MEMORANDUM

DATE: January 15, 2004

TO: Dale Stoudemire
Compliance Section
Regulatory Compliance Division

FROM: Paula Anderson
Owner/Operator Support Section
Assessment and Corrective Action Division
Underground Storage Tank Program
Bureau of Land and Waste Management

SUBJECT: Public Notice # 09322-02
Smith's Grocery, UST Permit # 09322
York County

Per section 280.67 of the South Carolina Underground Storage Tank Control Regulations R. 61-91, the South Carolina Department of Health and Environmental Control (SCDHEC) is required to provide public notice of proposed corrective actions at underground storage tank facilities.

The Assessment & Corrective Action Division requests your assistance in posting the enclosed notice at public offices (e.g. post offices, court houses, etc.) located in close proximity to the referenced facility.

If possible, the notice should be posted for 15 days. The attached notice has been postdated to January 26, 2004 to allow your office time to have it posted prior to its beginning date. Your assistance is greatly appreciated.

Questions may be referred to my attention at (803) 896-6633.

Corrective Action Plan Amendment Received December 23, 2003
York County

Dear Mr. & Ms. Swift:

As you may be aware, petroleum products have been identified in the soil and groundwater at the referenced facility. To prevent the release from becoming an unacceptable risk, SEI Environmental Inc. has been retained to initiate corrective action of the impacted soil and groundwater using chemical treatment (hydrogen peroxide injection) to be followed by in situ bioremediation and natural attenuation. A copy of the proposed corrective action plan is available for your review at the SCDHEC Freedom of Information Office, 2600 Bull Street, Columbia, South Carolina. Please call the Freedom of Information Office at (803) 898-3882 for an appointment if you would like to review this corrective action plan.

Section 280.67 of the South Carolina Underground Storage Tank Regulations requires the SCDHEC to provide notice to those members of the public that may be affected by a planned corrective action. A copy of the public notice is enclosed for your information. You may observe limited drilling, trenching, and construction activities by SEI Environmental Inc. at the referenced property.

If you have any questions or comments regarding the proposed corrective action, please call or write Paula Anderson at (803) 896-6633 or 1-800-826-5435 (in South Carolina only). All comments should be submitted with fourteen (14) days of the date of this correspondence.

Sincerely,

Paula Anderson

NOTICE

State of South Carolina
Department of Health and Environmental Control
Columbia, South Carolina

Public Notice # 09322-02 Date: January 26, 2004

NOTICE OF PROPOSED CORRECTIVE ACTION

Section 280.67 of the S.C. Underground Storage Tank Control Regulations (R.61-92) requires that any Corrective Action Plan prepared to meet the requirements of 280.66 must be placed on notice for public comment. The following applicant has submitted a Corrective Action Plan for the rehabilitation of groundwater contaminated by petroleum constituents released from underground storage tanks (USTs).

Applicant: Ms. Lois B. Smith, Smith's Grocery, 3175 Charlotte Hwy, York, SC. The Smith's Grocery has no active USTs used for storage of petroleum products; two gasoline USTs were removed in December 1991. The facility is located at 3175 Charlotte Hwy, York in York County, South Carolina.

Corrective action will consist of chemical treatment (hydrogen peroxide injection) to be followed by in situ bioremediation and natural attenuation.

A copy of the Corrective Action Plan is available for review at the Department's Freedom of Information Office, 2600 Bull Street in Columbia, SC. Please call (803) 898-3882 to schedule an appointment.

Persons wishing to comment upon or object to Corrective Action approval are invited to submit same in writing within fifteen (15) days of the date of this notice to South Carolina Department of Health and Environmental Control, Underground Storage Tank Program, 2600 Bull Street, Columbia, S.C. 29201 or call Paula Anderson at (803) 898-4318. The public notice # 09322-02 should be placed at the top of the first page of comments. Where there is a significant degree of public interest, the Department will hold a public hearing.

Please bring the foregoing to the attention of persons who you know will be interested in this matter.

Re: Request for Change in Injectate in Class VA-I Injection Wells
Smith Grocery
3176 Charlotte Highway, SC Hwy 49
York, South Carolina 29745-7609
York County
UST Permit # 09322
UIC Permit # 563

Dear Mr. Adams;

SEI Environmental, Inc. (SEI) requests approval from the South Carolina Bureau of Water for changing the injectate in the eighteen (18) Class VA-I injection wells at the above referenced facility. Attached are Figure 1, a topographic map illustrating the site and Figure 2, a site map depicting the monitoring wells and injection wells.

October 10, 2001, SEI submitted a letter to the Bureau of Water and SCDHEC notifying of the advancement of six (6) injection wells (IW-1 – IW-6) on August 22, 2001 and the advancement of twelve (12) additional injection wells (IW-7 – IW-18) on September 25 and 26, 2001. The purpose of the advancement of the injection wells, as described in the July 13, 2001 Corrective Action Plan, was for the purpose of injection of nutrients and microbial bacteria to enhance bio-remediation.

January 10, 2003, SEI requested that the UIC permit be amended to allow for the introduction of urea nitrogen, which is 46 percent nitrogen, with water into the existing eighteen (18) injection wells.

SEI submits that the periodic injection of nutrients, microbial bacteria and urea nitrogen has been halted. SEI requests approval from the Bureau of Water, permitting SEI to

SEI
Environmental, Inc.

amend the UIC Permit to allow SEI to use the existing eighteen (18) injection well(s) for the purpose of injecting a mild hydrogen peroxide solution to remediate the dissolved Chemicals of Concern (COC) in the groundwater. SEI submits that the injection of the mild hydrogen peroxide solution will have no impact on the local water quality or pose a threat to human health or the environment. SEI proposes that inoculation of the injection wells will commence upon written approval from the Bureau of Water and SCDHEC. It is proposed that injection will occur at a minimum of once per quarter and until laboratory analytical data shows that the COC's are below Site Specific Target Levels for all sample points. SEI anticipates that remediation activities, via the injection of a mild hydrogen peroxide solution, will take approximately fifteen (15) months to complete.

The existing quarterly monitoring and sampling plan for the monitoring wells and drinking water wells will continue with no change.

If you have any question(s) and / or comments concerning the above referenced request, please contact John Paul Bekish at (803) 788-2535.

Sincerely,

12/22/05

Re: Submittal of Tax Map Information
Smith Grocery
3176 Charlotte Highway, SC Hwy 49
York, South Carolina 29475-7609
York County
UST Permit # 09322

Dear Ms. Anderson;

SEI Environmental, Inc., SEI, submits the attached tax map information for the above referenced facility per your request on January 13, 2003.

If you have any questions and / or comments, please contact John Paul Bekish at 803-788-2535.

Sincerely,

John Paul Bekish
Operations Manager
SEI - Columbia, SC Office

Re: Summary of Corrective Action and Gauging Results
Second and Third Quarter
Smith's Grocery
#176 Charlotte Highway (Highway 49)
York, South Carolina 29745
York County
UST Permit # 09322

Dear Ms. Anderson;

SEI Environmental, Inc. (SEI) submits summary of gauging results and laboratory analytical results for samples collected on April 2, 2003 and August 26, 2003. Attached, Appendix A, Figure 1, a topographic map depicting the location of the site and Figure 2, a site map illustrating the location of the monitoring wells.

April 2 and August 26, 2003, SEI personnel were on site to gauge the monitoring wells, remove free product and collect groundwater samples. Twenty three (23) monitoring were gauged each site visit. No free product was found during either sampling event. A total of four (4) drums of petroleum-impacted water were generated from the purging of the sixteen(16) wells during each sampling event. Attached in Appendix C is Table 2, which summarizes the April 2 and August 26, 2003 gauging, and field screening information and copies of the Field Data Information Sheet(s) for Ground Water Sampling. Upon completion of purging and collection of field screening information, a representative sample was collected from each sample point. Each sample was submitted to Environmental Science Laboratory in Nashville, Tennessee for analysis for Benzene, Toluene, Ethylbenzene, Xylene (BTEX) by EPA method 8260B, Methyl Tert-butyl Ether (MTBE) by EPA method 8260B, Naphthalene by EPA method 8260B, Ethylene Dibromide by EPA method 8011, and Lead by EPA method 6010B. Attached in Appendix D is Table 3, which summarizes the laboratory analytical results and copies of the laboratory analytical results and a copy of the Chain of Custody. Attached in Appendix E is Figure 3, a CoC map based on the April 22, 2003 laboratory analytical data.

April 2 and August 29, 2003, a total of four (4) drums of petroleum-impacted water, which were generated from the purging of the sample points, was disposed at G & K Tank Services, Inc. in Sumter, SC. Attached in Appendix F are copies of the Non-Hazardous Waste Manifests and Certificate for Disposals for the four (4) drums of petroleum-impacted water.

SEI
Environmental, Inc.

The evaluation of the corrective action activities' effectiveness consists of comparing the April 2, 2003 laboratory analytical data against the baseline SSTL concentrations and determining the percent of total concentration reduction. The percent of total concentration reduction is calculated by using the following formula:

> Percent of Total Concentration Reduction = (Initial Con. Above SSTL) – (Current Conc. Above SSTL) *(100)) / (Initial Conc. Above SSTL)

The calculation for the April 2, 2003 Percent of Total Concentration Reduction was found to be **43.7%.** Attached in Appendix G is Table 4, which illustrates the system's effectiveness analysis.

The evaluation of the corrective action activities' effectiveness consists of comparing the August 26, 2003 laboratory analytical data against the baseline SSTL concentrations and determining the percent of total concentration reduction. The percent of total concentration reduction is calculated by using the following formula:

> Percent of Total Concentration Reduction = (Initial Conc. Above SSTL) – (Current Conc. Above SSTL) *(100)) / (Initial Conc. Above SSTL)

The calculation for the August 26, 2003 Percent of Total Concentration Reduction was found to be **62.5%.** Attached in Appendix G is Table 4, which illustrates the system's effectiveness analysis.

SEI will continue to collect groundwater samples as required in the next quarterly sampling period as specified in the February 12, 2003 directive. Upon receipt of the laboratory analytical data, SEI will submit a report summarizing the findings.

If you have any questions and / or comments, concerning the information provided in this document, please contact David Pittman at (803) 788-2535.

Sincerely,

David B. Pittman

1.0 INTRODUCTION

South Carolina Department of Health and Environmental Control (SCDHEC) contracted SEI Environmental, Inc. (SEI) to conduct corrective action and quarterly groundwater sampling activities at the Smith's Grocery facility (UST Permit #09322) located at 3176 Charlotte Highway in York, South Carolina. The approximate location of the project site is shown on the United States Geological Survey (USGS), 7.5-Minute Series Topographic Map provided as Figure 1. The corrective action and sampling activities were approved by SCDHEC in correspondence dated March 26, 2001.

2.0 METHODOLOGY

2.1 Site Hydrogeology

During the January 6, 2003, gauging event, liquid phase hydrocarbons (LPH) were not detected in any monitor wells. Groundwater flow direction is toward the east with a hydraulic gradient of 0.0178 feet per foot, as measured between Monitor Wells MW-1 and MW-19. Groundwater measurements are summarized in Table I, and a groundwater elevation contour map is depicted in Figure 3.

2.2 Groundwater Sampling and Analysis

On January 6-7, 2003, SEI personnel obtained groundwater samples from Monitor Wells MW-1 through MW-20 and TW-1 through TW-3. In addition, four drinking water wells (identified as Hill, Smith, Strife, and Swift) were also sampled on these dates. A new, disposable, polyethylene bailer was used for the collection of the water samples from the monitor wells. Each groundwater sample was obtained after pH values and temperature had equilibrated unless petroleum odor was emanating from the well. If petroleum odors were observed in the monitor well, the groundwater sample was obtained after three well volumes were purged. All purge water was drummed for proper disposal at a permitted treatment facility. Field measurements

are presented in Appendix A. New, disposable, latex gloves were used to maintain sample integrity during the sampling process. The groundwater samples were placed in laboratory supplied containers, placed on ice, and delivered to Access Analytical, Inc. in Irmo, South Carolina for proper analysis. Proper preservation methods and chain-of-custody procedures were followed throughout the sampling process. The groundwater samples were analyzed for benzene, toluene, ethylbenzene, xylenes (BTEX), methyl-tert-butyl-ether (MTBE), and naphthalene by EPA method 8260; ethylene dibromide (EDB) by EPA method 8011; and lead by EPA method 7421.

3.0 LABORATORY ANALYTICAL RESULTS

Groundwater analytical results for the samples collected January 6-7, 2003, detected the presence of benzene concentrations at Monitor Wells MW-1, MW-2, MW-6, MW-7, MW-8, MW-10, MW-12, TW-1, and TW-2. Toluene concentrations were detected at Monitor Wells MW-1, MW-2, MW-6, MW-8, MW-9, MW-10, MW-12, TW-1, and TW-2. Ethylbenzene concentrations were detected at Monitor Wells MW-1, MW-2, MW-6 through MW-12, TW-1, and TW-2. Xylenes concentrations were detected at Monitor Wells MW-1, MW-2, MW-5, MW-6 through MW-10, MW-12, TW-1, and TW-2. MTBE concentrations were detected at Monitor Wells MW-2, MW-7, MW-8, and TW-2. MTBE concentrations may exist at Monitor Wells MW-1, MW-6, MW-10, and TW-1 due to high dilution factors that caused results to be less than their respective detection limits. Naphthalene concentrations were detected at Monitor Wells MW-1, MW-2, MW-6 through MW-13, TW-1, TW-2, TW-3, and the Hill water well. EDB concentrations were detected at Monitor Wells MW-1, MW-2, MW-6, MW-7, MW-8, MW-10, MW-12, TW-1, TW-2, and TW-3. Lead concentrations were detected at Monitor Wells MW-1 through MW-6, MW-8 through MW-12, MW-15, MW-16, MW-17, MW-19, MW-20, TW-1, TW-2, and the four potable water wells.

At Monitor Wells MW-1, MW-2, MW-6, MW-7, MW-8, MW-10, MW-12, and TW-2, benzene concentrations were detected greater than its site-specific threshold levels (SSTL) computed

specifically for these wells. At Monitor Wells MW-1, MW-2, MW-6, MW-8, MW-10, MW-12, and TW-2, toluene concentrations were detected greater than its SSTLs computed specifically for these wells. At Monitor Wells MW-1, MW-2, MW-6, MW-7, MW-8, MW-10, and TW-2, ethylbenzene concentrations were detected greater than its SSTLs computed specifically for these wells. At Monitor Wells MW-1, MW-2, MW-6, MW-7, MW-8, MW-12, and TW-2, xylenes concentrations were detected greater than its SSTL computed specifically for these wells. At Monitor Wells MW-2 and TW-2, MTBE concentrations were detected greater than its SSTLs computed specifically for these wells. At Monitor Wells MW-1, MW-2, MW-6, MW-7, MW-8, MW-10, MW-11, MW-12, and TW-2, naphthalene concentrations were detected greater than its SSTLs computed specifically for these wells. At Monitor Wells MW-2, MW-6, MW-7, MW-8, MW-10, MW-12, and TW-2, EDB concentrations were detected greater than its SSTLs computed specifically for these wells. At Monitor Wells MW-1, MW-8, MW-10, MW-11, MW-17, TW-2, Hill well, Strife well, and Swift well, lead concentrations were detected greater than its SSTL calculated for each of these wells. Groundwater analytical results are presented in Table III. Historical groundwater analytical results that compare current and past results with the SSTLs are presented in Table IV. Groundwater concentrations are depicted in Figures 4 and 5. Laboratory analyses and chain-of-custody are presented in Appendix B.

4.0 REMEDIATION EFFECTIVENESS

Chemicals of concern (CoC) concentration reduction is evaluated by verifying if the CoC concentrations reduction goals have been achieved in Monitor Wells MW-1 through MW-20, TW-1 through TW-3, and four drinking water wells named Hill, Smith, Strife, and Swift (previously named Vickery). Furthermore, chemical test data from Monitor Wells MW-1, MW-2, MW-6, MW-7, MW-8, MW-10 through MW-15, MW-17, MW-18, MW-19, TW-2, and TW-3 are used to evaluate the effectiveness of the bioremediation.

The evaluation of the remediation effectiveness consists in comparing the January 2003, CoC concentrations against the baseline concentrations and determining the percent of total concentration reduction. This is calculated by subtracting the current sample concentrations

above SSTLs from the baseline concentrations above SSTLs and multiplying this amount by 100. This number is then divided by the baseline concentrations above SSTLs. The calculation of the total concentration reduction is presented in Table V.

According to calculations made from the January 2003, sampling event, approximately 0.00 percent of the CoC concentrations has been removed from the site. 24.4

5.0 CONCLUSIONS

- Groundwater flow at the site is in an eastern direction with a hydraulic gradient of 0.0178 feet per foot, as measured between Monitor Wells MW-1 and MW-19.
- Liquid phase hydrocarbons were not detected in any monitor wells during the current sampling activities.
- Benzene concentrations were detected greater than their calculated SSTLs at Monitor Wells MW-1, MW-2, MW-6, MW-7, MW-8, MW-10, MW-12, and TW-2.
- Toluene concentrations were detected greater than the calculated SSTLs at Monitor Wells MW-1, MW-2, MW-6, MW-8, MW-10, MW-12, and TW-2.
- Ethylbenzene concentrations were detected greater than the calculated SSTLs at Monitor Wells MW-1, MW-2, MW-6, MW-7, MW-8, MW-10, and TW-2.
- Xylenes concentrations were detected greater than the calculated SSTLs at Monitor Wells MW-1, MW-2, MW-6, MW-7, MW-8, MW-12, and TW-2.
- Naphthalene concentrations were detected greater than the calculated SSTLs at Monitor Wells MW-1, MW-2, MW-6, MW-7, MW-8, MW-10, MW-11, MW-12, and TW-2.
- MTBE concentrations were detected greater than the calculated SSTLs at Monitor Wells MW-2 and TW-2.
- EDB concentrations were detected greater than the calculated SSTLs at Monitor Wells MW-2, MW-6, MW-7, MW-8, MW-10, MW-12, and TW-2.
- Lead concentrations were detected greater than the calculated SSTLs at Monitor Wells MW-1, MW-8, MW-10, MW-11, MW-17, TW-2, Hill well, Strife well, and Swift well.

- According to calculation made from the January 2003, sampling event, approximately 0.00 percent of the CoC concentrations has been removed from the site.
- SEI personnel last injected Microbac™ microbes and nutrients in the injection wells on November 25, 2002. SEI personnel will inject these microbes on a quarterly basis with the next scheduled event planned for ~~February~~ April 2003.
- Due to the presence of benzene concentrations in the Hill's potable water well, the GAC filter on this well was replaced January 23, 2003.

6.0 REPORT LIMITATIONS

This investigation is intended to be a non-biased assessment of on-site environmental conditions proximate to the location of the current UST system. Subsurface investigative methodologies are in accordance with all applicable state and federal regulatory requirements. The information presented in this report is based upon site-specific observations, generally accepted geological practices, and analytical results for environmental samples collected at the time of the field investigation. All data is believed to represent subsurface conditions at the facility, however, data may not be completely representative of all subsurface conditions.

Re: Smith's Grocery, SC Hwy 49, York, SC
UST Permit #09322
Release Reported June 30, 1993
Corrective Action Evaluation Report Received March 6, 2003
York County

Dear Ms. Smith:

The Underground Storage Tank (UST) Program of the South Carolina Department of Health and Environmental Control (SCDHEC) has reviewed the referenced report submitted by SEI Environmental.

The next Quarterly Monitoring Report is due within forty-five (45) days after the April 2003 quarterly sampling event. On all correspondence regarding this site, please reference **UST Permit #09322**. If you have any questions regarding this correspondence, feel free to call me at (803) 896-6647 or (800) 826-5435 (within South Carolina only).

Sincerely,

K. Akhvlediani

Re: Smith's Grocery, 3176 Charlotte Hwy, York, South Carolina
UST Permit #09322
Correspondence Received January 21, 2003
York County

Dear Mr. Bolton:

The Bureau of Land and Waste Management of the South Carolina Department of Health and Environmental Control (SCDHEC) has reviewed the referenced correspondence and previous Corrective Action Performance Evaluation Reports.

In the correspondence you requested removing monitoring wells MW-3, MW-4, MW-5, MW-9, MW-16, MW-20, and TW-1 from quarterly sampling requirements for future sampling events. Complete exemption from sampling these monitoring wells cannot be granted at this time. However, since the data has shown plume stability or below detection limit concentrations in past sampling events, these monitoring wells can now be sampled on an annual schedule. Please continue to gauge all wells and sample monitoring wells MW-1, MW-2, MW-6, MW-7, MW-8, MW-10 through MW-15, MW-17, MW-18, MW-19, TW-2, and TW-3, and potable water wells identified as Smith, Hill, Swift, and Strife on a quarterly basis and sample monitoring wells MW-3, MW-4, MW-5, MW-9, MW-16, MW-20, and TW-1 in the first quarter annually.

On all correspondence regarding this site, please reference UST Permit #09322. If you have any questions concerning this correspondence, please contact Paula Anderson at 803-896-6633 or 800-826-5435 (within SC only).

Sincerely,

Paula Anderson

UST Facility Name: Smith's Grocery 09322 **County: York**
UST Facility Address: Hwy 49, York, SC
UST Owner: Ms. Lois B. Smith

Description: Impacted Wells

The UST release from the referenced facility has impacted a total of four potable wells. These wells belong to the Hill, Smith, and Strife residences, and the former Vickery residence. Granular Activated Carbon (GAC) filter units have been installed on these individual wells so they are usable. No alternate public water source is readily available.

The tank owner's contractor is performing active corrective action in the affected area. A Corrective Action System Evaluation Report was received April 19, 2002.

Re: Quarterly Groundwater Sampling
Smith's Grocery
York County
UST Permit #09322

Dear Ms. Anderson:

SEI Environmental, Inc. (SEI) is currently conducting corrective action activities at Smith's Grocery. SEI respectfully requests that only the monitor wells used in the SSTL calculations be sampled quarterly. Specifically, these are MW-1, MW-2, MW-6, MW-7, MW-8, MW-10 through MW-15, MW-17, MW-18, MW-19, TW-2, TW-3, and the four potable water wells identified as Smith, Hill, Swift, and Strife. Currently, SEI samples all monitor wells associated with the subject property during the quarterly sampling events. This site was last sampled January 7, 2003.

Thank you for your assistance in this matter. Please contact me at 788-2535 should you have any questions or require more information.

Sincerely,
SEI Environmental, Inc.

Re: Smith's Grocery
York, South Carolina
York County
UST Permit #09322
UIC Permit #563

Dear Mr. Adams:

SEI Environmental, Inc. (SEI) respectfully requests that the above referenced UIC Permit be amended to allow for the introduction of a mixture of urea nitrogen, which is 46 percent nitrogen, with water into the existing 18 injection wells. Specifically, approximately 0.5 pounds of urea nitrogen will be mixed with 55-gallons of water and injected into the injection wells. This mixture should provide nutrients to the existing microbes, which SEI has been injecting quarterly over the past year. As urea nitrogen (NH_2CONH_2) does not contain nitrates, there should not be a concern regarding this type of fertilizer for injection.

Thank you for your assistance in this matter. Should you have any questions or require additional information, please contact me at 788-2535.

Sincerely,
SEI Environmental, Inc.

Re: GAC Filter Installation
Smith's Grocery
York County
UST Permit #09322

Dear Ms. Anderson:

Enclosed is a copy of the SCDHEC invoice and supporting documentation for the GAC filter that SEI Environmental, Inc. contracted to have installed on the Strife potable water well. The original invoice has been forwarded to Ms. Pat Holland. Should you have any questions or require additional information, please contact me at 788-2535.

Sincerely,

Re: Smith's Grocery, SC Hwy 49, York, SC
UST Permit # 09322
Adjacent property belonging to Mr. Jeffery Vickery
Phone conversation on December 21, 2001
York County

Dear Mr. Vickery:

In response to your request for information about environmental conditions and liability associated with the referenced facility and adjacent property, the following is provided.

Our records indicate that two Underground Storage Tanks (USTs) were registered with the Department by Ms. Lois Smith. The registered USTs were removed on March 27, 1996. An assessment report received on June 30, 1993 documented a release of petroleum products in the vicinity of the UST. Our records indicate that Ms. Lois Smith complied with the regulatory requirements and stopped the leak from the tanks. Additionally, she is currently pursuing the extent and severity of contamination under our direction. Active corrective action is in progress at the site.

This release of petroleum products from the USTs is qualified to receive funding under the conditions of the State Underground Petroleum Environmental Response Bank (SUPERB) Act. This means that reasonable costs up to $1,000,000 can be paid by the SUPERB account for site rehabilitation actions associated with this release. Should cleanup costs exceed $1,000,000, Ms. Lois Smith, under state and federal law, retains responsibility for any additional actions and associated costs.

Should the potential exist for petroleum contamination to migrate onto an adjacent property, the UST owner/operator and the Department may require access during reasonable hours to perform necessary rehabilitation activities. In such cases, all rehabilitation activities remain the responsibility of the Ms. Lois Smith. You should be aware that there are currently no laws or regulations that prohibit the use or development of adjacent properties and properties where a petroleum release has occurred.

If you have any questions, please do not hesitate to call Paula Anderson at (803) 898-4318 or (800) 826-5435 (within SC only).

Sincerely,

Paula Anderson

1.0 INTRODUCTION

South Carolina Department of Health and Environmental Control (SCDHEC) contracted SEI Environmental, Inc. (SEI) to conduct corrective action and quarterly groundwater sampling activities at the Smith's Grocery facility (UST Permit #09322) located at 3176 Charlotte Highway in York, South Carolina. The approximate location of the project site is shown on the United States Geological Survey (USGS), 7.5-Minute Series Topographic Map provided as Figure 1. The corrective action and sampling activities were approved by SCDHEC in correspondence dated March 26, 2001.

2.0 METHODOLOGY

2.1 Site Hydrogeology

During the October 24, 2002, gauging event, liquid phase hydrocarbons (LPH) were not detected in any monitor wells. Groundwater flow direction is toward the east with a hydraulic gradient of 0.0178 feet per foot, as measured between Monitor Wells MW-1 and MW-19. Groundwater measurements are summarized in Table I, and a groundwater elevation contour map is depicted in Figure 3.

2.2 Groundwater Sampling and Analysis

On October 23-24, 2002, SEI personnel obtained groundwater samples from Monitor Wells MW-1, MW-2, MW-3, MW-6 through MW-20 and TW-1 through TW-3. Monitor Wells MW-4 and MW-5 were not sampled as these wells were dry. In addition, four drinking water wells (identified as Hill, Smith, Strife, and Swift) were also sampled on these dates. The drinking water well previously identified as Vickery has been renamed Swift since this is the name of the new owners. A new, disposable, polyethylene bailer was used for the collection of the water samples from the monitor wells. Each groundwater sample was obtained after pH values and

temperature had equilibrated unless petroleum odor was emanating from the well. If petroleum odors were observed in the monitor well, the groundwater sample was obtained after three well volumes were purged. All purge water was drummed for proper disposal at a permitted treatment facility. Field measurements are presented in Appendix A. New, disposable, latex gloves were used to maintain sample integrity during the sampling process. The groundwater samples were placed in laboratory supplied containers, placed on ice, and delivered to Access Analytical, Inc. in Irmo, South Carolina for proper analysis. Proper preservation methods and chain-of-custody procedures were followed throughout the sampling process. The groundwater samples were analyzed for benzene, toluene, ethylbenzene, xylenes (BTEX), methyl-tert-butyl-ether (MTBE), and naphthalene by EPA method 8260B; ethylene dibromide (EDB) by EPA method 8011; and lead by EPA method 6010B.

3.0 LABORATORY ANALYTICAL RESULTS

Groundwater analytical results for the samples collected October 23-24, 2002, detected the presence of benzene concentrations at Monitor Wells MW-1, MW-2, MW-6, MW-7, MW-8, MW-9, MW-10, MW-12, TW-1, TW-2, and the Swift water well. Toluene concentrations were detected at Monitor Wells MW-1, MW-2, MW-6, MW-7, MW-8, MW-9, MW-10, MW-11, MW-12, TW-1, TW-2, and the Swift water well. Ethylbenzene concentrations were detected at Monitor Wells MW-1, MW-2, MW-6 through MW-12, TW-1, and TW-2. Xylenes concentrations were detected at Monitor Wells MW-1, MW-2, MW-6 through MW-10, MW-12, TW-1, TW-2, and the Swift water well. MTBE concentrations were detected at Monitor Wells MW-1, MW-2, MW-8, and TW-2. Naphthalene concentrations were detected at Monitor Wells MW-1, MW-2, MW-6 through MW-13, TW-1, TW-2, and the Swift water well. EDB concentrations were detected at Monitor Wells MW-1, MW-2, MW-6, MW-7, MW-8, MW-10, MW-12, TW-1, TW-2, and TW-3. Lead concentrations were detected at Monitor Wells MW-1, MW-2, MW-3, MW-6 through MW-10, MW-12, MW-15 through MW-20, TW-1, TW-2, and the Smith water well.

At Monitor Wells MW-1, MW-2, MW-6, MW-7, MW-8, MW-10, MW-12, and TW-2, benzene, toluene, ethylbenzene, naphthalene, and EDB concentrations were detected greater than their respective site specific threshold levels (SSTL) computed specifically for these wells. At Monitor Wells MW-1, MW-2, MW-6, MW-7, MW-8, MW-12, and TW-2, xylenes concentrations were detected greater than its SSTL computed specifically for these wells. At Monitor Wells MW-1, MW-2, and TW-2, MTBE concentrations were detected greater than its SSTLs computed specifically for these wells. At Monitor Wells MW-1, MW-2, MW-6, MW-7, MW-8, MW-12, MW-17, MW-19, and TW-2, lead concentrations were detected greater than its SSTL calculated for each of these wells. Groundwater analytical results are presented in Table III. Historical groundwater analytical results which compare current and past results with the SSTLs are presented in Table IV. Groundwater concentrations are depicted in Figures 4 and 5. Laboratory analyses and chain-of-custody are presented in Appendix B.

4.0 REMEDIATION EFFECTIVENESS

Chemicals of concern (CoC) concentration reduction is evaluated by verifying if the CoC concentrations reduction goals have been achieved in Monitor Wells MW-1 through MW-20, TW-1 through TW-3, and four drinking water wells named Hill, Smith, Strife, and Swift (previously named Vickery). Furthermore, chemical test data from Monitor Wells MW-1, MW-2, MW-6, MW-7, MW-8, MW-10 through MW-15, MW-17, MW-18, MW-19, TW-2, and TW-3 are used to evaluate the effectiveness of the bioremediation.

The evaluation of the remediation effectiveness consists in comparing the October 2002, CoC concentrations against the baseline concentrations and determining the percent of total concentration reduction. This is calculated by subtracting the current sample concentrations above SSTLs from the baseline concentrations above SSTLs and multiplying this amount by 100. This number is then divided by the baseline concentrations above SSTLs. The calculation of the total concentration reduction is presented in Table V.

According to calculations made from the October 2002, sampling event, approximately 0.00 percent of the CoC concentrations has been removed from the site.

5.0 CONCLUSIONS

- Groundwater flow at the site is in an eastern direction with a hydraulic gradient of 0.0178 feet per foot, as measured between Monitor Wells MW-1 and MW-19.
- Liquid phase hydrocarbons were not detected in any monitor wells during the current sampling activities.
- Benzene, toluene, ethylbenzene, naphthalene, and EDB concentrations were detected greater than their calculated SSTLs at Monitor Wells MW-1, MW-2, MW-6, MW-7, MW-8, MW-10, MW-12, and TW-2.
- Xylenes concentrations were detected greater than the calculated SSTLs at Monitor Wells MW-1, MW-2, MW-6, MW-7, MW-8, MW-12, and TW-2
- MTBE concentrations were detected greater than the calculated SSTLs at Monitor Wells MW-1, MW-2, and TW-2.
- Lead concentrations were detected greater than the calculated SSTLs at Monitor Wells MW-1, MW-2, MW-6, MW-7, MW-8, MW-12, MW-17, MW-19, and TW-2.
- According to calculation made from the October 2002, sampling event, approximately 0.00 percent of the CoC concentrations has been removed from the site.
- The Vickery potable water well has been renamed Swift, as the Vickery's no longer live at this location.
- SEI personnel last injected Microbac™ microbes and nutrients in the injection wells on August 21, 2002, and November 25, 2002. SEI personnel will inject these microbes on a quarterly basis with the next scheduled event planned for February 2002.
- Due to the presence of benzene concentrations in the Swift's potable water well, the GAC filter on this well was replaced November 20, 2002.

6.0 REPORT LIMITATIONS

This investigation is intended to be a non-biased assessment of on-site environmental conditions proximate to the location of the current UST system. Subsurface investigative methodologies are in accordance with all applicable state and federal regulatory requirements. The information presented in this report is based upon site-specific observations, generally accepted geological practices, and analytical results for environmental samples collected at the time of the field investigation. All data is believed to represent subsurface conditions at the facility, however, data may not be completely representative of all subsurface conditions.

1.0 INTRODUCTION

South Carolina Department of Health and Environmental Control (SCDHEC) contracted SEI Environmental, Inc. (SEI) to conduct corrective action and quarterly groundwater sampling activities at the Smith's Grocery facility (UST Permit #09322) located at 3176 Charlotte Highway in York, South Carolina. The approximate location of the project site is shown on the United States Geological Survey (USGS), 7.5-Minute Series Topographic Map provided as Figure 1. The corrective action and sampling activities were approved by SCDHEC in correspondence dated March 26, 2001.

2.0 METHODOLOGY

2.1 Site Hydrogeology

During the July 8, 2002, gauging event, liquid phase hydrocarbons (LPH) were not detected in any monitor wells. Groundwater flow direction is toward the east with a hydraulic gradient of 0.0182 feet per foot, as measured between Monitor Wells MW-1 and MW-19. Groundwater measurements are summarized in Table I, and a groundwater elevation contour map is depicted in Figure 3.

2.2 Groundwater Sampling and Analysis

On July 8-9, 2002, SEI personnel obtained groundwater samples from Monitor MW-1 through MW-20 and TW-1 through TW-3. In addition, four drinking water wells (identified as Hill, Smith, Strife, and Swift) were also sampled on these dates. The drinking water well previously identified as Vickery has been renamed Swift since this is the name of the new owners. A new, disposable, polyethylene bailer was used for the collection of the water samples from the monitor wells. Each groundwater sample was obtained after pH values and temperature had equilibrated unless petroleum odor was emanating from the well. If petroleum odors were observed in the

monitor well, the groundwater sample was obtained after three well volumes were purged. All purge water was drummed for proper disposal at a permitted treatment facility. Field measurements are presented in Appendix A. New, disposable, latex gloves were used to maintain sample integrity during the sampling process. The groundwater samples were placed in laboratory supplied containers, placed on ice, and delivered to TestAmerica Incorporated in Columbia, South Carolina for proper analysis. Proper preservation methods and chain-of-custody procedures were followed throughout the sampling process. The groundwater samples were analyzed for benzene, toluene, ethylbenzene, xylenes (BTEX), methyl-tert-butyl-ether (MTBE), and naphthalene by EPA method 8260B; ethylene dibromide (EDB) by EPA method 8011; polynuclear aromatic hydrocarbons (PAH) by EPA method 8270C; and lead by EPA method 6010B.

3.0 LABORATORY ANALYTICAL RESULTS

Groundwater analytical results for the samples collected July 8-9, 2002, detected the presence of benzene concentrations at Monitor Wells MW-1, MW-2, MW-6, MW-7, MW-8, MW-10, MW-12, TW-1, and TW-2. Toluene concentrations were detected at Monitor Wells MW-1, MW-2, MW-6, MW-7, MW-8, MW-10, MW-12, TW-1, TW-2, and the Swift water well. Ethylbenzene, xylenes, and naphthalene concentrations were detected at Monitor Wells MW-1, MW-2, MW-6 through MW-10, MW-12, TW-1, and TW-2. MTBE concentrations were detected at Monitor Well MW-2. Due to high dilution factors, MTBE concentrations were below detection limits at Monitor Wells MW-1, MW-6, MW-7, MW-8, MW-10, TW-1, and TW-2; however, MTBE concentrations may exist at these locations. EDB concentrations were detected at Monitor Wells MW-1, MW-2, MW-6, MW-7, MW-8, MW-10, MW-12, MW-14, MW-15, MW-17, MW-18, TW-1, TW-2, and TW-3. PAH constituents (other than naphthalene) were not detected at any sample locations. Lead concentrations were detected at Monitor Wells MW-1, MW-2, MW-3, MW-6 through MW-16, MW-18, MW-19, and MW-20.

At Monitor Wells MW-1, MW-2, MW-6, MW-7, MW-8, MW-10, MW-12, and TW-2, benzene and naphthalene concentrations were detected greater than their respective site specific threshold levels (SSTL) computed specifically for these wells. At Monitor Wells MW-1, MW-2, MW-6, MW-7, MW-8, MW-10, and TW-2, toluene and ethylbenzene concentrations were detected greater than the SSTLs computed specifically for these wells. At Monitor Wells MW-1, MW-6, MW-8, and TW-2, xylenes concentrations were detected greater than its SSTL computed specifically for these wells. At Monitor Well MW-2, MTBE concentrations were detected greater than its computed SSTL. However, MTBE concentrations may exist greater than its respective calculated SSTLs at Monitor Wells MW-1, MW-6, MW-7, MW-8, MW-10, and TW-2 due to high dilution factors which yielded results less than their respective detection limits at these wells. At Monitor Wells MW-2, MW-6, MW-7, MW-8, MW-10, MW-12, MW-17, and TW-2, EDB concentrations were detected greater than its SSTLs calculated for each of these wells. At Monitor Wells MW-1, MW-2, MW-7, MW-8, MW-10, MW-11, MW-12, MW-13, MW-14, MW-18, and MW-19, lead concentrations were detected greater than its SSTL calculated for each of these wells. Groundwater analytical results are presented in Table III. Historical groundwater analytical results which compare current and past results with the SSTLs are presented in Table IV. Groundwater concentrations are depicted in Figures 4 through 6. Laboratory analyses and chain-of-custody are presented in Appendix B.

4.0 REMEDIATION EFFECTIVENESS

Chemicals of concern (CoC) concentration reduction is evaluated by verifying if the CoC concentrations reduction goals have been achieved in Monitor Wells MW-1 through MW-20, TW-1 through TW-3, and four drinking water wells named Hill, Smith, Strife, and Swift (previously named Vickery). Furthermore, chemical test data from Monitor Wells MW-1, MW-2, MW-6, MW-7, MW-8, MW-10 through MW-15, MW-17, MW-18, MW-19, TW-2, and TW-3 are used to evaluate the effectiveness of the bioremediation.

The evaluation of the remediation effectiveness consists in comparing the July 2002, CoC concentrations against the baseline concentrations and determining the percent of total concentration reduction. This is calculated by subtracting the current sample concentrations above SSTLs from the baseline concentrations above SSTLs and multiplying this amount by 100. This number is then divided by the baseline concentrations above SSTLs. The calculation of the total concentration reduction is presented in Table V.

According to calculations made from the July 2002, sampling event, approximately 0.00 percent of the CoC concentrations has been removed from the site.

5.0 CONCLUSIONS

- Groundwater flow at the site is in an eastern direction with a hydraulic gradient of 0.0182 feet per foot, as measured between Monitor Wells MW-1 and MW-19.
- Liquid phase hydrocarbons were not detected in any monitor wells during the current sampling activities.
- Benzene and naphthalene concentrations were detected greater than the calculated SSTLs at Monitor Wells MW-1, MW-2, MW-6, MW-7, MW-8, MW-10, MW-12, and TW-2.
- Toluene and ethylbenzene concentrations were detected greater than the calculated SSTLs at Monitor Wells MW-1, MW-2, MW-6, MW-7, MW-8, MW-10, and TW-2.
- Xylenes concentrations were detected greater than the calculated SSTLs at Monitor Wells MW-1, MW-6, MW-8, and TW-2
- MTBE concentrations were detected greater than the calculated SSTLs at Monitor Well MW-2. MTBE concentrations may exist greater than the respective calculated SSTLs at Monitor Wells MW-1, MW-6, MW-7, MW-8, MW-10, and TW-2 due to a high dilution factor which yielded results less than detection limits at these wells.
- EDB concentrations were detected greater than the calculated SSTLs at Monitor Wells MW-2, MW-6, MW-7, MW-8, MW-10, MW-12, MW-17, and TW-2.

- Lead concentrations were detected greater than the calculated SSTLs at Monitor Wells MW-1, MW-2, MW-7, MW-8, MW-10, MW-11, MW-12, MW-13, MW-14, MW-18, and MW-19.
- According to calculation made from the July 2002, sampling event, approximately 0.00 percent of the CoC concentrations has been removed from the site.
- The Vickery potable water well has been renamed Swift, as the Vickery's no longer live at this location.
- SEI personnel last injected Microbac™ microbes and nutrients in the injection wells on May 7, 2002. SEI personnel will inject these microbes on a quarterly basis with the next scheduled event planned for August 2002.

6.0 REPORT LIMITATIONS

This investigation is intended to be a non-biased assessment of on-site environmental conditions proximate to the location of the current UST system. Subsurface investigative methodologies are in accordance with all applicable state and federal regulatory requirements. The information presented in this report is based upon site-specific observations, generally accepted geological practices, and analytical results for environmental samples collected at the time of the field investigation. All data is believed to represent subsurface conditions at the facility, however, data may not be completely representative of all subsurface conditions.

1.0 INTRODUCTION

South Carolina Department of Health and Environmental Control (SCDHEC) contracted SEI Environmental, Inc. (SEI) to conduct corrective action and quarterly groundwater sampling activities at the Smith's Grocery facility (UST Permit #09322) located at 3176 Charlotte Highway in York, South Carolina. The approximate location of the project site is shown on the United States Geological Survey (USGS), 7.5-Minute Series Topographic Map provided as Figure 1. The corrective action and sampling activities were approved by SCDHEC in correspondence dated March 26, 2001.

2.0 METHODOLOGY

2.1 Site Hydrogeology

During the January 7, 2002, gauging event, liquid phase hydrocarbons (LPH) were not detected in any monitor wells. Groundwater flow direction is toward the east with a hydraulic gradient of 0.0180 feet per foot as measured between Monitor Wells MW-1 and MW-19. Groundwater measurements are summarized in Table I, and a groundwater elevation contour map is depicted in Figure 3.

2.2 Groundwater Sampling and Analysis

On January 7-8, 2002, SEI personnel obtained groundwater samples from Monitor MW-1 through MW-20, TW-1 through TW-3. In addition, three drinking water wells (identified as Hill, Smith, and Strife) were also sampled on these dates. The drinking water well (identified as Vickery) could not be sampled as the electricity had been turned off to the pump. A new, disposable, polyethylene bailer was used for the collection of the water samples from the monitor wells. Each groundwater sample was obtained after pH values and temperature had equilibrated unless petroleum odor was emanating from the well. If petroleum odors were observed in the

monitor well, the groundwater sample was obtained after three well volumes were purged. All purge water was drummed for proper disposal at a permitted treatment facility. Field measurements are presented in Appendix A. New, disposable, latex gloves were used to maintain sample integrity during the sampling process. The groundwater samples were placed in laboratory supplied containers, placed on ice, and shipped via FedEx to TestAmerica Incorporated in Nashville, Tennessee for proper analysis. Proper preservation methods and chain-of-custody procedures were followed throughout the sampling process. The groundwater samples were analyzed for benzene, toluene, ethylbenzene, xylenes (BTEX), methyl-tert-butyl-ether (MTBE), and naphthalene by EPA method 8260B; ethylene dibromide (EDB) by EPA method 8011; polynuclear aromatic hydrocarbons (PAH) by EPA method 8270C; and lead by EPA method 6010B. In addition, the samples were analyzed for ferrous iron by EPA method 3500D; methane by EPA method RSK175M; nitrate by EPA method 353.2; and sulfate by EPA method 9056.

3.0 LABORATORY ANALYTICAL RESULTS

Groundwater analytical results for the samples collected January 7-8, 2002, detected the presence of benzene concentrations at Monitor Wells MW-1, MW-2, MW-6, MW-7, MW-8, MW-10, TW-1, and TW-2. Toluene concentrations were detected at Monitor Wells MW-1, MW-2, MW-3, MW-5, MW-6, MW-7, MW-8, MW-10, MW-16, TW-1, and TW-2. Ethylbenzene concentrations were detected at Monitor Wells MW-1, MW-2, MW-5, MW-6, MW-7, MW-8, MW-10, TW-1, and TW-2. Xylenes concentrations were detected at Monitor Wells MW-1, MW-2, MW-5 through MW-10, MW-16, TW-1, and TW-2. MTBE concentrations were detected at Monitor Wells MW-2 and TW-2. Due to high dilution factors, MTBE concentrations were below detection limits at Monitor Wells MW-1, MW-6, MW-8, MW-10, and TW-1; however, MTBE concentrations may exist at these locations. Naphthalene concentrations were detected at Monitor Wells MW-7, MW-9, MW-10, and TW-2. Due to high dilution factors, naphthalene concentrations were below detection limits at Monitor Wells

MW-1, MW-2, MW-6, MW-8, and TW-1; however, naphthalene concentrations may exist at these locations. EDB concentrations were detected at Monitor Wells MW--2, MW-6, MW-7, MW-8, MW-10, MW-12, MW-14, MW-18, TW-1, TW-2, and TW-3. PAH constituents (other than naphthalene) were not detected at any sample locations. Lead concentrations were detected at Monitor Wells MW-1 through MW-4, MW-6 through MW-15, MW-18, MW-19, MW-20, and TW-2. Ferrous iron concentrations were detected at Monitor Wells MW-1, MW-2, MW-3, MW-6 through MW-9, MW-14, MW-18, MW-19, TW-1, and TW-3. Nitrate concentrations were detected at Monitor Wells MW-3, MW-4, MW-11 through MW-16, MW-18, MW-19, MW-20, and TW-3. Also, nitrate concentrations were detected at the drinking water well identified as Smith. Sulfate concentrations were detected at Monitor Wells MW-1, MW-2, MW-6, MW-8, MW-10, MW-12, MW-15, MW-18, TW-1, TW-2, and TW-3.

At Monitor Wells MW-1, MW-2, MW-6, MW-7, MW-8, MW-10, and TW-2, benzene, toluene, and ethylbenzene concentrations were detected greater than their respective site specific threshold levels (SSTL) computed specifically for these wells. At Monitor Wells MW-1, MW-6, MW-7, MW-8, and TW-2, xylenes concentrations were detected greater than its SSTL computed specifically for these wells. At MW-2 and TW-2, MTBE concentrations were detected greater than its computed SSTL at these wells. However, MTBE concentrations may exist greater than its SSTL at Monitor Wells MW-1, MW-6, and MW-8 due to high dilution factors which yielded results less than their respective detection limits at these wells. At Monitor Wells MW-7, MW-10, and TW-2, naphthalene concentrations were detected greater than its SSTL computed for each of these wells. However, naphthalene concentrations may exist greater than its SSTL at Monitor Wells MW-1, MW-2, MW-6, and MW-8 due to high dilution factors which yielded results less than their respective detection limits at these wells. At Monitor Wells MW-2, MW-6, MW-7, MW-8, MW-10, and TW-2, EDB concentrations were detected greater than its SSTLs calculated for each of these wells. At Monitor Wells MW-1, MW-2, MW-6, MW-7, MW-8, MW-11, MW-13, MW-14, MW-19, and TW-2, lead concentrations were detected greater than its SSTL calculated for each of these wells. Groundwater analytical results are presented in Table

III. Historical groundwater analytical results which compare current and past results with the SSTLs are presented in Table IV. Groundwater concentrations are depicted in Figures 4 through 7. Laboratory analyses and chain-of-custody are presented in Appendix B.

4.0 REMEDIATION EFFECTIVENESS

Chemicals of concern (CoC) concentration reduction is evaluated by verifying if the CoC concentrations reduction goals have been achieved in Monitor Wells MW-1 through MW-20, TW-1 through TW-3, and four drinking water wells named Hill, Smith, Strife, and Vickery. Furthermore, chemical test data from Monitor Wells MW-1, MW-2, MW-6, MW-7, MW-8, MW-10 through MW-15, MW-17, MW-18, MW-19, TW-2, and TW-3 are used to evaluate the effectiveness of the bioremediation.

The evaluation of the remediation effectiveness consists in comparing the January 2002, CoC concentrations against the baseline concentrations and determining the percent of total concentration reduction. This is calculated by subtracting the current sample concentrations above SSTLs from the baseline concentrations above SSTLs and multiplying this amount by 100. This number is then divided by the baseline concentrations above SSTLs. The calculation of the total concentration reduction is presented in Table V.

According to calculations made from the January 2002, sampling event, approximately 13.87 percent of the CoC concentrations has been removed from the site.

5.0 CONCLUSIONS

- Groundwater flow at the site is in an eastern direction with a hydraulic gradient of 0.0180 feet per foot as measured between Monitor Wells MW-1 and MW-19.
- Liquid phase hydrocarbons were not detected in any monitor wells during the current sampling activities.
- Benzene, toluene, and ethylbenzene concentrations were detected greater than their respective calculated SSTLs at Monitor Wells MW-1, MW-2, MW-6, MW-7, MW-8, MW-10, and TW-2.
- Xylenes concentrations were detected greater than the calculated SSTLs at Monitor Wells MW-1, MW-6, MW-7, MW-8, and TW-2.
- MTBE concentrations were detected greater than the calculated SSTLs at Monitor Wells MW-2 and TW-2. MTBE concentrations may exist greater than the SSTL at Monitor Wells MW-1, MW-6, and MW-8 due to a high dilution factor which yielded results less than detection limits at these wells.
- Naphthalene concentrations were detected greater than the calculated SSTLs at Monitor Wells MW-7, MW-10, and TW-2. Naphthalene concentrations may exist greater than the SSTL at Monitor Wells MW-1, MW-2, MW-6, and MW-8 due to a high dilution factor which yielded results less than detection limits at these wells.
- EDB concentrations were detected greater than the calculated SSTLs at Monitor Wells MW-2, MW-6, MW-7, MW-8, MW-10, and TW-2.
- Lead concentrations were detected greater than the calculated SSTLs at Monitor Wells MW-1, MW-2, MW-6, MW-7, MW-8, MW-11, MW-13, MW-14, MW-19, and TW-2.
- According to calculation made from the January 2002, sampling event, approximately 13.87 percent of the CoC concentrations have been removed from the site.

6.0 REPORT LIMITATIONS

This investigation is intended to be a non-biased assessment of on-site environmental conditions proximate to the location of the current UST system. Subsurface investigative methodologies are in accordance with all applicable state and federal regulatory requirements. The information presented in this report is based upon site-specific observations, generally accepted geological practices, and analytical results for environmental samples collected at the time of the field investigation. All data is believed to represent subsurface conditions at the facility, however, data may not be completely representative of all subsurface conditions.

1.0 INTRODUCTION

South Carolina Department of Health and Environmental Control (SCDHEC) contracted SEI Environmental, Inc. (SEI) to conduct corrective action and quarterly groundwater sampling activities at the Smith's Grocery facility (UST Permit #09322) located at 3176 Charlotte Highway in York, South Carolina. The approximate location of the project site is shown on the United States Geological Survey (USGS), 7.5-Minute Series Topographic Map provided as Figure 1. The corrective action and sampling activities were approved by SCDHEC in correspondence dated March 26, 2001.

2.0 METHODOLOGY

2.1 Site Hydrogeology

During the April 1, 2002, gauging event, liquid phase hydrocarbons (LPH) were not detected in any monitor wells. Groundwater flow direction is toward the east with a hydraulic gradient of 0.0201 feet per foot, as measured between Monitor Wells MW-2 and MW-19. Groundwater measurements are summarized in Table I, and a groundwater elevation contour map is depicted in Figure 3.

2.2 Groundwater Sampling and Analysis

On April 1, 2002, SEI personnel obtained groundwater samples from Monitor MW-1 through MW-20, TW-1 through TW-3. In addition, three drinking water wells (identified as Hill, Smith, and Strife) were also sampled on these dates. The drinking water well (identified as Vickery) could not be sampled as the electricity had been turned off to the pump. A new, disposable, polyethylene bailer was used for the collection of the water samples from the monitor wells. Each groundwater sample was obtained after pH values and temperature had equilibrated unless petroleum odor was emanating from the well. If petroleum odors were observed in the monitor

well, the groundwater sample was obtained after three well volumes were purged. All purge water was drummed for proper disposal at a permitted treatment facility. Field measurements are presented in Appendix A. New, disposable, latex gloves were used to maintain sample integrity during the sampling process. The groundwater samples were placed in laboratory supplied containers, placed on ice, and shipped via FedEx to TestAmerica Incorporated in Nashville, Tennessee for proper analysis. Proper preservation methods and chain-of-custody procedures were followed throughout the sampling process. The groundwater samples were analyzed for benzene, toluene, ethylbenzene, xylenes (BTEX), methyl-tert-butyl-ether (MTBE), and naphthalene by EPA method 8260B; ethylene dibromide (EDB) by EPA method 8011; polynuclear aromatic hydrocarbons (PAH) by EPA method 8270C; and lead by EPA method 6010B. In addition, the samples were analyzed for ferrous iron by EPA method 3500D; methane by EPA method RSK175M; nitrate by EPA method 353.2; and sulfate by EPA method 9056.

3.0 LABORATORY ANALYTICAL RESULTS

Groundwater analytical results for the samples collected April 1, 2002, detected the presence of benzene concentrations at Monitor Wells MW-1, MW-2, MW-6, MW-7, MW-8, MW-9, MW-10, MW-12, TW-1, and TW-2. Toluene concentrations were detected at Monitor Wells MW-1, MW-2, MW-6, MW-7, MW-8, MW-9, MW-10, MW-12, TW-1, and TW-2. Ethylbenzene, xylenes, and naphthalene concentrations were detected at Monitor Wells MW-1, MW-2, MW-5 through MW-10, MW-12, TW-1, and TW-2. MTBE concentrations were detected at Monitor Wells MW-1 and MW-2. Due to high dilution factors, MTBE concentrations were below detection limits at Monitor Wells MW-6, MW-7, MW-8, MW-10, TW-1, and TW-2; however, MTBE concentrations may exist at these locations. EDB concentrations were detected at Monitor Wells MW-1, MW-2, MW-6, MW-7, MW-8, MW-10, MW-12, MW-15, MW-17, MW-18, TW-1, TW-2, and TW-3. In addition, EDB concentrations were detected at the potable water well identified as Hill. PAH constituents (other than naphthalene) were not detected at any sample locations. Lead concentrations were detected at

Monitor Wells MW-1 through MW-18 and MW-20. Ferrous iron concentrations were detected at all sample locations except MW-4, MW-11, TW-2, and the three potable water wells that were sampled. Nitrate concentrations were detected at all sample locations except MW-1, MW-2, MW-6 through MW-10, MW-12, MW-17, TW-1, and TW-2. Sulfate concentrations were detected at Monitor Wells MW-2, MW-6, MW-8, MW-12, MW-14, MW-20, TW-1, TW-2, and TW-3.

At Monitor Wells MW-1, MW-2, MW-6, MW-7, MW-8, MW-10, MW-12, and TW-2, benzene and toluene concentrations were detected greater than their respective site specific threshold levels (SSTL) computed specifically for these wells. At Monitor Wells MW-1, MW-2, MW-6, MW-7, MW-8, MW-10, and TW-2, ethylbenzene concentrations were detected greater than the SSTLs computed specifically for these wells. At Monitor Wells MW-1, MW-6, MW-7, MW-8, and TW-2, xylenes concentrations were detected greater than its SSTL computed specifically for these wells. At Monitor Well MW-2, MTBE concentrations were detected greater than its computed SSTL. However, MTBE concentrations may exist greater than its SSTL at Monitor Wells MW-6, MW-7, MW-8, MW-10, and TW-2 due to high dilution factors which yielded results less than their respective detection limits at these wells. At Monitor Wells MW-1, MW-2, MW-6, MW-7, MW-8, MW-10, MW-12, and TW-2, naphthalene concentrations were detected greater than its SSTL computed for each of these wells. At Monitor Wells MW-1, MW-2, MW-6, MW-7, MW-8, MW-10, MW-12, MW-17, and TW-2, EDB concentrations were detected greater than its SSTLs calculated for each of these wells. At Monitor Wells MW-1, MW-2, MW-6, MW-7, MW-8, MW-10, MW-11, MW-12, MW-13, MW-14, MW-17, and MW-18, lead concentrations were detected greater than its SSTL calculated for each of these wells. Groundwater analytical results are presented in Table III. Historical groundwater analytical results which compare current and past results with the SSTLs are presented in Table IV. Groundwater concentrations are depicted in Figures 4 through 7. Laboratory analyses and chain-of-custody are presented in Appendix B.

4.0 REMEDIATION EFFECTIVENESS

Chemicals of concern (CoC) concentration reduction is evaluated by verifying if the CoC concentrations reduction goals have been achieved in Monitor Wells MW-1 through MW-20, TW-1 through TW-3, and four drinking water wells named Hill, Smith, Strife, and Vickery. Furthermore, chemical test data from Monitor Wells MW-1, MW-2, MW-6, MW-7, MW-8, MW-10 through MW-15, MW-17, MW-18, MW-19, TW-2, and TW-3 are used to evaluate the effectiveness of the bioremediation.

The evaluation of the remediation effectiveness consists in comparing the April 2002, CoC concentrations against the baseline concentrations and determining the percent of total concentration reduction. This is calculated by subtracting the current sample concentrations above SSTLs from the baseline concentrations above SSTLs and multiplying this amount by 100. This number is then divided by the baseline concentrations above SSTLs. The calculation of the total concentration reduction is presented in Table V.

According to calculations made from the April 2002, sampling event, approximately 0.00 percent of the CoC concentrations has been removed from the site.

5.0 CONCLUSIONS

- Groundwater flow at the site is in an eastern direction with a hydraulic gradient of 0.0201 feet per foot, as measured between Monitor Wells MW-2 and MW-19.
- Liquid phase hydrocarbons were not detected in any monitor wells during the current sampling activities.
- Benzene and toluene concentrations were detected greater than the calculated SSTLs at Monitor Wells MW-1, MW-2, MW-6, MW-7, MW-8, MW-10, MW-12, and TW-2.

- Ethylbenzene concentrations were detected greater than the calculated SSTLs at Monitor Wells MW-1, MW-2, MW-6, MW-7, MW-8, MW-10, and TW-2.
- Xylenes concentrations were detected greater than the calculated SSTLs at Monitor Wells MW-1, MW-6, MW-7, MW-8, and TW-2
- MTBE concentrations were detected greater than the calculated SSTLs at Monitor Well MW-2. MTBE concentrations may exist greater than the SSTL at Monitor Wells MW-6, MW-7, MW-8, MW-10, and TW-2 due to a high dilution factor which yielded results less than detection limits at these wells.
- Naphthalene concentrations were detected greater than the calculated SSTLs at Monitor Wells MW-1, MW-2, MW-6, MW-7, MW-8, MW-10, MW-12, and TW-2.
- EDB concentrations were detected greater than the calculated SSTLs at Monitor Wells MW-1, MW-2, MW-6, MW-7, MW-8, MW-10, MW-12, MW-17, and TW-2.
- Lead concentrations were detected greater than the calculated SSTLs at Monitor Wells MW-1, MW-2, MW-6, MW-7, MW-8, MW-10, MW-11, MW-12, MW-13, MW-14, MW-17, and MW-18.
- According to calculation made from the April 2002, sampling event, approximately 0.00 percent of the CoC concentrations has been removed from the site.
- Due to the presence of EDB concentrations in the Hill's potable water well, the GAC filters on the Hill's and Strife's potable water wells were replaced April 17, 2002. The filter was not changed on the Vickery's potable water well as this well has not been in use since the Vickery's moved in December 2001.
- SEI personnel last injected Microbac™ microbes and nutrients in the injection wells on February 19, 2002. SEI personnel will inject these microbes on a quarterly basis with the next scheduled event planned for May 2002.

6.0 REPORT LIMITATIONS

This investigation is intended to be a non-biased assessment of on-site environmental conditions proximate to the location of the current UST system. Subsurface investigative methodologies are in accordance with all applicable state and federal regulatory requirements. The information presented in this report is based upon site-specific observations, generally accepted geological practices, and analytical results for environmental samples collected at the time of the field investigation. All data is believed to represent subsurface conditions at the facility, however, data may not be completely representative of all subsurface conditions.

Re: Smith's Grocery
UST Permit #09322; CP # 15367
Release I Reported on June 30, 1993
Bids Received December 13, 2001
York County

Dear Ms. Smith:

The Underground Storage Tank (UST) Program of the South Carolina Department of Health and Environmental Control recognizes your commitment to continue work at this site utilizing your own contractor. The UST Program has reviewed the analytical results of samples taken from Strife residence water supply well. The results of the water quality analysis indicate the presence of benzene.

Based on the available data, your site's priority classification is a 1D. Therefore, funds from the State Underground Petroleum Environmental Response Bank (SUPERB) Account are available for remediation of the water supply well and additional site investigative activities at this time.

Cost Proposal #15367 has been approved for $2,494.35 for the installation of a granular activated carbon (GAC) filter unit on your well. The GAC unit will cleanse the water passing through it of all potentially harmful petroleum constituents. Maintenance and cleansing of the unit will be performed as necessary. Please have your contractor install the GAC filter unit immediately upon receipt of this letter.

SEI Environmental, Inc. can submit an invoice for direct billing from the SUPERB account. Please note that all applicable South Carolina certification requirements apply to the laboratory services, well installation, and report preparation and that only EPA Method 8260B will be accepted for purgeable aromatic analyses. All site rehabilitation activities must be performed and submitted by a South Carolina Certified Underground Storage Tank Site Rehabilitation Contractor.

The invoice for GAC installation is due within 60 days from the date of this letter. Interim invoices may not be submitted for this scope of work. If the invoice is not submitted within 120 days from the date of this letter, monies allocated to pay this invoice will be uncommitted. This means that the invoice will not be processed for payment until all other committed funds are paid or monies become available.

Please note that Sections 44-2-110(4) and 44-2-130 of the SUPERB Statute state that no costs will be allowed unless prior approval from the Department is obtained. If for any reason additional tasks will be completed, these additional tasks and the associated cost must be preapproved by the Department for the cost to be paid. The SCDHEC reserves the authority to pay only for work properly performed and/or technically justified and will only pay rates in accordance with established criteria. Further, SCDHEC reserves the right to question and/or reject costs if deemed unreasonable. The SCDHEC reserves the right to audit project records at any time during the project or after completion of work.

On all correspondence concerning this site, please reference **UST Permit #09322 and CP #15367.** If there are any questions concerning this project, please contact me at (803) 898-4318 or (800) 826-5435 (within South Carolina only).

Sincerely,

Paula Anderson

1.0 INTRODUCTION

South Carolina Department of Health and Environmental Control (SCDHEC) contracted SEI Environmental, Inc. (SEI) to conduct corrective action and quarterly groundwater sampling activities at the Smith's Grocery facility (UST Permit #09322) located at 3176 Charlotte Highway in York, South Carolina. The approximate location of the project site is shown on the United States Geological Survey (USGS), 7.5-Minute Series Topographic Map provided as Figure 1. The corrective action and sampling activities were approved by SCDHEC in correspondence dated March 26, 2001.

2.0 METHODOLOGY

2.1 Site Hydrogeology

During the November 5, 2001, gauging event, liquid phase hydrocarbons (LPH) were not detected in any monitor wells. Groundwater flow direction is toward the northeast with a hydraulic gradient of 0.018 feet per foot as measured between Monitor Wells MW-1 and MW-19. Groundwater measurements are summarized in Table I, and a groundwater elevation contour map is depicted in Figure 3.

2.2 Groundwater Sampling and Analysis

On November 5-7, 2001, SEI personnel obtained groundwater samples from Monitor MW-1 through MW-20, TW-1 through TW-3. In addition, four drinking water wells (identified as Hill, Smith, Strife, and Vickery) were sampled on November 28, 2001. A new, disposable, polyethylene bailer was used for the collection of the water samples from the monitor wells. Each groundwater sample was obtained after pH values and temperature had equilibrated unless petroleum odor was emanating from the well. If petroleum odors were observed in the monitor well, the groundwater sample was obtained after three well volumes were purged. All purge

water was drummed for proper disposal at a permitted treatment facility. Field measurements are presented in Appendix A. New, disposable, latex gloves were used to maintain sample integrity during the sampling process. The groundwater samples were placed in laboratory supplied containers, placed on ice, and delivered to TestAmerica Incorporated in Columbia, South Carolina for proper analysis. Proper preservation methods and chain-of-custody procedures were followed throughout the sampling process. The groundwater samples were analyzed for benzene, toluene, ethylbenzene, xylenes (BTEX), methyl-tert-butyl-ether (MTBE), naphthalene, and ethylene dibromide (EDB) by EPA method 8260B; polynuclear aromatic hydrocarbons (PAH) by EPA method 8270C; and lead by EPA method 200.7. In addition, the samples were analyzed for ferrous iron by EPA method 3500D; methane by EPA method RSK175M; nitrate by EPA method 353.2; and sulfate by EPA method 9056.

3.0 LABORATORY ANALYTICAL RESULTS

Groundwater analytical results for the samples collected in November 2001, detected the presence of benzene concentrations at Monitor Wells MW-1, MW-2, MW-6, MW-7, MW-8, MW-10, MW-12, TW-1, and TW-2. Toluene concentrations were detected at Monitor Wells MW-1, MW-2, MW-6, MW-7, MW-8, MW-10, MW-11, MW-12, TW-1, and TW-2. Ethylbenzene concentrations were detected at Monitor Wells MW-1, MW-2, MW-6 through MW-10, MW-12, TW-1, and TW-2. Xylenes concentrations were detected at Monitor Wells MW-1, MW-2, MW-6 through MW-10, MW-12, TW-1, and TW-2. MTBE concentrations were detected at Monitor Wells MW-2, TW-1, and TW-2. Due to high dilution factors, MTBE concentrations were below detection limits at Monitor Wells MW-1, MW-6, MW-7, and MW-10; however, MTBE concentrations may exist at these locations. Naphthalene concentrations were detected at Monitor Wells MW-1, MW-2, MW-6 through MW-9, MW-12, and TW-2. Due to high dilution factors, naphthalene concentrations were below detection limits at Monitor Wells MW-10 and TW-1; however, naphthalene concentrations may exist at these locations. EDB concentrations were detected at Monitor Wells MW-1, MW-2, MW-6, MW-7,

MW-8, MW-10, MW-12, MW-14, MW-15, MW-17, MW-18, TW-1, and TW-2. In addition, EDB concentrations were detected at the drinking water wells identified as Hill (which has a filter) and Strife. However, SEI personnel resampled these two potable water wells on December 6-7, 2001. EDB concentrations were below detection limits at the Hill well, but EDB concentrations were detected at the Strife Well. PAH constituents (other than naphthalene) were not detected at any sample locations. Lead concentrations were detected at Monitor Wells MW-1 through MW-20 and TW-2. In addition, lead concentrations were detected at the Vickery drinking water well. Ferrous iron concentrations were detected at Monitor Wells MW-1, MW-2, MW-3, MW-5 through MW-9, MW-12, MW-17, MW-19, TW-1, and TW-3. Nitrate concentrations were detected at Monitor Wells MW-3, MW-4, MW-5, MW-11 through MW-20, and TW-3. Also, nitrate concentrations were detected at the drinking water wells identified as Hill, Smith, and Strife. Sulfate concentrations were detected at Monitor Wells MW-1, MW-2, MW-5, MW-6, MW-10, MW-12, MW-18, TW-1, TW-2, And TW-3.

At Monitor Wells MW-1, MW-2, MW-6, MW-7, MW-8, MW-10, MW-12, and TW-2, benzene and toluene concentrations were detected greater than their respective site specific threshold levels (SSTL) computed specifically for these wells. At Monitor Wells MW-1, MW-2, MW-6, MW-7, MW-8, MW-10, and TW-2, ethylbenzene concentrations were detected greater than its SSTL computed specifically for these wells. At Monitor Wells MW-1, MW-6, MW-7, MW-8, and TW-2, xylenes concentrations were detected greater than its SSTL computed specifically for these wells. At MW-2 and TW-2, MTBE concentrations were detected greater than its computed SSTL at these wells. However, MTBE concentrations may exist greater than its SSTL at Monitor Wells MW-6, MW-7, MW-8, and MW-10 due to a high dilution factor which yielded results less than detection limits at these wells. At Monitor Wells MW-1, MW-2, MW-6, MW-7, MW-8, and TW-2, naphthalene concentrations were detected greater than its SSTL computed for each of these wells. However, naphthalene concentrations may exist greater than its SSTL at Monitor Well MW-10 due to a high dilution factor which yielded results less than its detection limit at this well. At Monitor Wells MW-2, MW-6, MW-7, MW-8, MW-10, and TW-2, EDB

concentrations were detected greater than its SSTL calculated for each of these wells. At Monitor Wells MW-1, MW-2, MW-6, MW-7, MW-8, MW-10, MW-11, MW-12, and TW-2, lead concentrations were detected greater than its SSTL calculated for each of these wells. Groundwater analytical results are presented in Table III. Historical groundwater analytical results which compare current and past results with the SSTLs are presented in Table IV. Groundwater concentrations are depicted in Figures 4 through 7. Laboratory analyses and chain-of-custody are presented in Appendix B.

4.0 REMEDIATION EFFECTIVENESS

Chemicals of concern (CoC) concentration reduction is evaluated by verifying if the CoC concentrations reduction goals have been achieved in Monitor Wells MW-1 through MW-20, TW-1 through TW-3, and four drinking water wells named Hill, Smith, Strife, and Vickery. Therefore, chemical test data from Monitor Wells MW-1, MW-2, MW-6, MW-7, MW-8, MW-10 through MW-15, MW-17, MW-18, MW-19, TW-2, and TW-3 are used to evaluate the effectiveness of the bioremediation.

The evaluation of the remediation effectiveness consists in comparing the November 2001, CoC concentrations against the baseline concentrations and determining the percent of total concentration reduction. This is calculated by subtracting the current sample concentrations above SSTLs from the baseline concentrations above SSTLs and multiplying this amount by 100. This number is then divided by the baseline concentrations above SSTLs. The calculation of the total concentration reduction is presented in Table V.

According to calculations made from the November 2001, sampling event, approximately 4.73 percent of the CoC concentrations has been removed from the site.

5.0 CONCLUSIONS

- Groundwater flow at the site is in a northeastern direction with a hydraulic gradient of 0.018 feet per foot as measured between Monitor Wells MW-1 and MW-19.
- Liquid phase hydrocarbons were not detected in any monitor wells during the current sampling activities.
- Benzene and toluene concentrations were detected greater than their respective calculated SSTLs at Monitor Wells MW-1, MW-2, MW-6, MW-7, MW-8, MW-10, MW-12, and TW-2.
- Ethylbenzene concentrations were detected greater than the calculated SSTLs at Monitor Wells MW-1, MW-2, MW-6, MW-7, MW-8, MW-10, and TW-2.
- Xylenes concentrations were detected greater than the calculated SSTLs at Monitor Wells MW-1, MW-6, MW-7, MW-8, and TW-2.
- MTBE concentrations were detected greater than the calculated SSTLs at Monitor Wells MW-2 and TW-2. MTBE concentrations may exist greater than the SSTL at Monitor Wells MW-6, MW-7, MW-8, and MW-10 due to a high dilution factor which yielded results less than detection limits at these wells.
- Naphthalene concentrations were detected greater than the calculated SSTLs at Monitor Wells MW-1, MW-2, MW-6, MW-7, MW-8, and TW-2. Naphthalene concentrations may exist greater than the SSTL at Monitor Well MW-10 due to a high dilution factor which yielded results less than detection limits at these wells.
- EDB concentrations were detected greater than the calculated SSTLs at Monitor Wells MW-2, MW-6, MW-7, MW-8, MW-10, and TW-2.
- EDB concentrations were detected at the Strife potable water well. As a result, SEI is in the process of having a filter installed on this well.
- Lead concentrations were detected greater than the calculated SSTLs at Monitor Wells MW-1, MW-2, MW-6, MW-7, MW-8, MW-10, MW-11, MW-12, and TW-2.

- According to calculation made from the November 2001, sampling event, approximately 4.73 percent of the CoC concentrations have been removed from the site.
- Filters on the drinking water wells, identified as Hill and Vickery, were changed November 29, 2001.

6.0 REPORT LIMITATIONS

This investigation is intended to be a non-biased assessment of on-site environmental conditions proximate to the location of the current UST system. Subsurface investigative methodologies are in accordance with all applicable state and federal regulatory requirements. The information presented in this report is based upon site-specific observations, generally accepted geological practices, and analytical results for environmental samples collected at the time of the field investigation. All data is believed to represent subsurface conditions at the facility, however, data may not be completely representative of all subsurface conditions.

Dear Ms. Anderson,

Please find enclosed the Corrective Action Quarterly Groundwater Sampling Report associated with the July 11, 2001 sampling event for the above referenced site. Copies of all pertinent maps can be found in the Figures section of the report. Quarterly sampling results are provided in the Tables section of the report. Copies of the analytical results are also attached in the Appendix of the report.

Please feel free to call me at (803) 788-2535 if you have any questions concerning this report.

Sincerely,
SEI Environmental

1.0 INTRODUCTION

South Carolina Department of Health and Environmental Control (SCDHEC) contracted SEI Environmental, Inc. (SEI) to conduct corrective action and quarterly groundwater sampling activities at the Smith's Grocery facility (Site ID No. 09322) located on US Highway 49 in York, South Carolina. The approximate location of the project site is shown on the United States Geological Survey (USGS), 7.5-Minute Series Topographic Map provided as **Figure 1**. The corrective action and sampling activities were approved by SCDHEC in correspondence dated May 30, 2000.

2.0 GROUNDWATER SAMPLING METHODOLOGY

CoC concentraiton reduction is evaluated by verifying if the CoC concentrations reduction goals have been achieved in Monitor Wells MW-1 through MW-20, TW-1 through TW-3, and four drinking water wells named Hill, Vickery, Strife, and Smith. Therefore, chemical test data from Monitor Wells MW-1, MW-2, MW-6, MW-7, MW-8, MW-10 through MW-15, MW-17, through MW-5, MW-12 through MW-14, and MW-19 , MW-2, MW-6 through MW-8, MW-10 through MW-15, MW-10 through MW-19, TW-2 and TW-3 as well as the four drinking water wells in conjunction with following information are used to evaluate the effectiveness of the bioremediation.

2.1 Groundwater Direction and Velocity

On July 11, 2001, SEI personnel conducted a gauging and groundwater sampling event at the subject site. A water level indicator was used to record the water level in each well. A water-level measuring point (top of PVC casing) was established for each monitor well and referenced to a relative benchmark (BM). Unconfined groundwater was measured to be between 23 and 45 feet below the measuring point. The water level measurements were converted to relative water table elevations by subtracting the water level measurements from the referenced measuring point elevations on the top of the PVC casing. The water table elevations were then contoured to determine the relative direction of groundwater flow in the surficial aquifer. Groundwater measurements from the February sampling event are summarized in **Table I**, and a groundwater elevation contour map

is depicted in **Figure 3**. Groundwater measurements from the February sampling event are also compared to previous sampling events summarized in **Table II**.

Based on the groundwater elevation calculation, it appears that groundwater at the site moves mostly in an eastern direction. It was calculated that groundwater moves under a hydraulic gradient of 0.017 feet per foot as measured between Monitor Well MW-4 and MW-19.

2.2 Groundwater Sampling and Analysis

On July 11, 2001, SEI personnel obtained groundwater samples from Monitor MW-1 through MW-20, TW-1 through TW-3, and four drinking water wells named Hill, Vickery, Strife, and Smith. A new, disposable, polyethylene bailer was used for the collection of the water samples from the monitor wells. Each groundwater sample was obtained after pH values and temperature had equilibrated unless petroleum odor was emanating from the well. If petroleum odors were observed in the monitor well, the groundwater sample was obtained after three well volumes were purged. All purge water was drummed for proper disposal at a permitted treatment facility. Field measurements are presented in **Appendix A.** New, disposable, latex gloves were used to maintain sample integrity during the sampling process. The groundwater samples were placed in laboratory supplied containers, placed on ice, and delivered to TestAmerica Incorporated in Columbia, South Carolina for proper analysis. Proper preservation methods and chain-of-custody procedures were followed throughout the sampling process. The groundwater samples were analyzed for benzene, toluene, ethylbenzene, xylenes (BTEX), methyl-tert-butyl-ether (MTBE), and naphthalene by EPA method 8260; and polynuclear aromatic hydrocarbons by EPA method 8270; and lead by EPA method 200.7.

The four (4) drinking water wells located in the vicinity of this site will be sampled and the filters changed during the next sampling event due on October of 2001.

3.0 LABORATORY RESULTS

Groundwater analytical results for the samples collected on July 11, 2001, detected benzene concentrations in Compliance Monitor Wells MW-1 (830 µg/L), MW-2 (33,000 µg/L), MW-6 (2840 µg/L), MW-7 (980 µg/L), MW-8 (12000 µg/L), MW-10 (6450 µg/L), MW-12 (242 µg/L), and TW-2 (3610 µg/L) above its site specific target level (SSTL) of (11µg/l), (10 µg/L), (6 µg/L), (6 µg/L), (12 µg/L), (9 µg/L), (7 µg/L), and (5 µg/l) respectively. Toluene concentrations were detected in Compliance Monitor Wells MW-1 (13200 µg/L), MW-2 (50600 g/L), MW-6 (13500 µg/L), MW-8 (78000 µg/L), MW-10 (20400 µg/L)., MW-12 (14.8 µg/L), and TW-2 (1660 µg/L) above its SSTLs of (2223 µg/L), (2021 µg/L), (1212 µg/L), (2424 µg/L), (1819 µg/L), (5 µg/L), and (5 µg/L) respectively. Ethylbenzene concentrations were detected in Compliance Monitor Wells MW-1 (2300 µg/L), MW-2 (2260 µg/L), MW-6 (1840 µg/L), MW-7 (900 µg/L), MW-8 (6400 µg/L), MW-10 (2660 µg/L), and TW-2 (50.1 µg/L) above its SSTLs of (1558 µg/L), (1416 µg/L) (850 µg/L), (850 µg/L), (1700 µg/L), (1274 µg/L), and (5 µg/L) respectively. Xylene concentrations were detected in Monitor Wells MW-1 (15200 µg/L), MW-6 (8440 µg/L), MW-8 (31400 µg/L), and TW-2 (465 µg/L) above its SSTLs of (10000 µg/L), (8000 µg/L), (16000 µg/L), and (180 µg/l) respectively. MTBE concentrations were detected in Monitor Wells MW-2 (1220 µg/L) and TW-2 (50.8 µg/l) above its SSTLs of (81 µg/L) and (5 µg/l) respectively. Naphthalene concentrations were detected in Monitor Wells MW-1 (585 µg/L), MW-2 (590 µg/L), MW-7 (360 µg/L), MW-8 (910 µg/L), MW-12 (38.8 µg/L), and TW-2 (68.2 µg/L) above its SSTL of (56 µg/L), (51 µg/L), (31 µg/L), (62 µg/L), (36 µg/L), and (18 µg/L) respectively. All other Chemicals of Concern (CoC) were not detected at concentrations exceeding their associated SSTL in the wells that were actually sampled during this sampling event. Laboratory analytical results are summarized in **Table III** and are depicted in **Figure 4**. Laboratory analytical results are also compared to analytical results from previous sampling events and are summarized in **Table IV**. Laboratory analytical results and chain-of-custody are presented in **Appendix B**.

4.0 REMEDIATION EFFECTIVENESS

The evaluation of the remediation effectiveness consists in comparing the July 11, 2001, CoC concentrations against the base line and determining the percent of total concentration reduction. This is calculated by subtracting from the total concentration above SSTLs from baseline sampling the total concentration above SSTLs from the July 11, 2001, sampling event and dividing it by the total concentration above SSTLs from baseline sampling. The calculation of the total concentration reduction is presented in **Table V**.

According to calculations made from the July 11, 2001 sampling event, approximately 72.0 percent of the CoC concentrations have been removed from the site.

5.0 SUMMARY OF FINDINGS

Based on the above information, SEI findings are as follows:

- On July 11, 2001, SEI personnel obtained groundwater samples from Monitor Wells MW-1, MW-2, MW-6 through MW-8, MW-10 through MW-15, MW-10 through MW-19, TW-2 and TW-3.
- Based on the groundwater elevation calculation, it appears that groundwater at the site moves mostly in an eastern direction. It was calculated that groundwater moves under a hydraulic gradient of 0.017 feet per foot as measured between Monitor Well MW-4 and MW-19.
- Benzene concentrations in Compliance Monitor Wells MW-1 (830 µg/L), MW-2 (33,000 µg/L), MW-6 (2840 µg/L), MW-7 (980 µg/L), MW-8 (12000 µg/L), MW-10 (6450 µg/L), MW-12 (242 µg/L), and TW-2 (3610 µg/L) above its site specific target level (SSTL) of (11µg/l), (10 µg/L), (6 µg/L), (6 µg/L), (12 µg/L), (9 µg/L), (7 µg/L), and (5 µg/l) respectively.

- Toluene concentrations were detected in Compliance Monitor Wells MW-1 (13200 µg/L), MW-2 (50600 g/L), MW-6 (13500 µg/L), MW-8 (78000 µg/L), MW-10 (20400 µg/L)., MW-12 (14.8 µg/L), and TW-2 (1660 µg/L) above its SSTLs of (2223 µg/L), (2021 µg/L), (1212 µg/L), (2424 µg/L), (1819 µg/L), (5 µg/L), and (5 µg/L) respectively.
- Ethylbenzene concentrations were detected in Compliance Monitor Wells MW-1 (2300 µg/L), MW-2 (2260 µg/L), MW-6 (1840 µg/L), MW-7 (900 µg/L), MW-8 (6400 µg/L), MW-10 (2660 µg/L), and TW-2 (50.1 µg/L) above its SSTLs of (1558 µg/L), (1416 µg/L) (850 µg/L), (850 µg/L), (1700 µg/L), (1274 µg/L), and (5 µg/L) respectively.
- Xylene concentrations were detected in Monitor Wells MW-1 (15200 µg/L), MW-6 (8440 µg/L), MW-8 (31400 µg/L), and TW-2 (465 µg/L) above its SSTLs of (10000 µg/L), (8000 µg/L), (16000 µg/L), and (180 µg/l) respectively.
- MTBE concentrations were detected in Monitor Wells MW-2 (1220 µg/L) and TW-2 (50.8 µg/l) above its SSTLs of (81 µg/L) and (5 µg/l) respectively.
- Naphthalene concentrations were detected in Monitor Wells MW-1 (585 µg/L), MW-2 (590 µg/L), MW-7 (360 µg/L), MW-8 (910 µg/L), MW-12 (38.8 µg/L), and TW-2 (68.2 µg/L) above its SSTL of (56 µg/L), (51 µg/L), (31 µg/L), (62 µg/L), (36 µg/L), and (18 µg/L) respectively.
- According to calculations made from the July 11, 2001 sampling event, approximately 72.0 percent of the CoC concentrations have been removed from the site.
- Filters on the drinking water wells at this site will be changed during the next sampling event due in October of 2001. Samples will also then be collected for these drinking water wells at that time.

6.0 REPORT LIMITATIONS

This investigation is intended to be a non-biased assessment of on-site environmental conditions proximate to the location of the current UST system. Subsurface investigative methodologies are in accordance with all applicable state and federal regulatory requirements. The information presented in this report is based upon site-specific observations, generally accepted geological practices, and analytical results for environmental samples collected at the time of the field investigation. All data is believed to represent subsurface conditions at the facility, however, data may not be completely representative of all subsurface conditions.

Subject: Smith's Grocery, SC Hwy 49, York, SC
Petroleum Release reported June 30, 1993
UST Permit #09322

The Underground Storage Tank (UST) Program received notice from Bob Bolton of SEI Environmental on December 4, 2001 that a water supply well at the Strife residence was impacted by EDB from the facility referenced above. The well was resampled and results received December 11, 2001 confirmed the presence of EDB. A Granular Activated Carbon (GAC) filter unit will be installed on the well. Two nearby residences already have GAC filters installed on their water supply wells.

Corrective action activities are currently in progress at the facility.

If you have any questions, please call me at (803) 898-4318.

UST Permit #09322

Dear Ms. Anderson:

Please find enclosed corrected text and table for the Corrective Action Quarterly Groundwater Sampling Report – Smith's Grocery that SEI Environmental, Inc. (SEI) recently submitted. SEI apologizes for any inconvenience that this may have caused. Should you have any questions or require additional information, please contact Mr. Fred Lyke or me at 788-2535.

Sincerely,
SEI Environmental, Inc.

Bob Bolton
Project Manager

Enclosure

1.0 INTRODUCTION

South Carolina Department of Health and Environmental Control (SCDHEC) contracted SEI Environmental, Inc. (SEI) to conduct corrective action and quarterly groundwater sampling activities at the Smith's Grocery facility (UST Permit #09322) located on SC Highway 49 in York, South Carolina. The approximate location of the project site is shown on the United States Geological Survey (USGS), 7.5-Minute Series Topographic Map provided as **Figure 1**. The corrective action and sampling activities were approved by SCDHEC in correspondence dated March 26, 2001.

2.0 GROUNDWATER SAMPLING METHODOLOGY

CoC concentration reduction is evaluated by verifying if the CoC concentration reduction goals have been achieved in Monitor Wells MW-1 through MW-19, TW-1 through TW-3, and four drinking water wells named Hill, Vickery, Strife, and Smith. Therefore, chemical test data from Monitor Wells MW-1, MW-2, MW-6, MW-7, MW-8, MW-10 through MW-15, MW-17, MW-18, MW-19, TW-2, and TW-3 are used to evaluate the effectiveness of the bioremediation.

2.1 Groundwater Direction and Velocity

On July 11, 2001, SEI personnel conducted a gauging and groundwater sampling event at the subject site. A water level indicator was used to record the water level in each well. A water-level measuring point (top of PVC casing) was established for each monitor well and referenced to a relative benchmark (BM). Unconfined groundwater was measured to be between 23 and 45 feet below the measuring point. The water level measurements were converted to relative water table elevations by subtracting the water level measurements from the referenced measuring point elevations on the top of the PVC casing. The water table elevations were then contoured to determine the relative direction of groundwater flow in the surficial aquifer. Groundwater measurements from the February sampling event are summarized in **Table I**, and a groundwater elevation contour map is depicted in **Figure 3**.

Based on the groundwater elevation calculation, it appears that groundwater at the site moves mostly in an eastern direction. It was calculated that groundwater moves under a hydraulic gradient of 0.017 feet per foot as measured between Monitor Well MW-4 and MW-19.

2.2 Groundwater Sampling and Analysis

On July 11, 2001, SEI personnel obtained groundwater samples from Monitor MW-1 through MW-20, TW-1 through TW-3, and four drinking water wells named Hill, Vickery, Strife, and Smith. A new, disposable, polyethylene bailer was used for the collection of the water samples from the monitor wells. Each groundwater sample was obtained after pH values and temperature had equilibrated unless petroleum odor was emanating from the well. If petroleum odors were observed in the monitor well, the groundwater sample was obtained after three well volumes were purged. All purge water was drummed for proper disposal at a permitted treatment facility. Field measurements are presented in **Appendix A.** New, disposable, latex gloves were used to maintain sample integrity during the sampling process. The groundwater samples were placed in laboratory supplied containers, placed on ice, and delivered to TestAmerica Incorporated in Columbia, South Carolina for proper analysis. Proper preservation methods and chain-of-custody procedures were followed throughout the sampling process. The groundwater samples were analyzed for benzene, toluene, ethylbenzene, xylenes (BTEX), methyl-tert-butyl-ether (MTBE), ethylene dibromide (EDB), and naphthalene by EPA method 8260; polynuclear aromatic hydrocarbons by EPA method 8270; and lead by EPA method 200.7.

The four (4) drinking water wells located in the vicinity of this site will be sampled and the filters changed during the next sampling event due on October of 2001.

3.0 LABORATORY RESULTS

Groundwater analytical results for the samples collected on July 11, 2001, detected benzene concentrations in Compliance Monitor Wells MW-1 (830 µg/L), MW-2 (33,000 µg/L), MW-6 (2840 µg/L), MW-7 (980 µg/L), MW-8 (12000 µg/L), MW-10 (6450 µg/L), MW-12 (242 µg/L), and TW-2 (3610 µg/L) above its site specific target level (SSTL) of (11µg/l), (10 µg/L), (6 µg/L), (6 µg/L), (12 µg/L), (9 µg/L), (7 µg/L), and (5 µg/l) respectively. Toluene concentrations were detected in Compliance Monitor Wells MW-1 (13200 µg/L), MW-2 (50600 g/L), MW-6 (13500 µg/L), MW-8 (78000 µg/L), MW-10 (20400 µg/L)., MW-12 (14.8 µg/L), and TW-2 (1660 µg/L) above its SSTLs of (2223 µg/L), (2021 µg/L), (1212 µg/L), (2424 µg/L), (1819 µg/L), (5 µg/L), and (5 µg/L) respectively. Ethylbenzene concentrations were detected in Compliance Monitor Wells MW-1 (2300 µg/L), MW-2 (2260 µg/L), MW-6 (1840 µg/L), MW-7 (900 µg/L), MW-8 (6400 µg/L), MW-10 (2660 µg/L), and TW-2 (50.1 µg/L) above its SSTLs of (1558 µg/L), (1416 µg/L) (850 µg/L), (850 µg/L), (1700 µg/L), (1274 µg/L), and (5 µg/L) respectively. Xylene concentrations were detected in Monitor Wells MW-1 (15200 µg/L), MW-6 (8440 µg/L), MW-8 (31400 µg/L), and TW-2 (465 µg/L) above its SSTLs of (10000 µg/L), (8000 µg/L), (16000 µg/L), and (180 µg/l) respectively. MTBE concentrations were detected in Monitor Wells MW-2 (1220 µg/L) and TW-2 (50.8 µg/l) above its SSTLs of (81 µg/L) and (5 µg/l) respectively. Naphthalene concentrations were detected in Monitor Wells MW-1 (585 µg/L), MW-2 (590 µg/L), MW-7 (360 µg/L), MW-8 (910 µg/L), MW-12 (38.8 µg/L), and TW-2 (68.2 µg/L) above its SSTL of (56 µg/L), (51 µg/L), (31 µg/L), (62 µg/L), (36 µg/L), and (18 µg/L) respectively. All other Chemicals of Concern (CoC) were not detected at concentrations exceeding their associated SSTL in the wells that were actually sampled during this sampling event. Laboratory analytical results are summarized in **Table III** and are depicted in **Figure 4**. Laboratory analytical results are also compared to analytical results from previous sampling events and are summarized in **Table IV**. Laboratory analytical results and chain-of-custody are presented in **Appendix B**.

4.0 REMEDIATION EFFECTIVENESS

The evaluation of the remediation effectiveness consists in comparing the July 11, 2001, CoC concentrations against the baseline and determining the percent of total concentration reduction. This is calculated by subtracting the current sample concentrations above SSTLs from the baseline concentrations above SSTLs and multiplying this amount by 100. This number is then divided by the baseline concentrations above SSTLs. The calculation of the total concentration reduction is presented in **Table V**.

According to calculations made from the July 11, 2001 sampling event, approximately 0.00 percent of the CoC concentrations have been removed from the site.

5.0 SUMMARY OF FINDINGS

Based on the above information, SEI findings are as follows:

- On July 11, 2001, SEI personnel obtained groundwater samples from Monitor Wells MW-1, MW-2, MW-6 through MW-8, MW-10 through MW-15, MW-10 through MW-19, TW-2 and TW-3.
- Based on the groundwater elevation calculation, it appears that groundwater at the site moves mostly in an eastern direction. It was calculated that groundwater moves under a hydraulic gradient of 0.017 feet per foot as measured between Monitor Well MW-4 and MW-19.
- Benzene concentrations in Compliance Monitor Wells MW-1 (830 µg/L), MW-2 (33,000 µg/L), MW-6 (2840 µg/L), MW-7 (980 µg/L), MW-8 (12000 µg/L), MW-10 (6450 µg/L), MW-12 (242 µg/L), and TW-2 (3610 µg/L) above its site specific target level

(SSTL) of (11µg/l), (10 µg/L), (6 µg/L), (6 µg/L), (12 µg/L), (9 µg/L), (7 µg/L), and (5 µg/l) respectively.

- Toluene concentrations were detected in Compliance Monitor Wells MW-1 (13200 µg/L), MW-2 (50600 g/L), MW-6 (13500 µg/L), MW-8 (78000 µg/L), MW-10 (20400 µg/L)., MW-12 (14.8 µg/L), and TW-2 (1660 µg/L) above its SSTLs of (2223 µg/L), (2021 µg/L), (1212 µg/L), (2424 µg/L), (1819 µg/L), (5 µg/L), and (5 µg/L) respectively.
- Ethylbenzene concentrations were detected in Compliance Monitor Wells MW-1 (2300 µg/L), MW-2 (2260 µg/L), MW-6 (1840 µg/L), MW-7 (900 µg/L), MW-8 (6400 µg/L), MW-10 (2660 µg/L), and TW-2 (50.1 µg/L) above its SSTLs of (1558 µg/L), (1416 µg/L) (850 µg/L), (850 µg/L), (1700 µg/L), (1274 µg/L), and (5 µg/L) respectively.
- Xylene concentrations were detected in Monitor Wells MW-1 (15200 µg/L), MW-6 (8440 µg/L), MW-8 (31400 µg/L), and TW-2 (465 µg/L) above its SSTLs of (10000 µg/L), (8000 µg/L), (16000 µg/L), and (180 µg/l) respectively.
- MTBE concentrations were detected in Monitor Wells MW-2 (1220 µg/L) and TW-2 (50.8 µg/l) above its SSTLs of (81 µg/L) and (5 µg/l) respectively.
- Naphthalene concentrations were detected in Monitor Wells MW-1 (585 µg/L), MW-2 (590 µg/L), MW-7 (360 µg/L), MW-8 (910 µg/L), MW-12 (38.8 µg/L), and TW-2 (68.2 µg/L) above its SSTL of (56 µg/L), (51 µg/L), (31 µg/L), (62 µg/L), (36 µg/L), and (18 µg/L) respectively.
- According to calculations made from the July 11, 2001 sampling event, approximately 0.00 percent of the CoC concentrations have been removed from the site.
- Filters on the drinking water wells at this site will be changed during the next sampling event due in October of 2001. Samples will also then be collected for these drinking water wells at that time.

6.0 REPORT LIMITATIONS

This investigation is intended to be a non-biased assessment of on-site environmental conditions proximate to the location of the current UST system. Subsurface investigative methodologies are in accordance with all applicable state and federal regulatory requirements. The information presented in this report is based upon site-specific observations, generally accepted geological practices, and analytical results for environmental samples collected at the time of the field investigation. All data is believed to represent subsurface conditions at the facility, however, data may not be completely representative of all subsurface conditions.

Re: Underground Injection Control Permit #563
Smith's Grocery Site
York County

Dear Ms. Smith:

Enclosed is a Permit to Operate for eighteen (18) Class VA-I (Aquifer Remediation) injection wells at Smith's Grocery Site, York County, SC.

If you have any question, please call me at (803) 898-3549.

Sincerely,

Todd Adams, Hydrologist

Injection Well Operating Approval
for

Class II, III, and V.A. Injection Well(s)

Permit #563 Date of Issue: October 22, 2001

In accordance with the provisions of Title 48, Chapter 1, South Carolina Code of Laws, 1976, as amended, and pursuant to receiving a Permit to Construct eighteen (18) Class V.A.-I (Aquifer Remediation) injection wells, authorization is granted to Ms. Smith to operate eighteen (18) Class V.A.-I injection wells located at the Smith's Grocery Site, York County, SC, and are subject to the attached provisos noted for the operator.

Pursuant to Title 48, Chapter 1, South Carolina Code of Laws, 1976, as amended, this authorization may be rescinded if these injection wells should, at any time, contaminate, pollute, or otherwise adversely affect other water in the vicinity or for any other conditions contained in R61-87, Title 48, Chapter 1, South Carolina Code of Laws, 1976, as amended.

Expires: October 22, 2003

Provisos to the Injection Well Operating Approval
for
Underground Injection Well Permit #563
Smith's Grocery Site
York County, S.C.
October 22, 2001

1) Construction of new or abandonment of existing wells must be reported to the Department within thirty (30) days of completion.

2) Only microbial biomass and ambient air as described in the Corrective Action Plan may be injected into the subsurface. Any changes in the system operation other than as presented in the UIC Permit Application must be reported to the Department prior to implementation.

Re: Smith Grocery CA, Site #09322, CP #13099

Dear Ms. Anderson:

This correspondence is to notify your office that the installation of the remediation system referenced above has been completed. A copy of our invoice #42380 for $79,743.60 is attached and the original invoice has been sent to Pat Holland for payment in separate correspondence.

On August 22, 2001, six injection wells (IW-1 through IW-6) were installed at the facility. On September 25 and 26, 2001, the remaining injection wells (IW-7 through IW-18) were installed. The injection well installations comply with UIC permit #563. A site map (Figure 1) is attached illustrating the location of the injection wells installed. Well construction records are also provided. A copy of this correspondence and attachments are being sent to Todd Adams for his files.

If you have any questions please do not hesitate to call.

Best regards,

SEI Environmental, Inc.

Re: Smith's Grocery
UST Permit # 09322
Corrective Action Plan received July 17, 2001
York County

Dear Ms. Smith:

The Underground Storage Tank (UST) Program of the South Carolina Department of Health and Environmental Control (SCDHEC) has reviewed the referenced documents. Further, as required by Section 280.67 of the South Carolina Underground Storage Tank Regulations R.61-92, the UST Program has provided a public notice period including notice of the pending corrective actions to the surrounding land owners via certified correspondence. No objections to the proposed actions were expressed; therefore, corrective action activities may proceed at this time. A Copy of the Bureau of Air Quality permit exemption and Underground Injection Control Permit to Construct have already been forwarded.

As stated in Specifications for Corrective Action, Item 2 of the Request for Bids, an initial monitoring report documenting CoC concentrations in all wells and potentiometric conditions prior to start up must be submitted to the UST Program within 45 days of award of bid contract. **Sampling for this initial monitoring event must occur prior to system startup.**

The UST Program grants preapproval for transportation of virgin petroleum contaminated soil and groundwater which may be generated during site construction, drilling, and well development / purging from the referenced site to a permitted treatment facility. If the contaminated soil or ground water is not immediately transported to the permitted treatment facility, it must be properly stored in labeled containers or covered with plastic as appropriate. The contaminated soil and/or groundwater must be accepted by the approved treatment facility. There can be no spillage or leakage in transport. A copy of the disposal manifest and/or acceptance letter from the receiving facility that clearly designates the quantity received must be included in the report.

As outlined in the Department's March 26, 2001, correspondence, cost proposal #13099 has been approved in the amount of $ 199,359.00. The first pay-for-performance invoice in the amount of $ 79,743.60 (40%) may be submitted (on the enclosed invoice form) once the Underground Injection Control Permit to Operate has been issued and the treatment system has been placed into operation.

On all correspondence regarding this site, please reference the UST Permit #09322. If you have any questions, please contact me at (803) 898-4318 or (800) 826-5435 (within South Carolina only).

Sincerely,

Paula Anderson

Re: Underground Injection Control Permit #563
Smith's Grocery
York County, South Carolina

Dear Ms. Smith:

Enclosed is a Permit to Construct for eighteen (18) Class VA-I injection wells at the Smith's Grocery as requested in the UIC application received July 17, 2001. An inspection of the UIC System must be conducted prior to issuance of Approval to Operate. After completion of the inspection, Approval to Operate #563 will be issued.

If you have any questions, please feel free to call me at (803) 898-3549.

WATER MONITORING ASSESSMENT & PROTECTION DIVISION

Injection Well Construction Permit
for
Class II, III, and V.A. Injection Well(s)

Permit #563

Date Issued: August 6, 2001
Date Expired: August 6, 2002

For (Operator): SEI

In accordance with provisions of Title 48, Chapter 1, South Carolina Code of Laws, 1976, as amended, permission is granted for construction of eighteen (18) Class V.A.-I injection wells located at the Smith's Grocery, York County, SC with the following provisions:

1) The operator shall submit completed SCDHEC well record forms to the Department's Water Monitoring, Assessment & Protection Division after completion of the injection wells.

2) Upon completion of construction, injection activities shall not commence prior to receiving approval from the Department to operate the injection wells.

3) When the injection wells are no longer in use, or upon request by the Department, within sixty (60) days all injection wells must be permanently abandoned in accordance with the South Carolina Well Standards and Regulations (R.61-71.10).

4) Injection wells must be installed and grouted in accordance with the South Carolina Well Standards and Regulations (R.61-71).

STATEMENT OF BASIS - UIC DRAFT PERMIT #563

In accordance with the South Carolina Underground Injection Control Regulations, Section R61-87.12,J., this "Statement of Basis" has been prepared for the Underground Injection Control permit application received July 17, 2001.

Ownership of the proposed injection wells is Ms. Lois B. Smith, 3176 Charlotte Highway, York, SC 29745. The permit (UIC #563) is for the construction of eighteen (18) injection wells for ground water remediation at the Smith's Grocery. The intent of the injection wells is to remediate volatile organic compounds by injection of a microbial biomass with ambient air into the subsurface as described in UIC application. The draft permit for the underground injection proposal has been prepared based on staff review and the application of the Pollution Control Act of South Carolina and the Underground Injection Control Regulations of South Carolina.

Conditions of the permit issuance include the submittal of well records for all injection wells installed and the inspection of well construction by the Department prior to injection.

RE: Water Supply Well Sampling
Vickery & Hill Residences
Smith's Grocery
York, York County
Site ID #: 09322
CBM #: 10629

Dear Ms. Anderson:

The purpose of this correspondence is to request approval of the attached ACCP, which outlines the costs necessary to continue monthly sampling of two water supply wells located adjacent to the above referenced site. The wells, which have been affected by a release of petroleum products from an unknown source, are currently in use by the Vickery family and the Hill family. The proposed costs cover continued monthly sampling activities at the residences for three months (August 2001 through October 2001) and analysis of the samples for BTEX, MTBE and naphthalene by Method 8260. Update reports documenting the results of the sampling will be submitted to the SCDHEC monthly.

If you have any questions or require additional information concerning this matter, please contact the undersigned at (803) 548-5989.

Sincerely,
CBM Environmental Services, Inc.

W. Scott Ball
Assessment Director

Corrective Action Plan Received July 17, 2001
York County

Dear Mr. and Ms. Hemphill:

As you may be aware, petroleum products have been identified in the soil and groundwater at the referenced facility. To prevent the release from becoming an unacceptable risk, SEI Environmental, Inc. has been retained to initiate corrective action of the impacted soil and groundwater using in situ bioremediation followed by natural attenuation. A copy of the proposed corrective action plan is available for your review at the SCDHEC Freedom of Information Office, 2600 Bull Street, Columbia, South Carolina. Please call the Freedom of Information Office at (803) 898-3882 for an appointment if you would like to review this corrective action plan.

Section 280.67 of the South Carolina Underground Storage Tank Regulations requires the SCDHEC to provide notice to those members of the public that may be affected by a planned corrective action. A copy of the public notice is enclosed for your information. You may observe limited drilling, trenching, and construction activities by SEI Environmental, Inc. at the referenced property.

If you have any questions or comments regarding the proposed corrective action, please call or write Paula Anderson at (803) 898-4318 or 1-800-826-5435. All comments should be submitted with fourteen (14) days of the date of this correspondence.

Sincerely,

Paula Anderson, Hydrologist

MEMORANDUM

DATE: August 22, 2001

TO: Dale Stoudemire
Compliance Section
Regulatory Compliance Division

FROM: Paula Anderson PA
Owner/Operator Assistance Section
Assessment and Corrective Action Division

SUBJECT: Public Notice # 09322-01
Smith's Grocery, UST Permit # 09322
York County

Per section 280.67 of the South Carolina Underground Storage Tank Control Regulations R. 61-91, the South Carolina Department of Health and Environmental Control (SCDHEC) is required to provide public notice of proposed corrective actions at underground storage tank facilities.

The Assessment & Corrective Action Division requests your assistance in posting the enclosed notice at public offices (e.g. post offices, court houses, etc.) located in close proximity to the referenced facility.

If possible, the notice should be posted for 15 days. The attached notice has been postdated to August 31, 2001 to allow your office time to have it posted prior to its beginning date. Your assistance is greatly appreciated.

Questions may be referred to my attention at (803) 898-4318.

SUBJECT: Public Notice # 09322-01
Smith's Grocery, UST Permit # 09322
York County

Per section 280.67 of the South Carolina Underground Storage Tank Control Regulations R. 61-91, the South Carolina Department of Health and Environmental Control (SCDHEC) is required to provide public notice of proposed corrective actions at underground storage tank facilities.

The Assessment and Corrective Action Division requests your assistance in making the technical file for the referenced facility available for review by any concerned citizens and/or environmental consultants.

The notice has been postdated to August 31, 2001 and will be posted for 15 days. A copy is enclosed for your information. Your assistance is greatly appreciated.

Questions may be referred to my attention at (803) 898-4318.

1.0 INTRODUCTION

The South Carolina Department of Health and Environmental Control (SCDHEC) Bureau of Groundwater requested that a Corrective Action Plan be prepared for Smith's Grocery located at 3176 Charlotte Highway in York, South Carolina. A Site Location Map is provided as Figure 1 and a Site Map is provided as Figure 2..

2.0 SITE CHARACTERIZATION

The regional geology of York can be described broadly as the Charlotte Belt. Structurally, it is described as a broad belt of medium to high-grade metamorphic rocks with common rock types including gneisses, schists, and amphibolites. The regional hydrogeology occurs in two types of materials: 1.) clayey and sandy soil and weathered material and 2.) underlying bedrock consisting of uneven distribution and size of rock fractures (that permit circulation and supply of groundwater). (Fairey, 1977).

Surficial groundwater generally flows to the southeast, which is consistent with the topography of the area. Saturated conditions are encountered approximately 26 - 43 feet below grade.

3.0 GROUNDWATER QUALITY

CBM preformed a Rapid Assessment at the subject site in August and October 2000. A table and site map depicting the analytical results of the groundwater samples collected were included in the corrective action bid package. Free product was not identified within the last year. Dissolved petroleum constituents above the risk based screening levels (RBSLs) were detected at several monitor wells located on the subject and adjacent properties.

4.0 GROUNDWATER REMEDIATION

Groundwater remediation will be accomplished by biologically treating the dissolved-phase product in situ. Detailed descriptions of the techniques are presented in the sections that follow.

4.1 In Situ Bioremediation Theory

In situ bioremediation refers to the use of natural microbiological processes occurring in the subsurface environment to breakdown complex organic compounds into simpler, non-toxic compounds without the removal of aquifer material. Contaminant degradation takes place by microorganisms when the contaminants either serve as a primary energy source (electron donor), or are fortuitously metabolized when other primary substrates are available to the microorganisms (co-metabolism).

In order for the electron donors to be utilized by the indigenous microbial community, compounds must also be available which allow energy transfer by the microorganisms to take place. Such compounds are classified as electron acceptors, and are generally believed to be used in sequential fashion based on the energy yield that results to the microorganisms when energy production and electron donor utilization is taking place.

For in situ biodegradation to occur in the subsurface, the following basic requirements need to be met (Bedient et al., 1994):

- Presence of appropriate microbial population – generally microorganisms that are able to degrade petroleum products are ubiquitous in the subsurface environments;

- Energy source and a carbon source – organic carbon is utilized both as an energy source by releasing electrons during transformation and by cells for maintenance and growth;

- Electron acceptor – the electrons released by the carbon transformation must be taken up by some other chemical. Oxygen is the preferred electron acceptor and is necessary for the aerobic biodegradation of organic compounds. Residual oxygen concentrations of <1.0 mg/l in ground water tend to limit the overall aerobic reaction rates;

- Nutrients – for bacterial growth to occur nutrients are needed (e.g.; nitrogen, phosphorous, calcium, potassium, magnesium, iron, etc.). The major nutrients (nitrogen and phosphorous) are required in order of magnitude higher levels than the minor and trace nutrients (sodium, potassium, calcium, magnesium, iron, chloride, and sulfur). A typical C:N:P ratio of approximately 100:10:1 (by weight ratio) is used to ensure that adequate levels of N and P exist for unhindered bioremediation, and;

- Appropriate environmental conditions – microbial activity is dependent upon many environmental conditions such as temperature, pH, salinity, pressure, concentrations of the constituents of concern, and the presence of inhibitors.

Typically the rate of naturally occurring bioremediation of benzene, toluene, ethyl benzene, and xylene (BTEX) compounds is often limited by either the concentration of an appropriate electron acceptor or a nutrient needed during the transformation of the BTEX into a non-toxic compound. Enhanced in situ bioremediation attempts to stimulate biodegradation by indigenous microbial populations. This is accomplished by adding the limiting electron acceptor and/or the appropriate nutrients to the subsurface environment until the hydrocarbon substrate becomes the limiting factor (i.e., hydrocarbon concentrations are reduced to levels that will not sustain the microbial population).

Typical electron acceptors in order of relative amount of energy available to a given microbial community are: oxygen, nitrate, iron (III), sulfate, and carbon dioxide. Microbes tend to oxidize hydrocarbons (and other organic substrates) by using the electron acceptor that provides the most energy (Strumm and Morgan, 1981). Oxygen provides microbes with more free energy (via oxygen reduction) than any other electron acceptor. Nitrate is the second best electron acceptor. Research has shown that BTEX compounds are some of the most aerobically biodegradable anthropogenic compounds found in the subsurface environment (Lee et al., 1987). Table 1 below (modified from Bedient et al., 1994) lists research supporting biodegradation of BTEX compounds.

4.2 In Situ Bioremediation Evaluation and Design

A subsurface microbial community has been identified at several sites that exhibit similar subsurface conditions to the subject site. Based on the analyses conducted at these similar sites, a selected biologic community of indigenous BTEX degraders will be grown to provide the inoculum for the in situ injection wells. A Safety Evaluation was performed by the State of South Carolina Toxicologist on Micro-Bac International Bioremediation Product. The State Toxicologist issued a safety evaluation letter dated January 15, 1999. A copy of this letter is included in Appendix A.

Up to eighteen (18) in situ injection wells will be installed at the locations depicted in Figure 4. The injection wells will be installed using 2-inch diameter Schedule 40 PVC casing approximately fifty (50) feet long. Perforations along the length will allow impacted ground water to enter the reactor and will allow the treated oxygenated ground water and excess biomass to exit the reactors. A schematic drawing of the typical injection well is provided as Figure 5.

In biological processes, microorganisms degrade organic compounds either directly to obtain carbon and/or energy, or in a co-metabolic process with no significant benefit to the organism. In a situation where the microorganisms are in equilibrium (i.e., biomass decay approximately equals biomass growth) the stoichiometric equation describing the degradation of hydrocarbons (using n-hexane as a typical hydrocarbon) is:

$C_6H_{14} + 9.5O_2 \rightarrow 6CO_2 + 7H_2O$

Based on the above equation 9.5 moles of oxygen are required for every mole of hydrocarbon consumed, or on a weight basis, approximately 3.5 grams of oxygen area required for every 1 gram of hydrocarbon. In actual cases biodegradation rates range from approximately 2 mg/l-day to 20 mg/l-day, affected by initial concentrations, temperature, and initial biomass (USEPA, 1995). For Smith's Grocery site, a conservative oxygen utilization rate of 6% per day is assumed. Bacteria and nutrients purchased from MicroBac will be injected into the shallow aquifer through the proposed injection wells. Excess biomass and ground water will flow out through perforations to the water table. The treatment radius of each in situ immobilized bed bioreactor will be limited by the permiability of the subsurface. Field experience from other sites and the rule of thumb derived from air sparging projects indicate that this radius will be on the order of 12 to 15 feet. Initial nutrients will be provided in the form of time-released solids mixed with water and installed in the bioreactor.

Using a first order decay rate of .35, calculated from the reported half-life value for benzene of 24 months, the average degradation rate for the site can be determined. The half-life value for benzene was selected because it is the longest half-life of the two constituents present above SSTL concentrations. The half-life of benzene was taken from Table 2C of the South Carolina Risked-Based Corrective Action for Petroleum Releases document dated January 5, 1998. The first order degradation rate is calculated by:

$L_t = Le^{-kt}$ (Cookson, 1995)

Where: L_t = concentration after degradation for time (t) in days

L = original concentration

k = first-order degradation rate constant, unit per day

The sum total of the constituents of concern (COC) above calculated SSTL values (as presented in the bid specifications) was 1.407 mg/l. Based on the above calculation the target levels can be

reached in less than12 months. A safety factor is appropriate and therefore, a remediation time frame of 36 months is suggested.

To monitor actual remediation rates, a field-monitoring program will be proposed to provide evidence that the site will be remediated within the required time frame. Because of the widely variable hydrocarbon concentrations, the average biodegradation rate does not reflect actual biodegradation rates throughout the site. Biodegradation rates may also fluctuate with the season and as contaminant concentration decreases

5.0 CORRECTIVE ACTION MONITORING

Sampling and reporting will be conducted on a quarterly basis. Quarterly samples will be conducted on all monitor wells. The groundwater samples will be analyzed for the BTEX compounds, Naphthalene, and MTBE. Analytical methodologies shall be as specified in SCDHEC DUSTM guidance documents (or equivalent). Proper field notes and chain of custody documentation will be maintained.

6.0 ABANDONMENT

Upon achieving remediation goals, all monitoring wells will be abandoned in accordance with SCDHEC guidelines.

MEMORANDUM

TO: Scott McInnes
Underground Storage Tank Management Bureau

FROM: John F. Brown, DVM, PhD
State Toxicologist
Division of Health Hazard Evaluation

RE: Safety Evaluation of Micro-Bac International Bioremediation Product for Hydrocarbon-based Soil Contamination

1. I have reviewed the responses to DHEC Guidelines of Health Hazard Evaluation of Bioremediation Procedures for Contaminated Soil relating to the product noted above. The responses were submitted by Dennis R. Schneider, Ph.D. of Micro-Bac International, inc. of Round Rock, Texas. All proprietary information will be secured and kept confidential, as requested.

2. If the above product noted is used in the approved application procedure, I find no significant threat to the public health and environmental integrity of South Carolina and have no objection to it being used on approved designated sites.

3. This review does not address the effectiveness of the proposed procedure. Efficacy evaluation must be made by other parties, if required.

cc: George Flores; fax (803) 957-4086

DHEC 2502 (08/1997)

Attachment A – Activity for Review

The permit application is in support of the remedial activities proposed for Smith's Grocery in York, SC (SCDHEC Site ID# 09322). Remedial activities proposed the installation and operation of injection wells for remediation of dissolved phase hydrocarbons. The operation of the injection wells does not require the injection of air as the oxygen delivery system since the biomass to be injected is anaerobic.

Attachment C – Operating Data

For each in situ bioreactor:

1. MiroBac International Inc material will be poured into each injection well. No routine recovery of ground water is anticipated. No air permeability data is available.

2. Average and maximum injection pressure will not exceed pressure head from the top of the casing to the water table.

3. Injection will be on an as needed basis.

4. No contaminant constituents will be in the injected fluid.

5. Based on calculations in the Corrective Action Plan estimated length of clean up will be less than 36 months. It is requested that the permit be valid for an initial period of three years.

Attachment D – Monitoring Program

1. At startup of the injection wells and at 90 days after startup dissolved oxygen, pH, nitrates, and gasoline range organics will be monitored. In addition, prior to system startup a ground water sample will be collected from each of the existing monitoring wells. Prior to sample collection the water level in each well will be measured. The volume of water standing in the well will be calculated. A volume equal to or greater than three times the calculated volume will be purged from the well before a sample is collected. Field measurements of pH, temperature, and specific conductance will be made and recorded after each single volume purge. Purge water will be containerized and temporarily stored onsite in labeled containers for subsequent off site disposal through an approved facility. Samples will be placed in laboratory supplied containers, maintained at 4^0 C, in a cooler and shipped to a SC certified laboratory for analysis. The ground water samples will be analyzed for the BTEX components, Naphthalene, and MTBE. Analytical methodologies shall be as specified in SCDHEC DUSTM guidance documents (or equivalent). Proper field notes and chain of custody documentation will be maintained.

   Sampling and reporting will be conducted on a quarterly basis. Quarterly sampling will be conducted on all monitor wells.

2. No contaminant constituents will be present in the injectate.

3. No hydraulic impact on the contaminant plume is anticipated. Water level measurements will be collected and potentiometric maps at intervals specified above to confirm that the existing ground water flow direction is not affected.

Attachment E – Existing or Pending State/Federal Permits

The site is identified by SCDHEC as having active underground storage tanks. No other known permits exist.

Attachment F – Description of Business

This facility is a convenience store.

AIA Document A311

Performance Bond

KNOW ALL MEN BY THESE PRESENTS: that

(Here insert full name and address or legal title of Contractor)

SEI Environmental, Inc., 2506 Grandview AVenue, Nashville, TN 37211

as Principal, hereinafter called Contractor, and,

(Here insert full name and address or legal title of Surety)

Gulf Insurance Company, 5 Forest Park Drive, Farmington, CT 06032

as Surety, hereinafter called Surety, are held and firmly bound unto

(Here insert full name and address or legal title of Owner)

South CArolina Superb Account, c/o SC Dept. of Health & Environmental Control, 2600 Bull Street, Columt

as Obligee, hereinafter called Owner, in the amount of **********
One Hundred Ninety-Nine Thousand Three Hundred Fifty-Nine And 00/100********
********** Dollars ($ 199,359.00*********),

for the payment whereof Contractor and Surety bind themselves, their heirs, executors, administrators, successors and assigns, jointly and severally, firmly by these presents.

WHEREAS,

Contractor has by written agreement dated , entered into a contract with Owner for

(Here insert full name, address and description of project)

Soil & Ground Water Redmediation @ Smith's Grocery, 3516 Charlotte Highway, York, SC

in accordance with Drawings and Specifications prepared by

(Here insert full name and address or legal title of Architect)

which contract is by reference made a part hereof, and is hereinafter referred to as the Contract.

PERFORMANCE BOND

NOW, THERFFORE, THE CONDITION OF THIS OBLIGATION is such that, if Contractor shall promptly and faithfully perform said Contract, then this obligation shall be null and void; otherwise it shall remain in full force and effect.

The Surety hereby waives notice of any alteration or extension of time made by the Owner.

Whenever Contractor shall be, and declared by Owner to be in default under the Contract, the Owner having performed Owner's obligations thereunder, the Surety may promptly remedy the default, or shall promptly

1) Complete the Contract in accordance with its terms and conditions, or

2) Obtain a bid or bids for completing the Contract in accordance with its terms and conditions, and upon determination by Surety of the lowest responsible bidder, or, if the Owner elects, upon determination by the Owner and the Surety jointly of the lowest responsible bidder, arrange for a contract between such bidder and Owner, and make available as Work progresses (even though there should be a default or a succession of defaults under the contract or contracts of completion arranged under this paragraph) sufficient funds to pay the cost of completion less the balance of the contract price; but not exceeding, including other costs and damages for which the Surety may be liable hereunder, the amount set forth in the first paragraph hereof. The term "balance of the contract price," as used in this paragraph, shall mean the total amount payable by Owner to Contractor under the Contract and any amendments thereto, less the amount properly paid by Owner to Contractor.

Any suit under this bond must be instituted before the expiration of two (2) years from the date on which final payment under the Contract falls due.

No right of action shall accrue on this bond to or for the use of any person or corporation other than the Owner named herein or the heirs, executors, administrators or successors of the Owner.

as Obligee, hereinafter called Owner, for the use and benefit of claimants as hereinbelow defined, in the amount of **One Hundred Ninety-Nine Thousand Three Hundred Fifty-Nine And 00/100**********:

(Here insert a sum equal to at least one-half of the contract price)

Dollars ($ **199,359.00**********), for the payment whereof Principal and Surety bind themselves, their heirs, executors, administrators, successors and assigns, jointly and severally, firmly by these presents.

WHEREAS,

Principal has by written agreement dated , entered into a contract with Owner for

(Here insert full name, address and description of project)

Soil & Ground Water Redmediation @ Smith's Grocery, 3516 Charlotte Highway, York, SC

in accordance with Drawings and Specifications prepared by

(Here insert full name and address or legal title of Architect)

which contract is by reference made a part hereof, and is hereinafter referred to as the Contract.

LABOR AND MATERIAL PAYMENT BOND

NOW, THEREFORE, THE CONDITION OF THIS OBLIGATION is such that, if Principal shall promptly make payment to all claimants as hereinafter defined, for all labor and material used or reasonably required for use in the performance of the Contract, then this obligation shall be void; otherwise it shall remain in full force and effect, subject, however, to the following conditions:

1. A claimant is defined as one having a direct contract with the Principal or with a Subcontractor of the Principal for labor, material, or both, used or reasonably required for use in the performance of the Contract, labor and material being construed to include that part of water, gas, power, light, heat, oil, gasoline, telephone service or rental of equipment directly applicable to the Contract.

2. The above named Principal and Surety hereby jointly and severally agree with the Owner that every claimant as herein defined, who has not been paid in full before the expiration of a period of ninety (90) days after the date on which the last of such claimant's work or labor was done or performed, or materials were furnished by such claimant, may sue on this bond for the use of such claimant, prosecute the suit to final judgment for such sum or sums as may be justly due claimant, and have execution thereon. The Owner shall not be liable for the payment of any costs or expenses of any such suit.

3. No suit or action shall be commenced hereunder by any claimant:

a) Unless claimant, other than one having a direct contract with the Principal, shall have given written notice to any two of the following: the Principal, the Owner, or the Surety above named, within ninety (90) days after such claimant did or performed the last of the work or labor, or furnished the last of the materials for which said claim is made, stating with substantial accuracy the amount claimed and the name of the party to whom the materials were furnished, or for whom the work or labor was done or performed. Such notice shall be served by mailing the same by registered mail or certified mail, postage prepaid, in an envelope addressed to the Principal, Owner or Surety, at any place where an office is regularly maintained for the transaction of business, or served in any manner in which legal process may be served in the state in which the aforesaid project is located, save that such service need not be made by a public officer.

b) After the expiration of one (1) year following the date on which Principal ceased Work on said Contract, it being understood, however, that if any limitation embodied in this bond is prohibited by any law controlling the construction hereof such limitation shall be deemed to be amended so as to be equal to the minimum period of limitation permitted by such law.

c) Other than in a state court of competent jurisdiction in and for the county or other political subdivision of the state in which the Project, or any part thereof, is situated, or in the United States District Court for the district in which the Project, or any part thereof, is situated, and not elsewhere.

4. The amount of this bond shall be reduced by and to the extent of any payment or payments made in good faith hereunder, inclusive of the payment by Surety of mechanics' liens which may be filed of record against said improvement, whether or not claim for the amount of such lien be presented under and against this bond.

RIDER TO BOND INVOLVING TOXIC MATERIAL

BOND NO. AI 2676924

This bond is being issued subject to the following express conditions which shall survive the release and discharge of Surety from any further liability of its performance and payment obligations required under it's bond:

FIRST: The bond issued by Surety shall not be considered to be a substitute for or in any other way satisfy the requirement for any type of insurance that may be contained in the contract documents between the Principal, Obligee, and/or Owner.

SECOND: No suit shall be commenced against the Principal or Surety for any default in performance or for labor performed or material supplied, after tow years from the date of the contract between the Principal and Obligee, or one year after substantial completion, or within one year of actual discovery by Obligee of breach by Principal, whichever occurs last.

THIRD: No right of action against Surety shall inure to the benefit of any person, firm or corporation other than the Obligee, or for the use or benefit of the Obligee.

FOURTH: Notwithstanding any provision contained to the contrary in the contract documents between the Principal, Obligee, and/or Owner, Surety shall not be held liable or in any other respect be responsible to the Obligee or to any other person, firm or corporation for nay act(s) of negligence by the Principal, its agents, servants or employees or by any contractor employed by Surety to complete the contract in the event of the Principal's default, while performing the contract, which results in personal injuries or property damage.

RE: Water Supply Well Analytical Data
Smith's Grocery
York, York County
Site ID #: 09322
CBM Project #: 10629

Dear Mr. Madabhushi:

The purpose of this correspondence is to present information associated with the sampling of two water supply wells located near the above referenced site. The water supply wells located at the Vickery residence and the Hill residence were sampled on March 22, 2001. Granular activated carbon (GAC) units have been installed on each of the wells to treat groundwater affected by petroleum hydrocarbons. Post-treatment samples were collected from each of the water supply wells. The samples were submitted for analyses of BTEX, MTBE and naphthalene using Method 8260. No detectable concentrations of the requested method constituents were reported in the samples. The complete analytical reports for the groundwater samples collected from the water supply wells are attached.

The wells are tentatively scheduled to be sampled again in late April as part of a monthly monitoring plan. There have been no funds approved by the SCDHEC to continue the monthly monitoring of the two water supply wells after March 2001. If you wish to continue the monitoring activities, please contact the undersigned and an ACCA requesting approval of the necessary funds will be submitted to the SCDHEC.

If you have any questions or require additional information concerning this matter, please contact the undersigned at (803) 548-5989.

Sincerely,
CBM Environmental Services, Inc.

W. Scott Ball
Senior Project Manager

Re: Smith's Grocery; S.C. Highway 49
UST Permit # 09322; CP # 13099
Release Reported June 30, 1993
Corrective Action Solicitation Response Summary Form received March 19, 2001
York County

Dear Ms. Smith:

The Underground Storage Tank Program of the South Carolina Department of Health and Environmental Control has received your Corrective Action Solicitation Response Summary Form and understands that you have no preference as your site rehabilitation contractor for corrective action. Therefore, SEI, as the company submitting the most competitive price quotation, is hereby provided financial approval for the associated activities. Therefore, SEI is hereby provided financial approval for the associated activities.

A Corrective Action Plan (CAP) (3 copies), Engineering Report (4 copies), Underground Injection Control Permit Application (4 copies), Wastewater discharge permit application (3 copies), and Bureau of Air Quality Control Modeling Forms (3 copies), should be submitted to the Department within 30 days of receipt of this letter. All Corrective Actions are subject to the conditions and specifications as outlined in the Request for Corrective Action Price Quotation. This includes a performance bond or irrevocable standby letter of credit, equal to the financial approval amount of $199,359.00, which must be submitted with the CAP and must specify that the State Underground Petroleum Environmental Response Bank (SUPERB) Account will be the recipient in case of any forfeiture. Since SCDHEC is responsible for the disbursement of funds from the SUPERB Account, the financial responsibility mechanism will be held by the Bureau until all work is successfully completed.

A cost proposal has been established in the amount of $199,359.00. Compensation will be in accordance with the pay for performance schedule outlined below. Future invoices and/or other criteria included therein must comply with current SUPERB criteria per Section 44-2-20(2) and the referenced bid special conditions. The accepted price quotation is considered final and will not be increased for any reason (e.g., unanticipated iron fouling of a system, wells clogging because of biological activity or sediments, increased subcontractor costs, loss of utilities, modification to the system to meet the remediation goals, etc.) with the exception of unforeseen geologic circumstances or identification of additional CoC from another release. Per the referenced price quotation specification, two invoices (one for each site) will be submitted at each payment milestone using the enclosed invoice form as follows:

- $ 79,743.60 within 90 days of operation or issuance of a permit to operate for the remediation system corrective action as described in the approved CAP and;

- $19,935.90 once one-quarter of the initial BTEX and MTBE concentration is removed as compared to the initial sampling data and SSTL presented in the Corrective Action Solicitation;

- $ 19,935.90 once one-half of the initial BTEX and MTBE concentration is removed as compared to the initial sampling data and SSTL presented in the Request for Corrective Action Price Quotation;

- $ 29,903.85 once three-quarters of the initial BTEX and MTBE concentration is removed as compared to the initial sampling data and SSTL presented in the Request for Corrective Action Price Quotation; and

- $ 49,839.75 once the concentration in and around all monitoring wells is at or below the SSTL goals for each CoC (see specifications item 11 in the Request for Corrective Action Price Quotation for the method of verification), and all remediation equipment, wells, and trenches installed by SEI are removed from the site or properly abandoned.

On all correspondence regarding this site, please reference UST Permit # 09322. If you have any questions, please contact me at (800) 826-5435 (within South Carolina only) or (803) 898-4365.

Re: Smith's Grocery
UST Permit #09322
Corrective Action Price Quotations received March 9, 2001
York County

Dear Mrs. Smith:

The Underground Storage Tank Program of the South Carolina Department of Health and Environmental Control has reviewed the Corrective Action Price Quotations resulting from the Corrective Action Solicitation. The cost for active corrective action activities will be established in the amount of $199,359.00. Copies of the corrective action price quotations are enclosed for your review. A "Corrective Action Price Quotation Proposal Summary" form is also enclosed for you to specify your choice of contractor, if you have a preference. Any Class I Certified Underground Storage Tank Contractor may perform the necessary activities at the established price. Please return the "Corrective Action Price Quotation Proposal - Summary" form by March 19, 2001 in order for the necessary financial approval to be made.

On all correspondence regarding this site, please reference UST Permit #09322. If you have any questions, please contact me at (800) 826-5435 (within South Carolina only) or (803) 898-4318.

Sincerely,

Sriram Madabhushi

Sriram Madabhushi, Hydrologist

RE: Water Supply Well Analytical Data
Smith's Grocery
York, York County
Site ID #: 09322
CBM Project #: 10629

Dear Mr. Madabhushi:

The purpose of this correspondence is to present information associated with the sampling of two water supply wells located near the above referenced site. The water supply wells located at the Vickery residence and the Hill residence were sampled on February 1, 2001. Granular activated carbon (GAC) units have been installed on each of the wells to treat groundwater affected by petroleum hydrocarbons. Post-treatment samples were collected from each of the water supply wells. The samples were submitted for analyses of BTEX, MTBE and naphthalene using Method 8260. No detectable concentrations of the requested method constituents were reported in the samples. The wells are scheduled to be sampled again in late February as part of a monthly monitoring plan. The complete analytical reports for the groundwater samples collected from the water supply wells are attached.

If you have any questions or require additional information concerning this matter, please contact the undersigned at (803) 548-5989.

Sincerely,
CBM Environmental Services, Inc.

W. Scott Ball

FROM: Lee A. Monts, Manager
Owner/Operator Assistance Section
Assessment and Corrective Action Division
Underground Storage Tank Program

SUBJECT: Smith's Grocery
UST Permit #09322
York County

DATE: March 2, 2001

As an incorrect submittal deadline was listed on the Corrective Action Solicitation Response form for the referenced solicitation, the deadline for submittal is being extended to 5:00 PM on March 9, 2001. A corrected form is provided. If you plan to participate, the completed form may be faxed to my attention at (803) 898-4330. This memorandum is being provided to each contractor that requested the solicitation package and the UST Owner/Operator. Thank you for your interest.

Submit the following by March 9, 2001

CORRECTIVE ACTION SOLICITATION RESPONSE

Please respond to the following questions:

1. The corrective action method(s) or technology (ies) that will be proposed in the CAP will be (list all active and/or intrinsic methods or technologies for remediation of the aquifer; attach additional pages(s) as required): _____
_____
_____
_____

2. The estimated time in months to complete the corrective action from the date of financial approval, corrective action goals are met, and all corrective action items are removed from the site or properly abandoned is approximately _____ months. This time assumes all submitted plans and reports will be reviewed by DHEC within 30 days of receipt.

3. The total cost in dollars, regardless of the type, quantity or duration of the permitted technology applied, to treat the area of concern (see Figure 2) such that the thickness of free product does not exceed 0.01 foot and levels of CoCs do not exceed the site-specific target levels (SSTLs) defined in item 11.C. at any point, complete all associated monitoring and post-remediation verification, prepare all plans, reports, and correspondence; obtain and meet all terms and conditions of all required permits and licenses; design, install, monitor, operate, maintain, and when completed, properly abandon or remove all assessment and remediation items installed as part of corrective action; provide evidence of performance bond; and other items outlined in this request for solicitation response for Smith's Grocery (UST Permit #09322), 3176 Charlotte Highway, York, SC 29745, York County is: $ _____

ACCEPTANCE and DELIVERY STATEMENT

In compliance with the request for solicitation response and subject to all conditions thereof, the contractor offers and agrees, if selected by the UST owner/operator within _____ days from the final solicitation response submittal date, to furnish any or all items/services quoted at the prices set forth once financial approval has been issued by the Department.

For the purpose of this submittal and acceptance of financial approval should it occur, I certify that this company understands the nature of the release and the geological conditions at this facility as documented in the technical file and this solicitation. Additionally, I certify that this company understands that acceptance is based on total cost to treat the area of concern.

COOLER RECEIPT FORM

Client: CBM BC# 225166

Cooler Received On: 2-2-01 And Opened On: 2-2-01 By: Craig Cothron

(Signature)

1. Temperature of Cooler when opened 4.0 Degrees Celsius
2. Were custody seals on outside of cooler? ..... NO Yes
   a. If yes, how many, what kind and where: 1 Front
3. Were custody seals on containers and intact? ..... NO
4. Were the seals intact, signed, and dated correctly? ..... N/A Yes
5. Were custody papers inside cooler? ..... YES
6. Were custody papers properly filled out (ink,signed,etc)? ..... YES
7. Did you sign the custody papers in the appropriate place? ..... YES
8. What kind of packing material used? Bubblewrap Peanuts Vermiculite Other None
9. Was sufficient ice used (if appropriate)? ..... YES
10. Did all bottles arrive in good condition(unbroken)? ..... YES
11. Were all bottle labels complete (#,date,signed,pres,etc)? ..... YES
12. Did all bottle labels and tags agree with custody papers? ..... YES
13. Were correct bottles used for the analysis requested? ..... YES
14. a. Were VOA vials received? ..... YES
    b. Was there any observable head space present in any VOA vial? ..... NO
15. Was sufficient amount of sample sent in each bottle? ..... YES
16. Were correct preservatives used? ..... YES
17. Was residual chlorine present? ..... NO
18. Corrective action taken, if necessary:

Corrective Action Solicitation Package
Smith's Grocery - UST Permit #09322

PURPOSE and SCOPE OF WORK

The Underground Storage Tank (UST) Program of the South Carolina Department of Health and Environmental Control (DHEC) has determined that active corrective action of the petroleum release from a regulated underground storage tank site is required, and Mrs. Lois Smith, the owner/operator responsible for the release, has opted to seek the services of a certified contractor to perform corrective action in accordance with defined rehabilitation goals. The objective is to maintain potable water for, reduce the levels of chemicals of concern (CoC) in the soil and in the ground-water to below defined site specific target levels (SSTLs). **In this request for solicitation response, DHEC is acting not as an agent, but as a coordinator between site rehabilitation contractors and the UST owner/operator. As payment will be from the State Underground Petroleum Environmental Response Bank (SUPERB) Account, requirements outlined in this technical specifications package, the SUPERB Act, and R.61-98 apply. All contractors submitting a solicitation response must be South Carolina Certified Class I Site Rehabilitation Contractors.** The scope of work defined in this solicitation is to be implemented at Smith's Grocery, 3176 Charlotte Highway, York, SC 29745, York County for the release reported on June 30, 1993.

SPECIAL CONDITIONS

1. CONTRACT PERIOD: The corrective action pay for performance will be effective from date of financial approval until the corrective action, as described in this technical specification package, is completed by a SCDHEC Class I Site Rehabilitation Contractor.

2. This technical specification package is for corrective action at only one (1) site in South Carolina. **Compensation from the SUPERB Account is not considered a state contract for purposes of procurement or subject to state bid requirements in accordance with Section 44-2-130(D) of the State Underground Petroleum Response Bank (SUPERB) Act**. A signed corrective action solicitation response form should be returned (via mail or fax) to Mr. Lee Monts of the UST Program by the date specified to be forwarded to Mrs. Lois Smith.

3. FINANCIAL APPROVAL: **The owner/operator will select the contractor to perform this active corrective action in accordance with the SUPERB Act (Title 44, Chapter 2 of the Code of Laws of South Carolina). Therefore, financial approval may not be to any of the contractors that submit a solicitation response or to the contractor who submits the lowest price.** When the UST owner/operator selects the rehabilitation contractor, a contractual agreement will be made between the owner/operator and the environmental contractor. If the work is performed in an acceptable manner, DHEC will make payment from the SUPERB Account in accordance with the payment instructions from the UST owner/operator. The proposed implementation schedule to achieve the remediation goals, the removal of all equipment and abandonment of wells, (including pre-existing wells), trenches, etc. installed by the contractor, and the proposed remediation technology(ies) or method(s) must protect public health and the environment and be eligible for permitting by DHEC. The total cost, methods, and estimated time to complete the contract must also be advantageous to the State of South Carolina.

4. REASONABLE COST: The low price submitted to the UST Program (as the coordinator) or as obtained by the UST owner/operator, will be considered the allowable cost by the SUPERB program to complete the corrective action as described in this technical specification package as long as the price is within reason. DHEC reserves the right to reject any and all corrective action solicitation responses that appear to be out of line with the customary and reasonable cost for the same scope of work in a similar geologic setting.

5. Contractor must agree to make positive efforts to use women and minority owned businesses and individuals.

6. AMENDMENTS: All amendments to this solicitation response will be in writing from the UST Program. The UST owner/operator or DHEC will not be legally bound by any amendment or interpretation, which is not in writing.

7. QUESTIONS: Questions or requests for information must be submitted in writing and received by 5:00p.m., February 12, 2000. After this date, no further questions will be addressed. A written response will be provided to all requestors of this technical specification package. The questions may be faxed to Lee Monts (fax number (803) 898-4330).

8. **NOTE . . . THE ONLY OFFICIAL CONTACT PERSON AT DHEC DURING THE SOLICITATION RESPONSE SUBMITTAL AND FINANCIAL APPROVAL PROCESS IS LEE MONTS. CONTRACTORS ARE NOT TO CONTACT ANY OTHER UST PROGRAM PERSONNEL OR OTHER CONTRACTORS.**

9. The certified contractor selected by the UST owner/operator will be required to treat the area where the dissolved petroleum chemicals of concern are above site specific target levels (see Figure 2). Please note that there are temporary granular activated carbon filters installed on the Vickery and Hill drinking water wells and the corrective action process should include maintaining/providing potable water supply to the effected residences. Verification that interim corrective action goals have been met will be based upon ground-water quality samples collected from monitoring wells *MW-1, MW-2, MW-6, MW-7, MW-8, MW-10 thru MW-15, MW-17, MW-18, MW-19, TW-2 and TW-3*. Verification that final corrective goals have been met will be based upon ground-water quality samples collected from all existing monitoring wells, and additional verification wells to be installed at locations designated by DHEC (see specification #10 for more detail).

10. REPORTS: Deliver the reports to: SCDHEC, UST Program, Attn.: Sriram Madabhushi, 2600 Bull Street, Columbia, SC 29201 or other location as specified. A minimum of two (2) copies of each plan and two (2) copies of each report must be delivered to the above address. Based on permitting and other requirements, engineering report, UIC permits, air modeling forms or NPDES Permits may be required. Please contact the Department for the exact number of copies of each document to be submitted.

11. INVOICING: Invoices will be submitted to: SCDHEC, UST Program, Attn.: Financial Section, 2600 Bull Street, Columbia, SC 29201, using the Department's Corrective Action (CA) Invoice form. The initial invoice must be received at the above address within 120 days from the date of the letter directing Corrective Action Plan (CAP) implementation or funds will be uncommitted as required by the Section 44-2-40(B) of the SUPERB Act. If funds are uncommitted, any submitted invoices will be held until funding is available. Payment to the contractor will be a pay-for-performance system as follows:

    A. Payment of forty percent (40%) of the total price approved will be made within 90 days of operation of the remediation system or implementation of corrective action as described in the approved corrective action plan (CAP), subject to the limitations of Section 44-2-40 of the

SUPERB Act. This will be documented in the initial monitoring report. The CoC concentrations requiring reduction is as follows:

CoC concentrations in parts per billion (µg/l) based on August 23 & October 10, 2000 sampling: (CoC may increase or decrease in the future)

Well	Benzene	Toluene	Ethyl-benzene	Xylenes	M*t*BE	Lead	EDB	Naph-thalene	Total Conc.
Vickery WSW	5	2.	2	26	2	5	5	5	52
Hill WSW	2	2	2	2	5	5	5	5	28

MW-19	5	5	5	10	5	51	0.02	5	86.02
TW-2	400	8	5.0	180	5.0	2	0.05	18	618.05
TW-3	5	5	5	10	5	2	0.23	5	37.23
Initial Conc.*	47644	158164	19824	84035	1694	1716	322.43	4820	318219.43
SSTL Conc.	120	10975	7772	80343	490	199	53.33	391	100343.33
Initial Conc. above SSTL	47524	147189	12052	3692	1204	1517	269.1	4429	217876.1

* Laboratory analysis is less than calculated SSTLs; therefore, SSTL concentration is set equal to laboratory concentration.
** CoC concentration may change due to seasonal fluctuations in the groundwater.

B. Payment of thirty-five percent (35%) of the total price approved will be made based on achieving interim CoC concentration reduction goals at the site as verified in monitoring *MW-1, MW-2, MW-6, MW-7, MW-8, MW-10 thru MW-15, MW-17, MW-18, MW-19, TW-2 and TW-3*. Payment will be made for interim goals of 25, 50, and 75 percent reduction of total CoC concentration by the implementation of corrective action.

NOTE: Payment cannot be based on laboratory analyses for any well that has been used for injection unless that well has returned to ambient conditions.

(1) 25 percent total concentration reduction will be achieved when one-quarter of the initial BTEX, M*t*BE, Lead, EDB and Naphthalene concentrations from monitoring *MW-1, MW-2, MW-6, MW-7, MW-8, MW-10 thru MW-15, MW-17, MW-18, MW-19, TW-2 and TW-3* is removed as compared to the SSTLs. The following formula will be used to calculate the percent total concentration reduction: total concentration above SSTLs from initial sampling less total concentration above SSTLs from subsequent sampling divided by total concentration above SSTLs from initial sampling. Payment of 10 percent (10%) of the total price approved will be made upon verification (see Specifications item 10 for the method of verification) of at least one-quarter of the total CoC concentration above SSTLs is removed.

The following example demonstrates the CoC Concentration Reduction Calculation:

Well		Benzene	Toluene	Ethylbenzene	Xylenes	MTBE	Naphthalene	Conc. above SSTL
MW-1	Initial Conc. [A]	7,500	4,000	2,000	15,000	3,000	1,000	32,500
	SSTL [B]	10	2,000	1,400	10,000	80	50	13,540
	Initial Conc. above SSTL [C]	7,490	2,000	600	5,000	2,920	950	18,960
	Subsequent Concentration [D]	3,000	1,000	900	13,000	2,000	5	19,905
	SSTL [E]	10	2,000	1,400	10,000	80	50	13,540
	Subseq. Conc. above SSTL [F]	2,990	0	0	3,000	1,920	0	7,910
MW-4	Initial [G]	150	400	50	250	300	25	1175
	SSTL [H]	5	400	50	250	40	25	770
	Initial Conc. above SSTL [I]	145	0	0	0	260	0	405
	Subsequent Concentration [J]	100	100	1	1	100	1	303
	SSTL [K]	5	400	50	250	40	25	770
	Subseq. Conc. above SSTL [L]	95	0	0	0	60	0	155
Totals	Initial Conc. above SSTL [M]	(sum of initial concentration above SSTL for all wells) (C+I)						19,365
	Subseq. Conc. above SSTL [N]	(sum of subsequent concentration above SSTL for all wells) (F+L)						8,065

Notes: **If subsequent sampling indicates a CoC concentration at or below the SSTL and/or a CoC concentration at BDL but the reporting limit is at/or below the SSTL value for any constituent, the value for the concentration reduction will be 0 (no negative numbers).**

If subsequent sampling indicates a CoC concentration at BDL but the reporting limit is above the SSTL, the value for any constituent will be the analytical reporting limit.

Concentration Reduction Calculation

CoC Concentration Reduction = $\frac{(M-N)}{(M)} = \frac{(19{,}365-8{,}065)}{19{,}365} = 0.5835 * 100 = 58.35\%$ CoC Reduction

(2) 50 percent total concentration reduction will be achieved when one-half of the initial BTEX, M*t*BE, Lead, EDB, and Naphthalene concentration from monitoring monitoring *MW-1, MW-2, MW-6, MW-7, MW-8, MW-10 thru MW-15, MW-17, MW-18, MW-19, TW-2 and TW-3* is removed as compared to the SSTLs. The formula outlined in item 11. B. (1) will be used. Payment of 10 percent (10%) of the total price approved will be made upon verification (see Specifications item 10 for the method of verification) of at least one-half of the total CoC concentration above SSTLs is removed.

(3) 75 percent total concentration reduction will be achieved when three-quarters of the initial BTEX, M*t*BE, Lead, EDB, and Naphthalene concentration from monitoring wells *MW-1, MW-2, MW-6, MW-7, MW-8, MW-10, MW-11 thru MW-15, MW-17, MW-18, MW-19, TW-2 and TW-3* is removed as compared to the SSTLs. The formula outlined in item 11 B (1) will be used. Payment of 15 percent (15%) of the total price approved will be made upon verification (see Specifications item 10 for the method of verification) of at least three-quarters of the total CoC concentration above SSTLs is removed.

C. **The final 25 percent (25%) of the total price approved will be paid upon: 1) verification that the levels of CoC do not exceed the site-specific target levels (SSTLs) defined in item 11.C. at any point in the area of concern (see Figure 2). Verification that the SSTLs have been met will be based upon ground-water quality samples collected from all existing monitoring wells, and additional verification wells to be installed at locations designated by DHEC (see specification #10 for more detail); and 2) all remediation and assessment items installed by the contractor (e.g., wells [including preexisting wells], trenches, etc.) are removed from the site or properly abandoned.** The SSTLs are as follows:

In the source area, near SB-4, SB-5 and MW-1 (Figure 3 – Appendix B), the following SSTLs for soil should be met.

Site specific target levels (SSTLs) in parts per billion (µg/kg):

CoC	SSTLs (mg/Kg)
Benzene	0.005
Toluene	1.9
Ethylbenzene	1.456
Xylenes	56.072
Naphthalene	0.252

Groundwater Site specific target levels (SSTLs) in parts per billion (µg/l)

Total	120	10975	7772	80343	490	199	53.33	391	100343.33

* Laboratory analysis is less than calculated SSTLs; therefore, SSTL concentration is set equal to laboratory concentration.
** Laboratory analysis is below detection limits; therefore, SSTL concentration is set equal to detection limits.

12. NOTIFICATION FOR FAILURE TO PERFORM: If the contractor fails to meet any specification of corrective action as outlined in this document, DHEC will notify the contractor by certified letter of the deficiency(ies). If the contractor does not correct the deficiency(ies) within 30 days, the contractor will be in breach of contract and the financial approval may be voided by DHEC. DHEC will notify the contractor by certified letter that the financial approval is void and if any invoices are payable upon review and approval of DHEC. If the contractor corrects the deficiency(ies) within 30 days, the financial approval will continue. Please note contractor-owned items used on-site for the contract that are destroyed by acts of nature, improper maintenance or handling, theft or vandalism will not be replaced or reimbursed by the SUPERB Account. The amount of financial approval will be final and will not be increased or cancelled for any reason (e.g., unanticipated iron fouling of a system, wells clogging because of biological activity or sediments, increased subcontractor costs, loss of utilities, modification

to the system to meet the remediation goals, etc.) with the exception of unforeseen geologic circumstances or identification of additional CoC from another release.

13. SITE SPECIFIC DETAILS: A brief technical summary of the release, including a location map and specifics of existing wells, is attached. The detailed technical file will be available for review through the Freedom of Information (FOI) Office located on the third floor of the Sims Building, 2600 Bull Street, Columbia, SC. Review of the detailed technical file is not mandatory; however, contractors submitting a solicitation response are strongly encouraged to review the file to ensure a complete understanding of the contract requirements. The contractor given financial approval will be responsible for understanding the information in the technical file. Appointments to view the technical file may be scheduled on weekdays between the hours of 8:30 A.M. to 5:00 P.M. by calling the SCDHEC Freedom of Information Office at (803) 898-3882. Please request file for UST Permit#09322.

NOTE: Free-phase product may be present at this site. No free-phase product was detected during the base-line sampling event, however, application of corrective action technologies can result in the mobilization and possible appearance of free-phase product or elevated CoC concentrations in the monitoring wells.

14. **The contractor will submit a CAP within 30 days of notification of selection by the UST Owner/Operator Assistance Section.** The implementation of the CAP will be initiated immediately upon the Department's directive to implement the CAP and all associated permit(s) have been issued; implementation will be in accordance with the schedule presented in the CAP. **A performance bond or irrevocable standby letter of credit, equal to the financial approval amount, will be required by DHEC.** The issuing institution for an irrevocable standby letter of credit must be an entity that has the authority to issue letters of credit in South Carolina and whose letter-of-credit operations are regulated and examined by a federal or state agency. The original performance bond or irrevocable letter of credit will be submitted to the UST Program, Attn.: Lee Monts, within 30 days of financial approval. The performance bond or irrevocable standby letter of credit will specify that the SUPERB Account will be the recipient of any forfeiture. Since DHEC is responsible for the disbursement of funds from the SUPERB Account, the financial responsibility mechanism (i.e., bond or letter-of-credit) will be held by the UST Program until the work is successfully completed.

15. **MINIMUM REQUIREMENTS: Corrective action will be considered complete once the levels of CoC are verified to be below the SSTLs listed in item 11.C., and removal or abandonment of all remediation and assessment items installed by the contractor (e.g., wells [including preexisting wells], trenches, etc.). See Specification #10 for the method of verification.** All rehabilitation activities associated with a UST release must be performed by a SCDHEC certified Class I site rehabilitation contractor as required by R. 61-98. All corrective action plans and reports must be sealed by a Professional Engineer or Professional Geologist registered in the State of South Carolina. All engineering reports, drawings and plans must be sealed by a Professional Engineer registered in the State of South Carolina. All laboratory analysis for CoC must be performed by a SC certified laboratory. All monitoring, verification, injection, or recovery wells must be installed and abandoned by a SC certified well driller. All applicable certification, training, permits, applications, and fees associated with well installation; injection, discharge, treatment, or transportation of ground water, air, or soil; construction or operation of a remediation system; and any other action requiring a permit are the responsibility of the contractor. Any required business or occupation license and occupational safety and health training (e.g., OSHA) as defined by the laws and regulations of the United States of America, State of South Carolina, county or city is also the responsibility of the contractor. The terms and conditions of all applicable permits will be met. Any contaminated ground water, soil, or construction material must be properly transported and disposed of, or treated at an approved facility with prior approval from DHEC. Any

costs for utilities construction and service (electric, telephone, sewer, etc.) required by the corrective action are the responsibility of the contractor.

SPECIFICATIONS for CORRECTIVE ACTION

All corrective action solicitation responses submitted must meet the following specifications as required by the proposed treatment method(s) or corrective action technology(ies):

1. The solicitation response for active corrective action may be submitted by mail or by fax. The response will outline in general terms an approach to achieve the remediation goals (e.g., reduction of each CoC to SSTL). The response must outline the following:

   A. A description of the proposed treatment method(s) or technology(ies) for corrective action.

   B. The estimated amount of time in months to complete site rehabilitation to meet the remediation goals, install verification wells, and remove or abandon all assessment and remediation items installed as part of the corrective action.

   C. The total cost (in thousands of dollars) to complete site rehabilitation to meet the remediation goals and to remove or abandon all assessment and remediation items installed as part of the corrective action.

2. The contractor selected by the owner/operator to perform corrective action activities must complete and submit a detailed CAP (three copies) for the release at Smith's Grocery - UST Permit #09322), 3176 Charlotte Highway, York, SC 29745, York County, South Carolina **within 30 days of notification by the UST Program**. **NOTE:** ***Use of monitoring well(s) for injection purposes is not allowed.*** A condition of the plan may include installation of additional recovery, sparge, compliance, or injection wells. The plan must define all active (pump and treat, sparge, vapor extraction, excavation of impacted soils, bioremediation, etc.) and passive (intrinsic remediation, monitoring, etc.) corrective action method(s) proposed to reduce CoC to SSTLs. It must be shown, by use of scientific models, computations, or discussion, how each CoC will be reduced to the SSTL for each remediation method proposed for the release. Any assumptions used in a model will be listed or shown, as well as, appropriate references. Intrinsic corrective action will require monitoring to verify remediation. General construction details will be included (e.g., install four additional recovery wells, construct a compliance point, install four air injection wells, excavate 3,000 cubic yards of impacted soils, etc.) as well as details of well abandonment and equipment removal. A remediation time table including abandonment of wells and removal of equipment will be included with the CAP. The UST Program will review the CAP and initiate a public notice period for a maximum of 30 days. The contractor must obtain a copy of the applicable portion of the tax map. This map will depict the location of the facility, and all impacted properties, and all properties located adjacent to the impacted properties. The names and addresses of the owners of each of these properties will be provided. The contractor may be required to attend or provide input at a public meeting upon request by DHEC. Any CAP amendments and modifications arising from public notice must be submitted within 15 days of notification by DHEC. The CAP and any amendments or modifications must be sealed by a qualified Professional Engineer or Geologist registered in the State of South Carolina. The owner/operator, Mrs. Lois Smith, will be consulted and will approve the location of the corrective action system. If permanent, the system must be enclosed in a fenced area or small building. The initial invoice must be received at the above address within four months or funds will be uncommitted as required by the SUPERB Act. If funds are uncommitted this invoice will be held until funding is available.

An initial monitoring report documenting CoC concentrations in all wells and potentiometric conditions prior to start up (including verification of system operation or CAP implementation) must be submitted to the UST Program within 45 days after financial approval. Sampling for the initial monitoring report must occur prior to system startup.

Based on naturally occurring conditions, the dissolved concentration of petroleum chemicals of concern (CoC) will increase or decrease. For the purposes of this contract, the total CoC concentration for the wells included in the technical specification package may reasonably increase up to 150 percent or decrease as much as 50 percent. If the total CoC concentration in all wells listed in Special Condition 11.B. increases more than 150 percent based on this initial sampling or if measurable free product that has not been previously documented in any report is detected during the initial sampling event, the contractor may request in writing that the award be canceled. **If either of these conditions occurs, the contractor will contact the UST project manager within two days of problem identification and will submit written documentation within five days of notification.** The contractor will be reimbursed for one personnel mobilization to collect samples, one sample collection and one analytical fee each monitoring well sampled as outlined in SUPERB Allowable Costs, plus $6,000 for all other costs incurred (e.g., CAP preparation, obtaining performance bond, business license). The contract will be canceled and the performance bond will be returned to the company. If the total CoC concentration in all wells listed in Special Condition 11.B. decreases to less than 50 percent based on this initial sampling the DHEC may cancel the award. If the corrective action system is started or treatment is performed, the contractor will be required to complete the contract unless geological conditions change or another release is confirmed. See special condition 12. If the contract is canceled by DHEC, the contractor will be notified by certified letter and an invoice for the above outlined items shall be submitted within 20 days from the date of the certified letter canceling the contract.

3. Complete and submit all applications for permits (injection, NPDES, BAQC modeling form, thermal treatment, construction, etc. and an engineering report (2 copies each) with the CAP. Any required permit changes or corrections will be submitted within 15 days of notification by DHEC. The ER and any ER amendments and modifications, must be sealed by a Professional Engineer registered in the State of South Carolina. After review of the CAP and all permit applications by DHEC, the UST Program will issue a notice to proceed with CAP implementation.

   Implementation of the corrective action plan before the completion of the public notice process and approval of all permits by DHEC is not authorized. If premature implementation occurs, the Department will not reimburse those costs from the SUPERB Account, and the financial approval amount will be reduced by that amount. If the Department agrees with early implementation to better protect human health in an emergency and provides approval in writing, early implementation without any reduction to the financial approval amount will be authorized.

4. Implement the CAP within 30 days of receipt of notice to proceed and any required permit to construct. Disruption to the owner/operator's normal business will be kept to a minimum. The contractor will repair the site to the condition as it existed prior to installation of the corrective action system (e.g., asphalt paved areas will be repaved with asphalt, concrete areas will be replaced with concrete, grass areas will have soil replaced to the original grade and be reseeded or sodded with grass, etc.). Upon completion of any required construction, DHEC will inspect the system and issue a permit to operate. The contractor will, at all times, keep the site free from waste materials and rubbish related to the corrective action. Until completion of the corrective action, the contractor will keep the premises in a clean, neat and workmanlike condition satisfactory to DHEC. All generated soil and wastewater will be removed from the site promptly. Manifests documenting the proper disposal of the soil and wastewater must be included in the appropriate report.

5. Gain access to the adjacent property to sample monitoring wells and to install any corrective action equipment, as required. The contractor will repair the adjacent property to the condition as it existed prior to installation of the corrective action systems (e.g., asphalt paved areas will be repaved with asphalt, concrete areas will be replaced with concrete, grass areas will have soil replaced to the original grade and reseeded or sodded with grass, etc.)

6. Initiate system startup within 15 days of receipt of the permit to operate. Remediation as defined in the CAP and ER will begin upon system startup. An initial monitoring report documenting CoC concentrations in all wells and potentiometric conditions prior to start up (including verification of system operation or CAP implementation) must be submitted to the UST Program. **If any problem with CAP implementation occurs, the contractor will contact the UST project manager within 24 hours of problem identification and will submit written documentation within five days of notification.**

   NOTE: Free-phase product may be present at this site. No free-phase product was detected during the base-line sampling event, however, application of corrective action technologies can result in the mobilization and possible appearance of free-phase product or elevated CoC concentrations in the monitoring wells.

7. Complete and submit a corrective action monitoring report (3 copies plus one copy for any DHEC Bureau that issued a permit) on a quarterly basis. The corrective action monitoring reports must include:

   A. A narrative portion that documents current site conditions and system effectiveness in achieving the remediation goals (e.g., free product removal, reducing CoC to the SSTLs) as outlined in the CAP. Any system down time and the associated reason(s) will be included in the report.

   B. Conclusions and recommendations based on the reported data.

   C. Ground-water laboratory analytical data for all monitoring wells in the following format (additional parameters such as dissolved oxygen may be required; do not sample wells containing free product):

Analytical Data (µg/l)

Monitoring Well	Date	Benzene	Toluene	Ethylbenzene	Xylenes	MtBE	Naphthalene
MW-1	07/15/99	145	200	146	1,000	170	47
	10/15/99	140	190	140	900	50	165
MW-2	07/15/99	580	800	300	1,000	60	20
	10/15/99	480	690	257	912	50	19

   D. Ground-water potentiometric data for all monitoring wells in the following format:

Ground-water Data (feet)

Monitoring Well	Date	TOC Elevation	TOC to GW	TOC to FP	FP Thickness	GW Elevation
MW-1	07/15/99	98.0	17.54			80.46
	10/15/99	98.0	17.90			80.10
MW-2	07/15/99	100.0	20.50	20.47	0.03	79.50
	10/15/99	100.0	21.50	21.48	0.02	78.50

   E. A ground-water elevation contour map of the site based on current ground-water potentiometric data.

F. A CoC map based upon current ground-water laboratory analytical data. The ground-water data should be adjacent to the relevant monitoring well using the following format (additional parameters such as dissolved oxygen may be required):

MW - Number
Benzene (µg/l)
Toluene (µg/l)
Ethylbenzene (µg/l)
Xylenes (µg/l)
MTBE (µg/l)
Lead (µg/l)
EDB (ng/l)
Naphthalene (µg/l)

G. A copy of the DHEC approval letter and manifests for any contaminated soil and ground-water removed from the site for treatment and/or disposal.

H. Additional data required by permits (e.g., air analyses, wastewater effluent analyses and amounts, etc.). The data should be reported on a form or in a format specified in the permits, and attached to the monitoring report as an addendum.

All rehabilitation activities associated with the UST release must be performed by a SCDHEC Certified Site Rehabilitation Contractor. All air, soil, and ground-water analyses must be performed by a South Carolina certified laboratory. The corrective action monitoring report must be sealed by a Professional Engineer or Geologist registered in the State of South Carolina. All monitoring wells associated with the release will be sampled on a quarterly basis for the first year. Thereafter, the number of wells sampled may be reduced and/or the interval between corrective action monitoring reports may be lengthened upon clear demonstration of CoC reduction, unless restricted by permit requirements. Any approval to reduce the number of wells sampled or the frequency of sampling must be in writing from the Bureau of Land and Waste Management UST Program. DHEC may require data to be reported on a form or in a specific format. The contractor will be provided with the proper report forms and format prior to system startup. The contractor will be notified of any revisions to the report forms or format 90 days prior to the due date for the corrective action monitoring report.

8. Collect one (1) ground-water sample per monitoring event for all monitoring wells associated with the release. Each well should be purged prior to sampling. Purging is considered complete once the ground-water temperature and pH have stabilized. Sampling logs should note all temperature and pH measurements, as well as the location and type of each sample submitted for laboratory analysis. Each ground-water sample will be collected in accordance with established QA/QC protocol and submitted to a certified laboratory for analysis. The samples must be analyzed for the following parameters:

Analyte	Analytical Method	Reporting Limit (µg/l)
BTEX, Naphthalene, M*t*BE	8260B	5
Lead	200.7	5
EDB	8260B	0.02
PAH	8270C	10

Additional samples (air, groundwater, effluent, soil) required by permits must be collected in accordance with established QA/QC protocol and submitted to a certified laboratory for analysis. The samples will be analyzed for parameters stipulated in the permits. Sampling and analytical data for each sample (e.g., field sampling logs, chain of custody forms, certificates of analysis, and the lab certification number) will be included in the corrective action monitoring report.

9. Properly dispose of all contaminated soil and ground water generated during the implementation of the CAP and installation of verification wells. DHEC must approve the disposal facility selected for treatment and disposal of the free product and contaminated soil and ground water. The owner/operator of the facility is considered the generator for any contaminated soil and ground water. The contractor must document all disposal of free product and contaminated soil and ground water in the quarterly corrective action monitoring report.

10. Verification for the removal of free product will be conducted by SCDHEC personnel with an interface probe. If the remediation technology is in-situ (e.g., pump and treat, air sparging, vapor extraction): suspend operation of the system once the remediation goals for all CoC have been maintained for a period of 30 days. Samples are to be taken after one (1) quarter or after all CoC levels have reached equilibrium and again after a second quarter. Along with the parameters listed in Specification #8, the ground-water samples should also be sampled for the following parameters:

Analyte	Analytical Method*	Reporting Limit
Dissolved Oxygen	SM4500-O G	500 µg/l
Ferrous Iron	SM3500-Fe D	30 µg/l
Methane	Kerr Method	1 mg/l
Nitrate	9056/9210	100 µg/l
Sulfate	9038/9056	1000 µg/l

*or EPA equivalent method that can achieve the same reporting level

If sample results indicate that the remediation goals are not sustained, the contractor must submit a corrective action status report (up to 3 copies) that outlines the deficiency(ies) and offers recommendations for achieving the remediation goals with a revised timetable. Modifying and restarting of the system will be directed by DHEC. The system will operate until all remediation goals are again maintained for a minimum period of 30 days. Operation of the system will then be suspended again and samples taken to verify that remediation goals are sustained. This cycle of activity, including status reports, will be repeated until all CoC levels remain below SSTLs for all wells listed in Special Conditions item 11 C for two (2) consecutive quarters. Up to three verification wells for soil and groundwater analyses may then be installed at locations designated by DHEC. Costs for verification well installation are considered part of the financial approval amount. Each well will be sampled in accordance with Specifications item 8 and the analyses compared to the calculated SSTLs for the CoC at that well location. If the laboratory analyses are at or below the SSTLs, corrective action will be considered complete. If any analysis is above the SSTL, the corrective action will not be considered complete, and the activity cycle described above must be repeated until all CoC levels remain below SSTLs for those wells listed in Special Conditions item 11 C. Split or duplicate samples may be collected by DHEC (or its subcontractors) to verify achievement of remediation goals. Split ground-water samples will be accomplished during quarterly monitoring events and during the final sampling of monitoring and verification wells to document that the cleanup goals have been met. A ground-water sample will be collected from each monitoring well to substantiate the ¼, ½, or ¾ concentration reduction has occurred. Once the site rehabilitation contractor indicates the final cleanup goals have been reached, a ground-water sample will be collected from each monitoring well plus the required verification wells. These two separate quality assurance events will consist of a representative ground-water sample being collected by the certified rehabilitation contractor. Part of the split sample will be analyzed by a SCDHEC certified laboratory selected by the contractor as part of the routine quarterly reporting process, and the second half of the sample will be analyzed by a SCDHEC laboratory selected

by the UST Program. In addition to the ground water collected from the monitoring wells, the UST Program may provide up to three prepared blanks for the contractor's laboratory to analyze. The laboratory analysis from the contractor's and the UST Program's laboratory will be compared. In the event of substantial variance (more than 15%), a second sampling event with field and prepared blanks will be sent to a SC certified laboratory by the UST Program for analysis. The contractor will be notified when the wells will be resampled, can observe this second sampling event, and will be provided analytical results for comment. Based on these results, DHEC Laboratory Certification will be contacted to assist the UST program in determining the cause of the laboratory variation. The Director of the Assessment and Corrective Action Division will make the final decision on which analytical values will be the basis for payment or closure based on the recommendation of the site rehabilitation contractor, DHEC Laboratory Certification, the UST Section Manager, and Project Manager. The site rehabilitation contractor will be provided a written record of any decision. **At least two weeks notice will be provided to the UST Project Manager prior to mobilizing to the site for sampling to verify attainment of remediation goals.** Costs for transportation and analysis of split or duplicate samples will be paid by DHEC.

or

If the remediation technology is a single event (e. g. excavation of impacted soils, vacuum enhanced recovery): collect sufficient samples as outlined in the CAP to verify the reduction of CoC to the remediation goals. The contractor may be required to install and sample soil and groundwater in up to three verification wells at locations designated by DHEC. If the levels of CoC in all samples are at or below SSTLs, corrective action will be considered complete. If the level of any CoC is above the SSTL, additional corrective action will be required. The contractor will submit one (1) corrective action status report to document the reduction of CoC to the remediation goals. Split or duplicate samples will be collected by DHEC (or its subcontractors) to verify achievement of remediation goals in the manner outlined above. **At least two weeks notice will be provided to UST Project Manager prior to mobilizing to the site for sampling to verify attainment of remediation goals.** Costs for transportation and analysis of split or duplicate samples will be paid by DHEC.

11. Disassemble and remove the remediation system and all associated remediation items including utilities from the site within 60 days of notification by DHEC that the remediation goal for the release associated with the UST(s) at the site has been achieved. Disruption to the owner/operator's normal business will be kept to a minimum.

12. Properly abandon all wells (including preexisting wells), borings, trenches, and piping/utility runs installed by the contractor as part of corrective action within 60 days of notification by DHEC that the remediation goal for the release associated with the UST(s) at the site has been achieved. The abandonment will be in accordance with South Carolina Well Standards and Regulations R. 61-71 and accepted industry standards for abandonment of trenches and piping/utility runs. Disruption to the property owner's normal business will be kept to a minimum. The contractor must notify DHEC of the method of well abandonment and final disposal of any free product and contaminated soil or ground water. The contractor will return the site to the condition prior to corrective action (e.g., asphalt paved areas will be repaved with asphalt, concrete areas will be replaced with concrete, grass areas will have soil replaced to the original grade and reseeded or sodded with grass, etc.)

CORRECTIVE ACTION SOLICITATION RESPONSE

Please respond to the following questions:

1. The corrective action method(s) or technology (ies) that will be proposed in the CAP will be (list all active and/or intrinsic methods or technologies for remediation of the aquifer; attach additional pages(s) as required): _____
_____
_____
_____

2. The estimated time in months to complete the corrective action from the date of financial approval, corrective action goals are met, and all corrective action items are removed from the site or properly abandoned is approximately _____ months. This time assumes all submitted plans and reports will be reviewed by DHEC within 30 days of receipt.

3. The total cost in dollars, regardless of the type, quantity or duration of the permitted technology applied, to treat the area of concern (see Figure 2) such that the thickness of free product does not exceed 0.01 foot and levels of CoCs do not exceed the site-specific target levels (SSTLs) defined in item 11.C. at any point, complete all associated monitoring and post-remediation verification, prepare all plans, reports, and correspondence; obtain and meet all terms and conditions of all required permits and licenses; design, install, monitor, operate, maintain, and when completed, properly abandon or remove all assessment and remediation items installed as part of corrective action; provide evidence of performance bond; and other items outlined in this request for solicitation response for Smith's Grocery (UST Permit #09322), 3176 Charlotte Highway, York, SC 29745, York County is: $ _____

ACCEPTANCE and DELIVERY STATEMENT

In compliance with the request for solicitation response and subject to all conditions thereof, the contractor offers and agrees, if selected by the UST owner/operator within _____ days from the final solicitation response submittal date, to furnish any or all items/services quoted at the prices set forth once financial approval has been issued by the Department.

For the purpose of this submittal and acceptance of financial approval should it occur, I certify that this company understands the nature of the release and the geological conditions at this facility as documented in the technical file and this solicitation. Additionally, I certify that this company understands that acceptance is based on total cost to treat the area of concern.

TABLE 2
SUMMARY OF GROUNDWATER ELEVATION DATA[1]
SMITH'S GROCERY
DECEMBER 1, 1999

Well No.	Date Completed	Top of Casing Elevation	Depth to Water	Water Table Elevation	Well Depth	Screened Interval
MW-1	1/16/99	91.16	27.85	63.31	35	25-35
MW-2	11/15/99	94.57	31.58	62.99	38	23-38
MW-3	11/12/99	91.91	28.62	63.29	35	25-35
MW-4	11/11/99	86.20	22.76	63.44	27	17-27
MW-5	11/11/99	89.29	26.20	63.09	30	20-30
MW-6	11/12/99	93.91	31.60	62.31	37	27-37
MW-7	11/12/99	91.68	30.41	61.27	36	26-36
MW-8	11/16/99	94.72	31.65	63.07	38	23-38
MW-9	11/16/99	90.54	29.31	61.23	36	21-36
MW-10	11/16/99	99.77	37.30	62.47	44	29-44
MW-11	11/16/99	100.46	38.23	62.23	44	29-44
MW-12	11/17/99	99.61	37.53	62.08	44	29-44
MW-13	11/17/99	100.39	41.22	59.17	47	32-47
MW-14	11/18/99	98.89	41.85	57.04	50	35-50
MW-15	11/18/99	100.18	43.23	56.95	50	35-50
MW-16	11/18/99	89.91	30.00	59.91	37	22-37
MW-17	11/19/99	94.46	34.67	59.79	40	25-40
MW-18	11/19/99	98.14	40.87	57.27	46	31-46
MW-19	11/19/99	98.27	43.51	54.76	50	35-50
TW-1	11/15/99	94.72	32.00[2]	62.72	61	56-61

729

Notes:
1. Elevations relative to a temporary benchmark with an assumed datum of 100.00 feet; data reported in feet.
2. Depth to groundwater measured on January 24, 2000.

TABLE 3
SUMMARY OF RESULTS
SLUG TEST ANALYSES[1]
SMITH'S GROCERY

Well No.	Hydraulic Conductivity		Seepage Velocity[2]	
	ft/min	ft/day	ft/day	ft/year
MW-2	1.04×10^{-4}	0.15	0.006	2.19
MW-5	1.98×10^{-4}	0.29	0.012	4.38
MW-10	7.89×10^{-5}	0.11	0.004	1.46

Notes:
1. Slug tests conducted on December 1, 1999.
2. Seepage velocities calculated using the equation $V = K(dh/dl)/n_e$, where:
   K = hydraulic conductivity
   dh/dl = hydraulic gradient = 0.01 ft/ft.
   n_e = effective porosity = 0.25

TABLE 4
SUMMARY OF LABORATORY ANALYSES[1]
SOIL SAMPLES[2]

173

Notes:

1. Analyses for BTEX constituents and naphthalene by Method 8260 with Method 5035 preparation; analyses for PAHs by Method 8270; analysis for TPH 3550 by Method 8015M; analysis for TOC by SW846 Method 9060M; all results reported in mg/kg.
2. Samples SB-1 through SB-5 were collected on November 19, 1999; samples SB-6 through SB-12 were collected on October 22, 1999.
3. Analysis not requested.
4. Concentrations in bold face type exceeded the RBSLs.
5. January 1998 Risk-Based Screening Levels for sandy soil where the vertical separation between the "worst case" soil sample and the water table is between 10 and 15 feet.

Cooler Received On: 10-21-00 And Opened On: 10-21-00 By: Cray Allen

Cray R. Allen
(Signature)

1. Temperature of Cooler when opened 2 Degrees Celsius
2. Were custody seals on outside of cooler?..... YES (NO)
   a. If yes, how many, what kind and where:_____
3. Were custody seals on containers and intact?..... (NO) YES
4. Were the seals intact, signed, and dated correctly?..... (YES) NO
5. Were custody papers inside cooler?..... (YES) NO
6. Were custody papers properly filled out (ink,signed,etc)?..... (YES) NO
7. Did you sign the custody papers in the appropriate place?..... (YES) NO
8. What kind of packing material used? (Bubblewrap) Peanuts Vermiculite Other None
9. Was sufficient ice used (if appropriate)?..... (YES) NO
10. Did all bottles arrive in good condition(unbroken)?..... (YES) NO
11. Were all bottle labels complete (#,date,signed,pres,etc)?..... (YES) NO
12. Did all bottle labels and tags agree with custody papers?..... (YES) NO
13. Were correct bottles used for the analysis requested?..... (YES) NO
14. a. Were VOA vials received?..... (YES) NO
    b. Was there any observable head space present in any VOA vial?..... (NO) YES
15. Was sufficient amount of sample sent in each bottle?..... (YES) NO
16. Were correct preservatives used?..... (YES) NO
17. Was residual chlorine present?..... (NO) YES

Mark Beasley
(Signature)

1. Temperature of Cooler when opened 4.0 DEGREES CELSIUS
2. Were custody seals on outside of cooler and intact? ..... YES
   a. If yes, what kind and where: TAPE 1 Front
   b. Were the signature and date correct? ..... YES
3. Were custody seals on containers intact? ..... NO
4. Were custody papers inside cooler? ..... YES
5. Were custody papers properly filled out (ink, signed, etc)? ..... YES
6. Did you sign the custody papers in the appropriate place? ..... YES
7. What kind of packing material was used? Bubblewrap Peanuts Other None
8. Was sufficient ice used (if appropriate)? ..... YES
9. Did all bottles arrive in good condition(unbroken)? ..... YES
10. Were all bottle labels complete (#, date, signed, pres, etc)? ..... YES
11. Did all bottle labels and tags agree with custody papers? ..... YES
12. Were correct bottles used for the analysis requested? ..... YES
13. If present, was any observable VOA headspace present? ..... NO
14. If present, were VOA vials checked for absence of air bubbles and noted if found? ..... YES
15. Was sufficient amount of sample sent in each bottle? ..... YES
16. Were correct preservatives used? ..... YES
17. Was residual chlorine present (if appropriate?) ..... NO
18. Corrective action taken, if necessary:
    a. Name of person contacted: SEE ATTACHED FOR RESOLUTION IF NEEDED
    b. Date: _____

Re: Smith's Grocery
UST Permit #09322; CA#13300
Assessment Component Cost Proposal received January 19, 2001
York County

Dear Ms. Smith:

The Underground Storage Tank Program of the South Carolina Department of Health and Environmental Control (SCDHEC) agrees that the next scope of work at this site will be completed utilizing your own contractor. The Department has approved the enclosed cost proposal for the implementation of post-GAC ground water sampling activities, which can be initiated immediately.

A Cost Proposal (CP) #13300 has been approved to complete the necessary work and will be kept on file. The amount on the CP form represents the SUPERB allowable costs as established on March 31, 2000 for upto three rounds of monthly sampling of the two water supply wells with granular activated carbon filters in operation. The Department shall be notified before each sampling event.

All applicable laboratory and report preparation certification requirements must be satisfied. The sampling reports should be submitted within two weeks of each sampling event. If the invoice is not submitted within 120 days of this letter, monies allocated to pay this invoice will be uncommitted. This means that the invoice will not be processed for payment until all other committed funds are paid or monies become available.

Please reference UST Permit ID#09322 and Cost Agreement #13300 on all correspondence regarding this approval. If you have any questions concerning this correspondence, please contact me at (803) 898-4318.

Sincerely,

Sriram Madabhushi

Sriram Madabhushi, Hydrologist
Owner/Operator Assistance Section

Re: Smith's Grocery
UST Permit ID#09322
Monitoring Report received November 9, 2000
York County

Dear Mrs. Smith:

The Underground Storage Tank (UST) Program has reviewed the referenced November 2000 Monitoring Report. Potential receptors include the water supply wells at the Vickery, Hill, Strife and Smith Residences located around your facility. Active corrective action is necessary to ensure there is no potential impact to human health or the environment.

The site's priority classification is **1D**. Therefore, SUPERB funds are currently available for implementation of an acceptable method of corrective action. The selected technology must completely reduce the petroleum chemicals of concern to those concentrations listed in the Corrective Action Solicitation Package. All rehabilitation activities associated with the UST release must be performed by a SCDHEC certified site rehabilitation contractor as required by R.61-98.

A minimum of three competitive Responses to the Solicitation Package must be submitted. The Department understands that you wish to select the rehabilitation contractor to perform the corrective action. In addition to the Response Forms you personally solicit as outlined below, the Department will announce the solicitation in the South Carolina Business Opportunities. This announcement is to ensure enough Responses are received to initiate a corrective action in timely manner. This announcement will clearly indicate that the UST owner/operator will make the contractor selection to receive financial approval at the most reasonable cost as determined by the solicitation process.

Procedures

The following steps should be followed as you secure responses to the Corrective Action Solicitation Package.

Step 1. Select a minimum of three (3) certified site rehabilitation contractors to complete the enclosed Corrective Action Solicitation Response Form. A list of currently certified contractors is enclosed.

Step 2. Provide each of the selected site rehabilitation contractors a copy of this letter and the enclosed Corrective Action Solicitation Package.

Step 3. Direct each of your selected site rehabilitation contractors to submit their response form to the attention of Lee A. Monts, by February 28, 2001.

You will be provided copies of all the response forms submitted. Upon review of the responses, you will be required to complete a Corrective Action Solicitation Response Summary form which designates which site rehabilitation contractor you wish to use.

On all future correspondence, please reference the **UST Permit #09322.** Please note that approval from the Department must be issued before corrective action begins. Questions concerning this correspondence should be addressed to my attention at (803) 898-4318 or (800) 826-5435 (toll free with in South Carolina only).

Sincerely,

Sriram Madabhushi

Sriram Madabhushi, Hydrologist
Owner/Operator Assistance Section

Corrective Action Solicitation Package
Smith's Grocery - UST Permit #09322

PURPOSE and SCOPE OF WORK

The Underground Storage Tank (UST) Program of the South Carolina Department of Health and Environmental Control (DHEC) has determined that active corrective action of the petroleum release from a regulated underground storage tank site is required, and Mrs. Lois Smith, the owner/operator responsible for the release, has opted to seek the services of a certified contractor to perform corrective action in accordance with defined rehabilitation goals. The ~~objective is to maintain potable water for,~~ reduce the levels of chemicals of concern (CoC) in the soil and in the ground-water to below defined site specific target levels (SSTLs). **In this request for solicitation response, DHEC is acting not as an agent, but as a coordinator between site rehabilitation contractors and the UST owner/operator. As payment will be from the State Underground Petroleum Environmental Response Bank (SUPERB) Account, requirements outlined in this technical specifications package, the SUPERB Act, and R.61-98 apply. All contractors submitting a solicitation response must be South Carolina Certified Class I Site Rehabilitation Contractors.** The scope of work defined in this solicitation is to be implemented at Smith's Grocery, 3176 Charlotte Highway, York, SC 29745, York County for the release reported on June 30, 1993.

SPECIAL CONDITIONS

1. CONTRACT PERIOD: The corrective action pay for performance will be effective from date of financial approval until the corrective action, as described in this technical specification package, is completed by a SCDHEC Class I Site Rehabilitation Contractor.

2. This technical specification package is for corrective action at only one (1) site in South Carolina. **Compensation from the SUPERB Account is not considered a state contract for purposes of procurement or subject to state bid requirements in accordance with Section 44-2-130(D) of the State Underground Petroleum Response Bank (SUPERB) Act.** A signed corrective action solicitation response form should be returned (via mail or fax) to Mr. Lee Monts of the UST Program by the date specified to be forwarded to Mrs. Lois Smith.

3. FINANCIAL APPROVAL: **The owner/operator will select the contractor to perform this active corrective action in accordance with the SUPERB Act (Title 44, Chapter 2 of the Code of Laws of South Carolina). Therefore, financial approval may not be to any of the contractors that submit a solicitation response or to the contractor who submits the lowest price.** When the UST owner/operator selects the rehabilitation contractor, a contractual agreement will be made between the owner/operator and the environmental contractor. If the work is performed in an acceptable manner, DHEC will make payment from the SUPERB Account in accordance with the payment instructions from the UST owner/operator. The proposed implementation schedule to achieve the remediation goals, the removal of all equipment and abandonment of wells, (including pre-existing wells), trenches, etc. installed by the contractor, and the proposed remediation technology(ies) or method(s) must protect public health and the environment and be eligible for permitting by DHEC. The total cost, methods, and estimated time to complete the contract must also be advantageous to the State of South Carolina.

4. REASONABLE COST: The low price submitted to the UST Program (as the coordinator) or as obtained by the UST owner/operator, will be considered the allowable cost by the SUPERB program to complete the corrective action as described in this technical specification package as long as the price is within reason. DHEC reserves the right to reject any and all corrective action solicitation responses that appear to be out of line with the customary and reasonable cost for the same scope of work in a similar geologic setting.

5. Contractor must agree to make positive efforts to use women and minority owned businesses and individuals.

6. AMENDMENTS: All amendments to this solicitation response will be in writing from the UST Program. The UST owner/operator or DHEC will not be legally bound by any amendment or interpretation, which is not in writing.

7. QUESTIONS: Questions or requests for information must be submitted in writing and received by 5:00p.m., February 12, 2000. After this date, no further questions will be addressed. A written response will be provided to all requestors of this technical specification package. The questions may be faxed to Lee Monts (fax number (803) 898-4330).

8. **NOTE . . . THE ONLY OFFICIAL CONTACT PERSON AT DHEC DURING THE SOLICITATION RESPONSE SUBMITTAL AND FINANCIAL APPROVAL PROCESS IS LEE MONTS. CONTRACTORS ARE NOT TO CONTACT ANY OTHER UST PROGRAM PERSONNEL OR OTHER CONTRACTORS.**

9. The certified contractor selected by the UST owner/operator will be required to treat the area where the dissolved petroleum chemicals of concern are above site specific target levels (see Figure 2). Verification that interim corrective action goals have been met will be based upon ground-water quality samples collected from monitoring wells *MW-1, MW-2, MW-6, MW-7, MW-8, MW-10 thru MW-15, MW-17, MW-18, MW-19, TW-2 and TW-3*. Verification that final corrective goals have been met will be based upon ground-water quality samples collected from all existing monitoring wells, and additional verification wells to be installed at locations designated by DHEC (see specification #10 for more detail).

10. REPORTS: Deliver the reports to: SCDHEC, UST Program, Attn.: Sriram Madabhushi, 2600 Bull Street, Columbia, SC 29201 or other location as specified. A minimum of two (2) copies of each plan and two (2) copies of each report must be delivered to the above address. Based on permitting and other requirements, engineering report, UIC permits, air modeling forms or NPDES Permits may be required. Please contact the Department for the exact number of copies of each document to be submitted.

11. INVOICING: Invoices will be submitted to: SCDHEC, UST Program, Attn.: Financial Section, 2600 Bull Street, Columbia, SC 29201, using the Department's Corrective Action (CA) Invoice form. The initial invoice must be received at the above address within 120 days from the date of the letter directing Corrective Action Plan (CAP) implementation or funds will be uncommitted as required by the Section 44-2-40(B) of the SUPERB Act. If funds are uncommitted, any submitted invoices will be held until funding is available. Payment to the contractor will be a pay-for-performance system as follows:

A. Payment of forty percent (40%) of the total price approved will be made within 90 days of operation of the remediation system or implementation of corrective action as described in the approved corrective action plan (CAP), subject to the limitations of Section 44-2-40 of the SUPERB Act. This will be documented in the initial monitoring report. The CoC concentrations requiring reduction is as follows:

CoC concentrations in parts per billion (µg/l) based on August 23 & October 10, 2000 sampling:

(CoC may increase or decrease in the future)

Well	Benzene	Toluene	Ethyl-benzene	Xylenes	MtBE	Lead	EDB	Naph-thalene	Total Conc.
Vickery WSW	5	2.	2	26	2	5	5	5	52
Hill WSW	2	2	2	2	5	5	5	5	28
Smith WSW	2	2	2	2	2	5	5	5	25
Strife WSW	5	5	5	15	5	5	5	5	50

MW-17	5	5	5	10	5	29	0.02	5	64.02
MW-18	5	5	5	10	5	42	0.12	5	77.12
MW-19	5	5	5	10	5	51	0.02	5	86.02
TW-2	400	8	5.0	180	5.0	2	0.05	18	618.05
TW-3	5	5	5	10	5	2	0.23	5	37.23
Initial Conc.*	47644	158164	19824	84035	1694	1716	322.43	4820	318219.43
SSTL Conc.	120	10975	7772	80343	490	199	53.33	391	100343.33
Initial Conc. above SSTL	47524	147189	12052	3692	1204	1517	269.1	4429	217876.1

* Laboratory analysis is less than calculated SSTLs; therefore, SSTL concentration is set equal to laboratory concentration.
** CoC concentration may change due to seasonal fluctuations in the groundwater.

B. Payment of thirty-five percent (35%) of the total price approved will be made based on achieving interim CoC concentration reduction goals at the site as verified in monitoring *MW-1, MW-2, MW-6, MW-7, MW-8, MW-10 thru MW-15, MW-17, MW-18, MW-19, TW-2 and TW-3*. Payment will be made for interim goals of 25, 50, and 75 percent reduction of total CoC concentration by the implementation of corrective action. **NOTE: Payment cannot be based on laboratory analyses for any well that has been used for injection unless that well has returned to ambient conditions.**

(1) 25 percent total concentration reduction will be achieved when one-quarter of the initial BTEX, MtBE, Lead, EDB and Naphthalene concentrations from monitoring *MW-1, MW-2,*

MW-6, MW-7, MW-8, MW-10 thru MW-15, MW-17, MW-18, MW-19, TW-2 and TW-3 is removed as compared to the SSTLs. The following formula will be used to calculate the percent total concentration reduction: total concentration above SSTLs from initial sampling less total concentration above SSTLs from subsequent sampling divided by total concentration above SSTLs from initial sampling. Payment of 10 percent (10%) of the total price approved will be made upon verification (see Specifications item 10 for the method of verification) of at least one-quarter of the total CoC concentration above SSTLs is removed.

The following example demonstrates the CoC Concentration Reduction Calculation:

Well		Benzene	Toluene	Ethylbenzene	Xylenes	MTBE	Naphthalene	Conc. above SSTL
MW-1	Initial Conc. A	7,500	4,000	2,000	15,000	3,000	1,000	32,500
	SSTL B	10	2,000	1,400	10,000	80	50	13,540
	Initial Conc. above SSTL C	7,490	2,000	600	5,000	2,920	950	18,960
	Subsequent Concentration D	3,000	1,000	900	13,000	2,000	5	19,905
	SSTL E	10	2,000	1,400	10,000	80	50	13,540
	Subseq. Conc. above SSTL F	2,990	0	0	3,000	1,920	0	7,910
MW-4	Initial G	150	400	50	250	300	25	1175
	SSTL H	5	400	50	250	40	25	770
	Initial Conc. above SSTL I	145	0	0	0	260	0	405
	Subsequent Concentration J	100	100	1	1	100	1	303
	SSTL K	5	400	50	250	40	25	770
	Subseq. Conc. above SSTL L	95	0	0	0	60	0	155
Totals	Initial Conc. above SSTL M	(sum of initial concentration above SSTL for all wells) (C+I)						19,365
	Subseq. Conc. above SSTL N	(sum of subsequent concentration above SSTL for all wells) (F+L)						8,065

Notes: **If subsequent sampling indicates a CoC concentration at or below the SSTL and/or a CoC concentration at BDL but the reporting limit is at/or below the SSTL value for any constituent, the value for the concentration reduction will be 0 (no negative numbers).**

If subsequent sampling indicates a CoC concentration at BDL but the reporting limit is above the SSTL, the value for any constituent will be the analytical reporting limit.

Concentration Reduction Calculation

$$\text{CoC Concentration Reduction} = \frac{(M-N)}{(M)} = \frac{(19{,}365-8{,}065)}{19{,}365} = 0.5835 * 100 = 58.35\% \text{ CoC Reduction}$$

(2) 50 percent total concentration reduction will be achieved when one-half of the initial BTEX, M*t*BE, Lead, EDB, and Naphthalene concentration from monitoring monitoring *MW-1, MW-2, MW-6, MW-7, MW-8, MW-10 thru MW-15, MW-17, MW-18, MW-19, TW-2 and TW-3* is removed as compared to the SSTLs. The formula outlined in item 11. B. (1) will be used. Payment of 10 percent (10%) of the total price approved will be made upon verification (see Specifications item 10 for the method of verification) of at least one-half of the total CoC concentration above SSTLs is removed.

(3) 75 percent total concentration reduction will be achieved when three-quarters of the initial BTEX, M*t*BE, Lead, EDB, and Naphthalene concentration from monitoring wells *MW-1, MW-2, MW-6, MW-7, MW-8, MW-10, MW-11 thru MW-15, MW-17, MW-18, MW-19, TW-2 and TW-3* is removed as compared to the SSTLs. The formula outlined in item 11 B (1) will be used. Payment of 15 percent (15%) of the total price approved will be made upon verification (see Specifications item 10 for the method of verification) of at least three-quarters of the total CoC concentration above SSTLs is removed.

C. **The final 25 percent (25%) of the total price approved will be paid upon: 1) verification that the levels of CoC do not exceed the site-specific target levels (SSTLs) defined in item 11.C. at any point in the area of concern (see Figure 2). Verification that the SSTLs have been met will be based upon ground-water quality samples collected from all existing monitoring wells, and additional verification wells to be installed at locations designated by DHEC (see specification #10 for more detail); and 2) all remediation and assessment items installed by the contractor (e.g., wells [including preexisting wells], trenches, etc.) are removed from the site or properly abandoned.** The SSTLs are as follows:

In the source area, near SB-4, SB-5 and MW-1 (Figure 3 – Appendix B), the following SSTLs for soil should be met.

Site specific target levels (SSTLs) in parts per billion (µg/kg):

CoC	SSTLs (mg/Kg)
Benzene	0.005
Toluene	1.9
Ethylbenzene	1.456
Xylenes	56.072
Naphthalene	0.252

Groundwater Site specific target levels (SSTLs) in parts per billion (µg/l)

Well	Benzene	Toluene	Ethyl-benzene	Xylenes	MTBE	Lead	EDB	Naph-thalene	Total
Vickery	5	2*	2*	26*	2*	5*	5*	5*	52
Hill	2*	2*	2*	2*	5*	5*	5*	5*	28
Strife	2*	2*	2*	2*	2*	5*	5*	5*	25

Total	120	10975	7772	80343	490	199	53.33	391	100343.33

* Laboratory analysis is less than calculated SSTLs; therefore, SSTL concentration is set equal to laboratory concentration.
** Laboratory analysis is below detection limits; therefore, SSTL concentration is set equal to detection limits.

12. NOTIFICATION FOR FAILURE TO PERFORM: If the contractor fails to meet any specification of corrective action as outlined in this document, DHEC will notify the contractor by certified letter of the deficiency(ies). If the contractor does not correct the deficiency(ies) within 30 days, the contractor will be in breach of contract and the financial approval may be voided by DHEC. DHEC will notify the contractor by certified letter that the financial approval is void and if any invoices are payable upon review and approval of DHEC. If the contractor corrects the deficiency(ies) within 30 days, the financial approval will continue. Please note contractor-owned items used on-site for the contract that are destroyed by acts of nature, improper maintenance or handling, theft or vandalism will not be replaced or reimbursed by the SUPERB Account. The amount of financial approval will be final and will not be increased or cancelled for any reason (e.g., unanticipated iron fouling of a system, wells clogging because of biological activity or sediments, increased subcontractor costs, loss of utilities, modification

to the system to meet the remediation goals, etc.) with the exception of unforeseen geologic circumstances or identification of additional CoC from another release.

13. SITE SPECIFIC DETAILS: A brief technical summary of the release, including a location map and specifics of existing wells, is attached. The detailed technical file will be available for review through the Freedom of Information (FOI) Office located on the third floor of the Sims Building, 2600 Bull Street, Columbia, SC. Review of the detailed technical file is not mandatory; however, contractors submitting a solicitation response are strongly encouraged to review the file to ensure a complete understanding of the contract requirements. The contractor given financial approval will be responsible for understanding the information in the technical file. Appointments to view the technical file may be scheduled on weekdays between the hours of 8:30 A.M. to 5:00 P.M. by calling the SCDHEC Freedom of Information Office at (803) 898-3882. Please request file for UST Permit#09322.

NOTE: **Free-phase product may be present at this site. No free-phase product was detected during the base-line sampling event, however, application of corrective action technologies can result in the mobilization and possible appearance of free-phase product or elevated CoC concentrations in the monitoring wells.**

14. **The contractor will submit a CAP within 30 days of notification of selection by the UST Owner/Operator Assistance Section.** The implementation of the CAP will be initiated immediately upon the Department's directive to implement the CAP and all associated permit(s) have been issued; implementation will be in accordance with the schedule presented in the CAP. **A performance bond or irrevocable standby letter of credit, equal to the financial approval amount, will be required by DHEC.** The issuing institution for an irrevocable standby letter of credit must be an entity that has the authority to issue letters of credit in South Carolina and whose letter-of-credit operations are regulated and examined by a federal or state agency. The original performance bond or irrevocable letter of credit will be submitted to the UST Program, Attn.: Lee Monts, within 30 days of financial approval. The performance bond or irrevocable standby letter of credit will specify that the SUPERB Account will be the recipient of any forfeiture. Since DHEC is responsible for the disbursement of funds from the SUPERB Account, the financial responsibility mechanism (i.e., bond or letter-of-credit) will be held by the UST Program until the work is successfully completed.

15. **MINIMUM REQUIREMENTS: Corrective action will be considered complete once the levels of CoC are verified to be below the SSTLs listed in item 11.C., and removal or abandonment of all remediation and assessment items installed by the contractor (e.g., wells [including preexisting wells], trenches, etc.). See Specification #10 for the method of verification.** All rehabilitation activities associated with a UST release must be performed by a SCDHEC certified Class I site rehabilitation contractor as required by R. 61-98. All corrective action plans and reports must be sealed by a Professional Engineer or Professional Geologist registered in the State of South Carolina. All engineering reports, drawings and plans must be sealed by a Professional Engineer registered in the State of South Carolina. All laboratory analysis for CoC must be performed by a SC certified laboratory. All monitoring, verification, injection, or recovery wells must be installed and abandoned by a SC certified well driller. All applicable certification, training, permits, applications, and fees associated with well installation; injection, discharge, treatment, or transportation of ground water, air, or soil; construction or operation of a remediation system; and any other action requiring a permit are the responsibility of the contractor. Any required business or occupation license and occupational safety and health training (e.g., OSHA) as defined by the laws and regulations of the United States of America, State of South Carolina, county or city is also the responsibility of the contractor. The terms and conditions of all applicable permits will be met. Any contaminated ground water, soil, or construction material must be properly transported and disposed of, or treated at an approved facility with prior approval from DHEC. Any

costs for utilities construction and service (electric, telephone, sewer, etc.) required by the corrective action are the responsibility of the contractor.

SPECIFICATIONS for CORRECTIVE ACTION

All corrective action solicitation responses submitted must meet the following specifications as required by the proposed treatment method(s) or corrective action technology(ies):

1. The solicitation response for active corrective action may be submitted by mail or by fax. The response will outline in general terms an approach to achieve the remediation goals (e.g., reduction of each CoC to SSTL). The response must outline the following:

   A. A description of the proposed treatment method(s) or technology(ies) for corrective action.

   B. The estimated amount of time in months to complete site rehabilitation to meet the remediation goals, install verification wells, and remove or abandon all assessment and remediation items installed as part of the corrective action.

   C. The total cost (in thousands of dollars) to complete site rehabilitation to meet the remediation goals and to remove or abandon all assessment and remediation items installed as part of the corrective action.

2. The contractor selected by the owner/operator to perform corrective action activities must complete and submit a detailed CAP (three copies) for the release at Smith's Grocery - UST Permit #09322), 3176 Charlotte Highway, York, SC 29745, York County, South Carolina **within 30 days of notification by the UST Program. NOTE:** ***Use of monitoring well(s) for injection purposes is not allowed.*** A condition of the plan may include installation of additional recovery, sparge, compliance, or injection wells. The plan must define all active (pump and treat, sparge, vapor extraction, excavation of impacted soils, bioremediation, etc.) and passive (intrinsic remediation, monitoring, etc.) corrective action method(s) proposed to reduce CoC to SSTLs. It must be shown, by use of scientific models, computations, or discussion, how each CoC will be reduced to the SSTL for each remediation method proposed for the release. Any assumptions used in a model will be listed or shown, as well as, appropriate references. Intrinsic corrective action will require monitoring to verify remediation. General construction details will be included (e.g., install four additional recovery wells, construct a compliance point, install four air injection wells, excavate 3,000 cubic yards of impacted soils, etc.) as well as details of well abandonment and equipment removal. A remediation time table including abandonment of wells and removal of equipment will be included with the CAP. The UST Program will review the CAP and initiate a public notice period for a maximum of 30 days. The contractor must obtain a copy of the applicable portion of the tax map. This map will depict the location of the facility, and all impacted properties, and all properties located adjacent to the impacted properties. The names and addresses of the owners of each of these properties will be provided. The contractor may be required to attend or provide input at a public meeting upon request by DHEC. Any CAP amendments and modifications arising from public notice must be submitted within 15 days of notification by DHEC. The CAP and any amendments or modifications must be sealed by a qualified Professional Engineer or Geologist registered in the State of South Carolina. The owner/operator, Mrs. Lois Smith, will be consulted and will approve the location of the corrective action system. If permanent, the system must be enclosed in a fenced area or small building. The initial invoice must be received at the above address within four months or funds will be uncommitted as required by the SUPERB Act. If funds are uncommitted this invoice will be held until funding is available.

An initial monitoring report documenting CoC concentrations in all wells and potentiometric conditions prior to start up (including verification of system operation or CAP implementation) must be submitted to the UST Program within 45 days after financial approval. Sampling for the initial monitoring report must occur prior to system startup.

Based on naturally occurring conditions, the dissolved concentration of petroleum chemicals of concern (CoC) will increase or decrease. For the purposes of this contract, the total CoC concentration for the wells included in the technical specification package may reasonably increase up to 150 percent or decrease as much as 50 percent. If the total CoC concentration in all wells listed in Special Condition 11.B. increases more than 150 percent based on this initial sampling or if measurable free product that has not been previously documented in any report is detected during the initial sampling event, the contractor may request in writing that the award be canceled. **If either of these conditions occurs, the contractor will contact the UST project manager within two days of problem identification and will submit written documentation within five days of notification.** The contractor will be reimbursed for one personnel mobilization to collect samples, one sample collection and one analytical fee each monitoring well sampled as outlined in SUPERB Allowable Costs, plus $6,000 for all other costs incurred (e.g., CAP preparation, obtaining performance bond, business license). The contract will be canceled and the performance bond will be returned to the company. If the total CoC concentration in all wells listed in Special Condition 11.B. decreases to less than 50 percent based on this initial sampling the DHEC may cancel the award. If the corrective action system is started or treatment is performed, the contractor will be required to complete the contract unless geological conditions change or another release is confirmed. See special condition 12. If the contract is canceled by DHEC, the contractor will be notified by certified letter and an invoice for the above outlined items shall be submitted within 20 days from the date of the certified letter canceling the contract.

3. Complete and submit all applications for permits (injection, NPDES, BAQC modeling form, thermal treatment, construction, etc. and an engineering report (2 copies each) with the CAP. Any required permit changes or corrections will be submitted within 15 days of notification by DHEC. The ER and any ER amendments and modifications, must be sealed by a Professional Engineer registered in the State of South Carolina. After review of the CAP and all permit applications by DHEC, the UST Program will issue a notice to proceed with CAP implementation.

   Implementation of the corrective action plan before the completion of the public notice process and approval of all permits by DHEC is not authorized. If premature implementation occurs, the Department will not reimburse those costs from the SUPERB Account, and the financial approval amount will be reduced by that amount. If the Department agrees with early implementation to better protect human health in an emergency and provides approval in writing, early implementation without any reduction to the financial approval amount will be authorized.

4. Implement the CAP within 30 days of receipt of notice to proceed and any required permit to construct. Disruption to the owner/operator's normal business will be kept to a minimum. The contractor will repair the site to the condition as it existed prior to installation of the corrective action system (e.g., asphalt paved areas will be repaved with asphalt, concrete areas will be replaced with concrete, grass areas will have soil replaced to the original grade and be reseeded or sodded with grass, etc.). Upon completion of any required construction, DHEC will inspect the system and issue a permit to operate. The contractor will, at all times, keep the site free from waste materials and rubbish related to the corrective action. Until completion of the corrective action, the contractor will keep the premises in a clean, neat and workmanlike condition satisfactory to DHEC. All generated soil and wastewater will be removed from the site promptly. Manifests documenting the proper disposal of the soil and wastewater must be included in the appropriate report.

5. Gain access to the adjacent property to sample monitoring wells and to install any corrective action equipment, as required. The contractor will repair the adjacent property to the condition as it existed prior to installation of the corrective action systems (e.g., asphalt paved areas will be repaved with asphalt, concrete areas will be replaced with concrete, grass areas will have soil replaced to the original grade and reseeded or sodded with grass, etc.)

6. Initiate system startup within 15 days of receipt of the permit to operate. Remediation as defined in the CAP and ER will begin upon system startup. An initial monitoring report documenting CoC concentrations in all wells and potentiometric conditions prior to start up (including verification of system operation or CAP implementation) must be submitted to the UST Program. **If any problem with CAP implementation occurs, the contractor will contact the UST project manager within 24 hours of problem identification and will submit written documentation within five days of notification.**

NOTE: Free-phase product may be present at this site. No free-phase product was detected during the base-line sampling event, however, application of corrective action technologies can result in the mobilization and possible appearance of free-phase product or elevated CoC concentrations in the monitoring wells.

7. Complete and submit a corrective action monitoring report (3 copies plus one copy for any DHEC Bureau that issued a permit) on a quarterly basis. The corrective action monitoring reports must include:

A. A narrative portion that documents current site conditions and system effectiveness in achieving the remediation goals (e.g., free product removal, reducing CoC to the SSTLs) as outlined in the CAP. Any system down time and the associated reason(s) will be included in the report.

B. Conclusions and recommendations based on the reported data.

C. Ground-water laboratory analytical data for all monitoring wells in the following format (additional parameters such as dissolved oxygen may be required; do not sample wells containing free product):

Analytical Data (µg/l)

Monitoring Well	Date	Benzene	Toluene	Ethylbenzene	Xylenes	MtBE	Naphthalene
MW-1	07/15/99	145	200	146	1,000	170	47
	10/15/99	140	190	140	900	50	165
MW-2	07/15/99	580	800	300	1,000	60	20
	10/15/99	480	690	257	912	50	19

D. Ground-water potentiometric data for all monitoring wells in the following format:

Ground-water Data (feet)

Monitoring Well	Date	TOC Elevation	TOC to GW	TOC to FP	FP Thickness	GW Elevation
MW-1	07/15/99	98.0	17.54			80.46
	10/15/99	98.0	17.90			80.10
MW-2	07/15/99	100.0	20.50	20.47	0.03	79.50
	10/15/99	100.0	21.50	21.48	0.02	78.50

E. A ground-water elevation contour map of the site based on current ground-water potentiometric data.

F. A CoC map based upon current ground-water laboratory analytical data. The ground-water data should be adjacent to the relevant monitoring well using the following format (additional parameters such as dissolved oxygen may be required):

MW - Number
Benzene (µg/l)
Toluene (µg/l)
Ethylbenzene (µg/l)
Xylenes (µg/l)
MTBE (µg/l)
Lead (µg/l)
EDB (ng/l)
Naphthalene (µg/l)

G. A copy of the DHEC approval letter and manifests for any contaminated soil and ground-water removed from the site for treatment and/or disposal.

H. Additional data required by permits (e.g., air analyses, wastewater effluent analyses and amounts, etc.). The data should be reported on a form or in a format specified in the permits, and attached to the monitoring report as an addendum.

All rehabilitation activities associated with the UST release must be performed by a SCDHEC Certified Site Rehabilitation Contractor. All air, soil, and ground-water analyses must be performed by a South Carolina certified laboratory. The corrective action monitoring report must be sealed by a Professional Engineer or Geologist registered in the State of South Carolina. All monitoring wells associated with the release will be sampled on a quarterly basis for the first year. Thereafter, the number of wells sampled may be reduced and/or the interval between corrective action monitoring reports may be lengthened upon clear demonstration of CoC reduction, unless restricted by permit requirements. Any approval to reduce the number of wells sampled or the frequency of sampling must be in writing from the Bureau of Land and Waste Management UST Program. DHEC may require data to be reported on a form or in a specific format. The contractor will be provided with the proper report forms and format prior to system startup. The contractor will be notified of any revisions to the report forms or format 90 days prior to the due date for the corrective action monitoring report.

8. Collect one (1) ground-water sample per monitoring event for all monitoring wells associated with the release. Each well should be purged prior to sampling. Purging is considered complete once the ground-water temperature and pH have stabilized. Sampling logs should note all temperature and pH measurements, as well as the location and type of each sample submitted for laboratory analysis. Each ground-water sample will be collected in accordance with established QA/QC protocol and submitted to a certified laboratory for analysis. The samples must be analyzed for the following parameters:

Analyte	Analytical Method	Reporting Limit (µg/l)
BTEX, Naphthalene, MtBE	8260B	5
Lead	200.7	5
EDB	8260B	0.02
PAH	8270C	10

Additional samples (air, groundwater, effluent, soil) required by permits must be collected in accordance with established QA/QC protocol and submitted to a certified laboratory for analysis. The samples will be analyzed for parameters stipulated in the permits. Sampling and analytical data for each sample (e.g., field sampling logs, chain of custody forms, certificates of analysis, and the lab certification number) will be included in the corrective action monitoring report.

9. Properly dispose of all contaminated soil and ground water generated during the implementation of the CAP and installation of verification wells. DHEC must approve the disposal facility selected for treatment and disposal of the free product and contaminated soil and ground water. The owner/operator of the facility is considered the generator for any contaminated soil and ground water. The contractor must document all disposal of free product and contaminated soil and ground water in the quarterly corrective action monitoring report.

10. Verification for the removal of free product will be conducted by SCDHEC personnel with an interface probe. If the remediation technology is in-situ (e.g., pump and treat, air sparging, vapor extraction): suspend operation of the system once the remediation goals for all CoC have been maintained for a period of 30 days. Samples are to be taken after one (1) quarter or after all CoC levels have reached equilibrium and again after a second quarter. Along with the parameters listed in Specification #8, the ground-water samples should also be sampled for the following parameters:

Analyte	Analytical Method*	Reporting Limit
Dissolved Oxygen	SM4500-O G	500 µg/l
Ferrous Iron	SM3500-Fe D	30 µg/l
Methane	Kerr Method	1 mg/l
Nitrate	9056/9210	100 µg/l
Sulfate	9038/9056	1000 µg/l

*or EPA equivalent method that can achieve the same reporting level

If sample results indicate that the remediation goals are not sustained, the contractor must submit a corrective action status report (up to 3 copies) that outlines the deficiency(ies) and offers recommendations for achieving the remediation goals with a revised timetable. Modifying and restarting of the system will be directed by DHEC. The system will operate until all remediation goals are again maintained for a minimum period of 30 days. Operation of the system will then be suspended again and samples taken to verify that remediation goals are sustained. This cycle of activity, including status reports, will be repeated until all CoC levels remain below SSTLs for all wells listed in Special Conditions item 11 C for two (2) consecutive quarters. Up to three verification wells for soil and groundwater analyses may then be installed at locations designated by DHEC. Costs for verification well installation are considered part of the financial approval amount. Each well will be sampled in accordance with Specifications item 8 and the analyses compared to the calculated SSTLs for the CoC at that well location. If the laboratory analyses are at or below the SSTLs, corrective action will be considered complete. If any analysis is above the SSTL, the corrective action will not be considered complete, and the activity cycle described above must be repeated until all CoC levels remain below SSTLs for those wells listed in Special Conditions item 11 C. Split or duplicate samples may be collected by DHEC (or its subcontractors) to verify achievement of remediation goals. Split ground-water samples will be accomplished during quarterly monitoring events and during the final sampling of monitoring and verification wells to document that the cleanup goals have been met. A ground-water sample will be collected from each monitoring well to substantiate the ¼, ½, or ¾ concentration reduction has occurred. Once the site rehabilitation contractor indicates the final cleanup goals have been reached, a ground-water sample will be collected from each monitoring well plus the required verification wells. These two separate quality assurance events will consist of a representative ground-water sample being collected by the certified rehabilitation contractor. Part of the split sample will be analyzed by a SCDHEC certified laboratory selected by the contractor as part of the routine quarterly reporting process, and the second half of the sample will be analyzed by a SCDHEC laboratory selected

by the UST Program. In addition to the ground water collected from the monitoring wells, the UST Program may provide up to three prepared blanks for the contractor's laboratory to analyze. The laboratory analysis from the contractor's and the UST Program's laboratory will be compared. In the event of substantial variance (more than 15%), a second sampling event with field and prepared blanks will be sent to a SC certified laboratory by the UST Program for analysis. The contractor will be notified when the wells will be resampled, can observe this second sampling event, and will be provided analytical results for comment. Based on these results, DHEC Laboratory Certification will be contacted to assist the UST program in determining the cause of the laboratory variation. The Director of the Assessment and Corrective Action Division will make the final decision on which analytical values will be the basis for payment or closure based on the recommendation of the site rehabilitation contractor, DHEC Laboratory Certification, the UST Section Manager, and Project Manager. The site rehabilitation contractor will be provided a written record of any decision. **At least two weeks notice will be provided to the UST Project Manager prior to mobilizing to the site for sampling to verify attainment of remediation goals.** Costs for transportation and analysis of split or duplicate samples will be paid by DHEC.

or

If the remediation technology is a single event (e. g. excavation of impacted soils, vacuum enhanced recovery): collect sufficient samples as outlined in the CAP to verify the reduction of CoC to the remediation goals. The contractor may be required to install and sample soil and groundwater in up to three verification wells at locations designated by DHEC. If the levels of CoC in all samples are at or below SSTLs, corrective action will be considered complete. If the level of any CoC is above the SSTL, additional corrective action will be required. The contractor will submit one (1) corrective action status report to document the reduction of CoC to the remediation goals. Split or duplicate samples will be collected by DHEC (or its subcontractors) to verify achievement of remediation goals in the manner outlined above. **At least two weeks notice will be provided to UST Project Manager prior to mobilizing to the site for sampling to verify attainment of remediation goals.** Costs for transportation and analysis of split or duplicate samples will be paid by DHEC.

11. Disassemble and remove the remediation system and all associated remediation items including utilities from the site within 60 days of notification by DHEC that the remediation goal for the release associated with the UST(s) at the site has been achieved. Disruption to the owner/operator's normal business will be kept to a minimum.

12. Properly abandon all wells (including preexisting wells), borings, trenches, and piping/utility runs installed by the contractor as part of corrective action within 60 days of notification by DHEC that the remediation goal for the release associated with the UST(s) at the site has been achieved. The abandonment will be in accordance with South Carolina Well Standards and Regulations R. 61-71 and accepted industry standards for abandonment of trenches and piping/utility runs. Disruption to the property owner's normal business will be kept to a minimum. The contractor must notify DHEC of the method of well abandonment and final disposal of any free product and contaminated soil or ground water. The contractor will return the site to the condition prior to corrective action (e.g., asphalt paved areas will be repaved with asphalt, concrete areas will be replaced with concrete, grass areas will have soil replaced to the original grade and reseeded or sodded with grass, etc.)

CORRECTIVE ACTION SOLICITATION RESPONSE

Please respond to the following questions:

1. The corrective action method(s) or technology (ies) that will be proposed in the CAP will be (list all active and/or intrinsic methods or technologies for remediation of the aquifer; attach additional pages(s) as required): _____

2. The estimated time in months to complete the corrective action from the date of financial approval, corrective action goals are met, and all corrective action items are removed from the site or properly abandoned is approximately _____ months. This time assumes all submitted plans and reports will be reviewed by DHEC within 30 days of receipt.

3. The total cost in dollars, regardless of the type, quantity or duration of the permitted technology applied, to treat the area of concern (see Figure 2) such that the thickness of free product does not exceed 0.01 foot and levels of CoCs do not exceed the site-specific target levels (SSTLs) defined in item 11.C. at any point, complete all associated monitoring and post-remediation verification, prepare all plans, reports, and correspondence; obtain and meet all terms and conditions of all required permits and licenses; design, install, monitor, operate, maintain, and when completed, properly abandon or remove all assessment and remediation items installed as part of corrective action; provide evidence of performance bond; and other items outlined in this request for solicitation response for Smith's Grocery (UST Permit #09322), 3176 Charlotte Highway, York, SC 29745, York County is: $ _____

ACCEPTANCE and DELIVERY STATEMENT

In compliance with the request for solicitation response and subject to all conditions thereof, the contractor offers and agrees, if selected by the UST owner/operator within _____ days from the final solicitation response submittal date, to furnish any or all items/services quoted at the prices set forth once financial approval has been issued by the Department.

For the purpose of this submittal and acceptance of financial approval should it occur, I certify that this company understands the nature of the release and the geological conditions at this facility as documented in the technical file and this solicitation. Additionally, I certify that this company understands that acceptance is based on total cost to treat the area of concern.

RE: Water Supply Well Analytical Data
Top of Casing Elevation Data
Smith's Grocery
York, York County
Site ID #: 09322
CBM Project #: 10629

Dear Ms. Dubois:

The purpose of this correspondence is to present information associated with assessment activities conducted at the above referenced site. Three additional monitoring wells were completed at the site on August 17-18, 2000. The monitoring wells installed included one Type II monitor well (MW-20) and two Type III monitor wells (TW-2 and TW-3). A subsequent survey was completed and the top of casing elevations for the three monitoring wells were determined. The top of casing elevations are as follows:

MW-20 – 87.89 feet
TW-2 – 94.57 feet
TW-3 – 98.97 feet

Water supply wells located at the Vickery residence and the Hill residence were sampled on October 19, 2000. Granular activated carbon (GAC) units have been installed on each of the wells to treat groundwater affected by petroleum hydrocarbons. Pre-treatment and post-treatment samples were collected from each of the water supply wells. The samples were submitted for analyses of BTEX, MTBE and naphthalene using Method 8260. No detectable concentrations of the requested method constituents were reported in the pre-treatment and post-treatment samples collected from the Hill water supply well. No detectable concentrations of the requested method constituents were reported in the post-treatment sample collected from the Vickery well. Benzene was reported in the pre-treatment sample collected from the Vickery well at a concentration of 83.8 ug/L. The complete analytical reports for the groundwater samples collected from the water supply wells are attached.

If you have any questions or require additional information concerning this matter, please contact the undersigned at (803) 548-5989.

Sincerely,
CBM Environmental Services, Inc.

W. Scott Ball
Senior Project Manager

Cooler Received On: 10-21-00 And Opened On: 10-21-00 By: Cray Allen

Cray R. Allen
(Signature)

1. Temperature of Cooler when opened 2 Degrees Celsius
2. Were custody seals on outside of cooler? ..... YES (NO)
   a. If yes, how many, what kind and where: _____
3. Were custody seals on containers and intact? ..... (NO) YES
4. Were the seals intact, signed, and dated correctly? ..... (YES) NO
5. Were custody papers inside cooler? ..... (YES) NO
6. Were custody papers properly filled out (ink,signed,etc)? ..... (YES) NO
7. Did you sign the custody papers in the appropriate place? ..... (YES) NO
8. What kind of packing material used? (Bubblewrap) Peanuts Vermiculite Other None
9. Was sufficient ice used (if appropriate)? ..... (YES) NO
10. Did all bottles arrive in good condition(unbroken)? ..... (YES) NO
11. Were all bottle labels complete (#,date,signed,pres,etc)? ..... (YES) NO
12. Did all bottle labels and tags agree with custody papers? ..... (YES) NO
13. Were correct bottles used for the analysis requested? ..... (YES) NO
14. a. Were VOA vials received? ..... (YES) NO
    b. Was there any observable head space present in any VOA vial? ..... (NO) YES
15. Was sufficient amount of sample sent in each bottle? ..... (YES) NO
16. Were correct preservatives used? ..... (YES) NO
17. Was residual chlorine present? ..... (NO) YES
17. Corrective action taken, if necessary:

RE: Groundwater Monitoring Report
Smith's Grocery
York, York County
Site ID #: 09322
CBM Project #: 10629

√d6 addendum

Dear Ms. Dubois:

The purpose of this report is to present the results of monitoring well installation and groundwater sampling activities conducted at the above referenced site. The activities were conducted in general accordance with the Assessment Component Cost Proposal submitted to the SCDHEC on February 29, 2000 and approved in correspondence dated March 14, 2000 and June 20, 2000. Three additional monitoring wells were completed at the site on August 17-18, 2000. The monitoring wells installed included one Type II monitor well (MW-20) and two Type III monitor wells (TW-2 and TW-3). A subsequent survey has not been approved for the site. Therefore, the top of casing elevations for the three monitoring wells have not been surveyed. A comprehensive groundwater sampling event was conducted at the site on August 21-23, 2000. Groundwater samples were collected from monitoring wells MW-1 through MW-20 and TW-1 through TW-3 during the sampling event. Groundwater samples have also been routinely collected from water supply wells in the area around the site. The following Figures, Tables and Appendices have been attached:

Figure 1: USGS Topographic Map
Figure 2: Site Map
Figure 3: Water Table Surface Map
Figure 4: Groundwater Quality Map
Table 1: Summary of Groundwater Elevation Data
Table 2: Summary of Groundwater Analytical Data – Monitoring Wells
Table 3: Summary of Groundwater Analytical Data – Natural Attenuation Parameters
Appendix A: Well Construction Records
Appendix B: Laboratory Analytical Reports
Appendix C: Groundwater Sampling Data Sheets
Appendix D: Disposal Manifest

Concentrations of one or more dissolved phase BTEX constituents, MTBE, EDB and/or naphthalene that exceeded the RBSLs were reported in monitoring wells MW-1, MW-2, MW-6 through MW-10, MW-12, TW-1 and TW-2. In addition, concentrations of total lead that exceeded the RBSL were reported in MW-2 through MW-4, MW-6, MW-7, MW-9, MW-10 and MW-13 through MW-20. Please note that the site and all surrounding residential properties use water supply wells as a source of potable water. A municipal water source is not available to the area. Water supply wells located at the Vickery and Hill residences, located to the east of the site, have been affected by petroleum hydrocarbons. Granular activated carbon treatment systems have been installed at the wells and are currently being used to treat the groundwater pumped from the wells. Monthly post treatment samples were collected at the Vickery and Hill water supply wells through July 2000. Pre-approval for the continued monthly sampling of the Vickery and Hill water supply wells was submitted to the SCDHEC on August 3, 2000. Monthly sampling of the wells will be continued when approval is received from the SCDHEC.

Based on the groundwater quality data obtained from the monitoring wells, it appears that the horizontal and vertical extent of the hydrocarbon plume has been adequately defined for the purpose of determining an appropriate corrective action.

Please contact the undersigned at (803) 548-5989 if you have any questions or comments concerning this project.

Sincerely,
CBM Environmental Services, Inc.

	RBSL[4]	5	1,000	700	10,000	40	5	10	15

Notes:
1. Analyses for BTEX constituents, MTBE, and naphthalene by Method 8260; analyses for EDB by 504.1; analyses for PAHs by Method 8270; analyses for total lead by EPA Method 200.7; all results reported in µg/L.
2. Concentrations in bold face type exceeded the RBSLs.
3. Less than the method detection limit specified in the laboratory report.
4. January 1998 Risk-Based Screening Levels.

Lab Submittal Date/Time: 8/22/00 16:45

The following analytical results have been obtained for the indicated sample which was submitted to this laboratory:

TEST PARAMETER	TEST RESULT	UNITS	REPORTING LIMIT	METHOD REFERENCE	DATE/TIME STARTED	ANALYST
SURR: 2-FLUOROBIPHENYL	51	%	32-106	8270	8/25/00 14:14	CWA
SURR: TERPHENYL, D14	53**	%	64-150	8270	8/25/00 14:14	CWA
DILUTION FACTOR	1	ug/L		8270	8/25/00 14:14	CWA
METALS DIGESTION	Completed			EPA 200.7	8/24/00 10:45	PRF
IRON, TOTAL	0.16	mg/L	0.10	EPA 200.7	8/24/00 18:52	MSP
METALS DIGESTION	Completed			EPA 3020	8/25/00 09:30	PRF
EDB	0.05	ug/L	0.02	EPA 504	8/29/00 17:37	SA
METHANE	Not detected	ug/L	26	RSK175M	8/29/00 13:17	SA

Sample Comments:

Sample for EDB by 504 and Methane was subcontracted to SC certified laboratory #84009.

** - Surrogate for 8270 fell below acceptance range. Matrix interference is suspected.

Sample Collection Date/Time: 8/23/00 14:25
Lab Submittal Date/Time: 8/23/00 16:00

The following analytical results have been obtained for the indicated sample which was submitted to this laboratory:

TEST PARAMETER	TEST RESULT	UNITS	REPORTING LIMIT	METHOD REFERENCE	DATE/TIME STARTED	ANALYST

Sample Comments:

Sample for Sulfate was subcontracted to SC certified laboratory #96031001.

Sample for Nitrate was subcontracted to Rogers & Callcott.

Samples for EDB and Methane were subcontracted to SC certified laboratory #84009.

Mr. Ball;

We can mobilize and proceed to the Vickery residence on 11/1/2000 between 11-12. The price will be $353.13. This breaks down to $233.13 for parts and labor, and $120.00 for mileage. For this price, we will shock chlorinate the Eco3100PF12 filter & the house.Let me know if this is satisfactory and we will proceed.Thanks for your time.

Sincerely yours;

James V. Barker

Re: Smiths Grocery
Groundwater Sampling Approval
UST Permit # 09322, CP#11972
York County

Dear Mrs. Smith:

The Department requests that the Vickery and Hill family potable wells be resampled monthly for the next three months. A Cost Agreement has been approved for this scope of work.

Cost Agreement **#11972** is approved up to the amount of the enclosed cost agreement form. The Monitoring Report submitted at the conclusion of these activities should include the following:

- A narrative portion documenting current site conditions and noting the names of field personnel, date, time, ambient air temperature, and general weather conditions during the sampling event. The report shall also contain well purging data, pH, specific conductivity, water temperature, PID readings (where applicable) and turbidity comments. **Please be advised that only EPA Method 8260B will be accepted for purgeable aromatics.**

- Ground-water laboratory analytical data for all monitoring wells shall be presented in a tabular format.

- Manifests for any contaminated soil and/or groundwater removed from the site for treatment and/or disposal.

- The report must be signed and sealed by a professional geologist or engineer registered in the State of South Carolina.

All laboratories utilized must be certified within the state of South Carolina for the analysis used. Please note that all rehabilitation activities associated with a UST release must be performed by a SCDHEC certified site rehabilitation contractor as required by R.61-98. The Ground-water Monitoring Report and associated invoice should be submitted within **60 days from the date of this letter.** If the invoice is not submitted **within 120 days** from the date of this correspondence, monies allocated to pay this invoice will be uncommitted. This means that the invoice will not be processed for payment until all other committed funds are paid or monies become available.

The Bureau grants pre-approval for the transportation of the investigative derived waste (virgin petroleum contaminated soil and groundwater) from the referenced site to a permitted treatment facility. All investigative derived waste must be properly stored in labeled containers or covered with plastic as appropriate. All contaminated investigated derived waste must be accepted by the approved treatment facility. There can be no spillage or leakage in transport. A copy of the disposal manifest and approval letter from the receiving facility must be included as an appendix to the final report. If the levels of petroleum contamination based on laboratory analysis are below treatment levels, please contact the project manager for approval to dispose of the investigative waste on site. The SUPERB Account will not compensate for transportation or treatment of clean soil and/or ground water.

On all future correspondence, please reference the **UST Permit #09322.** On the Assessment Component invoice please reference the UST Permit identification number and cost agreement number **11972.** Questions concerning the above should be addressed to me at (803) 898-4334 or 1(800)826-5435 (within South Carolina).

Sincerely,

Pamela DuBois, Hydrogeologist

Re: Smith's Grocery
UST Permit #09322; CP #10647, MWA #12578
Groundwater Sampling Approval
York County

Dear Mrs. Smith:

After review of the Rapid Assessment Report dated February 3, 2000, the Department requests the installation of additional monitoring wells and resampling of only the three newly installed monitoring wells. A Cost Agreement has been approved for this scope of work.

Cost Agreement **#10647** is approved up to the amount of the enclosed cost agreement form. The Monitoring Report submitted at the conclusion of these activities should include the following:

- A comprehensive round of ground water sampling of all wells associated with the release utilizing intrinsic parameters (nitrate, sulfate, ferrous iron, methane).
- A narrative portion documenting current site conditions and noting the names of field personnel, date, time, ambient air temperature, and general weather conditions during the sampling event. The report shall also contain well purging data, pH, specific conductivity, water temperature, PID readings (where applicable) and turbidity comments.
- Ground-water elevations, depth to groundwater, measurable free product thickness (where applicable), total well depth and screened interval for all monitoring wells associated with the site shall be presented in tabular form, unless otherwise directed by the Department. Ground-water laboratory analytical data for all monitoring wells shall be presented in a tabular format.
- A ground-water elevation contour map of the site based on current ground-water potentiometric data.
- A CoC map based on current ground-water laboratory analytical data. The ground-water data should be adjacent to the relevant monitoring well.

DHEC/UST/030800

- Manifests for any contaminated soil and/or groundwater removed from the site for treatment and/or disposal.

- The report must be signed and sealed by a professional geologist or engineer registered in the State of South Carolina.

All laboratories utilized must be certified within the state of South Carolina for the analysis used. Please note that all rehabilitation activities associated with a UST release must be performed by a SCDHEC certified site rehabilitation contractor as required by R.61-98. The Ground-water Monitoring Report and associated invoice should be submitted within **60 days from the date of this letter.** If the invoice is not submitted **within 120 days** from the date of this correspondence, monies allocated to pay this invoice will be uncommitted. This means that the invoice will not be processed for payment until all other committed funds are paid or monies become available.

The Bureau grants pre-approval for the transportation of the investigative derived waste (virgin petroleum contaminated soil and groundwater) from the referenced site to a permitted treatment facility. All investigative derived waste must be properly stored in labeled containers or covered with plastic as appropriate. All contaminated investigated derived waste must be accepted by the approved treatment facility. There can be no spillage or leakage in transport. A copy of the disposal manifest and approval letter from the receiving facility must be included as an appendix to the final report. If the levels of petroleum contamination based on laboratory analysis are below treatment levels, please contact the project manager for approval to dispose of the investigative waste on site. The SUPERB Account will not compensate for transportation or treatment of clean soil and/or ground water.

On all future correspondence, please reference the **UST Permit #09322.** On the Assessment Component invoice please reference the UST Permit identification number and cost agreement number **10647.** Questions concerning the above should be addressed to me at (803) 898-4334 or 1(800)826-5435 (within South Carolina).

Sincerely,

Pamela DuBois

Monitoring Well Installation Approval Form

Date of Issue: March 8, 2000 Approval No.: 12578

Approval is hereby granted to: CBM Environmental Services, Inc.
(On behalf of): Lois Smith
UST Permit #: **09322**
County: York

This approval is for the construction of 3 permanent monitoring wells in accordance with the construction plans and technical specifications outlined in the **Rapid Assessment** Document. The wells are to be constructed within the surficial aquifer for the intended purpose of monitoring ground-water quality and/or water level(s) at the referenced facility. Approval is provided with the following conditions:

1. The latitude and longitude, surveyed elevations, boring and/or geologist logs and actual (as built) construction details for each well will be submitted with the technical report.

2. Each well will be labeled with an identification plate constructed of a durable material affixed to the casing or surface pad where it is readily visible. The plate will provide monitoring well I.D.#, date of construction, static water level, and driller name and state certification #.

3. Well construction and sampling derived waste including, but not necessarily limited to, drill cuttings, drilling fluids, development and purge water should be managed properly and in compliance with applicable requirements. If containerized, each vessel should be clearly labeled with regard to contents, source, and date of activity.

4. A minimum of forty-eight (48) hours prior to initiation of drilling activities, please provide notice to Pamela DuBois at (803) 898-4334 or duboispm@columb26.dhec.state.sc.us.

5. Please provide ground-water quality analytical data (chemical analysis and/or water level(s)) and associated measurements (i.e., in-situ field measurements) to Pamela DuBois with the technical report.

6. Monitoring wells will be installed by or under the direct supervision of a licensed well driller certified by the State of South Carolina.

7. Monitoring wells and temporary monitoring wells will be abandoned by or under the direct supervision of a licensed well driller certified by the State of South Carolina. Temporary monitoring wells shall not remain in place for longer than 30 days from the date of installation. Monitoring wells may be abandoned only upon concurrence by this Division.

This approval is pursuant to the provisions of Section 44-55-40 of the 1976 South Carolina Code of Laws and the Department of Health and Environmental Control Regulations R.61-71. Please remember to have a copy of this approval on the site during well installation.

Re: Smith's Grocery
Rapid Assessment Report received February 3, 2000
UST Permit # 09322
York County

Dear Mrs. Smith:

The Bureau of Underground Storage Tank Management of the South Carolina Department of Health and Environmental Control (SCDHEC) has reviewed the Rapid Assessment Report for the referenced site. The next scope of work to be implemented is installation of additional telescoping monitoring wells near TW-1 and MW-10, and additional shallow monitoring wells downgradient of MW-10 to better define the plume, and resampling of all monitoring wells. Our records indicate that you have selected CBM Environmental Services, Inc. as your contractor to perform assessment activities at the site.

Please have your contractor complete and submit the Assessment Component Cost Proposal form within thirty days of the date of this letter. The plan should include a comprehensive round of ground water sampling of all wells associated with the release and computer modeling, utilizing intrinsic parameters (nitrate, sulfate, ferrous iron, methane), to determine site specific target levels for all CoC. The SUPERB (State Underground Petroleum Environmental Response Bank) allowable cost for each component is included on the Assessment Component Cost Proposal form. All site rehabilitation activities associated with the UST release must be performed by a SCDHEC certified site rehabilitation contractor in accordance with R.61-98.

On all correspondence or inquiries regarding this project, please reference **UST Permit #09322.** If you have any questions, please feel free to contact me at (803) 898-4334 or 1-800-826-5435 (within South Carolina only).

Sincerely,

Pamela DuBois, Hydrogeologist

1.0 INTRODUCTION

1.1 Background

The purpose of this report is to present the results of rapid assessment (RA) activities conducted at the Smith's Grocery site. The activities were conducted in accordance with the scope of work outlined in the Rapid Assessment Plan dated August 11, 1999 by CBM Environmental Services, Inc. (CBM) and approved in correspondence from the SCDHEC dated September 22, 1999. The site operated as a convenience store/retail petroleum facility until March 1996. The site currently operates as a convenience store. No petroleum products for retail distribution are currently stored on-site.

Two underground storage tanks (USTs) were removed from the site on March 27, 1996. The USTs consisted of one 6,000-gallon gasoline UST and one 8,000-gallon gasoline UST. A UST Closure Report was submitted to the SCHDEC in April 1996. One Type II monitoring well (MW-1) was installed during Initial Groundwater Assessment (IGWA) activities conducted at the site in January 1999. The IGWA report was submitted to the SCDHEC on February 19, 1999.

Please note that a petroleum retail facility/country store known as the former Smith's Store was located across Highway 49 approximately 200 feet to the southeast of the site where the entrance to The Pines subdivision is presently located. The facility contained two unregistered 1,000-gallon gasoline USTs that were reportedly installed in 1947 and in service until 1977. The USTs were reportedly emptied and taken out of service when the store closed in 1977. The USTs were removed from the site on October 13, 1994 by the Royster Oil Company, Inc. of Shelby, North Carolina. No detectable concentrations of gasoline-range TPH were reported in soil samples collected from the UST excavations during closure activities. Information concerning the removal of the USTs and associated closure sampling at the site is contained in the October 27, 1994, Earth Management Systems, Inc. report titled, *"Environmental Assessment Report, Campbell Property, York County, South Carolina"* and the Royster Oil Company, Inc. report titled, *"Underground Storage Tank Removals, Campbell Property aka formerly Smith's Store"* last dated October 29, 19994.

1.2 Regional Geology/Hydrogeology

The site is located in the Charlotte Belt of the Piedmont Physiographic Province. As reported by Butler (1966), the Charlotte Belt includes medium- to high-grade metamorphic rocks and a complicated sequence of intrusive igneous rocks. The metamorphic rocks are mainly schist, gneiss, amphibolite and meta-gabbro. The igneous rocks range in composition from granite to gabbro. The older intrusive rocks are commonly foliated and conformable to regional structures; the younger rocks are massive and cross-cutting. Large intrusions of adamellite, granite, syenite and gabbro are among the most conspicuous of the younger series. Age determinations by radiometric methods generally indicate emplacement in the Paleozoic, and the younger intrusions are probably of late Paleozoic age.

The mantle that covers the underlying fractured bedrock in most places provides an intergranular medium through which recharge and discharge of water from the fractured rocks commonly occur, resulting in a composite two-media system which characterizes groundwater flow. The top of the system is the water table

surface, which is typically located in saprolite. The fractured bedrock generally grades downward into unfractured rock below a depth of approximately 300 feet. Thus, the base of the groundwater system is indistinct.

1.3 Receptor Survey

The Smith's Grocery site is located in a rural/residential area in York County (**Figure 1**). Potable water to the structure on-site is provided by a water supply well approximately 140 feet deep. A shallower water supply well (approximately 30 feet deep) that was affected by the release and is no longer in service is also located on-site. In addition to the two water supply wells located on-site, 26 other water supply wells were identified within a 1,000-foot radius of the site. Of these 26 wells, 23 were identified in The Pines, a single family residential subdivision located to the east of the site across Highway 49. The water supply wells identified in The Pines subdivision are located at distances ranging from approximately 220 feet to 950 feet from the subject site. The three remaining water supply wells were identified approximately 800 feet to 900 feet to the north of the subject site. None of the properties on which these water supply wells are located currently have access to municipal water.

Underground utility conduits present on-site and in the immediate vicinity include natural gas lines, fiber optic lines, telephone lines and electrical lines. The natural gas lines are located on-site and along the west side of Highway 49. Additional natural gas lines as well as telephone, electric and fiber optic lines are located along the east side of Highway 49 and extend east along Southern Pines Road into The Pines subdivision. The underground utilities are located at depths of approximately three to four feet. The utility conduits do not intersect known areas of soil contamination and are located above the seasonal high water table. A Site Map showing the locations of the utilities, the former UST area and pump island, the water supply wells on-site and on adjacent properties, and the approximate location of the former Smith's Store has been included as **Figure 2**. The Surveyed Site Map on which **Figure 2** was based has been included as **Appendix A**.

2.0 ASSESSMENT INFORMATION

2.1 Assessment Activities

Twelve soil borings (SB-1 through SB-12) were installed during RA activities between October 22 and November 19, 1999. The soil borings were advanced in the vicinity of the former USTs, product lines, pump island and background area to determine the extent of affected soil in the vadose zone. Soil samples were collected at five-foot intervals and field screened with an organic vapor analyzer (OVA). The soil sample that exhibited the highest OVA reading or the sample collected at the maximum depth above the seasonal high water table was submitted for laboratory analyses. Soil boring logs and field screening results have been included as **Appendix B**.

In order to determine the horizontal extent of groundwater contamination, 32 temporary groundwater-sampling points (S-1 through S-32) were installed between October 11 and November 4, 1999 to depths ranging from 30 to 44 feet using solid stem augers. Screening was performed on the groundwater samples for BTEX constituents and MTBE using either a portable or laboratory gas chromatograph (GC). The locations of the temporary sampling points along with BTEX constituent and MTBE concentrations are shown on **Figure 3**. The results of GC screening have been summarized in **Table 1**. Complete reports of GC screening have been included as **Appendix C**.

Based on the GC screening results, a total of 18 Type II monitoring wells (MW-2 through MW-19) were installed between November 11 and November 19, 1999 along the inferred perimeter of the plume in order to monitor plume migration and within the plume to evaluate contaminant trends. On November 23, 1999 one Type III monitoring well (TW-1) was completed to determine the vertical extent of the plume. The locations of the monitoring wells are shown on **Figure 2**. Well construction records for the monitoring wells installed during IGWA and RA activities have been included as **Appendix D**. All soil and purge water generated during RA activities was placed in 55-gallon drums and transported to a licensed facility for disposal. Certificates of Disposal have been included as **Appendix E**.

2.2 Site Geology/Hydrogeology

Based on information obtained during assessment activities conducted to date, the site is underlain at shallow depths by undifferentiated, reddish brown to tan silty clays grading to saprolitic silty sands. Thin veins of partially weathered quartz were encountered at depths of approximately 15 to 20 feet in several of the borings. The percentages of gravel, sand, silt and clay in a soil sample (SB-8) collected at a depth of eight to ten feet were 2%, 56%, 28% and 16%, respectively.

Depths to groundwater measured on December 1, 1999 in the Type II monitoring wells ranged from 22.76 to 43.51 feet. Water table elevations ranged from 54.76 to 63.44 feet relative to a temporary benchmark with an assumed elevation of 100.00 feet. Based on this data groundwater flow was toward the east. The horizontal hydraulic gradient ranged from less than 0.01 feet per foot beneath the site to approximately 0.04 feet per foot to the east approaching The Pines subdivision. A Water Table Surface Map based on the December 1999 data has been included as **Figure 4**. A summary of groundwater elevation data is presented in **Table 2**.

Slug tests were performed on monitoring wells MW-2, MW-5 and MW-10 during RA activities. Hydraulic conductivities, calculated using the Bouwer and Rice method, ranged from 7.89×10^{-5} to 1.98×10^{-4} feet per minute (0.11 to 0.29 feet per day). Seepage velocities, calculated using the equation $V = K (dh/dl)/n_e$, ranged from 0.004 to 0.012 feet per day (1.46 to 4.38 feet per year). A summary of the results of slug test analyses performed during RA activities is presented in **Table 3**. Calculations and raw data from the slug tests have been included as **Appendix F**. Please note that the seepage velocity calculated from the results of the slug test conducted on MW-5 was used in the fate and transport model in order to provide the most conservative estimate of contaminant movement.

2.3 Soil Quality

The soil samples collected during RA activities were submitted for laboratory analyses for BTEX constituents and naphthalene using Method 8260 with Method 5035 preparation, and for PAHs using Method 8270. Soil samples SB-8 and SB-12 were also analyzed for diesel-range TPH and TOC using Method 3550/8015M and SW846 Method 9060M, respectively. Concentrations of one or more BTEX constituents and/or naphthalene that exceeded the applicable RBSLs were reported in soil samples collected from SB-4, SB-5, SB-7, SB-9 and SB-10. The soil boring locations and individual BTEX constituent and naphthalene concentrations in soil samples collected during RA activities are shown on **Figure 5.** A summary of the results of laboratory analyses of soil samples is presented in **Table 4.** Complete reports of laboratory analyses of soil samples collected during RA activities have been included as **Appendix G.**

2.4 Groundwater Quality

2.4.1 Monitoring Wells

All of the monitoring wells were developed and sampled on December 1-2, 1999. Analyses were performed for BTEX constituents, MTBE, naphthalene and EDB using Method 8260, PAHs using Method 8270, and total lead using EPA Method 200.7. Analyses were also performed for natural attenuation parameters that included total iron using EPA Method 200.7, nitrate using Standard Method 4500, sulfate using EPA Method 375.2 and methane using EPA Method 3810M. Concentrations of one or more dissolved phase BTEX constituents, MTBE and/or naphthalene that exceeded the RBSLs were reported in monitoring wells MW-1, MW-2, MW-6 through MW-10, MW-12 and TW-1. In addition, concentrations of total lead that exceeded the RBSL were reported in MW-2, MW-5 through MW-7, MW-10, MW-11, MW-15, MW-18 and MW-19. Inferred isoconcentration contours for individual BTEX constituents, MTBE, naphthalene and EDB are shown on **Figures 6** through **12,** respectively. The inferred vertical extent of total organic COC in groundwater is shown on the cross-sections, **Figures 13** and **14.** Please note that, due to the lack of precise information regarding construction details, groundwater quality data from water supply wells has not been used in the preparation of these figures. A summary of groundwater analytical data from the monitoring wells is presented in **Table 6.** A summary of groundwater analyses for natural attenuation parameters is presented in **Table 7.** Groundwater sampling data sheets have been included as **Appendix H.** A complete report of laboratory analyses of groundwater samples collected from the monitoring wells in December 1999 is included as **Appendix I.**

2.4.2 Water Supply Wells

On October 15, 1999, during discussions with the owners of the Vickery property, Mrs. Vickery mentioned that the water to the residence provided by the water supply well on the property had an unusual odor and taste. Based on this information, and with the approval of the SCDHEC, CBM sampled the Vickery well on October 18, 1999. Laboratory analyses were performed for BTEX constituents, MTBE and

naphthalene using Method 8260. Detectable concentrations of benzene (64.6 µg/L), xylenes (39.82 µg/L) and naphthalene (5.41 µg/L) were reported in the groundwater sample. The concentration of benzene exceeded the RBSL. On October 26, 1999, after approval was received from the SCDHEC, a granular activated carbon (GAC) unit was placed on the Vickery well by Barker Filtration, Inc. Four other water supply wells (Barnette, Beasley, Strife and Wood) located in The Pines subdivision were sampled by SCDHEC personnel on October 21, 1999. Laboratory analyses were performed for volatile organics using Method 8260B. No detectable concentrations of requested method constituents were reported in these four water supply wells. The Hill and Foster water supply wells, also located in The Pines subdivision, were sampled by CBM personnel on November 5 and November 19, 1999, respectively. Laboratory analyses were performed for BTEX constituents, MTBE and naphthalene using Method 8260. ~~No detectable concentrations of requested method constituents were reported in the Foster well. Detectable concentrations of benzene (1.43 µg/L) and naphthalene (2.46 µg/L) were reported in the Hill well.~~ Neither of the concentrations exceeded the RBSLs. However, as a precaution and with the approval of the SCDHEC, a ~~GAC unit was installed~~ on the Hill well on November 16, 1999 by Barker Filtration, Inc.

In order to monitor the quality of the groundwater being used at the residences, the Vickery and Hill water supply wells have been sampled and laboratory analyses performed for BTEX constituents, MTBE and naphthalene on a weekly basis since the installation of the GAC units. After some initial difficulties with the GAC units, including replacement of the carbon on the Vickery well, and shock chlorination of the unit on the Hill well, no detectable concentrations of BTEX constituents, MTBE or naphthalene have been reported in the wells after December 14, 1999. Please note that the well which currently provides water to the Smith residence was sampled during IGWA activities in January 1999 and during RA activities in December 1999. No detectable concentrations of requested Method 8260 constituents have been reported in the Smith well to date.

The locations of the Smith, Vickery, Hill and Strife water supply wells are shown on **Figure 2.** A historical summary of the results of the laboratory analyses of groundwater samples collected from the water supply wells is presented in **Table 8.** A complete report of laboratory analyses of water supply well samples collected between October 18, 1999 and January 5, 2000 is included as **Appendix J.**

3.0 TIER I EVALUATION

3.1 Comparison with RBSLs

Concentrations of dissolved phase benzene, toluene, ethylbenzene, xylenes, MTBE, naphthalene, EDB and total lead that exceeded the RBSLs were reported in groundwater samples collected RA activities. In addition, concentrations of each of the BTEX constituents and naphthalene reported in one or more of the soil samples collected at the site exceeded the RBSLs.

3.2 Site Conceptual Exposure Model

The site currently operates as a convenience store. The site is approximately 1.53 acres in size and is located in a rural/residential area in York County, South Carolina. South Carolina Highway 49 borders the site to the east. To the east of Highway 49 is The Pines, a medium density, single family subdivision. Undeveloped agricultural property borders the site to the south and west. A residential structure occupied by the Smith family borders the site to the north. Undeveloped and wooded property is located to the north of the Smith residence. Please note that the former Smith's Store was previously located across Highway 49 to the east of the site. The facility was reportedly used as a petroleum retail facility and country store and was reportedly closed in 1977.

As referenced in **Section 2.2**, the soils underlying the site consist primarily of undifferentiated silty clays grading to saprolitic silty sands with common veins of partially weathered quartz. Based on data collected in December 1999, the average depth to groundwater was 34.13 feet. Groundwater flow at the site was toward the east at calculated seepage velocities ranging from 1.46 to 4.38 feet per year. The groundwater plume is located on-site in the vicinity of the former pump island and UST basin and extends to the north beneath and parallel to Highway 49 and to the vicinity of the former Smith's Store to the east.

The subject site and surrounding properties are served by water supply wells. A municipal water supply is not currently available to the area. Therefore, exposure routes currently exist for ingestion, dermal contact or volatile inhalation of groundwater affected by the release. Concentrations of COC that exceeded the RBSLs were reported in soil samples collected in the on-site source area. However, the soil samples were collected from depths greater than six feet. Therefore, no exposure routes currently appear to exist for ingestion, dermal contact or volatile inhalation unless the soil is disturbed. The USTs at the site have been removed and there are no known plans for any excavation. However, since concentrations of COC in soil in the unsaturated zone exceeded the RBSLs and groundwater has been affected by the release, it is apparent that COC are leaching to the water table.

4.0 TIER II RISK EVALUATION

4.1 Exposure Points/Pathways

A total of 28 private potable wells were identified within a 1,000-foot radius of the site. Since no municipal water supply is available in the area, each of these wells represents a potential exposure point to groundwater affected by the release. One of the two water supply wells located on-site is currently in use. Potable water to residences in The Pines subdivision, located hydraulically down-gradient from the source area, is provided by 23 water supply wells. Three other water supply wells were identified approximately 800 to 900 feet north and hydraulically cross-gradient from the source area. Three of the wells are known to have been or currently are affected by the release. The original Smith well was replaced by the current water supply well after hydrocarbon contamination was initially reported at the site. Petroleum hydrocarbon constituents were detected in the Vickery and Hill wells during RA activities. However, as discussed in **Section 2.4.2**,

GAC units have been placed on these wells. Recent analytical results of groundwater samples collected from the Vickery and Hill wells after the GAC units do not indicate that the residents are being exposed to selected COC in groundwater. The underground utility lines at the site and on the adjoining properties to the east are located above the seasonal high water table and do not intersect known areas of soil contamination. Therefore, these utility lines do not appear to represent exposure points. Based on this information, the primary exposure pathway appears to be the migration of aqueous phase COC in groundwater to water supply wells in the area.

4.2 Points of Compliance

No alternative to groundwater as a source of potable water is available in the area. Two water supply wells, one inactive and one currently in use, are located on-site. In addition, detectable concentrations of petroleum hydrocarbon constituents have been reported in two of the water supply wells located hydraulically down-gradient from the site. Based on this information, the point of compliance should be established immediately down-gradient from the on-site source area

4.3 Soil Leachability Model

The risk of contaminants in soil leaching to the groundwater table was calculated using the SCDHEC Leachability Model for Petroleum Contaminated Soil. The results indicated that the concentrations of benzene, toluene, ethylbenzene, xylenes and naphthalene in the source area were above the calculated SSTLs. Benzo(a)anthracene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene and dibenzo(a,h)anthracene were not detected in soil at the site. Therefore, leachability data for these compounds were not calculated by the model. The results of soil leachability modeling are summarized in **Table 5**. The In-Situ Soil Risk Evaluation data forms are presented as **Appendix K**.

4.4 Fate and Transport Model

A fate and transport model based on the Domenico equations and modified by CBM was run to determine the risk posed by the release to potential receptors. For modeling purposes, Receptor 1 is the Vickery water supply well located approximately 220 feet east from the center of the source area, Receptor 2 is a water supply well located approximately 600 feet from the center of the source area and Receptor 3 is the down-gradient limit of the 1,000-foot receptor search radius. With the exception of MTBE and EDB, the fate and transport model was performed for each COC that exceeded the RBSL. No K_{oc} values for MTBE or EDB are presented in the SCDHEC RBCA guidance documents to account for retardation. Therefore, although concentrations of MTBE and EDB also exceeded the RBSLs, the fate and transport simulation was not performed for these COC. A summary of the fate and transport model input parameters and assumptions is presented in **Table 9**.

The results of the model indicate that concentrations of benzene would exceed the RBSL for groundwater at Receptor 1 in 5 to 6 years, toluene in 16 to 17 years, ethylbenzene in 68 to 69 years, and naphthalene in 20 to 21 years. The concentration of xylenes would not exceed the RBSL at Receptor 1 during

the simulation period of 1,000 years. The results of the model indicate that concentrations of benzene would exceed the RBSL for groundwater at Receptor 2 in 35 to 36 years, toluene in 95 to 96 years and naphthalene in 125 to 126 years. The model also indicated that the concentrations of benzene would exceed the RBSL for groundwater at Receptor 3 in 84 to 85 years, toluene in 211 to 212 years and naphthalene in 278 to 279 years. The concentrations of ethylbenzene and xylenes would not exceed the RBSL at Receptor 2 or Receptor 3 during the simulation period of 1,000 years. A summary of the results of the fate and transport model is presented in **Table 10**. The equations and calculations used in the model have been included as **Appendix L**.

4.5 Groundwater SSTL Calculations

Based on the results of the fate and transport model, the SSTLs for groundwater for each COC, with the exception of MTBE and EDB, that exceeded the RBSLs and three down-gradient receptors were calculated. The calculations indicated that the concentrations of benzene, toluene, ethylbenzene and naphthalene in the source area exceed the SSTLs necessary to maintain concentrations below the RBSLs at Receptor 1. The calculations also indicated that the concentrations of benzene, toluene and naphthalene in the source area exceed the SSTLs necessary to maintain concentrations below the RBSLs at Receptor 2 and Receptor 3. However, it is important to note that the model does not account for any reduction in source concentrations by natural attenuation during the simulation period. It is probable that natural attenuation would play an important role in reduction of source concentrations. A summary of the SSTLs for groundwater is presented in **Table 11**. The input parameters and equations used to calculate the SSTLs have been included as **Appendix M**.

5.0 CONCLUSIONS AND RECOMMENDATIONS

- Concentrations of benzene, toluene, ethylbenzene, xylenes and/or naphthalene that exceeded the calculated SSTLs were reported in five of the soil samples collected at the site. Although the worst case soil sample was collected beneath the former UST basin, it appears that releases also occurred from the former pump island and along the product lines. Because groundwater has been affected by the release, it is apparent that contaminated soil extends to the water table. Due to the depth to groundwater beneath the source area (approximately 30 feet) the affected soil represents a significant secondary source of groundwater contamination and remediation should be required.
- Concentrations of dissolved phase benzene, toluene, ethylbenzene, xylenes, MTBE, naphthalene and EDB that exceeded the RBSLs were reported in groundwater samples collected from Type II monitoring wells at the site and on adjacent properties. Based on the concentrations of benzene and naphthalene reported in MW-9, the cross-gradient extent of the groundwater plume to the north has not been adequately defined. Therefore, one additional Type II monitoring well should be installed to the north of MW-9 along Highway 49.

- Concentrations of lead that exceeded the RBSL were reported in groundwater samples collected from monitoring wells at the site and on adjacent properties. However, the concentrations of lead do not clearly correlate with levels of organic hydrocarbon constituents. Therefore, the extent to which lead is present as a result of the release or occurs at background levels is not clear at this time.
- Concentrations of each of the BTEX constituents and naphthalene that exceeded the RBSLs were reported in the groundwater sample collected from the Type III monitoring well (TW-1). Therefore, the vertical extent of groundwater contamination has not been adequately defined. However, prior to the installation of an additional Type III monitoring well, TW-1 should be resampled to determine if COC levels can be significantly reduced after extensive redevelopment.
- There is no alternative to groundwater as the source of potable water currently available in the area. A total of 28 water supply wells, including two wells located on-site, were identified within a 1,000-foot radius of the site. One of the water supply wells on-site has been affected by the release and is not currently in use. Based on available data, the well that provides water to the residence on-site has not been affected by the release. Two of the 23 water supply wells identified in The Pines subdivision, located hydraulically down-gradient from the on-site source area, have been affected by the release. GAC units have been installed on these wells. In addition, the results of fate and transport modeling indicate that receptors located down-gradient and within a 1,000-foot radius of the site are at risk from the release. Based on local hydrogeologic conditions, these receptors include many of the other 21 water supply wells identified in The Pines subdivision.
- Based on available data, the inferred configuration of the groundwater contaminant plume is not consistent with either the direction of groundwater flow or the surficial topography at the site. The plume extends from the on-site source area, and from the vicinity of MW-10 located adjacent to the former Smith's Store, along an elongated axis oriented north/south, parallel to Highway 49. Data obtained during RA activities indicates that the direction of groundwater flow is relatively uniform to the east, toward The Pines subdivision. The presence of hydrocarbon constituents in the Hill and Vickery wells indicates that a hydraulic connection exists between these wells and the surficial aquifer. In addition, groundwater quality data obtained from both temporary screening points and water supply wells indicates that the plume extends to the vicinity of the Hill and Vickery residences. This extent is not supported by groundwater quality data from the monitoring wells. Development of The Pines subdivision was completed within the last five years. It is possible that relatively recent withdrawals of groundwater from the water supply wells in the subdivision is inducing movement of the contaminant plume horizontally toward the east. In addition, it is possible that the withdrawal is inducing a vertical hydraulic gradient, causing the contaminant plume to move beneath some monitoring wells. Please note that the extent to which the withdrawal from water supply wells in the area is influencing the movement of the contaminant plume is conjectural. Additional information, including specific construction details of the water supply wells and

more complete potentiometric data during planned periods of withdrawal would be necessary to support this conjecture, and was beyond the scope of work for this RA.

- Due to the presence of numerous private water supply wells in the area, and the absence of an alternative water source, active remediation of groundwater contaminants will be required. Groundwater remediation should be initiated as rapidly as possible to reduce the risk from the release to additional water supply wells.
- Based on this information, the GAC units should remain in service on the Hill and Vickery wells until an alternative water source is made available to the area or until groundwater contaminants are reduced to acceptable levels. Post treatment water samples should be collected on a monthly basis in order to monitor groundwater quality until a carbon breakthrough time based on contaminant concentrations and water consumption can be established. A more infrequent monitoring program should also be established for those water supply wells considered to be at greatest risk from the release.
- The water supply well on-site that is not currently in use should be properly abandoned to ensure that it does not become an exposure point in the future.

6.0 LIMITATIONS

This report has been prepared for the exclusive use of Smith's Grocery for specific application to the referenced site in York County, South Carolina. The assessment was conducted based on the scope of work and level of effort desired by the client and with resources adequate only for that scope of work. Our findings have been developed in accordance with generally accepted standards of geology and hydrogeology practices in the State of South Carolina, available information, and our professional judgment. No other warranty is expressed or implied.

The data that is presented in this report are indicative of conditions that existed at the precise locations sampled and at the time the samples were collected. Additionally, the data obtained from samples would be interpreted as being meaningful with respect to parameters indicated in the laboratory report. No additional information can logically be inferred from this data.

Notes:

1. Concentrations in bold face type exceeded the January 1998 RBSLs.
2. Less than the detection limit specified in the screening report.
3. Not detected at or above the detection limit specified in the screening report.
4. Risk-Based Screening Level.

TABLE 2
SUMMARY OF GROUNDWATER ELEVATION DATA[1]
SMITH'S GROCERY
DECEMBER 1, 1999

Well No.	Date Completed	Top of Casing Elevation	Depth to Water	Water Table Elevation	Well Depth	Screened Interval
MW-1	1/16/99	91.16	27.85	63.31	35	25-35
MW-2	11/15/99	94.57	31.58	62.99	38	23-38
MW-3	11/12/99	91.91	28.62	63.29	35	25-35
MW-4	11/11/99	86.20	22.76	63.44	27	17-27
MW-5	11/11/99	89.29	26.20	63.09	30	20-30
MW-6	11/12/99	93.91	31.60	62.31	37	27-37
MW-7	11/12/99	91.68	30.41	61.27	36	26-36
MW-8	11/16/99	94.72	31.65	63.07	38	23-38
MW-9	11/16/99	90.54	29.31	61.23	36	21-36
MW-10	11/16/99	99.77	37.30	62.47	44	29-44
MW-11	11/16/99	100.46	38.23	62.23	44	29-44
MW-12	11/17/99	99.61	37.53	62.08	44	29-44
MW-13	11/17/99	100.39	41.22	59.17	47	32-47
MW-14	11/18/99	98.89	41.85	57.04	50	35-50
MW-15	11/18/99	100.18	43.23	56.95	50	35-50
MW-16	11/18/99	89.91	30.00	59.91	37	22-37
MW-17	11/19/99	94.46	34.67	59.79	40	25-40
MW-18	11/19/99	98.14	40.87	57.27	46	31-46
MW-19	11/19/99	98.27	43.51	54.76	50	35-50
TW-1	11/15/99	94.72	32.00[2]	62.72	61	56-61

729

Notes:
1. Elevations relative to a temporary benchmark with an assumed datum of 100.00 feet; data reported in feet.
2. Depth to groundwater measured on January 24, 2000.

TABLE 3
SUMMARY OF RESULTS
SLUG TEST ANALYSES[1]
SMITH'S GROCERY

Well No.	Hydraulic Conductivity		Seepage Velocity[2]	
	ft/min	ft/day	ft/day	ft/year
MW-2	1.04×10^{-4}	0.15	0.006	2.19
MW-5	1.98×10^{-4}	0.29	0.012	4.38
MW-10	7.89×10^{-5}	0.11	0.004	1.46

Notes:
1. Slug tests conducted on December 1, 1999.
2. Seepage velocities calculated using the equation $V = K(dh/dl)/n_e$, where:
   K = hydraulic conductivity
   dh/dl = hydraulic gradient = 0.01 ft/ft.
   n_e = effective porosity = 0.25

TABLE 4
SUMMARY OF LABORATORY ANALYSES[1]
SOIL SAMPLES[2]

173

Notes:

1. Analyses for BTEX constituents and naphthalene by Method 8260 with Method 5035 preparation; analyses for PAHs by Method 8270; analysis for TPH 3550 by Method 8015M; analysis for TOC by SW846 Method 9060M; all results reported in mg/kg.
2. Samples SB-1 through SB-5 were collected on November 19, 1999; samples SB-6 through SB-12 were collected on October 22, 1999.
3. Analysis not requested.
4. Concentrations in bold face type exceeded the RBSLs.
5. January 1998 Risk-Based Screening Levels for sandy soil where the vertical separation between the "worst case" soil sample and the water table is between 10 and 15 feet.

TABLE 5
SUMMARY OF SSTLs FOR SOIL
SMITH'S GROCERY

COC	Source Concentration (mg/kg)[1]	RBSL[2] (mg/kg)	SSTL (mg/kg)	Comments
Benzene	0.307	0.005	0.0032	SSTL exceeded
Toluene	5.010	1.666	0.832	SSTL exceeded
Ethylbenzene	9.420	1.337	0.448	SSTL exceeded
Xylenes	65.180	43.503	10.1	SSTL exceeded
Naphthalene	2.160	0.213	0.024	SSTL exceeded

Notes:
1. "Worst case" BTEX constituent and naphthalene concentrations based on analysis of a soil sample collected from SB-4 at a depth of 15-20 feet; no detectable concentrations of PAHs were reported.
2. January 1998 Risk-Based Screening Levels for sandy soils where the vertical separation between the "worst case" soil sample and the water table is between 10 and 15 feet.

Notes:

1. Analyses for BTEX constituents, MTBE and naphthalene by Method 8260; results reported in µg/L.
2. Concentrations in bold face type exceeded the RBSLs.
3. Less than the method detection limit specified in the laboratory report.
4. Barnette, Beasley, Strife and Wood water supply wells sampled by the SCDHEC.
5. January 1998 Risk-Based Screening Levels.

TABLE 9
SUMMARY OF FATE AND TRANSPORT MODEL INPUT PARAMETERS
DOWN-GRADIENT RECEPTORS
SMITH'S GROCERY

GENERAL INPUT PARAMETERS	
Source Width (ft)[1]	150
Vertical Thickness of Source (ft)[2]	38
Distance of Assumed Receptor (ft)[3]	220, 600, 1,000
Groundwater Flow Velocity (ft/yr)[4]	4.38
Time of Simulation (yrs)	1,000
Longitudinal Dispersivity (ft)	100
Transverse Dispersivity (ft)	33.33
Vertical Dispersivity (ft)	5.0
Total Organic Carbon (mg/kg)[5]	60
TPH 3550 (mg/kg)[6]	0.004
Effective Porosity (%)[7]	25
Bulk Density (g/cc)	1.53

CONTAMINANT SPECIFIC INPUT PARAMETERS					
Parameter	Benzene	Toluene	Ethylbenzene	Xylenes	Naphthalene
Source Area Concentration (µg/L)[8]	**36,000**	**60,000**	**4,900**	**24,900**	**900**
K_{oc} (ml/g)	81	133	176	639	1,543

Notes:

1. Based on the width of the hydrocarbon plume in the site vicinity, extended to include the former USTs, dispenser islands, product piping, and monitoring wells MW-1, MW-2, MW-8, MW-10 and TW-1; the monitoring wells with the overall highest hydrocarbon impact were incorporated into the source area.
2. Based on the approximate height of the water column in the Type III monitoring well (TW-1).
3. Receptor 1 is the Vickery water supply well located approximately 220 feet east from the center of the source area; Receptor 2 is a water supply well located approximately 600 feet east from the center of the source area; and Receptor 3 is the down-gradient limit of the 1,000-foot receptor search radius.
4. Based on the seepage velocity calculated using slug test data from MW-5 obtained in December 1999.
5. Based on the results of analyses of a soil sample collected from SB-12 in October 1999.
6. Based on the results of analyses of a soil sample collected from SB-8 in October 1999.
7. Referenced in Scott, 1969.
8. Source concentrations for benzene are based on the results of analyses of a groundwater sample collected from MW-2 in December 1999; source concentrations for toluene, ethylbenzene, xylenes and naphthalene are based on the results of analyses of a groundwater sample collected from MW-8 in December 1999.

TABLE 10
SUMMARY OF RESULTS
FATE AND TRANSPORT MODEL
SMITH'S GROCERY

COC	RBSL (µg/L)	Time[1] Receptor 1	Time Receptor 2	Time Receptor 3
Benzene	5	between 5 and 6	between 35 and 36	between 84 and 85
Toluene	1,000	between 16 and 17	between 95 and 96	between 211 and 212
Ethylbenzene	700	between 68 and 69	greater than 1,000	greater than 1,000
Xylenes	10,000	greater than 1,000	greater than 1,000	greater than 1,000
Naphthalene	10	between 20 and 21	between 125 and 126	between 278 and 279

Note:
1. Time in years for COC concentration at receptor to exceed the RBSL.

TABLE 11
SUMMARY OF SSTLs FOR GROUNDWATER
CLOSEST DOWN-GRADIENT RECEPTOR
SMITH'S GROCERY

COC	Source Area Concentration[1]	RBSL	Minimum SSTL at the Source	Comments
Benzene	36,000	5	18.5	SSTL exceeded
Toluene	60,000	1,000	3,700.06	SSTL exceeded
Ethylbenzene	4,900	700	2,590.06	SSTL exceeded
Xylenes	24,900	10,000	37,006.20	SSTL not exceeded
Naphthalene	900	10	37.04	SSTL exceeded

Note:

1. Source concentrations for benzene are based on the results of analyses of a groundwater sample collected from MW-2 in December 1999; source concentrations for toluene, ethylbenzene, xylenes and naphthalene are based on the results of analyses of a groundwater sample collected from MW-8 in December 1999; concentrations reported in µg/L.

Borehole SB-1 Sampling Date: 11/19/99 Sample Depth: 15 – 20'

Sampling Interval	Field Screening Results (ppm)	Lithology	Soil Conditions
0 – 5	0	Reddish brown silty clay	---
5 – 10	0	Reddish brown silty clayey sand	---
10 – 15	0	Reddish brown silty clayey sand	---
15 – 20	15	Reddish brown silty, clayey sand w/ quartz fragments	hydrocarbon odor

Borehole SB-2 Sampling Date: 11/19/99 Sample Depth: 15 – 20'

Sampling Interval	Field Screening Results (ppm)	Lithology	Soil Conditions
0 – 5	0	Reddish brown silty clay	---
5 – 10	10	Reddish brown silty micaceous clayey sand w/ quartz fragments	hydrocarbon odor
10 – 15	21	Reddish brown silty micaceous clayey sand w/ quartz fragments	hydrocarbon odor
15 – 20	135	Brown/tan silty, clayey sand	hydrocarbon odor

Borehole SB-3 Sampling Date: 11/19/99 Sample Depth: 15 – 20'

Sampling Interval	Field Screening Results (ppm)	Lithology	Soil Conditions
0 – 5	0	Reddish brown silty clay	---
5 – 10	0	Reddish brown silty clayey sand	hydrocarbon odor
10 – 15	0	Reddish brown silty clayey sand	hydrocarbon odor
15 – 20	2	Tan micaceous silty clayey sand	hydrocarbon odor

Borehole SB-4 Sampling Date: 11/19/99 Sample Depth: 15 – 20'

Sampling Interval	Field Screening Results (ppm)	Lithology	Soil Conditions
0 – 5	0	Reddish brown silty clay	---
5 – 10	12	Reddish brown silty micaceous clayey sand w/ white clay lenses	hydrocarbon odor
10 – 15	37	Reddish brown silty micaceous clayey sand w/ white clay lenses	hydrocarbon odor

Borehole SB-5 Sampling Date: 11/19/99 Sample Depth: 15 – 20'

Sampling Interval	Field Screening Results (ppm)	Lithology	Soil Conditions
0 – 5	0	Reddish brown silty clay	hydrocarbon odor
5 – 10	0	Reddish brown silty clayey sand	hydrocarbon odor
10 – 15	0	Reddish brown silty clayey sand	hydrocarbon odor
15 – 20	12	Reddish brown silty micaceous clayey sand w/ white clay lenses	slight hydrocarbon odor

Borehole SB-6 Sampling Date: 10/22/99 Sample Depth: 10 – 15'

Sampling Interval	Field Screening Results (ppm)	Lithology	Soil Conditions
0 – 5	5	Reddish brown clayey silt w/ quartz fragments	---
5 – 10	1,800	Reddish brown clayey silt w/ quartz fragments	hydrocarbon odor
10 – 15	3,800	Tan clayey silty sand w/ quartz fragments	hydrocarbon odor
15 – 20	340	Tan clayey silty sand w/ quartz fragments	hydrocarbon odor

Borehole SB-7 Sampling Date: 10/22/99 Sample Depth: 8 – 10'

Sampling Interval	Field Screening Results (ppm)	Lithology	Soil Conditions
0 – 2	8	Brown silty clay	---
2 – 4	37	Reddish brown silty clayey sand	---
4 – 6	No sample	No sample	---
6 – 8	600	Reddish brown silty clayey sand	hydrocarbon odor
8 - 10	10,000	Reddish brown/tan silty clayey sand	hydrocarbon odor

Borehole SB-8 Sampling Date: 10/22/99 Sample Depth: 8 – 10'

Sampling Interval	Field Screening Results (ppm)	Lithology	Soil Conditions
0 – 2	4	Gravel	---
2 – 4	1,000	Brown silt	hydrocarbon odor

Gas Chromatograph Report

Field Analysis of Groundwater Headspace Samples
Smith's Grocery, York, S.C.

November 2nd, 4th and 5th, 1999

Prepared for

CBM Environmental Services, Inc.

Prepared by

JKServices Inc.

Field Procedures

A PE Photovac Voyager Gas Chromatograph (GC) equipped with a Photo Ionization Detector (PID) was used to screen groundwater headspace samples prior to installation of permanent groundwater monitoring wells at Smith's Grocery, located in York, S.C. This "real time" field screening data aides in the horizontal and vertical delineation of dissolved phase hydrocarbon plumes and the placement of groundwater monitoring wells. Field screening usually results in minimizing drilling costs and increases the accuracy of monitoring well placement.

Prior to analyzing groundwater samples, the portable GC was calibrated by preparing a field standard consisting of MTBE, Benzene, Toluene, Ethylbenzene, M-Xylene and O-Xylene. On a daily basis, an individual laboratory prepared glass ampule with all six of the target constituents at a preanalyzed concentration of 1000 μg/mL (PPM) in methanol was used to produce a calibration standard. Five μl of this solution was added to a 100 mL volumetric flask of distilled water to produce a 50 μg/L stock solution.[1] Once the stock solution was completed, 20 mL of this solution was decanted into a nonpreserved VOA bottle and allowed to equilibrate in a 29.4° C water bath. Prior to analysis, the sample vial was shaken vigorously for a minimum of one minute to maximize stripping of the dissolved phase compounds into the vial headspace.[2,3] Following sample equalization, a syringe was used to perforate the septa in the sample container and remove vapors from the vial headspace. These vapors were then injected directly into the GC. Once the VOA headspace was analyzed, the GC was calibrated to the initial concentration of the compounds in the standard solution. The compounds chosen to calibrate the portable GC are listed in Table 1.

Table 1. Calibration Compounds

Calibration Compound	Concentration in μg/mL (PPM)
MTBE	0.05
Benzene	0.05
Toluene	0.05
E-Benzene	0.05
M-Xylene	0.05
O-Xylene	0.05

Following analysis of the calibration standard, a syringe blank or distilled water blank was analyzed to assure that cross contamination was not present in the injection syringe or GC column. In addition, distilled water blanks, syringe blanks and GC recalibration was carried out as field conditions dictated.

Groundwater samples were collected from approximately 40 - 45 feet below land surface from a temporary well installed using an auger rig (Figure 1). Once the auger was advanced to the desired depth, it was withdrawn and a 1" diameter PVC screen was inserted into the boring

(Figure 2). After groundwater entered the boring, a disposable bailer was used to collect groundwater samples and fill a 40 mL non preserved sample vial with 20 mL of groundwater. The vial was then brought back to the GC (Figure 3) and allowed to equilibrate in a 29.4° C water bath. Sample analysis is performed in the same manner as the initial standard analysis. For samples containing high levels of dissolved phase hydrocarbons, a field dilution was performed to avoid saturation of the GC detector, and minimize coelution of individual peaks.

Using these calibration techniques, analysis of groundwater headspace will yield comparative results but will not duplicate laboratory analysis due to differences in sample preparation/analysis methods. If representative groundwater samples are split with a laboratory at the time GC analysis is performed, a calibration curve can be produced to better estimate actual groundwater dissolved phase hydrocarbon concentrations.

Groundwater Results

On November 2nd, 4th and 5th 1999, 27 groundwater samples and two water well samples were collected and field screened using a PE Photovac Voyager GC. Field screening results are presented in Table 2.

APPENDIX D
WELL CONSTRUCTION RECORDS

DHEC

PROMOTE PROTECT PROSPER

Water Well Record
Bureau of Water
2600 Bull Street, Columbia, SC 29201-1708; (803) 734-5300

1. LOCATION OF WELL:

County: York
System Name: Smith's Grocery
Latitude: 35° 03' 36" N
Longitude: 81° 07' 25" W

Distance and Direction from Road Intersections: Charlotte Hwy. & Old McKinney Rd.

Street Address & City of Well Location: 3176 Charlotte Hwy., York, SC

Sketch Map: See Attached

2. CUTTING SAMPLES: ☐ Yes ☒ No

Geophysical Logs: ☐ Yes (please enclose) ☒ No

Formation Description	Thickness of Stratum	Depth to Bottom of Stratum
Red clay w/silt and some backfill	35'	35'
material consisting of trees, etc.		
Indicate Water Bearing Zones (Use a 2nd sheet if needed)		

3. REMARKS MW-1 Bentonite Seal 23' to 24'

4. OWNER OF WELL: Lois B. Smith
Address: 3176 Charlotte Hwy. York, SC 29745

MATERIAL ACCEPTED:

5 drums of non-hazardous petroleum contaminated water

DISPOSAL METHOD:

Waste water treatment

GARCO Inc. accepted the above listed materials on 01/6/00. The material has been assigned the following GARCO Identification number(s).

GARCO ID No.(s) AQ-2000 through AQ-2004

GARCO, Inc. has accepted custody of the above referenced non-hazardous material. This material has been determined to be non-hazardous by a material profile, generator knowledge and/or analytical data provided to GARCO, Inc.

A Q T E S O L V

A Program for

Automatic Estimation of Aquifer Coefficients

From Aquifer Test Data

By:

Glenn M. Duffield
and
James O. Rumbaugh, III

Geraghty & Miller Modeling Group
1895 Preston White Drive, Suite 301
Reston, VA 22091

(703) 476 - 0335

A Q T E S O L V is a user-friendly program designed to analyze data from aquifer tests automatically. Aquifer coefficients for a variety of aquifer test conditions can be estimated by A Q T E S O L V , including the following:

- o confined aquifers, unconfined aquifers, and leaky aquifers
- o pumping tests, injection tests, recovery tests, and slug tests

Features:

- o Interactive, menu-driven program design
- o Nonlinear least-squares estimation of aquifer coefficients
- o Statistical analysis of results
- o Complete graphical display of results

TEST DESCRIPTION

Data set........... MW2.DAT
Data set title..... SMITH'S GROCERY - SLUG TEST - MW-2
Company............ CBM ENVIRONMENTAL SERVICES,INC
Project............ 10629
Client............. LOIS SMITH
Location........... YORK, SOUTH CAROLINA
Test date.......... 12/1/1999
Test well.......... MW-2
Obs. well.......... N/A

Knowns and Constants:
No. of data points.................. 79
Radius of well casing............... 0.083
Radius of well...................... 0.354
Aquifer saturated thickness......... 6.38
Well screen length.................. 15
Static height of water in well...... 31.62
Log(Re/Rw).......................... 3.323
A, B, C............................. 0.000, 0.000, 2.377

ANALYTICAL METHOD

Bouwer-Rice (Unconfined Aquifer Slug Test)

RESULTS FROM STATISTICAL CURVE MATCHING

STATISTICAL MATCH PARAMETER ESTIMATES

	Estimate		Std. Error
K =	1.0376E-004	+/-	8.8358E-007
y0 =	8.1402E-001	+/-	2.5689E-003

ANALYSIS OF MODEL RESIDUALS

residual = calculated - observed
weighted residual = residual * weight

Weighted Residual Statistics:
Number of residuals............... 79
Number of estimated parameters.... 2
Degrees of freedom................ 77
Residual mean..................... -8.189E-005

SMITH'S GROCERY

Data Set: C:\AQTW\09322MW0.AQT
Date: 12/04/00 Time: 15:17:20

AQUIFER DATA

Saturated Thickness: 6.76 ft Anisotropy Ratio (Kz/Kr): 1.

WELL DATA

Initial Displacement: 1.345 ft Water Column Height: 37.24 ft
Casing Radius: 0.083 ft Wellbore Radius: 0.354 ft
Screen Length: 15. ft

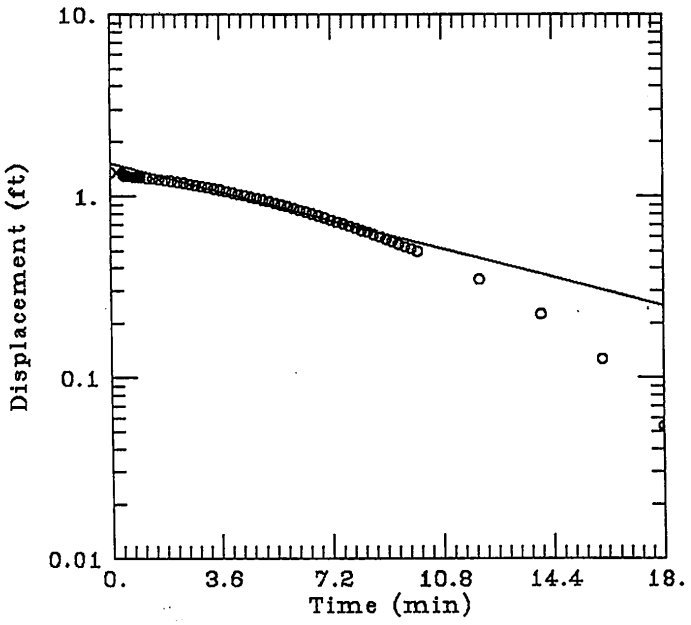
SOLUTION

Aquifer Model: Unconfined K = 4.494E-05 ft/min
Solution Method: Bouwer-Rice y0 = 1.335 ft

$K = 2.2 \times 10^{-7}$ m/s

CBM ENVIRONMENTAL SERVICES,INC	Client: LOIS SMITH
Project No.: 10629	Location: YORK, SOUTH CAROLINA

SMITH'S GROCERY – SLUG TEST – MW-10



DATA SET:
MW10.DAT
12/07/99

AQUIFER TYPE:
Unconfined
SOLUTION METHOD:
Bouwer-Rice
TEST DATE:
12/1/1999
TEST WELL:
MW-10
OBS. WELL:
N/A

ESTIMATED PARAMETERS:
K = 7.8891E-05 ft/min
y0 = 1.514,ft

TEST DATA:
H0 = 1.345 ft
rc = 0.083 ft
rw = 0.354 ft
L = 15. ft
b = 6.75 ft
H = 37.24 ft

A Q T E S O L V

A Program for

Automatic Estimation of Aquifer Coefficients

From Aquifer Test Data

By:

Glenn M. Duffield
and
James O. Rumbaugh, III

Geraghty & Miller Modeling Group
1895 Preston White Drive, Suite 301
Reston, VA 22091

(703) 476 - 0335

A Q T E S O L V is a user-friendly program designed to analyze data from aquifer tests automatically. Aquifer coefficients for a variety of aquifer test conditions can be estimated by A Q T E S O L V , including the following:

- o confined aquifers, unconfined aquifers, and leaky aquifers
- o pumping tests, injection tests, recovery tests, and slug tests

Features:

- o Interactive, menu-driven program design
- o Nonlinear least-squares estimation of aquifer coefficients
- o Statistical analysis of results
- o Complete graphical display of results

<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<>>

TEST DESCRIPTION

```
Data set........... MW10.DAT
Data set title..... SMITH'S GROCERY - SLUG TEST - MW-10
Company............ CBM ENVIRONMENTAL SERVICES,INC
Project............ 10629
Client............. LOIS SMITH
Location........... YORK, SOUTH CAROLINA
Test date.......... 12/1/1999
Test well.......... MW-10
Obs. well.......... N/A

Knowns and Constants:
   No. of data points................... 87
   Radius of well casing................ 0.083
   Radius of well....................... 0.354
   Aquifer saturated thickness.......... 6.76
   Well screen length................... 15
   Static height of water in well....... 37.24
   Log(Re/Rw)........................... 3.42
   A, B, C..............................  0.000,  0.000,  2.377
```

ANALYTICAL METHOD

Bouwer-Rice (Unconfined Aquifer Slug Test)

RESULTS FROM STATISTICAL CURVE MATCHING

STATISTICAL MATCH PARAMETER ESTIMATES

```
          Estimate          Std. Error
   K  =   7.1249E-005 +/-   1.8234E-006
   y0 =   1.3882E+000 +/-   1.0340E-002
```

ANALYSIS OF MODEL RESIDUALS

residual = calculated - observed
weighted residual = residual * weight

```
Weighted Residual Statistics:
   Number of residuals................ 87
   Number of estimated parameters.... 2
   Degrees of freedom................ 85
   Residual mean..................... -0.003065
```

Residual standard deviation..... 0.05712
Residual variance..... 0.003263

Model Residuals:

Notes:

1. Analyses for BTEX constituents, MTBE, and naphthalene using Method 8260; results reported in µg/L.
2. Concentrations in bold exceed the RBSL.
3. Not detected at or above the method detection limit specified in the laboratory analytical report.
4. Barnette, Beasley, Strife and Wood water supply wells sampled by the SCDHEC.
5. Risk Based Screening Level.

Section A — Required Client Information:

Company: CBM ENVIRONMENTAL SERVICES
Address: 377 CARCWINDS BLVD. SUITE 118
FORT MILL S.C. 29708
Phone: (803) 546-5989 Fax: (803) 5485892

Section B — Required Client Information:

Report To: SCOTT BALL
Invoice To: ←
P.O. 11342
Project Name: SMITHS GROCERY
Project Number: 10629

Client Information (Check quote/contract):
Requested Due Date: STANDARD TA *TAT:
* Under 14 day turnaround subject to laboratory and contractual obligations and may result in a Rush Turnaround Surcharge.
Turn Around Time (TAT) in calender days.

Section C — To Be Completed by Pace Analytical and Client

Quote Reference:
Project Manager:
Project #:
Profile #:
Requested Analysis: BTEX MTBE NAPH 8260; PAHS 8270; Pb/Iron; NITRATE; SULFATE; METHANE; EDB

Section D — Required Client Information:

SAMPLE ID — One character per box. (A-Z, 0-9 / .-) Sample IDs MUST BE UNIQUE

Valid Matrix Codes: MATRIX / CODE — WATER WT, SOIL SL, OIL OL, WIPE WP, AIR AR, TISSUE TS, OTHER OT

APPENDIX K
IN–SITU SOIL RISK EVALUATION DATA FORMS

Leachability Input Paramaters

South Carolina Department of Health and Environmental Control
Bureau of Underground Storage Tank Management

Site Data

Facility Name : SMITHS GROCERY Site ID # : 09322

Input Parameters

Percent Sand in soil		: 56.000	%			5%<sand<70%
Percent Clay in soil		: 16.000	%			5%<clay<60%
DAF		: 8.000				
Worst Case Soil Analyses	Benzene	: 0.307	mg/Kg	Cs		
	Toluene	: 5.010	mg/Kg	Cs		
	Ethylbenzene	: 9.420	mg/Kg	Cs		
	Xylenes	: 65.180	mg/Kg	Cs		
	Naphthalene	: 2.160	mg/Kg	Cs		
	Other COC	: 0.000	mg/Kg	Cs		
Natural organic carbon content		: 60.000	mg/Kg	foc		
TPH		: 0.004	mg/Kg	TPH		
Porosity		: 0.470	decimal%	phi		C1
Residual water content		: 0.070	decimal%	Wr		C2
Bulk density of soil		: 1.530	g/cc	Bd		C3
Soil hydraulic conductivity		: 0.252E-03	cm/sec	Kf		C4
Average annual recharge		: 25.000	cm	Hw		
Wetting front suction (-ve)		: -15.000	cm	Hf		C5
Distance from highest soil contamination to water table		: 430.680	cm	L		
Groundwater RBSL(or SSTL)		: 0.005	mg/L	Crbsl		

Figure

List possible human exposure pathways from soil:

Leachability Results and Conclusions

South Carolina Department of Health and Environmental Control
Bureau of Underground Storage Tank Management

Site Data

Facility Name : SMITHS GROCERY Site ID # : 09322
Chemical of Concern(Benzene,Naphthalene,etc): BENZENE

(Please use a separate form for each COC that exceeds the RBSL in soil)

Chemical Specific Data

Biodegradation half-life period	:	16.00 days	t1/2	Refer to
Soil/water partitioning coeff.	:	81.00 mg/L	Koc	Table
Henrys law constant	:	0.226E+00	H	C2

Results

				Equation Set	Step
Total organic carbon content	:	0.600E-04 decimal%	fcs	I	1
Air filled porosity	:	0.400E+00 decimal%	f	I	2
Leachate concentration	:	0.293E+01 mg/L	Cw	I	3
Infiltration time	:	0.527E+06 seconds	t	II	1
Velocity of water	:	0.844E+03 ft/yr	Vw	II	2
Soil/water distribution coeff.	:	0.486E-02 mL/g	Kd	III	1
COC percolation rate	:	0.831E+03 ft/yr	Vc	III	2
Time to reach groundwater	:	0.620E+01 days	Tc	IV	1
Concentration to protect groundwater	:	0.382E-02 mg/L	Cp	IV	2
Site specific target level	:	0.321E-02 mg/Kg	Csstl	V	

Conclusions

Does concentration of COC in soil exceed SSTL ? Yes ___ No ___

Risk of human exposure due to contaminated soil ? Yes ___ No ___

Leachability Results and Conclusions

South Carolina Department of Health and Environmental Control
Bureau of Underground Storage Tank Management

Site Data

Facility Name : SMITHS GROCERY Site ID # : 09322
Chemical of Concern(Benzene,Naphthalene,etc): TOLUENE

(Please use a separate form for each COC that exceeds the RBSL in soil)

Chemical Specific Data

Biodegradation half-life period	:	22.00 days	t1/2	Refer to
Soil/water partitioning coeff.	:	133.00 mg/L	Koc	Table
Henrys law constant	:	0.301E+00	H	C2

Results

					Equation Set	Step
Total organic carbon content	:	0.600E-04	decimal%	fcs	I	1
Air filled porosity	:	0.400E+00	decimal%	f	I	2
Leachate concentration	:	0.396E+02	mg/L	Cw	I	3
Infiltration time	:	0.527E+06	seconds	t	II	1
Velocity of water	:	0.844E+03	ft/yr	Vw	II	2
Soil/water distribution coeff.	:	0.798E-02	mL/g	Kd	III	1
COC percolation rate	:	0.823E+03	ft/yr	Vc	III	2
Time to reach groundwater	:	0.627E+01	days	Tc	IV	1
Concentration to protect groundwater	:	0.821E+00	mg/L	Cp	IV	2
Site specific target level	:	0.832E+00	mg/Kg	Csstl	V	

Conclusions

Does concentration of COC in soil exceed SSTL ? Yes ___ No ___

Risk of human exposure due to contaminated soil ? Yes ___ No ___

Leachability Results and Conclusions

Time to reach groundwater	:	0.795E+01	days	Tc	IV	1
Concentration to protect groundwater	:	0.223E-01	mg/L	Cp	IV	2
Site specific target level	:	0.237E-01	mg/Kg	Csstl	V	

Conclusions

Does concentration of COC in soil exceed SSTL ? Yes ___ No ___

Risk of human exposure due to contaminated soil ? Yes ___ No ___

Leachability Results and Conclusions

South Carolina Department of Health and Environmental Control
Bureau of Underground Storage Tank Management

Site Data

Facility Name : SMITHS GROCERY Site ID # : 09322
Chemical of Concern(Benzene,Naphthalene,etc): BENZO(A)ANTHRACENE

(Please use a separate form for each COC that exceeds the RBSL in soil)

Chemical Specific Data

Biodegradation half-life period	: 679.00	days	t1/2	Refer to
Soil/water partitioning coeff.	: 1380384.00	mg/L	Koc	Table
Henrys law constant	: 0.200E-03		H	C2

Results

				Equation Set	Step
Total organic carbon content	: 0.600E-04	decimal%	fcs	I	1
Air filled porosity	: 0.400E+00	decimal%	f	I	2
Leachate concentration	: 0.000E+00	mg/L	Cw	I	3
Infiltration time	: 0.527E+06	seconds	t	II	1
Velocity of water	: 0.844E+03	ft/yr	Vw	II	2
Soil/water distribution coeff.	: 0.828E+02	mL/g	Kd	III	1
COC percolation rate	: 0.312E+01	ft/yr	Vc	III	2
Time to reach groundwater	: 0.165E+04	days	Tc	IV	1
Concentration to protect groundwater	: 0.185E-02	mg/L	Cp	IV	2
Site specific target level	: N/A	mg/Kg	Csstl	V	

Conclusions

Does concentration of COC in soil exceed SSTL ? Yes ___ No ___

Risk of human exposure due to contaminated soil ? Yes ___ No ___

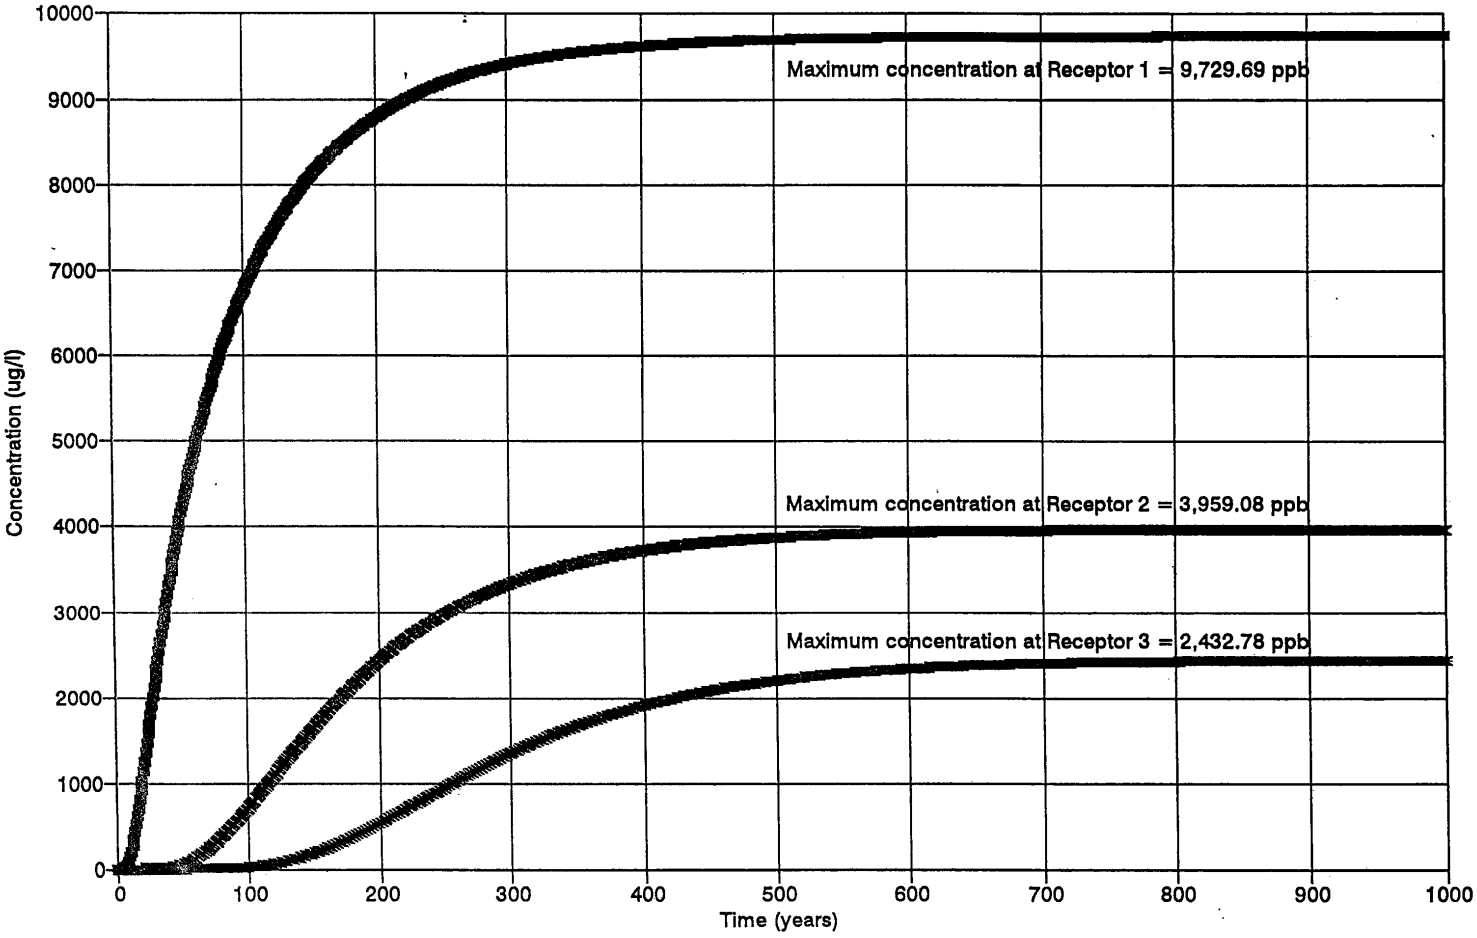
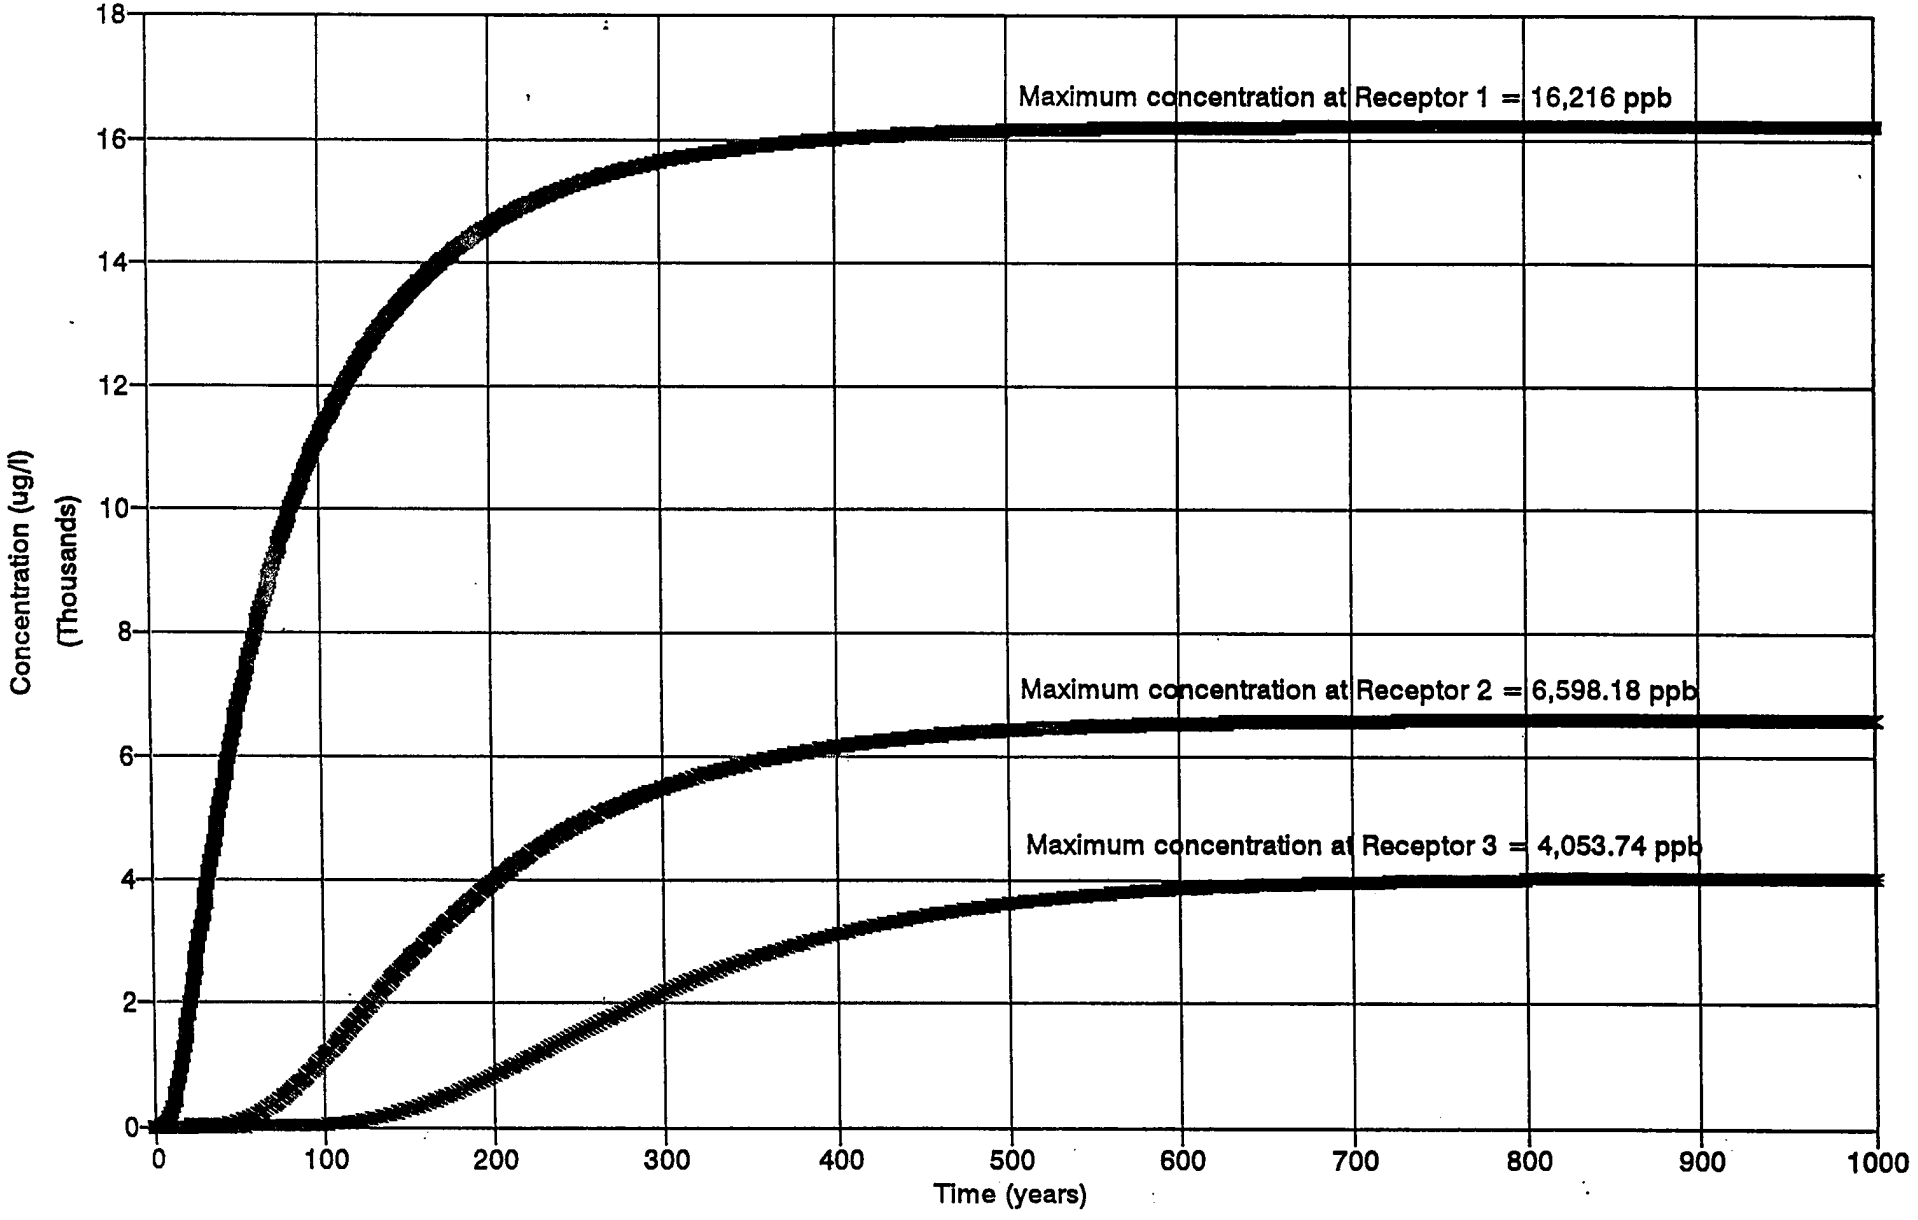
FATE AND TRANSPORT MODEL

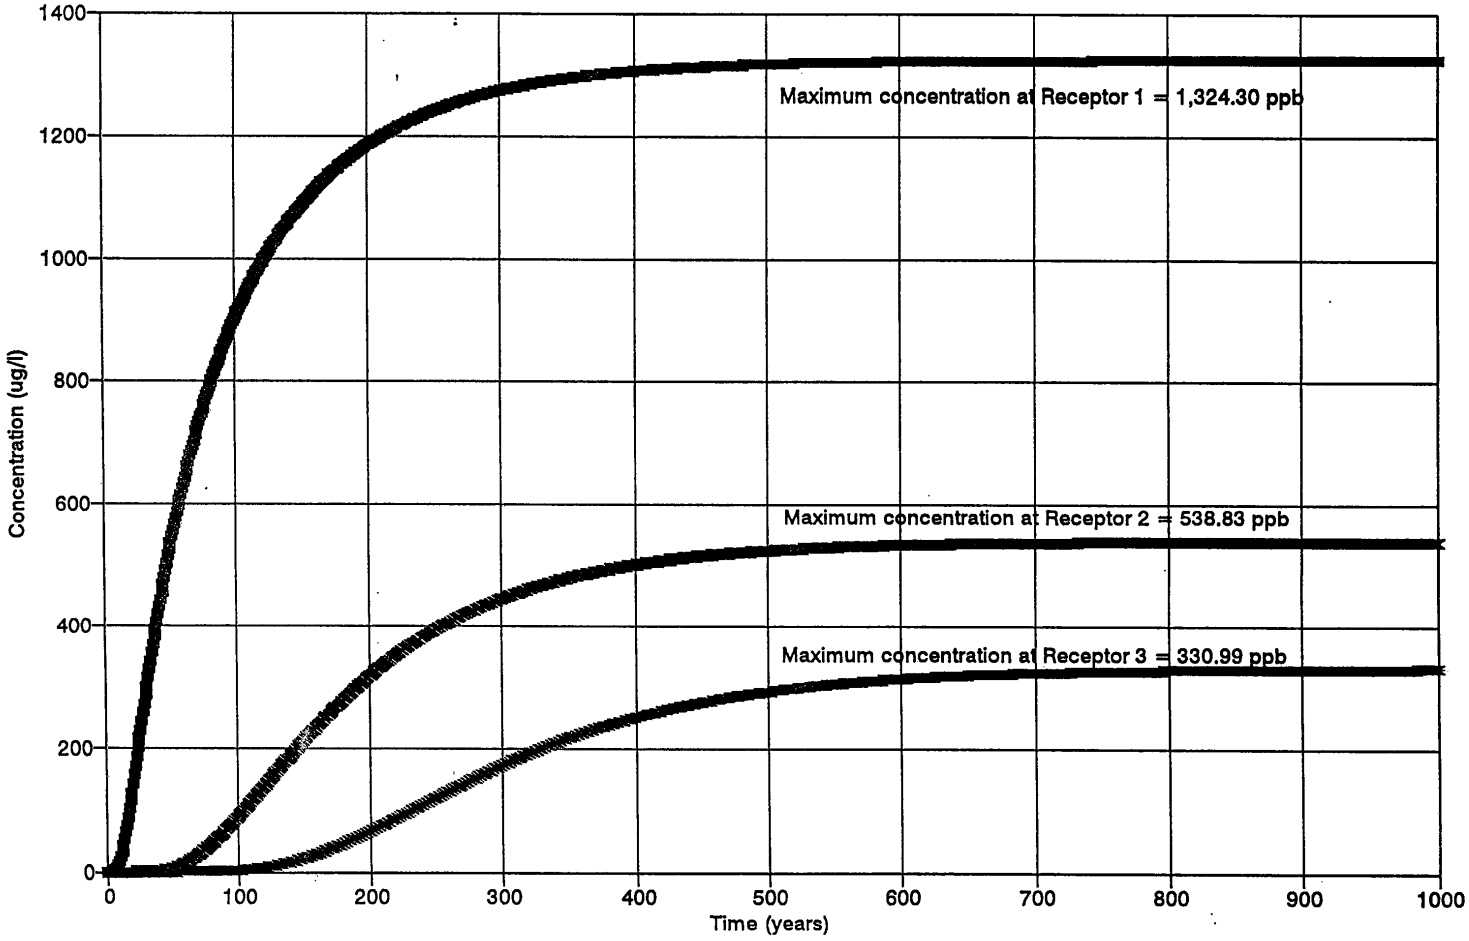
Change in Receptor Concentration
Benzene



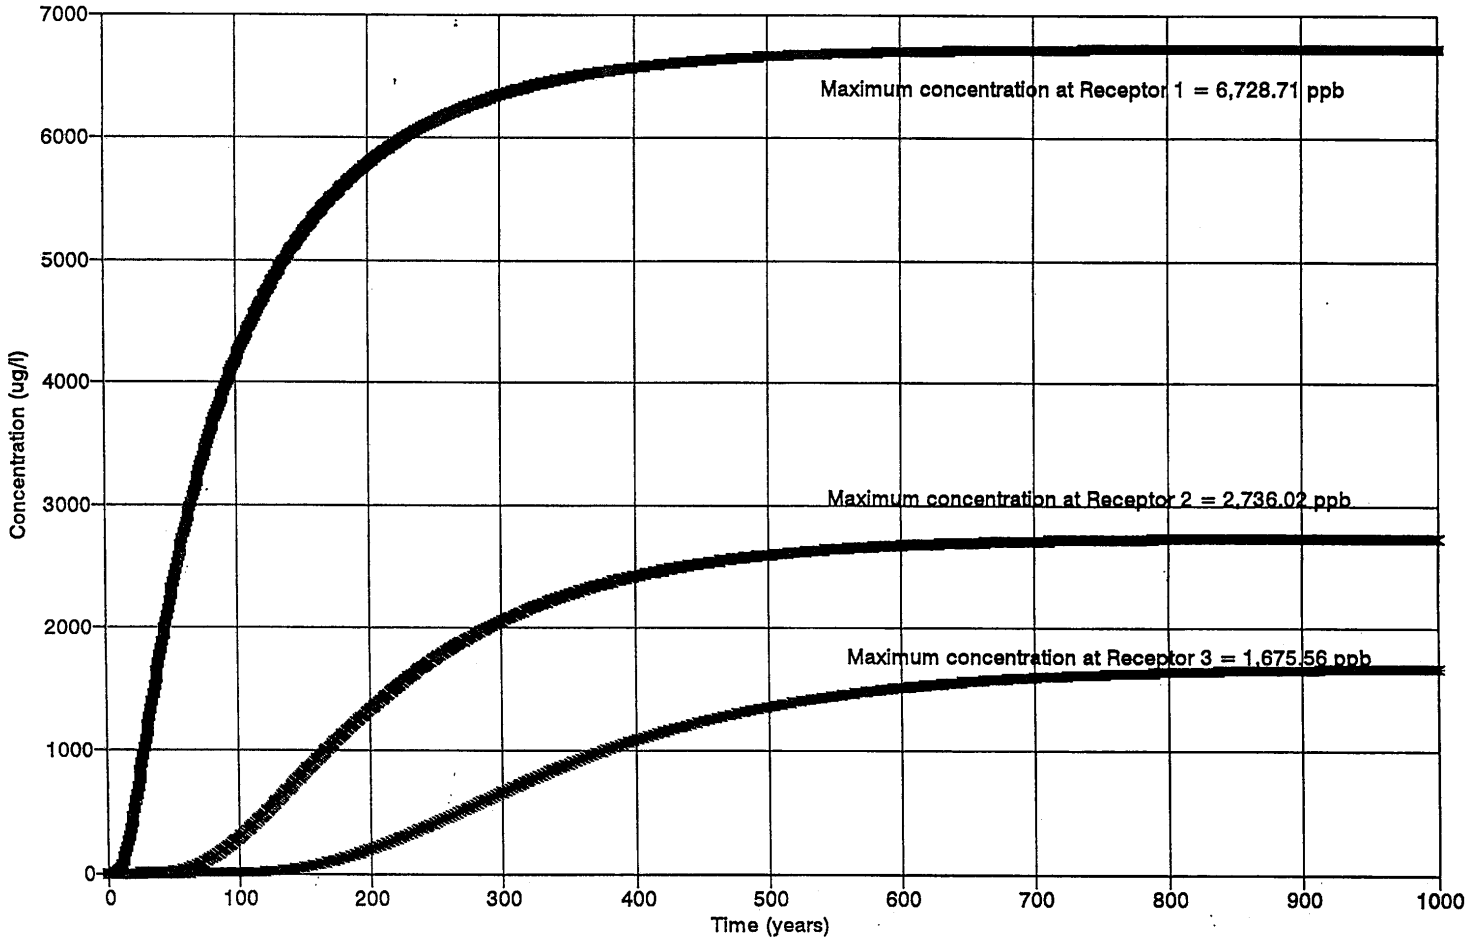
Change in Receptor Concentration
Toluene



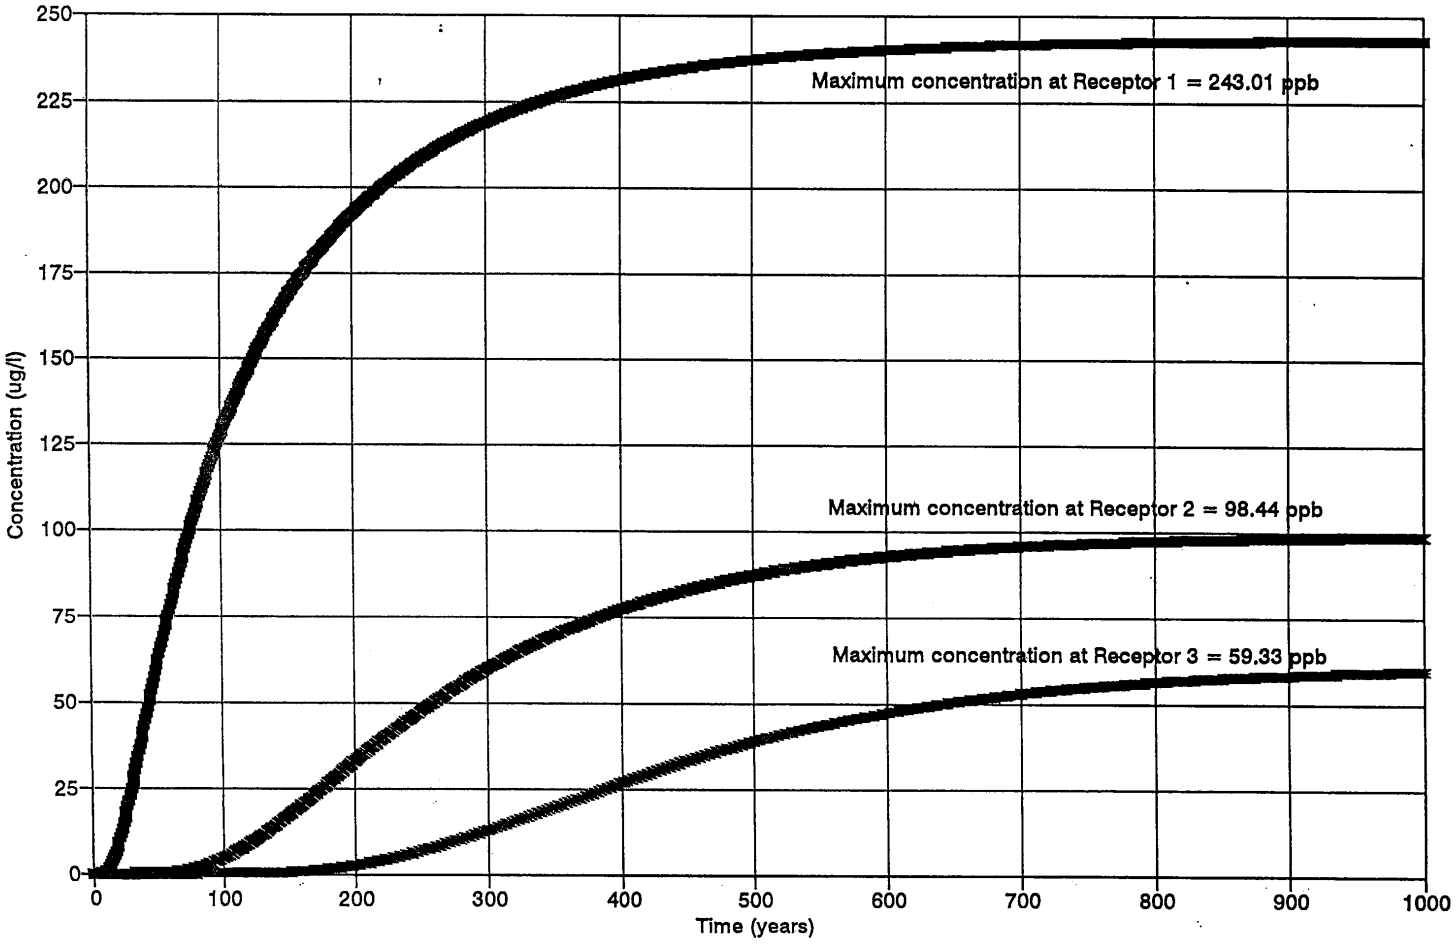
Change in Receptor Concentration
Ethylbenzene



Change in Receptor Concentration
Xylenes



Change in Receptor Concentration
Naphthalene



TITLE : SMITHS GROCERY
CBM JOB # : 10629
SC ID # : 09322

Contaminant of Concern is BENZENE

C(x,0,0,t)=(C0/2)erfc[(x-vt)/2(Ax*vt)1/2]
erf[Y/4(Ay*x)1/2]erf[Z/2(alphz*x)1/2]

INPUT PARAMETERS :
Concentration of Source (ppb) = 36000.00
Source Width (ft) = 150.00
Vertical Thickness of Source (ft) = 38.00
Distance of Recipient (ft) =1000.00
Groundwater Flow Velocity (ft/yr) = 3.65
Time of Simulation (years) = 1000.00
Longitudinal Dispersivity (ft) = 100.000000
Transverse Dispersivity (ft) = 33.333332
Vertical Dispersivity (ft) = 5.000000
Total Organic Carbon, TOC (mg/kg) = 60.00
Total Petroleum Hydrocarbons,TPH(mg/kg) = 0.00
Soil/Water Part. Coefficient,Koc(ml/g) = 81.00
Organic Carbon Fraction, foc (%) = 0.0000600
Porosity = .250
Bulk Density (g/cc) = 1.530
Retardation Factor, Rf = 1.02974
Contaminant Velocity (ft/yr) = 3.54457

CONCENTRATION COMPUTED FOR :
220.000 ft. 600.000 ft 1000.000 ft.

TITLE : SMITHS GROCERY

CBM JOB # : 10629
SC ID # : 09322

Contaminant of Concern is TOLUENE

C(x,0,0,t)=(C0/2)erfc[(x-vt)/2(Ax*vt)1/2]
erf[Y/4(Ay*x)1/2]erf[Z/2(alphz*x)1/2]

INPUT PARAMETERS :
Concentration of Source (ppb) = 60000.00
Source Width (ft) = 150.00
Vertical Thickness of Source (ft) = 38.00
Distance of Recipient (ft) =1000.00
Groundwater Flow Velocity (ft/yr) = 3.65
Time of Simulation (years) = 1000.00
Longitudinal Dispersivity (ft) = 100.000000
Transverse Dispersivity (ft) = 33.333332
Vertical Dispersivity (ft) = 5.000000
Total Organic Carbon, TOC (mg/kg) = 60.00
Total Petroleum Hydrocarbons,TPH(mg/kg) = 0.00
Soil/Water Part. Coefficient,Koc(ml/g) = 133.00
Organic Carbon Fraction, foc (%) = 0.0000600
Porosity = .250
Bulk Density (g/cc) = 1.530
Retardation Factor, Rf = 1.04884
Contaminant Velocity (ft/yr) = 3.48004

CONCENTRATION COMPUTED FOR :
220.000 ft. 600.000 ft 1000.000 ft.

TITLE : SMITHS GROCERY
CBM JOB # : 10629

SC ID # : 09322

Contaminant of Concern is ETHYLBENZENE

C(x,0,0,t)=(C0/2)erfc[(x-vt)/2(Ax*vt)1/2]
erf[Y/4(Ay*x)1/2]erf[Z/2(alphz*x)1/2]

INPUT PARAMETERS :
Concentration of Source (ppb) = 4900.00
Source Width (ft) = 150.00
Vertical Thickness of Source (ft) = 38.00
Distance of Recipient (ft) =1000.00
Groundwater Flow Velocity (ft/yr) = 3.65
Time of Simulation (years) = 1000.00
Longitudinal Dispersivity (ft) = 100.000000
Transverse Dispersivity (ft) = 33.333332
Vertical Dispersivity (ft) = 5.000000
Total Organic Carbon, TOC (mg/kg) = 60.00
Total Petroleum Hydrocarbons,TPH(mg/kg) = 0.00
Soil/Water Part. Coefficient,Koc(ml/g) = 176.00
Organic Carbon Fraction, foc (%) = 0.0000600
Porosity = .250
Bulk Density (g/cc) = 1.530
Retardation Factor, Rf = 1.06463
Contaminant Velocity (ft/yr) = 3.42842

CONCENTRATION COMPUTED FOR :
220.000 ft. 600.000 ft 1000.000 ft.

TITLE : SMITHS GROCERY
CBM JOB # : 10629
SC ID # : 09322

Contaminant of Concern is XYLENES

C(x,0,0,t)=(C0/2)erfc[(x-vt)/2(Ax*vt)1/2]
erf[Y/4(Ay*x)1/2]erf[Z/2(alphz*x)1/2]

INPUT PARAMETERS :
Concentration of Source (ppb) = 24900.00
Source Width (ft) = 150.00
Vertical Thickness of Source (ft) = 38.00
Distance of Recipient (ft) =1000.00
Groundwater Flow Velocity (ft/yr) = 3.65
Time of Simulation (years) = 1000.00
Longitudinal Dispersivity (ft) = 100.000000
Transverse Dispersivity (ft) = 33.333332
Vertical Dispersivity (ft) = 5.000000
Total Organic Carbon, TOC (mg/kg) = 60.00
Total Petroleum Hydrocarbons,TPH(mg/kg) = 0.00
Soil/Water Part. Coefficient,Koc(ml/g) = 639.00
Organic Carbon Fraction, foc (%) = 0.0000600
Porosity = .250
Bulk Density (g/cc) = 1.530
Retardation Factor, Rf = 1.23465
Contaminant Velocity (ft/yr) = 2.95630

CONCENTRATION COMPUTED FOR :
220.000 ft. 600.000 ft 1000.000 ft.

TITLE : SMITHS GROCERY
CBM JOB # : 10629
SC ID # : 09322

Contaminant of Concern is NAPHTHALENE

C(x,0,0,t)=(C0/2)erfc[(x-vt)/2(Ax*vt)1/2]
erf[Y/4(Ay*x)1/2]erf[Z/2(alphz*x)1/2]

INPUT PARAMETERS :
Concentration of Source (ppb) = 900.00
Source Width (ft) = 150.00
Vertical Thickness of Source (ft) = 38.00
Distance of Recipient (ft) =1000.00
Groundwater Flow Velocity (ft/yr) = 3.65
Time of Simulation (years) = 1000.00
Longitudinal Dispersivity (ft) = 100.000000
Transverse Dispersivity (ft) = 33.333332
Vertical Dispersivity (ft) = 5.000000
Total Organic Carbon, TOC (mg/kg) = 60.00
Total Petroleum Hydrocarbons,TPH(mg/kg) = 0.00
Soil/Water Part. Coefficient,Koc(ml/g) = 1543.00
Organic Carbon Fraction, foc (%) = 0.0000600
Porosity = .250
Bulk Density (g/cc) = 1.530
Retardation Factor, Rf = 1.56661
Contaminant Velocity (ft/yr) = 2.32987

CONCENTRATION COMPUTED FOR :
220.000 ft. 600.000 ft 1000.000 ft.

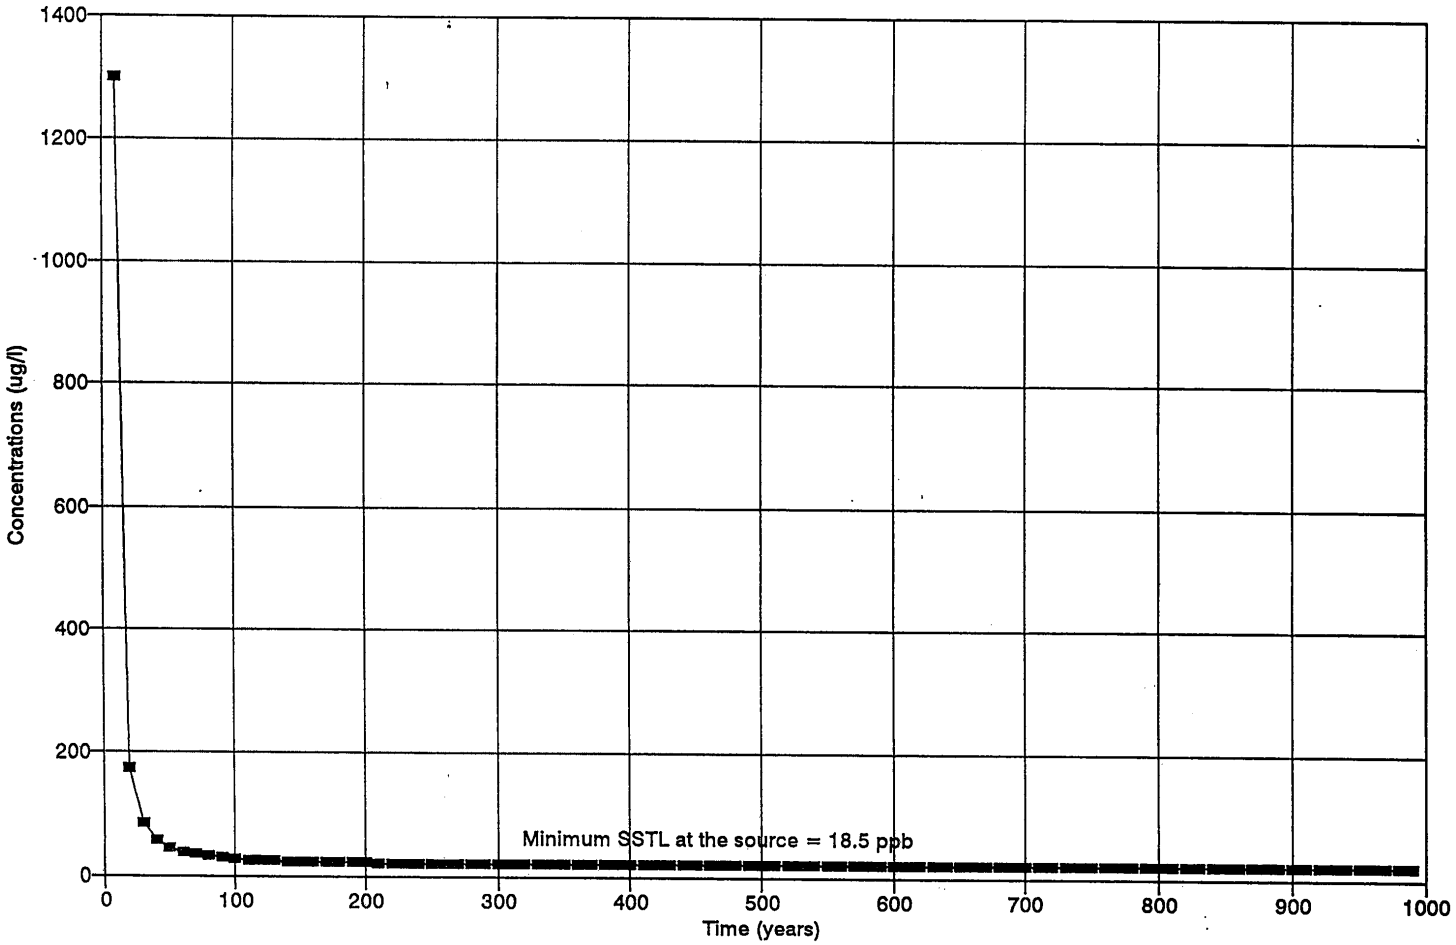
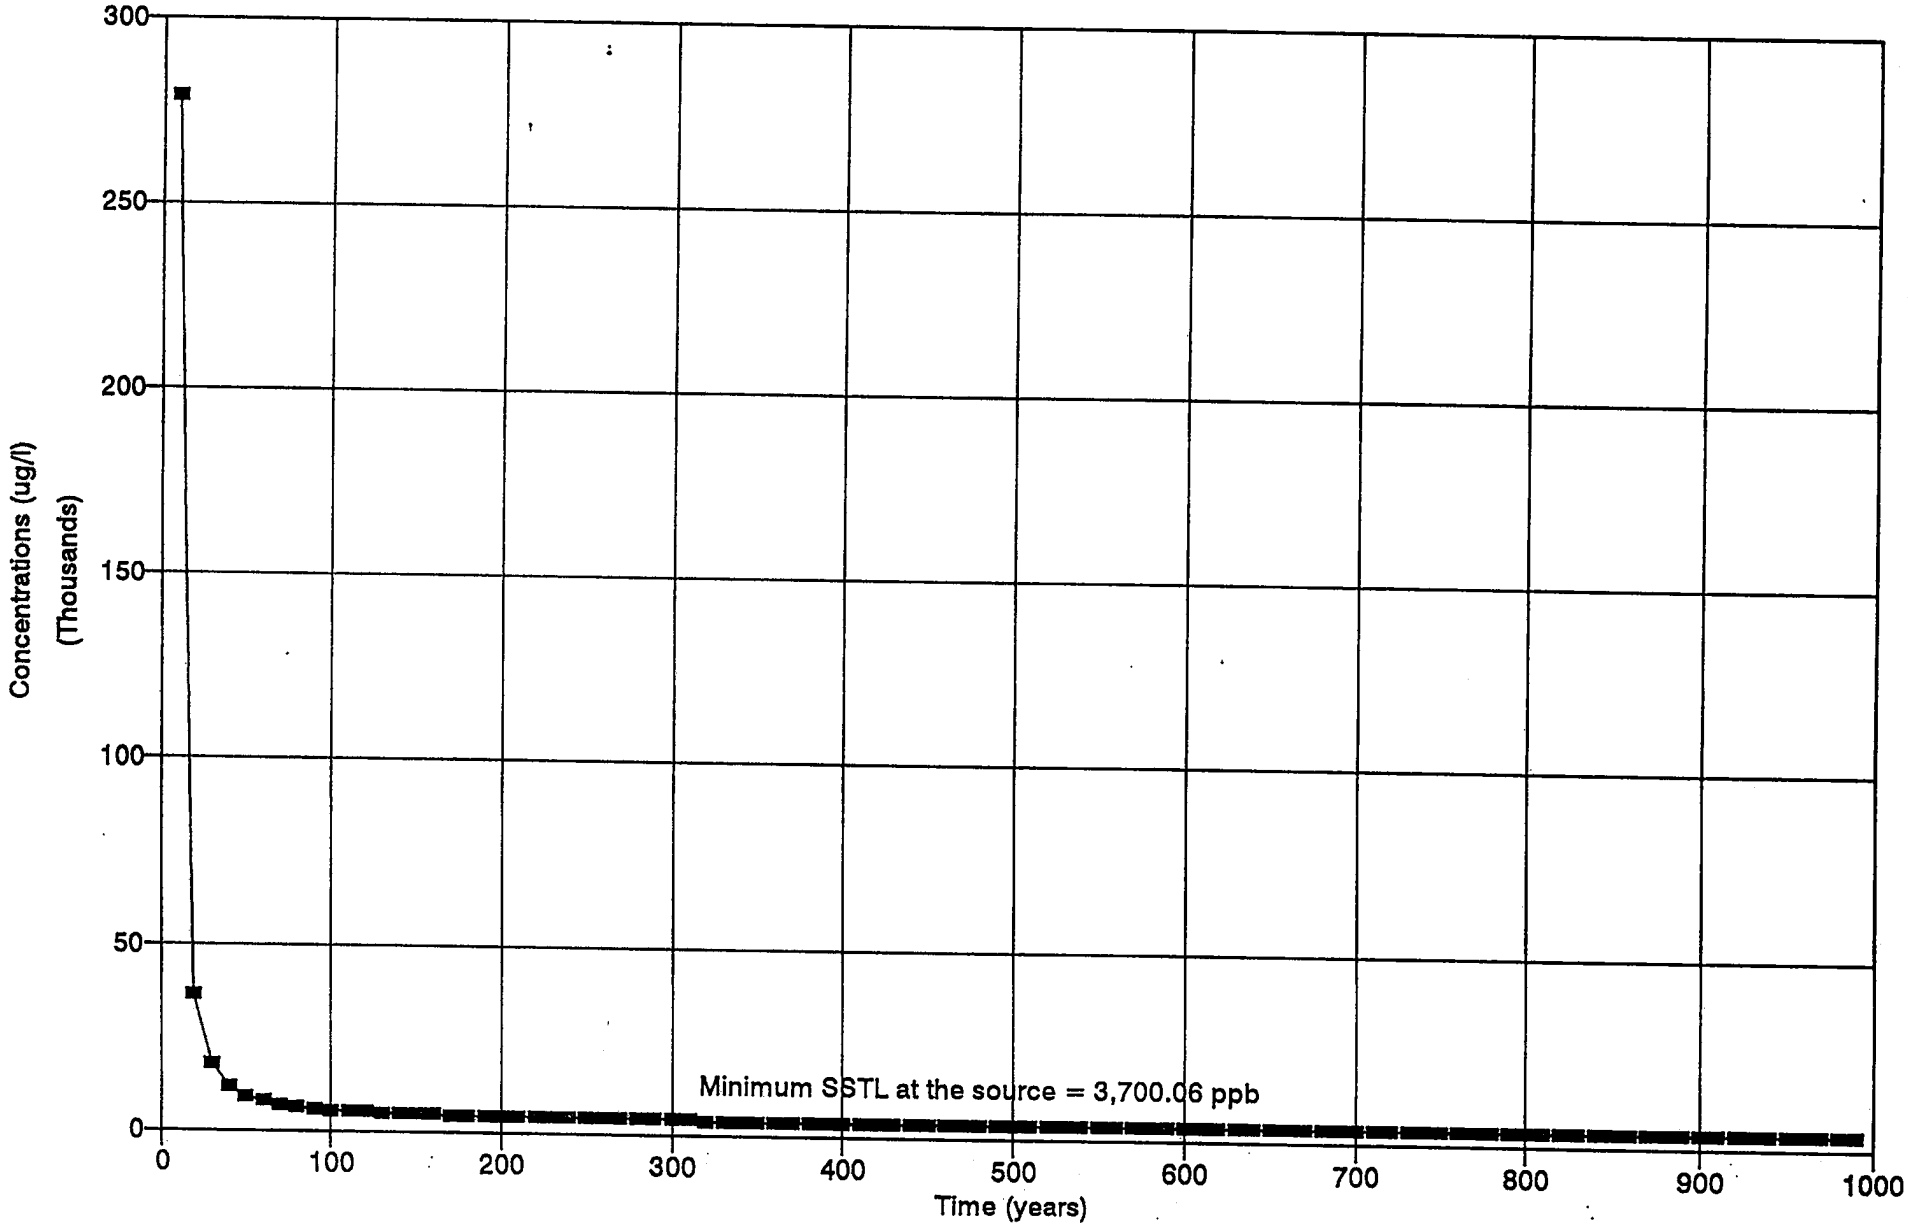
APPENDIX M
SSTL CALCULATIONS

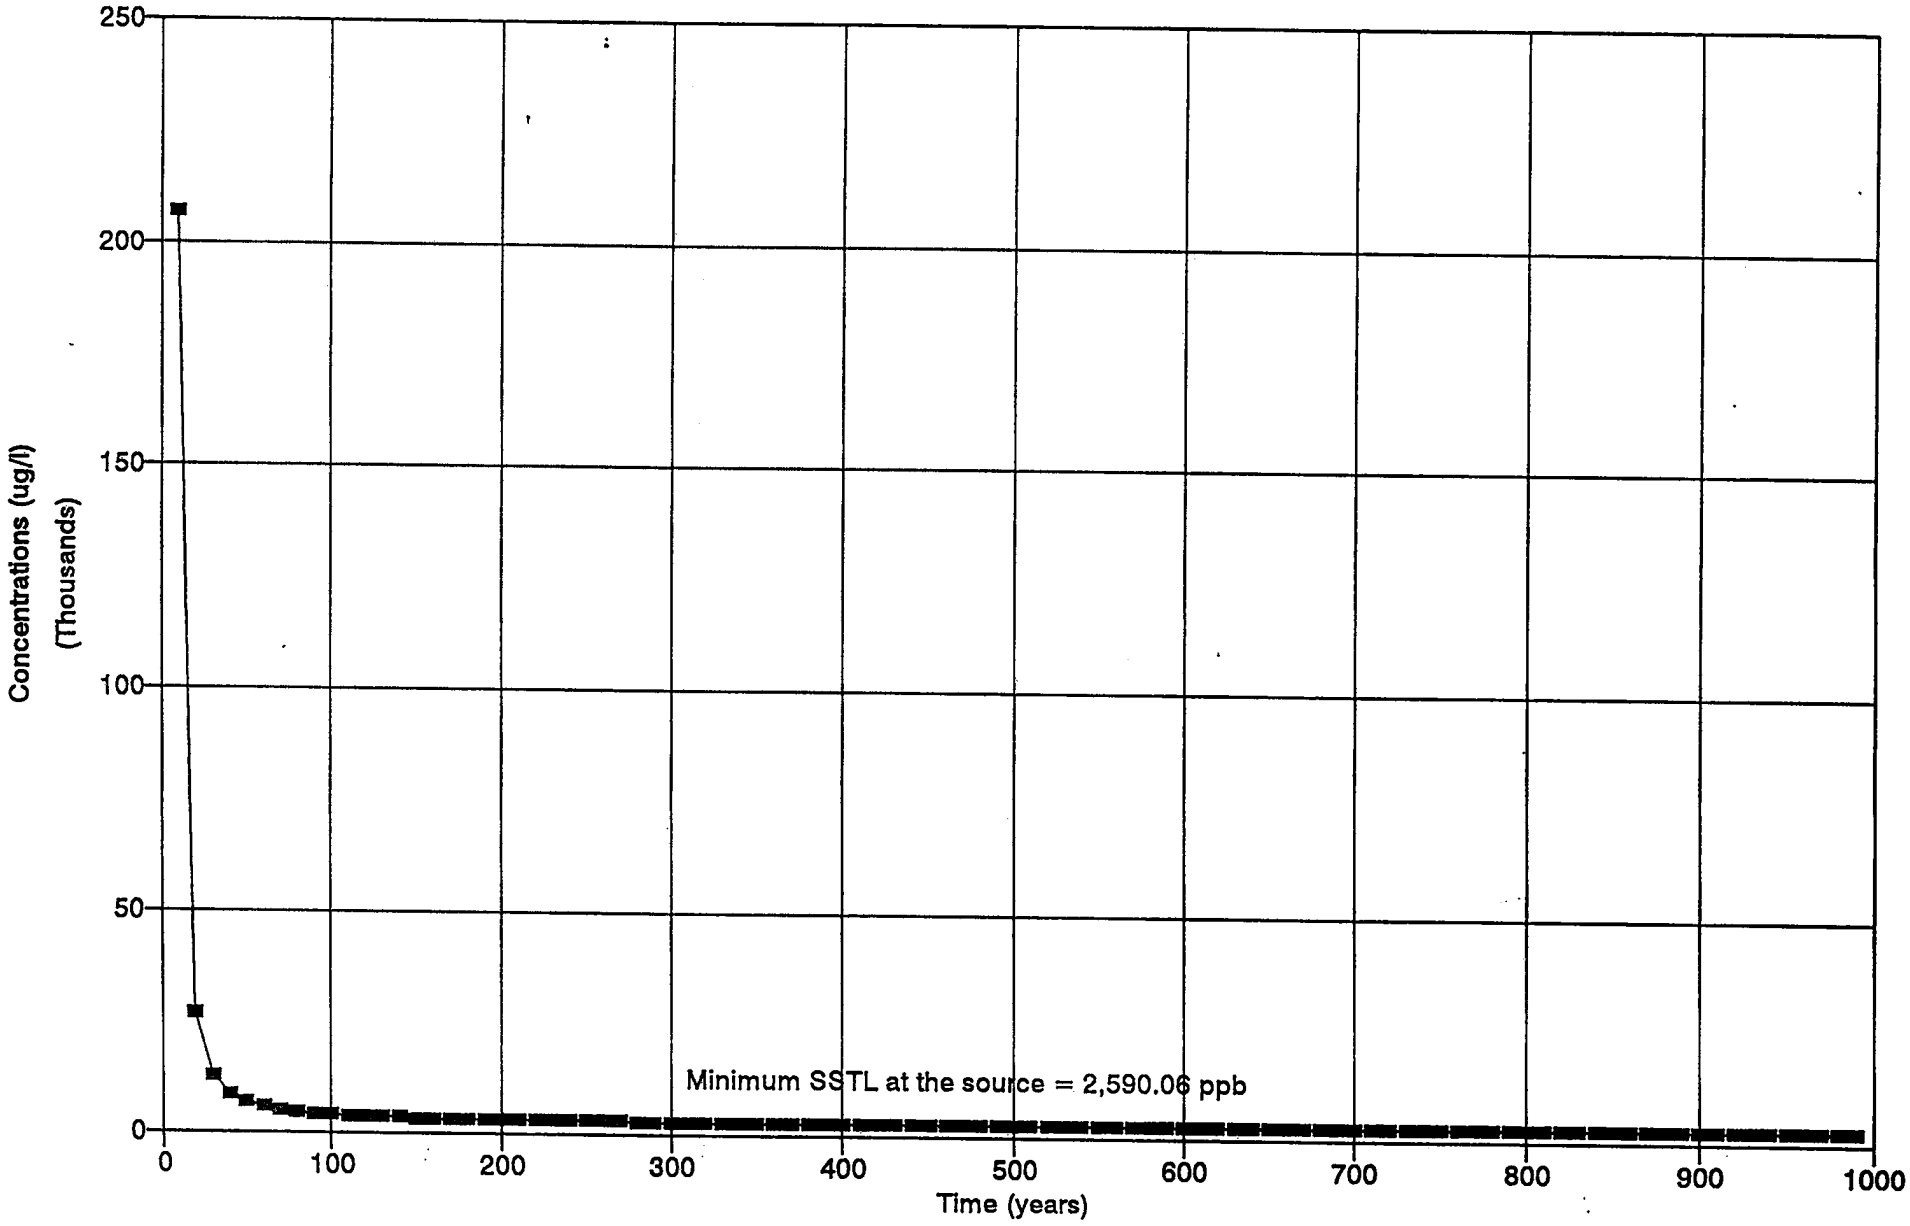
Source Concentrations
Benzene



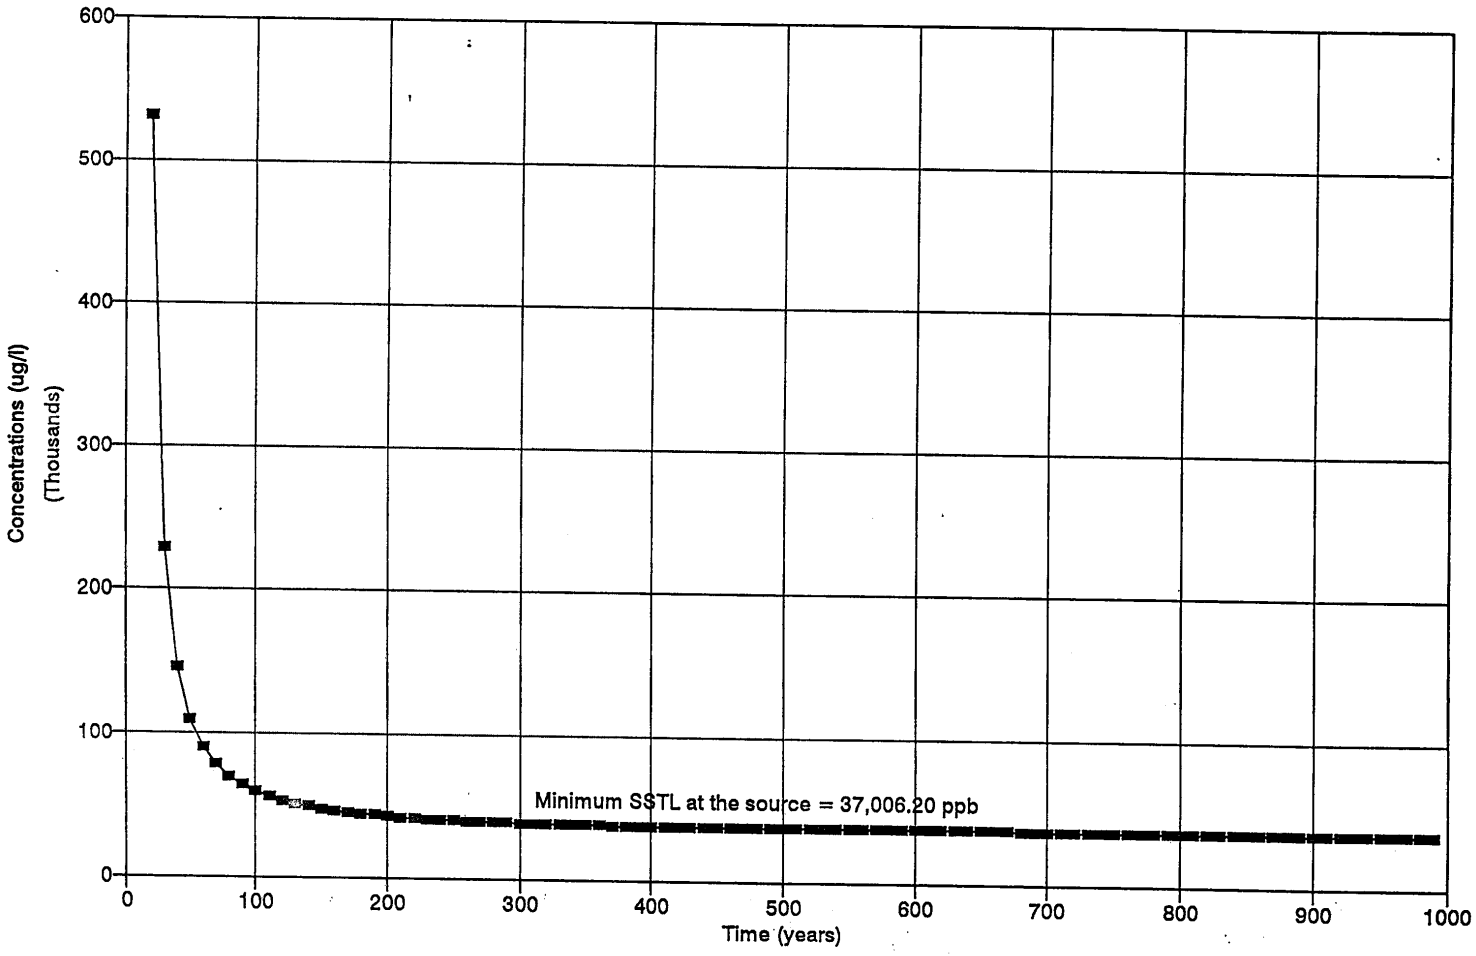
Source Concentrations
Toluene



Source Concentrations
Ethylbenzene

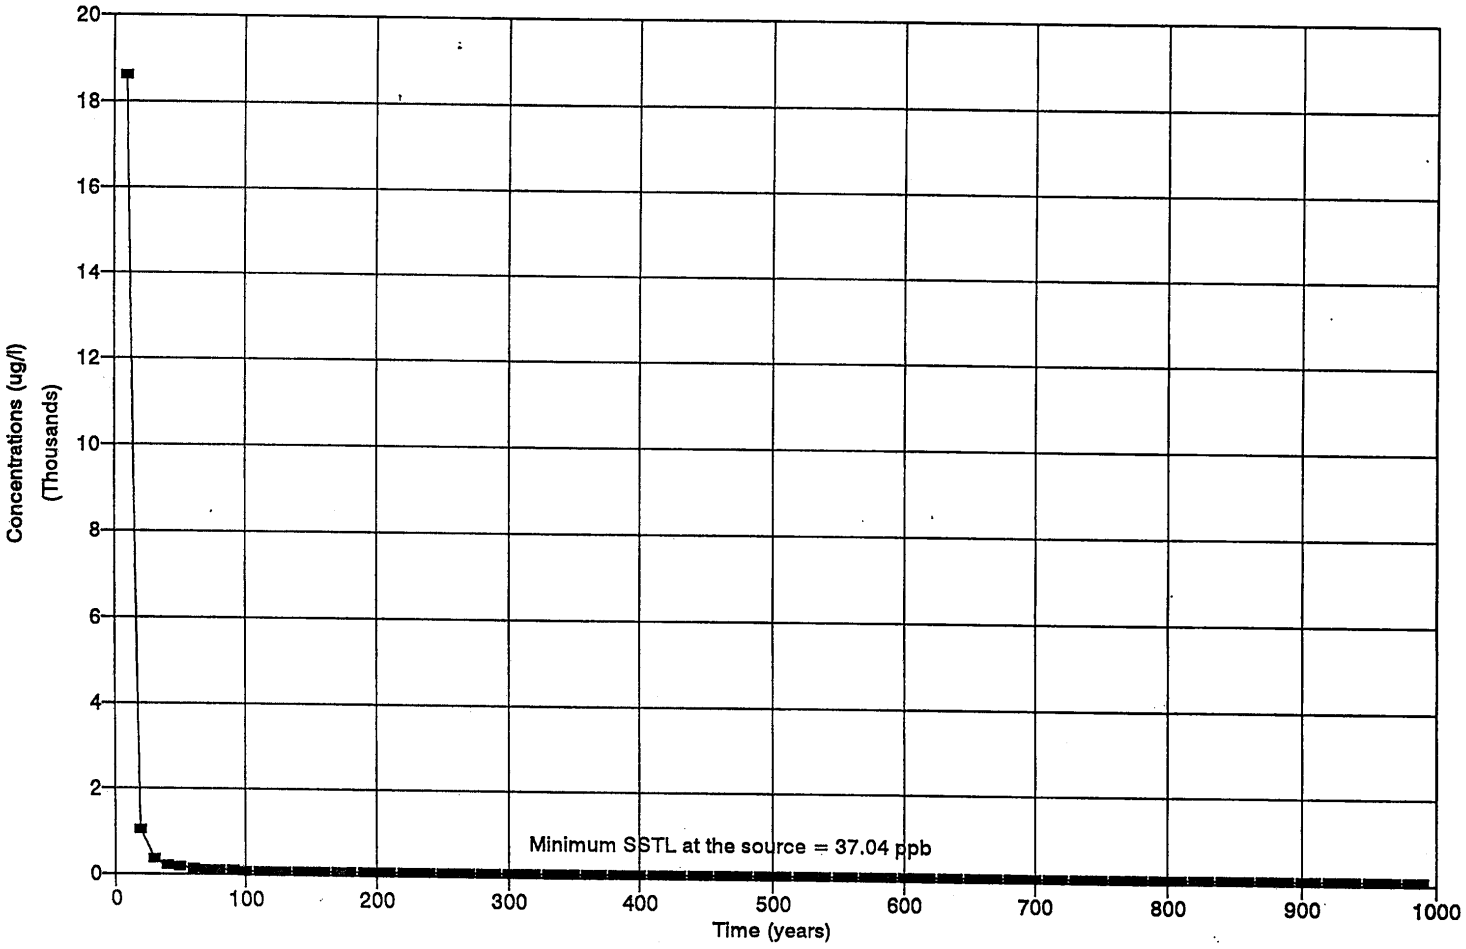


Source Concentrations
Xylenes



Source Concentrations

Naphthalene



TITLE : SMITHS GROCERY
CBM JOB # : 10629
SC ID # : 09322

Contaminant of Concern is BENZENE

C(x,0,0,t)=(C0/2)erfc[(x-vt)/2(Ax*vt)1/2] erf[Y/4(Ay*x)1/2]erf[Z/2(alphz*x)1/2]

INPUT PARAMETERS :
Concentration of Source (ppb) = 36000.00
Source Width (ft) = 150.00
Vertical Thickness of Source (ft) = 38.00
Distance of Recipient (ft) =1000.00
Groundwater Flow Velocity (ft/yr) = 3.65
RBSL concentration for COC(ppb) = 5.00
Longitudinal Dispersivity (ft) = 100.000000
Transverse Dispersivity (ft) = 33.333332
Vertical Dispersivity (ft) = 5.000000
Total Organic Carbon, TOC (mg/kg) = 60.00
Total Petroleum Hydrocarbons,TPH(mg/kg) = 0.00
Soil/Water Part. Coefficient,Koc(ml/g) = 81.00
Organic Carbon Fraction, foc (%) = 0.0000600
Porosity = .250
Bulk Density (g/cc) = 1.530
Retardation Factor, Rf = 1.02974
Contaminant Velocity (ft/yr) = 3.54457

SSTL CONCENTRATION COMPUTED FOR :
220.000 ft.

TIME (yrs)	SSTL FOR RECEPTOR 1 (ppb)

Based on a travel time of 94.4259 years
For the receptor to be at 10.0000 ppb
The SSTL should be (in ppb): 73.9974

Report of

SIEVE/HYDROMETER ANALYSIS

Report Date: 12/10/99 Analysis Date: 12/8/99

Client: CBM Environmental
377 Carowinds Blvd, Suite 118
Fort Mill, SC 29708

C&L Job #: 9095

Project: SMITH'S GROCERY, CBM #10629
Sample ID: SB-8 (8'-10')

Method of Analysis: ASTM D422-63(1990)

Analyst: R.H. NeSmith

1.	Gravel, passing 3-in. and retained on No.4 sieve:	2 %
2.	Sand, passing No. 4 sieve and retained on No. 200 sieve	56 %
	(a) Coarse Sand, passing No. 4, retained on No. 10	-- %
	(b) Medium Sand, passing No.10, retained on No.40	-- %
	(c) Fine Sand, passing No.40, retained on No. 200	-- %
3.	Silt, 0.074 to 0.005 mm	28 %
4.	Clay, smaller than 0.005 mm	16 %
5.	% Moisture	10

Respectfully Submitted,
C&L Consultants, Inc.

Randall H. NeSmith

December 13, 1999

Ms. Pamela DuBois
South Carolina Department of Health
and Environmental Control
2600 Bull Street
Columbia, South Carolina 29201-1708

RE: Site Survey
Smith's Grocery
York, York County
Site ID #: 09322
CBM #: 10629

Dear Ms. DuBois:

The purpose of this correspondence is to request approval of the attached proposal to complete a survey of the above referenced site. Based on the unusually large size of the site and the number of monitoring wells and other features that are to be located, the usual sum of $1,000 provided by the SCHHEC to complete the survey is insufficient. Similar situations have been encountered at other sites where RA activities were conducted and include Moore Food Store # 208 in Davis Station, South Carolina (Site ID #02459), Ridge Gas & Oil and Ridge Tire & Oil Company in Ridge Spring, South Carolina (Site ID #s 07965 and 07971) and the Santee Service Center in Santee, South Carolina (Site ID #11756). Additional costs above the standard $1,000 to complete comprehensive surveys at these sites were approved by the SCDHEC.

If necessary, additional proposals to complete the work can be requested and submitted for your review. If this proposal is acceptable, the work can reportedly be completed this week. In order to complete the site survey in a timely fashion, your prompt attention to this matter is greatly appreciated. If you have any questions or require additional information concerning this matter, please contact the undersigned at (803) 548-5989.

Sincerely,
CBM Environmental Services, Inc.

W. Scott Ball
Senior Project Manager

Fax No.:		**No. Pages:**	5 (Including Cover)
Phone No.:		**Regarding:**	Smiths Grocery Site / Hill Water Supply Well

___ Urgent / For Review ___ Please Comment / Please Call Me

Notes/Comments: Attached are results of samples collected from Tony Hill residence water supply well on 12/3/99. Samples were collected for total coliform & hydrogen sulfide to determine source of sulfur odor. Pretreatment samples (raw) from the GAC reported non-detect. Post treatment samples (treated) from the GAC reported non-detect for hydrogen sulfide but reported coliform present. Laboratory suggests that the GAC unit has bacteria in the carbon and that the GAC unit should be "shock chlorinated" to kill the bacteria. What is your opinion?

– Scott

Dear Mr. Ball:

Enclosed are environmental reports from 1989 and 1994 for the "Cambell" property we discussed by phone this morning. I am also enclosing reports resulting from removal of the abandoned store's tanks from the property.

We hope this information will assist you in your assessment of groundwater contamination in the area. If we can be of further help to you, please feel free to phone me at 704-423-0404.

Subject: Phase I Environmental/Prebuy Assessment Report
Campbell Property - York County, South Carolina
Earth Management Systems Reference No. 9410-119

Dear Mr. Smith:

Transmitted herewith is a copy of the Phase I Environmental/Prebuy Assessment report on the Campbell property located in York County, South Carolina. The Phase I study was verbally authorized by yourself on October 10, 1994.

Should you have any questions concerning the document, or should you require any additional information, please do not hesitate to call.

We appreciate the opportunity to be of service, and look forward to working with you in the future.

Respectfully submitted,

ENVIRONMENTAL/PREBUY ASSESSMENT
REFERENCE NUMBER 9410-119
CAMPBELL PROPERTY
York County, South Carolina

October 27, 1994

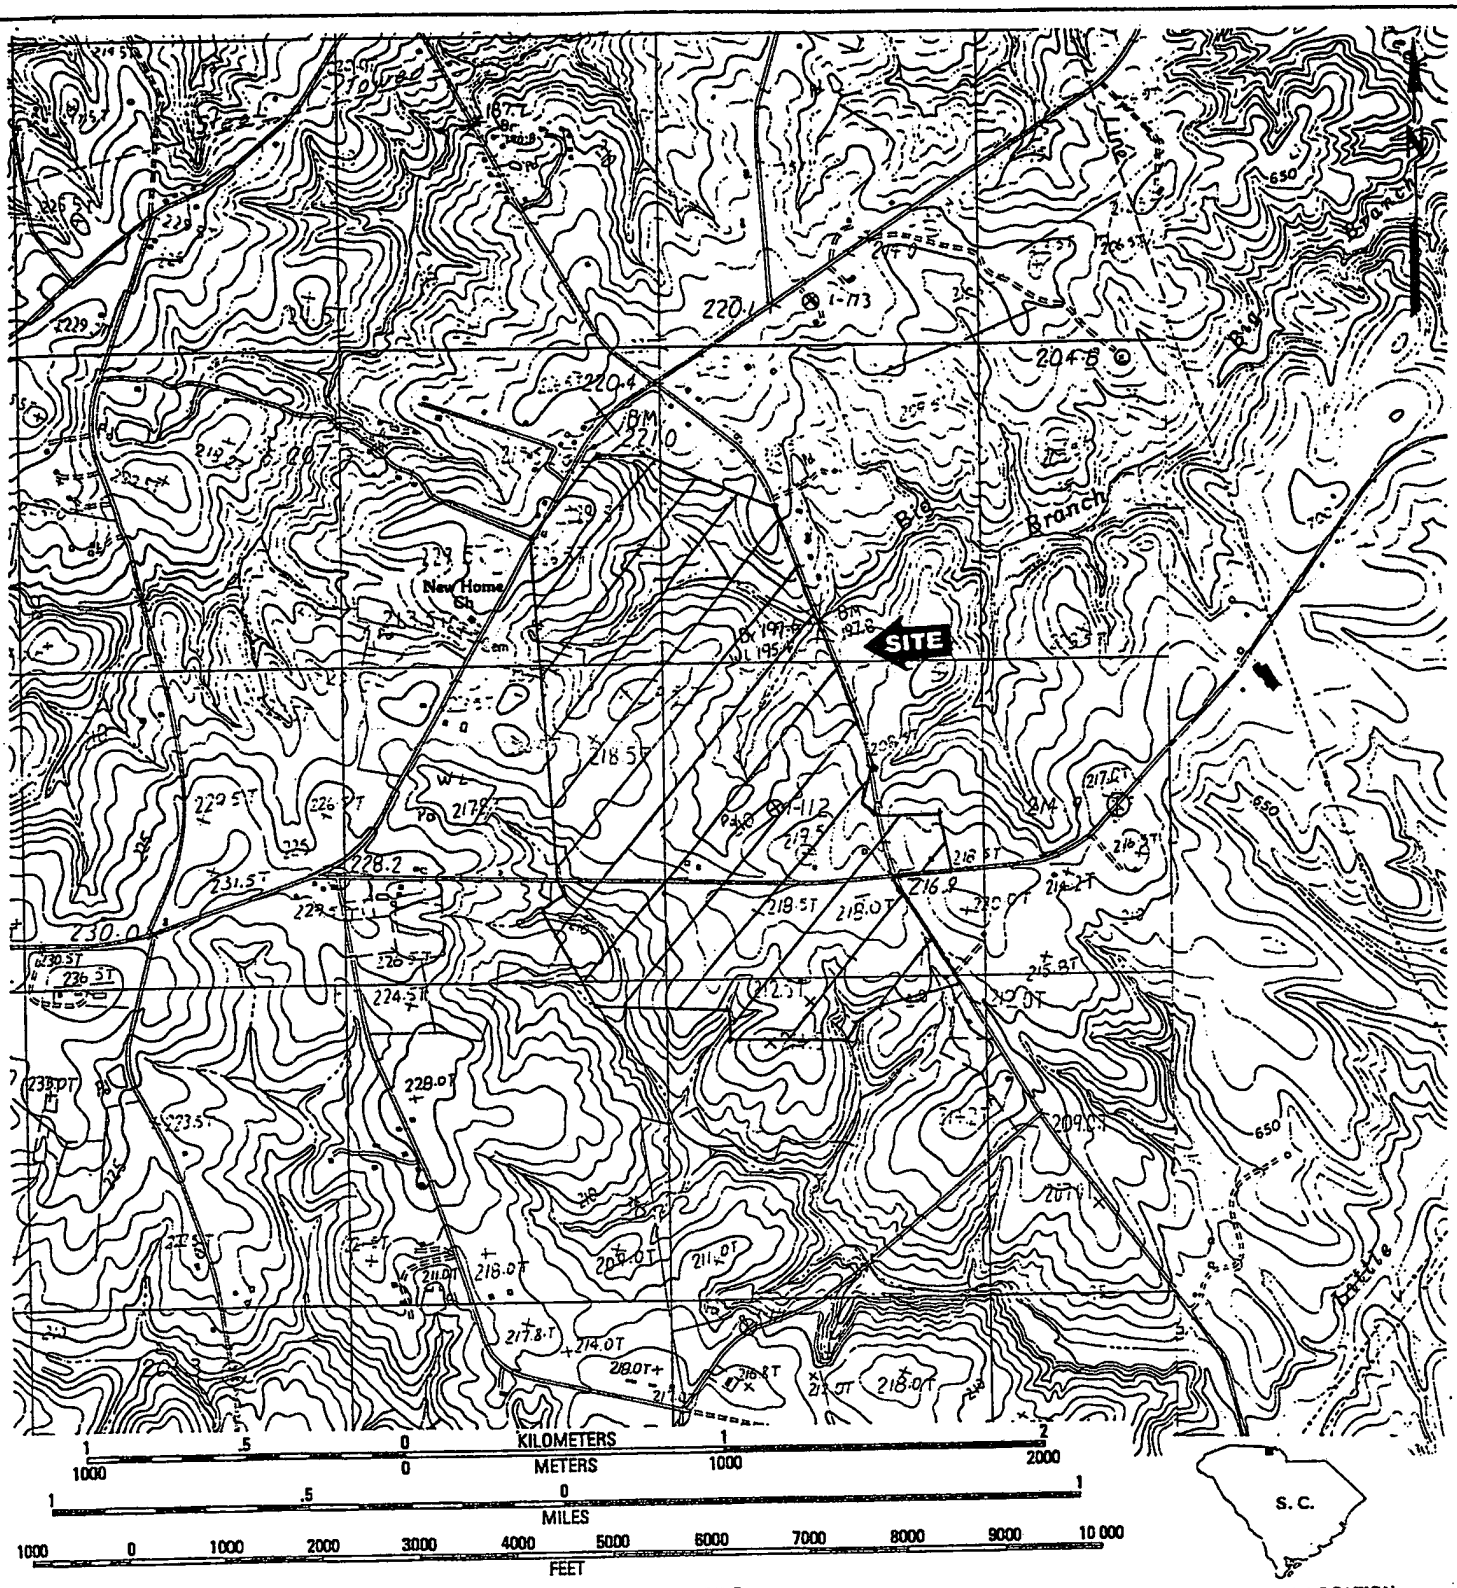
The following report presents results of the Phase I Environmental/Prebuy Assessment performed on the Campbell property, located at the intersection of Campbell Road (County Road 80) and Paraham Road (County Road 54) in York County, South Carolina. The location of the property is indicated on Figure 1. The objective of the Phase I assessment was to estimate the presence of, and potential for, significant environmental liability on the property. Completion of the Phase I assessment involved performance of the following tasks:

- review of environmental records for the property and vicinity available through the United States Environmental Protection Agency (USEPA) and the South Carolina Department of Health and Environmental Control (SCDHEC);
- inspection and interpretation of available aerial photography for the area to identify areas of potential environmental concern; and
- performance of a site inspection of the property and a reconnaissance of the surrounding area.

The following sections present methods and results of each task.

SITE DESCRIPTION

The Campbell property is located at the intersection of Campbell and Paraham Roads (County Roads 80 and 54) in York County, South Carolina. The property encompasses approximately 408.53 acres, and is bounded by private residences, Smith's Grocery and Montgomery's Garage on the west, by wooded property and private residences on the north, by Paraham Road, wooded property and private residences on the east and by wooded property and pastureland on the south. The property consists of a mixture of mature forests and young stands of managed pines with a few scattered structures.



CONTOUR INTERVAL 3 METERS

QUADRANGLE LOCATION

Base Map: USGS 7.5-Minute Topographic Quadrangles: Clover, SC and Lake Wylie, SC-NC

EARTH MANAGEMENT SYSTEMS, INC.

Environmental Consultants

FIGURE 1
SITE LOCATION & TOPOGRAPHY
CAMPBELL PROPERTY
YORK COUNTY, S.C.
Earth Management Systems
Reference No. 9410-119

A review of the Clover and Lake Wylie, SC 7.5-minute topographic quadrangles indicates that the property slopes generally toward stream valleys located on the northeast and south parts of the property. Elevations across the property range from approximately 748 to 649 feet NGVD (National Geodetic Vertical Datum). Shallow ground-water flow is thought to be generally toward the east on the northern part of the property and to discharge into headwaters of Big Branch located throughout this part of the property. Shallow ground-water flow on the southern part of the property is thought to be toward the south and to discharge into headwaters of Little Anderson Creek. Geologically, the property is located within the Charlotte Belt of the Piedmont Physiographic Province. Bedrock at the property consists of micaceous gneiss. According to the Soil Survey of York County, SC (USDA/SCS, 1965), the following soil types are found on the property: in stream valleys, Worsham sandy loam and Wilkes Complex; on slopes, Cecil clay loam, Cecil sandy loam, Helena sandy loam and Enon sandy loam; on uplands, Appling coarse sandy loam, Helena sandy loam, Cecil sandy loam, and Gullied Land. The Worsham sandy loam which is present in the stream valley at Big Branch is listed as a hydric (wetland-type) soil.

As indicated above, headwaters of Big Branch and Little Allison Creek are located on the north and south parts of the property respectively. Downstream portions of Big Branch may act as barriers to ground-water contamination. These portions of Big Branch are located adjacent the north part of the property, to within 1700 feet of the remainder of the northern two-thirds of the property. Downstream portions of Little Anderson Creek may also act as barriers to ground-water contamination. These portions of Little Anderson Creek are located adjacent to the south part of the property, to within 1200 feet of the southeast edge of the property.

Topographically, the Campbell property is situated in a highly dissected area of rolling hills with streams located in the intervening valleys. Topographically high areas are located north of the property, at the northwest corner of the property and west and southeast of the property. Surface water and shallow ground water at and near the property is thought to flow away from these upland areas toward adjoining stream valleys. Based upon these topographic features, potential off-site contaminant sources located on upland areas adjoining the north and northwest portions of the property and to the west and south would be considered those areas most likely to pose significant threats to the environmental status of the property.

REVIEW OF ENVIRONMENTAL RECORDS

Available environmental records and databases pertaining to the area near the Campbell property were reviewed by Earth Management Systems as part of the Environmental Assessment. Records and databases reviewed included the following:

- SCDHEC CERCLIS inventory;
- Inventory of USEPA National Priority List (NPL) sites in South Carolina;
- SCDHEC inventory of State Priority List (SPL) sites in York County;
- SCDHEC hazardous-waste notification list;
- USEPA inventory of Resource Conservation and Recovery Act (RCRA) facilities requiring enforcement action;
- SCDHEC underground-storage-tank (UST) notification and permit information database for York County;
- SCDHEC UST Confirmed Release Report database;
- SCDHEC inventory of permitted municipal and industrial landfills;
- SCDHEC inventory of petroleum and hazardous-materials spills in York County; and
- SCDHEC 1993 Ground-Water Contamination Inventory.

Records review were performed by (1) review of in-house inventories maintained by Earth Management Systems, (2) inquiries to the SCDHEC, and (3) performance of a computer data search by Environmental Data Resources, Inc. (EDR). The EDR Radius Map Report is included in Appendix I.

Although the data sources available from regulatory agencies include varying degrees of detail concerning listed sites, review of the materials provides a basis for identifying potential contaminant sources both within and beyond the property boundaries.

Hazardous-Waste Facilities

The USEPA FINDS list, and the SCDHEC hazardous-waste notification list, were reviewed to identify facilities within one-half mile of the Campbell property registered with the USEPA and the SCDHEC under provisions of the Resource Conservation and Recovery Act (RCRA) of 1976 to generate, treat or dispose of hazardous-waste. A variety of commercial and industrial facilities are classified by the USEPA and SCDHEC as hazardous waste facilities. The hazardous-waste notification system provides a means for regulating hazardous substances and providing for proper disposal. Hazardous-waste facilities, although potential sources for soil, surface-water or ground-water contamination, are not necessarily sites of environmental degradation. No hazardous-waste facilities were identified within one-half mile of the property.

CERCLIS/NPL/SPL Sites

The USEPA FINDS and CERCLIS lists, the USEPA NPL listing and the SCDHEC SPL listing were reviewed to identify CERCLIS sites within one mile of the Campbell property. CERCLIS sites have documented or suspected environmental problems for which the responsible party or parties may not have been clearly identified. CERCLIS sites undergo a series of investigations by either the USEPA or SCDHEC to determine the severity of contamination and the potential to impact public health and safety. Sites may be ranked by a hazard ranking system and placed on either the National or State Priority List (NPL/SPL), qualifying the site for remediation under Superfund. No CERCLIS sites were identified within one mile of the property from the review.

Permitted Domestic and Industrial Landfills

The SCDHEC list of landfills in South Carolina permitted to received domestic, industrial and cellulose wastes was reviewed to locate domestic and industrial waste landfills located within one mile of the Campbell property. None were identified within one mile of the Campbell property from the review.

Underground Storage Tanks (UST's)

Losses of petroleum and other chemical products from underground storage tanks (UST's) and associated piping are a major environmental concern, particularly because older UST's and piping generally have no systems for detection of leaks that may occur for several months or years prior to discovery. Requirements for notification and permitting of UST systems are in place or planned in most states. Recently enacted USEPA UST regulations also

require phased replacement or upgrading of all known UST systems (based on age), including installation of leak-detection systems. Many UST systems, however, remain unregistered or abandoned. Although petroleum retail facilities are currently exempted from SARA (Superfund Amendments and Reauthorization Act) innocent landowner provisions, their eventual inclusion in the regulations cannot be discounted. Also, the presence of petroleum contaminants in the subsurface can adversely affect property value, cause safety hazards, and/or preclude development of water resources on the property.

Two facilities with UST's were identified within one-half mile of the property from an area reconnaissance (page 16), and from review of the SCDHEC UST notification and permit information database for York County. The following information on the facilities was available from review of the UST database:

Facility Name (I.D. No.)	No. on Fig. 3	Address and/or Dist. & Dir. from Property	No. Tanks	Age (yrs.)	Contents
Montgomery's Amoco (N-46-NO-09453)	1	adjoins property at NW corner 3243 Char. Hwy.	2	16	GN*
Smith's Grocery (N-46-NO-09322)	2	adjoins property at NW corner 3176 Char. Hwy.	2	31	GN**

GN = gasoline, DL = Diesel, WO = waste oil, KN = kerosene, TOU = temporary out-of-use

* UST's at Montgomery's Amoco are temporarily out-of-use, although not listed as such.
** Smith's Grocery also has a kerosene UST which is not listed in the registration database.

Sites with Documented Contamination

A review of the SCDHEC Leaking Underground Storage Tanks (LUST) database, Spills Incidents database and SCDHEC Ground-Water Contamination Inventory list indicated no documented cases of soil, surface-water and/or ground-water degradation are known within one-half mile of the property. However, interviews with Lois Smith, owner of Smith's Grocery, and a SCDHEC representative yielded the following information:

Incident: Gasoline Contamination of Drinking Water Well at Smith Residence

Location: adjoins northwest part of property (no. 2 on Figure 3)

Description: In 1979, soon after UST's were installed at Smith's Grocery, the Smiths observed a strong gasoline odor in their well water. According to Lois Smith, well water discharged onto the ground burned when lit with a match. Loose piping connections at the product dispensers were found to be the source of the release, and were subsequently repaired. The shallow well (TD = 30 feet) was replaced with a deep well (TD 140 feet) to provide potable water. In 1993 Ripley Oil Company performed a soil boring program at the site. According to Julie Elam of the SCDHEC, the only information submitted concerning the assessment was a sketch map of the site and a chain-of-custody form which indicates that samples were collected from depths of 4 to 12 feet. SCDHEC has requested, but has apparently not yet received, additional details concerning the assessment program.

Established or Suspected Direction(s) of Contaminant Migration: Contamination of the Smith residence well indicates that free product migrated from the product dispensers approximately 100 feet to the north. Topography suggests a west to northwest direction of ground-water flow.

Potential to Impact Campbell property: Given the uncertainty of ground-water flow direction, some southwest spreading of contaminants cannot be ruled out. However, the likelihood of migration of any contamination onto significant portions of the Campbell property is considered minimal.

Summary

No information was found through review of available USEPA and SCDHEC data sources to indicate that the Campbell property has any past or ongoing environmental problems. The property was not included on any Federal or State database reviewed. USEPA and SCDHEC records indicate that no listed hazardous waste generators are located within one-half mile of the property, and that no CERCLIS sites or permitted landfills are located within one mile of the property. SCDHEC records indicate that four UST's are currently registered for use within one-half mile of the property. Based on a review of available information, and inquiries to SCDHEC personnel, Smith's Grocery is the only known contamination incident which has a potential to impact a portion of the Campbell property, although the likelihood is considered minimal.

INTERPRETATION OF AVAILABLE AERIAL PHOTOGRAPHY

Available aerial photography for the Campbell property and vicinity was reviewed to identify past or present areas of potential environmental concern that may not be apparent from a present-day inspection of the property and nearby areas.

Aerial-photography taken since 1941 was available for review. This included black-and-white aerial photography dated 1941, 1949, 1964 and 1970 and false-color infrared aerial photography dated 1981, 1989 and 1994. A copy of the 1989 false-color infrared photography is included in Appendix II.

The effectiveness of aerial-photography interpretation in identifying areas of past or present potential environmental concern is dependent upon several factors, for example years of coverage, clarity of available photos, whether stereo coverage (three-dimensional viewing) is possible, cloud cover and vegetative cover. Aerial photography interpretation provides a valuable method to identify areas of obvious or potential environmental concern for further evaluation, as necessary.

The following discussion, presented as a chronological outline, is to provide an overview of past land use in the area, and to identify areas of potential concern at or near the property discernable from interpretation of available photographic coverage.

Flight Year: 1941 (Photomosaic 905-41)

General Land Use(s) in Area: Land in the area is overwhelmingly in agricultural usage.

Land Use on Subject Property: The subject property is approximately 70 percent cultivated land and 30 percent woodlands. Seven structures are apparent: five bounding the north side of Campbell Road between SC 49 and Paraham Road, one bordering the north side of Campbell Road east of Paraham Road, and one on the northwest part of the property.

Potential Areas of Concern: No areas of concern are apparent.

Flight Year: 1949 Photo No.: PL-3F-149

General Land Use(s) in Area: Agricultural land use continues to dominate the area. Houses and sheds or other small buildings are evident west of the central part of the property and to the north and northwest of the property.

Land Use on Subject Property: Two additional structures are evident at the larger scale of the photography - a second structure on the northwest part and a structure on the north side of Campbell Road on the west edge of the property. A utility easement is also evident crossing east to west across the central part of the property.

Potential Areas of Concern: No areas of concern are apparent.

Flight Year: 1964 Photo No.: PL-2FF-122

General Land Use(s) in Area: Agricultural land use has declined somewhat since 1949. The number of private residences and amount of wooded land have increased. Cultivated land continues to be present north, south and west of the Campbell property. Wooded land is present to the east and south.

Land Use on Subject Property: Almost all the formerly cultivated areas appeared to have been allowed to become overgrown or have been planted in trees. Heavy tree growth is present around tributaries of Big Branch on the north part of the property. A grassed area is evident at the southwest corner of the property. A total of 15 structures are apparent - most of the structures are along Campbell Road. Three structures are evident on the northwest part of the property: one along Charlotte Hwy and two approximately 200 feet off the highway.

Potential Areas of Concern: No areas of concern are apparent.

Flight Year: 1970 Photo No.: PL-4LL-77

General Land Use(s) in Area: No significant changes in area land use are apparent.

Land Use on Subject Property: Mature trees cover approximately 50 percent of the property, specifically the southwest corner and the northeast and central parts surrounding Big Branch. Recently timbered areas occupy most of the remaining property. A small plowed field adjoins the south side of the two structures located off the road on the northwest part of the property. Immature trees surround the plowed field.

Potential Areas of Concern: No areas of concern are apparent.

Flight Year: 1981 Photo No.: 1381-143 (False-Colored Infrared)

General Land Use(s) in Area: Land in the area appears primarily to be farmed or utilized as timberland. Plowed fields are evident north and west of the property and adjoining the property's southeast corner. Mature trees bound the south and east parts of the property. A second larger structure is now evident at the current location of Montgomery's Garage at the northwest corner of the property.

Land Use on Subject Property: The property now appears to be approximately 30 percent plowed fields, 35 percent mature trees and 35 percent immature trees. Mature trees are confined to the stream valleys. Three structures are now evident at the farmhouse location on the northwest part of the property and another continues to be present at the general store location on Charlotte Hwy. Four structures are evident along Campbell Road between Paraham and Charlotte Hwy and one east of Paraham, north of Campbell Road.

Potential Areas of Concern: The presence of a relatively large structure immediately northwest of the property suggest possible commercial usage.

Flight Year: 1989 Photo No.: 1371-139 (False-Colored Infrared)

General Land Use(s) in Area: Area land use continues to be a mixture of timber land, farming and residential development. Large structures, apparently storage buildings, barns, or garages are evident immediately northwest of the property and 500 feet west of the property. A structure located at the current location of Smith's Grocery appears to have a fuel dispenser island.

Land Use on Subject Property: The subject property is now covered mostly by mature trees. Immature trees are present on the southwest part of the property and cleared areas are present on the southeast part. Small clearings are evident on the northwest part around the farmhouse and country store and in several areas on the south part of the property near Campbell Road. Only one structure is now evident at the farm house location.

Potential Areas of Concern: The apparent presence of a gas station immediately across the road from the property at its northwest part poses a concern.

Flight Year: 1994 Photo No.: 7459-57 (False-Colored Infrared)

General Land Use(s) in Area: The only significant changes in area land use are the construction of a large structure 500 feet to the north at the northwest corner of Paraham and Charlotte Hwy and the presence of a field immediately south of the property.

Land Use on Subject Property: A series of dirt roads are evident extending north and south from Campbell Road into areas of immature trees. Four or five structures are evident along Campbell Road.

Potential Areas of Concern: The new large structure located 500 feet to the north poses some concern.

Summary

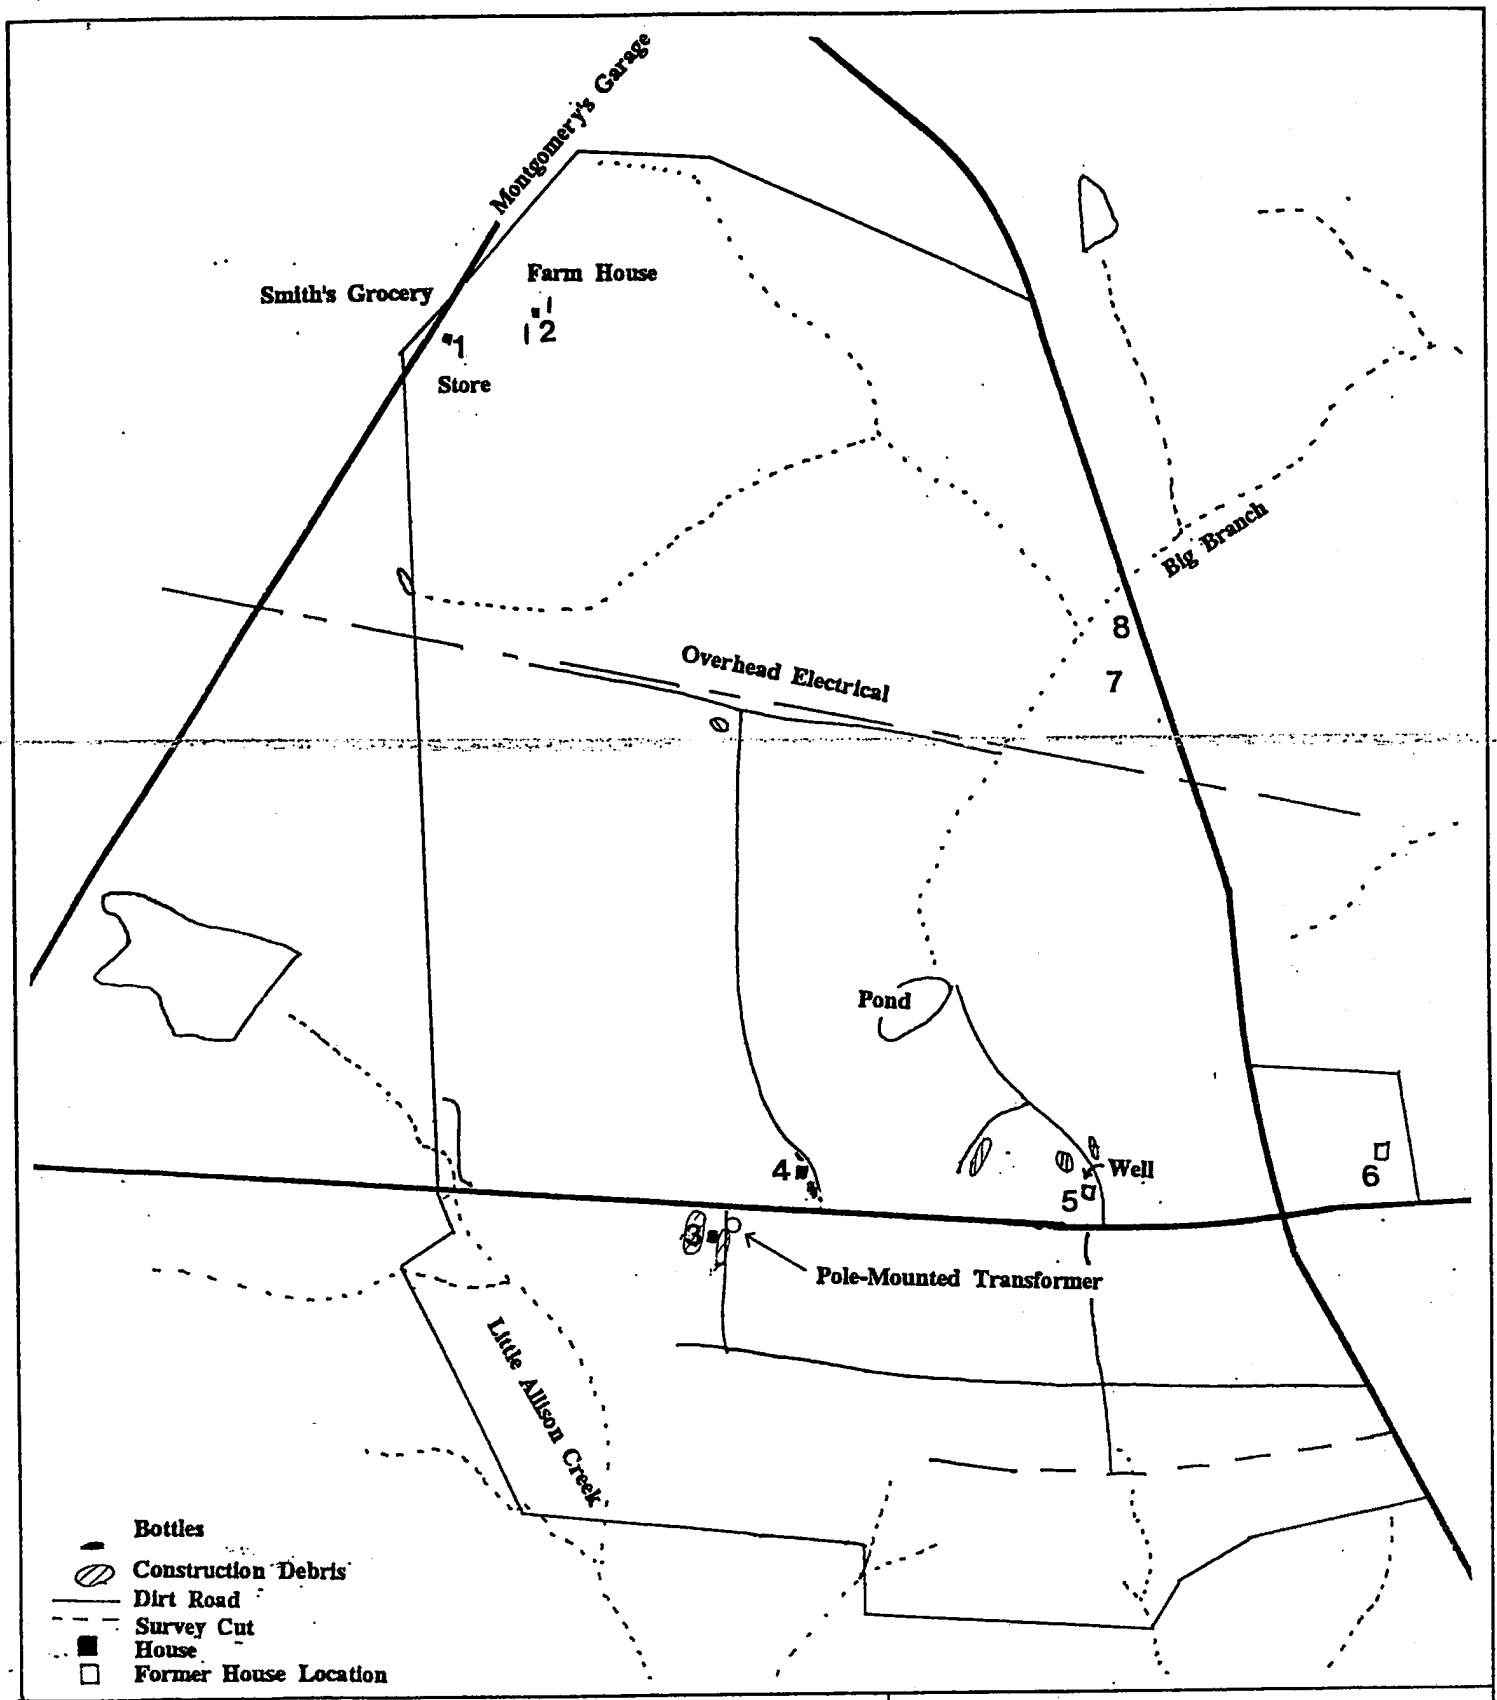
The subject property appears to have been utilized for farming and timber during the 53-year period for which photographic coverage was available. A store was first evident on the northwestern corner of the property some time between 1949 and 1964. Facilities of a possible commercial nature have been evident adjoining the northwest part of the property since 1981. Both the store and off-site facilities of a possible commercial nature are possible environmental concerns.

SITE INSPECTION

A site inspection of the Campbell property was performed by a representative of Earth Management Systems on October 13 and 19, 1994 to assess the potential for contamination of the property from on-site sources. No soil, ground-water or surface-water samples were collected for chemical analysis as part of the site inspection. Photodocumentation of many of the particulars noted during the inspection appears in Appendix III. A site map illustrating locations of features noted during the inspection is included as Figure 2.

General Land Use/Condition

The property consists of wooded land with scattered dilapidated houses and barns.



EARTH MANAGEMENT SYSTEMS, INC.
Environmental Consultants

FIGURE 2
SITE MAP DEPICTING
AREAS OF CONCERN
CAMPBELL PROPERTY
YORK COUNTY, S.C.
Earth Management Systems
Reference No. 9410-119

Structures

Structures or evidence of former structures were observed at eight locations on the property. These locations depicted on Figure 2, contained the following:

No. on Fig. 2	Description
1	General Store
2	Farmhouse & debris
3	Dilapidated house & debris
4	Dilapidated house & debris
5	Former house location, well & debris
6	Former house
7	Dilapidated barn and animal pen
8	Remains of house

Vegetative Cover

The property contains a mixture of cultivated pine timberland, and mature woodlands consisting of both hardwoods and pines. Moderate to heavy undergrowth by vines and shrubs is present in the mature woodlands and only light undergrowth is apparent in the areas of cultivated timberland.

Water-Supply Wells/Monitor Wells

As depicted on Figure 2, one inactive water-supply well was observed on the south part of the property at location no. 5. Other water supply wells may be present in the vicinity of the collapsing houses or beneath the heavy growth of vines and plum trees surrounding these structures, however, their presence could not be confirmed. Abandonment of the well by a South Carolina licensed drilling company is recommended to prevent potential contamination of ground water.

Waste Treatment

No waste treatment facilities of any kind were observed. It is possible that old septic tanks may be present in the vicinity of one or more of the old houses on the property.

Transformers/Potential Sources for PCB (Polychlorinated Biphenyl) Contamination

Transformers and other electrical equipment located outside of on-site structures were visible inspected for evidence of significant leakage, and for manufacturer placards noting the presence of PCB dielectric oils, ad part of the Phase I Assessment. Generally, ballasts and other electrical equipment located inside structures pose only minimal threats to soil and ground water; inspection of interior electrical equipment was not within the scope of the Phase I study. One pole-mounted electrical transformers was observed at the house located on the south side of the Campbell Road (no. 4). No evidence of oil leakage was observed. Accordingly, it is thought very unlikely that any release of transformer oil has occurred.

Underground/Above-Ground Tanks

Two underground storage tanks were removed from beside the old grocery store on the northwest part of the property on October 13, 1994. One of the tanks appeared to be a fuel oil tank and the other was a gasoline tank. The fuel oil tank was located on the north side of the old grocery. The gasoline tank was situated west of the fuel oil tank. Piping for only one product dispenser was evident. According to an employee of Royster Oil Company, the gasoline tank had a hole which leaked water during removal. The fuel oil tank was reported to be structurally intact with no evidence of active leakage. Soil samples were collected from two feet beneath each tank and analyzed for total petroleum hydrocarbons in the gasoline range. No petroleum hydrocarbons were reported by the laboratory above method detection levels. A copy of the laboratory report is included in Appendix IV.

Hazardous Waste or Hazardous Substances

One bottle of Lintox Livestock Spray & Dip was observed on a shelf in the old country store. According to the label, this substance contains the pesticide compounds lindane and toxaphene. Only an estimated six ounces of liquid was present in the bottle. No evidence of leakage or spillage from the bottle was observed. No other hazardous substances and no hazardous waste were observed on the property. Removal of the bottle of Lintox from the property is recommended to prevent accidental release of this hazardous substance.

Solid Waste or Debris

Several debris piles were noticed to have been dumped on the property. Building materials including roofing shingles, sheet metal and lumber make up the bulk of the dumped debris. Piles of discarded bottles and cans were evident nearby several of the houses. A large pile of discarded wooden crating material was present at the house located along the south side of Campbell Road. Locations of observed debris piles are indicated on Figure 2.

Stained Soil, Dead or Stressed Vegetation

An area of oil-stained soil was observed in front of the old house on the northwest part of the property. An area measuring at least five by seven feet appeared to be surficially impacted. The depth of staining and full lateral extent were not readily apparent. Removal of the oil impacted soil is recommended following clearing of vegetation in this area. Vegetation along survey cuts and logging roads was the only stressed vegetation observed.

Discoloration of Water Bodies

No discoloration or odor was observed in ponds and streams on the property.

Asbestos-Containing Materials

Many buildings materials manufactured between 1940 and 1980 contained asbestos. Thermal insulation of ovens, water heater and pipes typically may contain friable asbestos which may be identified by visual observation. No insulation materials were observed on the property. Inspection of the building materials present in the dilapidated houses and piles of construction debris by a SCDHEC-licensed asbestos inspector is recommended to verify the absence of asbestos containing building materials.

Summary

Four areas of environmental concern were identified on the Campbell property (1) two underground storage tanks at the general store, (2) one out-of-use water well, (3) an area of oil-stained soil beside the old farmhouse on the northwest part of the property, and (4) possible asbestos containing building materials in the dilapidated structures on the property and in construction debris piles. Closure of the UST's coupled with the absence of

reported soil contamination beneath them removes the first concern. The following measures are recommended to address remaining concerns:

- o abandonment of the well by a licensed South Carolina driller.
- o excavation and disposal of the oil-impacted soil following clearing of vegetation in that area; and
- o inspection of the structures by a SCDHEC licensed asbestos inspector.

AREA RECONNAISSANCE

The area within about one-half mile of the Campbell property was reconnoitered by a representative of Earth Management Systems on October 19, 1994 to assess the potential for contamination of the property from off-site sources. The area reconnaissance was performed by visual inspection of properties from public roads to the extent possible based on access and time constraints. Potential off-site sources of contamination identified from the area reconnaissance are discussed in the following sections.

Adjoining Properties

3176 Char. Hwy

Direction	Property Usage	Potential Environmental Concern(s)
Northwest	Smith's Grocery (no. 2 on Fig. 3), Montgomery's Garage (no. 1 on Fig. 3) & private residences → UST #09453	UST's, waste oil, solvents
North	wooded, private residences	none apparent
East	Wooded & private residences	none apparent
South & Southwest	grassed fields	none apparent
West	wooded, grassed fields, private residence	none apparent

Of these adjoining properties, those toward the northwest and north and portions of those to the south and east are thought to be in hydraulically upgradient positions with respect to shallow ground-water flow near the Campbell property. Accordingly, any ground-water contamination present on these properties would have a significant potential to migrate to the Campbell property via ground-water flow. As indicated, the properties include Smith's Grocery and Montgomery's Garage. Smith's Grocery may located hydraulically upgradient from a sliver of the Campbell property located west of Charlotte Hwy. Accordingly, there is thought to be a slight potential for contamination of this part of the Campbell property from the past release of gasoline to shallow ground water at Smith's Grocery. Likewise, Montgomery's Garage appears to pose a potential source of contamination from the UST's, waste oil and solvents present there.

Potential Off-Site Sources Within One-Half Mile

One additional potential off-site source of contamination were identified within one-half mile of the Campbell property from the area reconnaissance:

Potential Source	No. on Fig. 3	Distance & Direction from Property	Potential Concern(s)
Private Residence	3	2400 feet W	above-ground tank

This property is thought to be in a hydraulically upgradient position with respect to shallow ground-water flow near the Campbell property. Based on review of available information, contamination has not been documented at this property. There exists little potential that the Campbell property has been impacted by a release of contaminants at this location, based on anticipated ground-water flow direction in the area and distance from the Campbell property to this potential upgradient contaminant source (2400 feet to west).

CONCLUSIONS

A Phase I Environmental Assessment has been conducted on the 408-acre Campbell property in York County, South Carolina. The assessment consisted of a review of available environmental records for the subject property and surrounding area, inspection and interpretation of topographic maps and available aerial photography, a site inspection and an area reconnaissance. Based on the results, the following conclusions are presented:

- No information was found through review of available USEPA and SCDHEC data sources to indicate that the Campbell property has any past or ongoing environmental problems. The property was not included on any Federal or State database reviewed. USEPA and SCDHEC records indicate that no listed hazardous waste generators are located within one-half mile of the property, and that no CERCLIS sites or permitted landfills are located within one mile of the property. SCDHEC records indicate that four UST's are currently registered for use within one-half mile of the property. Based on a review of available information, and inquiries to SCDHEC personnel, Smith's Grocery is the only known contamination incident which has a potential to impact a portion of the Campbell property, although the likelihood is considered minimal

- The subject property appeared to have been utilized for farming and timber during the 53-year period for which photographic coverage was available. A store was first evident on the northwestern corner of the property some time between 1949 and 1964. Facilities of a possible commercial nature have been evident adjoining the northwest part of the property since 1981. Both the store and off-site facilities of a possible commercial nature are possible environmental concerns.

- Four areas of environmental concern were identified on the Campbell property (1) two underground storage tanks at the general store, (2) one out-of-use water well, (3) an area of oil-stained soil beside the old farmhouse on the northwest part of the property, and (4) possible asbestos containing building materials in the dilapidated structures on the property and in construction debris piles. Closure of the UST's coupled with the absence of reported soil contamination beneath them removes the first concern. The following measures are recommended to address remaining concerns:

  (1) abandonment of the well by a licensed South Carolina driller.

  (2) excavation and disposal of the oil-impacted soil following clearing of vegetation in that area; and

  (3) inspection of the structures by a SCDHEC licensed asbestos inspector.

- The area reconnaissance identified Smith's Garage and Montgomery's Garage as potential off-site contamination sources which have the potential to impact small portions of the Campbell property. There is no indication, however, that a release of contaminants from either site has in fact impacted any portion of the property.

Based on results of the Phase I study, no evidence exists for significant impact to any portion of the Campbell property by identified on-site or off-site sources. As indicated, several minor concerns were noted which are recommended to be addressed, but their presence should pose no obstacle to the planned use of the property.

Respectfully submitted,

THE EDR-RADIUS MAP™

The EDR-Radius Map™ is a screening tool which maps sites with potential or existing environmental liabilities. Specified government databases are searched in accordance with the ASTM Standard (E 1527) or custom specifications provided by the user.

The EDR-Radius Map™ includes the following three maps:

Topographic Map:

- displays a two mile radius around the target property
- displays the United States Geological Survey (USGS) topographic contours and selected road features (i.e., major street names, and hydrographic data)

Overview Map:

- displays a one-mile (ASTM Standard) or customer specified radius around the target property
- includes major geographic attributes available in EDR's computer mapping system (i.e., street names, available hydrography)

Detail Map:

- displays a quarter-mile radius or customer specified radius around the target property and provides the user with a close-up view
- includes all geographic attributes available in EDR's computer mapping system (i.e., street names, address ranges)
- helps the user locate "orphan" sites, those sites with insufficient address information such that they can only be identified as within the zip code, city, or county of the target property

Please call EDR's Nationwide Customer Service at
1-800-352-0050 (8am - 8pm EST)
with questions or comments about your report.

Thank you for your business!

MANUFACTURED GAS PLANT (Coal Gas) SITES

Prior to the widespread use of natural gas, combustible gas manufactured from coke, coal and oil served as the major fuel for urban heating, cooking and lighting in the U.S. for over 100 years. Beginning in 1816, manufactured gas or "town gas" was produced at thousands of plant sites throughout the United States. Pipeline distribution of natural gas during the 1950s rapidly replaced manufactured gas as the major gaseous fuel. As a result, manufactured gas production gradually came to an end through the 1950s and 1960s.

Along with the production of large volumes of gas, manufactured gas plants also yielded large quantities of by-products during their operation, including complex mixtures of coal tars, sludges, oils and other chemicals. Coal tar was the principal by-product from the gasification process. Although some of the coal tars were refined into a variety of marketable products, substantial volumes remained unused and were considered as waste. Coal tar and other waste products from the gasification plants were frequently disposed on the plant site in unlined pits or in some cases injected underground through injection wells. These practices have left behind subsurface coal tar contamination at many former manufactured gas plant (MGP) sites.

Coal tar is the waste of primary concern at MGP sites. Coal tars are relatively dense, viscous liquid mixtures. The composition of coal tar varies but is usually a mixture of the following:

- Polycyclic aromatic hydrocarbons (PAH), such as benzo-pyrene, naphthalene, anthracene, acenaphthene and phenanthrene.
- Phenolic compounds, including phenol and methylphenols.
- Light aromatic compounds, such as benzene, toluene and xylenes.
- Miscellaneous organics, such as dibenzofuran.
- Small quantities or inorganic chemicals, such as iron, lead, copper, zinc, various sulfides, cyanides and nitrates.

Coal tar is somewhat heavier than water and tends to migrate vertically downward in the subsurface until it encounters a stratum that it cannot permeate. There it resides in an immobile state or spreads slowly. It can then serve as a continuous source of groundwater contamination in that PAH and other constituent compounds are slowly solubilized. Coal tars in the subsurface at MGP sites have persisted for decades because they are sparingly soluble, resistant to biodegration and they move slowly through porous media. The problem of coal tars in the subsurface at old MPG sites represents a significant part of the general problem of subsurface contamination with dense organic liquids in the United States.

The residue from former MGP sites often contains significant amounts of hazardous substances which can cause contamination of both soil and groundwater. A number of these sites are already included on EPA's CERCLIS list and the hazardous waste site lists of many states. Individual site cleanup costs have been estimated in the million dollar plus range.

The information included in EDR's "Former Manufactured Gas Plant Site" Database is provided under exclusive license by Real Property Scan, Inc. Subject: Phase I Environmental/Prebuy Assessment Report
Homestead Land and Timber Property
Earth Management Systems Report No. 8910-148

Dear Mr. Smith:

Transmitted herewith is a copy of the Phase I Environmental/Prebuy Assessment report on the Homestead Land and Timber property, located in York County, South Carolina.

Should you have any questions concerning the document, or should you require any additional information, please do not hesitate to call.

We appreciate the opportunity to be of service to Homestead Land and Timber, and look forward to working with you in the future.

Respectfully submitted,

ENVIRONMENTAL/PREBUY ASSESSMENT
REFERENCE NUMBER 8910-148
HOMESTEAD LAND AND TIMBER PROPERTY
York County, South Carolina

September 26, 1989

The following report presents results of the Phase I Environmental/Prebuy Assessment performed on the Homestead Land and Timber property in York County, South Carolina. The location of the property is indicated on figure 1. The objective of the Phase I assessment was to estimate the presence of, and potential for, significant environmental liability on the property. Completion of the Phase I assessment involved performance of three primary tasks:

- o review of environmental records for the property and vicinity available through the United States Environmental Protection Agency (USEPA) and the South Carolina Department of Health and Environmental Control (SCDHEC);

- o inspection and interpretation of topographic maps and available aerial photography for the area to identify areas of potential environmental concern; and

- o performance of a site reconnaissance of the property and surrounding area.

The following sections present methods and results of each task.

REVIEW OF ENVIRONMENTAL RECORDS

Environmental records pertaining to the area near the Homestead Land and Timber property were reviewed by Earth Management Systems as part of the Environmental Assessment. Files reviewed included the USEPA facility index system (FINDS) list, state ground-water contamination files, the state and federal CERCLIS lists, the state hazardous waste notification list, the state underground storage tank (UST) incident file, and the state UST notification and permits files.

Hazardous Waste Generating Facilities/CERCLIS Sites

The SCDHEC hazardous waste notification list was reviewed to identify facilities within one mile of the Homestead Land and Timber property registered with the USEPA and SCDHEC to generate, treat or dispose of hazardous waste. The following hazardous waste facility was identified within one mile of the property:

Facility (I.D. No.)	Distance and Direction from Property	Type Facility
EFP Products (SCD990755514)	3,700 ft East	Light Industry/Generator

The facility is discussed on page 7 of this report.

The USEPA and SCDHEC CERCLIS site inventory lists were reviewed to identify CERCLIS sites within two miles of the Homestead Land and Timber property. The CERCLIS lists include those sites with documented or suspected environmental problems. Facilities included on the lists have the potential to become state or federal Superfund sites. No CERCLIS sites were identified within two miles of the property from the review.

Underground Storage Tanks (UST's)

Two facilities with registered UST's were identified within one mile of the property from a site reconnaissance and review of SCDHEC UST notification and permit files. These are as follows:

Facility (I.D. No.)	Distance and Direction from Property	Number of UST's/Age (product)
Montgomery's Grocery & Garage (N-46-NO-09453)	adjoining, North	2/unknown (gasoline)
Smith's Grocery (N-46-NO-09322)	adjoining, North	2/10 yrs. (gasoline)

These facilities are discussed further on pages 7 and 8 of this report.

Sites with Documented Contamination

No sites with documented ground water contamination were identified within one mile of the Homestead property from review of SCDHEC files.

REVIEW OF TOPOGRAPHIC MAPS AND AERIAL PHOTOGRAPHY

Topographic maps and aerial photography for the Homestead Land and Timber property and vicinity were reviewed to evaluate shallow ground-water flow directions and to identify areas of past or present potential environmental concern at or near the property.

A review of the Lake Wylie and Clover South Carolina 7.5-minute topographic quadrangles indicates that the property slopes moderately toward stream valleys in the north and south parts of the property. Elevations on the property range from approximately 717 feet NGVD (National Geodetic Vertical Datum) to approximately 621 feet NGVD. The property is in a local ground-water recharge zone. Shallow ground-water flow at the site is thought to be generally toward the north and south in accordance with topography, and to discharge into Big Branch Creek in the north part of the property and into tributaries of little Allison Creek in the south part of the property.

The aerial-photography review included inspection of black-and-white aerial photography dated 1949, 1964 and 1970, and infrared aerial photography dated 1981.

The Homestead Land & Timber property consisted of approximately 35 percent timber stands and 65 percent cropland in 1949. Sparse homes were located along secondary roads bordering and near the property. The power line that trends roughly east-west through the property was in place in 1949. The area within about one mile of the property consisted of mixed farmland and forested acreage. No areas of potential environmental concern were apparent on or near the property from review of the 1949 aerial photography.

Little change in land use occurred at or near the property between 1949 and 1964. Houses remained along the secondary roads. The road bordering the east side of the property had been rerouted slightly since 1949, and a pond had been built in the east part of the property. Many of the fields had been planted in trees since 1949. In 1964, the property consisted of approximately 50 percent planted fields and 50 percent forested acreage. No areas of potential environmental concern were apparent.

By 1970, the north part of the property had become densely wooded. Two large areas (formerly planted in crops) north and south of the road that bisects the southern part of the property appeared very disrupted on the 1970 aerial photography. The nature of the disruption, which appeared as a chaotic, anastomosing series of linear cuts across the areas, could not be determined. No evidence of logging or crop harvesting was apparent; presumably, the disruption of the surface was related to clearing of brush from the fields.

By 1981, both of these areas had been contour plowed and replanted in crops or trees; no evidence of the past disruption was apparent on the 1981 aerial photography. A new pond had been constructed just west of the property since 1970. The Homestead Land & Timber property consisted of cleared fields and timber stands in 1981. No areas of potential environmental concern were apparent.

SITE RECONNAISSANCE

A site reconnaissance of the Homestead Land and Timber property and surrounding areas was performed by an Earth Management Systems representative on August 28, 1989 to assess the potential for contamination of the property from on-site or off-site sources. No ground-water or surface-water samples were collected for chemical analysis as part of the site reconnaissance. Soil samples were collected from the area near two UST's located on property.

Potential On-Site Sources

The Homestead property is characterized by rolling terrain, moderate slopes, and a well developed vegetative cover of hardwoods, pines, brush and grasses. Much of the property is open farm land. Bedrock exposures (mainly of adamellite, amphilbolite, phyllite, and quartzite of the Charlotte Belt) are common across the property.

Several areas of miscellaneous household and construction debris (including broken concrete, shingles, cans, bottles, vehicle parts, etc.) were identified in the north part of the property, and around past and present home sites on the property. No appreciable quantities of hazardous materials were identified among the debris. It is unlikely that the debris has resulted in any significant contamination of soil or ground water beneath the Homestead property.

An abandoned gas station is located on the property along South Carolina Highway 49. Two UST's were identified at the former gas station. One tank is 10 to 15 years old, and the other is 20 to 25 years old. Four soil borings were placed around the UST's. The borings were advanced to a depth below the level of the tanks. A soil sample was collected from the bottom of each boring. No petroleum odor or stains were noted in soil removed from the borings. A composite sample from the soil borings was shipped to Advanced Chemistry Labs of Chamblee, Georgia for Chemical Analysis. The sample was analyzed for benzene, toluene, ethylbenzene and xylenes (BTEX) and total petroleum hydrocarbons (TPH). Analytical results were as follows:

Benzene	Toluene	Ethylbenzene	Xylenes	TPH
<20 ug/kg	<20 ug/kg	<20 ug/kg	<20 ug/kg	<20 mg/kg

As indicated, no BTEX was detected in soil collected near the base of the UST's at the method detection limit of 20 micrograms per kilogram (ug/kg). Also, no total petroleum hydrocarbons were detected at the method detection limit for TPH of 10 milligrams per kilogram (mg/kg). Therefore, potential leakage from the UST's has not resulted in significant contamination of soil at the abandoned gas station. It is also highly unlikely that ground water has been impacted. A copy of the laboratory report is included in the appendix.

Earth Management Systems recommends that the UST's be properly abandoned according to USEPA and SCDHEC UST regulations. This can be accomplished either excavation and removal of the tanks, or by abandonment of the tanks in place. If the tanks are to be abandoned, a tank abandonment report should be prepared for submittal to the SCDHEC.

Outdoor privies were identified behind the abandoned gas station and near homes along Campbell Road. If these facilities are no longer in use, they should be abandoned and filled in with low-permeability clay.

Domestic water-supply wells are associated with the homes along Campbell Road. If the wells are not being used, and if there are no plans for future use of the wells, it is recommended that they be properly abandoned according to SCDHEC regulations. This may be accomplished by pulling all pump materials from the well(s), and pressure grouting the well(s) with cement, starting from the base of each well and proceeding to land surface.

Potential Off-Site Sources

As indicated on page 4 of this report, one hazardous-waste generating facility was identified within one mile of the property. No CERCLIS sites were identified near the property. The EFP Products facility (SCDHEC generator no. SCD990755514) is sufficiently removed and topographically situated across local barriers to shallow ground-water flow (streams) such that little potential exists for significant contamination of the Homestead Land and Timber property from any potential problems at the facility.

Four additional potential off site sources were identified during the area reconnaissance. These are as follows:

Facility	Distance & Direction from the property	Type
Montgomery's Grocery and Garage (Abandoned)	adjoining, North	Auto Garage
Smith's Grocery	adjoining, North	Gas Station
Carolina Screw Machine Products, Inc.	3500 ft East	Light Industry

Montgomery's Grocery and Garage (presently abandoned) adjoins the property to the north along South Carolina Highway 49. Two UST's were identified at this facility along with numerous junked vehicles. Based on topography, shallow ground-water flow beneath the site is thought to be toward the south (toward the Homestead Land and Timber property). Shallow ground-water from this site is thought to discharge to small creek behind the facility (on the Homestead property). Visible observation of this creek identified no stained soil or discolored water. It is unlikely that this facility has caused significant contamination of the Homestead Land and Timber property. Future leakage or spillage of petroleum at the Montgomery Grocery and Garage facility, however, could result in degradation of soil and/or ground water beneath the Homestead property.

Smith's Grocery adjoins the northern boundary of the Homestead property (just north of South Carolina Highway 49). Three underground tanks are present at this facility. The UST's are less than ten years old. Shallow ground-water flow at the facility is thought to be toward the northwest (away from the Homestead property) based on topography. It is doubtful that any potential loss of petroleum at Smith's Grocery has caused significant contamination of soil or ground water beneath the Homestead Land and Timber property.

The Carolina Screw Machine Products facility is located near the EFP Products facility approximately 3500 feet east of the Homestead property. Shallow ground-water flow at both facilities is thought to be toward the south and southeast (away from the Homestead property). Based on shallow ground-water flow and distance from the Homestead property, it is very unlikely that these facilities have caused significant contamination of the Homestead Land and Timber property.

CONCLUSIONS

Based on review of available environmental records for the area, inspection and interpretation of topographic maps and available aerial photography, and a site reconnaissance by a representative of Earth Management Systems, it is unlikely that the

Homestead Land and Timber property has been significantly impacted by any on-site or off-site sources of contamination.

It is recommended that the UST's associated with the former gas station be abandoned according to USEPA regulations. Outdoor privey facilities on the property not currently used should be abandoned and any domestic water supply wells not currently in use or planned for use in the future should be abandoned. Copies of SCDHEC Well Standards and Regulations and Underground Storage Tank Control Regulations are included with this report. Sections concerning UST abandonment and well abandonment are highlighted.

Respectfully submitted,
EARTH MANAGEMENT SYSTEMS, INC.

David Wm. Brown, G.I.T.
Staff Hydrogeologist

Stephen C. Godfrey, P.G.

UNDERGROUND STORAGE TANK REMOVALS
CAMPBELL PROPERTY aka formerly SMITH'S STORE
HIGHWAY 49, YORK, SC
OCTOBER 13, 1994

SCOPE OF JOB

The Campbell property includes an abandoned service station/country store. The property is for sale and proper closure is needed to insure no environmental problems. According to the former operator the two 1000 gallon steel tanks were installed about 1947 and were in use until 1977. The tanks were emptied, the store closed and a new location was built across the street approximately 120 feet east of the former location. The tanks and building have not been in use since this time.

These tanks were not registered with DHEC, nor are they eligible for SUPERB funds. DHEC has been notified and the removal guidelines were outlined by Brian Cook of DHEC.

On 10/13/94 work commenced at the site under misty to light rain conditions. The tanks were located under fill dirt and had been properly installed and backfilled with sand. Both gasoline tanks were welded, unprotected steel tanks. The soil surrounding the excavations were predominantly red clays, with some saprolite. The excavations did not encounter the water table. Upon removal, the tanks were found to be in fair condition with normal corrosion/surface rust. The galvanized piping was in good condition with normal corrosion and very little pitting.

Both tanks were buried under 14" of surface cover. Soil samples were collected by hand from the floor of the excavation pit at a depth of 7½' below the ground surface. The samples were placed in glass sample jars, packed on ice in laboratory coolers and shipped via UPS to Blue Ridge Labs for analysis. The tanks were transported to Shelby, NC where they have been picked up by Services Unlimited for certified EPA disposal.

The laboratory results indicate concentrations were below the minimum detection limits.

VI. Additional Information Required

See reverse side of pink copy (owner's copy) for additional information required by DEM in the written report and sketch.

VII. Check List

Check the activities completed.

- [x] Contact local fire marshall
- [x] Notify DEM Regional Office before abandonment
- [x] Drain & flush piping into tank.
- [x] Remove all product and residuals from tank
- [x] Excavate down to tank.
- [x] Clean and inspect tank.
- [x] Remove drop tube, fill pipe, gauge pipe, vapor recovery tank connections, submersible pumps and other tank fixtures.
- [x] Cap or plug all lines except the vent and fill lines.
- [x] Purge tank of all product & flammable vapors.
- [ ] Cut one or more large holes in the tanks.
- [x] Backfill the area.

Date Tank(s) Permanently closed: 10/13/94
Date of Change-in-Service: _____

ABANDONMENT IN PLACE
- [ ] Fill tank until material overflows tank opening;
- [ ] Plug or cap all openings;
- [ ] Disconnect and cap or remove vent line
- [ ] Solid inert material used - specify: _____

REMOVAL
- [x] Create vent hole
- [x] Label tank
- [x] Dispose of tank in approved manner

Final tank destination: Services Unlimited
Bostic, NC

Re: Smith's Grocery; SC Highway 49, York
UST Permit #09322, CP #09690
GAC Bids received October 22, 1999
York County

Dear Ms. Smith:

The Division of Underground Storage Tank Management of the South Carolina Department of Health and Environmental Control (SCDHEC) recognizes your commitment to continue work at this site utilizing your own contractor. The Division has reviewed the referenced bids submitted by CBM Environmental Services.

Installation of the GAC filter should begin immediately upon receipt of this letter. Cost Proposal #09690 has been approved for the amount shown on the enclosed cost proposal form.

CBM Environmental can submit an invoice for direct billing from the State Underground Petroleum Environmental Response Bank (SUPERB) Account. Please note that all applicable South Carolina certification requirements apply to the laboratory services, well installation, and report preparation. All site rehabilitation activities must be performed and submitted by a South Carolina Certified Underground Storage Tank Site Rehabilitation Contractor.

A report documenting the filter installation and the invoice is due within 45 days from the date of this letter. If the invoice and completed report are not submitted within 120 days from the date of this letter, monies allocated to pay this invoice will be uncommitted. This means that the invoice will not be processed for payment until all other committed funds are paid or monies become available. Please note that Sections 44-2-110(4) and 44-2-130 of the SUPERB Statute state that no costs will be allowed unless prior approval from the Department is obtained. If for any reason additional tasks will be completed, these additional tasks and the associated cost must be preapproved by the Department for the cost to be paid. The SCDHEC reserves the authority to pay only for work properly performed and/or technically justified and will only pay rates in accordance with established criteria. Further, SCDHEC reserves the right to question and/or reject costs if deemed unreasonable. The SCDHEC reserves the right to audit project records at any time during the project or after completion of work.

On all correspondence concerning this site, please reference **UST Permit #09322 and CP #09690.** If there are any questions concerning this project, please contact Pamela DuBois at (803) 898-4334 or (800) 826-5435 (within South Carolina only).

Sincerely,

Kimberly A. Wilson

X Urgent X For Review ____ Please Comment ____ Please Call Me

Notes/Comments: Bob / Scott attached are three quotes we quickly obtained, because of the urgency of the project. Delivery as well as price was the problem with two of the contractors We were unable to get bids from other contractor, like Ransoft, to short notice. I think Barker would be the guy you want anyway. Tuesday, 10/26 AM is his earliest date for installation. We tentatively had Monday, but DHEC took that date

Regards
Ray

SOUTH CAROLINA DEPARTMENT OF HEALTH AND ENVIRONMENTAL CONTROL

BID NUMBER: SB-2289-04/09/98/MJN

Please provide price quotation for the complete installation of and replacement of carbon for granular activated carbon filter systems in conjunction with remediation of Leaking Underground Storage Tank sites throughout the State of South Carolina.

REQUIREMENTS:

1. The contractor must be familiar with all types of carbon filter system units (EcoWater, Rain Soft etc.).
2. The contractor must be a certified professional plumber in the State of South Carolina. Certification must be provided with bid packages.
3. For emergency situations (i.e., GAC installations), the contractor shall mobilize within 24 hours of notification. The contractor shall complete all other items under the bidding schedule within, within 48 hours of notification. If situations arise which cause delays, DHEC must be notified within 24 hours of problem and a written justificaiton submitted within 48 hours. The justification will be reviewed by DHEC.

SPECIFICATION:

1. The unit must filter Volatile Organic Chemicals to include (minimum two cubic foot carbon system/50 lbs. carbon).
2. Have a five year warranty on the control head unit and lifetime warranty on the tank (for new units).
3. Have an automatic counter to keep account of treated water.
4. Have a 48 hour capacitor that will react equipment for backwashing purposes in the event of electrical failure.
5. The equipment specifications must be validated by the Water Quality Association.
6. Have a 6 months warranty on the pipes, fittings, etc., for all units.
7. Have a faucet installed on the inlet line to allow sampling of the water entering the unit and on the outlet within the housing unit.
8. The unit must be in a locked housing unit. Copies of the keys to the lock must be given to the owner of the well and the State-Lead Section of the Bureau of Underground Storage Tank Management.
9. The serial # of unit, site # and locking keys must be given to the homeowner and DHEC (Scott McInnis).

Additional costs not to be included in total but which will be applied if items are needed.

SPECIFICATIONS FOR GAC HOUSING:

1. With the installation, the housing unit must be lockable, vented, insulated to prevent freezing and of sufficient size to allow access to service unit. The unit must have a lock and assemblage. Copies of the keys to the lock must be given to the owner of the well and the State-Lead Section of the Bureau of Underground Storage Tank Management.

SPECIFICATIONS FOR UV LIGHT DISINFECTION UNITS:

1. Ultraviolet light disinfection unit with pre-filter-
   a. Unit must be capable of removing bacteria in water supply well.
   b. Unit must be capable of treating 5 gallons per minute on private water supply well.
   c Minimum of 9,000 lamp hours.
   d Lamp out sensor and alarm must be included in system.
   e. A pre-fabricated housing unit should be used if no other housing is available.
   f. Unit must have a 1 year warranty.

FAX NUMBER PHONE NUMBER

Mr Collins;

The price for a Ecowater 3100PF12 (2 cu. ft. G.A.C.) is $2395. If a housing unit is needed, it is $450. The mileage will be 50¢ a mile. These prices include normal installation . If anything extra is required, we would call you first. Thanks for your time and consideration.

P.S. These are the same units that we have installed all over the state for DHEC. They meet all their specs.

Sincerely:

James V. Barker

MESSAGE:

Thank you for your interest in CARBTROL remediation equipment.

We have reviewed the Specification. The equipment is not of our standard supply. Our equipment is designed for groundwater remediation and not for potable applications. Compliance with the Specification would require CARBTROL to make a substantial start-up effort. This would include engineering design, production, and any regulatory compliance issues (which would also require research). In addition, we would have to obtain properly certified carbons for potable water applications.

Since this would be a start-up situation, we estimate a budgetary price of $10,000.00 for the system with an estimated lead time of 3-4 months.

We trust this information will be helpful to you.
Please feel free to call me.

Attention: Mr. Ray Collins

Subject: Carbon System
RE: Bid number SB-2289-04/09/98/MJN

Dear Mr. Collins:

Eshelman Carolinas, Inc. is pleased to submit a bid for a carbon system for subject project.

- One liquid phase carbon vessel with 55 lbs virgin carbon. 4 gpm, 150 psi high pressure tank, FRP construction, NSF certifications, food grade rating for tank and internals.
- Backwash system
- Sampling ports (before and after carbon vessel)
- Lockable building or enclosure

Eshelman Carolinas, Inc will provide a licensed subcontractor to provide services in South Carolina.

Price $8,125.00

Prices are F.O.B. ship point. Terms are Net 30 days. No applicable taxes are included. Estimated delivery is three to fours weeks after accepted purchase order. Estimated delivery is $500.00

Should you have any questions, please feel free to contact us.

Your truly,

ESHELMAN CAROLINAS, INC.

Re: Right to Enter Agreement
Tax Map 489-4, Block 1, Lot 27
Smith's Grocery
York, York County
Site ID #: 09322
CBM Project #: 10629

Dear Mr. and Ms. Barnette:

CBM Environmental Services, Inc. (CBM), on behalf of Ms. Lois Smith, is currently conducting an environmental assessment at the Smith's Grocery facility located in York County, South Carolina. The assessment activities are being conducted at the direction of the South Carolina Department of Health and Environmental Control (SCDHEC). It is our understanding that you are the owner of an adjacent property identified as Block 1, Lot 27 on York County Tax Map 489-4. In order to complete the assessment, CBM, in conjunction with the SCDHEC, has determined that it may be necessary to collect one or more groundwater samples from the water table beneath this property. The samples will be collected by installing temporary monitoring wells. The wells will be removed after the samples have been collected. However, based on the results of the sampling, it may be necessary to install permanent monitoring wells on the property. CBM, in conjunction with the SCDHEC, will determine if the installation of permanent monitoring points will be necessary.

A Right to Enter Agreement for Conducting Subsurface Investigations has been enclosed for your review. Please sign it and return it in the envelope that has been provided at your earliest possible convenience. CBM will notify you approximately seven days prior to the start of the assessment activities, and will attempt to minimize any inconvenience that the activities may cause.

Your cooperation in this matter is greatly appreciated. Please do not hesitate to contact Mr. Scott Ball at (800) 743-1226 or Ms. Pam Dubois of the SCDHEC at (800) 826-5435 if you have any questions or require additional information.

Sincerely,
CBM Environmental Services, Inc.

W. Scott Ball
Senior Project Manager

RIGHT TO ENTER AGREEMENT
FOR
CONDUCTING SUBSURFACE INVESTIGATIONS

STATE OF SOUTH CAROLINA
COUNTY OF YORK

We, the undersigned, being all of the fee simple owners of a certain tract or parcel designated as Lot 27 on Block 1 of York County Tax Map 489-4 of York County, recognizing the benefits to said property by reason of conducting subsurface investigations, hereby grant to Smith's Grocery and its agents the right to enter said property in accordance with the requirements of the State of South Carolina. Smith's Grocery's agents may include CBM Environmental Services, Inc.

The undersigned hereby covenant and warrant that they are the sole owners of said property; that they solely have the right to grant this right to enter for conducting subsurface investigations against the lawful claims of all persons whomsoever.

It is agreed that Smith's Grocery and its agents shall have the right of future entry for the purpose of maintaining any permanent monitoring points for the duration of the monitoring period, as required by the State of South Carolina Department of Health and Environmental Control (SCDHEC).

It is further agreed that Smith's Grocery shall be responsible for restoring any damage done to the ground of said property by its employees or its agents during the subsurface investigation and monitoring period, and that Smith's Grocery shall abandon monitoring wells on said property in accordance with the SCDHEC requirements at the conclusion of the monitoring period.

It is agreed that Smith's Grocery shall hold harmless the owner of the aforementioned property for any personal injury that might be sustained during the course of conducting, and proximately resulting from the conduct of, subsurface investigations.

Re: Right to Enter Agreement
Tax Map 489-4, Block 1, Lot 2
Smith's Grocery
York, York County
Site ID #: 09322
CBM Project #: 10629

Dear Mr. Galambos:

CBM Environmental Services, Inc. (CBM), on behalf of Ms. Lois Smith, is currently conducting an environmental assessment at the Smith's Grocery facility located in York County, South Carolina. The assessment activities are being conducted at the direction of the South Carolina Department of Health and Environmental Control (SCDHEC). It is our understanding that you are the owner of an adjacent property identified as Block 1, Lot 2 on York County Tax Map 489-4. In order to complete the assessment, CBM, in conjunction with the SCDHEC, has determined that it may be necessary to collect one or more groundwater samples from the water table beneath this property. The samples will be collected by installing temporary monitoring wells. The wells will be removed after the samples have been collected. However, based on the results of the sampling, it may be necessary to install permanent monitoring wells on the property. CBM, in conjunction with the SCDHEC, will determine if the installation of permanent monitoring points will be necessary.

A Right to Enter Agreement for Conducting Subsurface Investigations has been enclosed for your review. Please sign it and return it in the envelope that has been provided at your earliest possible convenience. CBM will notify you approximately seven days prior to the start of the assessment activities, and will attempt to minimize any inconvenience that the activities may cause.

Your cooperation in this matter is greatly appreciated. Please do not hesitate to contact Mr. Scott Ball at (800) 743-1226 or Ms. Pam Dubois of the SCDHEC at (800) 826-5435 if you have any questions or require additional information.

Sincerely,
CBM Environmental Services, Inc.

The undersigned hereby covenant and warrant that they are the sole owners of said property; that they solely have the right to grant this right to enter for conducting subsurface investigations against the lawful claims of all persons whomsoever.

It is agreed that Smith's Grocery and its agents shall have the right of future entry for the purpose of maintaining any permanent monitoring points for the duration of the monitoring period, as required by the State of South Carolina Department of Health and Environmental Control (SCDHEC).

It is further agreed that Smith's Grocery shall be responsible for restoring any damage done to the ground of said property by its employees or its agents during the subsurface investigation and monitoring period, and that Smith's Grocery shall abandon monitoring wells on said property in accordance with the SCDHEC requirements at the conclusion of the monitoring period.

It is agreed that Smith's Grocery shall hold harmless the owner of the aforementioned property for any personal injury that might be sustained during the course of conducting, and proximately resulting from the conduct of, subsurface investigations.

Re: Smith's Grocery **(UST Permit #09322)**
Assessment Component Cost Proposal received August 13, 1999
York County

Dear Ms. Smith:

The Division of Underground Storage Tank Management recognizes your commitment to continue work at this site utilizing your own contractor. SCDHEC (South Carolina Department of Health and Environmental Control) has reviewed the Assessment Component Cost Proposal for a Rapid Assessment submitted by CBM Environmental, Inc.

Cost Agreement **#09123** is approved up to the amount of the enclosed cost agreement form. This amount represents the components as outlined in the attached Assessment Component Cost Proposal form. The cost proposal will be kept on file. Site activities can be initiated immediately upon receipt of this letter.

CBM Environmental, Inc. can submit an invoice for direct billing from the SUPERB (State Underground Petroleum Environmental Response Bank) Account. Please note that all applicable South Carolina certification requirements apply to the laboratory services, well installation, and report preparation. Approval for up to 870 feet for Field Screening (if technically necessary) and the installation of twelve shallow and one deep ground-water monitoring wells has been provided to your environmental consultant; a copy is enclosed for your records.

Please note that Sections 44-2-110(4) and 44-2-130 of the SUPERB Statute state that no costs will be allowed unless prior approval from the Department is obtained. If for any reason additional tasks will be completed, these additional tasks and the associated cost must be preapproved by the Department for the cost to be paid. **The SCDHEC reserves the authority to pay only for work properly performed and/or technically justified and will only pay rates in accordance with established criteria. Further, SCDHEC reserves the right to question and/or reject costs if deemed unreasonable.** The SCDHEC reserves the right to audit project records at any time during the project or after completion of work.

Rehabilitation activities at the site should be resumed immediately upon receipt of this letter. Characterization of all exposure pathways shall be completed using field screening points. Based on the field screening results, monitoring wells shall be installed in appropriate locations to monitor the migration of chemicals of concern along these exposure pathways and for site rehabilitation. The department shall be contacted prior to well installation for concurrence regarding the final well locations.

A Report of Findings and the invoice are due within 60 days from the date of this letter. Interim invoices may not be submitted for this scope of work. If the invoice is not submitted within 120 days from the date of this letter, monies allocated to pay this invoice will be uncommitted. This means that the invoice will not be processed for payment until all other committed funds are paid or monies become available.

The Division of Underground Storage Tank Management grants preapproval for transportation of virgin petroleum contaminated groundwater/soil from the referenced site to a permitted treatment facility. The contaminated groundwater/soil must be properly stored in labeled containers or covered with plastic as appropriate. The contaminated groundwater/soil must be accepted by the approved treatment facility. There can be no spillage or leakage in transport. A copy of the disposal manifest and/or acceptance letter from the receiving facility that clearly designates the quantity received must be included as an appendix to the final report. If the levels of petroleum contamination based on laboratory analysis are below risk-based screening levels, please contact the project manager for approval to dispose of soil and/or ground water on site. The SUPERB account will not compensate for transportation or treatment of clean soil and/or ground water.

On all correspondence concerning this site, please reference **UST Permit #09322 and Cost Proposal #09123**. If there are any questions concerning this project, please contact me at (803) 898-4334.

Sincerely,

Pamela DuBois

Monitoring Well Installation Approval Form

Date of Issue: August 20, 1999 Approval No.: 11930

Approval is hereby granted to: CBM Environmental, Inc.
(On behalf of): Lois Smith
UST Permit #: **09322**
County: York

This approval is for the construction of 13 permanent monitoring wells in accordance with the construction plans and technical specifications outlined in the **Rapid Assessment** Document. The wells are to be constructed within the surficial aquifer for the intended purpose of monitoring ground-water quality and/or water level(s) at the referenced facility. Approval is provided with the following conditions:

1. The latitude and longitude, surveyed elevations, boring and/or geologist logs and actual (as built) construction details for each well will be submitted with the technical report.

2. Each well will be labeled with an identification plate constructed of a durable material affixed to the casing or surface pad where it is readily visible. The plate will provide monitoring well I.D.#, date of construction, static water level, and driller name and state certification #.

3. Well construction and sampling derived waste including, but not necessarily limited to, drill cuttings, drilling fluids, development and purge water should be managed properly and in compliance with applicable requirements. If containerized, each vessel should be clearly labeled with regard to contents, source, and date of activity.

4. A minimum of forty-eight (48) hours prior to initiation of drilling activities, please provide notice to Pamela DuBois at (803) 898-4334 or duboispm@columb26.dhec.state.sc.us.

5. Please provide ground-water quality analytical data (chemical analysis and/or water level(s)) and associated measurements (i.e., in-situ field measurements) to Pamela DuBois with the technical report.

6. Monitoring wells will be installed by or under the direct supervision of a licensed well driller certified by the State of South Carolina.

7. Monitoring wells and temporary monitoring wells will be abandoned by or under the direct supervision of a licensed well driller certified by the State of South Carolina. Temporary monitoring wells shall not remain in place for longer than 30 days from the date of installation. Monitoring wells may be abandoned only upon concurrence by this Division.

This approval is pursuant to the provisions of Section 44-55-40 of the 1976 South Carolina Code of Laws and the Department of Health and Environmental Control Regulations R.61-71. Please remember to have a copy of this approval on the site during well installation.

Re: Right to Enter Agreement
Tax Map 456 Lot 56 and Lot 57
Smith's Grocery
York, York County
Site ID #: 09322
CBM Project #: 10629

Dear Mr. & Mrs. Norris:

CBM Environmental Services, Inc. (CBM), on behalf of Ms. Lois Smith, is currently conducting an environmental assessment at the Smith's Grocery facility located in York County, South Carolina. The assessment activities are being conducted at the direction of the South Carolina Department of Health and Environmental Control (SCDHEC). It is our understanding that you are the owner of adjacent properties identified as Lot 56 and Lot 57 on York County Tax Map 456. In order to complete the assessment, CBM, in conjunction with the SCDHEC, has determined that it may be necessary to collect one or more groundwater samples from the water table beneath this property. The samples will be collected by installing temporary monitoring wells. The wells will be removed after the samples have been collected. However, based on the results of the sampling, it may be necessary to install permanent monitoring wells on the property. CBM, in conjunction with the SCDHEC, will determine if the installation of permanent monitoring points will be necessary.

A Right to Enter Agreement for Conducting Subsurface Investigations has been enclosed for your review. Please sign it and return it in the envelope that has been provided at your earliest possible convenience. CBM will notify you approximately seven days prior to the start of the assessment activities, and will attempt to minimize any inconvenience that the activities may cause.

Your cooperation in this matter is greatly appreciated. Please do not hesitate to contact Mr. Scott Ball at (800) 743-1226 or Ms. Pam Dubois of the SCDHEC at (800) 826-5435 if you have any questions or require additional information.

Sincerely,
CBM Environmental Services, Inc.

COUNTY OF YORK

We, the undersigned, being all of the fee simple owners of certain tracts or parcels designated as Lot 7 on Tax Map 456 of York County, recognizing the benefits to said property by reason of conducting subsurface investigations, hereby grant to Smith's Grocery and its agents the right to enter said property in accordance with the requirements of the State of South Carolina. Smith's Grocery's agents may include CBM Environmental Services, Inc.

The undersigned hereby covenant and warrant that they are the sole owners of said property; that they solely have the right to grant this right to enter for conducting subsurface investigations against the lawful claims of all persons whomsoever.

It is agreed that Smith's Grocery and its agents shall have the right of future entry for the purpose of maintaining any permanent monitoring points for the duration of the monitoring period, as required by the State of South Carolina Department of Health and Environmental Control (SCDHEC).

It is further agreed that Smith's Grocery shall be responsible for restoring any damage done to the ground of said property by its employees or its agents during the subsurface investigation and monitoring period, and that Smith's Grocery shall abandon monitoring wells on said property in accordance with the SCDHEC requirements at the conclusion of the monitoring period.

It is agreed that Smith's Grocery shall hold harmless the owner of the aforementioned property for any personal injury that might be sustained during the course of conducting, and proximately resulting from the conduct of, subsurface investigations.

Re: Right to Enter Agreement
Tax Map 456, Lot 8
Smith's Grocery
York, York County
Site ID #: 09322
CBM Project #: 10629

Dear Ms. Carothers:

CBM Environmental Services, Inc. (CBM), on behalf of Ms. Lois Smith, is currently conducting an environmental assessment at the Smith's Grocery facility located in York County, South Carolina. The assessment activities are being conducted at the direction of the South Carolina Department of Health and Environmental Control (SCDHEC). It is our understanding that you are the owner of adjacent properties identified as Lot 8 on York County Tax Map 456. In order to complete the assessment, CBM, in conjunction with the SCDHEC, has determined that it may be necessary to collect one or more groundwater samples from the water table beneath this property. The samples will be collected by installing temporary monitoring wells. The wells will be removed after the samples have been collected. However, based on the results of the sampling, it may be necessary to install permanent monitoring wells on the property. CBM, in conjunction with the SCDHEC, will determine if the installation of permanent monitoring points will be necessary.

A Right to Enter Agreement for Conducting Subsurface Investigations has been enclosed for your review. Please sign it and return it in the envelope that has been provided at your earliest possible convenience. CBM will notify you approximately seven days prior to the start of the assessment activities, and will attempt to minimize any inconvenience that the activities may cause.

Your cooperation in this matter is greatly appreciated. Please do not hesitate to contact Mr. Scott Ball at (800) 743-1226 or Ms. Pam Dubois of the SCDHEC at (800) 826-5435 if you have any questions or require additional information.

Sincerely,
CBM Environmental Services, Inc.

FORM 638 (REV. 7/93)

APPLICATION FOR ENCROACHMENT PERMIT

No. _____

(ENCROACHMENT PERMIT OTHER THAN A PUBLIC UTILITY)

APPLICANT: Charles Cline
AND Marshall Miller & Associates
ADDRESS: P.O. Box 848
Bluefield, VA 24605

TELEPHONE NUMBER: 540-322-5467

COUNTY: York County
ROAD/ROUTE: Highway 49 and
Old McKinnely Road

ROAD NAME:

1. The undersigned applicant hereby applies to the South Carolina Department of Transportation (SCDOT) for a permit for encroachment on State Highway Right of Way as shown and described below:

2. **Type of Encroachment:** Soil borings and Monitoring wells

3. **Description of location:** See attached Map.
Intersection of Route 49
and Old McKinnely Road
Monitoring Wells will be installed atleast 4 feet
from the pavement and traffic control will be provided.

(Attach sketch indicating roadway features such as: pavement width, shoulder width, sidewalk and curb and gutter location, significant drainage structure, north arrow, right of way width, and location of the proposed encroachment with respect to the roadway centerline and the nearest intersecting road on the State system.)

4. The undersigned applicant hereby requests the SCDOT to permit encroachment on the Department right of way as described herein. It is expressly understood that the encroachment, if and when constructed, shall be installed in accordance with the sketch attached hereto and made a part hereof. The applicant agrees to comply with and be bound by the Department's "A Policy for Accommodating Utilities on Highways Rights of Way" and "Standard Specifications for Highway Construction" (made a part hereof by reference) on file in the Utility Office of the Department, and all general provisions on the reverse hereof and special provisions below or attached hereto during the installation, operation and maintenance of said encroachment within the Department Right of Way. The applicant hereby further agrees, and binds his heirs, successors, assigns, to assume any and all liability this Department might otherwise have in connection with accidents or injuries to persons, or damage to property, including the highway, that may be caused by the construction, maintenance, use, moving or removing, of the physical appurtenances contemplated herein and agrees to indemnify this Department for any liability incurred or injury or damage sustained by reason of the past, present, or future existence of said appurtenances.

APPLICANT NAME: _____ DATE: _____
(PLEASE PRINT OR TYPE)

APPLICANT SIGNATURE: _____ TITLE: _____

In compliance with your request and subject to all the provisions, terms, conditions and restrictions stated in the application, general provisions on the reverse hereof, and special provisions below or attached hereto, the Department approves the request. This permit shall become null and void unless the work contemplated herein shall have been completed prior to _____.

SPECIAL PROVISIONS:

DATE RECEIVED BY RES. MAINT. ENGR. _____ DATE FORWARDED _____ SCDOT APPROVAL _____ DATE _____

DATE RECEIVED BY DIST. ENGR. ADMIN. _____ DATE FORWARDED _____

☐ RESIDENT MAINTENANCE ENGINEER ☐ STATE HIGHWAY ENGINEER

☐ DISTRICT ENGINEERING ADMINISTRATOR ☐ DISTRICT MAINT./CONSTRUCTION ENGINEER

GENERAL PROVISIONS

1. NOTICE PRIOR TO STARTING WORK: Before starting the work contemplated herein within the limits of the highway right of way, the Department's Maintenance Superintendent in the county in which the proposed work is located shall be notified 24 hours in advance so that he may be present while the work is under way and this permit is subject to any further restrictions.

2. PERMIT SUBJECT TO INSPECTION: This permit shall be kept at the site of the work at all times while said work is under way and must be shown to any representative of the Department or law enforcement officer on demand.

3. PROTECTION OF HIGHWAY TRAFFIC: Adequate provisions shall be made for the protection of the highway traffic at all times. Necessary detours, barricades, warning signs and flagmen shall be provided by and at the expense of the permittee and shall be in accordance with the South Carolina Manual on Uniform Traffic Control Devices. The work shall be planned and carried out so that there will be the least possible inconvenience to the highway traffic. The permittee agrees to observe all rules and regulations of the Department while carrying on the work contemplated herein and take all other precautions that circumstances warrant.

4. STANDARDS OF CONSTRUCTION: All work shall conform to recognized standards of construction and shall be performed in a workmanlike manner. Adequate provisions shall be made for maintaining the proper drainage of the highway. All work shall be subject to the supervision and satisfaction of the Department.

5. FUTURE MOVING OF PHYSICAL APPURTENANCES: If, in the opinion of the State Highway Engineer, it should ever become necessary to move or remove the physical appurtenances, or any part thereof contemplated herein, on account of change in location of the highway, widening of the highway, or for any other sufficient reason, such moving or removing shall be done on demand of the Department at the expense of the permittee.

6. RESTORATION OF HIGHWAY FACILITIES UPON MOVING OR REMOVING OF PHYSICAL APPURTENANCES: If, and when, the physical appurtenances contemplated herein shall be moved or removed, either on the demand of the Department or at the option of the permittee, the highway and facilities shall immediately be restored to their original condition at the expense of the permittee.

7. COSTS: All work in connection with the construction, maintenance, moving or removing of the physical appurtenances contemplated herein shall be done by and at the expense of the permittee.

8. PERMITTEE: The word "Permittee" used herein shall mean the name of the person, firm, or corporation to whom this permit is addressed, his, her, its, heirs, successors and assigns.

9. PERMISSION OF ABUTTING PROPERTY OWNERS: It is distinctly understood that this permit does not in any wise grant or release any rights lawfully possessed by the abutting property owners. Any such rights necessary shall be secured from said abutting property owners by the permittee.

10. WORK PERFORMANCE:
   (a) Poles shall be placed at the distance from the centerline of the highway as specifically stipulated herein.
   (b) All crossings over the highway shall be constructed in accordance with Specifications for Overhead Crossings of Light and Power Transmission Lines and Telephone and Telegraph Lines over each other and over Highway Rights of Way in South Carolina, as approved by the Public Service Commission of South Carolina and operative as of date of this permit.
   (c) All tunnelling, boring, or jacking shall be done in such a way as not to disturb the highway surfacing.
   (d) No pavement shall be cut unless specifically authorized herein.
   (e) No excavation shall be nearer than three feet to the edge of pavement unless specifically authorized herein.
   (f) Underground facilities will be located at minimum depths as defined in the Utility Accommodations Manual for the transmittant, generally as follows: (1) Bury under pavement - 4 feet minimum for hazardous or dangerous transmittant; 3 feet minimum for other lines. (2) Bury under other surfaces - 30 inches minimum for power and communication lines and 3 feet for all other facilities. Shallower depths may be approved if adequate protection is provided.
   (g) Service and other small diameter pipes shall be jacked, driven, or otherwise forced underneath the pavements on any surfaced road without disturbing said pavement. The section under the highway pavement and within a distance of two (2) feet on either side shall be continuous without joints.
   (h) Work shall be performed in accordance with the Department's "A Policy for Accommodating Utilities on Highway Rights-of-Way", and "Standard Specifications for Highway Construction".

11. For the purpose of this permit, the word "DEPARTMENT" shall mean the South Carolina Department of Transportation.

12. The permittee shall be responsible for obtaining any other approvals or permits necessary for installation.

13. Permittee is responsible for maintaining reasonable access to private driveways during construction.

14. It is expressly provided that with respect to any limited access highway, the permittee shall not have or gain access from the main travel way of said highway or its on or off ramps to any facility authorized by this permit except upon approval by the Department.

15. DRIVEWAYS AND APPROACHES:
   (a) The existing crown of the highway shall be continued to the outside shoulder line of the highway.
   (b) If the driveway or approach is of concrete pavement, the pavement shall be constructed at least 6 inches thick, and of a mix not leaner than 1-2-4. There shall be a bituminous expansion joint, not less than ¾ inches in thickness, placed between the highway paving and the paving of the approach for the full width of the latter.

16. RAILROAD TRACKS:
   (a) The rails of railroad tracks crossing the highway at grade shall conform to the grade of the highway.
   (b) The provisions of the Code of Laws for South Carolina as amended regarding the construction and maintenance of railroad and highway grade crossings shall be complied with in all respects.
   (c) Unless specifically authorized herein, all engines, trains or cars operating over the tracks across the highway at grade shall be brought to a complete stop immediately before crossing the highway and before proceeding across the highway, flagmen carrying a red flag by day and a lantern by night shall be stationed on each side of the train to warn approaching highway traffic. Should the permittee fail to consistently operate the railroad in accordance with this section, after having received written notice from the Highway Department of such failure, this permit shall automatically become null and void insofar as the continuance of the railroad is concerned.
   (d) The railroad track contemplated herein and its appurtenances shall be completely removed from the highway right of way within 60 days if, when, and after operations across the highway on the railroad shall have been abandoned, and the highway replaced in at least as good condition as the adjacent sections of the highway may be at the time of abandonment of said operations. The cost of same shall be borne by the permittee.

17. BEAUTIFICATION WORK:
   (a) All trees, plants, flowers, etc., shall be placed in accordance with the provisions specifically stipulated herein.
   (b) All trees, plants, flowers, etc., shall be taken care of by and at the expense of the permittee and the provisions of this letter shall become null and void if and when said permittee ceases to take care of said trees, plants, flowers, etc.

18. There shall be no excavation of soil nearer than two feet of any public utility line or appurtenant facility except with the consent of the owner thereof, or except upon special permission of this Department after an opportunity to be heard is given the owner of such line or appurtenant facility.

Re: Smith's Grocery **(UST Permit #09322)**
Initial Ground Water Assessment Report received February 16, 1999
York County

Dear Ms. Smith:

The Division of Underground Storage Tank Management has reviewed the referenced Initial Ground Water Assessment Report. Currently, the release reported on June 30, 1993 at the referenced site has a priority classification of 2B. Therefore, SUPERB (State Underground Petroleum Environmental Response Bank) funds are available to implement the next necessary scope of work. The scope of work to be implemented is a **Rapid Assessment**.

Our records show that you have selected CBM Environmental Services, Inc. as the contractor to perform assessment activities at the site. Please have your contractor complete and submit the enclosed Assessment Component Cost Proposal form and Rapid Assessment Plan form within thirty days of the date of this letter. Every component may not be necessary to complete the above scope of work. The SUPERB allowable cost for each component is included on the Assessment Component Cost Proposal form.

On all correspondence or inquiries regarding this project, please reference **UST Permit #09322**. If you have any questions, please feel free to contact Pamela DuBois at (803) 898-4334 or 1 (800) 826-5435 (within South Carolina only).

Sincerely,

UST Permit #09322
Initial Ground-Water Assessment Report received February 16, 1999
York County

Dear Ms. Smith:

The results of the Initial Ground-Water Assessment (copy enclosed for your records) confirm the presence of impacted ground water and the need for a Tier 2 Assessment.

As authorized by your Permission Form (received September 16, 1998), the SCDHEC will directly procure the services of an environmental contractor on your behalf for the Tier 2 Assessment. The associated cost will be paid by the State Underground Petroleum Environmental Response Bank (SUPERB) Account. You will be informed of the results upon completion.

On all correspondence regarding this site, please reference UST Permit #09322. Please feel free to call Read S. Miner, at (803) 898-4349 or (800) 826-5435 (within SC only) if you have questions or need additional information.

Purchase Order #148159
Notice to Proceed

Dear Mr. Cline:

The Division of Underground Storage Tank Management of the South Carolina Department of Health and Environmental Control (SCDHEC) is requesting the submittal of Tier 2 Assessment Plans for various Tier 2 assessment component tasks for eight facilities.

Roddey Store	UST Permit # 02147	Chester County	Class 1
Leroy Springs	UST Permit # 02067	Chester County	Class 3BD
Smiths Grocery	UST Permit # 09322	York County	Class 2BB
Handy Pantry #44	UST Permit # 09372	York County	Class 2AB
Country Chevron	UST Permit # 09449	York County	Class 3BE
Alexander Auto & Tire	UST Permit # 14507	York County	Class 2BB
Randy Sims Exxon	UST Permit # 05663	Laurens County	Class 3AA
Farmers Texaco	UST Permit # 11293	Laurens County	Class 3AA

The Department understands that you intend to distribute these facilities between two offices of Marshall Miller & Associates, Inc. Please inform Read Miner via facsimile (803) 898-4330 which office will be addressing which projects and the order in which you intend to address the listed facilities on or before March 19, 1999. The following implementation schedule must be followed:

		Plan due date	Report due date
Office #1	Facility #1	March 19, 1999	June 4, 1999
	Facility #2	March 24, 1999	June 10, 1999
	Facility #3	March 29, 1999	June 15, 1999
	Facility #4	April 2, 1999	June 21, 1999
Office #2	Facility #5	March 19, 1999	June 4, 1999
	Facility #6	March 24, 1999	June 10, 1999
	Facility #7	March 29, 1999	June 15, 1999
	Facility #8	April 2, 1999	June 21, 1999

Tier 2 Assessment Plans, Implementation, and Reports submittal shall be performed in accordance with the referenced contract. Per Section 12, Special Conditions, "a late fee of $100.00/day may be levied for each report submitted after the deadline established in the Notice to Proceed.

On all correspondence regarding these sites, please reference the UST Permit number. The Tier 2 Assessment Reports shall be submitted to the attention of Read Miner.

Sincerely,

State Lead and Field Services Section

Is there a drinking water supply well (public or private) or surface water supply intake within 1000 feet of the UST?		X
Are irrigation or other non-drinking water wells located within 1000 feet of the UST?	X	
Are there other potential receptors (i.e., utilities, surface waters, wetlands) less than 500 feet from the UST?		X

*If "yes" provide additional information:
One water supply well, designated WSW-1, is located approximately 150 feet east of the UST. Natural gas lines run parallel to SC Highway 49 and from the structure on-site to Old McKinney Road.

Were any water wells within a 250 foot radius sampled? X Yes _____ No

Is the current use of the site and surrounding properties commercial, residential, agricultural or industrial?
Site: Commercial Adjacent Properties: Residential

Soil and Monitoring Well Data

Primary Soil Type: Backfill/silty clay

Well Installation Method and Date: Hollow stem auger on 1/16/99

Development Method: Disposable polyethylene bailer

Soil Sample Depth: NA

CDHEC Site ID #: 09322

SOIL ANALYTICAL DATA

Soil Boring	Benzene (mg/kg)	Toluene (mg/kg)	Ethylbenzene (mg/kg)	Xylenes (mg/kg)	Naphthalene (mg/kg)
---	---	---	---	---	---

Soil Boring	Benzo(a)-anthracene (mg/kg)	Benzo(b)-fluoranthene (mg/kg)	Benzo(k)-fluoranthene (mg/kg)	Chrysene (mg/kg)	Dibenzo(a,h)-anthracene (mg/kg)
---	---	---	---	---	---

Groundwater Data

Depth to Groundwater: 27.32 feet

Well Purging/Sampling Method: Disposable polyethylene bailer

Date Sampled: 2/2/99

Feet Product Thickness: NA

Soil/Water Disposal Method: Soil and purge water were placed in a 55-gallon drum for transportation to a licensed disposal facility.

Certificate of Disposal

GENERATOR:

Smith's Grocery
3176 Charlotte Hwy.
York, SC

MATERIAL ACCEPTED:

2 drums of non-hazardous petroleum contaminated soil

DISPOSAL METHOD:

Bio-Remediation

GARCO Inc. accepted the above listed materials on 2/12/99. The material has been assigned the following GARCO Identification number(s).

GARCO ID No.(s) SP-1010 through SP-1011

GARCO, Inc. has accepted custody of the above referenced non-hazardous material. This material has been determined to be non-hazardous by a material profile, generator knowledge and/or analytical data provided to GARCO, Inc.

From: Read S. Miner, P.G., Hydrologist
State Lead and Field Services Section

Re: Smith's Grocery
Facility #09322
SB-1752 - 01/15/98/MJN
Initial Ground-Water Assessment Report received February 16, 1999
York County

The referenced report contains the following defficiencies pertaining to the referenced contract requirements:

- Special Condition #5 - Two copies of the report are required.
- Specification #13 - Appendix B should be analytical data.
- Specification #13 - Appendix C. should be topographic map.
- Specification 13. - Appendix D. should be Site Base Map. Base map did not include property lines, private underground utilities on or adjacent to the site, previous soil sample locations.
- Specification #13 - Appendix E should be disposal manifests.
- Specification #13 - Appendix F. should be additional data.

Re: IGWA Bid Package #SB-1752-01/15/98/MJN

Dear Mr. Hess:

Based on the award of the referenced bid package, information packets for fifteen (15) underground storage tank facilities were provided to you on December 23, 1998. The packets contained all necessary approvals for work to begin. The facilities have been assigned an individual Cost Proposal (CP) number as listed below. Please reference the CP number and Purchase Order #108844 on the appropriate invoices submitted for payment against each facility. Invoice forms are enclosed for your convenience. As specified in the referenced bid, **the completed invoice forms and associated IGWA reports (include contract certification number) are expected on or before the designated due date associated with each site (see below).**

Facility ID#	County	Report Due Date	CP#
12890	Union	02/16/98	06855
09322	York	02/16/98	06856
14507	York	02/16/98	06857
12152	Aiken	02/18/98	06858
13219	Aiken	02/18/98	06859
00128	Aiken	02/18/98	06860
14276	Aiken	02/22/98	06861
12180	Aiken	02/22/98	06862
15758	Spartanburg	02/22/98	06863
15866	Spartanburg	02/24/98	06864
09945	Spartanburg	02/24/98	06865
12635	Spartanburg	02/24/98	06866
08588	Spartanburg	02/26/98	06867
08268	Spartanburg	02/26/98	06868
15985	Spartanburg	02/26/98	06869

CBM will perform services at the site on behalf of the sites' responsible parties (RP); however, payments will be made from the SUPERB and TRUST Accounts as appropriate. The site RP has no obligation for payment for this scope of work.

The Division grants preapproval for transportation of drums of virgin petroleum contaminated soil and drums of groundwater from the referenced site to a permitted treatment facility. The contaminated soil and/or groundwater must be properly stored in labeled 55 gallon drums or equivalent containers. The contaminated soil and/or groundwater must be accepted by the approved treatment facility. There can be no spillage or leakage in transport. A copy of the disposal manifest from the receiving facility that clearly designates the quantity received must be included as an appendix to the final report.

Please provide this office with a schedule of drilling dates and coordinate all work with H. Reed Corley before commencing work at the facilities. If you have any questions or need further assistance, please contact H. Reed Corley at (800) 826-5435 (within SC only) or (803) 898-4360.

Sincerely,

State Lead & Field Services Section

UNDERGROUND STORAGE TANK AND PROPERTY OWNER

RSM

PERMISSION FORM - **Facility ID #09322**

If you are the owner of the former or existing underground storage tanks and the property owner, please complete this form.

I, Lois B. Smith, certify that I am the legal owner of the underground storage tanks and property located at the facility identified below or serve as the authorized representative for the owner. I grant permission to the South Carolina Department of Health and Environmental Control (SCDHEC) to secure on my behalf contractor services to conduct assessment and corrective action activities as required, and authorize SCDHEC, or a contractor selected by SCDHEC, to enter this property at reasonable times only to accomplish these site rehabilitation tasks. The contractor(s) will be designated as my contractor for only the required site rehabilitation activities. Compensation to the contractor(s) will be from the SUPERB Account and I will have no obligation to pay the contractor(s). I understand that SCDHEC will be responsible for notifying me of all activities that are necessary prior to their initiation and will promptly provide to me a copy of each environmental report. I understand that I may choose to select my own contractor at the completion of any phase of work by notifying the Bureau of Underground Storage Tank Management in writing.

Re: Smith's Grocery
Facility ID #09322
Environmental Insurance Statement
Telepone conversation on September 4, 1998
Release Date:August 5, 1991
York County

Dear Ms. Smith:

The Underground Storage Tank Program (USTP) of the South Carolina Department of Health and Environmental Control (SCDHEC) has reviewed the departmental file for the referenced facility and determined that a release of petroleum hydrocarbons has occurred. To proceed with the qualification process for the State Underground Petroleum Environmental Response Bank (SUPERB) Act, the following information is required:

- **Written confirmation of the existence or non-existence of an environmental insurance policy for this site. This information must be signed by the responsible party and a notary public. For your convenience, an insurance statement form has been enclosed. If an environmental insurance policy existed at the time of the release, a copy of the policy with all endorsements must be submitted with the insurance statement.**

Currently, the release reported at the referenced site has a priority classification of 5A. In order to determine what risk the release may pose to human health and the environment, the next scope of work to be implemented is an **Initial Ground-Water Assessment**.

In the referenced telephone conversation you stated that you would prefer for SCDHEC to directly procure the services of a site rehabilitation contractor to perform the necessary site activities. As requested, I have enclosed the permission form that must be completed for SCDHEC and its contractor to access the property. Please complete the requested information to my attention on or before **September 15, 1998** with a copy of this letter. Qualification for SUPERB funds cannot occur until this information is submitted.

On all correspondence relating to this site, please reference the **Facility ID #09322.** If you have any questions, please feel free to contact Rodney Wilson at (803) 734-2844 or 1-800-826-5435 (within South Carolina only).

Sincerely,

Assessment and Corrective Action Branch

Re: Smith's Grocery
Facility ID #09322
Notice of Violation
York County

Dear Ms. Smith:

The Division of Underground Storage Tank (UST) Management of the South Carolina Department of Health and Environmental Control directed you to complete an Initial Ground-Water Assessment (IGWA) in June 1998. To date, the required report has not been received. In accordance with Section 280.65 of the South Carolina Underground Storage Tank Regulations, the assessment must be conducted as documented chemicals of concern are above the risk-based-screening levels.

The enclosed Owner/Operator Lead Information Sheet should be completed and returned to my attention within 10 days. Upon submittal of the information sheet, a cost proposal number will be assigned under which the IGWA invoice will be submitted to the Department upon completion of work. The IGWA report will be due within 60 days after the cost proposal number is issued. **However, if the information sheet is not returned within 10 days, enforcement procedures will be initiated.**

Please reference **Facility ID #09322** in all correspondence concerning this project. If you have any questions or need additional information, please call Rodney Wilson at 1-800-826-5435 (within SC only) or (803) 734-2844. Thank you for your time and cooperation in this matter.

Sincerely,

Availability of SUPERB Funding
York County

Dear Ms. Smith:

Currently, the release reported on June 30, 1993 at the referenced site has a priority classification of 5A. In order to determine what risk the release may pose to human health and the environment, SUPERB funds are being made available to implement the next necessary scope of work. The scope of work to be implemented is an **Initial Ground-Water Assessment.**

Our records do not indicate that you have selected a contractor to perform assessment activities at this site. If you wish to select your own contractor, please indicate your choice on the enclosed Information Sheet and return to my attention within 10 days in order for the necessary technical and financial approvals to be issued. All site rehabilitation activities must be performed and submitted by a South Carolina Certified Underground Storage Tank Site Rehabilitation Contractor. If you need assistance in finding a certified contractor, please let us know and we will provide you a list of companies for your consideration.

If you wish, the SCDHEC can directly procure the services of a site rehabilitation contractor on your behalf. If you would like more information on this method of implementing the necessary scope of work, please contact Rodney Wilson within 10 days of this letter. Submittal of the enclosed Information Sheet is not required if you select this method. If you choose this option, additional forms will be forwarded to you for SCDHEC and its contractor to access the property.

On all correspondence or inquiries regarding this project, please reference **Site ID #09322**. If you have any questions, please feel free to contact Rodney Wilson at (803) 734-2844 or 1-800-826-5435 (within South Carolina only).

Sincerely,

Assessment and Corrective Action Branch

Dear Sir,

I own and operate Smith's Bro. highway 49 York, SC. I have been in the Store business 40 years. In 1978 I moved in to the Store & Presently own and Operate. That some year Mosingo oil Co. of Rock Hill SC installed 3 new tanks at the time of installation one of the new lines leaked, Mosingo Corrected the faulty line. I was unaware of the June 30 amnesty Provision until recently. I got a man to come take samples of all my tanks, Pumps, and lines. It appears to have some Contamination at Sample #1 and Sample #2 From the odor of the dirt samples. My tank registration No is N46 ND 09322001 My samples have been delivered to Prism Lab, in Spartanburg. My analysis will be forwarded to you as soon as I receive them. Thank you for your help in this Matter.

Sincerely Yours
Louis B. Smith

	Tank 1	Tank 2	Tank 3	Tank 4	Tank 5	Tank 5
A. Construction Material	steel	steel				
B. Distance from UST to Dispenser	53 ft	53 ft				
C. Number of Dispensers	1	1				
D. Type of System	suction	suction				
E. Was Piping Removed from the Ground	yes	yes				
F. Visible Corrosion or Pitting	no	no				
G. Visible Holes	no	no				
H. Age	15	15				

I. If any corrosion, pitting, or holes were observed, describe the location and extent for each line.

None

VII. BRIEF SITE DESCRIPTION AND HISTORY

Smith's Grocery is located on Highway 49 in between York and Clover. This location sits on the edge of the Kings Mountain Belt. Soils here are Saprolitic with a high porosity and very low conductivity. Ground water in this area varies form 20 to 35 feet. This store installed new tanks 15 years ago. A site assessment was conducted in 1993 for participation in the Superb program.

VIII. SITE CONDITIONS

	Yes	No	Unk
A. Were any petroleum-stained or contaminated soils found in the UST excavation, soil borings, trenches, or monitoring wells? If yes, indicate depth and location on the site map.		x	
B. Were any petroleum odors detected in the excavation, soil borings, trenches, or monitoring wells? If yes, indicate location on site map and describe the odor (strong, mild, etc.)		x	
C. Was water present in the UST excavation, soil borings, or trenches? If yes, how far below land surface (indicate location and depth? _____		x	
D. Did contaminated soils remain stockpiled on site after closure? If yes, indicate the stockpile location on the site map. Name of DHEC representative authorizing soil removal: _____		x	
E. Was a petroleum sheen or free product detected on any excavation or boring waters? If yes, indicate location and thickness. _____		x	

IX. SAMPLE INFORMATION

A. SCDHEC Lab Certification Number 99012

B.

X. SAMPLING METHODOLOGY

Provide a detailed description of the methods used to collect and store (preserve) the samples. Please use the space provided below.

Samples were taken by the grab method with new gloves worn for each sample. Samples were packed into laboratory approved glass containers with Teflon caps. After each sample was taken they were immediately placed on ice for direct transport to the laboratory. Chain of custody tape was placed on each jar and a chain of custody form was filled out for the sample batch.

XI. RECEPTORS

	Yes	No
A. Are there any lakes, ponds, streams, or wetlands located within 1000 feet of the UST system. If yes, indicate type of receptor, distance, and direction on site map.		x
B. Are there any public, private, or irrigation water supply wells within 1000 feet of the UST system? If yes, indicate type of well, distance, and direction on site map.	x	
C. Are there any underground structures (e.g., basements) located within 100 feet of the UST system. If yes, indicate type of structure, distance, and direction on site map.		x
D. Are there any underground utilities (e.g., telephone, electricity, gas, water, sewer, storm drain) located within 100 feet of the UST system that could potentially come in contact with the contamination? If yes, indicate the type of utility, distance, and direction on the site map.	x	
E. Has contaminated soil been identified at a depth less than 3 feet below land surface in an area that is not capped by asphalt or concrete? If yes, indicate the area of contaminated soil on the site map.	x

Appendix 5 - INSURANCE STATEMENT

This site is potentially eligible to receive state monies to assist you in site rehabilitation, if required. Before eligibility for State Underground Petroleum Environmental Response Bank (SUPERB) funds can be determined, written confirmation of the existence or non-existence of an environmental insurance policy for this site is required. Please complete the following information:

X I do not have any insurance that would cover releases from underground storage tanks.

____ I have an insurance policy that covers releases from underground storage tanks.

My policy provider is: _____
The policy deductible is: _____
The policy limit is: _____

If you have this type of insurance, please include a copy of the policy with this report.

Signature: Lou B. Bruce

Date: 4.13.96

To be Completed by Notary Public:

Sworn before me this 13th day of April, 1996.

Lou M Taylor
(Name)

Notary Public for the state of South Carolina

My commission expires March 16th 2004.

Please affix State Seal if you are commissioned outside South Carolina.
