemicals of Concern (CoC) were detected in ten (MW-1, MW-2, MW-6, MW-7, MW-8, MW-10, MW-11, MW-12, MW-17 and TW-2) of the seventeen monitoring wells sampled at concentrations exceeding their respective SSTL. Figure 4 in Appendix A is a site map presenting monitoring well location and their CoC concentrations. Table 2 in Appendix B summarizes historical groundwater analytical results. A copy of the laboratory report and completed chain-of-custody form is included in Appendix C.

3.2 Water Supply Well Analytical Results

CoC were detected in two (Swift and Hill) of the pre-GAC filter samples collected at concentrations exceeding their respective SSTLs. The post-GAC filter sample for the Swift water supply well exceeded SSTLs for benzene. Figure 4 in Appendix A is a site map presenting water supply well locations and their CoC concentrations. Table 2 in Appendix B summarizes historical water supply well analytical results. A copy of the laboratory report and completed chain-of-custody form is included in Appendix C.

3.3 Site Specific Target Levels

Site Specific Target Levels (SSTLs) have been designated for sixteen (MW-1, MW-2, MW-6 through MW-8, MW-10 through MW-15, MW-17 through MW-19, TW-2, and TW-3) monitoring wells and all four (Crook, Swift, Hill, and Smith) water supply wells. For three (Crook, Swift, and Hill) water supply wells with GAC filters, the SSTLs apply to the pre-GAC filter samples. Table 4 in Appendix B summarizes SSTL information.

4.0 REMEDIATION SYSTEM EFFECTIVENESS

In awarding the Pay-For-Performance (PFP) site remediation contract, the South Carolina Department of Health and Environmental Control (SCDHEC) set remediation goals for this site via site specific target levels (SSTLs). The monitoring wells have individual target concentrations for seven (benzene, toluene, ethylbenzene, xylenes, MTBE, naphthalene, lead, and EDB) identified chemicals of concern (CoC).

Remediation system effectiveness can be calculated comparing the initial January 6, 2003, CoC concentrations that exceeded the SSTLs with the current CoC concentrations that exceeded the SSTLs. Monitoring well MW-1 was not located during the current sampling event. Consequently, SSTL data for monitoring well MW-1 from the September 16, 2005, groundwater sampling event was utilized for the concentration reduction calculation. The formula is a follows:

$$\left[\frac{\text{[01/06/03 Sample Concentration Above SSTL]} - \text{[Current Sample Concentration Above SSTL]}}{\text{[01/06/03 Sample Concentration Above SSTL]}}\right] * 100 = \% \text{ Reduction}$$

Using the current analytical results, the concentration reduction is -0.676%.

5.0 CONCLUSIONS

Free product was not detected. CoC were detected in eight monitoring wells and two water supply wells above their respective SSTLs. The percent concentration reduction has been calculated at -0.676%.

SEI Environmental, Inc recommends continuing the quarterly monitoring to evaluate the continued reduction of chemicals of concern in the monitoring wells on site. The next sampling event will occur in March 2007. SEI is currently evaluating alternative methods of active corrective action to be implemented at the site in order to proceed with the remediation effort.

CURRENT MASS ABOVE SSTL										217,876.56
PERCENT TOTAL MASS REDUCTION ABOVE SSTL										219,348.421
										-0.676

µg/l - micrograms per liter
ND = Not Detected
NE = Not Established
NA = Not Analyzed
RBSL = Risk Based Screen Level
SSTL = Site Specific Target Levels
Bold denotes concentrations over their respective SSTL or RBSL.
* = 09/16/05 Sampling Event SSTL Data Utilized For Reduction Calculation.

- Concentration Reduction Calculation is as follows:

$$\frac{\text{[Initial Sample Concentration Above SSTL] - [Subsequent Sample Concentration Above SSTL]}}{\text{[Initial Sample Concentration Above SSTL]}} \times 100 = \%\ \text{Reduction}$$

LIMITATIONS

This investigation is intended to be a non-biased assessment of on-site environmental conditions proximate to the location of the former UST system. Subsurface investigative methodologies are in accordance with all applicable state and federal regulatory requirements. The information presented in this report is based upon site-specific observations, generally accepted geological practices, and analytical results for environmental samples collected at the time of the field investigation. All data is believed to represent subsurface conditions at the facility, however, data may not be completely representative of all subsurface conditions.

This report has been prepared under the guidance of a Licensed Geologist registered in South Carolina to meet the requirements of the South Carolina Department of Health and Environmental Control. The information and conclusions expressed in this report are based upon normal standards of the profession and limited to information available at this time. Chemical analyses of the samples associated with this report were performed by a subcontracted, independent, and certified laboratory. All data have been reviewed for accuracy and, excepting obvious errors, have been accepted as correct. SEI Environmental, Inc. reserves the right to revise estimates of performances as required by changes in the data supplied by AccuTest Laboratories.

1.0 INTRODUCTION

Smith's Grocery is a convenience and retail fuel store located at 3176 Charlotte Highway (SC Highway 49) in York, York County, South Carolina. Figure 1 in Appendix A is a portion of the United States Geological Survey (USGS) 7.5-minute topographical quadrangle map identifying the location of the site.

The following is a brief summary of recent events occurring at the site:

- May 10, 2004 – Groundwater Sampling Event
- August 17, 2004 – Groundwater Sampling Event
- January 14, 2005 – Groundwater Sampling Event
- June 29, 2005 – Groundwater Sampling Event
- September 16, 2005 – Groundwater Sampling Event
- February 28, 2006 – Groundwater Sampling Event
- June 21, 2006 – Groundwater Sampling Event
- October 4, 2006 – Groundwater Sampling Event

On October 4, 2006, seventeen groundwater monitoring wells and four water supply wells were sampled in accordance with the requirements of the PFP contract. This report provides details of the groundwater sampling event.

2.0 FIELD MEASUREMENTS AND SAMPLING

2.1 Groundwater Sampling

On June 21, 2006, groundwater samples were collected from seventeen (MW-1, MW-2, MW-6 through MW-8, MW-10 through MW-15, MW-17 through MW-19, and TW-1 through TW-3) of twenty-three existing groundwater monitoring wells. Six (MW-3 through MW-5, MW-9, MW-16, and MW-20) have been removed from the sampling schedule.

Prior to sampling, twenty-one (MW-1 through MW-3, MW-5 through MW-19, and TW-1 throughTW-3) of the twenty-three groundwater monitoring wells were gauged utilizing an oil-water interface probe to measure depth to groundwater, and to detect any free product present.

Three (MW-4, MW-9, and MW-20) monitoring wells were not gauged because they could not be located. The depth to groundwater measurement is used to calculate the groundwater elevation used in determining the current groundwater potentiometric surface, along with hydraulic gradient, and groundwater flow direction. Figure 2 in Appendix A is a site map depicting monitoring well locations.

Free product was not currently and has not historically been detected in any of the monitoring wells. Figure 3 in Appendix A presents a groundwater potentiometric map for the current sampling event. The latest groundwater data indicate that groundwater flow at the site is predominately east to southeast with a hydraulic gradient of 0.0202 feet per foot between monitoring wells MW-7 and MW-19. This flow direction is consistent with previous determinations of groundwater movement. Table 1 in Appendix B summarizes groundwater measurement data.

Representative groundwater samples were collected utilizing new, disposable bailers. Samples were placed in laboratory supplied containers, maintained at 4° Celsius, and shipped via FedEx under chain-of-custody to AccuTest, Inc. Laboratories in Orlando, Florida. The groundwater samples were analyzed by EPA Methods 8260B (for benzene, toluene, ethylbenzene, xylenes (BTEX), methyl-tert-butyl-ether (MTBE), and naphthalene), 8011 (for ethylene dibromide (EDB)), and 3030C for lead. Appendix C contains Field Data Information Sheets for Groundwater Sampling.

2.2 Water Supply Well Sampling

On October 4, 2006, groundwater samples were collected from four (Crook, Smith, Swift and Hill) water supply wells. Three water supply wells (Crook, Hill, and Swift) are fitted with granular activated carbon (GAC) filters. As such, samples were collected from the Swift and Hill wells before (pre) and after (post) the GAC filters. The Crook well was not sampled in this manner during the current sampling event. Prior to sampling, the water was allowed to run for at least ten minutes. The samples were placed into laboratory supplied containers, maintained at 4° Celsius, and shipped via FedEx under chain-of-custody to AccuTest, Inc.

Laboratories in Orlando, Florida. The groundwater samples were analyzed by EPA Methods 8260B (for benzene, toluene, ethylbenzene, xylenes (BTEX), methyl-tert-butyl-ether (MTBE), and naphthalene), 8011 (for ethylene dibromide (EDB)), and 3030C for lead.

3.0 LABORATORY ANALYTICAL RESULTS

3.1 Groundwater Analytical Results

Chemicals of Concern (CoC) were detected in ten (MW-1, MW-2, MW-6, MW-7, MW-8, MW-10, MW-11, MW-12, MW-17 and TW-2) of the seventeen monitoring wells sampled at concentrations exceeding their respective SSTL. Figure 4 in Appendix A is a site map presenting monitoring well location and their CoC concentrations. Table 2 in Appendix B summarizes historical groundwater analytical results. A copy of the laboratory report and completed chain-of-custody form is included in Appendix C.

3.2 Water Supply Well Analytical Results

CoC were detected in two (Swift and Hill) of the pre-GAC filter samples collected at concentrations exceeding their respective SSTLs. The post-GAC filter sample for the Swift water supply well exceeded SSTLs for benzene and xylenes. Figure 4 in Appendix A is a site map presenting water supply well locations and their CoC concentrations. Table 2 in Appendix B summarizes historical water supply well analytical results. A copy of the laboratory report and completed chain-of-custody form is included in Appendix C.

3.3 Site Specific Target Levels

Site Specific Target Levels (SSTLs) have been designated for sixteen (MW-1, MW-2, MW-6 through MW-8, MW-10 through MW-15, MW-17 through MW-19, TW-2, and TW-3) monitoring wells and all four (Crook, Swift, Hill, and Smith) water supply wells. For three (Crook, Swift, and Hill) water supply wells with GAC filters, the SSTLs apply to the pre-GAC filter samples. Table 4 in Appendix B summarizes SSTL information.

4.0 REMEDIATION SYSTEM EFFECTIVENESS

In awarding the Pay-For-Performance (PFP) site remediation contract, the South Carolina Department of Health and Environmental Control (SCDHEC) set remediation goals for this site via site specific target levels (SSTLs). The monitoring wells have individual target concentrations for seven (benzene, toluene, ethylbenzene, xylenes, MTBE, naphthalene, lead, and EDB) identified chemicals of concern (CoC).

Remediation system effectiveness can be calculated comparing the initial January 6, 2003, CoC concentrations that exceeded the SSTLs with the current CoC concentrations that exceeded the SSTLs. Monitoring well MW-1 was not located during the current sampling event. Consequently, SSTL data for monitoring well MW-1 from the September 16, 2005, groundwater sampling event was utilized for the concentration reduction calculation. The formula is a follows:

$$\left[\frac{\text{[01/06/03 Sample Concentration Above SSTL]} - \text{[Current Sample Concentration Above SSTL]}}{\text{[01/06/03 Sample Concentration Above SSTL]}}\right] * 100 = \text{\% Reduction}$$

Using the current analytical results, the concentration reduction is -22.182%.

5.0 CONCLUSIONS

The groundwater flow direction at the time of the October 4, 2006 sampling event was towards the east, southeast with a hydraulic gradient of 0.0202 feet per foot. Free product was not detected. CoC were detected in eight monitoring wells and two water supply wells above their respective SSTLs. The percent concentration reduction has been calculated at -22.182%.

SEI Environmental, Inc recommends continuing the quarterly monitoring to evaluate the continued reduction of chemicals of concern in the monitoring wells on site. The next sampling event will occur in September 2006. SEI is currently evaluating alternative methods of active corrective action to be implemented at the site in order to proceed with the remediation effort.

INITIAL MASS ABOVE SSTL										217,876.56
CURRENT MASS ABOVE SSTL										266,206.146
PERCENT TOTAL MASS REDUCTION ABOVE SSTL										-22.182

µg/l - micrograms per liter
ND = Not Detected
NE = Not Established
NA = Not Analyzed
RBSL = Risk Based Screen Level
SSTL = Site Specific Target Levels
Bold denotes concentrations over their respective SSTL or RBSL
* = 09/16/05 Sampling Event SSTL Data Utilized For Reduction Calculation

- Concentration Reduction Calculation is as follows:

$$\frac{\text{[Initial Sample Concentration Above SSTL] - [Subsequent Sample Concentration Above SSTL]}}{\text{[Initial Sample Concentration Above SSTL]}} \times 100 = \%\ \text{Reduction}$$

Re: Smith's Grocery, SC Hwy 49, York, SC
UST Permit #09322
Release reported June 30, 1993
Corrective Action Status Report received August 23, 2006
York County

Dear Mr. Hemphill

The Underground Storage Tank (UST) Program of the South Carolina Department of Health and Environmental Control has reviewed the referenced report submitted by SEI Environmental, Inc. SEI is currently conducting corrective action activities in response to groundwater contamination at the former Smith's Grocery. The next quarterly sampling will be conducted in approximately three months.

If you would like additional information regarding this corrective action or if you would like to review the monitoring report, please contact me by phone at (803) 896-6397, by fax at (803) 896-6245, or by e-mail at thomadl@dhec.sc.gov.

Sincerely,

Debra L. Thoma

LOUIS SMITH
3176 CHARLOTTE HWY
YORK SC 29745

Re: Smith's Grocery, SC Hwy 49, York, SC
UST Permit #09322
Release reported June 30, 1993
Corrective Action Status Report received August 23, 2006
York County

Dear Ms. Smith:

The Underground Storage Tank (UST) Program has reviewed the report submitted by SEI Environmental, Inc. SEI Environmental received Corrective Action Plan approval in September 2001. Based on the proposed time frame of 30 months, corrective action activities were estimated to have been completed by March 2004. SEI should evaluate the current remediation methodology and propose any necessary modifications in order to expedite the remediation. The next corrective action status evaluation report should be submitted on or before October 15, 2006.

The report documented that the Swift water supply well contained benzene in the Post-GAC sample, but the report fails to document any filter changes. Please remember that SEI is responsible for maintaining the granulated activated carbon units. For any well that has detection in post-GAC samples, the GAC filter should be changed immediately and such work documented in the submitted reports.

On all correspondence regarding this site, please reference the UST Permit Number. Please feel free to contact me, at (803) 896-6397 or thomadl@dhec.sc.gov, if you have questions or need additional information.

Sincerely,

Debra L. Thoma, Hydrogeologist

LIMITATIONS

This investigation is intended to be a non-biased assessment of on-site environmental conditions proximate to the location of the former UST system. Subsurface investigative methodologies are in accordance with all applicable state and federal regulatory requirements. The information presented in this report is based upon site-specific observations, generally accepted geological practices, and analytical results for environmental samples collected at the time of the field investigation. All data is believed to represent subsurface conditions at the facility, however, data may not be completely representative of all subsurface conditions.

This report has been prepared under the guidance of a Licensed Geologist registered in South Carolina to meet the requirements of the South Carolina Department of Health and Environmental Control. The information and conclusions expressed in this report are based upon normal standards of the profession and limited to information available at this time. Chemical analyses of the samples associated with this report were performed by a subcontracted, independent, and certified laboratory. All data have been reviewed for accuracy and, excepting obvious errors, have been accepted as correct. SEI Environmental, Inc. reserves the right to revise estimates of performances as required by changes in the data supplied by AccuTest Laboratories.

1.0 INTRODUCTION

Smith's Grocery is a convenience and retail fuel store located at 3176 Charlotte Highway (SC Highway 49) in York, York County, South Carolina. Figure 1 in Appendix A is a portion of the United States Geological Survey (USGS) 7.5-minute topographical quadrangle map identifying the location of the site.

The following is a brief summary of recent events occurring at the site:

- May 10, 2004 – Groundwater Sampling Event
- August 17, 2004 – Groundwater Sampling Event
- January 14, 2005 – Groundwater Sampling Event
- June 29, 2005 – Groundwater Sampling Event
- September 16, 2005 – Groundwater Sampling Event
- February 28, 2006 – Groundwater Sampling Event
- June 21, 2006 – Groundwater Sampling Event

On June 21, 2006, seventeen groundwater monitoring wells and four water supply wells were sampled in accordance with the requirements of the PFP contract. This report provides details of the groundwater sampling event.

2.0 FIELD MEASUREMENTS AND SAMPLING

2.1 Groundwater Sampling

On June 21, 2006, groundwater samples were collected from seventeen (MW-1, MW-2, MW-6 through MW-8, MW-10 through MW-15, MW-17 through MW-19, and TW-1 through TW-3) of twenty-three existing groundwater monitoring wells. Six (MW-3 through MW-5, MW-9, MW-16, and MW-20) have been removed from the sampling schedule.

Prior to sampling, twenty-one (MW-1 through MW-3, MW-5 through MW-19, and TW-1 throughTW-3) of the twenty-three groundwater monitoring wells were gauged utilizing an oil-water interface probe to measure depth to groundwater, and to detect any free product present. Two (MW-4 and MW-20) monitoring wells were not gauged because they could not

be located. The depth to groundwater measurement is used to calculate the groundwater elevation used in determining the current groundwater potentiometric surface, along with hydraulic gradient, and groundwater flow direction. Figure 2 in Appendix A is a site map depicting monitoring well locations.

Free product was not currently and has not historically been detected in any of the monitoring wells. Figure 3 in Appendix A presents a groundwater potentiometric map for the current sampling event. The latest groundwater data indicate that groundwater flow at the site is predominately east to southeast with a hydraulic gradient of 0.035 feet per foot between monitoring wells MW-7 and MW-19. This flow direction is consistent with previous determinations of groundwater movement. Table 1 in Appendix B summarizes groundwater measurement data.

All monitoring wells were purged prior to sampling by removing a minimum of three well volumes of water via hand bailing with a new, disposable, polyethylene bailer or until groundwater quality data stabilized, or the well went dry. This purging process produced approximately 75 gallons of petroleum contaminated water. The purge water was disposed of at a South Carolina licensed facility. Appendix C contains Field Data Information Sheets for Groundwater Sampling.

Representative groundwater samples were collected utilizing new, disposable bailers. Samples were placed in laboratory supplied containers, maintained at 4° Celsius, and shipped via FedEx under chain-of-custody to AccuTest, Inc. Laboratories in Orlando, Florida. The groundwater samples were analyzed by EPA Methods 8260B (for benzene, toluene, ethylbenzene, xylenes (BTEX), methyl-tert-butyl-ether (MTBE), and naphthalene), 8011 (for ethylene dibromide (EDB)), and 3030C for lead.

2.2 Water Supply Well Sampling

On June 21, 2006, groundwater samples were collected from four (Crook, Smith, Swift and Hill) water supply wells. Three water supply wells (Crook, Hill, and Swift) are fitted with

granular activated carbon (GAC) filters. As such, samples were collected from the Swift and Hill wells before (pre) and after (post) the GAC filters. The Crook well was not sampled in this manner during the current sampling event. Prior to sampling, the water was allowed to run for at least ten minutes. The samples were placed into laboratory supplied containers, maintained at 4° Celsius, and shipped via FedEx under chain-of-custody to AccuTest, Inc. Laboratories in Orlando, Florida. The groundwater samples were analyzed by EPA Methods 8260B (for benzene, toluene, ethylbenzene, xylenes (BTEX), methyl-tert-butyl-ether (MTBE), and naphthalene), 8011 (for ethylene dibromide (EDB)), and 3030C for lead.

3.0 LABORATORY ANALYTICAL RESULTS

3.1 Groundwater Analytical Results

Chemicals of Concern (CoC) were detected in ten (MW-1, MW-2, MW-6, MW-7, MW-8, MW-10, MW-11, MW-12, MW-17 and TW-2) of the seventeen monitoring wells sampled at concentrations exceeding their respective SSTL. Figure 4 in Appendix A is a site map presenting monitoring well location and their CoC concentrations. Table 2 in Appendix B summarizes historical groundwater analytical results. A copy of the laboratory report and completed chain-of-custody form is included in Appendix C.

3.2 Water Supply Well Analytical Results

CoC were detected in two (Swift and Hill) of the pre-GAC filter samples collected at concentrations exceeding their respective SSTLs. The post-GAC filter sample for the Swift water supply well exceeded SSTLs for benzene. Figure 4 in Appendix A is a site map presenting water supply well locations and their CoC concentrations. Table 2 in Appendix B summarizes historical water supply well analytical results. A copy of the laboratory report and completed chain-of-custody form is included in Appendix C.

3.3 Site Specific Target Levels

Site Specific Target Levels (SSTLs) have been designated for sixteen (MW-1, MW-2, MW-6 through MW-8, MW-10 through MW-15, MW-17 through MW-19, TW-2, and TW-3) monitoring wells and all four (Crook, Swift, Hill, and Smith) water supply wells.

For three (Crook, Swift, and Hill) water supply wells with GAC filters, the SSTLs apply to the pre-GAC filter samples. Table 4 in Appendix B summarizes SSTL information.

4.0 REMEDIATION SYSTEM EFFECTIVENESS

In awarding the Pay-For-Performance (PFP) site remediation contract, the South Carolina Department of Health and Environmental Control (SCDHEC) set remediation goals for this site via site specific target levels (SSTLs). The monitoring wells have individual target concentrations for seven (benzene, toluene, ethylbenzene, xylenes, MTBE, naphthalene, lead, and EDB) identified chemicals of concern (CoC).

Remediation system effectiveness can be calculated comparing the initial January 6, 2003, CoC concentrations that exceeded the SSTLs with the current CoC concentrations that exceeded the SSTLs. Monitoring well MW-1 was not located during the current sampling event. Consequently, SSTL data for monitoring well MW-1 from the September 16, 2005, groundwater sampling event was utilized for the concentration reduction calculation. The formula is a follows:

$$\left[\frac{\text{[01/06/03 Sample Concentration Above SSTL]} - \text{[Current Sample Concentration Above SSTL]}}{\text{[01/06/03 Sample Concentration Above SSTL]}}\right] * 100 = \% \text{ Reduction}$$

Using the current analytical results, the concentration reduction is -10.951%. This percentage is up from 21.73% from the February 28, 2006 groundwater sampling event.

5.0 CONCLUSIONS

The groundwater flow direction at the time of the February 28, 2006 sampling event was towards the east, southeast with a hydraulic gradient of 0.035 feet per foot. Free product was not detected. CoC were detected in eight monitoring wells and two water supply wells above their respective SSTLs. The percent concentration reduction has been calculated at -10.951%.

SEI Environmental, Inc recommends continuing the quarterly monitoring to evaluate the continued reduction of chemicals of concern in the monitoring wells on site. The next sampling event will occur in September 2006. SEI is currently evaluating alternative methods of active corrective action to be implemented at the site in order to proceed with the remediation effort.

INITIAL MASS ABOVE SSTL										217,876.56
CURRENT MASS ABOVE SSTL										241,736.851
PERCENT TOTAL MASS REDUCTION ABOVE SSTL										-10.951

ug/l - micrograms per liter
D = Not Detected
E = Not Established
NA = Not Analyzed
RBSL = Risk Based Screen Level
SSTL = Site Specific Target Levels
Bold denotes concentrations over their respective SSTL or RBSL
* = 09/16/05 Sampling Event SSTL Data Utilized For Reduction Calculation

Concentration Reduction Calculation is as follows:

$$\frac{\text{[Initial Sample Concentration Above SSTL] - [Subsequent Sample Concentration Above SSTL]}}{\text{[Initial Sample Concentration Above SSTL]}} \times 100 = \%\ \text{Reduction}$$

YORK SC 29745

Re: Smith's Grocery, SC Hwy 49, York, SC
UST Permit #09322
Release reported June 30, 1993
Corrective Action Status Report received May 1, 2006
York County

Dear Ms. Smith:

The Underground Storage Tank (UST) Program has reviewed the report submitted by SEI Environmental, Inc. SEI Environmental received Corrective Action Plan approval in September 2001. Based on the proposed time frame of 30 months, corrective action activities were estimated to been completed by March 2004; however, there is only a 37% reduction in the petroleum concentrations. SEI should evaluate the current remediation methodology and propose any necessary modifications in order to expedite the remediation. The next corrective action status evaluation report should be submitted on or before July 30, 2006.

On all correspondence regarding this site, please reference the UST Permit Number. Please feel free to contact me, at (803) 896-6397 or thomadl@dhec.sc.gov, if you have questions or need additional information.

Sincerely,

Debra L. Thoma

Re: Smith's Grocery, SC Hwy 49, York, SC
UST Permit #09322
Release reported June 30, 1993
Corrective Action Status Report received May 1, 2006
York County

Dear Mr. & Mrs. Hill:

The Underground Storage Tank (UST) Program of the South Carolina Department of Health and Environmental Control has reviewed the referenced report submitted by SEI Environmental, Inc. SEI is currently conducting corrective action activities in response to groundwater contamination at the former Smith's Grocery. The next quarterly sampling will be conducted in approximately three months.

If you would like additional information regarding this corrective action or if you would like to review the monitoring report, please contact me by phone at (803) 896-6397, by fax at (803) 896-6245, or by e-mail at thomadl@dhec.sc.gov.

Sincerely,

Debra L. Thoma, Hydrogeologist

LIMITATIONS

This investigation is intended to be a non-biased assessment of on-site environmental conditions proximate to the location of the former UST system. Subsurface investigative methodologies are in accordance with all applicable state and federal regulatory requirements. The information presented in this report is based upon site-specific observations, generally accepted geological practices, and analytical results for environmental samples collected at the time of the field investigation. All data is believed to represent subsurface conditions at the facility, however, data may not be completely representative of all subsurface conditions.

This report has been prepared under the guidance of a Licensed Geologist registered in South Carolina to meet the requirements of the South Carolina Department of Health and Environmental Control. The information and conclusions expressed in this report are based upon normal standards of the profession and limited to information available at this time. Chemical analyses of the samples associated with this report were performed by a subcontracted, independent, and certified laboratory. All data have been reviewed for accuracy and, excepting obvious errors, have been accepted as correct. SEI Environmental, Inc. reserves the right to revise estimates of performances as required by changes in the data supplied by Accutest Laboratories.

1.0 INTRODUCTION

Smith's Grocery is a convenience and retail fuel store located at 3176 Charlotte Highway (SC Highway 49) in York, York County, South Carolina. Figure 1 in Appendix A is a portion of the United States Geological Survey (USGS) 7.5-minute topographical quadrangle map identifying the location of the site.

The following is a brief summary of recent events occurring at the site:

- May 10, 2004 – Groundwater Sampling Event
- August 17, 2004 – Groundwater Sampling Event
- January 14, 2005 – Groundwater Sampling Event
- June 29, 2005 – Groundwater Sampling Event
- September 16, 2005 – Groundwater Sampling Event
- February 28, 2006 – Groundwater Sampling Event

On February 28, 2006, twenty groundwater monitoring wells and two water supply wells were sampled in accordance with the requirements of the PFP contract. This report provides details of the groundwater sampling event.

2.0 FIELD MEASUREMENTS AND SAMPLING

2.1 Groundwater Sampling

On February 28, 2006, groundwater samples were collected from sixteen (MW-2, MW-6, MW-7, MW-8, MW-10, MW-11, MW-12, MW-13, MW-14, MW-15, MW-17, MW-18, MW-19, TW-1, TW-2, and TW-3) of twenty-three existing groundwater monitoring wells. Six (MW-3, MW-4, MW-5, MW-9, MW-16, and MW-20) monitoring wells were not sampled because they were removed from the sampling schedule. One (MW-1) monitoring well was not sampled because it could not be located.

Prior to sampling, twenty (MW-2, MW-3, MW-5 through MW-19, TW-1, TW-2, and TW-3) of the twenty-three groundwater monitoring wells were gauged utilizing an oil-water interface probe to measure depth to groundwater, and to detect any free product present. Two (MW-1

and MW-4) monitoring wells were not gauged because they could not be located. The depth to groundwater measurement is used to calculate the groundwater elevation used in determining the current groundwater potentiometric surface, along with hydraulic gradient, and groundwater flow direction.

Free product was not currently and has not historically been detected in any of the monitoring wells. Figure 3 in Appendix A presents a groundwater poetentiometric map for the current sampling event. The latest groundwater data indicate that groundwater flow at the site is predominately east to southeast with a hydraulic gradient of 0.032 feet per foot. This flow direction is consistent with previous determinations of groundwater movement. Table 1 in Appendix B summarizes groundwater measurement data.

All monitoring wells were purged prior to sampling by removing a minimum of three well volumes of water via hand bailing with a new, disposable, polyethylene bailer or until groundwater quality data stabilized, or the well went dry. This purging process produced approximately 55 gallons of petroleum contaminated water. The purge water was disposed of at a South Carolina licensed facility. Table 3 summarizes field observation data. Appendix C contains Field Data Information Sheets for Groundwater Sampling.

Representative groundwater samples were collected utilizing new, disposable bailers. Samples were placed in laboratory supplied containers, maintained at 4° Celsius, and shipped via FedEx under chain-of-custody to AccuTest, Inc. Laboratories in Orlando, Flordia. The groundwater samples were analyzed by EPA Methods 8260B (for benzene, toluene, ethylbenzene, xylenes (BTEX), methyl-tert-butyl-ether (MTBE), and naphthalene) and 8011 (for ethylene dibromide (EDB)). Lead was not sampled for this quarter.

2.2 Water Supply Well Sampling

On February 28, 2006, groundwater samples were collected from two (Swift and Hill) water supply wells. These water supply wells are fitted with granular activated carbon (GAC) filters. As such, samples were collected before (pre) and after (post) the GAC filters. Prior to

sampling, the water was allowed to run for at least ten minutes. The samples were placed into laboratory supplied containers, maintained at 4° Celsius, and shipped via FedEx under chain-of-custody to AccuTest, Inc. Laboratories in Orlando, Florida. The groundwater samples were analyzed by EPA Methods 8260B (for benzene, toluene, ethylbenzene, xylenes (BTEX), methyl-tert-butyl-ether (MTBE), and naphthalene). Lead was not sampled for this quarter.

3.0 LABORATORY ANALYTICAL RESULTS

3.1 Groundwater Analytical Results

CoCs were detected in six (MW-2, MW-6, MW-7, MW-8, MW-10, and TW-2) of the sixteen monitoring wells sampled at concentrations exceeding their respective SSTL. Monitoring well MW-2 contained the highest concentrations of benzene (24,400 micrograms per liter (µg/L)) ethylbenzene (4,700 µg/L), total xylenes (28,400 µg/L) EDB (143 µg/L), and MTBE (847 µg/L). Monitoring well MW-8 contained the highest concentrations of toluene (52,500 µg/L). Monitoring well MW-7 and MW-8 contained the highest concentration of naphthalene (562 µg/L). Figure 4 in Appendix A is a site map presenting monitoring well location and their CoC concentrations. Table 2 in Appendix B summarizes historical groundwater analytical results. A copy of the laboratory report and completed chain-of-custody form is included in Appendix C.

3.2 Water Supply Well Analytical Results

CoCs were detected in the two (Swift and Hill) of the pre-GAC filter samples collected at concentrations exceeding their respective SSTLs for specific compounds. Both the Swift and Hill water supply wells contained concentrations of benzene (169 µg/L and 9.4 µg/L, respectively) in the pre-GAC filter samples. The post-GAC filter sample for the Swift water supply well contained benzene at a concentration of 7.2 µg/L. This exceeds the SSTL for benzene for this well of 5 µg/L. Figure 4 in Appendix A is a site map presenting water supply well locations and their CoC concentrations. Table 2 in Appendix B summarizes historical water supply well analytical results. A copy of the laboratory report and completed chain-of-custody form is included in Appendix C.

3.3 Site Specific Target Levels

Site Specific Target Levels (SSTLs) have been designated for sixteen (MW-1, MW-2, MW-6, MW-7, MW-8, MW-10 through MW-15, MW-17, MW-18, MW-19, TW-2, and TW-3) monitoring wells and all four (Crook, Swift, Hill, and Smith) water supply wells. For the three (Crook, Swift, and Hill) water supply wells with GAC filters, the SSTLs apply to the pre-GAC filter samples. Eight (MW-2, MW-6, MW-7, MW-8, MW-10, MW-11, MW-17, and TW-2) monitoring wells and two (Hill and Swift) water supply wells contained CoC concentrations exceeded their SSTLs. Table 4 in Appendix B summarizes SSTL information.

4.0 REMEDIATION SYSTEM EFFECTIVENESS

In awarding the Pay-For-Performance (PFP) site remediation contract, the South Carolina Department of Health and Environmental Control (SCDHEC) set remediation goals for this site via site specific target levels (SSTLs). The monitoring wells have individual target concentrations for seven (benzene, toluene, ethylbenzene, xylenes, MTBE, naphthalene, lead, and EDB) identified chemicals of concern (CoC).

Remediation system effectiveness can be calculated comparing the initial January 6, 2003, CoC concentrations that exceeded the SSTLs with the current CoC concentrations that exceeded the SSTLs. For lead and the data used in the calculation was from the June 29, 2005, sampling event. For monitoring well MW-1 the data used in the calculation was from the September 16, 2005 sampling event. The formula is a follows:

$$\left[\frac{\text{[01/06/03 Sample Concentration Above SSTL]} - \text{[Current Sample Concentration Above SSTL]}}{\text{[1/06/03 Sample Concentration Above SSTL]}}\right] * 100 = \% \text{ Reduction}$$

Using the current analytical results, the concentration reduction is -21.02%.

5.0 CONCLUSIONS

The groundwater flow direction at the time of the February 28, 2006 sampling event was towards the east, southeast with a hydraulic gradient of 0.032 feet per foot. Free product was

not detected. CoC were detected in eight monitoring wells and two water supply wells above their respective SSTLs. The percent concentration reduction has been calculated at -22.73%,

During the previous sampling event, there was a significant increase in petroleum constituent concentrations exhibited by monitoring well MW-1. For example, benzene concentrations increased from 273 µg/L on June 29, 2005, to 23,300 µg/L on September 16, 2005. As the data from the September 16, 2005 sampling event was used in the calculation of the COC reduction for the site the increase in COC concentrations above the SSTLs may be anomalous. Thus, subsequent monitoring events will have to give direction to further investigation into the increased concentrations.

If subsequent monitoring events manifest the same concentration increases in monitoring well MW-1, efforts will be made to determine the locations of the former UST system as a potential contributing factor. Also, the site will be examined for other potential source areas around and immediately up gradient of monitoring well MW-1, such as a previously unknown heating oil UST. However, if subsequent monitoring events show concentrations back within historical range, then the current sample would become suspect for laboratory error, most likely misidentification and switching with an unrelated sample.

The post-GAC filter water supply well samples collected from the Swift well contained concentrations of CoC above their respective SSTLs. The post-GAC filter concentrations indicated filter break through. SEI has ordered parts for the system and will change out the GAC filter at Swift during the next quarter.

SEI Environmental, Inc recommends continuing the quarterly monitoring to evaluate the continued reduction of chemicals of concern in the monitoring wells on site. The next sampling event will occur in May 2006. SEI is currently evaluating alternative methods of active corrective action to be implemented at the site in order to proceed with the remediation effort.

Re: Smith's Grocery, SC Hwy 49, York, SC
UST Permit #09322
Release reported June 30, 1993
Corrective Action Status Report received May 1, 2006
York County

Dear Mr. & Mrs. Crook:

The Underground Storage Tank (UST) Program of the South Carolina Department of Health and Environmental Control has reviewed the referenced report submitted by SEI Environmental, Inc. SEI is currently conducting corrective action activities in response to groundwater contamination at the former Smith's Grocery. The next quarterly sampling will be conducted in approximately three months.

If you would like additional information regarding this corrective action or if you would like to review the monitoring report, please contact me by phone at (803) 896-6397, by fax at (803) 896-6245, or by e-mail at thomadl@dhec.sc.gov.

Sincerely,

Debra L. Thoma

Re: Smith's Grocery, SC Hwy 49, York, SC
UST Permit #09322
Release reported June 30, 1993
Notice of Alleged Violation
York County

Dear Ms. Smith:

The Underground Storage Tank (UST) Program of the South Carolina Department of Health and Environmental Control directed you to submit a Corrective Action Status Evaluation Report in October 2005 with the report due on January 30, 2006. To date the required report has not been received. In accordance with Section 280.65 of the South Carolina Underground Storage Tank Regulations, the assessment must be conducted as chemicals of concern are above the risk-based-screening levels.

Implementation of this scope of work should proceed upon receipt of this correspondence. **Please submit the report within 30 days from the date of this letter. Should you not submit the report on or before May 1, 2006, this office will be forced to initiate enforcement action.**

On all correspondence regarding this site, please reference UST Permit #09322. If you have any questions concerning this correspondence, please contact me at (803) 896-6397, via fax at (803) 896-6245, or via e-mail at thomadl@dhec.sc.gov.

Sincerely,

Debra L. Thoma

Re: Pay For Performance Corrective Action Projects
Proposed Reporting Schedule received December 12, 20051

Dear Mr. Hight:

Thank you for providing the proposed reporting schedule. The schedule has been reviewed by our project managers and is approvable as submitted with one exception.

For the Perry's Grocery project (UST Permit ID# 03426, SEI Project No. 303196) semi-annual sampling and reporting was proposed. Because this corrective action is being augmented with the use of the Potassium Triple Salt, the Department would like to reports submitted on a quarterly basis to better characterize the effect of the new technology.

The UST Program appreciates SEI's efforts to get these projects back on track. We look forward to working with you in the near future to bring these sites to closure. Please feel free to contact me at (803) 896-6585 if you have any questions or need additional information.

Sincerely,

Christopher S. Doll, P.G., Manager

RE: Water Supply Well Sampling Results
Smith Grocery
176 Charlotte Highway (SC Highway 49)
York, York County, South Carolina
UST Permit Number: 09322
SEI Project Number: 300401

Dear Ms. Thoma:

On September 16, 2005, the Swift's water supply well, associated with the above referenced site, was sampled. Sample results received on October 17, 2005, indicated that GAC filter break through of petroleum constituents had occurred. As such, on October 18, 2005, SEI personnel mobilized to site to perform maintenance on the Swift GAC filter.

On October 19, 2005, SEI personnel re-sampled the Swift water supply well, both pre and post GAC filter. Results indicate pre-GAC filter concentrations of benzene, total xylenes, naphthalene, and 1,2-dibromide. Results indicate post-GAC filter concentrations below laboratory detection limits for all compounds. A copy of the laboratory report is attached.

Thus, the Swift water supply well high concentration issue has been addressed. If you have any questions or comments, please contact me at (919) 832-2535.

Sincerely,
SEI Environmental, Inc.

UST Permit #09322
Release reported June 30, 1993
Corrective Action Status Report received October 24, 2005
York County

Dear Mr. Wiggam:

The Underground Storage Tank (UST) Program of the South Carolina Department of Health and Environmental Control has reviewed the referenced report submitted by SEI Environmental, Inc. SEI is currently conducting corrective action activities in response to groundwater contamination at the former Smith's Grocery. Please find enclosed a copy of the report. The next quarterly sampling will be conducted in approximately three months.

If you would like additional information regarding this corrective action, please contact me by phone at or (803) 896-6397, by fax at (803) 896-6245, or by e-mail at thomadl@dhec.sc.gov.

Sincerely,

Debra L. Thoma, Hydrogeologist

Dear Mr. Hemphill

The Underground Storage Tank (UST) Program of the South Carolina Department of Health and Environmental Control has reviewed the referenced report submitted by SEI Environmental, Inc. SEI is currently conducting corrective action activities in response to groundwater contamination at the former Smith's Grocery. Monitoring Well MW-3 was sampled and no petroleum compounds were detected. The next quarterly sampling will be conducted in approximately three months.

If you would like additional information regarding this corrective action or if you would like to review the monitoring report, please contact me by phone at (803) 896-6397, by fax at (803) 896-6245, or by e-mail at thomadl@dhec.sc.gov.

Sincerely,

Debra L. Thoma

Re: Smith's Grocery, SC Hwy 49, York, SC
UST Permit #09322
Release reported June 30, 1993
Corrective Action Status Report received October 24, 2005
York County

Dear Ms. Smith:

The Underground Storage Tank (UST) Program has reviewed the report submitted by SEI Environmental, Inc. SEI Environmental received Corrective Action Plan approval in September 2001. Based on the proposed time frame of 30 months, corrective action activities should have been completed in March 2004; however, there is only a 37% reduction in the petroleum concentrations. SEI should evaluate the current remediation methodology and propose any necessary modifications in order to expedite the remediation. The next corrective action status evaluation report documenting the results from the September sampling event should be submitted on or before January 30, 2006.

On all correspondence regarding this site, please reference the UST Permit Number. Please feel free to contact me, at (803) 896-6397 or thomadl@dhec.sc.gov, if you have questions or need additional information.

Sincerely,

Debra L. Thoma, Hydrogeologist

LIMITATIONS

This investigation is intended to be a non-biased assessment of on-site environmental conditions proximate to the location of the former UST system. Subsurface investigative methodologies are in accordance with all applicable state and federal regulatory requirements. The information presented in this report is based upon site-specific observations, generally accepted geological practices, and analytical results for environmental samples collected at the time of the field investigation. All data is believed to represent subsurface conditions at the facility, however, data may not be completely representative of all subsurface conditions.

This report has been prepared under the guidance of a Licensed Geologist registered in South Carolina to meet the requirements of the South Carolina Department of Health and Environmental Control. The information and conclusions expressed in this report are based upon normal standards of the profession and limited to information available at this time. Chemical analyses of the samples associated with this report were performed by a subcontracted, independent, and certified laboratory. All data have been reviewed for accuracy and, excepting obvious errors, have been accepted as correct. SEI Environmental, Inc. reserves the right to revise estimates of performances as required by changes in the data supplied by Accutest Laboratories.

1.0 INTRODUCTION

Smith's Grocery is a convenience and retail fuel store located at 3176 Charlotte Highway (SC Highway 49) in York, York County, South Carolina. Figure 1 in Appendix A is a portion of the United States Geological Survey (USGS) 7.5-minute topographical quadrangle map identifying the location of the site.

The following is a brief summary of recent events occurring at the site:

- May 10, 2004 – Groundwater Sampling Event
- August 17, 2004 – Groundwater Sampling Event
- January 14, 2005 – Groundwater Sampling Event
- June 29, 2005 – Groundwater Sampling Event
- September 16, 2005 – Groundwater Sampling Event

On September 16, 2005, sixteen groundwater monitoring wells and four water supply wells were sampled in accordance with the requirements of the PFP contract. This report provides details of the groundwater sampling event.

2.0 FIELD MEASUREMENTS AND SAMPLING

2.1 Groundwater Sampling

On September 16, 2005, groundwater samples were collected from sixteen (MW-1, MW-2, MW-6, MW-7, MW-8, MW-10, MW-11, MW-13, MW-14, MW-15, MW-17, MW-18, MW-19, TW-1, TW-2, and TW-3) of twenty-three existing groundwater monitoring wells. Six (MW-3, MW-4, MW-5, MW-9, MW-16, and MW-20) monitoring wells were not sampled because they were removed from the sampling schedule. One (MW-12) monitoring well was not sampled because it could not be located.

Prior to sampling, twenty-one (MW-1 through MW-11, MW-13 through MW-19, TW-1, TW-2, and TW-3) of the twenty-three groundwater monitoring wells were gauged utilizing an oil-water interface probe to measure depth to groundwater, and to detect any free product present. Two (MW-12 and MW-20) monitoring wells were not gauged because they could not be

located. The depth to groundwater measurement is used to calculate the groundwater elevation used in determining the current groundwater potentiometric surface, along with hydraulic gradient, and groundwater flow direction.

Free product was not currently and has not historically been detected in any of the monitoring wells. Figure 3 in Appendix A presents a groundwater poetentiometric map for the current sampling event. The latest groundwater data indicate that groundwater flow at the site is predominately east to southeast with a hydraulic gradient varying between 0.0168 feet per foot (between monitoring wells MW-8 and MW-14) and 0.0222 feet per foot (between monitoring wells MW-6 and MW-19). This flow direction is consistent with previous determinations of groundwater movement. Table 1 in Appendix B summarizes groundwater measurement data.

All monitoring wells were purged prior to sampling by removing a minimum of three well volumes of water via hand bailing with a new, disposable, polyethylene bailer or until groundwater quality data stabilized, or the well went dry. This purging process produced approximately 103.66 gallons of petroleum contaminated water. The purge water was disposed of at a South Carolina licensed facility. Table 3 summarizes field observation data. Appendix C contains Field Data Information Sheets for Groundwater Sampling.

Representative groundwater samples were collected utilizing new, disposable bailers. Samples were placed in laboratory supplied containers, maintained at 4° Celsius, and shipped via FedEx under chain-of-custody to AccuTest, Inc. Laboratories in Orlando, Flordia. The groundwater samples were analyzed by EPA Methods 8260B (for benzene, toluene, ethylbenzene, xylenes (BTEX), methyl-tert-butyl-ether (MTBE), and naphthalene) and 8011 (for ethylene dibromide (EDB)). Lead was not sampled for this quarter.

2.2 Water Supply Well Sampling

On September 16, 2005, groundwater samples were collected from four (Crook, Swift, Hill, and Smith) water supply wells. Three (Crook, Swift, and Hill) of the water supply wells are

fitted with granular activated carbon (GAC) filters. As such, samples were collected before (pre) and after (post) the GAC filters. Prior to sampling, the water was allowed to run for at least ten minutes. The samples were placed into laboratory supplied containers, maintained at 4° Celsius, and shipped via FedEx under chain-of-custody to AccuTest, Inc. Laboratories in Orlando, Flordia. The groundwater samples were analyzed by EPA Methods 8260B (for benzene, toluene, ethylbenzene, xylenes (BTEX), methyl-tert-butyl-ether (MTBE), and naphthalene) and 8011 (for ethylene dibromide (EDB)). Lead was not sampled for this quarter.

3.0 LABORATORY ANALYTICAL RESULTS

3.1 Groundwater Analytical Results

CoCs were detected in eight (MW-1, MW-2, MW-6, MW-7, MW-8, MW-10, MW-11, and TW-2) of the sixteen monitoring wells sampled at concentrations exceeding their respective SSTL. Monitoring well MW-2 contained the highest concentrations of benzene (24,300 micrograms per liter (µg/L)) and MTBE (1,130 µg/L). Monitoring well MW-1 contained the highest concentrations of toluene (59,100 µg/L), ethylbenzene (4,700 µg/L), and total xylenes (28,900 µg/L). Monitoring wells MW-7 and MW-8 contained the equally highest concentration of naphthalene (1,040 µg/L). Monitoring well MW-10 contained the highest concentration of EDB (143 µg/L). Figure 4 in Appendix A is a site map presenting monitoring well location and their CoC concentrations. Table 2 in Appendix B summarizes historical groundwater analytical results. A copy of the laboratory report and completed chain-of-custody form is included in Appendix C.

3.2 Water Supply Well Analytical Results

CoCs were detected in two (Crook and Swift) of the three pre-GAC filter samples collected at concentrations exceeding their respective SSTLs for specific compounds. The Crook water supply well contained a concentration of EDB (368 µg/L) and the Swift water supply well contained a concentration of benzene (12.6 µg/L). CoCs were detected in two (Swift and Hill) of the three post-GAC filter samples collected at concentrations exceeding their respective SSTLs for specific compounds. Both the Swift and Hill water supply wells

contained concentrations of benzene (342 µg/L and 2.6 µg/L, respectively). The Smith water supply well sample was below laboratory detection limits for CoCs. Figure 4 in Appendix A is a site map presenting water supply well locations and their CoC concentrations. Table 2 in Appendix B summarizes historical water supply well analytical results. A copy of the laboratory report and completed chain-of-custody form is included in Appendix C.

3.3 Site Specific Target Levels

Site Specific Target Levels (SSTLs) have been designated for sixteen (MW-1, MW-2, MW-6, MW-7, MW-8, MW-10 through MW-15, MW-17, MW-18, MW-19, TW-2, and TW-3) monitoring wells and all four (Crook, Swift, Hill, and Smith) water supply wells. For the three (Crook, Swift, and Hill) water supply wells with GAC filters, the SSTLs apply to the pre-GAC filter samples. Eight (MW-1, MW-2, MW-6, MW-7, MW-8, MW-10, MW-11, and TW-2) monitoring wells and two (Crook and Swift) water supply wells contained CoC concentrations exceeded their SSTLs.

During the September 16, 2005, sampling event, in monitoring well MW-1, SSTLs were exceed for all CoCs except MTBE and naphthalene. In monitoring wells MW-2 and MW-11, SSTLs were exceeded for all CoCs except EDB. In monitoring well MW-6, SSTLs were exceeded for benzene and naphthalene only. In monitoring wells MW-7 and MW-8, SSTLs were exceeded for all CoCs except MTBE. In monitoring well MW-10, SSTLs were exceeded for all CoCs except xylenes, MTBE, and naphthalene. In monitoring well TW-2, SSTLs were exceeded for all CoCs. In the Crook water supply well pre-GAC filter sample, SSTLs were exceeded for EDB only. In the Swift water supply well pre-GAC filter sample, SSTLs were exceeded for benzene only. Table 4 in Appendix B summarizes SSTL information.

4.0 REMEDIATION SYSTEM EFFECTIVENESS

In awarding the Pay-For-Performance (PFP) site remediation contract, the South Carolina Department of Health and Environmental Control (SCDHEC) set remediation goals for this site via site specific target levels (SSTLs). The monitoring wells have individual target

concentrations for seven (benzene, toluene, ethylbenzene, xylenes, MTBE, naphthalene, lead, and EDB) identified chemicals of concern (CoC).

Remediation system effectiveness can be calculated comparing the initial January 6, 2003, CoC concentrations that exceeded the SSTLs with the current CoC concentrations that exceeded the SSTLs. For lead and monitoring well MW-12, the data used in the calculation was from the prior June 29, 2005, sampling event. The formula is a follows:

$$\left[\frac{\text{[01/06/03 Sample Concentration Above SSTL]} - \text{[Current Sample Concentration Above SSTL]}}{\text{[01/06/03 Sample Concentration Above SSTL]}}\right] * 100 = \%\ \text{Reduction}$$

Using the current analytical results, the concentration reduction is 37.47%. Table 4 in Appendix B presents concentration reduction calculations.

5.0 CONCLUSIONS

The groundwater flow direction at the time of the September 16, 2005, sampling event was towards the east, southeast with a hydraulic gradient varying between 0.0168 and 0.0222 feet per foot. Free product was not detected. CoC were detected in eight monitoring wells and two water supply wells above their respective SSTLs. The percent concentration reduction has been calculated at 37.47%, which is an improvement from the June 29, 2005, percent concentration reduction of 25.59%.

During this sampling event, there was a significant increase in petroleum constituent concentrations exhibited by monitoring well MW-1. For example, benzene concentrations increased from 273 µg/L on June 29, 2005, to 23,300 µg/L on September 16, 2005. In addition, monitoring wells MW-2 and MW-8, which are immediately down gradient of monitoring well MW-1, also exhibited increases in benzene and toluene concentrations. As depth to groundwater is on the deep end of historical depths, washing of petroleum constituents from the "smear" zone of the soil is not suspected. In addition, there are no known existing dispensers, USTs, ASTs, or other potential source areas located immediately adjacent or up gradient of monitoring well MW-1. Where the former USTs and dispensers

were located is unknown and existing site features do not suggest the locations. However, it is believed that the former USTs and dispensers were down gradient of monitoring well MW-1. As such, the cause of the dramatic increase in concentrations in monitoring well MW-1 is unknown at this time. Thus, subsequent monitoring events will have to give direction to further investigation into the increased concentrations.

If subsequent monitoring events manifest the same concentration increases in monitoring well MW-1, efforts will be made to determine the locations of the former UST system as a potential contributing factor. Also, the site will be examined for other potential source areas around and immediately up gradient of monitoring well MW-1, such as a previously unknown heating oil UST. However, if subsequent monitoring events show concentrations back within historical range, then the current sample would become suspect for laboratory error, most likely misidentification and switching with an unrelated sample.

Two (Swift and Hill) post-GAC filter water supply well samples contained concentrations of CoC above their respective SSTLs. In addition, it is highly likely that the pre and post-GAC filter samples for the Swift water supply well were inadvertently switched, so that in fact the pre-GAC filter sample had a concentration was 342 µg/L and the post-GAC filter sample had a concentration of 12.6 µg/L. Either way, the post-GAC filter concentrations indicated filter break through. As such, on October 18, 2005, SEI Environmental, Inc. personnel mobilized to the site to conduct necessary maintenance. In addition, SEI has order parts for the system and will change out the GAC filter at Swift during the next quarter.

SEI Environmental, Inc recommends continuing the quarterly monitoring to evaluate the continued reduction of chemicals of concern in the monitoring wells on site. The next sampling event will occur in December 2005. SEI is currently evaluating alternative methods of active corrective action to be implemented at the site in order to proceed with the remediation effort.

µg/L - micrograms per liter
SSTL = Site Specific Target Levels
RBSL = Risk Based Screen Level
N/A = Not Applicable
N/S = Not Sampled
Bold denotes concentrations over respective SSTL & RBSL

TABLE 4 (Continued)

Concentration Reduction Calculation – September 16, 2005 Smith's Grocery 3176 Charlotte Highway (Highway 49) York, York County, South Carolina UST Permit Number: 09322 SEI Project Number: 300401										
Well ID		Benzene (µg/L)	Toluene (µg/L)	Ethyl-benzene (µg/L)	Total Xylenes (µg/L)	MTBE (µg/L)	Naph-thalene (µg/L)	Lead (µg/L)	EDB (µg/L)	Concentration > SSTL (µg/L)
TOTALS	Initial > SSTL	(Sum of Initial Concentration Above SSTL for all Wells)								217,876.56
	Subsequent > SSTL	(Sum of Subsequent Concentration Above SSTL for all Wells)								299,514.5

* High MDL due to other compounds, data for calculation comes from June 29, 2005, sampling event
**Lead was not sampled, data for calculation comes from June 29, 2005, sampling event
*** MW-12 was not sampled, data for calculation comes from June 29, 2005, sampling event

µg/L - micrograms per liter
SSTL = Site Specific Target Levels
Results of Non-Detect and Negative Numbers are Treated as Zeros

Comparison of Analytical Data = [(217,876.56 – 299,514.5)/217,876.56]*100 = 37.47 %

$$\left[\frac{\text{[01/06/03 Sample Concentration Above SSTL]} - \text{[09/16/05 Sample Concentration Above SSTL]}}{\text{[01/06/03 Sample Concentration Above SSTL]}}\right] * 100 = \% \text{ Reduction}$$

Re: Smith's Grocery, 3176 Charlotte Hwy, York, South Carolina
UST Permit #09322 CA #25790
Release 1 Reported June 30, 1993
Request from Donald Crook, 3035 Clover Circle on October 19, 2005
York County

Dear Ms. Smith:

The Underground Storage Tank (UST) Program of the South Carolina Department of Health and Environmental Control (SCDHEC) recognizes your commitment to continue work at this site utilizing your own contractor. SCDHEC has received a request from Mr. Donald Crook at 3035 Clover Circle to have the Granular Activated Carbon (GAC) unit removed from his residence. Mr. Crook understands the potential health effects associated with the consumption of water that may contain petroleum compounds and accepts responsibility for such. Mr. Crook requests that he be contacted at (803) 684-2858 by SEI Environmental so that he may be present during the removal of the unit. Cost Agreement **#25790** has been approved in the amount shown on the enclosed Approved Cost Agreement to complete the necessary work. SEI will still be required to collect a sample from the water supply well on a quarterly basis.

SEI Environmental, Inc. can submit an invoice for direct billing from the SUPERB Account. Please note that all applicable South Carolina certification requirements apply to the laboratory services, well installation, and report preparation. Please note that Sections 44-2-110(4) and 44-2-130 of the SUPERB Statute state that no costs will be allowed unless prior approval from the Department is obtained. If for any reason additional tasks will be completed, these additional tasks and the associated cost must be pre-approved by the Department for the cost to be paid. The SCDHEC reserves the authority to pay only for work properly performed and/or technically justified and will only pay rates in accordance with established criteria. Further, SCDHEC reserves the right to question and/or reject costs if deemed unreasonable or excessive. The SCDHEC reserves the right to audit project records at any time during the project or after completion of work.

A report documenting the GAC removal is due within 30 days of the date of this letter, and the invoice is due within 90 days from the date of this letter. If the invoice is not submitted within 120 days from the date of this letter, monies allocated to pay this invoice will be uncommitted. This means that the invoice will not be processed for payment until all other committed funds are paid or monies become available.

On all correspondence concerning this site, please reference **UST Permit #09322 and Cost Agreement #25790**. If there are any questions concerning this project, please contact me at (803) 896-6397, via email at thomadl@dhec.sc.gov or by fax at (803) 896-6245.

Sincerely,

Debra L. Thoma

Subject: RE: Smith Grocery, SC Hwy 49, York, SC

Dear Debra,

I authorize you to remove the equipment.

I want to be around when the contractor removes the equipment. I know there have been prior problems with the equipment before I bought the house when freezing temperatures came about.

Please advise me on the date and time of removal.

I have no concern of you taking future samples from my well.

I appreciate continued advisement of your test/reports from my well and property (there are several (at least 2 not counting my well) collection sites on my property). I believe by removing the system we will reduce the cost of this remediation in the long term, it will reduce my concerns of further problems and it will provide me an outdoor spigot I can get to without physical exertion.

I feel more confident drinking the water from my well than any municipality.

Thank you for your help.

Best regards,

Donald Crook

Subject: Re: Smith Grocery, SC Hwy 49, York, SC

Mr. Crook:

Due to the release from the former underground storage tanks at Smith Grocery, at some time during the course of the assessment or corrective action petroleum chemicals were detected in the supply well above the laboratory detection limit. As a precautionary measure, the granulated activated carbon filter was installed to remove the petroleum from the water. The UST Program policy is to offer the installation of a filter anytime a chemical is detected as the potential exists for the level to exceed the EPA drinking water standards. The UST Program can authorize costs for the contractor (SEI Environmental) to come out and remove the unit. There will no cost to you for removal of the unit. The most recent sample collected before the filter showed all compounds below laboratory detection limits except for EDB (Ethylene Dibromide) at 0.07 ppb. The EPA drinking

water standard is 0.05 ppb. By requesting the filter be removed, you are acknowledging that the consumption of water that may contain petroleum chemicals may cause adverse health effects and that you accept responsibility for such. The contractor still be collect a sample from you well on a quarterly basis until the cleanup of the release is completed and I will continue to provide you a copy of the reports for as long as you wish to receive them. Upon your confirmation that you still would like the filter removed, I will send through the necessary paperwork to get the unit removed. If I can be of any further assistance, please do not hesitate to contact me.

Sincerely,

Debra L. Thoma

>>> "Donald Crook" <donaldcrook@bellsouth.net> 10/19/2005 1:05 PM >>>
Dear Debra,

Emailed you earlier. Guess my company's firewall prevents me from communicating to the government.

I reside at:

3035 Clover Circle
York, SC 29745

I bought the house in July 2004. Someone or you have a filtration system at my house. I'd like it removed.

1) It blocks one of 2 outside spigots I have.

2) I look at it as a potential problem in freezing weather and know it is just another thing to go wrong in supporting my house.

Can you explain why this filtration system is necessary when your report shows negligible concerns. Personally I feel the pine trees around my house are producing as much volatile chemical concerns as what came about in the report at my site. I do not see any concern with lead or any other heavey metal.

The cost of removing the devise now can save our state money by not sending people out to maintain it.

Yesterday they maintained it and my wife was concern because the water came out like looking like milk and fizzing. I knew what had happened. They back washed the thing and O2 was all in the system. It is still not out of the system.

I believe my water is better than any municipally can provide. I am pretty confident of this fact.

Bottom line. I want the system removed and appreciate your assistance on this matter.

Best regards,

Donald Crook

Re: Underground Injection Control Permit #563M
Smith's Grocery Site
York County

Dear Ms. Smith:

Enclosed is a Permit to Operate eighteen (18) Class V.A.-I. (Aquifer Remediation) injection wells at the Smith's Grocery Site, York County, SC.

The issuance of this **UIC Permit 563M** represents a final staff decision that may be appealed to the Administrative Law Court (ALC). Such appeal must be made pursuant to the amended Rules of Procedure for the Administrative Law Court that became effective on May 1, 2005. Pursuant to Rule 11 of the amended ALC Rules of Procedure, such appeal must be made by filing a request for a contested case hearing with the Clerk of the ALC within thirty (30) days after notice of this decision at the following address:

Clerk, Administrative Law Court
1205 Pendleton Street, Suite 224
P. O. Box 11667
Columbia, SC 29211

Pursuant to Rule 11(D), the following elements must, at a minimum, be included within the request:

1. The name of the party requesting the hearing and the issue(s) for which the hearing is requested;
2. The caption or other information sufficient to identify the decision, order, letter, determination, action, or inaction which is subject to the hearing;
3. A copy of the written agency decision, order, letter or determination, if any, which gave rise to the request;
4. The relief requested.

Furthermore, pursuant to ALC Rule 71, the Administrative Law Court requires that a party requesting a contested case hearing must submit a filing fee in the amount of $250 with the Administrative Law Court.

Finally, a copy of a request for the contested case hearing must also be served on each party, including but not limited to DHEC. Copies of a request for a contested case hearing should be mailed to the Clerk of the Board, DHEC, 2600 Bull Street, Columbia, SC 29201, (803) 898-3300.

If you have any question, please call Norman J. Dodson at (803) 898-3531.

Sincerely,

Norman J. Dodson, Hydrogeologist

WATER MONITORING ASSESSMENT & PROTECTION DIVISION

Injection Well Operating Approval
for

Class II, III, and V.A. Injection Well(s)

Permit #563M Date of Issue: October 13, 2005

In accordance with the provisions of Title 48, Chapter 1, South Carolina Code of Laws, 1976, as amended, and pursuant to receiving a Permit to Operate eighteen (18) Class V.A.-I. (Aquifer Remediation) injection wells, authorization is granted to Smith's Grocery to operate eighteen (18) Class V.A.-I. (Aquifer Remediation) injection wells located at the Smith's Grocery Site, York County, SC, and are subject to the attached provisos noted for the operator.

The Class V.A.-I. injection wells are two (2) inches in diameter and approximately thirty to forty (30 to 40) feet deep

Pursuant to Title 48, Chapter 1, South Carolina Code of Laws, 1976, as amended, this authorization may be rescinded if these injection wells should, at any time, contaminate, pollute, or otherwise adversely affect other water in the vicinity or for any other conditions contained in R61-87, Title 48, Chapter 1, South Carolina Code of Laws, 1976, as amended.

Expires: October 13, 2006

Provisions to the Injection Well Operating Approval
for
Underground Injection Well Permit #563M
Smith's Grocery
York County, S.C.
October 13, 2005

1) Construction of new or abandonment of existing wells must be reported to the Department within thirty (30) days of completion.

2) Only Potassium Triple Salt as described in the application dated September 30, 2005 may be injected into the subsurface at the eighteen (18) Class V.A.-I. (Aquifer Remediation) injection wells. Any changes in the system operation other than as presented in the UIC Permit Application must be reported to the Department prior to implementation.

Project Summary

On June 29, 2005, SEI Environmental conducted a comprehensive, quarterly groundwater sampling and gauging event at Smith's Grocery. Attached is Figure 1, a topographic map and Figure 2, a site map depicting the locations of the existing monitoring wells and water supply well locations.

Activities and Assessment of Existing Conditions

A. Potentiometric Data:

On June 29, 2005 SEI personnel collected groundwater elevations from twenty-three (23) monitoring wells using an electronic water level indicator. Groundwater elevation data collected from the groundwater monitoring wells indicates groundwater flowing in a southeasterly direction. No free product was detected at the site. Table 1 is a historical summary of the site groundwater elevation data. Figure 3 is a groundwater potentiometric map based on the June 29, 2005 gauging observations.

B. Groundwater Analytical Data:

On June 29, 2005 SEI personnel mobilized to the site to gauge twenty-nine (29) monitoring wells and sample seventeen (17) monitoring wells, MW-1, MW-2, MW-6, MW-8, MW-10, MW-11, MW-12, MW-13, MW-14, MW-15, MW-17, MW-18 MW-19, TW-1, TW-2 and TW-3. Four (4) water supply wells, Crook, Hill, Swift, and Smith were also sampled during the event. These water supply samples were collected both before and after well water was filtered by the granular activated carbon (GAC) filters. Please note that the laboratory analytical report presents test results for the Swift water supply well inaccurately due to sampler error in labeling "pre and post" GAC filter samples. Table 2 presents the analytical data accurately for the Swift water supply well.

Field Data Information Sheet(s) for Ground Water Sampling are provided as Appendix A. One hundred and eight (108) gallons of purged groundwater were generated from the purging and field screening of the monitoring wells for later disposal at NU-WAY Environmental of Lexington, South Carolina.

Upon completion of gauging, purging, and collection of groundwater parameters, a representative sample was collected from the seventeen monitoring wells listed above, and the water supply wells. Each sample was submitted to Accutest Laboratories in Orlando, Florida for analysis of benzene, toluene, ethylbenzene, xylenes (BTEX), methyl tert-butyl ether (MTBE), and naphthalene by EPA Method 8260B, ethylene dibromide (EDB) by EPA Method 8011, and lead by EPA Method 6010. The laboratory analytical report is provided as Appendix B.

A map depicting the Chemicals of Concern (CoC) for the June 29, 2005 sampling event is provided as Figure 1. A historical summary of the laboratory analytical data is provided as Table 2.

The following is a summary of the July 29, 2005 analytical test results trends of groundwater samples collected from compliance monitoring wells and water supply wells. The laboratory analytical test results indicate that ten (10) groundwater samples collected on June 29, 2005 exhibited benzene concentrations above the Site Specific Target Levels (SSTLs). Five (5) groundwater samples exhibited toluene concentrations above the SSTLs. Five (5) groundwater samples exhibited ethylbenzene concentrations above the SSTLs. Four (4) groundwater samples exhibited xylenes concentrations above the SSTLs.

Four (4) groundwater samples exhibited MTBE concentrations above the SSTLs. Eight (8) groundwater samples exhibited naphthalene concentrations above the SSTLs. Seven (7) groundwater samples exhibited lead concentrations above SSTLs. Five (5) groundwater samples exhibited EDB concentrations above the SSTLs.

C. Percent Reduction Calculation

The calculation of the June 29, 2005 Percent Concentration Reduction is determined through the comparison of the June 29, 2005 laboratory analytical data and the baseline data. The calculation is 25.59%. The formula for calculating the Percent Concentration Reduction is:

Percent of Concentration Reduction = ((Initial Mass Above SSTL) - (Current Mass Above SSTL)*100))/ (Initial Mass Above SSTL)

The rather low percentage of reduction of chemicals of concern at the site is due to the high level of contamination indicated in the Laboratory Analytical Report in the samples collected from the majority of compliance wells.

D. Summary of Disposal Activities

On July 14, 2005, SEI personnel transported the purged groundwater to NU-WAY Environmental, located in Lexington, South Carolina. A copy of the Non-Hazardous Waste Manifests is provided as Appendix C.

Conclusions

Based upon the field observations and the subsequent laboratory analytical data, SEI will continue corrective action and conduct groundwater monitoring and gauging at the next scheduled sampling period. SEI is currently considering alternative remediation technologies to implement more effective site cleanup at Smith's Grocery.

Re: Smith's Grocery, SC Hwy 49, York, SC
UST Permit #09322
Release reported June 30, 1993
Corrective Action Plan Addendum received October 3, 2005
York County

Dear Ms. Smith:

The Underground Storage Tank (UST) Program has reviewed the Corrective Action Plan Addendum submitted by SEI Environmental, Inc. The information has been forwarded to the Bureau of Water for a modification to the existing UIC Permit. Upon approval for the Bureau of Water, SEI may commence with the implementation of the addendum by injecting Potassium Triple Salt into the subsurface.

If there are any questions concerning this project, please contact me at (803) 896-6397, via email at thomadl@dhec.sc.gov or by fax at (803) 896-6245.

Sincerely,

Debra L. Thoma, Hydrogeologist

MEMORANDUM

DATE: October 3, 2005

TO: Norman Dodson
Water Monitoring, Assessment & Protection Division
Bureau of Water

FROM: Debra L. Thoma
Assessment & Corrective Action Division
Underground Storage Tank Program

SUBJECT: Smith's Grocery, SC Hwy 49, York, SC
UST Permit #09322
Corrective Action Plan received July 17, 2001
Corrective Action Plan Addendum received October 3, 2005
York County

Attached for your review and approval is a request from SEI Environmental to modify their UIC Permit at the above referenced site from hydrogen peroxide to Potassium Triple Salt. Initial review by this Department indicates the proposed addendum is approvable, with the exception of utilizing the existing monitoring wells that is prohibited under the terms and conditions of the contract. Please send the completed modified Permit to my attention once your review and approval is completed.

Questions may be referred to my attention at (803) 896-6397.

Corrective Action Status Report received September 1, 2005
York County

Dear Mr. Hemphill

The Underground Storage Tank (UST) Program of the South Carolina Department of Health and Environmental Control has reviewed the referenced report submitted by SEI Environmental, Inc. SEI is currently conducting corrective action activities in response to groundwater contamination at the former Smith's Grocery. Monitoring Well MW-3 was sampled and no petroleum compounds were detected. The next quarterly sampling will be conducted in approximately three months.

If you would like additional information regarding this corrective action or if you would like to review the monitoring report, please contact me by phone at (800) 826-5435 (within South Carolina only) or (803) 896-6397, by fax at (803) 896-6245, or by e-mail at thomadl@dhec.sc.gov.

Re: Smith's Grocery, SC Hwy 49, York, SC
UST Permit #09322
Release reported June 30, 1993
Corrective Action Status Report received September 6, 2005
York County

Dear Ms. Smith:

The Underground Storage Tank (UST) Program has reviewed the report submitted by SEI Environmental, Inc. SEI Environmental received Corrective Action Plan approval in September 2001. Based on the proposed time frame of 30 months, corrective action activities should have been completed in March 2004; however, there is only a 25 % reduction in the petroleum concentrations. SEI should evaluate the current remediation methodology and propose any necessary modifications in order to expedite the remediation. Please note, the report was to be submitted by June 15, 2005 but was not submitted until September 6, 2005. The next corrective action status evaluation report documenting the results from the September sampling event should be submitted on or before October 30, 2005.

The UST Program also requests that information concerning the carbon changes be included in all future reports. This information may be in tabular format and must contain the date water samples were collected, the date the analytical results were received, and the date the carbon unit was changed out. This information must also contain historical information for all affected water supply wells. SEI must ensure that the carbon is being changed on a frequent enough basis such to minimize any breakthrough or provide an alternative source of potable water.

On all correspondence regarding this site, please reference the UST Permit Number. Please feel free to contact me, at (803) 896-6397 or thomadl@dhec.sc.gov, if you have questions or need additional information.

Sincerely,

UST Permit #09322
Release reported June 30, 1993
York County

Dear Ms. Smith:

The Underground Storage Tank (UST) Program of the South Carolina Department of Health and Environmental Control directed you to have your contractor submit a Corrective Action Status Evaluation Report on or before June 30, 2005. To date the required report has not been received. In accordance with Section 280.65 of the South Carolina Underground Storage Tank Regulations, the corrective action must be conducted as chemicals of concern are above the risk-based-screening levels.

Please submit the report within 30 days from the date of this letter. Should you not submit the report on or before September 29, 2005 this office will be forced to initiate enforcement action.

On all correspondence regarding this facility, please reference UST Permit #09322. If you have any questions regarding this correspondence, feel free to contact me at (803) 896-6397, (800) 826-5435 (within SC only), or via e-mail at thomadl@dhec.sc.gov.

MR BILL WOOD
SEI ENVIRONMENTAL INC
3021 MCNAUGHTON DR STE 9
COLUMBIA SC 29223

Re: SEI Environmental Pay For Performance Projects
Meeting on March 23, 2005

Dear Mr. Wood:

On behalf of Lee Monts and the staff of the Assessment and Corrective Action Division, I would like to express our thanks for you and your colleagues taking the time to meet and discuss SEI Environmental's current situation regarding pay for performance (PfP) cleanups.

As we discussed, it is the Department's desire to see SEI accomplish the following three objectives in relation to these projects:

1. Return projects to a regular sampling and reporting schedule;
2. Re-establish reductions at sites where levels of chemicals of concern (CoC) have rebounded; and,
3. Begin closing out those projects that have achieved 95+ percent reduction of CoC but progress is no longer occurring.

In response to the first objective, you indicated that all projects would be back on schedule by the end of April, at the latest. You also stated that SEI has hired staff in the Columbia office and has reallocated personnel resources in other offices to assist with this effort.

In order to accomplish the other two objectives, SEI provided several proposals:

1. In order to limit some short-term costs, SEI proposes to drop historically clean monitoring wells from the sampling schedules of appropriate sites;
2. On some projects, especially the older ones, SEI would like to confirm/update the receptor surveys and possibly re-model the SSTLs;
3. On selected sites SEI will implement changes in technology, to include chemical oxidation. Mr. Mark Martin will meet with DHEC staff in the next few weeks to provide a detailed overview of his technology.

All site-specific proposals should be submitted to the individual project managers for review. Changes in technology will require a new public notice period.

You also raised the subject of monitoring wells that formerly contained free phase product. As we understand your hypothesis, the free phase product has been smeared in the well and is producing significant levels of CoC in subsequent sampling events that are not representative of the aquifer. In order to correct this condition, you would like to propose some method to "sterilize" these monitoring wells. You are asked to provide whatever data you may have to support your hypothesis along with your proposal. While treatment of monitoring wells is not allowed under the terms and conditions of the PfP agreements, the UST Program will consider your proposal.

We were encouraged by the statements of Mr. McAllen Finley that SEI has every intention of completing the work at all of these sites. We appreciate that Mr. Finley traveled from Nashville to attend this meeting.

Please feel free to contact me at (803) 896-6585 if you have any questions or need additional information.

Sincerely,

Re: Smith's Grocery, SC Hwy 49, York, SC
UST Permit #09322
Release reported June 30, 1993
Corrective Action Status Report received February 18, 2005
York County

Dear Ms. Smith:

The Underground Storage Tank (UST) Program has reviewed the report submitted by SEI Environmental, Inc. SEI Environmental received Corrective Action Plan approval in September 2001. Based on the proposed time frame of 30 months, corrective action activities should have been completed in March 2004; however, there is less than a 10% reduction in the petroleum concentrations. SEI should evaluate the current remediation methodology and propose any necessary modifications in order to expedite the remediation. Please note, the report was to be submitted by December 15, 2004 but was not submitted until February 18, 2005. Due to the fact that the laboratory data is from January 2005, the UST Program will not require submittal of the March 2005 report. The next corrective action status evaluation report should be submitted on or before June 15, 2005.

On all correspondence regarding this site, please reference the UST Permit Number. Please feel free to contact me, at (803) 896-6397 or thomadl@dhec.sc.gov, if you have questions or need additional information.

Sincerely,

Re: Summary of Corrective Action and Gauging Results
Smith's Grocery, Fourth Quarter 2004
#176 Charlotte Highway (Highway 49)
York, South Carolina 29745
UST Permit # 09322

Dear Ms. Thoma;

SEI Environmental, Inc. (SEI) submits the following summary of gauging results and laboratory analytical results for samples collected on January 14, 2005. On June 14, 2004, SCDHEC submitted to Ms. Lois Smith the a directive letter for the Corrective Action Plan. Included in this report are Figure 1, a topographic map depicting the location of the site, and Figure 2, a site map illustrating the location of the monitoring wells.

On January 14, 2005 SEI personnel were on site to gauge water levels, and check for the presence of free product. No free product was observed in any of the existing monitoring wells. Twenty three (23) monitoring wells were gauged. Appendix B contains Table 1 which summarizes the January 14, 2005 gauging results and Table 2 which is a historical summary of groundwater elevations at the site. A potentiometric surface map based on the current data is labeled as Figure 3.

Upon completion of gauging, seventeen (17) monitoring wells (MW-1, MW-2, MW-6, MW-7, MW-8, MW-10 through MW-15, MW-17, MW-18, MW-19, TW-1, TW-2, and TW-3) were sampled along with four (4) water supply wells. All monitoring wells were purged prior to sampling using a new, disposable bailer. Purging consisted of removing well volumes of groundwater until the parameter readings stabilized and three volumes were removed, or until the well was dry. Please note that petroleum odor was observed at MW-1, MW-2, MW-6 through MW-8, MW-10, MW-12, TW-1, and TW-2, and therefore no field parameter measurements were taken. Appendix C contains Table 3, which summarizes the January 14, 2005 gauging field information and includes copies of the Field Data Information Sheet(s) for Ground Water Sampling. Upon completion of purging activities, a representative sample was collected from each sample point, placed in the appropriate labeled sample containers, and placed on ice in a cooler. Three of the water supply wells (Hill, Swift, and Strife) were sampled both before and after the GAC filter unit in order to determine the effectiveness of the water filtration system.

Each sample was then submitted to TestAmerica Analytical Testing Corporation following strict chain-of-custody procedures. Each sample submitted was analyzed for benzene, toluene, ethylbenzene, xylene (BTEX), MtBE, and naphthalene by EPA method 8260B, lead by EPA method 200.7, and ethylene dibromide (EDB) by EPA method 8011.

After a review of the current analytical data, it was noted that the "post filtration" sample from the Swift water supply well had a benzene concentration of 22.0 µg/L. The carbon in the GAC unit was replaced on February 9, 2005. Following the carbon change, pre and post filtration samples were taken at the Swift residence the same day. The analytical data from the February 9, 2005 samples show that the filtration system is working properly and the carbon change was successful. All concentrations post-filtration are unable to be detected or below RBSL. It should also be noted that the Strife residence has been sold and is now the Crook residence. Included in Appendix D are Table 4, which summarizes the current laboratory analytical results; Table 5, a historical summary of the laboratory analytical data; copies of the laboratory analytical results, and a copy of the Chain of Custody. Also included in Appenix A is Figure 4, which is a groundwater CoC map reflecting the current analytical data.

On January 21, 2005 the 44 gallons of petroleum-impacted water, which was generated by the sampling and purging activities on January 14, 2005, was disposed at G&K Tank Service in Sumter, SC. Appendix E contains copies of the Non-Hazardous Waste Manifest and Certificate of Disposal.

The evaluation of the corrective action activities' effectiveness consists of comparing the Fourth Quarter 2004 laboratory analytical data against the baseline SSTL concentrations and determining the percent of total concentration reduction. The percent of total concentration reduction is calculated by using the following formula:

> Percent of Total Concentration Reduction =((Initial Mass Above SSTL) – (Current Mass Above SSTL) / (Initial Mass Above SSTL))*100

The calculation for the January 14, 2005 sampling event's Percent of Total Concentration Reduction was found to be 7.90 %. This calculation can be found on Table 6 in Appendix F.

SEI will collect groundwater samples in the first quarter of 2005 for further evaluation of the corrective action activities. Upon receipt of the laboratory analytical data, SEI will submit a report summarizing the findings.

If you have any questions or comments concerning the information provided in this document, please contact Owen Astwood at (803) 788-2535.

Sincerely,

Owen Astwood

Appendix E

Non-Hazardous Waste Manifest and Certificate of Disposal

Please print or type
(Form designed for use on elite (12-pitch) typewriter)

NON-HAZARDOUS WASTE MANIFEST

1. Generator's US EPA ID No.	Manifest Document No.	2. Page 1 of	
	GK7290		01/21/05

3. Generator's Name and Mailing Address: SMITH'S GROCERY
3176 CHARLOTTE HWY
YORK, SC

4. Generator's Phone ( )

5. Transporter 1 Company Name	6. US EPA ID Number	A. Transporter's Phone
SEI ENVRIONMENTAL, INC		803-788-2535
7. Transporter 2 Company Name	8. US EPA ID Number	B. Transporter's Phone
9. Designated Facility Name and Site Address	US EPA ID Number	C. Facility's Phone
G & K TANK SERVICES PO BOX 1384 SUMTER, SC 29151	987573557	800-800-6840

11. Waste Shipping Name and Description	12. Containers No.	12. Containers Type	13. Total Quantity	14. Unit Wt/Vol
a. NON HAZARDOUS PETROLEUM CONTAMINATED WATER PROFILE #313			44.0	gal
b.				
c.				
d.				

D. Additional Descriptions for Materials Listed Above

E. Handling Codes for Wastes Listed Above

15. Special Handling Instructions and Additional Information

16. **GENERATOR'S CERTIFICATION:** I certify the materials described above on this manifest are not subject to federal regulations for reporting proper disposal of Hazardous Waste.

Printed/Typed Name	Signature	Month	Day	Year

17. Transporter 1 Acknowledgement of Receipt of Materials

Printed/Typed Name	Signature	Month	Day	Year

18. Transporter 2 Acknowledgement of Receipt of Materials

Printed/Typed Name	Signature	Month	Day	Year

19. Discrepancy Indication Space

20. Facility Owner or Operator: Certification of receipt of waste materials covered by this manifest except as noted in Item 19.

Printed/Typed Name	Signature	Month	Day	Year

Re: **Notice of Complaint**
UST Permit #09319, Sunoco 0616-1293, 1754 Saluda St., Rock Hill, SC
UST Permit #09322, Smith's Grocery, SC Hwy 49, York, SC
UST Permit #14457, Captain Dick's Marina, 4123 US Bus 17 S., Murrells Inlet, SC
UST Permit #14541, Neely's Country Corner, 2150 Neely Store Rd., Rock Hill, SC

Dear Mr. Wood:

In accordance with the specifications and conditions of the contracts for the corrective action at the referenced facilities, a Corrective Action Status Evaluation (CASE) Report is to be submitted on a quarterly basis. To date the required reports have not been received. The CASE Report for UST Permit #09319 was to be submitted by December 15, 2004. The CASE Report for UST Permit #09322 was to be submitted by December 15, 2004. The CASE Report for UST Permit #14457 was to be submitted by January 15, 2005. The CASE Report for UST Permit #14541 was to be submitted by January 15, 2005. If the required reports are not received within thirty days from the date of this letter, the UST Program may take further action based upon the specifications and conditions of the contracts.

Please feel free to contact me at (803) 896-6397, if you have any questions or need additional information.

Sincerely,

Debra L. Thoma

Re: Progress of Pay For Performance Cleanups
UST Permits #02476, 02542, 02724, 03467, 03713, 08376, 09322, 11585, 11732, 11756, 14457, 14541

Dear Mr. Pittman:

As you know, SEI Environmental (SEI) is entered into a number of Pay for Performance (PFP) contracts with the State of South Carolina to perform active corrective action (ACA) activities at facilities with petroleum releases. These contracts state in detail how the ACA process and reporting procedure are to be implemented. Based upon a review of recent Corrective Action System Evaluation (CASE) reports for the above referenced sites, the Department has noted a lack of progress toward the corrective action goals established for the referenced sites. SEI should be aware of these and take appropriate measures to ensure that these projects get on track for completion. Although we appreciate your recent communication and diligence in the preparation of late CASE reports, it seems that meeting the requirements of the existing corrective action contracts is an ongoing struggle. Recently the SEI office in Columbia experienced some loss of personnel. The Department is concerned with the apparent shortage of personnel working on DHEC UST correctives action contracts as it relates to the lack of progress. Please provide a specific strategy to address each of the projects listed below.

mit #02724 – Minutemen Amoco 2
The CASE Report received on June 30, 2004 documented this project to be 61% complete. As the corrective action started in June 1999, this project is significantly behind schedule. Appropriate actions are needed to move this project to completion.

mit #14457 – Captain Dick's Marina
The CASE Report received on July 14, 2004 documented the continued presence of free product at the site. As the corrective action started in May 2001, this project is significantly behind schedule. Appropriate actions are needed to move this project to completion.

mit #03713 – Pantry 3229 dba Food Chief
The CASE Report received on August 25, 2004 documented the continued presence of free product at the site. As the corrective action started in October 2000, this project is significantly behind schedule. Appropriate actions are needed to move this project to completion.

mit #09322 – Smith's Grocery
The CASE Report received on June 9, 2004 documented this project to be 40% complete. As the corrective action was started in October 2001, this project is significantly behind schedule. Appropriate actions are needed to move this project to completion.

mit #14541 – Neely's Country Store

The CASE Report received on July 7, 2004 documented that no mass reduction has occurred on this project after three quarters of treatment. As there are impacted water supply wells associated with this release, the lack of progress is unacceptable. Immediate action is needed to move this project forward.

mit #11585 – Country Store

The CASE Report received on April 13, 2004 documented this project to be 57% complete. As the corrective action was started in September 2000, this project is significantly behind schedule. Appropriate actions are needed to move this project to completion.

mit #08376 – Abernathy Grocery

The CASE Report received on July 7, 2004 documented this project to be 63% complete. As the corrective action was started in April 1998, this project is significantly behind schedule. Appropriate actions are needed to move this project to completion.

mit #03467 – Cash and Carry Country Store

As the corrective action was started in October 2001, this project is behind schedule. Appropriate actions are needed to move this project to completion.

A response to this correspondence is requested no later than January 2, 2005.
Please feel free to contact me at (803) 896-6249 if you have any questions or need additional information.

Sincerely,

Kent M. Coleman

Re: Smith's Grocery, SC Hwy 49, York, SC
UST Permit #09322
Release reported June 30, 1993
Corrective Action Status Report received October 12, 2004
York County

Dear Ms. Smith:

The Underground Storage Tank (UST) Program has reviewed the report submitted by SEI Environmental, Inc. This report documents the results of the sampling activities. All future sampling activities should include pre- and post-GAC analyses so that the UST Program can ensure that the carbon units are being maintained in accordance with the bid specifications. In addition, the UST Program is concerned about the lack of progress. SEI Environmental received Corrective Action Plan approval in September 2001. Based on the proposed time frame of 30 months, corrective action activities should have been completed in March 2004; however, there is only a 37% reduction in the petroleum concentrations. SEI should evaluate the current remediation methodology and propose any necessary modifications in order to expedite the remediation. The next corrective action status evaluation report should be submitted on or before December 15, 2004.

On all correspondence regarding this site, please reference the UST Permit Number. Please feel free to contact me, at (803) 896-6397 or thomadl@dhec.sc.gov, if you have questions or need additional information.

Re: Summary of Corrective Action and Gauging Results
Smith's Grocery, First Quarter 2004
#176 Charlotte Highway (Highway 49)
York, South Carolina 29745
UST Permit # 09322

Dear Ms. Th0ma;

SEI Environmental, Inc. (SEI) submits the following summary of gauging results and laboratory analytical results for samples collected on August 17-18, 2004. On June 14, 2004, SCDHEC submitted to Ms. Lois Smith the attached directive letter for the Corrective Action Plan. A copy of the directive letter can be found in Appendix A. Attached is Figure 1, a topographic map depicting the location of the site and Figure 2, a site map illustrating the location of the monitoring wells.

August 17-18, 2004 SEI personnel were on site to gauge water levels, and check for the presence of free product. No free product was observed in Monitor Well MW-1. Please note that MW-4 and MW-20 could not be located. Attached in Appendix B is Table 1, which summarizes the August 17-18, 2004 gauging results. Attached is Figure 3, is a potentiometric map based upon the August 17-18, 2004 data.

August 17-18, 2004 SEI personnel were on site to gauge the monitoring wells, remove free product, if applicable, and collect groundwater samples. Twenty-one (21) monitoring wells were gauged. Upon completion of gauging, thirteen (13) monitoring wells, MW-3, MW-5, MW-11, MW-13 through MW-19, and TW-1 through TW-3 were purged and field screened. The remaining monitoring wells were not purged. Please note that petroleum odor was observed at MW-1, MW-2, MW-6 through MW-8, MW-9, MW-10, MW-12, and TW-2, a total of eight (8) monitoring wells. No free product was observed. Attached in Appendix B is Table 2, an historical summary of gauging results including groundwater elevation data. One Hundred and thirty-five(135) gallons of petroleum-impacted water was generated from the purging of the thirteen(13) monitoring wells. Attached in Appendix C is Table 3, which summarizes the August 17-18, 2004

SEI
Environmental, Inc.

gauging field information and copies of the Field Data Information Sheet(s) for Ground Water Sampling. Upon completion of purging activities, a representative sample was collected from each sample point. Each sample was submitted to Environmental Science Laboratory in Mt. Joliet Tennessee for analysis for Benzene, Toluene, Ethylbenzene, and Xylene (BTEX) by EPA method 8260B, Methyl Tert-butyl Ether (MTBE) by EPA method 8260B, Naphthalene by EPA method 8260B, Lead by EPA method 6010B, and Ethylene Dibromide (EDB) by EPA method 8011. Attached in Appendix D is Table 4, which summarizes the August 17-18, 2004 laboratory analytical results; Table 5, a historical summary of the laboratory analytical data; copies of the laboratory analytical results, and a copy of the Chain of Custody. Attached is Figure 4, a CoC map illustrating the August 17-18, 2004 laboratory analytical data.

August 19, 2004 the 135 gallons of petroleum-impacted water, which was generated from the purging of the sample points on August 17-18, 2004, was disposed at G & K Tank Services, Inc. in Sumter, SC. Attached in Appendix E are copies of the Non-Hazardous Waste Manifest and Certificate of Disposal.

The evaluation of the corrective action activities' effectiveness consists of comparing the March 8, 2004 laboratory analytical data against the baseline SSTL concentrations and determining the percent of total concentration reduction. The percent of total concentration reduction is calculated by using the following formula:

> Percent of Total Concentration Reduction = (Initial Mass Above SSTL) – (Current Mass Above SSTL) *(100)) / (Initial Mass Above SSTL)

The calculation for the August 7-18, 2004 Percent of Total Concentration Reduction was found to be 37.34 %. Attached in Appendix F is Table 6, which illustrates the concentration reduction calculation.

SEI will collect groundwater samples in the fourth quarter 2004 for further evaluation of the corrective action activities. Upon receipt of the laboratory analytical data, SEI will submit a report summarizing the findings.

If you have any questions and / or comments, concerning the information provided in this document, please contact David Pittman at (803) 788-2535.

Sincerely,

David B. Pittman

Appendix E

Non-Hazardous Waste Manifest and Certificate of Disposal

Please print or type
Form designed for use on elite (12-pitch) typewriter.

NON-HAZARDOUS WASTE MANIFEST

1. Generator's US EPA ID No.

Manifest Document No.

2. Page 1 of

3. Generator's Name and Mailing Address
SEI ENVIRONMENTAL, INC
[illegible]

4. Generator's Phone (   )

5. Transporter 1 Company Name
SEI ENVIRONMENTAL, INC

6. US EPA ID Number

A. Transporter's Phone
[illegible]

7. Transporter 2 Company Name

8. US EPA ID Number

B. Transporter's Phone

9. Designated Facility Name and Site Address
B & K TANK SERVICES
[illegible] 1384
SUMTER, SC [illegible]

10. US EPA ID Number

UST Permit #09322
Release reported June 30, 1993
Corrective Action Status Report received June 9, 2004
York County

Dear Mr. & Mrs. Swift:

The Underground Storage Tank (UST) Program of the South Carolina Department of Health and Environmental Control has reviewed the referenced report submitted by SEI Environmental, Inc. SEI is currently conducting corrective action activities in response to groundwater contamination at the former Smith's Grocery. Please find enclosed a copy of the report. The next quarterly sampling will be conducted in approximately three months.

If you would like additional information regarding this corrective action, please contact me by phone at (800) 826-5435 (within South Carolina only) or (803) 896-6397, by fax at (803) 896-6245, or by e-mail at thomadl@dhec.sc.gov.

Sincerely,

Debra L. Thoma

Re: Smith's Grocery, SC Hwy 49, York, SC
UST Permit #09322
Release reported June 30, 1993
Corrective Action Status Report received June 9, 2004
York County

Dear Ms. Smith:

The Underground Storage Tank (UST) Program has reviewed the report submitted by SEI Environmental, Inc. This report documents the results of the sampling activities. All future sampling activities should include pre- and post-GAC analyses so that the UST Program can ensure that the carbon units are being maintained in accordance with the bid specifications. In addition, the UST Program is concerned about the lack of progress. SEI Environmental received Corrective Action Plan approval in September 2001. Based on the proposed time frame of 30 months, corrective action activities should have been completed in March 2004; however, there is only a 40% reduction in the petroleum concentrations. SEI should evaluate the current remediation methodology and propose any necessary modifications in order to expedite the remediation. The next corrective action status evaluation report should be submitted on or before August 15, 2004.

On all correspondence regarding this site, please reference the UST Permit Number. Please feel free to contact me, at (803) 896-6397 or thomadl@dhec.sc.gov, if you have questions or need additional information.

Sincerely,

Debra L. Thoma

Dear Mr. Hemphill

The Underground Storage Tank (UST) Program of the South Carolina Department of Health and Environmental Control has reviewed the referenced report submitted by SEI Environmental, Inc. SEI is currently conducting corrective action activities in response to groundwater contamination at the former Smith's Grocery. Monitoring Well MW-3 on your property was not sampled. The next quarterly sampling will be conducted in approximately three months.

If you would like additional information regarding this corrective action or if you would like to review the monitoring report, please contact me by phone at (800) 826-5435 (within South Carolina only) or (803) 896-6397, by fax at (803) 896-6245, or by e-mail at thomadl@dhec.sc.gov.

Re: Summary of Corrective Action and Gauging Results
Smith's Grocery
#176 Charlotte Highway (Highway 49)
York, South Carolina 29745
UST Permit # 09322

Dear Ms. Thoma:

SEI Environmental, Inc. (SEI) submits the following summary of gauging results and laboratory analytical results for samples collected on May 10, 2004. On February 12, 2003, SCDHEC submitted to Mr. Paul Bekish the attached directive letter for the Corrective Action Plan. A copy of the directive letter can be found in Appendix A. Attached in Appendix B is Figure 1, a topographic map depicting the location of the site and Figure 2, a site map illustrating the location of the monitoring wells.

March 1, 2004 SEI personnel were on site to gauge water levels, and check for the presence of free product. No free product was observed. Please note that TW-1 could not be located. Attached in Appendix C is Table 1, which summarizes the March 1, 2004 gauging results. Attached in Appendix D, is Figure 3, is a potentiometric map based upon the March 1, 2004 data.

May 10, 2004 SEI personnel were on site to gauge the monitoring wells, remove free product, if applicable, and collect groundwater samples. Twenty-three (23) monitoring wells were gauged. Upon completion of gauging, eight (8) monitoring wells, MW-11, MW-13 through MW-15, MW-17 through MW-19, and TW-3 were purged and field screened. The remaining monitoring wells were not purged. Please note that petroleum odor was observed, resulting in no field screening, at MW-1, MW-2, MW-6 through MW-8, MW-10, MW-12, and TW-2, a total of eight (8) monitoring wells. No free product was observed. Attached in Appendix C is Table 2, a summary of the groundwater gauging results for May 10, 2004 and Table 3, an historical summary of gauging results including groundwater elevation data. 158 gallons of petroleum-impacted water was generated from the purging of the sixteen(16) monitoring wells. Attached in Appendix D is Figure 4, a Groundwater Potentiometric map of the May 10, 2004 field observations. Attached in Appendix E is Table 4, which summarizes the May 10, 2004 field screening information and

SEI
Environmental, Inc.

copies of the Field Data Information Sheet(s) for Ground Water Sampling. Upon completion of purging activities, a representative sample was collected from each sample point. Each sample was submitted to Environmental Science Laboratory in Mt. Juliet Tennessee for analysis for Benzene, Toluene, Ethylbenzene, Xylene (BTEX) by EPA method 8260B, Methyl Tert-butyl Ether (MTBE) by EPA method 8260B, Naphthalene by EPA method 8260B, Lead By EPA method 6010B, and Ethylene Dibromide(EDB) by EPA method 8011. Attached in Appendix F is Table 5, which summarizes the May 10, 2004 laboratory analytical results; Table 6, a historical summary of the laboratory analytical data; copies of the laboratory analytical results, and a copy of the Chain of Custody. Attached in Appendix G is Figure 5, a CoC map illustrating the May 10, 2004 laboratory analytical data.

May 15, 2004, the 158 gallons of petroleum-impacted water, which was generated from the purging of the sample points on May 10, 2004, was disposed at G & K Tank Services, Inc. in Sumter, SC. Attached in Appendix H are copies of the Non-Hazardous Waste Manifest and Certificate fof Disposal.

The evaluation of the corrective action activities' effectiveness consists of comparing the May 10, 2004, laboratory analytical data against the baseline SSTL concentrations and determining the percent of total concentration reduction. The percent of total concentration reduction is calculated by using the following formula:

> Percent of Total Concentration Reduction = (Initial Mass Above SSTL) – (Current Mass Above SSTL) *(100)) / (Initial Mass Above SSTL)

The calculation for the April 15, 2004 Percent of Total Concentration Reduction was found to be 40.22 %. Attached in Appendix I is Table 7, which illustrates the concentration reduction calculation.

SEI will collect groundwater samples in August 2004 for further evaluation of the corrective action activities. Upon receipt of the laboratory analytical data, SEI will submit a report summarizing the findings.

If you have any questions and / or comments, concerning the information provided in this document, please contact David Pittman at (803) 788-2535.

Sincerely,

David B. Pittman

Re: Smith's Grocery, 3176 Charlotte Hwy, York, South Carolina
UST Permit #09322
York County

Dear Mr. Bekish:

The Underground Storage Tank (UST) Program has reviewed the previous Corrective Action Performance Evaluation Reports. The UST Program is granting your request to remove monitoring wells MW-3, MW-4, MW-5, MW-9, MW-16, and MW-20 from the quarterly sampling requirements. These wells should be screened for organic vapors. Any well showing the presence of organic vapors should be sampled for laboratory analyses. The UST Program cannot authorize removal of TW-1 as contaminants of concern were detected during the January 2004 sampling event.

On all correspondence regarding this site, please reference UST Permit #09322. If you have any questions concerning this correspondence, please contact me at (803) 896-6397, (800) 826-5435 (within SC only), via fax at (803) 896-6245, or via e-mail at thomadl@dhec.sc.gov.

Re: Summary of Corrective Action and Gauging Results
Smith's Grocery, First Quarter 2004
#176 Charlotte Highway (Highway 49)
York, South Carolina 29745
UST Permit # 09322

Dear Ms. Anderson;

SEI Environmental, Inc. (SEI) submits summary of gauging results and laboratory analytical results for samples collected on January 8, 2004. Attached in Appendix A, Figure 1, is a topographic map depicting the location of the site and Figure 2, a site map illustrating the location of the monitoring wells.

January 8, 2004, SEI personnel were on site to gauge the monitoring wells, remove free product and collect groundwater samples. Twenty-three (23) monitoring wells were gauged each site visit. No free product was found during either sampling event. A total of two (2) drums of petroleum-impacted water were generated from the purging of the monitoring wells during the sampling event. Attached in Appendix C is Table 2, which summarizes January 8, 2004 gauging and field screening information, and copies of the Field Data Information Sheet(s) for Ground Water Sampling. Upon completion of purging and collection of field screening information, a representative sample was collected from each sample point. Each sample was submitted to Environmental Science Laboratory in Nashville, Tennessee for analysis for Benzene, Toluene, Ethylbenzene, Xylene (BTEX) by EPA method 8260B, Methyl Tert-butyl Ether (MTBE) by EPA method 8260B, Naphthalene by EPA method 8260B, Ethylene Dibromide by EPA method 8011, and Lead by EPA method 6010B. Attached in Appendix D is Table 3, which summarizes the laboratory analytical results and copies of the laboratory analytical results and a copy of the Chain of Custody. Attached in Appendix E is Figure 3, a CoC map based on the January 8, 2004, laboratory analytical data.

January 8, 2004, a total of two (2) drums of petroleum-impacted water, which were generated from the purging of the sample points, was disposed at G & K Tank Services, Inc. in Sumter, SC. Attached in Appendix F are copies of the Non-Hazardous Waste Manifests and Certificate for Disposals for the two(2) drums of petroleum-impacted water.

The evaluation of the corrective action activities' effectiveness consists of comparing the April 2, 2003 laboratory analytical data against the baseline SSTL concentrations and determining the percent of total concentration reduction. The percent of total concentration reduction is calculated by using the following formula:

SEI
Environmental, Inc.

Percent of Total Concentration Reduction = (Initial Con. Above SSTL) – (Current Conc. Above SSTL) *(100)) / (Initial Conc. Above SSTL)

The calculation for the January 8, 2004, Percent of Total Concentration Reduction was found to be **46.6%.** Attached in Appendix G is Table 4, which illustrates the system's effectiveness analysis.

SEI will continue collect groundwater samples as required in the next quarterly sampling period as specified in the February 12, 2003 directive. Upon receipt of the laboratory analytical data, SEI will submit a report summarizing the findings.

If you have any questions and / or comments, concerning the information provided in this document, please contact John Paul Bekish at (803) 788-2535.

Sincerely,

David B. Pittman

Re: Smith's Grocery, 3176 Charlotte Hwy., York, SC
UST Permit #09322
Laboratory Analytical Results for supply well sampled on March 3, 2004
York County

Dear Mr. & Mrs. Swift:

On March 3, 2004, the South Carolina Department of Health and Environmental Control (SCDHEC) sampled your supply well for gasoline constituents. Please find enclosed a copy of the analytical results. The results indicate that petroleum constituents are present before the granulated carbon (GAC) unit as indicated by the sample labeled Swift Pre-GAC but the unit is successfully removing the petroleum as indicated by the sample labeled Swift Post-GAC.

If you have any questions or need additional information, please contact me at (803) 896-6397 or (800) 826-5435 (within SC only).

Sincerely,

Re: Smith's Grocery, 3176 Charlotte Hwy., York, SC
UST Permit #09322
Laboratory Analytical Results for supply well sampled on March 3, 2004
York County

Dear Mr. Strife:

On March 3, 2004, the South Carolina Department of Health and Environmental Control (SCDHEC) sampled your supply well for gasoline constituents. Please find enclosed a copy of the analytical results. The results indicate that no petroleum was detected before the granulated carbon (GAC) unit as indicated by the sample labeled Strife Pre-GAC.

If you have any questions or need additional information, please contact me at (803) 896-6397 or (800) 826-5435 (within SC only).

Re: Smith's Grocery, 3176 Charlotte Hwy., York, SC
UST Permit #09322
Laboratory Analytical Results for supply well sampled on March 3, 2004
York County

Dear Mr. & Mrs. Hill:

On March 3, 2004, the South Carolina Department of Health and Environmental Control (SCDHEC) sampled your supply well for gasoline constituents. Please find enclosed a copy of the analytical results. The results indicate that low levels of petroleum are present before the granulated carbon (GAC) unit as indicated by the sample labeled Hill Pre-GAC but the unit is successfully removing the petroleum as indicated by the sample labeled Hill Post-GAC.

If you have any questions or need additional information, please contact me at (803) 896-6397 or (800) 826-5435 (within SC only).

Sincerely,

Debra L. Thoma

Re: Smith's Grocery, 3176 Charlotte Hwy., York, SC
UST Permit #09322
Laboratory Analytical Results for supply well sampled on March 3, 2004
York County

Dear MS. Smith:

On March 3, 2004, the South Carolina Department of Health and Environmental Control (SCDHEC) sampled your supply well for gasoline constituents. Please find enclosed a copy of the analytical results. The results indicate no petroleum constituents were detected.

If you have any questions or need additional information, please contact me at (803) 896-6397 or (800) 826-5435 (within SC only).

Sincerely,

Debra L. Thoma

Dear Ms. Thoma:

Enclosed are the analytical results for sample(s) received by the laboratory on March 5, 2004. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

If you have any questions concerning this report please feel free to contact me.

Sincerely,

Sherri Stabel

PARAMETER FOOTNOTES

Dilution factor shown represents the factor applied to the reported result and reporting limit due to changes in sample preparation, dilution of the extract, or moisture content

Inorganic Wet Chemistry and Metals Analyses were performed at our Pace Asheville laboratory and Organic testing was performed at our Pace Charlotte laboratory unless otherwise footnoted.

ND	Not detected at or above adjusted reporting limit
NC	Not Calculable
J	Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit
MDL	Adjusted Method Detection Limit
(S)	Surrogate

Re: Smith's Grocery, 3176 Charlotte Hwy, York, South Carolina
UST Permit **#09322**
Release 1 Reported June 30, 1993
Corrective Action Plan Addendum received December 23, 2003
UIC Permit Application received February 25, 2004
York County

Dear Mr. Bekish:

The Underground Storage Tank (UST) Program has reviewed the referenced document. Further, as required by Section 280.67 of the South Carolina Underground Storage Tank Regulations R.61-92, the Bureau has provided a public notice period including notice of the pending corrective actions to the surrounding land owners. No objections to the proposed actions were expressed and the plan is approved; therefore, corrective action activities may proceed at this time. A Copy of the Underground Injection Control Permit is enclosed.

On all correspondence regarding this site, please reference the UST Permit #09322. If you have any questions, please contact me at (803) 896-6633, (800) 826-5435 (within South Carolina only), or by Fax (803) 896-6245.

Sincerely,

Paula Anderson

Instructions for completing Chain of Custody (COC)

1. Complete all Client Information at top of sheet: name, address, phone, contact (person to whom report will be sent and contact can be made if questions arise), billing information if different from client, PO#, Project Name and/or Project Number as it will appear on the report.
2. Quote Reference, Project Manager, Project No. and Profile No. will be completed by Pace.
3. A separate COC must be filled out for each day of sample collection.
4. Sampler should print their name in the space provided and sign their name followed by the date of the sampling event.
5. Complete Sample Description as it will appear on the laboratory report; include time of sampling, sample matrix, no. of containers and preservative used.
6. Analysis Requested: Complete analysis on the lines provided and place a check in the column for the samples requiring the analysis. It may be necessary to use the space provided for additional comments or include attachments for extended lists of parameters.
7. Submission of samples to laboratory: Indicate Item Number of those samples being transferred; sign relinquished by, and include your affiliation.

*** IMPORTANT NOTE:**

Standard Turnaround Time is 2 weeks. If this does not satisfy your requirements, arrangements must be made prior to samples being submitted to the laboratory. Contact your project manager.

Special Project Requirements such as Low Level Detection Limits or level of QC reported must be indicated on the chain of custody. (Use Additional Comments Section.)

Re: Underground Injection Control Permit #563
Smith's Grocery Site
York County

Dear Ms. Smith:

Enclosed is a Permit to Operate for eighteen (18) Class VA-I (Aquifer Remediation) injection wells at Smith's Grocery Site, York County, SC.

Affected parties may appeal this permit decision in accordance with State Regulation R.61-72. To contest a case, a request for a hearing must be made to the Clerk of the DHEC Board within 15 days of the date of this letter. All requests must include the following information:

1) name of the party requesting the hearing,
2) issue(s) for which the hearing is requested,
3) caption or other information sufficient to identify the decision, order, action or inaction which is the subject of the hearing,
4) relief requested.

Note further that Administrative Law Judge (ALJ) Division rules require that persons requesting a contested case hearing must file a copy of the request and pay a filing fee in the amount of $250 dollars (US) with the ALJ Division at the following address:

Clerk, ALJ Division
1205 Pendleton Street, Suite 224
P.O. Box 11667
Columbia, SC 29211

Injection Well Operating Approval
for

Class II, III, and V.A. Injection Well(s)

Permit #563

Date of Issue: February 24, 2004

In accordance with the provisions of Title 48, Chapter 1, South Carolina Code of Laws, 1976, as amended, and pursuant to receiving a Permit to Construct eighteen (18) Class V.A.-I (Aquifer Remediation) injection wells, authorization is granted to Ms. Smith to operate eighteen (18) Class V.A.-I injection wells located at the Smith's Grocery Site, York County, SC, and are subject to the attached provisos noted for the operator.

Pursuant to Title 48, Chapter 1, South Carolina Code of Laws, 1976, as amended, this authorization may be rescinded if these injection wells should, at any time, contaminate, pollute, or otherwise adversely affect other water in the vicinity or for any other conditions contained in R61-87, Title 48, Chapter 1, South Carolina Code of Laws, 1976, as amended.

MS LOIS SMITH
3176 CHARLOTTE HWY
YORK SC 29745-9802

Re: Smith's Grocery, 3176 Charlotte Hwy, York, South Carolina
UST Permit #09322 CA #21387
Release 1 Reported June 30, 1993
Cost Agreement Received February 11, 2004
York County

Dear Ms. Smith:

The Underground Storage Tank (UST) Program of the South Carolina Department of Health and Environmental Control (SCDHEC) recognizes your commitment to continue work at this site utilizing your own contractor. SCDHEC has reviewed the Assessment Component Cost Agreement for necessary work on the Strife residence's Granular Activated Carbon (GAC) unit submitted by SEI Environmental, Inc. The work to be implemented at the Strife Residence's GAC unit is installation of heat tape and insulation to prevent pipes from freezing and a reroute of the GAC unit's drain pipe. Cost Agreement **#21387** has been approved in the amount shown on the enclosed Approved Cost Agreement to complete the necessary work.

SEI Environmental, Inc. can submit an invoice for direct billing from the SUPERB Account. Please note that all applicable South Carolina certification requirements apply to the laboratory services, well installation, and report preparation. Please note that Sections 44-2-110(4) and 44-2-130 of the SUPERB Statute state that no costs will be allowed unless prior approval from the Department is obtained. If for any reason additional tasks will be completed, these additional tasks and the associated cost must be pre-approved by the Department for the cost to be paid. The SCDHEC reserves the authority to pay only for work properly performed and/or technically justified and will only pay rates in accordance with established criteria. Further, SCDHEC reserves the right to question and/or reject costs if deemed unreasonable or excessive. The SCDHEC reserves the right to audit project records at any time during the project or after completion of work.

A report documenting the GAC unit work is due within 30 days of the date of this letter, and the invoice is due within 90 days from the date of this letter. If the invoice is not submitted within 120 days from the date of this letter, monies allocated to pay this invoice will be uncommitted. This means that the invoice will not be processed for payment until all other committed funds are paid or monies become available.

On all correspondence concerning this site, please reference **UST Permit #09322 and Cost Agreement #21387.** If there are any questions concerning this project, please contact me at (803) 896-6633, (800) 826-5435 (within South Carolina only), by e-mail at anderspe@dhec.sc.gov or by fax (803) 896-6245.

Re: Smith's Grocery, SC Hwy 49, York, South Carolina
UST Permit # 09322
E-mail received January 27, 2004
York County

Dear Mr. Strife:

The Underground Storage Tank (UST) Program received the referenced e-mail. We regret that you have experienced these inconveniences. The following is provided in response to your questions.

- You asked if anything can be done to ensure that the pipes do not freeze again and explode. You also stated that the drain from the granular activated carbon (GAC) unit was causing a mess in your yard. SEI Environmental, Ms. Smith's contractor of choice, should be in contact with you soon to evaluate these problems. They will visit your residence to determine what can be done to help allievate the problems. An estimate of costs will be submitted for my approval to be paid from the State Underground Petroleum Environmental Response Bank (SUPERB) Fund.
- You asked if the GAC unit was really necessary since you have your own water treatment system. The UST Program is required to protect human health and we must insure the safety of water from your well. The UST Program has no control over your treatment system, and as such, we could not insure the protection of human health without the GAC unit. The GAC unit is maintained at no cost to you.
- You asked how long the GAC unit would have to stay in your yard. This cannot be predicted based on the many variable factors in remediating petroleum contamination.
- You also stated that you are trying to sell your house. If you would like, the UST Program can write a letter outlining the situation and liability issues regarding the release at Smith's Grocery. The request may be submitted to me via e-mail, fax, or letter.

If you have any questions, please contact me at (803) 896-6633 or (800) 826-5435 (within South Carolina only), by fax at (803) 896-6245, or by e-mail at anderspe@dhec.sc.gov.

Sincerely,

Paula Anderson

Paula E. Anderson - UST Permit # 09322

From: Rob Strife <rob.strife@chicagopneumatic.com>
To: anderspe@dhec.sc.gov <anderspe@dhec.sc.gov>
Date: 1/27/04 4:35 PM
Subject: UST Permit # 09322

Paula,

I live at 3035 Clover Circle in York, SC. There are a few temp wells on my property and have been there for quite some time. We also have a filter system installed in the back of the house which caused big problems for us last year. The pipes froze and exploded flooding my back yard to the point that I had to have a french drain installed. When this happened I called the number on the tank and was told to fix the problem with the broken pipes myself that they would not do it.
Sorry for that I know that you can't do anything about it. I have a few questions for you.

1. Can anything be done to ensure that the pipes do not freeze again this year and explode?
2. I am trying to sell my house and this big unit in my yard is a deterent. I have my own $3,000 water treatment system in my garage do I really need another? 3. How long will I need to have this in my yard? It has been a couple of years already.
4. There is a drain pipe coming from this system which is draining into my yard causing a mess currently. Is there a way this can be altered or is that also my responsibility?

Sorry to lay all this on you but this is the first time I have seen a letter with any contact information on it.

Regards,

Rob Strife - Global Business Development Manager
