DICK Environmental Corp. will perform services at the sites on behalf of the site's responsible party (RP); however, payment will be made from the SUPERB Account. The site's RP has no obligation for payment for this scope of work. Please coordinate access to the facility with the property owner. Contact information has been provided in the information packet. The Bureau grants pre-approval for transportation of drums of groundwater from the referenced sites to a permitted treatment facility. The contaminated groundwater must be properly stored in labeled 55-gallon drums or equivalent containers. The contaminated groundwater must be accepted by the approved treatment facility. There can be no spillage or leakage in transport. A copy of the disposal manifest from the receiving facility that clearly designates the quantity received must be included with the final report.

Please contact me with the sampling schedule before commencing work at these facilities. If you have any questions or need further assistance, please contact me at (803) 896-6397 or thomadl@dhec.sc.gov.

Sincerely,

Debra L. Thoma

Dear Mr. Gillespie:

The Underground Storage Tank (UST) Program of the South Carolina Department of Health and Environmental Control has reviewed the referenced report and noted its findings. Please note that the new Green water supply well must be sampled next quarter. Additionally, the location of the new well should be included on the site map. The next quarterly monitoring report is due on or before April 15, 2004.

On all correspondence pertaining to this facility, please reference the UST Permit Number. If you have any questions or comments, please contact me by telephone at (803) 896-6629 or (800) 826-5435 or by e-mail at hydricpa@dhec.sc.gov.

Dear Mr. Gillespie:

The Underground Storage Tank Program has reviewed the referenced report and noted its findings. It was noted that the pre-existing supply well (CP-WW) at the Green residence was not operational and that a new supply well had been installed. Please note the location of the new water supply well on the site map and indicate it as CP-WW2. In addition, as CP-WW cannot be sampled, please collect a sample from CP-WW2. Please note that the next quarterly monitoring report must be submitted on or before January 15, 2004.

On all correspondence pertaining to this facility, please reference the UST Permit Number. If you have any questions, please contact me at (803) 896-6397.

Quarterly Monitoring Report received October 29, 2002
Abbeville County

Dear Mr. Crawford:

As you may be aware, a corrective action plan was implemented in May 2000, in response to a petroleum release from former USTs at the referenced facility. Please find enclosed a copy of the referenced report, which is sent to you in an effort to keep you informed of the remediation activities taking place. The report includes an overview of the current site conditions and details the most recent groundwater sampling activities. The results of this report provide analytical data that is used to determine the effectiveness of the remediation system. The next monitoring report will be forwarded to you as soon as this office has reviewed the findings.

The report indicated that two monitoring wells (MW-15 & MW-16) have been destroyed (see quarterly report). SUPERB funds can only be expended where reasonably justified, i.e. replacement of dry monitoring wells due to drought conditions. Therefore costs associated with the replacement of these wells cannot be paid by the SUPERB account. Please select a contractor from the enclosed list to reinstall these two wells. Note that financial and technical approval must be granted before work can commence.

On all correspondence regarding this site, please reference the UST Permit Number. Please feel free to contact me at (803) 896-6396 or (800) 826-5435 (within SC only) if you have questions or need additional information.

LEXINGTON SC 29171-0854

Re: Crawford's Country Store, 5870 Hwy 28 N, Abbeville, SC
UST Permit #12335; CA # 17563:P; UMW-16698
Bid # SB-19189-04/30/02-EMW; PO#409044
Abbeville County

Dear Mr. Force:

The Underground Storage Tank (UST) Program of the South Carolina Department of Health and Environmental Control (SCDHEC) has prepared a monitoring well installation package for the referenced facility (ies). Monitoring well approval for two (2) permanent monitoring wells is enclosed for your records. Please note that all applicable South Carolina certification requirements regarding well installation and report preparation must be met. All wells to be replaced should be gauged prior to drilling commencement. Please contact this office if site conditions have changed.

Cost Agreement (CA) #17563:P has been approved up to the amount of the enclosed cost agreement form and will be kept on file so that compensation can begin. **The SCDHEC reserves the authority to pay only for work properly performed and/or technically justified and will only pay rates in accordance with bid number SB-19189-04/30/02-EMW.** Further SCDHEC reserves the right to question and/or reject costs if deemed unreasonable. The SCDHEC reserves the right to audit project records at any time during the project or after completion of the work. The Monitoring Well Installation Report (two copies) must be submitted within 60 days from the date of this letter.

The Bureau grants pre-approval for transportation of drums of virgin petroleum contaminated soil and/or drums of groundwater from the referenced site to a permitted treatment facility. The contaminated soil and/or groundwater must be properly stored in labeled 55-gallon drums or equivalent containers. The contaminated soil and/or groundwater must be accepted by the approved treatment facility. There can be no spillage or leakage in transport. A copy of the disposal manifest from the receiving facility that clearly designates the quantity received must be included in the report.

A copy of the approved Cost Agreement is enclosed for your information. Future invoices and/or other criteria included therein must comply with current SUPERB criteria per Section 44-2-20(2). Please reference **Cost Agreement Number 17563:P** on all pertinent invoices and correspondence. Please note that Sections 44-2-110(4) and 44-2-130(B) of the SUPERB Statute state that no costs will be allowed (considered for payment) unless prior approval from the Department is obtained. If for any reason there is a change in this Cost Agreement, any associated changes to this Cost Agreement must be pre-approved by this Department in order for Force & Associates, Inc. to seek future cost compensation.

**Any item(s) not clearly or completely addressed in the report (SC certified driller's number, disposal manifest for soil cuttings, disposal manifests for generated ground water, etc.) WILL NOT be compensated by the SUPERB Account.** As agreed to in the referenced contract, the owner/operator of the referenced facility will not be responsible for any costs associated with this assessment.

On all correspondence regarding this site, please reference the UST Permit # 12335 and Cost Agreement #17563:P. If you have questions concerning this correspondence or would like to submit additional information, please contact me at (803) 896-6396 or (800) 826-5435 (within SC only).

Sincerely,

John D. Abernathy, Hydrogeologist

# Monitoring Well Installation Approval Form

Date of Issue: October 30, 2002
Approval No.: UMW-16698
Approval is hereby granted to: Force & Associates, Inc.
On behalf of: Frank Crawford
UST Permit # 12335
County: Abbeville

This approval is for the construction of two (2) permanent monitoring well(s) in accordance with the construction plans and technical specifications outlined in the SC Well Standards and Regulations. The well(s) are to be constructed within the surficial aquifer for the intended purpose of monitoring ground-water quality and/or water level(s) at the referenced facility. Approval is provided with the following conditions:

1. The latitude and longitude, surveyed elevations, boring and/or geologist logs and actual (as built) construction details for each well be submitted to my attention as part of the Monitoring Well Installation Report.

2. Each well shall be labeled with an identification plate constructed of a durable material affixed to the casing or surface pad where it is readily visible. The plate shall provide monitoring well I.D.#, date of construction, static water level, and driller name and state certification #.

3. Temporary wells must be properly abandoned within 30 days from the date of installation.

4. Well construction and sampling derived waste including, but not necessarily limited to, drill cuttings, drilling fluids, development and purge water should be managed properly and in compliance with applicable requirements. If containerized, each vessel should be clearly labeled with regard to contents, source, and date of activity.

5. A minimum of forty-eight (48) hours prior to initiation of drilling activities, please provide notice to John D. Abernathy at (803) 896-6396.

6. Please provide ground-water quality analytical data (chemical analysis and/or water level(s)) associated measurements (i.e., in-situ field measurements) to my attention with the Assessment Report.

7. Monitoring wells shall be installed by a permanently licensed well driller certified by the State of South Carolina.

This approval is pursuant to the provisions of Section 44-55-40 of the 1976 South Carolina Code of Laws and the Department of Health and Environmental Control Regulations R.61-71. **Please remember to have a copy of this approval on the site during well installation.**

Dear Mr. Crawford:

As you may be aware, a corrective action plan was implemented in May 2000, in response to a petroleum release from former USTs at the referenced facility. Please find enclosed a copy of the quarterly monitoring report, which is sent to you in an effort to keep you informed of the remediation activities taking place. Please note that the site rehabilitation contractor is required to reduce the concentrations of chemicals of concern to Site Specific Target Levels (SSTLs) established by this Bureau.

On all correspondence regarding this site, please reference the UST Permit Number. Please feel free to contact me at (803) 896-6396 or (800) 826-5435 (within SC only) if you have questions or need additional information.

Sincerely,

John D. Abernathy, Hydrogeologist

Contract SB-7691-12/02/99-TC
Purchase Order #230099
Notice to Proceed

Dear Mr. Force:

The Bureau of Underground Storage Tank Management of the South Carolina Department of Health and Environmental Control (SCDHEC) is requesting the submittal of cost proposals for the installation of a water supply well at the following facility.

| | | | |
|---|---|---|---|
| Crawford's Country Store | 12335 | Abbeville | private water supply well |

**Please submit the cost proposals within 10 days of the date of this letter.** The Letter of Intent and Health and Safety Plan shall be submitted to me within 15 days after approval of the cost proposal.

Plan implementation shall not commence on any site prior to receipt of written technical and financial approval from the Department. Installation of the water supply well shall proceed in accordance with implementation schedules established in the referenced bid specification and provided in applicable correspondence.

On all correspondence regarding these sites, please reference the UST Permit number. All documents shall be submitted to the attention of Read Miner.

Sincerely,

Read S Miner

Verification of Receipt of a Notice of Intent
Permit Number: 01015374

Dear Sir:

The Department of Health and Environmental Control has received your Notice of Intent to construct an Individual Residential Well for the FRANK CRAWFORD well at 5870 HWY 28N, ABBEVILLE.

Please reference the permit number above in any correspondence to the Department.

The well owner may wish to have the well analyzed for the presence or absence of bacteria. This is done after well installation has been completed and at least a week after the well has been properly disinfected. If possible, please inform the well owner that sample bottles and sampling instructions may be picked up at the nearest EQC District Office, County Health Department, or Health District Office. Samples must be delivered to the SCDHEC office on the same day the sample is taken and samples can only be accepted Monday through Wednesday. The well owner will also need to write the permit number on the laboratory form sent in with the water sample.

This approval to install a private drinking water well does not assure that the groundwater is free from contamination and is safe for the intended use. If you have any reason to believe contamination is present in the area of the well location, contact the Private Well Program (number below). Also, other local permits or licenses may be necessary to construct a well in your area of the state.

If you have any questions, please contact the Private Well Program at 1-888-761-5989.

**UST Permit #12335, CP #12349:P**
Private Water Supply Well Cost Proposal received September 14, 2000
SCDHEC Contract # SB-7691-12/02/99-TC
Purchase Order # 230099
Abbeville County

Dear Mr. Force:

The Bureau of Underground Storage Tank Management has reviewed the referenced cost proposal for the replacement of the private water supply well at the Crawford's Rental Property. Please submit your Notice of Intent and Health and Safety Plan to my attention within 15 days of the date of this letter. Well installation should be initiated within five days of receipt of Notice of Intent approval. The analytical results should be submitted to my attention by facsimile (803-898-4330) within 48 hours of receipt by the contractor. Well completion records should be submitted within 10 days of well completion.

Cost Proposal (CP) #12349:P has been approved in the amount shown on the enclosed cost proposal spreadsheet and will be kept on file so that compensation can begin.

**The SCDHEC reserves the authority to pay only for work properly performed and/or technically justified and will only pay rates in accordance with bid number SB-7691-12/02/99-TC.** Further SCDHEC reserves the right to question and/or reject costs if deemed unreasonable. The SCDHEC reserves the right to audit project records at any time during the project or after completion of the work.

A copy of the approved cost proposal is enclosed for your information. Future invoices and/or other criteria included therein must comply with current SUPERB criteria per Section 44-2-20(2). Please reference **Cost Proposal #12349:P** on all pertinent invoices and correspondence. Please note that Sections 44-2-110(4) and 44-2-130(B) of the SUPERB Statute state that no costs will be allowed (considered for payment) unless prior approval from the Department is obtained. If for any reason there is a change in this cost proposal, any associated changes to this cost proposal must be pre-approved by this Department in order for Force & Associates, Inc. to seek future cost compensation.

**Any item(s) not clearly or completely addressed in the report (SC certified driller's number, disposal manifest for soil cuttings, disposal manifests for generated ground water, etc.) WILL NOT be compensated by the SUPERB Account.** As agreed to in the referenced contract, the owner/operator of the referenced facility will not be responsible for any costs associated with this assessment.

Please note that all applicable South Carolina certification requirements regarding laboratory analyses, well installation, and report preparation must be met.

On all correspondence regarding this site, please reference the UST Permit #12335 and Cost Proposal #12349P. If you have questions concerning this correspondence or would like to submit additional information, please contact me at (803) 898-4362 or (800) 826-5435 (within SC only).

Sincerely,

RE: Water Well Replacement Cost Proposal
Crawford's Country Store (12335)
5870 Hwy 28 North
Antreville, SC

Dear Mr. Miner:

Force & Associates, Inc. is pleased to submit the attached cost proposal to install a private water supply well at the referenced site. This well will be installed to replace the existing supply well that has been impacted by petroleum hydrocarbons from an underground storage tank release. This cost proposal is being submitted as requested in your August 25, 2000 Notice to Proceed letter for Contract SB-7691-12/02/99-TC and Purchase Order #230099.

Thank you for the opportunity to submit this cost proposal to you for your review. Please note that this cost proposal is based on information obtained from water supply wells located near this area. If you have any questions or require additional information please contact my office at 803-359-3200.

Sincerely,
Force & Associates, Inc.

Greg Force

UST Permit #12335
Bid # SB-11171-04/25/00-HW
Purchase Order #252493
CP #12130:P
Abbeville County

Dear Mr. Cooper:

Under the terms and conditions of the referenced bid package, eight (8) carbon, gravel, and filter replacements and the associated mileage has been approved for the GAC unit associated with the Crawford Rental Property. These changes should be completed on a weekly basis (unless notified otherwise). This facility has been assigned an individual Cost Proposal (CP) number as listed above. Please reference the CP number and Purchase Order #252493 on the invoice submitted for payment.

V.E. Amick & Associates should complete the work in accordance with the established schedule. A hard copy will follow via United States postal service.

If you have any questions or need further assistance, please contact me at (803) 898-4362 or (800) 826-5435 (within SC only).

Re: Crawford's Country Store
UST Permit #12335
Telephone Conversation of August 23, 2000
Abbeville County

Dear Mr. Crawford:

A copy of the most recent analytical results obtained from your rental property well is enclosed. Per our referenced telephone discussion, it is my understanding that you have advised your tenants not to consume the water generated from the well associated with your rental property. Therefore, as Methyl-tert-butyl-ether is continuing to breakthrough the carbon filter pack on a regular basis, this office will direct its contractor to change out the filter pack every week until your private well is replaced. Well replacement is scheduled to commence within the next 60 days.

If you have questions concerning this correspondence, feel free to contact me at (803) 898-4360 or (800) 826-5435 (within SC only).

## WATER MONITORING, ASSESSMENT AND PROTECTION DIVISION

Injection Well Operating Approval
for

Class II, III, and V.A. Injection Well(s)

Permit #505 Date of Issue: May 31, 2000

In accordance with the provisions of Title 48, Chapter 1, South Carolina Code of Laws, 1976, as amended, and pursuant to receiving a Permit to Construct ten (10) Class V.A.-I (Aquifer Remediation) injection wells, authorization is granted to Mr. Crawford to operate ten (10) Class V.A.-I (Aquifer Remediation) injection wells located at the Crawford's Country Store, Abbeville County, and are subject to the attached provisos noted for the operator.

The Class V.A.-I (Aquifer Remediation) injection wells are a true diameter of 1 inch, a total depth of 10-30 feet located at the Crawford's Country Store, Abbeville County, South Carolina.

Pursuant to Title 48, Chapter 1, South Carolina Code of Laws, 1976, as amended, this authorization may be rescinded if these injection wells should, at any time, contaminate, pollute, or otherwise adversely affect other water in the vicinity or for any other conditions contained in R61-87, Title 48, Chapter 1, South Carolina Code of Laws, 1976, as amended.

Injection Well Construction Permit
for
Class II, III, and V.A. Injection Well(s)

Permit #505

Date Issued: May 3, 2000
Date Expired: May 3, 2001

For (Operator):Harold Crawford

In accordance with provisions of Title 48, Chapter 1, South Carolina Code of Laws, 1976, as amended, permission is granted for construction of one (1) Class V.A.-I injection well located at the Crawford's Country Store, Site Id #12335, Abbeville County, SC with the following provisions:

1) The operator shall submit completed SCDHEC well record forms to the Department's Water Monitoring, Assessment & Protection Division after completion of the injection wells.

2) Upon completion of construction, injection activities shall not commence prior to receiving approval from the Department to operate the injection wells.

3) When the injection wells are no longer in use, or upon request by the Department, within sixty (60) days all injection wells must be permanently abandoned in accordance with the South Carolina Well Standards and Regulations (R.61-71.10).

4) Injection wells must be installed and grouted in accordance with the South Carolina Well Standards and Regulations (R.61-71.10).

# STATEMENT OF BASIS - UIC DRAFT PERMIT #505

In accordance with the South Carolina Underground Injection Control Regulations, Section R61-87.12,J., this "Statement of Basis" has been prepared for the Crawford Country Store Underground Injection Control permit application addendum received May 1, 2000.

Ownership of the proposed injection wells is Harold Crawford, 5870 HWY 28 North, Abbeville, SC 29620. The permit (UIC #505) is for the construction of one (1) injection well for remedial corrective action at the Crawford's Country Store, Site Id #12335. The intent of the injection wells are to facilitate enhanced remediation by injection of ambient air as described in UIC application into the subsurface. The draft permit for the underground injection proposal has been prepared based on staff review and the application of the Pollution Control Act of South Carolina and the Underground Injection Control Regulations of South Carolina.

Conditions of the permit issuance include the submittal of well records for all injection wells installed and the inspection of well construction by the Department prior to injection.

**UST Permit #12335**
**Purchase Order #224318, CP #10156:P**
Bid Number: SB-9570-12/02/99-TC
Public Notice posted through April 7, 2000
Abbeville County

Dear Mr. Gillespie:

The Bureau of Underground Storage Tank Management has reviewed the Corrective Action Plan. The Bureau of Water has issued a permit to construct injection wells and the Bureau of Air Quality has issued conditional approval to operate the soil vapor extraction system (see enclosure). A permit to operate the Underground Injection Control system will be issued after the Bureau of Water has completed a system inspection. Upon receipt, operation of the treatment system should commence immediately. There were no comments received from the referenced public notice. A copy of the Permission Form is enclosed.

The Bureau grants preapproval for transportation of drums of virgin petroleum contaminated soil and/or drums of groundwater from the referenced site to a permitted treatment facility. The contaminated soil and/or groundwater must be properly stored in labeled 55 gallon drums or equivalent containers. The contaminated soil and/or groundwater must be accepted by the approved treatment facility. There can be no spillage or leakage in transport. A copy of the disposal manifest from the receiving facility that clearly designates the quantity received must be included in the monitoring report.

All future invoices and/or other rehabilitation activities must comply with current SUPERB criteria per Section 44-2-20(2) and the referenced bid special conditions. Please reference **Cost Proposal Number 10156** on all pay-for-performance invoices. Please note, per Section 44-2-40 of the SUPERB Statute, an invoice for site rehabilitation activities must be submitted on or before May 10, 2000, (four months from Statement of Award) or the Cost Proposal will be uncommitted.

An initial monitoring report documenting CoC concentrations in all wells (see Specification 2) and potentiometric conditions prior to start-up is expected within 30 days from the date of this correspondence. On all correspondence regarding this site, please reference the UST Permit Number. On the invoice, please reference the UST Permit Number and Cost Proposal Number. If you have questions concerning this correspondence, feel free to contact me at (803) 898-4360 or (800) 826-5435 (within SC only).

# NOTICE

State of South Carolina
The Department of Health and Environmental Control
Columbia, South Carolina

**Public Notice #: 12335-01** **Date: March 23, 2000**

## NOTICE OF PROPOSED CORRECTIVE ACTION

**Section 280.67 of the S.C. Underground Storage Tank Control Regulations (R.61-92) requires that any Corrective Action Plan prepared to meet the requirements of 280.66 must be placed on notice for public comment. The following applicant has submitted a Corrective Action Plan for the rehabilitation of ground water contaminated by petroleum constituents released from the former underground storage tanks located at the Crawford's Country Store Facility, 5870 Hwy. 28 North, Abbeville, SC**

**Applicant: Frank Crawford**

**Corrective action will consist of bailing free product, the injection of ambient air to enhance biodegradation, and soil vapor extraction to achieve Site-Specific Target Levels followed by natural attenuation to EPA established maximum contaminant levels.**

**A copy of the Corrective Action Plan is available for review at the Freedom of Information Office (898-3882) SCDHEC 2600 Bull Street in Columbia, SC.**

Persons wishing to comment upon or object to Corrective Action approval are invited to submit same in writing within fifteen (15) days of the date of this notice to South Carolina Department of Health and Environmental Control, Bureau of Underground Storage Tank Management, 2600 Bull Street, Columbia, S.C. 29201 or call at (800) 826-5435 (within SC only) or 898-4350. The public notice # should be placed at the top of the first page of comments. Where there is a significant degree of public interest, the SCDHEC will hold a public hearing.

Please bring the foregoing to the attention of persons who you know will be interested in this matter.

Ms. Patterson:

As you may be aware, petroleum products have been identified in the ground water at the referenced facility. To prevent the release from becoming an unacceptable risk, $H_2O$ Environmental, Inc., has been retained to initiate corrective action of the impacted ground water via the injection of ambient air, removal of free product via manual bailing, and soil vapor extraction (to remove petroleum vapors from the subsurface), followed by natural attenuation. A copy of the proposed corrective action plan is available for your review at the SCDHEC Freedom of Information Office, 2600 Bull Street, Columbia, South Carolina. Please call the Freedom of Information Office at (803) 898-3882 for an appointment if you would like to review this corrective action plan.

Section 280.67 of the South Carolina Underground Storage Tank Regulations requires the SCDHEC to provide notice to those members of the public that may be affected by a planned corrective action. No impact or construction activity on your property is anticipated. Your continued cooperation is appreciated. A copy of the public notice is enclosed for your information.

If you have any questions or comments regarding the proposed corrective action, please call or write H. Reed Corley at (803) 898-4360. All comments should be submitted with fifteen (15) days of the date of the enclosed Public Notice.

Sincerely,

H. Reed Corley, Hydrogeologist

RECEIVED
MAR 22 2000
Bureau of Underground
Storage Tank Management

MEMORANDUM

DATE: 21 March 2000

TO: Reed Corley
Bureau of Underground Storage Tank Management

FROM: Kevin J. Clark KC
Air Modeling Section
Bureau of Air Quality

SUBJECT: Crawford's Country Store, GWPD 12335

The Bureau of Air Quality has reviewed the information for the soil vapor extraction system to be located at the above location. It is the understanding of the Bureau of Air Quality that the Bureau of Underground Storage Tank Management no longer compensates companies for pilot tests. As a result, no air emission data will be available until after start up of the systems. The Bureau therefore grants conditional approval based on emission rate information being provided to the Bureau shortly after the first sampling event. If the emission rate information indicates the 1000 lb per month VOC limit will be exceeded, the system will be shut down, and an Air Permit will be obtained from the Bureau of Air Quality before operation may continue. This is in accordance with Section II, Part F, Paragraph G of the SC Dept. of Health and Environmental Control Air Pollution Control Regulation No. 62.1.

Re: Underground Injection Control Permit #505
Crawford's Country Store, Site Id #12335
Abbeville County

Dear Mr. Crawford:

Enclosed is a Permit to Construct for nine (9) Class VA-I injection wells at the Crawford's Country Store, Site Id #12335 as requested in the UIC application received March 20, 2000. An inspection of the UIC System must be conducted prior to issuance of Approval to Operate. After completion of the inspection, Approval to Operate #505 will be issued.

If you have any questions, please feel free to call me at (803) 898-3549.

Sincerely,

Todd Adams

## WATER MONITORING ASSESSMENT & PROTECTION DIVISION

Injection Well Construction Permit
for
Class II, III, and V.A. Injection Well(s)

Permit #505

Date Issued: March 21, 2000
Date Expired: March 21, 2001

For (Operator):Harold Crawford

In accordance with provisions of Title 48, Chapter 1, South Carolina Code of Laws, 1976, as amended, permission is granted for construction of nine (9) Class V.A.-I injection wells located at the Crawford's Country Store, Site Id #12335, Abbeville County, SC with the following provisions:

1) The operator shall submit completed SCDHEC well record forms to the Department's Water Monitoring, Assessment & Protection Division after completion of the injection wells.

2) Upon completion of construction, injection activities shall not commence prior to receiving approval from the Department to operate the injection wells.

3) When the injection wells are no longer in use, or upon request by the Department, within sixty (60) days all injection wells must be permanently abandoned in accordance with the South Carolina Well Standards and Regulations (R.61-71.10).

4) Injection wells must be installed and grouted in accordance with the South Carolina Well Standards and Regulations (R.61-71.10).

Todd Adams, Hydrologist
GroundWater Management Section
Bureau of Water

March 21, 2000
Date

DHEC 2104 (6/88)

# STATEMENT OF BASIS - UIC DRAFT PERMIT #505

In accordance with the South Carolina Underground Injection Control Regulations, Section R61-87.12,J., this "Statement of Basis" has been prepared for the Crawford Country Store Underground Injection Control permit application received March 20, 2000.

Ownership of the proposed injection wells is Harold Crawford, 5870 HWY 28 North, Abbeville, SC 29620. The permit (UIC #505) is for the construction of nine (9) injection wells for remedial corrective action at the Crawford's Country Store, Site Id #12335. The intent of the injection wells are to facilitate enhanced remediation by injection of ambient air as described in UIC application into the subsurface. The draft permit for the underground injection proposal has been prepared based on staff review and the application of the Pollution Control Act of South Carolina and the Underground Injection Control Regulations of South Carolina.

Conditions of the permit issuance include the submittal of well records for all injection wells installed and the inspection of well construction by the Department prior to injection.

Assessment and Corrective Action Branch

John Merritt, C.P.A., Manager
Financial Section

**Subject:** Bid Award, SB-9570-12/02/99-TC
Crawfords Country Store (UST Permit #12335)

The Division has reviewed the submittals received December 14, 1999, for the referenced Bid. The low bid was submitted by $H_2O$ Environmental. Therefore, this Division recommends immediate award of the contract to $H_2O$ Environmental.

AIMS Purchase Requisition #9570 has been amended to reflect the full bid price of $117,000.00. However, the purchase order should be generated for one half of the accepted bid award amount of $58,500.00. Please note, the full amount of the bid award should be noted in the body of the generated purchase order. Please provide **H. Reed Corley** a copy of the purchase order.

| Date | Signature (manual) |

*j:amendmen.doc 9/15/96*

**Question:** If results of groundwater analysis from verification wells indicate concentrations above SSTLs, will the installation of additional verification wells be required for project closure, or will the original verification wells simply be resampled to justify closure?

**Answer:** *No, the number of verification wells listed in the Bid are the only ones required. If additional verification wells in excess of the number specified are needed, the awarded contractor is not responsible for the associated installation or sampling costs.*

**Question:** Why are some SSTLs set below state RBSLs and Drinking Water MCLs?

**Answer:** *If the concentration reported back less than the established SSTL for that particular CoC and associated well, the laboratory value reported was utilized as the SSTL. The ground-water quality must not be further compromised by remobilization of contaminants.*

**Question:** Why was there no assessment of the contaminant plume south-east of MW-12?

**Answer:** *Based on the potentiometric data provided in the Rapid Report, the ground-water flow direction was deemed south-southeast of MW-12. Therefore, monitoring wells were installed hydraulically downgradient (MW-13) and crossgradient (MW-11 and MW-14) of MW-12 for horizontal delineation purposes.*

**Question:** Why is there no inorganic data (Nitrate, sulfate, ferrous iron, DO) included in the bid package?

**Answer:** *The inclusion of bioparameters was not deemed necessary as the goal of the Bid is to actively reduce CoC to established SSTLs. The Bid requires the sampling of the bioparameters during the six month verification phase of monitoring.*

**Question:** Referring to 11.B. What constitutes return to ambient conditions? (length of time?, well development?, or other?)

**Answer:** *Ambient conditions are reached once sufficient time has elapsed that formation waters from outside of the radius of influence of the treatment system or injectate have entered the well. This will be a function of the ground-water flow direction and velocity and re-establishment of any flow regimes that may have been disrupted by the injection process. Based on the average ground-water velocity of 58 feet per year, a return to ambient conditions could take up to six months or more assuming an influence radius of 30 feet.*

**Question:** If a contractor was to complete 50% of site cleanup, receive their payments, and cease work at the site, what actions would SCDHEC take to achieve site cleanup? What, if any, actions would be taken against the contractor?

**Answer:** *If corrective action was prematurely stopped, DHEC would again solicit bids for cleanup through South Carolina Business Opportunity. If work is stopped based on any condition other than unforeseen geologic circumstances or the encroachment of another release source, the remaining balance of the performance bond would be collected and paid to the SUPERB fund. A notation to the contractor's certification file may be rendered dependent upon the nature of work cessation.*

**Question:** What are the total depths of the Drinking Water wells?

**Answer:** *Based on well inspections and contacts made with the water well owners, the approximate total depth of the Crawford Store Well was deemed 230 feet. The total depths of the other water well identified in the Rapid Report are unknown.*

**Question:** Why was there no plan view map of the contaminant plume with contoured concentrations submitted in the bid package?

**Answer:** *Copies of CoC maps from the Rapid Report are attached; however, the relative concentrations have changed at each well.*

**Question:** How were SSTLs chosen for this site?

**Answer:** *As the site is currently being utilized as a source of drinking water, the exposure point was established at the source area; therefore, the resulting SSTLs were established at or below the RBSLs.*

**Question:** Is there a dry ditch or storm water sewer inlet, or a sanitary sewer suitable for accepting clean water nearby the site?

**Answer:** *A storm water drop inlet was identified during the Rapid Assessment investigation (see attached map). Its suitability for accepting clean water is unknown.*

**Question:** Is CP-WW a drinking water well? And having been last sampled in December, 1997 might it need to be replaced? Would the cost of that option be considered an extra to the base bid?

**Answer:** *Yes, CP-WW is a private drinking water well. Even though the water well has shown contaminant concentration levels in excess of established Drinking Water Standards, DHEC is not requiring the replacement of the well. A granular activated carbon unit has been installed on the well and is currently operating satisfactorily. The goal of the Bid is to reduce the contaminated water regime to established Drinking Water Standards.*

PERMISSION FORM - FACILITY ID #12335

**If you are the owner of the former or existing underground storage tanks and the property owner, please complete this form.**

I, Harold Franklin Crawford, certify that I am the legal owner of the underground storage tanks and property located at the facility identified below or serve as the authorized representative for the owner. I grant permission to the South Carolina Department of Health and Environmental Control (SCDHEC) to secure on my behalf contractor services to conduct assessment and corrective action activities as required, and authorize SCDHEC, or a contractor selected by SCDHEC, to enter this property at reasonable times only to accomplish these site rehabilitation tasks. The contractor(s) will be designated as my contractor for only the required site rehabilitation activities. Compensation to the contractor(s) will be from the SUPERB Account and I will have no obligation to pay the contractor(s). I understand that SCDHEC will be responsible for notifying me of all activities that are necessary prior to their initiation and will promptly provide to me a copy of each environmental report. I understand that I may choose to select my own contractor at the completion of any phase of work by notifying the Division of Underground Storage Tank Management in writing.

Name of Facility Crawford County Store Inc Phone # 864-348-7442

Street Address of Facility 5870 Hwy 28 North

Town, City, District, Suburb Abbeville, SC 29620

Name of nearest intersecting street, road, highway, alley Hwy 184

Is this facility within the city limits? (yes or no) NO

Is this facility serviced by a public water or sewer utility? (yes or no) NO, if no, please provide the name and phone number of a person that we can contact that can assist in the location of private water and septic tank lines FRANK CRAWFORD, phone number 864-446-2000

Were underground storage tanks previously removed from the ground at this facility? (yes or no) YES, if yes, please provide the name of a person we can contact that can assist in the location of the former underground storage tank excavation FRANK CRAWFORD, Phone number 864-446-2000

Is the property currently leased or rented to someone? (yes or no) NO, if yes, please provide their name _____ and phone number _____ and let them know about the pending assessment activities. If vehicles or other mobile structures are parked over the former or existing underground storage tanks, they should be moved before SCDHEC's contractor gets to the site.

NAME of UST/property owner (Please Print): HAROLD FRANKLIN CRAWFORD

Phone Number (home) 864-446-2000 (work) 864-348-7442

Signature of ~~UST~~/property Owner: Harold Franklin Crawford

Witness: [signature]

Date: 10-13-98 Month _____ Day _____ Year

COMMENTS:

The TOC sample was collected from FS-16. The FSs were renumbered from the field to be consecutive with the SBs numbers since ground water was screened from SBs (i.e. SBs are also FSs). The field note is attached which relate the original FS numbering with the new FS numbering as depicted on the report's map.

Also included is the sieve analysis. Please let me know if I should drop a copy in the mail or if this fax will suffice.

With regards to the placement of MW-3 and MW-2, my copy of the approved field-screening map also, has these wells moved out. I will discuss this with the on site engineer as soon as possible. However, the current placement of MW-3 and MW-2 provide very good resolution for the free product plume.

Also, as we discussed, I will discuss the seemingly high PID results of 60-ppm calibration gas equivalents from SB-9, relative to the low BTEX concentrations observed in MW-14 with the site engineer in hopes to increase the accuracy of the field screening method. Overall I have been very happy with our field screening results and we will continue to look for methods to improve consistency.

To: Reed Corley

Reed, I am refaxing the FS numbering sheet. Thought it might be to light originally

Fax: 0

Total Pages: 10
including cover

COMMENTS:

Re: Requested information on Crawford's #~~12334~~ #12335, Abbeville, SC

The TOC sample was collected from FS-16. The FSs were renumbered from the field to be consecutive with the SBs numbers since ground water was screened from SBs (i.e. SBs are also FSs). The field note is attached which relate the original FS numbering with the new FS numbering as depicted on the report's map.

Also included is the sieve analysis. Please let me know if I should drop a copy in the mail or if this fax will suffice.

With regards to the placement of MW-3 and MW-2, my copy of the approved field-screening map also, has these wells moved out. I will discuss this with the on site engineer as soon as possible. However, the current placement of MW-3 and MW-2 provide very good resolution for the free product plume.

Also, as we discussed, I will discuss the seemingly high PID results of 60-ppm calibration gas equivalents from SB-9, relative to the low BTEX concentrations observed in MW-14 with the site engineer in hopes to increase the accuracy of the field screening method. Overall I have been very happy with our field screening results and we will continue to look for methods to improve consistency.

# MEMO

Re: Facility ID# 12335
Crawford's Country Store
Telephone conv. w/ store clerk

Date: 10/15/98

Left word with the store clerk to notify the o/o (Mr. Crawford) that I'm sending a copy of the RAR to his attention. The report was sent to the store's address. Mr. Crawford was offered the options (state lead vs o/o) to proceed. A response is expected within 10 days.

*Re: Crawford's Country Store #12335,*
*Potential Receptor; Jerry McCullough Water Well*
*Abbeville County, South Carolina*

Dear Mr. Corley;

Enclosed please find the ground water analytical results for the Jerry McCullough water well. The McCullough water well is located south-southwest, slightly farther then the 1,000 feet receptor survey. However, due to an impacted water well (the Crawford Property water well; CPWW) located upgradient, I felt it was prudent to sample the McCullough well.

Analytical parameters included BTEX, MTBE, Naphthalene, EDB, and Lead. Results for all parameters were below screening levels and detection levels with the exception of lead at a concentration of 110 ug/L. The high concentration of lead is an order of magnitude above the highest concentrations observed on site, which may suggest that it is not related to the petroleum release at the Crawford Store.

If you have any questions or require additional information please do not hesitate to call.

Sincerely,

***Marshall Miller & Associates***

Charles E. Cline

**Re: Crawford's Country Store**
**Site ID #12335, CA # 03906:P, P.O. #2129**
**Rapid Assessment Plan & Cost Proposal received September 16, 1997**
**SCDHEC Contract # SB-76499-08/29/96/mjn awarded September 26, 1996**
**Abbeville County**

Dear Mr. Cline,

The Bureau of Underground Storage Tank Management has reviewed the Rapid Assessment Plan and associated Cost Proposal for the referenced site. Assessment activities at the site, as outlined in the referenced plan and as revised in this letter, should begin immediately upon receipt of this letter to define the vertical and horizontal extent of soil and ground-water chemicals of concern, all receptors and potential exposure pathways, and conduct tier II modeling for each chemical of concern above the Risk-Based Screening Level.

Cost proposal **# 03906:P** has been approved in the amount of **$31,832.16** and will be kept on file so that compensation can begin. Please note, the following adjustments were made:

- **Item 4B** - $300.00 more for personnel mobs.
- **Item 5** - $3,375.00 less for hand augered soil borings. The reasonable footage for this component is 150 feet.
- **Item 8** - $600.00 more for abandonment for a total of 525 feet of temporary boring/wells.
- **Item 14A** - $150.00 more for mathematical model costs. This model should be preformed as part of the Rapid Assessment.
- **Item 14B** - $2,000.00 less for computer model costs. Two models have been approved, however, one model per transport medium is allowed.
- **Item 19** - $85.84 less for report/project management.

A copy of the approved assessment cost proposal is enclosed for your information. Future invoices and/or other criteria included therein must comply with current SUPERB criteria per Section 44-2-20(2). Please reference **Cost Proposal number 03906:P** on all pertinent invoices and correspondence. Please note that Sections 44-2-110(4) and 44-2-130(B) of the SUPERB Statute state that no costs will be allowed (considered for payment) unless prior approval from the Department is obtained. If for any reason there is a change in this cost proposal, any associated changes to this cost proposal must be pre-approved by this Department in order for Marshall Miller & Associates to seek future cost compensation.

DHEC/UST/101697

Per the referenced contract, one assessment component invoice will be submitted with the Rapid Assessment Report. **Any item(s) not clearly or completely addressed in the report (SC certified driller's number, disposal manifest for soil borings, disposal manifests for generated ground water, modeling input data, etc.) WILL NOT be compensated by the SUPERB Account. The SCDHEC reserves the authority to pay only for work properly performed and/or technically justified and will only pay rates in accordance with bid number SB-76499-08/29/96MJN.** Further, SCDHEC reserves the right to question and/or reject costs if deemed unreasonable. The SCDHEC reserves the right to audit project records at any time during the project or after completion of the work. **In accordance with the referenced contract, two copies of The Rapid Assessment Report are due within 60 days from the date of this letter**. As agreed to in the referenced contract, the Owner/Operator of the referenced site will not be responsible for any costs associated with this assessment.

Monitoring well approval for 375 feet of temporary monitoring wells (geoprobe), fifteen (15) shallow monitoring wells, and one (1) deep pit cased monitoring well has been issued. A copy is enclosed for your records. Please note that all applicable South Carolina certification requirements regarding laboratory analyses, well installation, and report preparation must be met.

On all correspondence regarding this site, please reference Site ID number **12335**. On the component invoice please reference the Site number and Cost Agreement number **03906:P.** If you have questions concerning this correspondence, or would like to submit additional information, feel free to contact Michael A. Bishop , the site project manager, at (803) 734-0890 or Scott McInnis, the contract coordinator, at (803) 734-5615.

# Monitoring Well Installation Approval Form

Date of Issue: 10/16/97

Approval No.: 8852

Approval is hereby granted to: Marshall Miller & Associates

Site ID #: 12335
County: Abbeville

This approval is for the construction of 375 feet of temporary, 15 shallow permanent and 1 deep permanent monitoring wells designated in accordance with the construction plans and technical specifications outlined in the Rapid Assessment Guidance Document dated June 1995 and Bid Specification dated August 29, 1996. The wells are to be constructed within the surficial aquifer for the intended purpose of monitoring ground-water quality and/or water level(s) at the referenced facility. Approval is provided with the following conditions:

1. The latitude and longitude, surveyed elevations, boring and/or geologist logs and actual (as built) construction details for each well will be submitted to Michael A. Bishop as part of the Rapid Assessment Report.

2. Each well will be labeled with an identification plate constructed of a durable material affixed to the casing or surface pad where it is readily visible. The plate will provide monitoring well I.D.#, date of construction, static water level, and driller name and state certification #. (permanent wells only)

3. Well construction and sampling derived waste including, but not necessarily limited to, drill cuttings, drilling fluids, development and purge water should be managed properly and in compliance with applicable requirements. If containerized, each vessel should be clearly labeled with regard to contents, source, and date of activity.

4. A minimum of forty-eight (48) hours prior to initiation of drilling activities, please provide notice to Michael A. Bishop at (803) 734-0890.

5. Please provide ground-water quality analytical data (chemical analysis and/or water level(s)) and associated measurements (i.e., in-situ field measurements) to Michael A. Bishop as part of the Rapid Assessment Report.

6. Permanent monitoring wells will be installed by a licensed well driller certified by the State of South Carolina. Temporary monitoring wells shall also be installed by a well driller certified by the State of South Carolina and shall not remain in place for longer than 30 days from the date of installation.

This approval is pursuant to the provisions of Section 44-55-40 of the 1976 South Carolina Code of Laws and the Department of Health and Environmental Control Regulations R.61-71.

Re: Application for Encroachment Permit received October 2, 1997
Crawford's Country Store
**Site ID #12335**
Abbeville County

Dear Mr. Day:

The SCDOT Liaison has reviewed the referenced Application for Encroachment Permit submitted by Marshall Miller & Associates on behalf of the South Carolina Department of Health and Environmental Control (SCDHEC). The application requests permission to install four permanent monitoring wells in the right-of-way of SC-28 near Abbeville, SC.

The SCDHEC considers the proposed location of the monitoring wells within the right-of-way as necessary and appropriate to assess the severity and extent of ground-water contamination at the Crawford's Country Store site. This assessment is in the public interest of protecting the ground-water supply of the State of South Carolina. The Department, therefore, respectfully requests that the SCDOT approve the application as submitted. Should you require additional information regarding this site, feel free to contact me at (803) 734-5432.

Sincerely,

Joel P. Padgett, P.G., SCDOT Liaison

Re: Crawford's Country Store
**Site ID #12335**
Assessment Report Received
Abbeville County

Dear Mr. Crawford:

The Bureau of Underground Storage Tank Management of the South Carolina Department of Health and Environmental Control, has reviewed the referenced assessment report by Enviro-Test Services. A copy of the report is enclosed for your information.

A receptor survey and installation of one monitoring well were conducted as part of the initial site assessment. The results of the ground-water quality analysis indicates the concentrations of **Benzene, Toluene, Ethylbenzene, Xylenes, Naphthalenes**, and **Methyl Tertiary Butyl Ether (MTBE)** were above allowable risk based screening levels (RBSL). Based on these results, the site's priority classification is **2B**. Therefore, SUPERB funds are available, or will soon be available, to implement the next necessary scope of work. The scope of work to be implemented is a **Rapid Assessment.**

As the Owner or Operator of the Underground Storage Tanks (USTs) for this site, you have two funding options for proceeding with implementation of the scope of work indicated above:

**Funding Option 1**

You or your contractor can receive direct billing from the fund at the SUPERB allowable costs. If you need assistance in finding a contractor, please let us know and we will provide you with a list of companies for you to contact. If you wish to proceed under this option and you do not require assistance, please complete and return the enclosed information sheet within 10 days. Please have your contractor complete and submit the enclosed Assessment Component Cost Proposal form and Rapid Assessment Plan forms within thirty days of the date of this letter. Every component may not be necessary to complete the above scope of work. The SUPERB allowable cost for each component is included on the Assessment Cost Proposal form.

**Funding Option 2**

The SCDHEC will directly procure the services of an environmental contractor on your behalf. All activities will be directed and coordinated by SCDHEC and you will be informed of the results. If you wish to use this option, please complete the enclosed Right-Of-Entry form(s). Completed Right-Of-Entry forms are needed from both the underground storage tank and property owners. If you own the underground storage tank but do not own the property, please provide a copy of the appropriate form to the property owner and return the completed forms **within ten days of receipt of this letter.**

On all correspondence regarding this site, please reference site ID # **12335.** Please be sure to include the requested information so that the appropriate approvals can be issued. **Note: approval from the Department must be issued before work begins.** Please call Michael A. Bishop at (803) 734 - 0890 if you have questions or need additional information.

Sincerely,

Priority Ranking

Dear Underground Storage Tank Owner:

All releases from regulated underground storage tanks that have been reported to this Department have been prioritized using a ranking system that evaluates environmental and health related factors. The ranking system identifies those sites that represent the most serious threats where the Department should be allocating available SUPERB monies.

Currently, the referenced site ranks below many hundreds of other sites and no site rehabilitation activities under the direct billing method have been initiated to date. Therefore, since no site rehabilitation activities under direct billing are currently approved for this site (and due to the relative ranking), obligating financial resources for this site through the direct billing method is not possible at this time.

However, pursuant to R.61-92, § 280.65, the SCDHEC will provide expedited reviews of technical work plans should you wish to proceed with site rehabilitation activities and seek reimbursement upon completion. Please note that reimbursement typically takes a much longer period of time to process and that SUPERB monies are dispersed for reimbursement only so long as funds are available. Reimbursement requests are processed by SCDHEC in chronological order of receipt.

If you have any further questions, please contact Mr. David Baize or Mr. Chris Doll at 734-5331.

Sincerely,

Stanley L. Clark

Dear Mr. Warner:

This office hereby grants approval to Soil Remediation Company for thermal treatment of approximately 700 tons of virgin petroleum contaminated soils from the referenced underground storage tank facility at the Yadkin Brick Company facility in New London, North Carolina.

The following restrictions apply to all thermally treated soils.

1. Prior approval must be obtained from the appropriate thermal treatment facility officials.
2. The waste must be compatible with the treatment facility and not adversely affect the safe and efficient operation of the unit.
3. There can be no spillage or leakage during transport.
4. The DHEC District Solid Waste Consultant (Bob Jackson, # 223-0333) must be notified of your soil disposal location 72 hours in advance.
5. Weekend or holiday disposal is prohibited without prior notification of the District Solid Waste Consultant.
6. All State and Federal Air Quality Regulations must be strictly complied with.
7. This approval will be for one time only and is invalid after June 1, 1993.
8. If reimbursement from the State Underground Environmental Response Bank (SUPERB) Account is requested, copies of all laboratory data sheets, weight tickets, and disposal manifests must be provided to this office (retain originals in your own records).
9. Approval of your request for treatment at the above referenced facility does not guarantee that all of the associated costs will be considered reasonable or reimbursable from the SUPERB Account.

Sincerely,

Bronson E. Titus

EQC District Upper Savannah

Dear Tank Owner:

The South Carolina Department of Health and Environmental Control has received the above referenced report of stockpiled soils. The disposal plan as submitted is **incomplete in the following checked areas** and cannot be evaluated by this office. Please review the Assessment Guidelines and submit the requested information to the person listed below on or before July 15, 1992

**PLEASE SUBMIT THE FOLLOWING INFORMATION:**

___) **The type of petroleum product released.**
___) **The volume of soil to be treated.** (CY or TONS)
___) A scaled site map with stockpile and sample locations.

___) **A description of sampling methods.**
___) **A description of analytical methods.**
✓) The analytical laboratories' Chain-of-Custody forms.
✓) An acceptance letter from the thermal facility treating the soils or the landfill accepting the soils.

**THE FOLLOWING ANALYSIS MUST BE SUBMITTED:**

✓) **Additional composite samples are required.** 15 (number)
✓) **Each composite sample must be analyzed for:** (TPH) (BTEX)
✓) A DHEC Certified ORGANIC Lab must analyze the samples.

**FOR A SUPERB FUND REQUEST TO BE EVALUATED SUBMIT THE FOLLOWING:**

___) A written request for participation in the SUPERB program.
___) 1) A copy of any environmental spill insurance policy or,
2) a written statement of a self insurance mechanism or,
3) a written statement that no such insurance policy exists.
___) Full payment of the annual UST invoices. ($_____ DUE)

On all correspondence related to this site, please reference the **GWPD Site ID Number.** Questions should be addressed to the Ground-Water Protection Division at (803) 734-5331.

**Please return requested information to:** Angela L. Dillon

Dear Mr. Davis:

I have discussed the above referenced site with Freddie Harrill of Blue Ridge Environmental Services, Inc. Soil Remediation Company has hereby agreed to accept the soils at Yadkin Brick Company located in New London, North Caorlina.

If you have any questions, please contact the undersigned at (303) 756-2441.

Sincerely,

SOIL REMEDIATION COMPANY

Date May 25, 1992

Name Frank Crawford
Address Crawford's Country Store
Rt. 4 Box 205
Abbeville, SC 29620

**GWPD Site ID#** 12335
Facility Name Crawford's Country Store
Report dated 12/3/91
EQC District Upper Savannah

Dear Tank Owner:

The South Carolina Department of Health and Environmental Control has received the above referenced report of stockpiled soils. The disposal plan as submitted is **incomplete in the following checked areas** and cannot be evaluated by this office. Please review the Assessment Guidelines and submit the requested information to the person listed below on or before July 15, 1992

**PLEASE SUBMIT THE FOLLOWING INFORMATION:**

___) The type of petroleum product released.
___) The volume of soil to be treated. (CY or TONS)
___) A scaled site map with stockpile and sample locations.

___) A description of sampling methods.
___) A description of analytical methods.
_✓_) The analytical laboratories' Chain-of-Custody forms.
_✓_) An acceptance letter from the thermal facility treating the soils or the landfill accepting the soils.

**THE FOLLOWING ANALYSIS MUST BE SUBMITTED:**

_✓_) Additional composite samples are required. 15 (number)
_✓_) Each composite sample must be analyzed for: (TPH) (BTEX)
_✓_) A DHEC Certified ORGANIC Lab must analyze the samples.

**FOR A SUPERB FUND REQUEST TO BE EVALUATED SUBMIT THE FOLLOWING:**

___) A written request for participation in the SUPERB program.
___) 1) A copy of any environmental spill insurance policy or,
2) a written statement of a self insurance mechanism or,
3) a written statement that no such insurance policy exists.
___) Full payment of the annual UST invoices. ($_____ DUE)

On all correspondence related to this site, please reference the **GWPD Site ID Number.** Questions should be addressed to the Ground-Water Protection Division at (803) 734-5331.

Please return requested information to: Angela L. Dillon,
GWPD, 2600 Bull St., Columbia, SC 29201 FAX (803) 734-4661

Re: CRAWFORD'S COUNTRY STORE, ABBEVILLE
**GWPD Site # 12335**
Release Report dated December 3, 1991
Abbeville County

Dear Mr. Crawford:

The Ground-Water Protection Division (GWPD) of the South Carolina Department of Health and Environmental Control (SCDHEC) has received the above referenced release report. Soil contamination at this site has been confirmed at levels that require rehabilitation. This letter addresses the following topics: SUPERB Qualification, Initial Abatement, Free Product Recovery, Checklists, Expanded Assessment Plan, SUPERB Payment of the Expanded Assessment Plan, SUPERB Payment of Initial Abatement, and Enforcement.

**SUPERB Qualification**

Provided none of the exclusions listed in Section 44-2-110 of the State Underground Petroleum Environmental Response Bank Act (**SUPERB**) apply to this site, reasonable costs for site assessment and/or rehabilitation can be paid, either by direct billing or reimbursement, from the **SUPERB** fund in accordance with the enclosed **SUPERB** guidance. Prior to release of **SUPERB** funds, this office must have written confirmation of the existence (or nonexistence) of an environmental insurance policy or financial responsibility mechanism for this site and a written request for **SUPERB** funding.
Please note that reimbursement or direct billing from the SUPERB Account cannot occur until all applicable tank registration fees have been paid. If there are outstanding fees for the subject facility, please contact the Finance and Data Management Section of the Ground-Water Protection Division.

**Initial Abatement**

It is imperative that the cause of the release be identified and corrected in accordance with Section 280.62 of the South Carolina Underground Storage Tank Control Regulations (SCUSTCR). If the underground storage tank (UST) system is still in

recycled paper

operation or still contains product, the immediate removal of the product from the UST system and/or immediate performance of a complete system test must be performed. Confirmation of product removal or current results of tightness tests which verify that all existing systems (i.e. USTs and associated lines) are not leaking, must be submitted on or before **August 7, 1992**, in accordance with Sections 280.52 and 280.62 of the SCUSTCR. **SUPERB** funding cannot be made available until the source of the release is stopped.

**Free Product Recovery**

In accordance with Section 280.64 of the SCUSTCR, if free product has been indicated at the site, please begin free product removal to the maximum extent as practicable and in a manner that minimizes the spread of contamination.

**Checklist**

Please complete the enclosed standardized checklists and submit with the above required documentation. These checklists will assist you in understanding your responsibilities as well as expediting the assessment of the sites' contamination.

**Expanded Assessment Plan**

The extent and severity of soil and possible ground water-contamination at this site must be investigated pursuant to Sections 280.64 and 280.65 of the SCUSTCR. In an effort to expedite activities, streamlining of the assessment phase is being promoted. If your response action contractor participates in the streamlining activities, the Expanded Assessment Plan (EAP) would include specifications for the complete assessment (e.g. a sufficient number of boring/well locations, soil or water quality evaluation, aquifer property evaluations) such that a complete Corrective Action Plan can be prepared. This expanded assessment initiative will be allowed only to Responsible Parties and/or contractors who perform work associated with the UST Regulatory Section and/or the UST Corrective Action Sections. Please read the enclosed Assessment Guidance for a complete explanation of the streamlining option.

**SUPERB Payment of the EAP**

The requested EAP (2 copies) must be submitted on or before **August 7, 1992**. If the Assessment Plan is to be implemented under a Cost Proposal from the contractor, the Cost Proposal must be submitted with the EAP. If a Cost Proposal is not submitted with the plan, cost for EAP implementation can be recovered through reimbursement or Direct Contractor Payment. The cost associated with preparation and submittal of the EAP may be recovered through Direct Contractor Payment or reimbursement. Please note; Direct Contractor Payment Invoices for preparation and submittal of the EAP submitted with the EAP will be processed upon submittal to the SCDHEC.

**SUPERB Payment of Initial Abatement**

Cost associated with abatement actions (see Sections 280.61 through 280.63 of the SCUSTCR) may be recovered through reimbursement to the Responsible Party or Direct Contractor Payment to the Contractor. This office will not accept Cost Proposals for the work associated with compliance to Sections 280.61 through 280.63 of the SCUSTCR or for preparation and submittal of the Expanded Assessment Plan. Please read the enclosed **SUPERB** guidance for further elaboration on the financial aspects of payment.

**Enforcement**

The SCDHEC expects all Responsible Parties to comply with the activities required in Sections 280.61 - .64 of the SCUSTCR and of the requests made in this correspondence. Failure to comply with these regulations and/or requests may result in the initiation of enforcement action against the Responsible Party.

On all future correspondence, please reference the **GWPD Site ID number**. Questions concerning the above should be addressed to the Ground-Water Protection Division at 734-5331.

Sincerely,

James R. Hess, P.G., Manager
UST State Corrective Action Section

# SECTION 1.0
# INTRODUCTION

In correspondence dated December 18, 1999, $H_2O$ Environmental, Inc. ($H_2O$) received notification from the Bureau of Underground Storage Tank Management of the South Carolina Department of Health and Environmental Control (SCDHEC) to proceed with corrective action activities at the Crawford's Country Store (Site ID #12335). The bid package requested submittal of three (3) copies each of a corrective action plan, a Bureau of Air Quality Control Modeling Form, an injection permit and an engineering report. The notification is included in Appendix A, Regulatory Correspondence.

A corrective action strategy was developed based on assessment information provided by SCDHEC in Bid Number SB-9570-12/02/99-TC and available information obtained from the SCDHEC Freedom of Information Office. The assessment information available for review included portions of various assessment reports submitted by SCDHEC and others.

Based on the available assessment data, appropriate remedial processes were reviewed to determine their feasibility for application at this site. The proposed remediation system will consist of in-situ air sparging coupled with vapor extraction. These are proven, cost-effective methods for remediation of petroleum hydrocarbons in this type of environmental setting. This Corrective Action Plan/Engineering Report (CAP/ER) was prepared in general accordance with the Corrective Action Guidance Document (SCDHEC, June, 1997) and established scientific and engineering principles. The engineering system design consists only of sizing the air sparging and vapor extraction equipment and is, therefore, abbreviated in comparison to Engineering Reports associated with conventional pump and treatment systems. The sizing of the equipment is closely related to site hydrogeological characteristics, therefore, the Engineering Report is enclosed within the Corrective Action Plan.

## SECTION 2.0
## CONTAMINATION ASSESSMENT SUMMARY

Available contaminant assessment information was reviewed by $H_2O$ in preparation of this CAP. Pertinent assessment information is summarized below.

- The site is located on the U.S.G.S. Antreville, S.C. 7.5 Minute Quadrangle Map. The site and surrounding areas are depicted in Figure 1.0. Specifically, the site is located at 5870 Highway 28 North in Abbeville, South Carolina.
- The site is bordered to the north, east and south by private property, and to the west by Highway 28 North.
- The elevation of the site averages approximately 700 feet above mean sea level. The site topography slopes towards the east, southeast.
- The approximate location of the tankhold is in the area of MW-5 and MW-6 see Figure 2.0.
- There are currently seventeen (17) wells located at the site. The well network includes sixteen (16) shallow wells and one (1) deep well. The locations of these wells are depicted on Figure 2.0. Well construction information is summarized in Table 1.
- The site geology is summarized as follows: 0 to 65 feet below land surface (BLS) is a gray/yellow or brown medium to fine sandy clay with calcitic rock fragments and from 65 to at least 75 feet BLS is a competent bedrock.
- The ground water flow direction of the surfical aquifer on site is towards the southeast as shown on Figure 3.0. Depth to ground water ranges on site from approximately 15 to 17 feet BLS.
- The ground water analytical results of the most recent sampling event are summarized in Table 3. A ground water quality map is included as Figure 4.0, which illustrates the detected concentrations of benzene, total BTEX, MTBE and naphthalene from the August 1999 sampling event.
- Site Specific Target Levels (SSTLs) for chemicals of concern (BTEX, MTBE, and naphthalene) for seventeen (17) wells OMW-1, MW-2, MW-3, MW-4, MW-5, MW-7, MW-8, MW-9, MW-10, MW-11, MW-12, MW-13, MW-14, MW-15, DMW-17, CLS-WW and CP-WW and four (4) soil borings are listed in the SCDHEC bid package correspondence included in Appendix A.

# SECTION 3.0
# CORRECTIVE ACTION METHOD

The recommended corrective action strategy, for the dissolved hydrocarbon plume at Crawford's Country Store is in-situ air sparging coupled with vapor extraction. The free product in OMW-1, MW-2, MW-3 and MW-10 will be removed via manual bailing and absorbent pads. System operation is **projected** to continue for 18 months to decrease contaminant concentrations to levels below the assigned SSTLs. An additional 6 months are provided as a period of ground water monitoring to demonstrate that the chemicals of concern (COC) have been effectively reduced.

The recommended corrective action has proven effective at other sites with similar geologic and contaminant characteristics. A primary factor in achieving successful aquifer remediation is the understanding that the majority of the contamination exists adsorbed to the saturated soils. The detected COC in groundwater are only a small portion of the total amount present in the subsurface. The following are the results of two distribution studies. Felton, et al. 1992, reports that for a petroleum spill in a sandy soil, only 0.5% of the total mass of contamination is in the ground water, 31.5% is sorbed in the unsaturated soils and 68% is sorbed to the saturated soils. Leonard, et al. 1992, reports that for hydrocarbon solvents in sand, 5% is dissolved in ground water and 75% of the remaining 95% is in the saturated zone soils. These distributions are typical of hydrocarbons in shallow aquifers such as this site.

In-situ air sparging coupled with vapor extraction is an effective remediation technique for physically removing contaminants adsorbed to saturated soils and enhancing natural biodegradation.

# SECTION 4.0
# ENGINEERING REPORT

## 4.1 Air Sparging/Soil Vapor Extraction Pilot Testing

The need for air sparging/soil vapor extraction pilot testing was reviewed during the preparation of this CAP. It was decided that pilot testing is unnecessary since, the remedial design does include conservative placement of the vapor extraction wells and air sparging wells based on review of design literature and testing results at sites with similar lithology. An as-built plan will be submitted within 90 days of completion of the system installation.

## 4.2 Air Sparging System Design

Air sparging will be used to treat adsorbed phase hydrocarbons located beneath the water table, facilitate groundwater treatment through in-situ stripping, and enhance biodegradation through the addition of oxygen. Nine (9) air sparging wells (ASWs); SV-1, SV-2, SV-3, SV-4, SV-5, SV-6, SV-7, S-8 and S-9 are proposed for use within the area of dissolved and adsorbed phase hydrocarbon contamination as illustrated on Figure 5.0. A design flow rate of 3 cfm per well is expected to produce a radius of influence of approximately 30 feet.

### 4.2.1 Air Sparging Well Design

The depth to water at the site throughout the assessment phase ranged from approximately 15-17 feet BLS. Therefore, in order to obtain optimum air dispersion without excessive head pressure, the ASWs will be constructed of 1-inch diameter, Schedule 40 PVC with 25 feet of solid casing and 5 feet of 0.020 inch slotted screen. A 20/30 grade silica sand pack will extend approximately one foot above the screened interval and will be overlain with a 2 foot layer of bentonite. The remainder of the borehole annular space will be grouted with a mixture of Portland Cement and a 5% bentonite slurry. See Figure 7.0 for the construction details of the sparge wells.

### 4.2.2 Air Sparging Compressor Sizing

One 7.5-hp Ingersoll-Rand compressor has been selected to supply air to the seven (7) sparge wells (SV-1 through SV-7). Head losses for the air injection system were calculated to verify that the compressor would provide the design flow rate of 21cfm (3cfm per leg). Total system head loss, including the average 15 feet of static pressure and a 10% safety factor, is approximately 8 psi. The compressor will supply 24 cfm at 175 psi, which provides flexibility in flow rates and injection pressures. A portable 1.0-hp GAST compressor has been selected to supply air to the two sparge wells (S-8 and S-9), again 3cfm and 8 psi will be used. A flow meter, a gate valve and a pressure gauge will be fitted on each leg of the air injection system to allow flow/pressure adjustments. Manufacturer's specifications for the compressors are provided in Appendix B. A copy of the air injection UIC permit application is presented in Appendix C.

## 4.3 Vapor Extraction System Design

Adsorbed phase hydrocarbons and hydrocarbon vapors generated by air sparging will be recovered with a vapor extraction system (VES). The system will utilize seven (7) vapor extraction wells (SV-1 through SV-7), 15 feet in depth, placed in the same borehole as the sparge wells. See Figure 5.0 for the locations. In order to confirm that the vapor extraction system will affect the areal extent of "excessively contaminated" soil and capture the hydrocarbon vapors, verification testing will be conducted during system startup. The layout of the vapor extraction wells and configuration of the piping provide a flexible system which will allow more or less vacuum to be applied to the VES wells to enhance soil cleanup and vapor recovery.

### 4.3.1 Vapor Extraction Well Design

The vapor extraction wells will be installed adjacent to the air sparging wells, within the same borehole. The vapor extraction legs will consist of 2-inch diameter, 0.020 slotted, Schedule 40 PVC, place 5 feet below land surface (BLS) to 15 BLS.. The construction of the vapor extraction wells is illustrated on Figure 7.0 and the location is illustrated on Figure 5.0. The extraction wells will be piped to the equipment compound via 2-inch diameter Schedule 40 PVC. The pipe will be combined into a manifold connected to a vapor extraction blower. The extraction wells will be equipped with a flow control valve, a vacuum gauge and a sample port as illustrated in Figure 6.0.

### 4.3.2 Vapor Extraction Blower Sizing

Based on pilot testing conducted at sites with similar lithology, an applied vacuum of 25 inches water gauge (w.g.) at a flowrate of approximately 5 cfm (per well) is expected to produce the desired radius of influence of approximately 40 feet from each well. Based on this assumed vacuum and flowrate, total system head losses were calculated for the VES. Calculation of friction loss from the piping, valves, fittings, manifold and appurtenances predicts a loss of approximately 10 in. w.g. Therefore, the blower design requirements for the system (including a 10% safety factor) are a vacuum of 40 in. w.g. and a flow of 35 cfm. Two blowers will be required to obtain these numbers. Each VES blower will be 2.3-hp vacuum blower which will provide 50 cfm at 60 in. w.g. The blowers will be equipped with a particle filter and an air/water separator. The VES equipment layout is illustrated on Figure 6.0. Manufacturer's specifications for the blower and ancillary equipment are provided in Appendix D.

### 4.3.3 Vapor Extraction System Off-Gas Treatment

The discharge stack for the vapor extraction system will be constructed of a 15 foot tall, 4-inch diameter Schedule 40 PVC pipe. Air samples will be collected from the VES off-gas for analysis in accordance with EPA Test Method 18 to determine total volatile organic compound (VOC) concentrations. If VOC concentrations exceed limits established by SCDHEC, off-gas treatment will be installed. A copy of the SCDHEC BAQC UST Modeling Information Form is included in Appendix E.

## 4.4 Equipment Trailer

The air sparging and the vapor extraction equipment will be housed in a 6'x10' aluminum trailer. The equipment trailer will be supplied with a 100 amp, 230 volt, single-phase power drop. Safety features include a circuit interrupt, which will shut down the air sparging system should a failure occur in the vapor extraction system. This feature will also be triggered through a high-level float switch located in the condensate drum. The equipment trailer layout is shown on Figure 6.0.

# SECTION 5.0
# MAINTENANCE, MONITORING AND REPORTING

## 5.1 System Maintenance

The remediation system will be routinely monitored to evaluate the effectiveness and progress of the site cleanup. This will include minor flow rate adjustments, equipment inspections and performance of any routine, necessary or preventative maintenance task.

## 5.2 System Monitoring

All monitoring wells associated with the release will be sampled quarterly for a period of one year or until site clean up, whichever arrives first. After the first year of system operation and monitoring, the number of wells to be sampled may be reduced to exclude those wells that have remained below detection limits or others based upon consultation with the SCDHEC project manager. The appropriate monitoring wells will be sampled and analyzed for BTEX, MTBE and naphthalene on a quarterly basis. A soil vapor extraction system effluent air sample will also be collected, field screened with an OVA and analyzed for BTEX, MTBE and naphthalene. Quarterly air samples will not be collected if the analytical results of the air sample are below the BAQC limits. OVA field screening will be completed quarterly and if warranted an air sample would be collected. Liquid levels will be measured in all wells on a quarterly basis.

## 5.3 Project Reporting

As-built drawings will be prepared and submitted within 90 days of system installation and included in the first quarterly report.

Quarterly status reports will be submitted to the SCDHEC. The reports will summarize system operation and maintenance activities as well system and ground water monitoring results. The reports will include suggestions and recommendations to enhance the effectiveness of the treatment system. At minimum, the quarterly status reports will include:

- A brief summary of the progress and operating effectiveness of the remedial system
- Water table elevation maps and tables

COMMODITY: To perform corrective action of a petroleum release from a regulated underground storage tank site at Crawfords Country Store (UST Permit #12335), 5870 Hwy. 28 N., Abbeville, South Carolina

METHOD OF BID AWARD: Award will be made by total to the lowest responsive and responsible bidder.

SOUTH CAROLINA DEPARTMENT OF HEALTH AND ENVIRONMENTAL CONTROL
BID NUMBER: SB-9570-12/02/99-TC

## PURPOSE and SCOPE OF WORK

The Division of Underground Storage Tank (UST) Management of the South Carolina Department of Health and Environmental Control (DHEC) is seeking services to perform corrective action of a petroleum release from a regulated underground storage tank site in accordance with defined remediation goals. The objective is to remove free product AND/OR reduce the levels of chemicals of concern (CoC) in the ground water and subsurface soil to or below defined site specific target levels (SSTLs). All bidders must be South Carolina Certified Class I Site Rehabilitation Contractors. The scope of work defined in this bid invitation is to be implemented at Crawfords Country Store (UST Permit #12335), 5870 Hwy. 28 N., Abbeville, South Carolina for the release reported on December 3, 1991.

## SPECIAL CONDITIONS

1. CONTRACT PERIOD: The contract will be effective from date of award until the corrective action is complete as described in this contract.

2. This contract is for corrective action at only one (1) site in South Carolina. Compensation from the SUPERB Account is not considered a state contract for purposes of procurement or subject to state bid requirements in accordance with Section 44-2-130(D) of the SUPERB Act.

3. AWARD: Award will be made to a South Carolina Certified UST Site Rehabilitation Contractor based on the total cost of corrective action to SSTLs and removal or abandonment of assessment and rehabilitation items. The proposed implementation schedule to achieve the remediation goals, the removal of all equipment and abandonment of wells, (including pre-existing wells), trenches, etc. installed by the contractor, and the proposed remediation technology(ies) or method(s) must protect public health and the environment and be eligible for permitting by DHEC. The total cost, methods, and estimated time to complete the contract must also be advantageous to the State of South Carolina.

4. REASONABLE BID: DHEC reserves the right to reject any and all bids that appear to be above the customary and reasonable cost for the same scope of work in a similar geologic setting.

5. Contractor must agree to make positive efforts to use women and minority owned businesses and individuals.

6. AMENDMENTS: All amendments to this solicitation will be in writing from the DHEC Procurement Officer indicated on page one of this solicitation. DHEC will not be legally bound by any amendment or interpretation that is not in writing.

7. QUESTIONS: Questions or requests for information must be submitted in writing and received by 5:00 P.M., November 9, 1999. After this date, no further questions will be addressed. A written response will be mailed to all requestors of the bid package. The questions may be faxed to Tripp Clark, fax number (803) 898-3505.

8. NOTE . . . THE ONLY OFFICIAL CONTACT PERSON AT DHEC DURING THE BIDDING AND AWARDING PROCESS IS THE PROCUREMENT OFFICER INDICATED ON PAGE ONE OF THIS SOLICITATION. BIDDING CONTRACTORS ARE NOT TO CONTACT DHEC PERSONNEL LOCATED OUTSIDE THE BUREAU OF BUSINESS MANAGEMENT.

9. The contractor will be required to treat the area where the petroleum chemicals of concern are above site-specific target levels (see figure #2). Verification that interim corrective action goals have been met will be based upon ground-water quality samples collected from monitoring wells OMW-1, MW-2, MW-3, MW-4, MW-5, MW-7, MW-8, MW-9, MW-10, MW-11, MW-12, MW-13, MW-14, MW-15, DMW-17, and water wells CLS-WW, and CP-WW. Verification that final corrective goals have been met will be based upon ground-water quality samples collected from all existing monitoring wells (including water wells CLS-WW and CP-WW), and additional verification wells and verification soil borings to be installed at locations designated by SCDHEC (see specification #10 for more detail).

**SOUTH CAROLINA DEPARTMENT OF HEALTH AND ENVIRONMENTAL CONTROL**
**BID NUMBER: SB-9570-12/02/99-TC**

10. REPORTS: Deliver the reports to: SCDHEC, Division of UST Management, ATTN: **H. Reed Corley**, 2600 Bull Street, Columbia, SC 29201. A minimum of two (2) copies of each plan and two (2) copies of each report must be delivered to the above address. Based on permitting and other requirements, an engineering report, UIC permits, air modeling forms or NPDES Permits may be required. Please contact the Department for the exact number of copies of each document to be submitted.

11. INVOICING: Invoices will be submitted to: SCDHEC, Division of UST Management, ATTN: Financial Section, 2600 Bull Street, Columbia, SC 29201, using the Department's Corrective Action (CA) Bid Invoice form. The initial invoice must be received at the above address within four months of CAP approval or funds will be uncommitted as required by the Section 44-2-40(B) of the SUPERB Act. If funds are uncommitted the submitted invoice will be held until funding is available. Payment to the contractor will be a pay for performance system as follows:

A. Payment of forty percent (40%) of the total bid price will be made within 90 days of operation of the remediation system or implementation of corrective action as described in the approved corrective action plan (CAP), subject to the limitations of Section 44-2-40 of the SUPERB Act. The implementation should be documented in the first corrective action monitoring report.

B. Payment of thirty-five percent (35%) of the total bid price will be made based on removal of free product to .01 foot as verified in monitoring wells OMW-1, MW-2, MW-3, and MW-10 and achieving interim CoC mass reduction goals at the site as verified in monitoring wells OMW-1, MW-2, MW-3, MW-4, MW-5, MW-7, MW-8, MW-9, MW-10, MW-11, MW-12, MW-13, MW-14, MW-15, DMW-17, and water wells CLS-WW, and CP-WW. Payment will be made for interim goals of 25, 50, and 75 percent reduction of <u>total</u> CoC mass by the implementation of corrective action. **NOTE: Payment cannot be based on laboratory analyses for any well that has been used for injection unless that well has returned to ambient conditions.** The CoC mass requiring reduction is as follows:

CoC mass in parts per billion (mg/l) based on 08/05/99, sampling: (CoC may increase or decrease in the future)

| Well | Benzene | Toluene | Ethylbenzene | Xylenes | MTBE | Naphthalene | Total Mass |
|---|---|---|---|---|---|---|---|
| OMW-1** | 226,000 | 301,000 | 280,000 | 278,000 | 5,110,000 | 2,000 | 6,197,000 |
| MW-2** | 226,000 | 301,000 | 280,000 | 278,000 | 5,110,000 | 2,000 | 6,197,000 |
| MW-3** | 226,000 | 301,000 | 280,000 | 278,000 | 5,110,000 | 2,000 | 6,197,000 |
| MW-4 | 14,200 | 34,600 | 2,750 | 15,900 | 109,000 | <5 | 176,455 |
| MW-5 | 6,400 | 61,600 | 2,460 | 12,100 | 410 | 335 | 83,305 |
| MW-7 | <1 | <1 | <1 | <1 | 41 | <1 | 46 |
| MW-8 | <1 | <1 | <1 | <1 | <1 | <1 | 6 |
| MW-9 | 110 | 4,280 | 2,450 | 17,000 | 150 | <500 | 24,490 |
| MW-10** | 226,000 | 301,000 | 280,000 | 278,000 | 5,110,000 | 2,000 | 6,197,000 |
| MW-11 | <1 | <1 | <1 | <1 | 7 | <5 | 16 |

SOUTH CAROLINA DEPARTMENT OF HEALTH AND ENVIRONMENTAL CONTROL
BID NUMBER: SB-9570-12/02/99-TC

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| MW-12 | 5,000 | 260 | <200 | <200 | 41,200 | <1000 | 47,860 |
| MW-13 | 3 | <1 | <1 | <1 | 604 | <5 | 615 |
| MW-14 | 57 | 7 | 1 | 23 | 606 | 5 | 699 |
| MW-15 | 3 | 6 | 1 | 6 | 27 | <5 | 48 |
| DMW-17 | <1 | <1 | <1 | <1 | <1 | <1 | 6 |
| CLS-WW | <1 | <1 | <1 | <1 | <1 | <1 | 6 |
| CP-WW+ | 81 | 1 | <1 | 10 | 35 | <5 | 133 |
| Initial Mass* | 929,859 | 1,304,760 | 1,127,869 | 1,157,245 | 20,592,083 | 9,869 | 25,121,685 |
| SSTL Mass | 61 | 7,280 | 5,109 | 70,245 | 473 | 209 | 83,377 |
| Initial Mass above SSTL | 929,798 | 1,297,480 | 1,122,760 | 1,087,000 | 20,591,610 | 9,660 | 25,038,308 |

* CoC mass may change due to seasonal fluctuations in the groundwater.

** Contains free phase product (OMW-1 {1.05 ft.}, MW-2 {2.29 ft.}, MW-3 {1.01 ft.}, and MW-10 {1.01 ft.}) initial mass based on maximum solubility limits

\+ Sample collected December 1997

(1) 25 percent total mass reduction will be achieved when free product has been removed to .01 foot from OMW-1, MW-2, MW-3, and MW-10, and one-quarter of the initial BTEX, MTBE, and Naphthalene mass from monitoring wells OMW-1, MW-2, MW-3, MW-4, MW-5, MW-7, MW-8, MW-9, MW-10, MW-11, MW-12, MW-13, MW-14, MW-15, DMW-17, and water wells CLS-WW, and CP-WW is removed compared to the SSTLs. The following formula will be used to calculate the percent total mass reduction: total mass above SSTLs from initial sampling less total mass above SSTLs from subsequent sampling divided by total mass above SSTLs from initial sampling. Payment of 10 percent (10%) of the total bid price will be made upon verification (see Specifications item 10 for the method of verification) of at least one-quarter of the total CoC mass above SSTLs is removed.

(2) 50 percent total mass reduction will be achieved when one-half of the initial BTEX, MTBE, and Naphthalene mass from monitoring wells OMW-1, MW-2, MW-3, MW-4, MW-5, MW-7, MW-8, MW-9, MW-10, MW-11, MW-12, MW-13, MW-14, MW-15, DMW-17, and water wells CLS-WW, and CP-WW is removed as compared to the SSTLs. The formula outlined in item 11. B. (1) will be used. Payment of 10 percent (10%) of the total bid price will be made upon verification (see Specifications item 10 for the method of verification) of at least one-half of the total CoC mass above SSTLs is removed.

(3) 75 percent total mass reduction will be achieved when three-quarters of the initial BTEX, MTBE, and Naphthalene mass from monitoring wells OMW-1, MW-2, MW-3, MW-4, MW-5, MW-7, MW-8, MW-9, MW-10, MW-11, MW-12, MW-13, MW-14, MW-15, DMW-17, and water wells CLS-WW, and CP-WW is removed as compared to the SSTLs. The formula outlined in item 11 B (1) will be used. Payment of 15 percent (15%) of the total bid price will be made upon verification (see Specifications item 10 for the method of verification) of at least three-quarters of the total CoC mass above SSTLs is removed.

SOUTH CAROLINA DEPARTMENT OF HEALTH AND ENVIRONMENTAL CONTROL
BID NUMBER: SB-9570-12/02/99-TC

C. **The final 25 percent (25%) of the total bid price will be paid upon: 1) verification that the thickness of free product does not exceed .01 foot and the levels of CoC do not exceed the site-specific target levels (SSTLs) defined in item 11.C. at any point in the area of concern (see figure #2). Verification that the SSTLs have been met will be based upon ground-water quality samples collected from all existing monitoring wells, additional verification wells, and soil quality samples from verification soil borings to be installed at locations designated by DHEC (see specification #10 for more detail); and 2) all remediation and assessment items installed by the contractor (e.g., wells [including preexisting wells], trenches, etc.) are removed from the site or properly abandoned.** The SSTLs are as follows:

Site Specific Target Levels (SSTLs) in parts per billion (mg/l)

| Well | Benzene | Toluene | Ethylbenzene | Xylenes | MTBE | Naphthalene |
|---|---|---|---|---|---|---|
| OMW-1 | 5 | 1,000 | 700 | 10,000 | 40 | 25 |
| MW-2 | 5 | 1,000 | 700 | 10,000 | 40 | 25 |
| MW-3 | 5 | 1,000 | 700 | 10,000 | 40 | 25 |
| MW-4 | 5 | 1,000 | 700 | 10,000 | 40 | <5** |
| MW-5 | 5 | 1,000 | 700 | 10,000 | 40 | 25 |
| MW-7 | <1** | <1** | <1** | <1** | <1** | <1** |
| MW-8 | <1** | <1** | <1** | <1** | <1** | <1** |
| MW-9 | 5 | 1,000 | 700 | 10,000 | 40 | 25 |
| MW-10 | 5 | 1,000 | 700 | 10,000 | 40 | 25 |
| MW-11 | <1** | <1** | <1** | <1** | 7* | <5** |
| MW-12 | 5 | 260* | <200** | <200** | 40 | 25 |
| MW-13 | 3* | <1** | <1** | <1** | 40 | <5** |
| MW-14 | 5 | 7* | 1* | 23* | 40 | 5* |
| MW-15 | 3* | 6* | 1* | 6* | 27* | <5** |
| DMW-17 | <1** | <1** | <1** | <1** | <1** | <1** |
| CLS-WW | <1** | <1** | <1** | <1** | <1** | <1** |
| CP-WW | 5 | <1** | <1** | 10* | 35* | <5** |
| Total | 61 | 7,280 | 5,109 | 70,245 | 473 | 209 |

* Laboratory analysis is less than calculated SSTLs; therefore, SSTL mass is set equal to laboratory mass.

** Laboratory analysis is below detection limits; therefore, SSTL mass is set equal to detection limits.

Soil CoC mass is parts per billion (ug/kg) based on 11/10/97, sampling: (CoC mass may increase or decrease in the future)

1. NOTIFICATION FOR FAILURE TO PERFORM: If the contractor fails to meet any specification of corrective action as outlined in this document, DHEC will notify the contractor by certified letter of the deficiency (ies). If the contractor does not correct the deficiency(ies) within 30 days, the contractor will be in breach of contract and the bid award may be voided by DHEC. DHEC will notify the contractor by certified letter that the bid award is void and any invoices are payable upon review and approval of DHEC. If the contractor corrects the deficiency(ies) within 30 days, the bid award will continue. Please note contractor-owned items used on-site for the contract that are destroyed by acts of nature, improper maintenance or handling, theft or vandalism will not be replaced or reimbursed by the SUPERB fund. The accepted bid will be final and will not be increased or cancelled for any reason (e.g., unanticipated iron fouling of a system, wells clogging because of biological activity or sediments, increased subcontractor costs, loss of utilities, modification to the system to meet the remediation goals, etc.) with the exception of unforeseen geologic circumstances or identification of additional CoC from another release.

2. SITE SPECIFIC DETAILS: A brief technical summary of the release, including a location map and specifics of existing wells, is attached. The detailed technical file will be available for review through the Freedom of Information (FOI) Office located on the third floor of the Sims Building, 2600 Bull Street, Columbia, SC. **Review of the detailed technical file is not mandatory; however, bidders are strongly encouraged to review the file to ensure a complete understanding of the contract requirements. The successful bidder will be responsible for all information included in the technical file.** Appointments to view the technical file may be scheduled on weekdays between the hours of 8:30 A.M. to 5:00 P.M. by calling the SCDHEC Freedom of Information Office at (803) 898-3882. Please request file #12335.

3. **The contractor will submit a CAP within 30 days of Statement of Award notification from the Bureau of Business Management in accordance with Specification Item 2.** The implementation of the CAP will be initiated immediately upon Departmental approval of the CAP and all associated permit(s), and in accordance with the schedule presented in the bid. A performance bond or irrevocable standby letter of credit, equal to the award price, will be required by DHEC. The issuing institution for an irrevocable standby letter of credit must be an entity that has the authority to issue letters of credit in South Carolina and whose letter-of-credit operations are regulated and examined by a federal or state agency. The original performance bond or irrevocable standby letter of credit will be submitted to the Division of UST Management, Attn: Chris Doll, within 30 days of award. The performance bond or irrevocable standby letter of credit will specify that the SUPERB Account will be the recipient of any forfeiture.

4. **MINIMUM REQUIREMENTS: Corrective action will be considered complete once the levels of CoC in the area of concern (see figure #2) are verified to be at or below the SSTLs listed in item 11.C., and removal or abandonment of all remediation and assessment items installed by the contractor (e.g., wells [including preexisting wells], trenches, etc.). See Specification #10 for the method of verification.** All rehabilitation activities associated with a UST release must be performed by a SCDHEC certified Class I site rehabilitation contractor as required by R. 61-98. All corrective action plans and reports must be sealed by a Professional Engineer or Professional Geologist registered in the State of South Carolina. All engineering reports, drawings and plans must be sealed by a Professional Engineer registered in the State of South Carolina. All laboratory analysis for CoC must be performed by a SC certified laboratory. All monitoring, verification, injection, or recovery wells must be installed and abandoned by a SC certified well driller. All applicable certification, training, permits, applications, and fees associated with well installation; injection, discharge, treatment, or transportation of ground water, air, or soil; construction or operation of a remediation system; and any other action requiring a permit are the responsibility of the contractor. Any required business or occupation license and occupational safety and health training (e.g., OSHA) as defined by the laws and regulations of the United States of America, State of South Carolina, county or city is also the responsibility of the contractor. The terms and conditions of all applicable permits will be met. Any contaminated ground water, soil, or construction material must be properly transported and disposed of, or treated at an approved facility with prior approval from DHEC. Any costs for utilities construction and service (electric, telephone, sewer, etc.) required by the corrective action are the responsibility of the contractor.

SPECIFICATIONS for CORRECTIVE ACTION

The successful contractor must meet the following specifications as required by the proposed treatment method(s) or corrective action technology(ies):

1. Submit a CAP bid proposal. The proposal will outline in general terms an approach to achieve the remediation goals (e.g., reduction of each CoC to SSTL). The proposal must outline the following:

   A. A description of the proposed treatment method(s) or technology(ies) for corrective action.

   B. The total cost (in thousands of dollars) to complete site rehabilitation to meet the remediation goals and to remove or abandon all assessment and remediation items installed as part of corrective action.

   C. The estimated amount of time in months to complete site rehabilitation to meet the remediation goals, install verification wells, and remove or abandon all assessment and remediation items installed as part of corrective action.

2. Complete and submit a detailed CAP (three copies) for the release at Crawford's Country Store, 5870 Hwy. 28 N., Abbeville, South Carolina **within 30 days of Statement of Award notification by the Bureau of Business Management.** NOTE: ***Use of monitoring well(s) for injection purposes is not allowed.*** A condition of the plan may include installation of additional recovery, sparge, compliance, or injection wells. The plan must define all active (pump and treat, sparge, vapor extraction, excavation of impacted soils, bioremediation, etc.) and passive (intrinsic remediation, monitoring, etc.) corrective action method(s) proposed to reduce CoC to SSTLs. It must be shown, by use of scientific models, computations, or discussion, how each CoC will be reduced to the SSTL for each remediation method proposed for the release. Any assumptions used in a model will be listed or shown, as well as, appropriate references. Intrinsic corrective action will require monitoring to verify remediation. General construction details will be included (e.g., install four additional recovery wells, construct a compliance point, install four air injection wells, excavate 3,000 cubic yards of impacted soils, etc.) as well as details of well abandonment and equipment removal. A remediation timetable including abandonment of wells and removal of equipment will be included with the CAP. The Division of UST Management will review the CAP and initiate a public notice period for a maximum of 30 days. The contractor must obtain a copy of the applicable portion of the tax map. This map will depict the location of the facility,

and all impacted properties, and all properties located adjacent to the impacted properties. The names and addresses of the owners of each of these properties will be provided. The contractor may be required to attend or provide input at a public meeting upon request by DHEC. Any CAP amendments and modifications arising from public notice must be submitted within 15 days of notification by DHEC. The CAP and any amendments or modifications must be sealed by a qualified Professional Engineer or Geologist registered in the State of South Carolina. The owner/operator, Frank Crawford, will be consulted and will approve the location of the corrective action system. If permanent, the system must be enclosed in a fenced area or small building. The initial invoice must be received at the above address within four months or funds will be uncommitted as required by the SUPERB Act. If funds are uncommitted this invoice will be held until funding is available.

An initial monitoring report documenting CoC concentrations in all wells and potentiometric conditions prior to start up (including verification of system operation or CAP implementation) must be submitted to the Division of UST Management within 45 days after award. Sampling for the initial monitoring report must occur prior to system startup.

Based on naturally occurring conditions, the dissolved concentration of petroleum chemicals of concern (CoC) will increase or decrease. For the purposes of this contract, the total CoC mass for the wells included in the bid package may reasonably increase up to 150 percent or decrease as much as 50 percent. If the total CoC concentration in all wells listed in Special Condition 11.B. increases more than 150 percent based on this initial sampling or if measurable free product that has not been previously documented in any report is detected during the initial sampling event, the contractor may request in writing that the award be canceled. **If either of these conditions occurs, the contractor will contact the UST project manager within two days of problem identification and will submit written documentation within five days of notification.** The contractor will be reimbursed for one personnel mobilization to collect samples, one sample collection and one analytical fee each monitoring well sampled as outlined in SUPERB Allowable Costs, plus $6,000 for all other costs incurred (e.g., CAP preparation, obtaining performance bond, business license). The contract will be canceled and the performance bond will be returned to the company. If the total CoC concentration in all wells listed in Special Condition 11.B. decreases more than 50 percent based on this initial sampling the DHEC may cancel the award. If the corrective action system is started or treatment is performed, the contractor will be required to complete the contract unless geological conditions change or another release is confirmed. See special condition 12. If the contract is canceled by DHEC, the contractor will be notified by certified letter and an invoice for the above outlined items shall be submitted within 20 days from the date of the certified letter canceling the contract.

3. Complete and submit all applications for permits (injection, NPDES, BAQC modeling form, thermal treatment, construction, etc.; 3 copies) and an engineering report (ER; 4 copies) with the CAP. Any required permit changes or corrections will be submitted within 15 days of notification by DHEC. The ER and any ER amendments and modifications, must be sealed by a Professional Engineer registered in the State of South Carolina. After review of the CAP and all permit applications by DHEC, the Division of UST Management will issue a notice to proceed with CAP implementation.

Implementation of the corrective action plan before the completion of the public notice process and approval of all permits by DHEC is not authorized. If premature implementation occurs, the Department will not reimburse those costs from the SUPERB Account, and the bid award will be reduced by that amount. If the Department agrees with early implementation to better protect human health in an emergency and provides approval in writing, early implementation without any reduction to the bid amount will be authorized.

4. Implement the CAP within 30 days of receipt of notice to proceed and any required permit to construct. Disruption to the owner/operator's normal business will be kept to a minimum. Upon completion of any required construction, DHEC will inspect the system and issue a permit to operate.

5. Gain access to the adjacent property to sample monitoring wells and to install any corrective action equipment, as required.

6. Initiate system startup within 15 days of receipt of the permit to operate. Remediation as defined in the CAP and ER will begin upon system startup. **If any problem with CAP implementation occurs, the contractor will contact the UST project manager within 24 hours of problem identification and will submit written documentation within five days of notification.** ***Note: The application of corrective action technologies can result in the mobilization and possible increase in the thickness of free phase product or elevated CoC concentrations in the monitoring wells.***

7. Complete and submit a corrective action monitoring report (first quarterly due within 90 days of the date of the permit to operate and quarterly thereafter) 3 copies plus one copy for any DHEC Bureau that issued a permit) on a quarterly basis. The corrective action monitoring reports must include:

   A. A narrative portion that documents current site conditions and system effectiveness in achieving the remediation goals (e.g., free product removal, reducing CoC to the SSTLs) as outlined in the CAP. Any system down time and the associated reason(s) will be included in the report.

   B. Conclusions and recommendations based on the reported data.

   C. Ground-water laboratory analytical data for all monitoring wells in the following format (additional parameters such as dissolved oxygen may be required; do not sample wells containing free product):

Analytical Data (mg/l)

| Monitoring Well | Date | Benzene | Toluene | Ethylbenzene | Xylenes | MTBE | Naphthalene |
|---|---|---|---|---|---|---|---|
| MW-1 | 7/15/97<br>10/15/97 | 145<br>140 | 200<br>190 | 146<br>140 | 1,000<br>900 | 170<br>50 | 47<br>165 |
| MW-2 | 7/15/97<br>10/15/97 | 580<br>480 | 800<br>690 | 300<br>257 | 1,000<br>912 | 60<br>50 | 20<br>19 |

   D. Ground-water potentiometric data for all monitoring wells in the following format:

Ground water Data (feet)

| Monitoring Well | Date | TOC Elevation | TOC to GW | TOC to FP | FP Thickness | GW Elevation |
|---|---|---|---|---|---|---|
| MW-1 | 7/15/97<br>10/15/97 | 98.0<br>98.0 | 17.54<br>17.90 | | | 80.46<br>80.10 |
| MW-2 | 7/15/97<br>10/15/97 | 100.0<br>100.0 | 20.50<br>21.50 | 20.47<br>21.48 | 0.03<br>0.02 | 79.50<br>78.50 |

E. A ground-water elevation contour map of the site based on current ground-water potentiometric data.

F. A CoC map based upon current ground-water laboratory analytical data. The ground-water data should be adjacent to the relevant monitoring well using the following format (additional parameters such as dissolved oxygen may be required):

MW - Number
Benzene (mg/l)
Toluene (mg/l)
Ethylbenzene (mg/l)
Xylenes (mg/l)
MTBE (mg/l)
Naphthalene (mg/l)

G. A copy of the DHEC approval letter and manifests for any contaminated soil and ground-water removed from the site for treatment and/or disposal.

H. Additional data required by permits (e.g., air analyses, wastewater effluent analyses and amounts, etc.). The data should be reported on a form or in a format specified in the permits, and attached to the monitoring report as an addendum.

All rehabilitation activities associated with the UST release must be performed by a SCDHEC Certified Site Rehabilitation Contractor. All air, soil, and ground-water analyses must be performed by a South Carolina certified laboratory. The corrective action monitoring report must be sealed by a Professional Engineer or Geologist registered in the State of South Carolina. All monitoring wells associated with the release will be sampled on a quarterly basis for the first year. Thereafter, the number of wells sampled may be reduced and/or the interval between corrective action monitoring reports may be lengthened upon clear demonstration of CoC reduction, unless restricted by permit requirements. DHEC may require data to be reported on a form or in a specific format. The contractor will be provided with the proper report forms and format prior to system startup. The contractor will be notified of any revisions to the report forms or format 90 days prior to the due date for the corrective action monitoring report.

8. Collect one (1) ground-water sample per monitoring event for all monitoring wells associated with the release. Each well should be purged prior to sampling. Purging is considered complete once the ground-water temperature and pH have stabilized. Sampling logs should note all temperature and pH measurements, as well as the location and type of each sample submitted for laboratory analysis. Each ground-water sample will be collected in accordance with established QA/QC protocol and submitted to a certified laboratory for analysis. The ground-water samples must be analyzed for the following parameters:

| Analyte | Analytical Method* | Reporting Limit (mg/l) |
|---|---|---|
| BTEX | 8260B/5030B | 5 |
| Naphthalene | 8260B/5030B | 5 |
| MTBE | 8260B/5030B | 5 |

*or EPA equivalent method that can achieve the same reporting level

The soil samples must be analyzed for the following parameters:

| Analyte | Analytical Method* | Reporting Limit (mg/kg) |
|---|---|---|
| BTEX | 8260B/5030B | 5 |
| Naphthalene | 8260B/5030B | 5 |

*or EPA equivalent method that can achieve the same reporting level

Additional samples (air, groundwater, effluent, soil) required by permits must be collected in accordance with established QA/QC protocol and submitted to a certified laboratory for analysis. The samples will be analyzed for parameters stipulated in the permits. Sampling and analytical data for each sample (e.g., field sampling logs, chain of custody forms, certificates of analysis, and the lab certification number) will be included in the corrective action monitoring report.

9. Properly dispose of all contaminated soil and ground water generated during the implementation of the CAP and installation of verification wells and soil borings. DHEC must approve the disposal facility selected for treatment and disposal of the free product and contaminated soil and ground water. The owner/operator of the facility is considered the generator for any contaminated soil and ground water. The contractor must document all disposal of free product and contaminated soil and ground water in the corrective action monitoring report.

10. Verification for the removal of free product will be conducted by SCDHEC personnel with an interface probe. If the remediation technology is in-situ (e.g., pump and treat, air sparging, vapor extraction): suspend operation of the system once the remediation goals for all CoC have been maintained for a period of 30 days. Samples are to be taken after one (1) quarter or after all CoC levels have reached equilibrium and again after a second quarter. Along with the parameters listed in Specification #8, the ground-water samples should also be sampled for the following parameters:

| Analyte | Analytical Method* | Reporting Limit (mg/l) |
|---|---|---|
| Dissolved Oxygen | SM4500-O G | 500 |
| Ferrous Iron | SM3500-Fe D | 30 |
| Methane | Kerr Method | 1000 |
| Nitrate | 9056/9210 | 100 |
| Sulfate | 9038/9056 | 1000 |

*or EPA equivalent method that can achieve the same reporting level

If sample results indicate that the remediation goals are not sustained, the contractor must submit a corrective action status report (3 copies) that outlines the deficiency(ies) and offers recommendations for achieving the remediation goals with a revised timetable. Modifying and restarting of the system will be directed by DHEC. The system will operate until all remediation goals are again maintained for a period of 30 days. Operation of the system will then be suspended again and samples taken to verify that remediation goals are sustained. This cycle of activity, including status reports, will be repeated until all CoC levels remain below SSTLs for all wells listed in Special Conditions item 11 C for two (2) consecutive quarters. Three (3) verification wells and three (3) verification soil borings may then be installed at locations designated by DHEC. Costs for verification well and soil boring installation are considered part of this bid price. Each well and soil boring will be sampled in accordance with Specifications item 8 and the analyses compared to the calculated SSTLs for the CoC at that well and soil boring location. If the laboratory analyses are at or below the SSTLs, corrective action will be considered complete. If any analysis is above the SSTL, the corrective action will not be considered complete, and the activity cycle described above must be repeated until all CoC levels remain below SSTLs for those wells and soil borings listed in Special Conditions item 11 C. Split or duplicate samples may be collected by DHEC (or its subcontractors) to verify achievement of remediation goals. At least two weeks

notice will be provided to DHEC prior to mobilizing to the site for sampling to verify attainment of remediation goals. Costs for transportation and analysis of split or duplicate samples will be paid by DHEC.

or

If the remediation technology is a single event (e. g. excavation of impacted soils, vacuum enhanced recovery): collect sufficient samples as outlined in the CAP to verify the reduction of CoC to the remediation goals. The contractor may be required to install and sample **three (3)** verification wells and **three (3)** verification soil borings at locations designated by DHEC. If the levels of CoC in all samples are at or below SSTLs, corrective action will be considered complete. If the level of any CoC is above the SSTL, additional corrective action will be required. The contractor will submit one (1) corrective action status report to document the reduction of CoC to the remediation goals. Split or duplicate samples will be collected **by DHEC (or its subcontractors)** to verify achievement of remediation goals. **At least two weeks notice will be provided to DHEC prior to mobilizing to the site for sampling to verify attainment of remediation goals.** Costs for transportation and analysis of split or duplicate samples will be paid by DHEC.

11. Disassemble and remove the remediation system and all associated remediation items including utilities from the site within 60 days of notification by DHEC that the remediation goal for the release associated with the UST(s) at the site has been achieved. Disruption to the owner/operator's normal business will be kept to a minimum.

12. Properly abandon all wells (including preexisting wells), borings, trenches, and piping/utility runs installed by the contractor as part of corrective action within 60 days of notification by DHEC that the remediation goal for the release associated with the UST(s) at the site has been achieved. The abandonment will be in accordance with South Carolina Well Standards and Regulations R. 61-71 and accepted industry standards for abandonment of trenches and piping/utility runs. Disruption to the property owner's normal business will be kept to a minimum. The contractor must notify DHEC of the method of well abandonment and final disposal of any free product and contaminated soil or ground water. The contractor will return the site to the condition prior to corrective action (e.g., asphalt paved areas will be repaved with asphalt, concrete areas will be replaced with concrete, grass areas will have soil replaced to the original grade and reseeded or sodded with grass, etc.).

BIDDING SCHEDULE

**The total cost in dollars to treat the area of concern (see figure #2) such that the thickness of free product does not exceed .01 foot and the levels of CoC do not exceed the site-specific target levels (SSTLs) defined in item 11.C. at any point, complete all associated monitoring and post-remediation verification, prepare all plans, reports, and correspondence; obtain and meet all terms and conditions of all required permits and licenses; design, install, monitor, operate, maintain, and when completed, properly abandon or remove all assessment and remediation items installed as part of corrective action; provide evidence of performance bond; and other items outlined in this bid invitation for the Crawford's Country Store, (UST Permit # 12335), 5870 Hwy. 28 N., Abbeville, South Carolina is:**

$ 117,000.00

**SOUTH CAROLINA DEPARTMENT OF HEALTH AND ENVIRONMENTAL CONTROL**
**BID NUMBER: SB-9570-12/02/99-TC**

**OTHER CRITERIA**

Please respond to the following questions that have been designed to verify your corrective action qualifications:

1. The corrective action method(s) or technology (ies) that will be proposed in the CAP will be (list all active and/or intrinsic methods or technologies for remediation of the aquifer; attach additional pages(s) as required):

   Air Sparging enhanced with Soil Vapor Extraction.

2. The estimated time in months to complete the corrective action from the date of bid award, corrective action goals are met, and all corrective action items are removed from the site or properly abandoned is approximately 30 months. This time assumes all submitted plans and reports will be reviewed by DHEC within 30 days of receipt.

**BID ACCEPTANCE and DELIVERY STATEMENT**

In compliance with the bid solicitation and subject to all conditions thereof, the contractor offers and agrees, if this bid is accepted within 60 days from date of bid opening, to furnish any or all items/services quoted at the prices set forth.

# SOUTH CAROLINA DEPARTMENT OF HEALTH AND ENVIRONMENTAL CONTROL
## BID NUMBER: SB-9570-12/02/99-TC

## PLEASE READ THE FOLLOWING CAREFULLY PRIOR TO COMPLETING BID

### INSTRUCTIONS TO BIDDERS

DISCUSSIONS AND NEGOTIATIONS: By submission of a bid, bidder agrees that during the period following issuance of this solicitation and prior to notification of intent or award of a contract, the bidder shall not discuss this procurement with any party except members of the DHEC Procurement Division or other parties designated in this solicitation. Bidder shall not discuss or attempt to negotiate with the using area or program any aspects of the procurement without prior approval of the DHEC Procurement Division Buyer responsible for the procurement. Infractions may result in rejection of the violator's bid.

1. Unless otherwise required herein, only one signed copy of the invitation to bid is required.
2. Bids "faxed" directly to the DHEC Procurement Office will not be accepted or considered for award.
3. Bids, amendments thereto or withdrawal request must be received by the time advertised for bid opening. It is the bidder's sole responsibility to insure that these documents are received by the person (or office) at the time indicated in this solicitation document. Any withdrawal request received after the time of the bid opening shall be governed by DHEC Underground Storage Tank Environmental Remediation Procedures.
4. When specifications or descriptive papers are submitted with the bid submission, enter bidder's name thereon.
5. Submit your signed bid on this form. Show the bid number on the envelope as instructed. DHEC assumes no responsibility for unmarked or improperly marked envelopes. All envelopes received showing a bid number are placed directly under locked security until the date and time of opening. Do not include more than one bid invitation per envelope. If directing any other correspondence, address the envelope to the Procurement Officer but do not include the bid number on the envelope since it does not include your bid.
6. Bidders must clearly mark as "CONFIDENTIAL" each part of their bid which they consider to be proprietary information that could be exempt from disclosure under Section 30-4-40, Code of Laws of South Carolina 1976 (1986 Cum. Supp.; Freedom of Information Act) If any part is designated as confidential, there must be attached to that part an explanation of how this information fits within one or more categories listed in Section 30-4-40. DHEC reserves the right to determine whether this information should be exempt from disclosure and no legal action may be brought against the State, DHEC or its agents for its determination in this regard.
7. By submission of a bid, you are guaranteeing that all goods and services meet the requirements of this solicitation during the contract period.
8. Tie bids will be resolved as outlined in DHEC Underground Storage Tank Environmental Remediation Procedures.
9. Do not include any taxes that DHEC may be required to pay in the bid price. Upon submission of a bid by a state agency, the Procurement Officer will compute a 5% sales and use tax to the non-state agency bids when applicable (service and labor excluded) in determining the low bidder. This procedure conforms with the SC Tax Commission Sales and Use Tax Regulation 117-174-.95.
10. Correction of errors on this bid form: All prices and notations should be printed in ink or typewritten. Errors should be crossed out corrections entered and initialed by the person signing the bid. Erasures or use of typewriter correction fluid may be cause for rejection No bid shall be altered or amended after the time specified for the bid opening.
11. Ambiguous bids which are uncertain as to terms, delivery, quantity or compliance with this solicitation may be rejected or otherwise disregarded.
12. Any bidder desiring to exercise a grievance may do so under section IV of DHEC Underground Storage Tank Environmental Remediation Procedures. All correspondence should be directed to the Director of Procurement Services, Bureau of Business Management, 2600 Bull Street, Columbia, SC 29201.
13. Failure to respond to three consecutive bid notices may result in removal of bidder's name from the mailing list.

### GENERAL PROVISIONS

14. DHEC reserves the right to reject any and all bids, and to cancel this solicitation.
15. Unit prices will govern over extended prices unless otherwise stated in this solicitation.
16. Prohibition of Gratuities: Amended section 8-13-420 of the 1976 Code of Laws of South Carolina States: "Whoever gives or offers to any public official or public employee any compensation, including a promise of future employment, to influence his action, vote, opinion or judgement as a public official or public employee or such public official solicits or accepts such compensation to influence his action, vote, opinion or judgement shall be subject to the punishment as provided by Section 16-9-210 and Section 16-9-220. The provisions of this section shall not apply to political contributions unless such contributions are conditioned upon the performance of specific action of the person accepting such contribution nor shall they prohibit a parent, grand-parent or relative from making a gift to a child, grandchild or other close relative for love and affection except as hereafter provided".
17. Bidder's Qualification: Bidders must, upon request of DHEC, furnish satisfactory evidence of their ability to furnish products or services in accordance with the terms and conditions of these specifications. DHEC reserves the right to make the final determination as to the bidder's ability to provide the products or services requested herein.

# SOUTH CAROLINA DEPARTMENT OF HEALTH AND ENVIRONMENTAL CONTROL
## BID NUMBER: SB-9570-12/02/99-TC

18. **Bidder's Responsibility:** Each bidder shall fully acquaint himself with conditions relating to the scope and restrictions attending th execution of the work under the conditions of this solicitation. It is expected that this will sometimes require on-site observation. Th failure or omission of a bidder to acquaint himself with existing conditions shall in no way relieve him of any obligation with respect to thi bid or to the subsequent contract.
19. **Amendments:** All amendments to and interpretations of this solicitation shall be in writing from the DHEC Procurement Office. Neith DHEC or the Procurement Officer shall be legally bound by any amendment or interpretation that is not in writing.
20. **Award Criteria:** Award shall be as indicated herein to the lowest responsible and responsive bidder whose bid meets the requiremen and criteria set forth in this solicitation. Award may take longer than fourteen days. A copy of the award notice should be posted on th Procurement Bulletin Board located at 2600 Bull Street in the Aycock Building directly across from the Personnel Division and next to th Bureau of Business Management Procurement Services Division.
21. **Rejection:** DHEC reserves the right to reject any bid that contains prices for individual items or services that are unreasonable whe compared to the same or other bids if the rejection is in the best interest of the State.
22. **Competition:** This solicitation is intended to promote competition. If the language, specifications, terms and conditions, or an combination thereof restricts or limits the requirements in this solicitation to a single source, it shall be the responsibility of the intereste bidders to notify the DHEC Procurement Office in writing so as to be received five days prior to the opening date. Notification may b "faxed" to the DHEC Procurement Office, (803) 734-4874. The solicitation may or may not be changed but a review of such notificatio will be made prior to award.
23. **Order of Precedence:** In the event of inconsistency between provisions of this solicitation, the inconsistency shall be resolved by givir precedence in the following order; (A) the bidding schedule, (B) the specifications, (C) general conditions, (D) special provisions c special conditions of the contract whether incorporated by reference or otherwise, and (E)instruction to bidders.

### GENERAL CONDITIONS

24. **Contract Administration:** Questions or problems arising after award of this solicitation/contract shall be directed to the DHE Procurement Office, 2600 Bull Street, Columbia, SC, 29201. Reference the solicitation and contract number.
25. **Default:** In case of default by the contractor, DHEC reserves the right to purchase any or all items in default in the open market, chargin the contractor with any additional costs. The defaulting contractor shall not be considered a responsible bidder until the assessed charg has been satisfied.
26. **Save Harmless:** (This General Condition does not apply to solicitations for service requirements). The successful bidder shall indemni and save harmless the State of South Carolina and DHEC and all its officers, agents and employees from all suits or claims of an character brought by reason of infringing on any patent, trade mark or copyright. The bidder shall have no liability to DHEC if such paten trade mark or copyright infringement or claim is based upon the bidder's use of material furnished to the bidder by the State.
27. **Publicity Releases:** By submission of a bid, the contractor agrees not to refer to award of this contract in commercial advertising in suc a manner as to state or imply that the products or services provided are endorsed or preferred by DHEC or user.
28. **Tax Credit Availability:** Bidders interested in income tax credit availability by subcontracting with Certified Minority Firms should conta the Office of Minority Business Assistance, 1205 Pendleton Street, Columbia, SC, 29201. (803-734-0562)
29. **Affirmative Action:** The successful bidder will take affirmative action in complying with all Federal and State requirements concernin fair employment and employment of the handicapped, and concerning the treatment of all employees, without regard or discriminatio by reason of race, color, religion, sex, national origin or physical handicap.
30. **Assignment:** Unless otherwise indicated in this solicitation, no contract or its provisions may be assigned, sublet, subcontracted, c transferred without the prior written consent of the DHEC Procurement Office.
31. **Termination:** Any contract resulting from this solicitation may be terminated by DHEC by providing a thirty day advance notice in writin to the successful contractor.
32. **Non-Appropriations:** Any contract entered into by DHEC resulting from this solicitation shall be subject to cancellation without damage or further obligation when funds are not appropriated or otherwise made available to support continuation of performance in a subsequer fiscal period or appropriated year.
33. **Convenience:** In the event that this contract is terminated or canceled upon request and for the convenience of DHEC without th required thirty days advance written notification, then DHEC shall negotiate reasonable applicable termination costs.
34. **Cause:** Any contract resulting from this solicitation may be terminated without advance notice by DHEC for cause, default or negligenc on the part of the successful contractor.
35. **S.C. Law Clause:** Upon award of a contract under this bid, the person/partnership, association or corporation to whom the award is mac must comply with the laws of South Carolina which require such person or entity to be authorized and/or licensed to do busi State. Notwithstanding the fact that applicable statutes may exempt or exclude the successful bidder from requirements authorized and/or licensed to do business in this State. By submission of a bid, the bidder agrees to subject process of the courts of the State of South Carolina as to all matters and disputes arising performance thereof, including any questions as to the liability for taxes licenses or fees levied by
36. **Quality of Product:** (This general condition does not apply to solicitations for [illegible] unless otherwise indicated in this solicitation, it is understood and agreed that any [illegible] result of this solicitation shall be new and in first class condition that all containers shall be new and suitable for storage and shipment and that prices include standard commerci

packaging. If items that are other than new (i.e., remanufactured or refurbished) are desired to be bid, the bidder must obtain writte permission to bid such items at least five days in advance of the bid opening date. Written permission must be obtained from the DHEC Procurement Office.

37. **Compliance with Federal Requirements:** S.C. State or Federal requirements that are more restrictive shall be followed in bidding awarding and performance of this contract.
38. **Drug-Free Workplace:** Required by Section 44-107-10 (Drug Free Work-Place Act) of the SC Code of Laws, 1976, as amended. B submission of a bid, the bidder certifies that he will comply with all aspects of the Drug-Free Workplace Act and will not engage in th unlawful manufacture, distribution, dispensation, possession or use of a controlled substance in the performance of this contract. Thi certification also applies to any individual or firm employed by the contractor.
39. **Confidentiality Policy:** The successful contractor agrees to abide by DHEC's policy of confidentiality which states in part that a information as to personal facts and circumstances given or made available to employees and/or contractors of DHEC in administratio of programs shall be held confidential and shall not be divulged without the express written consent of the individual(s) to which it pertains
40. **Item Substitution:** No substitution of items will be allowed on any purchase made from the awarded contract without written permissio from the DHEC Procurement Office.
41. **Outside Contractor Program:** If applicable to scope of contract, contracted employees working on DHEC properties are entitled t information about hazardous chemicals present at DHEC; and DHEC's personnel are entitled to information about hazardous chemical brought to the facilities by contractors. In order to assure continued compliance with the Hazard Communication Standards whil contractors are on DHEC property and to control potential compliance obligations under the Superfund Amendments and Re-authorizatio Act, it is DHEC's policy to:
    A. Obtain written assurance that the contractor's employees have been trained to understand the hazards of the chemicals at DHE and how to use appropriate personal protective equipment. All personal protective equipment and training required for th contractor's employees will be provided by the contractor at the contractor's expense. (This includes SC State General Service employees).
    B. Require the contractor to notify the DHEC Bureau of Business Management or the appropriate DHEC unit Director whe introducing hazardous chemicals into DHEC work areas, which may harmfully expose DHEC employees. If the contractor i introducing such hazardous chemicals into any DHEC facility or onto DHEC property, the contractor shall provide the DHE Division of Procurement Services or the DHEC unit Director copies of the Material Safety Data Sheets (MSDS) for thos chemicals. The DHEC Division of Procurement Services or the DHEC unit Director should provide appropriate information t the DHEC employees before the contractor(s) enter any DHEC facility with chemicals.
    C. DHEC reserves the right to refuse to allow any contractor to bring any chemical onto DHEC property. DHEC also reserves th right to refuse to allow any contractor to bring certain quantities of chemicals on DHEC property.
42. Any written assurances, MSDS's, or correspondence required must be submitted prior to beginning any aspect of the contract.
43. **Travel:** As applicable, reimbursement to contractors for travel expenses will be made in accordance with regulations established for Sta employee travel and in accordance with guidelines established by DHEC.

## SPECIAL PROVISIONS

44. **FOB Destination:** All deliveries shall be FOB Destination. It is agreed by the parties hereto that delivery by the contractor to the comm carrier does not constitute delivery to the State. Any claim for loss or damage shall be between the contractor and the carrier. Bic received otherwise may be subject to rejection.
45. **Shipping/Delivery Charges:** Unless otherwise indicated in the "Special Conditions", any applicable shipping, delivery, assembly installation charges are to be indicated on the bidding schedule herein.
46. **Specifications:** The specifications listed herein are not to be considered restrictive to one source of supply. However, items offered mu be equal in quality and performance. The bidder to include with his bid supporting product data sufficient for DHEC to determine equali and acceptability. DHEC reserves the right to reject any offering in which the items offered are considered unsatisfactory in any manne DHEC will determine if minor deviations from the listed features or performance are acceptable.
47. **Confidentiality:** The Contractor and all contracting employees shall not discuss, disclose, release, divulge or otherwise communicat any confidential information as to personal facts and circumstances observed or overheard while performing work pursuant to this contra The Contractor and all contracting employees, their agents, personal representatives and assigns, shall be fully liable and accountab for any resulting damage or injury to any person, institution or DHEC.

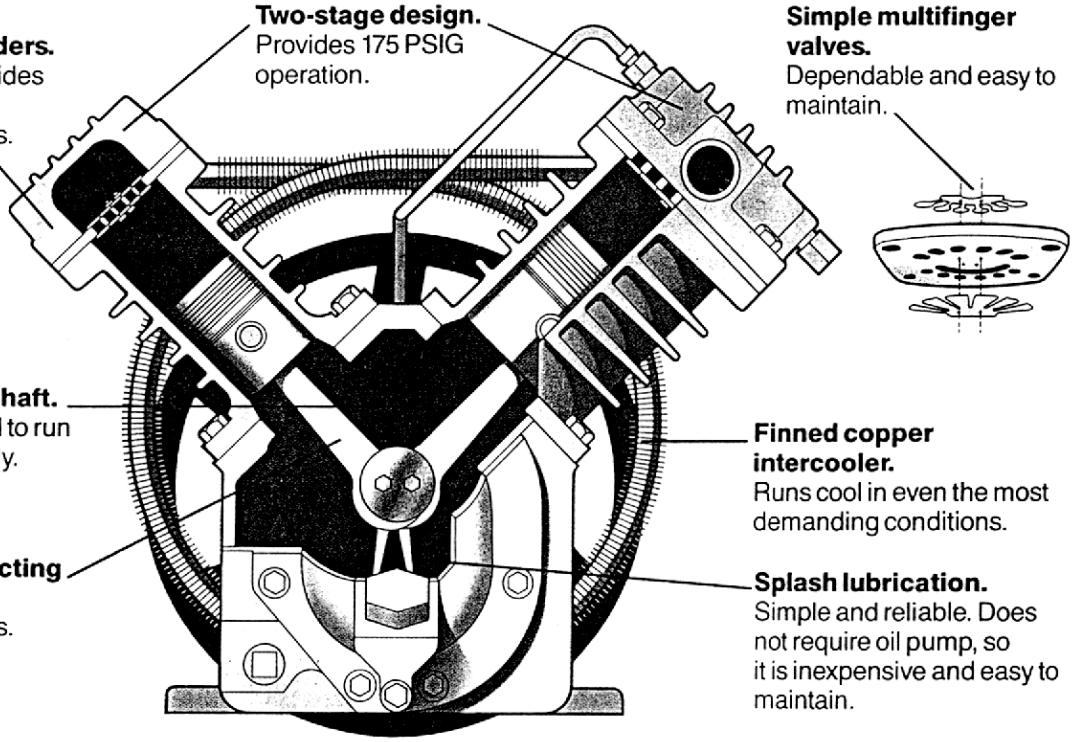
# 7.5 HP Two-Stage Industrial Air Compressor

- 100% cast-iron design
- 175 PSIG operation
- Simple maintenance
- Durable construction
- Backed by Ingersoll-Rand, the world's largest manufacturer of air compressors

INGERSOLL-RAND®
AIR COMPRESSORS

# Around the world, millions of Type-30® air compressors are running strong in the most demanding conditions. Here's why:



## 100% Cast Iron

For more than 60 years, Ingersoll-Rand's Type-30 industrial air compressors have set the industry's standards. Their rugged, 100% solid cast-iron construction, proven reliability and durability have made them the number-one-selling compressors in their class. And they are backed by Ingersoll-Rand, the world's largest manufacturer of air compressors.

## ADJUSTABLE VACUUM / PRESSURE RELIEF VALVE RECOMMENDATIONS

| Pressure Relief Valves | | |
|---|---|---|
| PART# | SUGGESTED PRESSURE RANGE | SUGGESTED DUTY RANGE |
| AN225<br>AN225B | 1-15 lbs. per sq. in.<br>3-15 lbs. per sq. in. | 15-45 Cubic ft. per min.<br>45-75 Cubic ft. per min. |
| AN225A<br>AN225C | .07-1.0 Bar<br>.2-1.0 Bar | 25-76 Cubic meters per hr.<br>76-127 Cubic meters per hr. |

| Vacuum Relief Valves | | |
|---|---|---|
| AN226<br>AN226A | 5-25 in. of mercury<br>844-167 Millibar | 15-55 Cubic ft. per min.<br>25-93 Cubic meters per hr. |

⚠ **WARNING** Relief Valves have set-screws (loctited in place) to prevent cap from screwing entirely off. Do not remove. See above table for suggested operating range.

⚠ **CAUTION** Relief Valves have insulating, color-coded sleeves (black for pressure, red for vacuum) to prevent the hand from contacting hot surfaces. Do not remove. The pressure relief valve will get particularly warm without the insulator while under pressure. Do not touch the lower portion of the valve.

Application of the relief valves may prevent a pump from hitting its maximum duty and will marginally reduce flow at a given duty as well due to the creation of an arbitrary leak path as the internal spring compresses slightly. Please do not mistake this for pump malfunction.

Gast relief valves will withstand mild solvents. If solvent collects in valve, it will blow out during operation.

The customer needs to establish pressure requirements, then adjust appropriate regulator by turning the knob to required level.

# ATTACHMENTS FOR UIC PERMIT

**Attachment A**

Nine (9) proposed sparge wells will be used to inject clean air for sparging.

**Attachment B**

The construction details for the proposed sparge well S-1 through S-9 are attached (Figure 7.0).

**Attachment C**

Clean air will be injected into all sparge wells continually at a flow rate of approximately 3 CFM and 8 PSI, for a period of approximately 24 months.

The hydraulic conductivity of the site is approximately 3.169 ft/day and will accept the flows proposed.

**Attachment D**

The monitoring program is provided in the associated CAP.

**Attachment E** N/A

**Attachment F**

The site is a retail fueling station/convenience store.

**Attachment G** See CAP/ER

**Attachment H** Attached please find a USGS Quad Map and a site map.

**Attachment I** See Expanded Assessment Report

**Attachment J** Shallow Surfical Aquifer

**Attachment K** See Expanded Assessment Report

FIGURE TITLE: REMEDIATION SYSTEM - TRAILER LAYOUT/MANIFOLD

Fuji regenerative blowers (ring compressors) are designed to generate pressure or vacuum through the rotation of a unique, single-stage impeller. Air enters through an inlet port and is picked up between the vanes of an impeller. As the impeller is rotated, air is bounced in and out between the base of the impeller and the outer casing. The cycle of air bouncing in and out of the casing to the rotating impeller vanes, accelerates and compresses, or regenerates the air until the air reaches the outlet port. Impeller, mounting base and housing are constructed of aluminum alloy (No. 5Z189, 5F243, and 5F651 have cast iron housing) for maximum strength, reduced weight and increased corrosion resistance. No. 5F241 is constructed of polyethylene plastics. Dustproof shaft seal protects bearings from contaminated air and foreign particles. Dynamically balanced to virtually eliminate vibration while increasing overall reliability. Class B NEMA insulation. Blower and TEFC motor are built as single unit with no gears, belts, motor bushings or sliding vanes. Single-phase motors have automatic reset thermal protection; three-phase motors have pilot duty thermal protection. For use with air and noncombustible, noncorrosive, nonexplosive gases. Maximum ambient temperature: 104°F.

- Continuous duty
- Pressure or vacuum operated
- Air flow without pulsation
- Oil-free air
- Low noise levels
- For use as original equipment or for upgraded performance

## BAQC UST Modeling Information

PLEASE FILL OUT COMPLETELY

SITE/COMPANY NAME: Crawford's Country Store SITE ID # 12335

CLEANUP LOCATION: 5870 Hwy. 28 N., Abbeyville, SC 29620

TYPE OF OPERATION (i.e. AIR STRIPPER): Soil Vapor Extraction

CONTACT: Noal Hudson - H2O Environmental, Inc. (803) 749-4080

## SITE MAPS

Please include a scaled plot plan of the site location that clearly shows distances from the stack to the property boundaries. All buildings and/or structures within a radius of 5 stack heights (measured from the stack/vent) shall be incorporated on this plot plan and information on each building and/or structure's height, width, and length shall also be included.

## STACK INFORMATION

HEIGHT ABOVE GROUND: 15 FEET; DIAMETER: 0.333 FEET

TEMPERATURE: 140 F; VELOCITY: 11 FEET/SECOND

## AIR TOXIC INFORMATION

| AIR TOXIC EMITTED (i.e. BENZENE) | CHEMICAL ABSTRACT SERVICE (CAS) NUMBER | EMISSION RATE LB/HR |
|---|---|---|
| A) Benzene | 71432 | Unknown - will be determined after first sampling and submitted to BAQC. |
| B) Toluene | 108883 | |
| C) Ethyl Benzene | 100414 | |
| D) Xylenes | 1330207 | |
| E) Napthalene | 91203 | |

Please submit this completed sheet with scaled site maps to Reed Corley, project manager at the Bureau of Underground Storage Tank Management, 2600 Bull Street, Columbia, SC 29201.

# Performance Bond

KNOW ALL MEN BY THESE PRESENTS, that:

H2O ENVIRONMENTAL INC
1061 W OAKLAND PARK BLVD, FORT LAUDERDALE, FL 33311

as Principal, hereinafter called Contractor. and
Gulf Insurance Company, St. Louis, MO , as Surety, hereinafter called Surety, hereinafter called Surety, are held and firmly bound unto

SOUTH CAROLINA DEPT OF HEALTH & ENVIRONMENTAL CONT
BUR. OF SOLID & HAZ. WSTE MGMT, COLUMBIA, SC 29201

as Obligee, hereinafter called Owner, in the amount of:
One Hundred Seventeen Thousand and 00/100 Dollars ($117,000)

for the payment whereof Contractor and Surety bind themselves, their heirs, executors, administrators, successors and assigns, jointly and severally, firmly by these presents.

WHEREAS,

Contractor has by written agreement dated February 2, 2000, entered into a contract with Owner for
Crawfords County Stone, 5870 Hwy 28 N. Abbeville, SC

in accordance with Drawings and Specifications prepared by

which contract is by reference made a part hereof, and is hereinafter referred to as the Contract.

Bond No. 6149406

# PERFORMANCE BOND

NOW, THEREFORE, THE CONDITION OF THIS OBLIGATION is such that, if Contractor shall promptly and faithfully perform said Contract, then this obligation shall be null and void; otherwise it shall remain in full force and effect.

The surety hereby waives notice of any alteration or extension of time made by the Owner.

Whenever Contractor shall be, and declared by Owner to be in default under the Contract, the Owner having performed Owner's obligations thereunder, the Surety may promptly remedy the default, or shall promptly

1) Complete the Contract in accordance with its terms and conditions, or

2) Obtain a bid or bids for completing the Contract in accordance with its terms and conditions, and upon determination by surety of the lowest responsible bidder, or, if the Owner elects, upon determination by the Owner and the Surety jointly of the lowest responsible bidder, arrange for a contract between such bidder and Owner, and make available as Work progresses (even though there should be a default or a succession of defaults under the contract or contracts of completion arranged under this paragraph) sufficient funds to pay the cost of completion less the balance of the contract price; but not exceeding, including other costs and damages for which the Surety may be liable hereunder, the amount set forth in the first paragraph hereof. The term 'balance of the contract price', as used in this paragraph, shall mean the total amount payable by Owner to Contractor under the Contract and any amendments thereto, less the amount properly paid by Owner to Contractor.

Any suit under this bond must be instituted before the expiration of two (2) years from the date on which final payment under the Contract falls due.

No right of action shall accrue on this bond to or for the use of any person or corporation other than the Owner named herein or the heirs, executors, administrators or successors of the Owner.

# Labor and Material Payment Bond

THIS BOND IS ISSUED SIMULTANEOUSLY WITH PERFORMANCE BOND IN FAVOR OF THE OWNER CONDITIONED ON THE FULL AND FAITHFUL PERFORMANCE OF THE CONTRACT

KNOW ALL MEN BY THESE PRESENTS, that:

H2O ENVIRONMENTAL INC
1061 W OAKLAND PARK BLVD, FORT LAUDERDALE, FL 33311

as Principal, hereinafter called the Principal, and Gulf Insurance Company, St. Louis, MO as Surety, hereinafter called Surety, hereinafter called Surety, are held and firmly bound unto

SOUTH CAROLINA DEPT OF HEALTH & ENVIRONMENTAL CONT
BUR. OF SOLID & HAZ. WSTE MGMT, COLUMBIA, SC 29201

as Obligee, hereinafter called Owner, for the use and benefit of claimants as hereinbelow defined, in the amount of:

One Hundred Seventeen Thousand and 00/100 Dollars ($117,000.00)

for the payment whereof Principal and Surety bind themselves, their heirs, executors, administrators, successors and assigns, jointly and severally, firmly by these presents.

WHEREAS,

Principal has by written agreement dated February 2, 2000, entered into a contract with Owner for

Crawfons County Stone, 5870 Hwy 28 N., Abbeville, SC

In accordance with Drawings and Specifications prepared by

which contract is by reference made a part hereof, and is hereinafter referred to as the Contract.

Bond No. 6149406

NOW, THEREFORE, THE CONDITION OF THIS OBLIGATION is such that, if Principal shall promptly make payment to all claimants as hereinafter defined, for all labor and material used or reasonably required for use in the performance of the Contract, then this obligation shall be void; otherwise it shall remain in full force and effect, subject, however, to the following conditions:

1. A claimant is defined as one having a direct contract with the Principal or with a Subcontractor of the Principal for labor, material, or both, used or reasonably required for use in the performance of the Contract, labor and material being construed to include that part of water, gas, power, light, heat, oil, gasoline, telephone service or rental of equipment directly applicable to the Contract.

2. The above named Principal and Surety hereby jointly and severally agree with the Owner that every claimant as herein defined, who has not been paid in full before the expiration of a period of ninety (90) days after the date on which the last of such claimant's work or labor was done or performed, or materials were furnished by such claimant, may sue on this bond for the use of such claimant, prosecute the suit to final judgement for such sum or sums as may be justly due claimant, and have execution thereon. The Owner shall not be liable for the payment of any costs or expenses of any such suit.

3. No suit or action shall be commenced hereunder by any claimant:

a) Unless claimant, other than one having a direct contract with the Principal, shall have given written notice to any two of the following: the Principal, the Owner, or the Surety above named, within ninety (90) days after such claimant did or performed the last of the work or labor, or furnished the last of the materials for which said claim is made, stating with substantial accuracy the amount claimed and the name of the party to whom the materials were furnished, or for whom the work or labor was done or performed. Such notice shall be served by mailing the same by registered mail or certified mail, postage prepaid, in an envelope addressed to the Principal, Owner, or Surety, at any place where an office is regularly maintained for the transaction of business, or served in any manner in which legal process may be served in the state in which the aforesaid project is located, save that such service need not be made by a public officer.

b) After the expiration of one (one) year following the date on which the Principal ceased Work on said Contract, it being understood, however, that if any limitation embodied in this bond is prohibited by any law controlling the construction hereof such limitation shall be deemed to be amended so as to be equal to the minimum period of limitation permitted by such law.

c) Other than in a state court of competent jurisdiction in and for the county or other political subdivision of the state in which the Project, or any part thereof, is situated, or in the United States District Court for the district in which the Project, or any part thereof, is situated, and not elsewhere.

4. The amount of this bond shall be reduced by and to the extent of any payment or payments made in good faith hereunder, inclusive of the payment by Surety of mechanics' liens which may be filed of record against said improvement, whether or not claim for the amount of such lien be presented under and against this bond.

RE: Initial Groundwater Sampling Results
Crawford's Grocery
5870 Highway 28 North
Abbeville (Antreville), South Carolina
SCDHEC Site ID # 12335

Dear Mr. Corley:

Attached please find two (2) copies of the initial ground water monitoring results for the above referenced facility. Monitoring wells MW-4 through MW-9 and MW-11 through MW-17 and water wells CP-WW and CLS-WW were sampled for BTEX, MTBE and naphthalene on April 26, 2000. Figure 1.0 illustrates groundwater elevations and flow direction and Figure 2.0 depicts the current groundwater quality, both maps are included as Attachment A. A summary of field measurements, water table elevations, and ground water analytical results have been provided as Tables 1, 2 and 3, respectively, in Attachment B. The concentrations of chemicals of concern appear to be similar to that of the groundwater samples collected on August 5, 1999. The laboratory analytical reports are included as Attachment C.

Product recovery efforts have been conducted on a regular basis since the initial sampling. System construction and implementation are currently being conducted at the facility and should be completed by May 31, 2000. Should you have any questions or require any additional information, please do not hesitate to contact me at (803) 749-4080.

Notes:

All results reported in parts per billion (ug/L) unless otherwise noted.

SSTL = Site specific target levels referenced in bid

FP = Free Product; NS = Not Sampled

BDL = Below detecatable Levels

Total BTEX = Summation of benzene, toluene, ethylbenzene and xylenes

MTBE = Methyl-tert-buytl-ether

## COOLER RECEIPT FORM

Client: SCDHEC BC# 204014

Cooler Received On: 8.16.00 And Opened On: 8.16.00 By: Craig Cothron

(Signature)

1. Temperature of Cooler when opened 4.0 Degrees Celsius
2. Were custody seals on outside of cooler?.....NO ~~Yes~~
   a. If yes, how many, what kind and where: 1 Front
   b. Were the seals intact, signed, and dated correctly?.....~~N/A~~ Yes
3. Were custody seals on containers and intact?.....NO
4. Were custody papers inside cooler?.....YES
5. Were custody papers properly filled out (ink,signed,etc)?.....YES
6. Did you sign the custody papers in the appropriate place?.....YES
7. What kind of packing material used? Bubblewrap Peanuts Vermiculite Other None
8. Was sufficient ice used (if appropriate)?.....YES
9. Did all bottles arrive in good condition( unbroken)?.....YES
10. Were all bottle labels complete (#,date,signed,pres,etc)?.....YES
11. Did all bottle labels and tags agree with custody papers?.....YES
12. Were correct bottles used for the analysis requested?.....YES
13. a. Were VOA vials received?.....YES
    b. Was there any observable head space present in any VOA vial?.....NO
14. Was sufficient amount of sample sent in each bottle?.....YES
15. Were correct preservatives used?.....YES
16. Was residual chlorine present?.....NO
17. Corrective action taken, if necessary:

RE: 1st Quarterly Report
Crawford's Country Store
5870 Hwy 28 North
Antreville, South Carolina
SCDHEC Site ID # 12335

Dear Mr. Corley:

On February 4, 2000, the South Carolina Department of Health and Environmental Control (SCDHEC) provided notice to proceed to $H_2O$ Environmental, Inc. ($H_2O$) to perform Corrective Action at Crawford's Country Store located at 5870 Highway 28 North, Antreville, South Carolina (see Figure 1.0, Attachment 1). The objective of the project is to reduce the Chemicals of Concern (COC) in monitoring wells OMW-1, MW-2 through MW-5, MW-7 through MW-15, MW-17, CP-WW and CLS-WW to the site specific target levels (SSTLs). A chronological summary of site activities is provided below:

| | |
|---|---|
| 2/4/00 | SCDHEC awarded Bid Number SB-9570-12/02/99-TC |
| 3/02/00 | Corrective Action Plan/Engineering Report submitted to SCDHEC |
| 4/18/00 | CAP/ER approved |
| 4/26/00 | Initial groundwater sampling event |
| 5/17/00 | Initial groundwater results submitted |
| 5/22/00-5/31/00 | System installed |
| 5/31/00 | System was inspected and approved Todd Adams of SCDHEC |
| 5/31/00 | Invoice submitted for payment of 40% of the contract amount |
| 6/14/00 | System start-up |
| 8/01/00 | First quarter sampling event |
| 8/28/99 | First quarter report submitted |

An air injection/vapor extraction system was installed and put in operation in June 2000. The system consists of eight air injection/vapor extraction wells SV-1 through SV-8 and air injection wells S-9 and S-10. The vapor extraction wells are connected to a single line manifold. The following table summarizes the general operating characteristics of the system.

ASSESSMENT & REMEDIATION SPECIALISTS
130 Centrum Drive, Suite 3B • Irmo, South Carolina 29063 • 803•749•4080 • Fax 803•749•9911

| Summary of System Operating Characteristics | | | | |
|---|---|---|---|---|
| Well ID | Activity | PSI | CFM | IWG |
| SV-1 - SV-8 | Vapor Extraction | – | – | 45 |
| SV-1 - SV-6 | Air Sparging | 10 | 5 | – |

(SV-7 through S-10 are not in use at this time)

An air sample was collected from the effluent of the vapor extraction system on August 1, 2000. Based on the review of the laboratory analysis, it is estimated that contaminant emissions will not exceed 1,000 pounds per month. A summary of laboratory analysis and projected mass removal rates are shown in the table. A copy of the laboratory report is provided in Attachment 3.

| Summary of Air Sample Analysis | | | |
|---|---|---|---|
| Compound | Concentration | Projected Mass Removal Rate | |
| | ($mg/m^3$) | Lb./day | lb./month |
| Benzene | 194 | 0.35 | 10.5 |
| Toluene | 859 | 1.54 | 46.2 |
| Eythlbenzene | 30.3 | 0.05 | 1.63 |
| Total Xylenes | 163.9 | 0.29 | 8.70 |
| MTBE | 123 | 0.23 | 6.90 |
| Naphthalene | 17.8 | 0.03 | 0.90 |

$$\frac{18\ mg}{m^3} \times \frac{0.02832\ m^3}{ft^3} \times \frac{1\ lb}{453.59 \times 10^3\ mg} \times \frac{20\ ft^3}{Min} \times \frac{1440\ min}{day} = \frac{0.017\ lbs}{Day} \times \frac{30\ days}{Month} = \frac{0.51\ lbs}{month}$$

On August 1, 2000, $H_2O$ Environmental Inc. personnel gauged and sampled all monitoring wells associated with the site. The monitoring wells were sampled for Benzene, Toluene, Ethylbenzene, total Xylenes (BTEX), Methyl-Tert-Butyl Ether (MTBE), and Naphthalene, with the exception of the wells containing free product: MW-1, MW-2 MW-3 and MW-10. A review of the groundwater elevation data indicated a groundwater flow direction to the south-southeast. Table 1, Attachment 2, summarizes field data collected during monitoring well purging. The groundwater elevations are summarized in Table 2, Attachment 2, and depicted graphically on Figure 1, Attachment 1. The groundwater quality for Chemicals of Concern are summarized on Table 3, Attachment 2, and depicted graphically on Figure 2, Attachment 1. A copy of the laboratory analytical report is provided in Attachment 3. Figure 3, Attachment 1 illustrates the Remediation System As-builts. Based on the concentrations, $H_20$ will continue to operate the system until all goals are achieved. If you have any questions or comments please do not hesitate to contact me at (803) 749-4080.

Sincerely,

**$H_2O$ Environmental, Inc.**

Attached is the Health & Safety Plan for Crawford's County Store.

UST
45-tec
DOCKETING

**SITE DESCRIPTION**

**Task to be performed**

1) Install a 300-ft. water supply well using 100-ft of 4-inch diameter outer casing and completing the remainder of the well open hole.
2) _____

**Approximate size of site:** 1-acre

**Indicate site topography, road and air accessibility, and pathways for hazardous substance dispersion on the Site Map.**

**Features**

Tanks _____ Drums _____ No. of drums _____ Containers (type) _____
Buildings ____ Dikes _____ Power lines ___X___ Sumps _____ Bodies of liquid _____
Dips in land _____ Buried lines _____ Phone lines ___X___ Well installation ___X___
Neighboring homes _____ Businesses _____ Unusual hazards _____
Other _____

**Activities**

1. Spill cleanup _____ Remedial cleanup _____ First Recon _____ Other Well Replacement
2. Soil: Excavation _____ Sampling _____ Disposal _____ Other _____
3. Drum: Excavation _____ Sampling _____ Staging _____ Bulking _____
   No. of Drums Other _____
4. Well: Replacement _____ Installation Approximately 300-ft. Sampling _____
5. Water Treatment _____
6. Liquid Treatment _____
7. Building Decontamination _____ Demolition _____ TBD _____
8. Tank: air monitoring _____ sampling _____ cleaning _____ repair _____
9. Other: _____

**Physical Hazards**

Check hazards which apply to the site:

Heat _____ Cold _____ Radiation _____ Small entry/exit Confined Space _____
Electrical equipment/sparks _____ Scaffolds _____ Trenching _____
Oxygen deficiency _____ High winds _____ Slippery ground Ice _____
Snake bites _____ Turbulent weather _____ Heavy equipment noise ___X___
Please see attachment for confined space information.

Will heat stress monitoring be necessary? Yes _____ No ___X___
If yes, you will need thermometers, stop watches and log for each employee.

**CONTAMINANTS**

**Give contractors and subcontractors a copy of the site safety plan because by law, they must be told about contaminants and hazards.**

**Please fill in blanks. Most lines will require circling the appropriate characteristic. Reference sources, Sittig's Handbook of Toxic & Hazardous Chemicals & Carcinogens, NIOSH's Pocket Guide to Chemical Hazards, and ACGIH's TLV's Threshold Limit Values, should be consulted. Other sources such as Condensed Chemical Dictionary, Hazardous Chemicals Data Book and others may be used. If MSDS is available, attach.**

**NA = Not Applicable _ DNA = Data Not Available**

**Substance:** Gasoline

**Physical state:** solid/sludge/liq/in container/free liq./vapor/other Trace quantities dissolved in water

**Soluble:** Water/other: Negligible

**Vapor Density:** 3-4 at _____ °F\°C

**Flammability:** combustible/flammable/pyrophoric/NA/DNA/LEL 1.3 UEL 6

**Explosivity:** explosive/shock sensitive/NA/DNA/LEL _____ EVL _____

**Incompatibles:** strong oxidizers (Al,Br,Nitrates,etc.)/strong acids/strong bases active metals (K,Na,etc.) water/other Oxidizers /NA/DNA _____

**Corrosivity:** ph _____ neutralizer _____ N/A

**Radioactivity:** background/alpha/beta/gamma/NA Known amount _____

**Exposure limits:** TLV Not Established ppm or _____ $mg/m^3$

Skin (Notation in TVL Book): yes/no

PEL _____ ppm or _____ $mg/m^3$

IDLH _____ ppm or _____ $mg/m^3$

**Warning properties:** respiratory irritant: yes

skin irritant: yes

corrosive: no

odor threshold _____ ppm or _____ $mg/m^3$/DNA

odor characteristics _____ /DNA

**Signs and Symptoms/Health Effects:**

Eye/nose/throat irritation

Eye burns/skin burns/pupil problems/vision disturbances

Dermatitis

Headache/nausea/vomiting/motor incoordination/numbness

Coughing/breathing problems/pulmonary edema

Abdominal pain/chest palpitations

**AIR MONITORING**
**Air Monitoring Equipment Needed:**

FID-OVA ____X____ $0_2$ Meter_____Explosimeter_____
Sample pump ensemble: Dupont or Gillian pumps_____ Sample media_____Tubing_____
Detector tube (especially useful for inorgainics): types _____
Confined space: CO_____$H_2S$ _____
Geiger Counter_____Other _____
***Be sure to calibrate and to attach log with air monitoring data.
*Remember CONTINUOUS monitoring is necessary for confined spaces.

Emergency Equipment:

Eyewash ___X___ shower _____ lifeline _____ SCBA _____
stretchers _____ emergency oxygen _____ first aid kit ___X___
PPE for the next level of protection: _____
Other: _____

Fire Extinguishers:
A,B,C,(Multiple purpose) ___X___
A (for ordinary materials) _____
B (for flammable and grease) _____
C (for electrical equipment) _____
D (for combustible metals such as Mg,Na) _____

Injury/Medical Emergencies
(General Priorities)

1. Use hand signals, horn signals, voice contact. Call paramedics.
2. Avoid exposure. SCBA is preferred for rescue.
3. Remove person from the site unless spinal injury is possible.
4. Observe for signs of breathing, eye contact, skin contact, bleeding, broken bones and signs of shock.
5. If the victim stops breathing, perform artificial respiration. If the heart stops, perform CPR, if qualified.
6. Eye contact – 15 minutes of plain water, contact doctor immediately.
7. Cursory decon is possible if injury does not involve loss of consciousness or heat stress.
8. Remove or cut off clothing. Avoid contamination of unprotected persons, if possible.
9. Skin contact – Shower 15 minutes, contact doctor as chemical might have been absorbed into the body.
10. For shock, keep warm, still, until medical help is available.
11. If necessary, transport to hospital.

Decontamination

Remember to bag sensitive instruments before use as they cannot be decontaminated. Wooden tools used on skin absorbing contaminants should be discarded. See attachment for recommended minimum decon layout and list of skin absorbers.

Solution(s) to be used: detergent & water __X__ Degreaser _____ Other _____
Methanol _____ Isopropanel ____ Hexane _____
Ivory (for oil) _____ Penatone (for PCB's) _____

Heavy equipment decon plan: water laser ____X____ diesel _____ Other _____

PERSONAL PROTECTIVE EQUIPMENT WORKSHET

*Switch to SCBA's when levels are IDLH, $O_2$ is 19.5% or less.
*Please remember the Protection Factors:

| | |
|---|---|
| Full face cartridge respirator | 50 |
| SAR | 2,000 |
| SCBA | 10,000 |

*TVL X protection Factor = Maximum amount of contaminant in ppm allowed for that respirator. (Exception: If the level of contaminant is at the IDLH, SCBA should be worn)_
Example:

Full face cartridge respirator X TLB Benzene
50 X 10 ppm ≤ 500 ppm Benzene
OK with that respirator

*Hard hats must be worn for all drilling activities.
*When hazards are unknown, Level B protection is required.
*Confined Spaces requries SAR and SCBA.

Please fill in the blanks and note if a change in operations will require a change in level.
EPA Criteria for PPE: Level C 0-5 ppm above background
Level B 5-500 ppm above background
Level A 500-1000 ppm above background

Personal Protective Equipment: Concentration of Contaminant = Level of Protection

____ppm to ____ppm Level C
Full face respirator cartridge _____
Protective clothing material: Tyvek_____Other _____
Hood: 2 Tyvek_____ 2 Other
Inside glove: Sample_____ Other_____
Outside glove: PVC_____ Other _____
Protective footwear: tingley(neoprene)_____Steel toe_____Other _____

**Qualifier Definitions:**

B = results based upon colony counts outside the acceptable range
I = the reported value is between the laboratory method detection limit and the laboratory practical quantitation limit
J1 = surrogate recovery limits have been exceeded
J3 = the reported value failed to meet the established quality control criteria for either precision and/or accuracy
J4 = the sample matrix interfered with the ability to make an accurate determination
J5 = the data is questionable because of improper lab or field protocols
K = off-scale low, actual value is less than the value given
L = off-scale high, actual value is known to be greater than the value given
Q = sample held beyond acceptable holding time
U = the compound was analyzed for but not detected
V = the analyte was detected in both the sample and the associated method blank
Z = too many colonies present (TNTC)

Project: CRAWFORD

---

**Qualifier Definitions:**

B = results based upon colony counts outside the acceptable range
I = the reported value is between the laboratory method detection limit and the laboratory practical quantitation limit
J1 = surrogate recovery limits have been exceeded
J3 = the reported value failed to meet the established quality control criteria for either precision and/or accuracy
J4 = the sample matrix interfered with the ability to make an accurate determination
J5 = the data is questionable because of improper lab or field protocols
K = off-scale low, actual value is less than the value given
L = off-scale high, actual value is known to be greater than the value given
Q = sample held beyond acceptable holding time
U = the compound was analyzed for but not detected
V = the analyte was detected in both the sample and the associated method blank
Z = too many colonies present (TNTC)

RE: 2nd Quarterly Report
Crawford's Country Store
5870 Hwy 28 North
Antreville, South Carolina
SCDHEC Site ID # 12335

Dear Mr. Abernathy:

On February 4, 2000, the South Carolina Department of Health and Environmental Control (SCDHEC) provided notice to proceed to $H_2O$ Environmental, Inc. ($H_2O$) to perform Corrective Action at Crawford's Country Store located at 5870 Highway 28 North, Antreville, South Carolina. The objective of the project is to reduce the Chemicals of Concern (COC) in monitoring wells OMW-1, MW-2 through MW-5, MW-7 through MW-15, MW-17, CP-WW and CLS-WW to the site specific target levels (SSTLs). A chronological summary of site activities is provided below:

| | |
|---|---|
| 2/4/00 | SCDHEC awarded Bid Number SB-9570-12/02/99-TC |
| 3/02/00 | Corrective Action Plan/Engineering Report submitted to SCDHEC |
| 4/18/00 | CAP/ER approved |
| 4/26/00 | Initial groundwater sampling event |
| 5/17/00 | Initial groundwater results submitted |
| 5/22/00-5/31/00 | System installed |
| 5/31/00 | System was inspected and approved Todd Adams of SCDHEC |
| 5/31/00 | Invoice submitted for payment of 40% of the contract amount |
| 6/14/00 | System start-up |
| 8/01/00 | 1st quarter sampling event |
| 8/28/99 | 1st quarter report submitted |
| 9/13/00 | Free product recovery from OMW-1, MW-2 and MW-3 |
| 12/13/00 | 2nd quarter sampling event |

UST
47
DOCKETING

An air injection/vapor extraction system was installed and put in operation in June 2000. The system consists of ten air injection/vapor extraction wells SV-1 through SV-10. In order to effectively target the source area, $H_2O$ is currently air sparging in injection/vapor extraction wells SV-1 through SV-6 and extracting vapor from injection/vapor extraction wells SV-1 through SV-8. Refer to Figure 1, Attachment 1 for a Site Plan depicting the system layout. The following table summarizes the general operating characteristics of the system.

| Summary of System Operating Characteristics | | | | |
|---|---|---|---|---|
| Well ID | Activity | PSI | CFM | IWG |
| SV-1 - SV-8 | Vapor Extraction | -- | -- | 55 |
| SV-1 - SV-6 | Air Sparging | 10 | 5 | -- |

An air sample was collected from the effluent of the vapor extraction system on August 1, 2000. Based on the review of the laboratory analysis, it is estimated that contaminant emissions will not exceed 1,000 pounds per month. No air sample was collected this quarter as OVA field screening indicated below detectable concentrations.

On December 13, 2000, $H_2O$ Environmental Inc. personnel gauged and collected groundwater samples from monitoring wells MW-4 through MW-9, MW-11 through MW-17, and water well CLS-WW at the site. Water well CP-WW located at the Green residence was not operational at the time of the sampling event and a groundwater sample could not be collected. A new water well has apparently been installed and is currently being used by the Green residence. Monitoring wells OMW-1, MW-2, MW-3 and MW-10 contain free product. These monitoring wells were gauged but groundwater samples were not collected. The groundwater samples were analyzed for Benzene, Toluene, Ethylbenzene, total Xylenes (BTEX), Methyl-Tert-Butyl Ether (MTBE), and Naphthalene. A review of the groundwater elevation data indicated a groundwater flow direction to the south-southeast. Groundwater elevation data collected from MW-3 and MW-12 was considered anomalous and was not used in determining groundwater flow direction. Table 1, Attachment 2, summarizes field data collected during monitoring well purging. The groundwater elevations are summarized on Table 2, Attachment 2, and depicted graphically on Figure 2, Attachment 1. The groundwater quality for Chemicals of Concern is summarized on Table 3, Attachment 2, and depicted graphically on Figure 3, Attachment 1. A copy of the laboratory analytical report is provided in Attachment 3.

On May 5, 2000 $H_2O$ conducted an Aggressive Fluid and Vapor Extraction Event (AVFR) with Ecological Services, Inc. Prior to evacuation, depth to product and depth to water measurements were collected from monitoring wells OMW-1, MW-2, MW-3 and MW-10. The event was conducted over a six-hour period and a total of approximately 625 gallons of water and petroleum product were removed from the referenced monitoring wells. A Material Manifests has been included as Attachment 4. Refer to the table below for depth to product and depth to water measurements collected during the AVFR event.

| Monitoring Well | Depth to product | Depth to Water | Product Thickness |
|---|---|---|---|
| OMW-1 | 15.91 | 17.01 | 1.1 |
| MW-2 | 16.02 | 18.07 | 2.05 |
| MW-3 | 15.96 | 16.72 | 0.76 |
| MW-10 | 15.90 | 17.65 | 1.75 |

Note: All measurements in units of feet.

Free product recovery efforts were also conducted on September 13, 2000 and December 13, 2000 from monitoring wells OMW-1, MW-2 and MW-3. Approximately 25 gallons of product were generated from the two product recovery events. Liquid level measurements collected from monitoring well MW-10 indicated a sheen on the date measured. Refer to Figure 1, Attachment 1 for a Site Plan depicting the location of

the referenced monitoring wells. Table 2, Attachment 2 summarizes free product thicknesses encountered during this quarter. Product generated is placed on-site into a 55-gallon drum. Any disposal manifests will be forwarded to DHEC upon receipt.

Based on the concentrations, $H_20$ will continue to operate the remediation system. If you have any questions or comments please do not hesitate to contact me at (803) 749-4080.

Sincerely,

**$H_2O$ Environmental, Inc.**

| SSTL | | 5 | <1 | <1 | 10 | - | 35 | <5 |

Notes:

All results reported in parts per billion (ug/L) unless otherwise noted.

SSTL = Site specific target levels referenced in bid

FP = Free Product; NS = Not Sampled

BDL = Below detecatable Levels

Total BTEX = Summation of benzene, toluene, ethylbenzene and xylenes

MTBE = Methyl-tert-buytl-ether

RE: 3rd Quarterly Report
Crawford's Country Store
5870 Hwy 28 North
Antreville, South Carolina
SCDHEC Site ID # 12335

Dear Mr. Abernathy:

On February 4, 2000, the South Carolina Department of Health and Environmental Control (SCDHEC) provided notice to proceed to $H_2O$ Environmental, Inc. ($H_2O$) to perform Corrective Action at Crawford's Country Store located at 5870 Highway 28 North, Antreville, South Carolina. The objective of the project is to reduce the Chemicals of Concern (COC) in monitoring wells OMW-1, MW-2 through MW-5, MW-7 through MW-15, DMW-17, CP-WW and CLS-WW to the site specific target levels (SSTLs). A chronological summary of site activities is provided below:

| | |
|---|---|
| 2/4/00 | SCDHEC awarded Bid Number SB-9570-12/02/99-TC |
| 3/02/00 | Corrective Action Plan/Engineering Report submitted to SCDHEC |
| 4/18/00 | CAP/ER approved |
| 4/26/00 | Initial groundwater sampling event |
| 5/17/00 | Initial groundwater results submitted |
| 5/22/00-5/31/00 | System installed |
| 5/31/00 | System was inspected and approved Todd Adams of SCDHEC |
| 5/31/00 | Invoice submitted for payment of 40% of the contract amount |
| 6/14/00 | System start-up |
| 8/01/00 | 1st quarter sampling event |
| 8/28/99 | 1st quarter report submitted |
| 9/13/00 | Free product recovery from OMW-1, MW-2 and MW-3 |
| 12/13/00 | 2nd quarter sampling event |
| 2/16/01 | 2nd quarter report submitted |
| 2/6/01 | 3rd quarter sampling event |

US
DOCKETING

An air injection/vapor extraction system was installed in May 2000 and put in operation in June 2000. The system consists of ten air injection/vapor extraction wells SV-1 through SV-10. In order to effectively target the source area, $H_2O$ is air sparging in injection/vapor extraction wells SV-1 through SV-6 and extracting vapor from injection/vapor extraction wells SV-1 through SV-8. Inspection of the system

mechanical problems with the air compressor. The system is being repaired and will be put back on site as soon as possible. $H_2O$ estimates the system will be operational the week of March 19, 2001. Refer to Figure 1, Attachment 1 for a Site Plan depicting the system layout. The following table summarizes the general operating characteristics of the system.

| Summary of System Operating Characteristics | | | | |
|---|---|---|---|---|
| Well ID | Activity | PSI | CFM | IWG |
| SV-1 - SV-8 | Vapor Extraction | – | – | 55 |
| SV-1 - SV-6 | Air Sparging | 10 | 5 | – |

An air sample was collected from the effluent of the vapor extraction system on August 1, 2000. Based on the review of the laboratory analysis, it is estimated that contaminant emissions will not exceed 1,000 pounds per month. No air sample was collected this quarter, as the system was not operational at the time of the site visit.

On February 6, 2001 $H_2O$ Environmental Inc. personnel gauged and collected groundwater samples from monitoring wells MW-4 through MW-9, MW-11 through MW-17, and water well CLS-WW at the site. Water well CP-WW located at the Green residence was not operational at the time of the sampling event and a groundwater sample could not be collected. A new water well has apparently been installed and is currently being used by the Green residence. Monitoring wells OMW-1, MW-2, MW-3 and MW-10 contain free product. These monitoring wells were gauged but groundwater samples were not collected. The groundwater samples were analyzed for Benzene, Toluene, Ethylbenzene, total Xylenes (BTEX), Methyl-Tert-Butyl Ether (MTBE), and Naphthalene. A review of the groundwater elevation data indicated a groundwater flow direction to the south-southeast. Table 1, Attachment 2, summarizes field data collected during monitoring well purging. The groundwater elevations are summarized on Table 2, Attachment 2, and depicted graphically on Figure 2, Attachment 1. The groundwater quality for Chemicals of Concern is summarized on Table 3, Attachment 2, and depicted graphically on Figure 3, Attachment 1. A copy of the laboratory analytical report is provided in Attachment 3.

Free product recovery efforts were conducted on February 6, 2001 from monitoring wells OMW-1 and MW-3. Approximately 5 gallons of product were generated during the event. Liquid level measurements collected from monitoring well MW-2 and MW-10 indicated a sheen on the date measured. Refer to Figure 1, Attachment 1 for a Site Plan depicting the location of the referenced monitoring wells. Table 2, Attachment 2 summarizes free product thicknesses encountered during this quarter. Product generated is placed on-site into a 55-gallon drum. Any disposal manifests will be forwarded to DHEC upon receipt.

| Monitoring Well | Depth to product | Depth to Water | Product Thickness |
|---|---|---|---|
| OMW-1 | 19.89 | 18.11 | 1.78 |
| MW-2 | 18.89+ | 18.89 | sheen |
| MW-3 | 19.26 | 18.30 | 0.96 |
| MW-10 | 18.84+ | 18.84 | sheen |

Note: All measurements in units of feet.

Review of the analytical data indicates monitoring wells MW-14, MW-15 and Water well CLS-WW are below the established SSTL's. Groundwater samples collected from MW-4, MW-5, MW-10, MW-11, MW-12 and MW-13 indicate concentrations remain above the established SSTL's. Based on the concentrations, $H_2O$ will continue to operate the remediation system. If you have any questions or comments please do not hesitate to contact me at (803) 749-4080.

Sincerely,

**$H_2O$ Environmental, Inc.**

**Notes:**

All results reported in parts per billion (ug/L) unless otherwise noted.

SSTL = Site specific target levels referenced in bid

FP = Free Product; NS = Not Sampled

BDL = Below detecatable Levels

Total BTEX = Summation of benzene, toluene, ethylbenzene and xylenes

MTBE = Methyl-tert-buytl-ether

RE: UIC permit addendum
Crawford's Grocery
5870 Highway 28 North
Abbeyville, South Carolina
SCDHEC Site ID # 12335

Dear Mr. Corley:

This letter is written to request permission to modify the existing UIC permit for the above referenced facility. $H_2O$ proposes the installation of one (1) additional sparge well located west of deep well DMW-17 (See Figure 5.0). The new sparge well (SV-10) will be constructed exactly like SV-1 through SV-9. Please see Figure 7.0 for the proposed well construction details. Upon your approval please forward the attached and amended UIC permit #505 to Todd Adams. If you have any questions or comments please do not hesitate to contact me at (803) 749-4080.

Sincerely,

**$H_2O$ Environmental, Inc.**

# ATTACHMENTS FOR UIC PERMIT

**Attachment A**

Ten (10) proposed sparge wells will be used to inject clean air for sparging.

**Attachment B**

The construction details for the proposed sparge well S-1 through S-10 are attached (Figure 7.0).

**Attachment C**

Clean air will be injected into all sparge wells continually at a flow rate of approximately 3 CFM and 8 PSI, for a period of approximately 24 months.

The hydraulic conductivity of the site is approximately 3.169 ft/day and will accept the flows proposed.

**Attachment D**

The monitoring program is provided in the associated CAP.

**Attachment E** N/A

**Attachment F**

The site is a retail fueling station/convenience store.

**Attachment G** See CAP/ER

**Attachment H** Attached please find a USGS Quad Map and a site map.

**Attachment I** See Expanded Assessment Report

**Attachment J** Shallow Surfical Aquifer

**Attachment K** See Expanded Assessment Report

RE: 5th Quarterly Report
Crawford's Country Store
5870 Hwy 28 North
Antreville, South Carolina
SCDHEC Site ID # 12335

Dear Mr. Abernathy:

On February 4, 2000, the South Carolina Department of Health and Environmental Control (SCDHEC) provided notice to proceed to $H_2O$ Environmental, Inc. ($H_2O$) to perform Corrective Action at Crawford's Country Store located at 5870 Highway 28 North, Antreville, South Carolina. See Figure 1, Attachment 1 for a layout of the site and remediation system. The objective of the project is to reduce the Chemicals of Concern (COC) in monitoring wells OMW-1, MW-2 through MW-5, MW-7 through MW-15, DMW-17, CP-WW and CLS-WW to the site specific target levels (SSTLs). A chronological summary of site activities is provided below:

| | |
|---|---|
| 2/4/00 | SCDHEC awarded Bid Number SB-9570-12/02/99-TC |
| 3/02/00 | Corrective Action Plan/Engineering Report submitted to SCDHEC |
| 4/18/00 | CAP/ER approved |
| 4/26/00 | Initial groundwater sampling event |
| 5/17/00 | Initial groundwater results submitted |
| 5/22/00-5/31/00 | System installed |
| 5/31/00 | System was inspected and approved Todd Adams of SCDHEC |
| 5/31/00 | Invoice submitted for payment of 40% of the contract amount |
| 6/14/00 | System start-up |
| 8/01/00 | 1st quarter sampling event |
| 8/28/99 | 1st quarter report submitted |
| 9/13/00 | Free product recovery from OMW-1, MW-2 and MW-3 |
| 12/13/00 | 2nd quarter sampling event |
| 2/16/01 | 2nd quarter report submitted |
| 2/6/01 | 3rd quarter sampling event |
| 3/15/01 | 3rd quarter report submitted |

|---|---|
| 6/5/01 | 4th quarter sampling event |
| 7/31/01 | 4th quarter report submitted |
| 9/13/01 | 5th quarter sampling event |

An air injection/vapor extraction system was installed in May 2000 and put in operation in June 2000. The system consists of ten air injection/vapor extraction wells SV-1 through SV-10. In order to target the source area, $H_2O$ is rotating air sparging in injection/vapor extraction wells SV-1 through SV-10 and extracting vapor from injection/vapor extraction wells SV-1 through SV-8. Refer to Figure 1, Attachment 1 for a map illustrating the system layout. The following table summarizes the general operating characteristics of the system.

| Summary of System Operating Characteristics | | | | |
|---|---|---|---|---|
| Well ID | Activity | PSI | CFM | IWG |
| SV-1 - SV-8 | Vapor Extraction | – | – | 55 |
| SV-1 - SV-10 | Air Sparging | 10 | 6 | – |

An air sample was collected from the effluent of the vapor extraction system on August 1, 2000. Based on the review of the laboratory analysis, it is estimated that contaminant emissions will not exceed 1,000 pounds per month. An air sample was not collected this quarter because the OVA field screening results were below detection limits.

On September 13, 2001 $H_2O$ Environmental Inc. personnel gauged and collected groundwater samples from monitoring wells MW-2, MW-4 through MW-17, and water well CLS-WW at the site. Water well CP-WW located at the Green residence was not operational at the time of the sampling event and a groundwater sample could not be collected. A new water well has apparently been installed and is currently being used by the Green residence. Monitoring wells OMW-1 and MW-3 contained free product and groundwater samples were not collected. The groundwater samples were analyzed for Benzene, Toluene, Ethylbenzene, total Xylenes (BTEX), Methyl-Tert-Butyl Ether (MTBE), and Naphthalene. A review of the groundwater elevation data indicated a groundwater flow direction to the south-southeast. Table 1, Attachment 2, summarizes field data collected during monitoring well purging. The groundwater elevations are summarized on Table 2, Attachment 2, and illustrated on Figure 2, Attachment 1. The groundwater quality for Chemicals of Concern is summarized on Table 3, Attachment 2, and illustrated on Figure 3, Attachment 1. A copy of the laboratory analytical report is provided in Attachment 3.

Free product was detected in monitoring wells OMW-1 and MW-3 this quarter having an average thickness of 0.02 feet which is down from an average of 0.29 feet reported last quarter. Liquid level measurements collected from monitoring well MW-2 and MW-10 indicated no measurable thickness of product on the date measured. Refer to Figure 1, Attachment 1 for a map illustrating the location of the referenced monitoring wells. The table below summarizes free product thicknesses encountered during this quarter. Product generated is placed on-site into a 55-gallon drum. Any disposal manifests will be forwarded to DHEC upon receipt.

| Monitoring Well | Depth to product | Depth to Water | Product Thickness |
|---|---|---|---|
| OMW-1 | 18.72 | 18.74 | 0.02 |
| MW-2 | -- | 19.03 | -- |
| MW-3 | 18.78 | 18.80 | 0.02 |
| MW-10 | -- | 19.16 | -- |

Note: All measurements in units of feet.

Review of the analytical data indicates monitoring wells MW-7, MW-8, MW-14, MW-15, and Water well CLS-WW are below the established SSTL's. Groundwater samples collected from MW-2, MW-4, MW-5, MW-9, MW-10, MW-11, MW-12, MW-13 and DMW-17 indicate concentrations above the established SSTL's. Free product is still present in OMW-1 and MW-3, however, based on the field data collected, the thickness has decreased considerably since last quarter. $H_2O$ will continue to operate the remediation system. If you have any questions or comments please do not hesitate to contact me at (803) 749-4080.

Sincerely,

**$H_2O$ Environmental, Inc.**
Class I Site Rehabilitation Contractor No. 32

Notes:

All results reported in parts per billion (ug/L) unless otherwise noted.

SSTL = Site specific target levels referenced in bid

FP = Free Product; NS = Not Sampled

BDL = Below detecatable Levels

Total BTEX = Summation of benzene, toluene, ethylbenzene and xylenes

MTBE = Methyl-tert-buytl-ether

RE: 6th Quarterly Report
Crawford's Country Store
5870 Hwy 28 North
Antreville, South Carolina
SCDHEC Site ID # 12335

UST
DOCKETING
5 Heck

Dear Mr. Abernathy:

On February 4, 2000, the South Carolina Department of Health and Environmental Control (SCDHEC) provided notice to proceed to $H_2O$ Environmental, Inc. ($H_2O$) to perform Corrective Action at Crawford's Country Store located at 5870 Highway 28 North, Antreville, South Carolina. See Figure 1, Attachment 1 for a layout of the site and remediation system. The objective of the project is to reduce the Chemicals of Concern (COC) in monitoring wells OMW-1, MW-2 through MW-5, MW-7 through MW-15, DMW-17, CP-WW and CLS-WW to the site specific target levels (SSTLs). A chronological summary of site activities is provided below:

| | |
|---|---|
| 2/4/00 | SCDHEC awarded Bid Number SB-9570-12/02/99-TC |
| 3/02/00 | Corrective Action Plan/Engineering Report submitted to SCDHEC |
| 4/18/00 | CAP/ER approved |
| 4/26/00 | Initial groundwater sampling event |
| 5/17/00 | Initial groundwater results submitted |
| 5/22/00-5/31/00 | System installed |
| 5/31/00 | System was inspected and approved Todd Adams of SCDHEC |
| 5/31/00 | Invoice submitted for payment of 40% of the contract amount |
| 6/14/00 | System start-up |
| 8/01/00 | 1st quarter sampling event |
| 8/28/99 | 1st quarter report submitted |
| 9/13/00 | Free product recovery from OMW-1, MW-2 and MW-3 |
| 12/13/00 | 2nd quarter sampling event |
| 2/16/01 | 2nd quarter report submitted |
| 2/6/01 | 3rd quarter sampling event |
| 3/15/01 | 3rd quarter report submitted |

| | |
|---|---|
| 6/5/01 | 4th quarter sampling event |
| 7/31/01 | 4th quarter report submitted |
| 9/13/01 | 5th quarter sampling event |
| 10/18/01 | 5th quarter report submitted |
| 12/7/01 | 6th quarter sampling event |

An air injection/vapor extraction system was installed in May 2000 and put in operation in June 2000. The system consists of ten air injection/vapor extraction wells SV-1 through SV-10. In order to target the source area, $H_2O$ is rotating air sparging in injection/vapor extraction wells SV-1 through SV-10 and extracting vapor from injection/vapor extraction wells SV-1 through SV-8. Refer to Figure 1, Attachment 1 for a map illustrating the system layout. The following table summarizes the general operating characteristics of the system.

**Summary of System Operating Characteristics**

| Well ID | Activity | PSI | CFM | IWG |
|---|---|---|---|---|
| SV-1 - SV-8 | Vapor Extraction | – | – | 55 |
| SV-1 - SV-10 | Air Sparging | 10 | 6 | – |

An air sample was collected from the effluent of the vapor extraction system on August 1, 2000. Based on the review of the laboratory analysis, it is estimated that contaminant emissions will not exceed 1,000 pounds per month. An air sample was not collected this quarter because the OVA field screening results were below detection limits.

On December 7, 2001, $H_2O$ Environmental Inc. personnel gauged and collected groundwater samples from monitoring wells MW-4 through MW-17 and water well CLS-WW at the site. Water well CP-WW located at the Green residence was not operational at the time of the sampling event and a groundwater sample could not be collected. A new water well has apparently been installed and is currently being used by the Green residence. Monitoring wells OMW-1 and MW-2 contained free product and monitoring well MW-3 had a sheen; therefore, groundwater samples were not collected. The groundwater samples were analyzed for Benzene, Toluene, Ethylbenzene, total Xylenes (BTEX), Methyl-Tert-Butyl Ether (MTBE), and Naphthalene. A review of the groundwater elevation data indicated a groundwater flow direction to the south-southeast. Table 1, Attachment 2, summarizes field data collected during monitoring well purging. The groundwater elevations and free product thicknesses are summarized on Table 2, Attachment 2, and illustrated on Figure 2, Attachment 1. The groundwater quality for Chemicals of Concern is summarized on Table 3, Attachment 2, and illustrated on Figure 3, Attachment 1. A copy of the laboratory analytical report is provided in Attachment 3. Groundwater generated during well purging was either placed in on-site 55-gallon drums or discharged on site as warranted by the data. Product generated is placed on-site into a 55-gallon drum. Any disposal manifests will be forwarded to DHEC upon receipt.

Review of the analytical data indicates monitoring wells MW-7, MW-8, MW-12, MW-15, and DMW-17 and Water well CLS-WW are below the established SSTL's. Groundwater samples collected from MW-4, MW-5, MW-9, MW-10, MW-11, MW-13, MW-14, and MW-16 indicate concentrations above the established SSTLs. $H_2O$ will continue to operate the remediation system. If you have any questions or comments please do not hesitate to contact me at (803) 749-4080.

Sincerely,

**$H_2O$ Environmental, Inc.**

Notes:

All results reported in parts per billion (ug/L) unless otherwise noted.

SSTL = Site specific target levels referenced in bid

FP = Free Product; NS = Not Sampled

BDL = Below detecatable Levels

Total BTEX = Summation of benzene, toluene, ethylbenzene and xylenes

MTBE = Methyl-tert-buytl-ether

RE: 7th Quarterly Report
Crawford's Country Store
5870 Hwy 28 North
Antreville, South Carolina
SCDHEC Site ID # 12335

Dear Mr. Abernathy:

On February 4, 2000, the South Carolina Department of Health and Environmental Control (SCDHEC) provided notice to proceed to $H_2O$ Environmental, Inc. ($H_2O$) to perform Corrective Action at Crawford's Country Store located at 5870 Highway 28 North, Antreville, South Carolina. See Figure 1, Attachment 1 for a layout of the site and remediation system. The objective of the project is to reduce the Chemicals of Concern (COC) in monitoring wells OMW-1, MW-2 through MW-5, MW-7 through MW-15, DMW-17, CP-WW and CLS-WW to the site specific target levels (SSTLs). A chronological summary of site activities is provided below:

| | |
|---|---|
| 2/4/00 | SCDHEC awarded Bid Number SB-9570-12/02/99-TC |
| 3/02/00 | Corrective Action Plan/Engineering Report submitted to SCDHEC |
| 4/18/00 | CAP/ER approved |
| 4/26/00 | Initial groundwater sampling event |
| 5/17/00 | Initial groundwater results submitted |
| 5/22/00-5/31/00 | System installed |
| 5/31/00 | System was inspected and approved Todd Adams of SCDHEC |
| 5/31/00 | Invoice submitted for payment of 40% of the contract amount |
| 6/14/00 | System start-up |
| 8/01/00 | 1st quarter sampling event |
| 8/28/99 | 1st quarter report submitted |
| 9/13/00 | Free product recovery from OMW-1, MW-2 and MW-3 |
| 12/13/00 | 2nd quarter sampling event |
| 2/16/01 | 2nd quarter report submitted |
| 2/6/01 | 3rd quarter sampling event |
| 3/15/01 | 3rd quarter report submitted |

| 12/7/01 | 6th quarter sampling event |
| 2/4/02 | 6th quarter report submitted |
| 3/5/02 | 7th quarter sampling event |

An air injection/vapor extraction system was installed in May 2000 and put in operation in June 2000. The system consists of ten air injection/vapor extraction wells SV-1 through SV-10. In order to target the source area, $H_2O$ is rotating air sparging in injection/vapor extraction wells SV-1 through SV-10 and extracting vapor from injection/vapor extraction wells SV-1 through SV-8. Refer to Figure 1, Attachment 1 for a map illustrating the system layout. The following table summarizes the general operating characteristics of the system.

**Summary of System Operating Characteristics**

| Well ID | Activity | PSI | CFM | IWG |
|---|---|---|---|---|
| SV-1 - SV-8 | Vapor Extraction | -- | -- | 55 |
| SV-1 - SV-10 | Air Sparging | 10 | 6 | -- |

An air sample was collected from the effluent of the vapor extraction system on August 1, 2000. Based on the review of the laboratory analysis, it is estimated that contaminant emissions will not exceed 1,000 pounds per month. An air sample was not collected this quarter because the OVA field screening results were below detection limits.

On March 5, 2002, $H_2O$ Environmental Inc. personnel gauged and collected groundwater samples from monitoring wells MW-4 through MW-16 and water well CLS-WW at the site. Water well CP-WW located at the Green residence was not operational at the time of the sampling event and a groundwater sample could not be collected. A new water well has apparently been installed and is currently being used by the Green residence. Monitoring wells OMW-1 and MW-3 contained free product and monitoring well MW-2 had a sheen; therefore, groundwater samples were not collected. The groundwater samples were analyzed for Benzene, Toluene, Ethylbenzene, total Xylenes (BTEX), Methyl-Tert-Butyl Ether (MTBE), and Naphthalene. A review of the groundwater elevation data indicated a groundwater flow direction to the south-southeast. Table 1, Attachment 2, summarizes field data collected during monitoring well purging. The groundwater elevations and free product thicknesses are summarized on Table 2, Attachment 2, and illustrated on Figure 2, Attachment 1. The groundwater quality for Chemicals of Concern is summarized on Table 3, Attachment 2, and illustrated on Figure 3, Attachment 1. A copy of the laboratory analytical report is provided in Attachment 3. Groundwater generated during well purging was either placed in on-site 55-gallon drums or discharged on site as warranted by the data. Product generated is placed on-site into a 55-gallon drum. Any disposal manifests will be forwarded to DHEC upon receipt.

Based on the groundwater quality, adjustments were made to the air sparging system in order to maintain groundwater control. $H_2O$ will continue to operate the remediation system. If you have any questions or comments please do not hesitate to contact me at (803) 749-4080.

Sincerely,

**$H_2O$ Environmental, Inc.**

Notes:

All results reported in parts per billion (ug/L) unless otherwise noted.

SSTL = Site specific target levels referenced in bid

FP = Free Product; NS = Not Sampled

BDL = Below detecatable Levels

Total BTEX = Summation of benzene, toluene, ethylbenzene and xylenes

MTBE = Methyl-tert-buytl-ether

RE: 8th Quarterly Report
Crawford's Country Store
5870 Hwy 28 North
Antreville, South Carolina
SCDHEC Site ID # 12335

Dear Mr. Abernathy:

On February 4, 2000, the South Carolina Department of Health and Environmental Control (SCDHEC) provided notice to proceed to $H_2O$ Environmental, Inc. ($H_2O$) to perform Corrective Action at Crawford's Country Store located at 5870 Highway 28 North, Antreville, South Carolina. See Figure 1, Attachment 1 for a layout of the site and remediation system. The objective of the project is to reduce the Chemicals of Concern (COC) in monitoring wells OMW-1, MW-2 through MW-5, MW-7 through MW-15, DMW-17, CP-WW and CLS-WW to the site specific target levels (SSTLs). A chronological summary of site activities is provided below:

| | |
|---|---|
| 2/4/00 | SCDHEC awarded Bid Number SB-9570-12/02/99-TC |
| 3/02/00 | Corrective Action Plan/Engineering Report submitted to SCDHEC |
| 4/18/00 | CAP/ER approved |
| 4/26/00 | Initial groundwater sampling event |
| 5/17/00 | Initial groundwater results submitted |
| 5/22/00-5/31/00 | System installed |
| 5/31/00 | System was inspected and approved Todd Adams of SCDHEC |
| 5/31/00 | Invoice submitted for payment of 40% of the contract amount |
| 6/14/00 | System start-up |
| 8/01/00 | 1st quarter sampling event |
| 8/28/99 | 1st quarter report submitted |
| 9/13/00 | Free product recovery from OMW-1, MW-2 and MW-3 |
| 12/13/00 | 2nd quarter sampling event |
| 2/16/01 | 2nd quarter report submitted |
| 2/6/01 | 3rd quarter sampling event |
| 3/15/01 | 3rd quarter report submitted |
| 6/5/01 | 4th quarter sampling event |

| | |
|---|---|
| 7/31/01 | 4th quarter report submitted |
| 9/13/01 | 5th quarter sampling event |
| 10/18/01 | 5th quarter report submitted |
| 12/7/01 | 6th quarter sampling event |
| 2/4/02 | 6th quarter report submitted |
| 3/5/02 | 7th quarter sampling event |
| 4/26/02 | 7th quarter report submitted |
| 6/6/02 | 8th quarter sampling event |

An air injection/vapor extraction system was installed in May 2000 and put in operation in June 2000. The system consists of ten air injection/vapor extraction wells SV-1 through SV-10. In order to target the source area, $H_2O$ is rotating air sparging in injection/vapor extraction wells SV-1 through SV-10 and extracting vapor from injection/vapor extraction wells SV-1 through SV-8. Refer to Figure 1, Attachment 1 for a map illustrating the system layout. The following table summarizes the general operating characteristics of the system.

| **Summary of System Operating Characteristics** | | | | |
|---|---|---|---|---|
| Well ID | Activity | PSI | CFM | IWG |
| SV-1 - SV-8 | Vapor Extraction | -- | -- | 55 |
| SV-1 - SV-10 | Air Sparging | 10 | 6 | -- |

An air sample was collected from the effluent of the vapor extraction system on August 1, 2000. Based on the review of the laboratory analysis, it is estimated that contaminant emissions will not exceed 1,000 pounds per month. An air sample was not collected this quarter because the OVA field screening results were below detection limits.

On June 6, 2002, $H_2O$ Environmental Inc. personnel gauged and collected groundwater samples from monitoring wells MW-1 through MW-14, MW-17, and water well CLS-WW at the site. Monitoring wells MW-15 and MW-16 were destroyed by field cultivation and groundwater samples could not be collected. Water well CP-WW located at the Green residence was not operational at the time of the sampling event and a groundwater sample could not be collected. A new water well has apparently been installed and is currently being used by the Green residence. The groundwater samples were analyzed for Benzene, Toluene, Ethylbenzene, total Xylenes (BTEX), Methyl-Tert-Butyl Ether (MTBE), and Naphthalene. A review of the groundwater elevation data indicated a groundwater flow direction to the south-southeast. Table 1, Attachment 2, summarizes field data collected during monitoring well purging. The groundwater elevations are summarized on Table 2, Attachment 2, and illustrated on Figure 2, Attachment 1. The groundwater quality for Chemicals of Concern is summarized on Table 3, Attachment 2, and illustrated on Figure 3, Attachment 1. A copy of the laboratory analytical report is provided in Attachment 3. Groundwater generated during well purging was either placed in on-site 55-gallon drums or discharged on site as warranted by the data. Any disposal manifests will be forwarded to DHEC upon receipt.

Based on the groundwater quality, $H_2O$ will continue to operate the remediation system. $H_2O$ Environmental, Inc. would like to request permission to utilize Enzyme Technologies, Inc's bioremediation technology at the site. The bioremediation bacteria mixture has been reviewed by the State Toxicologist and has been reviewed and approved for use by Art Shrader (see Attachment 4). The mixture would be injected into the ground via the existing air sparge wells per the manufacturer recommendations. Please reference the original Underground Injection Control Permit # 505 dated May 31, 2000 for additional air sparging specifications. If you have any questions or comments please do not hesitate to contact me at (803) 749-4080.

Sincerely,

**$H_2O$ Environmental, Inc.**

Notes:
All results reported in parts per billion (ug/L) unless otherwise noted.
SSTL = Site specific target levels referenced in bid
FP = Free Product; NS = Not Sampled
BDL = Below detecatable Levels
Total BTEX = Summation of benzene, toluene, ethylbenzene and xylenes
MTBE = Methyl-tert-buytl-ether

**Subject:** Re: Enzyme Technologies Introduction -Reply -Reply

Brian,

Dr. John F Brown, DVM, PhD, the State Toxicologist, has reviewed your treatment method and "provided the products and procedures are utilized at sites approved by appropriate DHEC programs, he finds no significant threat to the public health and environmental integrity of South Carolina and he has no objection to the procedures being carried out at approved designated sites."

Dr. Brown's review does not address the effectiveness of the procedure using the proprietary process.

Art Shrader

RE: 9th Quarterly Report
Crawford's Country Store
5870 Hwy 28 North
Antreville, South Carolina
SCDHEC Site ID # 12335

Dear Mr. Abernathy:

On February 4, 2000, the South Carolina Department of Health and Environmental Control (SCDHEC) provided notice to proceed to $H_2O$ Environmental, Inc. ($H_2O$) to perform Corrective Action at Crawford's Country Store located at 5870 Highway 28 North, Antreville, South Carolina. See Figure 1, Attachment 1 for a layout of the site and remediation system. The objective of the project is to reduce the Chemicals of Concern (COC) in monitoring wells OMW-1, MW-2 through MW-5, MW-7 through MW-15, DMW-17, CP-WW and CLS-WW to the site specific target levels (SSTLs). A chronological summary of site activities is provided below:

| | |
|---|---|
| 2/4/00 | SCDHEC awarded Bid Number SB-9570-12/02/99-TC |
| 3/02/00 | Corrective Action Plan/Engineering Report submitted to SCDHEC |
| 4/18/00 | CAP/ER approved |
| 4/26/00 | Initial groundwater sampling event |
| 5/17/00 | Initial groundwater results submitted |
| 5/22/00-5/31/00 | System installed |
| 5/31/00 | System was inspected and approved Todd Adams of SCDHEC |
| 5/31/00 | Invoice submitted for payment of 40% of the contract amount |
| 6/14/00 | System start-up |
| 8/01/00 | 1st quarter sampling event |
| 8/28/99 | 1st quarter report submitted |
| 9/13/00 | Free product recovery from OMW-1, MW-2 and MW-3 |
| 12/13/00 | 2nd quarter sampling event |
| 2/16/01 | 2nd quarter report submitted |
| 2/6/01 | 3rd quarter sampling event |
| 3/15/01 | 3rd quarter report submitted |
| 6/5/01 | 4th quarter sampling event |

| | |
|---|---|
| 7/31/01 | 4th quarter report submitted |
| 9/13/01 | 5th quarter sampling event |
| 10/18/01 | 5th quarter report submitted |
| 12/7/01 | 6th quarter sampling event |
| 2/4/02 | 6th quarter report submitted |
| 3/5/02 | 7th quarter sampling event |
| 4/26/02 | 7th quarter report submitted |
| 6/6/02 | 8th quarter sampling event |
| 7/10/02 | 8th quarter report submitted |
| 9/17/02 | 9th quarter sampling event |

An air injection/vapor extraction system was installed in May 2000 and put in operation in June 2000. The system consists of ten air injection/vapor extraction wells SV-1 through SV-10. In order to target the source area, $H_2O$ is rotating air sparging in injection/vapor extraction wells SV-1 through SV-10 and extracting vapor from injection/vapor extraction wells SV-1 through SV-8. Refer to Figure 1, Attachment 1 for a map illustrating the system layout. The following table summarizes the general operating characteristics of the system.

**Summary of System Operating Characteristics**

| Well ID | Activity | PSI | CFM | IWG |
|---|---|---|---|---|
| SV-1 - SV-8 | Vapor Extraction | -- | -- | 55 |
| SV-1 - SV-10 | Air Sparging | 10 | 6 | -- |

An air sample was collected from the effluent of the vapor extraction system on August 1, 2000. Based on the review of the laboratory analysis, it is estimated that contaminant emissions will not exceed 1,000 pounds per month. An air sample was not collected this quarter because the OVA field screening results were below detection limits.

On September 17, 2002, $H_2O$ Environmental Inc. personnel gauged and collected groundwater samples from monitoring wells MW-1, MW-3 through MW-14, MW-17, and water well CLS-WW at the site. Monitoring well MW-2 contained free product and a groundwater sample was collected. Monitoring wells MW-15 and MW-16 were destroyed by field cultivation and groundwater samples could not be collected. Water well CP-WW located at the Green residence was not operational at the time of the sampling event and a groundwater sample could not be collected. A new water well has been installed and is currently being used by the Green residence. The groundwater samples were analyzed for Benzene, Toluene, Ethylbenzene, total Xylenes (BTEX), Methyl-Tert-Butyl Ether (MTBE), and Naphthalene. Following groundwater sampling, a bacteria nutrient mixture was injected into the subsurface. The bioremediation technology was approved for use on August 12, 2002.

A review of the groundwater elevation data indicated a groundwater flow direction to the south-southeast. Table 1, Attachment 2, summarizes field data collected during monitoring well purging. The groundwater elevations are summarized on Table 2, Attachment 2, and illustrated on Figure 2, Attachment 1. The groundwater quality for Chemicals of Concern is summarized on Table 3, Attachment 2, and illustrated on Figure 3, Attachment 1. A copy of the laboratory analytical report is provided in Attachment 3. Groundwater generated during well purging was either placed in on-site 55-gallon drums or discharged on site as warranted by the data. Any disposal manifests will be forwarded to DHEC upon receipt.

Based on the groundwater quality, $H_2O$ will continue to operate the remediation system. If you have any questions or comments please do not hesitate to contact me at (803) 749-4080.

Sincerely,

**$H_2O$ Environmental, Inc.**

| | 17-Sep-02 | BDL | BDL | BDL | BDL | BDL | BDL | BDL |
| SSTL | | 5 | <1 | <1 | 10 | - | 35 | <5 |

**Notes:**

All results reported in parts per billion (ug/L) unless otherwise noted.

SSTL = Site specific target levels referenced in bid

FP = Free Product; NS = Not Sampled

BDL = Below detecatable Levels

Total BTEX = Summation of benzene, toluene, ethylbenzene and xylenes

MTBE = Methyl-tert-buytl-ether

*Re: Monitoring Well Installations*
*Crawford's Country Store, SCDHEC Site ID #12335*
*5870 Highway 28 North*
*Abbeville, South Carolina*

*Dear Mr. Abernathy:*

Force & Associates, Inc., is pleased to submit the attached water well records for monitoring wells MW-1R and MW-13R installed at the referenced facility on November 15, 2002.

The following measurements were recorded from field personnel on November 15, 2002:

| MW # | TOC Elevation (ft) | Depth to Water (ft) | pH (s.u.) | Conductivity (umhos/cm) | Temperature (°C) |
|---|---|---|---|---|---|
| MW-1R | 99.82 | 19.13 | 5.2 | 180 | 23.1 |
| MW-13R | 100.80 | 23.27 | 5.2 | 44 | 17.9 |

The site map, field data sheets, well construction logs, and the disposal manifests are attached for your review.

Thank you for your assistance with this project. If you have any questions or require additional information, please contact my office at 803-359-3200.

*Sincerely,*
***FORCE & ASSOCIATES, INC.***

*RE: Treatment of Purge Water*

*To SCDHEC Project Manager:*

Source:

Groundwater derived from development and purging of monitoring wells.

Conditions:

All purge water was contained in 55-gallon drums. Only water with hydrocarbon concentrations less than 20,000 ppb total BTEX and Benzene less than 5,000 ppb were treated using an activated carbon filter. Purge water with concentration exceeding 20,000 ppb were disposed of at licensed waste water treatment facility. The manifest is attached if applicable. No free product was treated using the filter. All specifications from the manufacturer and SCDHEC were strictly followed. All appropriate purge water was treated on-site. Records involving date, quantity, concentration, and location are attached.

**PURGE/DEVELOPMENT WATER TREATMENT**

RE: 10th Quarterly Report
Crawford's Country Store
5870 Hwy 28 North
Antreville, South Carolina
SCDHEC Site ID # 12335

Dear Mr. Abernathy:

On February 4, 2000, the South Carolina Department of Health and Environmental Control (SCDHEC) provided notice to proceed to $H_2O$ Environmental, Inc. ($H_2O$) to perform Corrective Action at Crawford's Country Store located at 5870 Highway 28 North, Antreville, South Carolina. See Figure 1, Attachment 1 for a layout of the site and remediation system. The objective of the project is to reduce the Chemicals of Concern (COC) in monitoring wells OMW-1, MW-2 through MW-5, MW-7 through MW-15, DMW-17, CP-WW and CLS-WW to the site specific target levels (SSTLs). A chronological summary of site activities is provided below:

| | |
|---|---|
| 2/4/00 | SCDHEC awarded Bid Number SB-9570-12/02/99-TC |
| 3/02/00 | Corrective Action Plan/Engineering Report submitted to SCDHEC |
| 4/18/00 | CAP/ER approved |
| 4/26/00 | Initial groundwater sampling event |
| 5/17/00 | Initial groundwater results submitted |
| 5/22/00-5/31/00 | System installed |
| 5/31/00 | System was inspected and approved Todd Adams of SCDHEC |
| 5/31/00 | Invoice submitted for payment of 40% of the contract amount |
| 6/14/00 | System start-up |
| 8/01/00 | 1st quarter sampling event |
| 8/28/99 | 1st quarter report submitted |
| 9/13/00 | Free product recovery from OMW-1, MW-2 and MW-3 |
| 12/13/00 | 2nd quarter sampling event |
| 2/16/01 | 2nd quarter report submitted |
| 2/6/01 | 3rd quarter sampling event |
| 3/15/01 | 3rd quarter report submitted |
| 6/5/01 | 4th quarter sampling event |

| | |
|---|---|
| 7/31/01 | 4th quarter report submitted |
| 9/13/01 | 5th quarter sampling event |
| 10/18/01 | 5th quarter report submitted |
| 12/7/01 | 6th quarter sampling event |
| 2/4/02 | 6th quarter report submitted |
| 3/5/02 | 7th quarter sampling event |
| 4/26/02 | 7th quarter report submitted |
| 6/6/02 | 8th quarter sampling event |
| 7/10/02 | 8th quarter report submitted |
| 9/17/02 | 9th quarter sampling event |
| 10/28/02 | 9th quarter report submitted |
| 12/12/02 | 10th quarter sampling event |

An air injection/vapor extraction system was installed in May 2000 and put in operation in June 2000. The system consists of ten air injection/vapor extraction wells SV-1 through SV-10. In order to target the source area, $H_2O$ is rotating air sparging in injection/vapor extraction wells SV-1 through SV-10 and extracting vapor from injection/vapor extraction wells SV-1 through SV-8. Refer to Figure 1, Attachment 1 for a map illustrating the system layout. The following table summarizes the general operating characteristics of the system.

**Summary of System Operating Characteristics**

| Well ID | Activity | PSI | CFM | IWG |
|---|---|---|---|---|
| SV-1 - SV-8 | Vapor Extraction | -- | -- | 55 |
| SV-1 - SV-10 | Air Sparging | 10 | 6 | -- |

An air sample was collected from the effluent of the vapor extraction system on August 1, 2000. Based on the review of the laboratory analysis, it is estimated that contaminant emissions will not exceed 1,000 pounds per month. An air sample was not collected this quarter because the OVA field screening results were below detection limits.

On December 12, 2002, $H_2O$ Environmental Inc. personnel gauged and collected groundwater samples from monitoring wells MW-1R, MW-2 through MW-17, and water well CLS-WW at the site. Water well CP-WW located at the Green residence was not operational at the time of the sampling event and a groundwater sample could not be collected. A new water well has been installed and is currently being used by the Green residence. The groundwater samples were analyzed for Benzene, Toluene, Ethylbenzene, total Xylenes (BTEX), Methyl-Tert-Butyl Ether (MTBE), and Naphthalene. Following groundwater sampling, a bacteria nutrient mixture was injected into the subsurface. An additional bioremediation event was conducted on January 14, 2003. The bioremediation technology was approved for use on August 12, 2002.

A review of the groundwater elevation data indicated a groundwater flow direction to the south-southeast. Table 1, Attachment 2, summarizes field data collected during monitoring well purging. The groundwater elevations are summarized on Table 2, Attachment 2, and illustrated on Figure 2, Attachment 1. The groundwater quality for Chemicals of Concern is summarized on Table 3, Attachment 2, and illustrated on Figure 3, Attachment 1. A copy of the laboratory analytical report is provided in Attachment 3. Groundwater generated during well purging was either placed in on-site 55-gallon drums or discharged on site as warranted by the data. Any disposal manifests will be forwarded to DHEC upon receipt.

Based on the groundwater quality, $H_2O$ will continue to operate the remediation system. If you have any questions or comments please do not hesitate to contact me at (803) 749-4080.

Sincerely,

**$H_2O$ Environmental, Inc.**

Notes:
All results reported in parts per billion (ug/L) unless otherwise noted.
SSTL = Site specific target levels referenced in bid
FP = Free Product; NS = Not Sampled
BDL = Below detecatable Levels
Total BTEX = Summation of benzene, toluene, ethylbenzene and xylenes
MTBE = Methyl-tert-buytl-ether

RE: 11th Quarterly Report
Crawford's Country Store
5870 Hwy 28 North
Antreville, South Carolina
SCDHEC Site ID # 12335

Dear Mr. Abernathy:

On February 4, 2000, the South Carolina Department of Health and Environmental Control (SCDHEC) provided notice to proceed to $H_2O$ Environmental, Inc. ($H_2O$) to perform Corrective Action at Crawford's Country Store located at 5870 Highway 28 North, Antreville, South Carolina. See Figure 1, Attachment 1 for a layout of the site and remediation system. The objective of the project is to reduce the Chemicals of Concern (COC) in monitoring wells OMW-1, MW-2 through MW-5, MW-7 through MW-15, DMW-17, CP-WW and CLS-WW to the site specific target levels (SSTLs). A chronological summary of site activities is provided below:

| | |
|---|---|
| 2/4/00 | SCDHEC awarded Bid Number SB-9570-12/02/99-TC |
| 3/02/00 | Corrective Action Plan/Engineering Report submitted to SCDHEC |
| 4/18/00 | CAP/ER approved |
| 4/26/00 | Initial groundwater sampling event |
| 5/17/00 | Initial groundwater results submitted |
| 5/22/00-5/31/00 | System installed |
| 5/31/00 | System was inspected and approved Todd Adams of SCDHEC |
| 5/31/00 | Invoice submitted for payment of 40% of the contract amount |
| 6/14/00 | System start-up |
| 8/01/00 | 1st quarter sampling event |
| 8/28/99 | 1st quarter report submitted |
| 9/13/00 | Free product recovery from OMW-1, MW-2 and MW-3 |
| 12/13/00 | 2nd quarter sampling event |
| 2/16/01 | 2nd quarter report submitted |
| 2/6/01 | 3rd quarter sampling event |
| 3/15/01 | 3rd quarter report submitted |
| 6/5/01 | 4th quarter sampling event |

$H_2O$ ENVIRONMENTAL, INC.

| | |
|---|---|
| 7/31/01 | 4th quarter report submitted |
| 9/13/01 | 5th quarter sampling event |
| 10/18/01 | 5th quarter report submitted |
| 12/7/01 | 6th quarter sampling event |
| 2/4/02 | 6th quarter report submitted |
| 3/5/02 | 7th quarter sampling event |
| 4/26/02 | 7th quarter report submitted |
| 6/6/02 | 8th quarter sampling event |
| 7/10/02 | 8th quarter report submitted |
| 9/17/02 | 9th quarter sampling event |
| 10/28/02 | 9th quarter report submitted |
| 12/12/02 | 10th quarter sampling event |
| 2/6/03 | 10th quarter report submitted |
| 3/31/03 | 11th quarter report submitted |

An air injection/vapor extraction system was installed in May 2000 and put in operation in June 2000. The system consists of ten air injection/vapor extraction wells SV-1 through SV-10. In order to target the source area, $H_2O$ is rotating air sparging in injection/vapor extraction wells SV-1 through SV-10 and extracting vapor from injection/vapor extraction wells SV-1 through SV-8. Refer to Figure 1, Attachment 1 for a map illustrating the system layout. The following table summarizes the general operating characteristics of the system.

**Summary of System Operating Characteristics**

| Well ID | Activity | PSI | CFM | IWG |
|---|---|---|---|---|
| SV-1 - SV-8 | Vapor Extraction | -- | -- | 55 |
| SV-1 - SV-10 | Air Sparging | 10 | 6 | -- |

An air sample was collected from the effluent of the vapor extraction system on August 1, 2000. Based on the review of the laboratory analysis, it is estimated that contaminant emissions will not exceed 1,000 pounds per month. An air sample was not collected this quarter because the OVA field screening results were below detection limits.

On March 31, 2003, $H_2O$ Environmental Inc. personnel gauged and collected groundwater samples from monitoring wells MW-1R, MW-2 through MW-12, MW-13R, MW-14 through MW-17, and water well CLS-WW at the site. Water well CP-WW located at the Green residence was not operational at the time of the sampling event and a groundwater sample could not be collected. A new water well has been installed and is currently being used by the Green residence. The groundwater samples were analyzed for Benzene, Toluene, Ethylbenzene, total Xylenes (BTEX), Methyl-Tert-Butyl Ether (MTBE), and Naphthalene. Following groundwater sampling, a bacteria nutrient mixture was injected into the subsurface. The bioremediation technology was approved for use on August 12, 2002.

A review of the groundwater elevation data indicated a groundwater flow direction to the south-southeast. Table 1, Attachment 2, summarizes field data collected during monitoring well purging. The groundwater elevations are summarized on Table 2, Attachment 2, and illustrated on Figure 2, Attachment 1. The groundwater quality for Chemicals of Concern is summarized on Table 3, Attachment 2, and illustrated on Figure 3, Attachment 1. A copy of the laboratory analytical report is provided in Attachment 3. Groundwater generated during well purging was either placed in on-site 55-gallon drums or discharged on site as warranted by the data. Any disposal manifests will be forwarded to DHEC upon receipt.

Based on the groundwater quality, $H_2O$ will continue to operate the remediation system. If you have any questions or comments please do not hesitate to contact me at (803) 749-4080.

Sincerely,

**$H_2O$ Environmental, Inc.**

| SSTL | | 5 | <1 | <1 | 10 | - | 35 | <5 |

Notes:
All results reported in parts per billion (ug/L) unless otherwise noted
SSTL = Site specific target levels referenced in bid
FP = Free Product; NS = Not Sampled
BDL = Below detecatable Levels
Total BTEX = Summation of benzene, toluene, ethylbenzene and xylenes
MTBE = Methyl-tert-buytl-ether

RE: 12th Quarterly Report
Crawford's Country Store
5870 Hwy 28 North
Antreville, South Carolina
SCDHEC Site ID # 12335

UST
DOCKETING
58teek

Dear Mr. Khattak:

On February 4, 2000, the South Carolina Department of Health and Environmental Control (SCDHEC) provided notice to proceed to $H_2O$ Environmental, Inc. ($H_2O$) to perform Corrective Action at Crawford's Country Store located at 5870 Highway 28 North, Antreville, South Carolina. See Figure 1, Attachment 1 for a layout of the site and remediation system. The objective of the project is to reduce the Chemicals of Concern (COC) in monitoring wells OMW-1, MW-2 through MW-5, MW-7 through MW-15, DMW-17, CP-WW and CLS-WW to the site specific target levels (SSTLs). A chronological summary of site activities is provided below:

| | |
|---|---|
| 2/4/00 | SCDHEC awarded Bid Number SB-9570-12/02/99-TC |
| 3/02/00 | Corrective Action Plan/Engineering Report submitted to SCDHEC |
| 4/18/00 | CAP/ER approved |
| 4/26/00 | Initial groundwater sampling event |
| 5/17/00 | Initial groundwater results submitted |
| 5/22/00-5/31/00 | System installed |
| 5/31/00 | System was inspected and approved Todd Adams of SCDHEC |
| 5/31/00 | Invoice submitted for payment of 40% of the contract amount |
| 6/14/00 | System start-up |
| 8/01/00 | 1st quarter sampling event |
| 8/28/99 | 1st quarter report submitted |
| 9/13/00 | Free product recovery from OMW-1, MW-2 and MW-3 |
| 12/13/00 | 2nd quarter sampling event |
| 2/16/01 | 2nd quarter report submitted |
| 2/6/01 | 3rd quarter sampling event |
| 3/15/01 | 3rd quarter report submitted |
| 6/5/01 | 4th quarter sampling event |

|---|---|
| 7/31/01 | 4th quarter report submitted |
| 9/13/01 | 5th quarter sampling event |
| 10/18/01 | 5th quarter report submitted |
| 12/7/01 | 6th quarter sampling event |
| 2/4/02 | 6th quarter report submitted |
| 3/5/02 | 7th quarter sampling event |
| 4/26/02 | 7th quarter report submitted |
| 6/6/02 | 8th quarter sampling event |
| 7/10/02 | 8th quarter report submitted |
| 9/17/02 | 9th quarter sampling event |
| 10/28/02 | 9th quarter report submitted |
| 12/12/02 | 10th quarter sampling event |
| 2/6/03 | 10th quarter report submitted |
| 3/31/03 | 11th quarter sampling event |
| 5/14/03 | 11th quarter report submitted |
| 7/16/03 | 12th quarter sampling event |

An air injection/vapor extraction system was installed in May 2000 and put in operation in June 2000. The system consists of ten air injection/vapor extraction wells SV-1 through SV-10. In order to target the source area, $H_2O$ is rotating air sparging in injection/vapor extraction wells SV-1 through SV-10 and extracting vapor from injection/vapor extraction wells SV-1 through SV-8. Refer to Figure 1, Attachment 1 for a map illustrating the system layout. The following table summarizes the general operating characteristics of the system.

| **Summary of System Operating Characteristics** | | | | |
|---|---|---|---|---|
| Well ID | Activity | PSI | CFM | IWG |
| SV-1 - SV-8 | Vapor Extraction | -- | -- | 55 |
| SV-1 - SV-10 | Air Sparging | 10 | 6 | -- |

An air sample was collected from the effluent of the vapor extraction system on August 1, 2000. Based on the review of the laboratory analysis, it is estimated that contaminant emissions will not exceed 1,000 pounds per month. An air sample was not collected this quarter because the OVA field screening results were below detection limits.

On July 16, 2003, $H_2O$ Environmental Inc. personnel gauged and collected groundwater samples from monitoring wells MW-1R, MW-2, MW-3, MW-5 through MW-12, MW-13R, MW-14 through MW-17, and water well CLS-WW at the site. Water well CP-WW located at the Green residence was not operational at the time of the sampling event and a groundwater sample could not be collected. A new water well has been installed and is currently being used by the Green residence. Monitoring well MW-4 was covered and could not be accessed. The groundwater samples were analyzed for Benzene, Toluene, Ethylbenzene, total Xylenes (BTEX), Methyl-Tert-Butyl Ether (MTBE), and Naphthalene. Following groundwater sampling, a bacteria nutrient mixture was injected into the subsurface. The bioremediation technology was approved for use on August 12, 2002.

A review of the groundwater elevation data indicated a groundwater flow direction to the south-southeast. Table 1, Attachment 2, summarizes field data collected during monitoring well purging. The groundwater elevations are summarized on Table 2, Attachment 2, and illustrated on Figure 2, Attachment 1. The groundwater quality for Chemicals of Concern is summarized on Table 3, Attachment 2, and illustrated on Figure 3, Attachment 1. A copy of the laboratory analytical report is provided in Attachment 3. Groundwater generated during well purging was either placed in on-site 55-gallon drums or discharged on site as warranted by the data. Any disposal manifests will be forwarded to DHEC upon receipt.

Based on the groundwater quality, $H_2O$ will continue to operate the remediation system. If you have any questions or comments please do not hesitate to contact me at (803) 749-4080.

Sincerely,

**$H_2O$ Environmental, Inc.**

Notes:
All results reported in parts per billion (ug/L) unless otherwise noted
SSTL = Site specific target levels referenced in bid
FP = Free Product; NS = Not Sampled
BDL = Below detecatable Levels
Total BTEX = Summation of benzene, toluene, ethylbenzene and xylenes
MTBE = Methyl-tert-buytl-ether

RE: 13th Quarterly Report
Crawford's Country Store
5870 Hwy 28 North
Antreville, South Carolina
SCDHEC Site ID # 12335

Dear Mr. Padgett:

On February 4, 2000, the South Carolina Department of Health and Environmental Control (SCDHEC) provided notice to proceed to $H_2O$ Environmental, Inc. ($H_2O$) to perform Corrective Action at Crawford's Country Store located at 5870 Highway 28 North, Antreville, South Carolina. See Figure 1, Attachment 1 for a layout of the site and remediation system. The objective of the project is to reduce the Chemicals of Concern (COC) in monitoring wells OMW-1, MW-2 through MW-5, MW-7 through MW-15, DMW-17, CP-WW and CLS-WW to the site specific target levels (SSTLs). A chronological summary of site activities is provided below:

| | |
|---|---|
| 2/4/00 | SCDHEC awarded Bid Number SB-9570-12/02/99-TC |
| 3/02/00 | Corrective Action Plan/Engineering Report submitted to SCDHEC |
| 4/18/00 | CAP/ER approved |
| 4/26/00 | Initial groundwater sampling event |
| 5/17/00 | Initial groundwater results submitted |
| 5/22/00-5/31/00 | System installed |
| 5/31/00 | System was inspected and approved Todd Adams of SCDHEC |
| 5/31/00 | Invoice submitted for payment of 40% of the contract amount |
| 6/14/00 | System start-up |
| 8/01/00 | 1st quarter sampling event |
| 8/28/99 | 1st quarter report submitted |
| 9/13/00 | Free product recovery from OMW-1, MW-2 and MW-3 |
| 12/13/00 | 2nd quarter sampling event |
| 2/16/01 | 2nd quarter report submitted |
| 2/6/01 | 3rd quarter sampling event |
| 3/15/01 | 3rd quarter report submitted |

| 8/20/03 | 13th quarter sampling event |

An air injection/vapor extraction system was installed in May 2000 and put in operation in June 2000. The system consists of ten air injection/vapor extraction wells SV-1 through SV-10. In order to target the source area, $H_2O$ is rotating air sparging in injection/vapor extraction wells SV-1 through SV-10 and extracting vapor from injection/vapor extraction wells SV-1 through SV-8. Refer to Figure 1, Attachment 1 for a map illustrating the system layout. The following table summarizes the general operating characteristics of the system.

**Summary of System Operating Characteristics**

| Well ID | Activity | PSI | CFM | IWG |
|---|---|---|---|---|
| SV-1 - SV-8 | Vapor Extraction | -- | -- | 55 |
| SV-1 - SV-10 | Air Sparging | 10 | 6 | -- |

An air sample was collected from the effluent of the vapor extraction system on August 1, 2000. Based on the review of the laboratory analysis, it is estimated that contaminant emissions will not exceed 1,000 pounds per month. An air sample was not collected this quarter because the OVA field screening results were below detection limits.

On August 20, 2003, $H_2O$ Environmental Inc. personnel gauged and collected groundwater samples from monitoring wells MW-1R, MW-2 through MW-12, MW-13R, MW-14 through MW-17, and water well CLS-WW at the site. Water well CP-WW located at the Green residence was not operational at the time of the sampling event and a groundwater sample could not be collected. A new water well has been installed and is currently being used by the Green residence. The groundwater samples were analyzed for Benzene, Toluene, Ethylbenzene, total Xylenes (BTEX), Methyl-Tert-Butyl Ether (MTBE), and Naphthalene. Following groundwater sampling, a bacteria nutrient mixture was injected into the subsurface. The bioremediation technology was approved for use on August 12, 2002.

A review of the groundwater elevation data indicated a groundwater flow direction to the south-southeast. Table 1, Attachment 2, summarizes field data collected during monitoring well purging. The groundwater elevations are summarized on Table 2, Attachment 2, and illustrated on Figure 2, Attachment 1. The groundwater quality for Chemicals of Concern is summarized on Table 3, Attachment 2, and illustrated on Figure 3, Attachment 1. A copy of the laboratory analytical report is provided in Attachment 3. Groundwater generated during well purging was either placed in on-site 55-gallon drums or discharged on site as warranted by the data. Any disposal manifests will be forwarded to DHEC upon receipt.

Based on the groundwater quality, $H_2O$ will continue to operate the remediation system. If you have any questions or comments please do not hesitate to contact me at (803) 749-4080.

Sincerely,

**$H_2O$ Environmental, Inc.**

NOTES:
NS - Not sampled
Temperature in Degrees Celcius
Dissolved Oxygen in mg/L
Depth to Water and Depth to bottom in units of feet
Well volumes (Gallons)
Specific Conductivity (umhos/cm)

Notes:
All results reported in parts per billion (ug/L) unless otherwise noted
SSTL = Site specific target levels referenced in bid
FP = Free Product; NS = Not Sampled
BDL = Below detecatable Levels
Total BTEX = Summation of benzene, toluene, ethylbenzene and xylenes
MTBE = Methyl-tert-buytl-ether

Re: Bid # IFB-34007-6/3/08-EMW; PO# 4500011317
Notice to Proceed

Dear Mr. Shane:

Based on the award of the referenced bid package, enclosed are the information packets to conduct assessments at several facilities. The packets contain the necessary approval for work to begin. The facilities have been assigned Cost Agreement (CA) numbers as listed below. Please reference the CA numbers and Purchase Order # 4500011317 on the appropriate invoices submitted for payment against the facilities. As specified in the referenced bid, **the completed invoice forms and associated reports (include contract certification number) are expected on or before the designated due date (see below).**

| UST Permit# | Facility | County | Release # | Work Scope | Due Date* | CA # | Approved Amt |

*From receipt of letter

Midland's Environmental Consultants, Inc. will perform services at the sites on behalf of the site's UST owners; however, payments will be made from the SUPERB Account. The site's UST owners have no obligation for payment for this scope of work. **Please note, if there are any changes in the established cost agreement amounts (e.g., additional water supply wells sampled, additional well footage, etc.) contact the site's project manager for technical and/or financial approval. Failure to do so prior to submittal of invoice may result in delay of payment.**

The Bureau grants pre-approval for transportation of drums of virgin petroleum contaminated soil and drums of groundwater from the referenced site to a permitted treatment facility. The contaminated soil and/or groundwater must be properly stored in labeled 55-gallon drums or equivalent containers.

The contaminated soil and/or groundwater must be accepted by the approved treatment facility. There can be no spillage or leakage in transport. A copy of the disposal manifest from the receiving facility that clearly designates the quantity received must be included as an appendix to the final report. Please note, transportation of waste oil contaminated soil must receive pre-approval from the Division of Waste Assessment & Emergency Response.

Please provide this office with a schedule of drilling dates and coordinate all work with me before commencing work at the facility. If you have any questions or need further assistance, please contact me at (803) 896-6629.

Sincerely,

Andrew McCormick, Hydrogeologist

# Monitoring Well Approval

Approval is hereby granted to: **Midlands Environmental Consultants, Inc.**

On behalf of: **Mr. Frank Crawford**

Facility: **Crawford's Country Store**
**5870 SC-28 North, Abbeville, SC**

UST Permit #: **12335**

County: **Abbeville**

This approval is for the installation of six shallow monitoring wells. The wells are to be installed in the approved locations in accordance with the South Carolina Well Standards, R.61-71, and applicable guidance documents.

***Please note that R.61-71 requires the following :***

1. All wells shall be drilled, constructed, and abandoned by a South Carolina certified well driller per R.61-71.D.1.

2. All monitoring wells shall be labeled as required by R.61-71.H.2.c.

3. A Water Well Record Form or other form provided or approved by the Department shall be completed and submitted to the Department within 30 days after well completion or abandonment unless another schedule has been approved by the Department. The form should contain the "as-built" construction details and all other information required by R.61-71.H.1.f

4. All analytical data and water levels obtained from each monitoring well shall be submitted to the Department within 30 days of receipt of laboratory results unless another schedule has been approved by the Department as required by R.61-71.H.1.d.

5. If any of the information provided to the Department changes, notification to the project manager (tel:803-896-6633 or e-mail: ridglect@dhec.sc.gov) shall be provided a minimum of twenty-four (24) hours prior to well construction as required by R.61-71.H.1.a.

6. All temporary monitoring wells shall be abandoned within 5 days of borehole completion using appropriate methods as required by R.61-71.H.4.c. All other wells shall be properly developed per R.61-71.H.2.d.

7. Departmental approval is required prior to abandonment of all monitoring wells as required by R.61-71.H.1.a.

This approval is pursuant to the provisions of Section 44-55-40 of the 1976 South Carolina Code of Laws and R.61-71 of the South Carolina Well Standards and Regulations, dated April 26, 2002. A copy of this approval should be on the site during well installation.

**Date of Issue:** 3/17/2011 **Approval:** 24166

RE: 15th Quarterly Report
Crawford's Country Store
5870 Hwy 28 North
Antreville, South Carolina
SCDHEC Site ID # 12335

Dear Ms. Hydrick:

On February 4, 2000, the South Carolina Department of Health and Environmental Control (SCDHEC) provided notice to proceed to $H_2O$ Environmental, Inc. ($H_2O$) to perform Corrective Action at Crawford's Country Store located at 5870 Highway 28 North, Antreville, South Carolina. See Figure 1, Attachment 1 for a layout of the site and remediation system The objective of the project is to reduce the Chemicals of Concern (COC) in monitoring wells OMW-1, MW-2 through MW-5, MW-7 through MW-15, DMW-17, CP-WW and CLS-WW to the site specific target levels (SSTLs). A chronological summary of site activities is provided below:

| | |
|---|---|
| 2/4/00 | SCDHEC awarded Bid Number SB-9570-12/02/99-TC |
| 3/02/00 | Corrective Action Plan/Engineering Report submitted to SCDHEC |
| 4/18/00 | CAP/ER approved |
| 4/26/00 | Initial groundwater sampling event |
| 5/17/00 | Initial groundwater results submitted |
| 5/22/00-5/31/00 | System installed |
| 5/31/00 | System was inspected and approved Todd Adams of SCDHEC |
| 5/31/00 | Invoice submitted for payment of 40% of the contract amount |
| 6/14/00 | System start-up |
| 8/01/00 | 1st quarter sampling event |
| 8/28/99 | 1st quarter report submitted |
| 9/13/00 | Free product recovery from OMW-1, MW-2 and MW-3 |
| 12/13/00 | 2nd quarter sampling event |
| 2/16/01 | 2nd quarter report submitted |

An air injection/vapor extraction system was installed in May 2000 and put in operation in June 2000. The system consists of ten air injection/vapor extraction wells SV-1 through SV-10. In order to target the source area, $H_2O$ is rotating air sparging in injection/vapor extraction wells SV-1 through SV-10 and extracting vapor from injection/vapor extraction wells SV-1 through SV-8. Refer to Figure 1, Attachment 1 for a map illustrating the system layout. The following table summarizes the general operating characteristics of the system.

| **Summary of System Operating Characteristics** | | | | |
|---|---|---|---|---|
| Well ID | Activity | PSI | CFM | IWG |
| SV-1 - SV-8 | Vapor Extraction | -- | -- | 55 |
| SV-1 - SV-10 | Air Sparging | 10 | 6 | -- |

An air sample was collected from the effluent of the vapor extraction system on August 1, 2000. Based on the review of the laboratory analysis, it is estimated that contaminant emissions will not exceed 1,000 pounds per month. An air sample was not collected this quarter because the OVA field screening results were below detection limits.

On February 18, 2004, $H_2O$ Environmental Inc. personnel gauged and collected groundwater samples from monitoring wells OMW-1, MW-1R, MW-2 through MW-12, MW-13R, MW-14 through MW-17, and water well CLS-WW at the site. Water well CP-WW located at the Green residence was not operational at the time of the sampling event and a groundwater sample could not be collected. A new water well has been installed and is currently being used by the Green residence. The new water well was designated CP-WW2. The sample collected from water well CP-WW2 was from an indoor sink, which may be a post filtered sample if there is a carbon unit on this water well. The groundwater samples were analyzed for Benzene, Toluene, Ethylbenzene, total Xylenes (BTEX), Methyl-Tert-Butyl Ether (MTBE), and Naphthalene. In addition, the groundwater samples were analyzed for the following natural attenuation parameters: ferrous iron, nitrate, sulfate, and methane.

A review of the groundwater elevation data indicated a groundwater flow direction to the south-southeast. Table 1, Attachment 2, summarizes field data collected during monitoring well purging. The groundwater elevations are summarized on Table 2, Attachment 2, and illustrated on Figure 2, Attachment 1. The groundwater quality for Chemicals of Concern is summarized on Table 3, Attachment 2, and illustrated on Figure 3, Attachment 1. A copy of the laboratory analytical report is provided in Attachment 3. Groundwater generated during well purging was either placed in on-site 55-gallon drums or discharged on site as warranted by the data. Any disposal manifests will be forwarded to DHEC upon receipt.

Based on the groundwater quality, $H_2O$ is shutting down the remediation system pending system evaluation. If you have any questions or comments please do not hesitate to contact me at (803) 749-4080.

Sincerely,

**$H_2O$ Environmental, Inc.**

Notes:
All results reported in parts per billion (ug/L) unless otherwise noted.

SSTL = Site specific target levels referenced in bid

FP = Free Product, NS = Not Sampled

BDL = Below detecatable Levels

Total BTEX = Summation of benzene, toluene, ethylbenzene and xylenes

MTBE = Methyl-tert-buytl-ether

Irmo, SC 29063

February 24, 2004
Report # 402001021
Order # 14448
STL Miami Cert ID# 96023
NELAP ID# E86349

Site Location/Project
South Carolina
DHE-12335 Crawfords

Sample I.D.: CLS-WW
Collected: 02/18/04 00:00
Received: 02/20/04 10:00
Collected by: D. Burritt

| PARAMETER | RESULT | UNITS | METHOD | DETECTION LIMIT | DATE EXT. | DATE ANALY. | ANALYST |
|---|---|---|---|---|---|---|---|
| SURROGATE: Dibromofluoromethane | 92.75% | | | | | | |

REPORT COMMENTS:
BDL: Indicates Analyte is Below Detection Limit MEDF: Matrix Effected Dilution Factor
Unless otherwise noted, mg/Kg denotes wet weight

Unless otherwise noted in analyst section, all work performed by STL MIAMI.
10200 USA Today Way, Miramar Florida 33025. (954) 431-4550 (South Carolina Cert ID# 96023)
Certs: FL=E86349, AL=41180,CT=PH0217, MD.=#271, MA.=#M-FL535,PR=FL00535 SC=96023,TN=TN02836
*Tests results meet all the requirements of NELAC, unless identified as "certification in-process"
Unless otherwise noted, samples submitted for EPA 5035 were collected,preserved and analyzed in accordance with all methodology requirements.

MDL for above samples = 10 ug/L

BDL - denotes 'Not Detected" at or above the lower method detection limit

- Unless otherwise noted in comments section samples listed above analyzed for methane by C.A.L., 3005 Broad River Rd. Columbia, SC 29210.

* - Reported as ug/L - in water phase.

RE: Lab Project Number: 9279737
Client Project ID: Crawford's Country/12335 22979

Dear Ms. Thoma:

Enclosed are the analytical results for sample(s) received by the laboratory on October 22, 2004. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

If you have any questions concerning this report please feel free to contact me.

Sincerely,

Sherri Stabel

## PARAMETER FOOTNOTES

Dilution factor shown represents the factor applied to the reported result and reporting limit due to changes in sample preparation, dilution of the extract, or moisture content

Inorganic Wet Chemistry and Metals Analyses were performed at our Pace Asheville laboratory and Organic testing was performed at our Pace Charlotte laboratory unless otherwise footnoted.

Method 9071B modified to use ASE.

All pH, Free Chlorine, Total Chlorine and Ferrous Iron analyses conducted outside of EPA recommended immediate hold time.

| | |
|---|---|
| ND | Not detected at or above adjusted reporting limit |
| NC | Not Calculable |
| J | Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit |
| MDL | Adjusted Method Detection Limit |
| (S) | Surrogate |
| [1] | Low surrogate recovery was confirmed as a matrix effect by a second analysis. |

## QUALITY CONTROL DATA PARAMETER FOOTNOTES

Consistent with EPA guidelines, unrounded concentrations are displayed and have been used to calculate % Rec and RPD values.

| | |
|---|---|
| LCS(D) | Laboratory Control Sample (Duplicate) |
| MS(D) | Matrix Spike (Duplicate) |
| DUP | Sample Duplicate |
| ND | Not detected at or above adjusted reporting limit |
| NC | Not Calculable |
| J | Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit |
| MDL | Adjusted Method Detection Limit |
| RPD | Relative Percent Difference |
| (S) | Surrogate |
| [1] | The surrogate and/or spike recovery was outside acceptance limits. |
| [2] | The spike recovery was outside acceptance limits for the MS and/or MSD due to an analyte concentration in the sample at four times greater than the spike concentration. The QC batch was accepted based upon LCS and/or LCSD recoveries within acceptance limits. |

## Instructions for completing Chain of Custody (COC)

1. Complete all Client Information at top of sheet: name, address, phone, contact (person to whom report will be sent and contact can be made if questions arise), billing information if different from client, PO#, Project Name and/or Project Number as it will appear on the report.

2. Quote Reference, Project Manager, Project No. and Profile No. will be completed by Pace.

3. A separate COC must be filled out for each day of sample collection.

4. Sampler should print their name in the space provided and sign their name followed by the date of the sampling event.

5. Complete Sample Description as it will appear on the laboratory report; include time of sampling, sample matrix, no. of containers and preservative used.

6. Analysis Requested: Complete analysis on the lines provided and place a check in the column for the samples requiring the analysis. It may be necessary to use the space provided for additional comments or include attachments for extended lists of parameters.

7. Submission of samples to laboratory: Indicate Item Number of those samples being transferred; sign relinquished by, and include your affiliation.

*** IMPORTANT NOTE:**

**Standard Turnaround Time is 2 weeks.** If this does not satisfy your requirements, arrangements must be made prior to samples being submitted to the laboratory. Contact your project manager.

**Special Project Requirements** such as Low Level Detection Limits or level of QC reported must be indicated on the chain of custody. (Use Additional Comments Section.)

## Instructions for completing Chain of Custody (COC)

1. Complete all Client Information at top of sheet: name, address, phone, contact (person to whom report will be sent and contact can be made if questions arise), billing information if different from client, PO#, Project Name and/or Project Number as it will appear on the report.

2. Quote Reference, Project Manager, Project No. and Profile No. will be completed by Pace.

3. A separate COC must be filled out for each day of sample collection.

4. Sampler should print their name in the space provided and sign their name followed by the date of the sampling event.

5. Complete Sample Description as it will appear on the laboratory report; include time of sampling, sample matrix, no. of containers and preservative used.

6. Analysis Requested: Complete analysis on the lines provided and place a check in the column for the samples requiring the analysis. It may be necessary to use the space provided for additional comments or include attachments for extended lists of parameters.

7. Submission of samples to laboratory: Indicate Item Number of those samples being transferred; sign relinquished by, and include your affiliation.

*** IMPORTANT NOTE:**

**Standard Turnaround Time is 2 weeks.** If this does not satisfy your requirements, arrangements must be made prior to samples being submitted to the laboratory. Contact your project manager.

**Special Project Requirements** such as Low Level Detection Limits or level of QC reported must be indicated on the chain of custody. (Use Additional Comments Section.)

RE: Lab Project Number: 92119599
Client Project ID: Crawford's 12335/CA:26743

Dear Ms. Thoma:

Enclosed are the analytical results for sample(s) received by the laboratory on May 18, 2006. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

Inorganic Wet Chemistry and Metals Analyses were performed at our Pace Asheville laboratory and Organic testing was performed at our Pace Charlotte laboratory unless otherwise footnoted.

If you have any questions concerning this report please feel free to contact me.

Sincerely,

Teresa Adams

## PARAMETER FOOTNOTES

Dilution factor shown represents the factor applied to the reported result and reporting limit due to changes in sample preparation, dilution of the extract, or moisture content

Method 9071B modified to use ASE.

All pH, Free Chlorine, Total Chlorine and Ferrous Iron analyses conducted outside of EPA recommended immediate hold time.

Depending on the moisture content the PRLs can be elevated for all soil samples reported on a dry weight basis.

2-Chloroethyl vinyl ether has been shown to degrade in the presence of acid.

| | |
|---|---|
| ND | Not detected at or above adjusted reporting limit |
| NC | Not Calculable |
| J | Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit |
| MDL | Adjusted Method Detection Limit |
| (S) | Surrogate |

## Instructions for completing Chain of Custody (COC)

1. **Section A and B:** Complete all Client information at top of sheet: company name, address, phone, fax, contact (the person to contact if there are questions, and who will receive the final report.), e-mail address (if available), PO#, Project Name and/or Project Number as you would like to see it appear on the report.

2. **Section C:** Invoice Information: Billing information is included in this section. This information should include the name and address of the person receiving the invoice.

3. Quote Reference should be completed if a quotation was provided by Pace Analytical. The Project Manager, and Profile No. will be completed by Pace Analytical Services.

4. **Site Location:** A separate COC must be filled out for each day of sample collection. Record the two letter postal code for the US state in which the samples were collected.

5. **Regulatory Agency:** List the program that is guiding the work to ensure proper regulations are followed.

6. **Section D:** Complete a Sample Description in the "SAMPLE ID" section as you would like it to appear on the laboratory report. The following information should also be included: the sample matrix, sample type (G (grab) or C (composite). When collecting a composite, the start time and end time should be documented in the respective boxes. The collection time for a grab (G) sample should be entered in the boxes marked 'Composite End/Grab'). Sample temp at collection (if required by state), the total number of containers, and preservative used.

7. Mark if the sample was filtered in the field by marking Y or N in 'Filtered' row by the Analysis requested.

8. Requested Analysis: List the required analysis and methods on the lines provided and place a check in the column for the samples requiring the analysis. Additional comments should be referenced in the bottom left hand corner or include attachments for extended lists of parameters.

9. The sampler should print their name in the space provided and sign their name followed by the date of the sampling event at the bottom of the COC in the spaces designated for 'SAMPLER NAME AND SIGNATURE'.

10. When relinquishing custody of the samples to a representative of the laboratory or other organization, indicate the Item Numbers of those samples being transferred; sign relinquished by, date and time, and include your affiliation.

***Important Note:**

**Standard Turnaround Time is 2 Weeks/10 business days.** Results will be delivered by end of business on the date due unless other arrangements have been made with your project manager.

**Special Project Requirements** such as Low Level Detection Limits or level of QC reported must be included on the chain of custody in the Additional Comments section.

Storage Tank Management

**Underground Storage Tank (UST) Owner/Operator Lead (Option 1)**
**Information Sheet**

**1. CHOICE OF CONTRACTOR** (Crawford's Country Store, Abbeville County)
As the UST Owner/Operator of Site # ( 12335 ), I would like to proceed with the (SLA/RA/Corrective Action/Well Abandonment) using the contractor or person(s)* listed below.

Name of Contractor/Person(s) Enviro-Test Services, Inc.
Address 7435 Broad River Road, Suite # 105
Irmo, South Carolina 29063
Telephone Number (803) 732 - 5770

*indicate if the person listed is your own employee

**2. FINANCIAL OR FAMILIAL RELATIONSHIP**
Does a financial or familial relationship, as defined below, exist between you and the contractor/person that you listed above? _____ Yes ___X___ No

Financial Relationship: A connection or association through a material interest of sources of income which exceed five percent of annual gross income form a business entity.

Familial Relationship: A connection or association by family or relatives in which a family member or relative has a material interest. Family or relatives include: father, mother, son, daughter, brother, sister, uncle, aunt, first cousin, nephew, niece, husband, wife, father-n-law, mother-n-law, son-n-law, daughter-n-law, stepfather, stepmother, stepson, stepdaughter, stepbrother, stepsister, half brother, half sister, grandparent, grandchild, great grandchild, step grandparent, step great grandparent, step grandchild, step great grandchild, or fiancee.

**3. PAYMENT**
You can pay the contractor and, upon the submittal of the canceled check (or a notarized statement from the contractor), be compensated from the SUPERB Account, or have payment issued directly from us to the contractor.

I request that payment be made to me after I have paid the contactor. _____ Yes ___X___ No
I request that payment be made directly to the contractor. ___X___ Yes _____ No

(Note: all costs must receive prior financial approval from the Department regardless of payment option.)

Underground Storage Tank Owner/Operator Signature Frank Crawford
Date 5-7-97

**If you are the owner of the former or existing underground storage tanks and the property owner, please complete this form.**

## PERMISSION FORM - SITE ID #12335

I, HAROLD FRANKLIN CRAWFORD, certify that I am the legal owner of the underground storage tanks and property located at the facility identified below or serve as the authorized representative for the owner. I grant permission to the South Carolina Department of Health and Environmental Control (SCDHEC) to secure on my behalf services of a contractor for only the activities outlined in the November 27, 1996 letter and authorize SCDHEC, or a contractor selected by SCDHEC, to enter this property at reasonable times only to accomplish these tasks. The contractor will be designated as my contractor for only the site rehabilitation activities outlined therein. Compensation to the contractor will be from the SUPERB Account and I will have no obligation to pay the contractor. I understand that SCDHEC shall be responsible for notifying me of all activities that are necessary prior to their initiation and shall promptly provide to me a summary of the data upon request.

Name of Facility Crawford's Country Store Phone # 864-348-7442

Street Address of Facility ROUTE # 4 BOX 205

Town, City, District, Suburb ABBEVILLE, SC 29620

Name of nearest intersecting street, road, highway, alley
INTERSECTION OF HIGHWAY 28 and 184

Is this facility within the city limits? (yes or no) NO

Is this facility serviced by a public water or sewer utility? (yes or no) NO, if no, please provide the name and phone number of a person that we can contact that can assist in the location of private water and septic tank lines HAROLD FRANKLIN CRAWFORD, phone number 864-446-2000

Were underground storage tanks previously removed from the ground at this facility? (yes or no) YES, if yes, please provide the name of a person we can contact that can assist in the location of the former underground storage tank excavation HAROLD FRANKLIN CRAWFORD, Phone number 864-446-2000

Is the property currently leased or rented to someone? (yes or no) NO, if yes, please provide their name _____ and phone number _____ and let them know about the pending assessment activities. If vehicles or other mobile structures are parked over the former or existing underground storage tanks, they should be moved before SCDHEC's contractor gets to the site.

NAME of UST/property owner (Please Print): HAROLD FRANKLIN CRAWFORD

Phone Number (home) 864-446-2000 (work) 864-348-7442

Signature of UST/property Owner: Harold Franklin Crawford

## 3.0 Discussion of Laboratory Results

All soil samples obtained during the course of UST closure field activities were submitted to a state certified laboratory for analysis. The soil samples were analyzed using EPA Method 8020, 5030 and 8100. Refer to Table 1, below, for a select summary of the soils laboratory analysis results.

**Table 1**

Select Summary of Laboratory Results: Soils

| Sample ID # | Benzene* | Toluene* | Ethyl-benzene* | Xylenes* | TPH^ | Naphthalene* |
|---|---|---|---|---|---|---|
| # 1 | BDL | 57 | 148 | 299 | 18 | NA |
| 2 | 5278 | 8116 | 28527 | 30214 | 1819 | NA |
| 3 | 1663 | 6598 | 20104 | 26144 | 1379 | NA |
| 4 | 3507 | 7099 | 21078 | 24848 | 1469 | NA |
| 5 | 246 | 532 | 286 | 1647 | 82 | BDL |
| 6 | 6155 | 8940 | 29938 | 29552 | 1794 | NA |
| SS # 1 | BDL | 99 | 742 | 1461 | 113 | BDL |
| 2 | 12 | 83 | 299 | 815 | 51 | BDL |
| 3 | 27 | 58 | 154 | 353 | 34 | BDL |

# 1.0 INTRODUCTION

The Crawford's Country Store Site, SCDHEC Site # 12335, is a convenience store/gasoline retail facility. The site is located on the corner of S.C. Highway 28 and S.C. Highway 184, in Abbeville County, South Carolina. The site is depicted on the Antreville, South Carolina, 7.5-minute quadrangle U.S. Geological Survey topographic map. In November, 1991, a Report of Suspected/Confirmed Release was filed with the South Carolina Department of Health and Environmental Control (DHEC) for the Crawford's Country Store Site, by Blue Ridge Environmental Services, Inc. Soil analytical data obtained during underground storage tank (UST) closure activities at the site indicated a petroleum hydrocarbon release had occurred. Five tanks were removed during the UST closure, which included: one 10,000-gallon gasoline, one 8,000-gallon gasoline, one 2,000-gallon gasoline, one 1,000-gallon diesel, and one 550-gallon kerosene tank. The tanks were replaced, within the site tank basin, with one 10,000-gallon and two 6,000-gallon gasoline tanks and one 6,000-gallon kerosene tank. There is also a 6,000-gallon diesel tank located northwest of the on-site building. In May, 1997, Enviro-Test Services, Inc., performed an Initial Groundwater Assessment, which revealed petroleum hydrocarbon impact to the ground water at the site.

In December, 1997, Marshall Miller & Associates (MM&A) performed a Rapid Assessment under state contract #SB-76499-08/29/96/MJN to further assess the site, as directed by DHEC. This Rapid Assessment Report (RAR) describes the work activities performed by MM&A.

## 1.1 Qualifying Statement

This report documents the results of the Rapid Assessment investigation conducted at the subject site under State Contract #SB-76499-08/19/96/MJN. Its intent is to summarize the results and findings of the investigation, and to provide recommendations regarding further investigative, monitoring, or remedial steps to be taken. The primary focus of the investigation and this report is to determine the degree and extent of contaminant impact that may pose a threat to human health and safety and/or the

environment, determine the potential migration pathways and potential receptors involved, and provide recommendations regarding remediation, monitoring, and/or further investigative efforts. Detailed presentation and discussion of methods and background is minimized, but all data are incorporated in tables, maps, and appendices.

The State Contract (#SB-76499-08/29/96-MJN) requirements and the "Risk-Based Corrective Action for Petroleum Releases" (January 5, 1998) guidance document were used to provide guidance on site assessment activities.

## 2.0 RECEPTOR SURVEY RESULTS

MM&A evaluated potential receptors within 1,000 feet of the site, which are depicted on *Map 2, Potential Receptors, Appendix II.* The potential receptors that were evaluated are as follows:

- Underground utilities
- Surface water drainage structures and features
- Underground stormwater drainage structures and features
- Potable water wells
- Buildings or structures.

### 2.1 Underground Utilities

Underground utilities that were identified during the potential receptor survey include telephone lines, gas lines, fiber optics, and a septic system. Electricity is supplied by overhead power lines, except for a few lines leading from the Crawford's Country Store to the pump islands.

Based on the Rapid Assessment results, it does not appear that any of these underground utilities are in direct contact with dissolved phase-contaminated ground water, or with residual soil contamination.

### 2.2 Surface Water Drainage Structures and Features

A small lake is located approximately 1,000 feet north of the site, which is hydrologically upgradient of the site.

### 2.3 Underground Storm Water Drainage Structures and Features

One drop inlet drain was identified in close proximity to the northwest corner of the Crawford's Country Store building which appeared to be designed to direct water away from the site in the northwest direction, toward a topographically lower area (see *Map 2, Appendix II*). The discharge location was not known by the property owner. At the time of this Rapid Assessment no water was identified in the drain, thus no sample was procured. Volatile Organic Compounds (VOCs) were not identified when the drop inlet was screened with a PID.

### 2.4 Potable Water Supply Wells

Several residences and commercial facilities are located within 1,000 feet of the site all of which are reported to have water wells. However, only three water wells were determined to be on-site or downgradient of the Crawford's Country Store. One water well, the Crawford's Country Store water well (CLSWW), is located on-site, approximately 170 feet hydraulically upgradient of monitoring well MW-2, located near the former UST basin. A second potable water well, the Crawford Property water well (CPWW), is located approximately 275 feet downgradient of MW-2 (see *Map 2, Appendix II* for location). At the time of the field investigation, well CPWW was not being utilized and the residence it supplies (owned by Mr. Crawford) was unoccupied. The third downgradient water well is located at the Jerry McCullough residence (803-348-7040), situated approximately 1,000 feet downgradient of the site.

### 2.5 Buildings or Structures

Two buildings are located within 250 feet of the former UST basin where the highest COC concentrations where observed. One building, the Crawford's Country Store, appears to be located above the region of apparent ground water contamination and could present an exposure point for vapor inhalation due to COC volatilization from contaminated ground water. The second building is the Crawford residence, which is located approximately 250 feet downgradient of the former UST basin and does not appear to be located directly above the area of highest soil or ground water impact. At the time of the assessment, the Crawford residence was unoccupied.

## 3.0 ASSESSMENT INFORMATION

### 3.1 Regional Geology and Hydrogeology

The subject site lies in the western Piedmont geologic province of South Carolina. Bedrock strata in the area are igneous and metamorphic assemblages of gneisses, schists, amphibolites, and intrusive granitoids, lying in composite stackings of thrust sheets of the Inner Piedmont belt. Unconsolidated sediments which mantle the bedrock form a relatively thin veneer, formed from weathering of the parent bedrock material (saprolite) and from recent re-working of colluvial deposits originally derived from the parent igneous and metamorphic rocks.

In general, the near surface aquifer system within the vicinity consists of antochthonous and colluvial sediments consisting of a variety of lithologies from predominately fine to medium sands. Shallow ground water discharge is towards the south-southeast. Spur Creek is the principal drainage feature within the site vicinity, and flows southeasterly and is located approximately 2,000 feet southeast of the site.

### 3.2 Site-Specific Soils, Geology, and Hydrogeology

The description of the site-specific soils, geology, and hydrogeology at the site is based on lithologic observations, and sieve and hydrometer analyses associated with the 13 soil borings conducted by MM&A. Results of these observations and analyses indicate that:

- The lithology consists of fine- to medium-grained, consolidated sandy clay down to a depth of approximately 65 feet below ground surface. At that depth, competent bedrock was encountered in boring DMW-17, the only boring which was taken to such depth as to encounter the bedrock. Sieve and hydrometer analyses of two soil samples obtained from soil borings SB-1 (at a depth of 24 feet below ground surface) and SB-2 (at a depth of 12 feet below ground surface) showed the following results:

    - 36.6% of the shallow sample (depth of 12 feet) passed the No. 200 sieve. This indicates that 36.6% of the soil particles are silt- and clay-sized, and 63.4% of the sample consists of sand- and/or gravel-sized particles.
    - 50.8% of the deeper sample (depth of 24 feet) passed the No. 200 sieve. This indicates that 50.8% of the soil particles are silt- and clay-sized, and 49.2% of the sample consists of sand- and/or gravel-sized particles.

## 4.0 FIELD ASSESSMENT METHODOLOGY

### 4.1 Soil Boring and Field Screening Points Installation and Sampling

MM&A installed 12 soil borings (SB–1 through SB-12) and 13 ground water field screening points (FS-13 through FS-25) to a maximum depth of 28 feet below ground surface, utilizing direct push technology (Geoprobe®). The locations of these soil borings and field screening points are indicated on *Map 3, Soil Boring, Field Screening and Monitoring Well Locations, Appendix II.*

### 4.1.1 Soil Borings

The soil boring samples were collected utilizing a decontaminated two-inch diameter, stainless steel barrel with expendable acetate liners. Continuous cores were collected following penetration of any asphalt and/or concrete. All of the soil borings were evaluated for indications of petroleum staining and/or odors, and lithologically logged using ASTM D2488-84, "Standard Practices for Description and Identification of Soils (Visual-Manual Procedures)."

A portion of each soil sample was placed into laboratory-supplied glassware following QA/QC protocols, and then placed into a cooler with ice and Chain-of-Custody forms for shipment to the approved analytical laboratory. A second portion of the field screening soil sample was placed into a Zip-Lock ® type bag, broken apart, and placed in the sun to enhance volatilization. After approximately 15 minutes, the headspace of each soil sample was screened for the presence of volatile organic compounds (VOCs) with a photoionization detector (PID). The PID was calibrated daily with 100 parts per million (ppm) isobutylene and air. All PID readings and field observations were recorded (see *Soil Boring Logs, Appendix III).* The PID readings for the saturated soils at the bottom of the soil borings were used in conjunction with additional ground water field screening points to determine the most appropriate locations for the permanent ground water monitoring wells.

### 4.1.2 Ground Water Field Screening Points

In addition to field screening of saturated soils, ground water samples were collected from each of ten field screening locations, in order to qualitatively delineate the extent of ground water contamination and provide a basis for selection of monitoring wells locations. Each sample was collected using a four feet long Geoprobe® stainless steel ground water sampling device, or through a one-inch diameter temporary monitoring well and a single-use, 0.5-inch polyethylene tubing with a decontaminated stainless steel check valve. Each ground water sample was placed into a Zip-Lock® type bag and the headspace of each sample was screened, within two minutes of collection, for the presence of VOCs with a PID (see *Table 4, Appendix I, Ground Water Field Screening PID Results).*

All drilling and sampling equipment was steam cleaned and/or cleaned with an industrial grade detergent (Alconox®) prior to use at each of the boring locations to minimize the potential for cross-boring contamination, and between each sampling interval. *Table 2, Appendix I, Soil Boring/Field Screening Total Depths,* identifies the total depth of each soil boring and field screening point.

### 4.2 Monitoring Well Installation

Fifteen shallow permanent ground water monitoring wells (designated MW-2 through MW-16) and one deeper, telescoping ground water monitoring well (DMW-17) were installed at the site in accordance with the June 2, 1985, South Carolina Well Standards and Regulations, and under the supervision of American Environmental Drilling Service, Inc., South Carolina Certified Well Driller No. 1152. A drilling rig equipped with 4.25-inch inside diameter hollow stem augers (HSA) was used to install the wells. Ground water monitoring well construction details are provided in *Appendix IV.*

All wells installed during this Rapid Assessment were constructed using two-inch diameter, flush-threaded, PVC well casings and 10 feet of No. 10 (0.010-inch) slot screens. Each well received a well-sorted, medium-grained, silica sand pack. Each sand pack extended approximately two feet above the top of the screen. Approximately two feet of bentonite was placed in the boreholes above the sand pack and hydrated. The remainder of the borehole annulus was filled with cement grout, and flush-mounted steel protective casings were set in the grout to protect the PVC well casing. To complete each well, a PVC cap was placed on the PVC well casing and locked.

A drilling rig capable of performing air and mud rotary was used to install one telescoping permanent ground water monitoring well, DMW-17, to delineate the vertical extent of dissolved phase impacted ground water. The telescoping well was constructed by installing a six-inch diameter PVC outer casing to a depth of 65 feet below ground surface (to the top of the bedrock surface), and grouting it into place. The following day, the boring was advanced an additional 10 feet below the base of the six-inch diameter casing. A five feet length of two-inch diameter, 0.010-inch slot well screen was installed from 70 to 75 feet below ground surface. A sand filter pack was emplaced extending approximately five feet above the top of the screen, creating an effective screened interval from 65 to 75 feet below ground surface. The total depths of the ground water

monitoring wells are presented in *Table 3, Appendix I, Ground Water Monitoring Well Total Depths.*

### 4.3 Permanent Ground Water Monitoring Well Sampling

The ground water sampling data were recorded on water sampling forms (see *Appendix III*). After measuring the depth to ground water, the wells were properly developed by evacuating a minimum of three well volumes or until pH, temperature and specific conductivity measurements stabilized. Water generated from the wells during well development and sampling was transported and treated off-site at Carolina Bio-Services Inc., Orangeburg, SC.

The ground water samples were collected in a manner such as to minimize the potential to alter or to contaminate the sample during collection or introduction into the sample containers. The ground water sample collection procedures and field measurements were conducted in accordance with accepted US EPA and DHEC protocols. Sampling personnel wore new, laboratory-quality latex gloves during all sample collection activities; at a minimum, the gloves were replaced prior to sampling each well. The filled sample containers, which were provided by the laboratory, were placed immediately into a clean sample cooler and covered with ice packs.

The ground water samples remained in the custody of MM&A sampling personnel throughout the collection process. MM&A personnel transported the ground water samples directly to the laboratory. This transaction is documented on the Chain-of-Custody Record (*Appendix V*).

## 5.0 HYDROGEOLOGIC PARAMETERS

### 5.1 Potentiometric Surface

The top of each permanent ground water monitoring well casing and the ground level elevation were surveyed relative to an arbitrary benchmark of 100 feet during a comprehensive site survey conducted by Arthur J. Weed, South Carolina Professional Surveyor Number 4193. The northern edge of each well casing was marked with a permanent indelible marker as a referenced point. All potentiometric ground water levels

were measured in relation to this surveyed reference point. The depth to ground water was measured to the nearest 0.01 feet using a decontaminated interface probe, and was found on December 1, 1997, to range from 5.1 feet to 21.05 feet below surface grade. The presence or absence of free product was determined by the interface probe. The potentiometric data are depicted on *Map 4, Appendix II, Potentiometric Surface of Upper Unconfined Horizon,* and are summarized in *Table 1, Appendix I, Potentiometric Data.*

### 5.2 Hydraulic Gradient

#### 5.2.1 Horizontal Gradient

The horizontal hydraulic gradient (i) is the difference in the hydraulic head between two potentiometric lines, divided by the differences at right angles between the two potentiometric lines. The hydraulic gradient in the area of ground water impact at the site, in the upper unconfined aquifer horizon, was calculated to be approximately 0.0229 feet per feet (2.29%), as measured on December 1, 1997. Ground water flow lines indicate that the direction of flow is to the south-southeast.

#### 5.2.2 Vertical Gradient

An upward vertical gradient was calculated between the upper and lower aquifer horizons. On December 1, 1997, the ground water elevation in the telescoping permanent ground water monitoring well, DMW-17, was 84.55 feet, and ground water elevation in the adjacent shallow monitoring well, MW-2, was 82.40 feet. Therefore, the difference in the water level between the upper and lower aquifer horizons was 2.15 feet. The separation between the well screen midpoints of the wells is 55.0 feet. Therefore, dividing the difference in ground water elevations (2.15 feet) by the mid-point screen separation (55.0 feet) results in a calculated upward vertical gradient of 0.0391 feet per feet (3.91%).

### 5.3 Hydraulic Conductivity

The hydraulic conductivity (K) is the rate at which water can move through an aquifer, or porous medium (Fetter, 1980). An "average" hydraulic conductivity for the upper unconfined horizon at the site has been estimated on the basis of performing slug tests on two shallow permanent ground water monitoring wells, MW-8 and MW-13. In

addition, a third slug test was performed on DMW-17, the telescoping well, to estimate the hydraulic conductivity at the deeper horizon. Each slug test was performed by quickly removing a volume of water from each well and measuring the rate of the recovery of the water level. The recovery data were plotted onto semi-log graph paper, and a best-fit line was imposed on the graphs. The hydraulic conductivity (K) was calculated by the following formula (Hvorslev, 1951);

$$K = \frac{r^2 \ln (L/R)}{2 L To}$$

| | | |
|---|---|---|
| $K$ | = | Hydraulic conductivity |
| ln | = | natural logarithm |
| *r | = | effective radius of screened interval |
| To | = | basis lag time |
| R | = | radius of boring |
| $L$ | = | length of saturated screened interval |

The slug test data are included in this report in *Appendix VII.* The following conductivity values were calculated for each well:

| Well | Hydraulic Conductivity |
|---|---|
| MW-8 | 1.137 ft/day |
| MW-13 | 5.200 ft/day |
| DMW-17* | 1.499 ft/day* |
| Arithmetic average of MW-8 and MW-13 | 3.169 ft/day |

*Telescoping well results are not applicable to upper horizon hydraulic conductivity calculations.

### 5.4 Average Linear Velocity

The average linear velocity (V) of ground water flow is the calculated rate of movement of ground water through an aquifer. The average linear velocity equation utilizes the following parameters:

- Calculated "average" value for the hydraulic conductivity (K), estimated to be 3.169 feet per year.
- Calculated value for the hydraulic gradient (i), 0.0229 feet per feet.
- Estimated effective porosity ($n_e$), 0.46

The effective porosity of the unconfined upper aquifer at the site was estimated based on the procedures outlined in the DHEC Risk-Based Corrective Action for Petroleum Releases as presented in *Appendix B, Figure 4* of that document, and the grain size/hydrometer data (see *Appendix V*). Based on these procedures and data, the effective porosity in the ground water zone was estimated to be 0.46 (46.0%).

The average linear velocity is calculated using the following equation:

$$V = \left( \frac{(3.169)(0.0229)}{0.46} = 0.1578 \text{ ft/d or } 57.58 \text{ ft/yr} \right)$$

The SCDHEC "Summary of Slug Test" data form, which summarizes the data for MW-8, MW-13, and DMW-17 is shown on the following page.

**Slug Data**

See Appendix III Table _____ Figure _____ for a list of all data measurements.(water level logs, etc.) (Complete as appropriate)
Water Level Recovery Data was measured by manually with water level indicator. (Hermit Data Logger, Manually with Water Level Indicator, etc.) (List Method).
Complete the following table for each well tested.
COMPLETE A SECOND SHEET IF MORE THAN FOUR WELLS ARE TESTED

| Slug Test Conducted in well(s) number | MW-8 | MW-13 | DMW-17 Type III |
|---|---|---|---|
| Initial Rise/Drawdown in well (feet) | 3.57 | 1.55 | 3.17 |
| Radius of Well Casing (feet) | 0.083 | 0.083 | 0.083 |
| Effective Radius of Well (feet) | 0.217 | 0.217 | 0.217 |
| Static Saturated Aquifer Thickness (feet) | NA | NA | NA |
| Length of Well Screen (feet) | 15 | 15 | 10 |
| Static Height of Water Column in Well (ft) | 12.47 | 3.95 | 10 |

**Calculations**

See Appendix VII Table _____ Figure ____ for calculations. (*Complete as appropriate*)
The method for aquifer calculations was Hvorslev (*i.e. Bouwer-Rice, Cooper, etc.*)
Calculated values by well were as follows:

| Slug Test Conducted in well(s) number | MW-8 | MW-13 | DMW-17 |
|---|---|---|---|
| Hydraulic Conductivity | 1.137 | 5.200 | 1.499 |

Thickness of the aquifer used to calculate hydraulic conductivity was _____ feet.
The aquifer is _____ confined _____ semi-confined X _____ water table (*Check as appropriate*).
The estimated seepage velocity is 57.58 feet per year based on a hydraulic conductivity of 3.169 ft/day (avg.), a hydraulic gradient of 2.29% , and a porosity of 46 percent for sandy clay soil (*list type, i.e., silty sand, clay, etc.*).

# SUMMARY OF SLUG TEST

# 6.0 ASSESSMENT RESULTS

## 6.1 Ground Water Field Screening Results

The PID results for ground water field screening points are summarized in *Table 4, Appendix I, Ground Water Field Screening PID Results.*

The ground water field screening data were utilized to identify areas of potential impact, and to identify the most appropriate locations for the placement of the permanent ground water monitoring wells. The saturated soil and ground water field screening locations where PID concentrations were greater than 20.0 ppm (calibration gas units) are depicted on *Map 5, Appendix II, Ground Water Field Screening* (prepared prior to installation eight (8) monitoring wells, and used as guidance in selection of well locations).

## 6.2 Soil Analytical Results

The laboratory analytical results from the soil borings are summarized in *Table 5, Appendix I, Soil Analytical Results (mg/kg).* Concentrations of chemicals of concern (COC) that exceed the Tier I South Carolina Risk Based Screening Levels (RBSLs) are highlighted.

The analytical results were compared to the Tier I RBSLs look-up table (DHEC Risk Based Corrective Action for Petroleum Releases, January, 1998) for sandy soil. Based on this comparison, benzene, and toluene, ethylbenzene, total xylenes, and naphthalene were present in concentrations greater than their RBSLs in the following soil borings:

- Benzene:

  SB-1, SB-5, and SB-7, at a depth of eight feet below ground surface.
  SB-4 at a depth of 12 feet below ground surface.

- Toluene and naphthalene:

  SB-4 at a depth of 12 feet below ground surface.
  SB-5 at a depth of eight feet below ground surface.

- Ethylbenzene and Total Xylenes:
  SB-4 at a depth of 12 feet below ground surface.

### 6.3 Free Product Results

Free product was identified and delineated in ground water monitoring wells OMW-1, MW-2, and MW-3 during the December, 1997, field work conducted by MM&A. However, free product was not detected in OMW-1 during the IGWA. The initial thickness measurements on December 1, 1997 indicated that there was 2.15 feet of free product in OMW-1, 0.01 foot in MW-2, and 0.1 foot in MW-3.

It should be noted that there are limitations associated with the accuracy of the results obtained by directly measuring the thickness of free product in monitoring wells. It is documented in the literature that the measured free product thickness in a monitoring well exceeds, sometimes by a large amount, the "true" thickness of hydrocarbon in the aquifer. Hughes, et. al. (1988) attributes this phenomenon to the interaction of capillary forces and buoyancy inside the monitoring well, and between the monitoring well and the formation. The interaction of these physical properties leads to an exaggerated depression of the water table downward in the monitoring well, which results in a greater thickness of hydrocarbon in the monitoring well than in the adjacent formation. Hughes, et. al (1988) notes that the upper elevation of the free product in a monitoring well will be equivalent to that of the free product in the formation; however, the base elevation of the free product in a monitoring well can be significantly lower than the base elevation of the free product in the formation. Hence, the exaggerated thickness.

Research has focused on developing a correlation between the free product thickness measured in monitoring wells, and the "true" free product thickness in the adjacent formation. However, none of the available methods developed to date have been found to generate predictable, reproducible results under either laboratory or field conditions, as noted in the USEPA publication, "*How to Effectively Recovery Free Product at Leaking Underground Storage Tanks: A Guide for State Regulators,*" USEPA document 510-R-96-001, published in 1996. The USEPA publication also identified

several limitations associated with the various methods developed to date that are being used to correlate the measured to the "true" free product thickness, which are as follows:

- The free product thickness measured in monitoring wells changes over time as the water table fluctuates.
- None of the methods account for residual petroleum hydrocarbons in the formation, and a portion of these hydrocarbons can contribute to the free product thickness in either the monitoring well or the formation as the potentiometric surface fluctuates.
- The methods that are based on the measurement of specific soil and fluid properties require field measurement of capillary pressure, pore water pressure, and water saturation that are difficult to accurately measure in the field. Furthermore, laboratory-developed values will typically not accurately represent field conditions.
- None of the methods account for the heterogeneity of aquifer parameters in the field. The movement of free product is a function of aquifer heterogeneities, which are rarely adequately represented by "average" properties.

Therefore, based on these limitations, the measured thickness of free product in permanent ground water monitoring wells should be considered to be representative of a "relative" value, and not a "true" value for the thickness of free product at Crawford's Country Store.

### 6.3.1 Free Product Bail-Down Results

Despite the limitations noted previously in Section 6.3, Wagner, et. al. (1988) and the USEPA (1996) note that either a pumping procedure or a bail-down procedure can be used to evaluate the free product thickness, and can yield results that are representative of a "true" free product thickness in the formation. MM&A used a bail-down procedure to evaluate free product thickness in monitoring well OMW-1. Wagner, et. al. (1988) notes that the quality of the data from the bail-down procedure is analogous to that from a "slug" test, and the procedure assumes the following:

- The hydrocarbon/water interface is above the potentiometric surface.
- The recharge rate of hydrocarbon into the well is "slow."

The bail-down method involves quickly bailing free product from a monitoring well until its thickness reaches an acceptable minimum thickness, which is defined as 0.1 foot to one foot by Wagner, et. al. (1988), and then measuring the upper elevation of the free product as it recharges. A free product bail-down test was performed on December 1, 1997. The field measurements for the free product bail-down tests are summarized in *Table 7, Appendix I, Free Phase Product Drawdown in OMW-1.*

Wagner, et. al. (1989) described the Yaniga and Demko method for evaluating bail-down test data. Wagner, et. al. (1989) indicated that this method could be used to provide an estimate of the "true" free product thickness; therefore, MM&A selected the Yaniga and Demko method to evaluate the bail-down test data. The Yaniga and Demko method involves plotting the field elevation data versus log time to generate a hydrocarbon-water curve. This curve is then visually evaluated to "fit" two straight lines, and the free product thickness at the intersection of those lines is assumed under the Yaniga and Demko method to be the "true" free product thickness. As depicted on *Graph 1, Appendix I,* the estimated free product thickness for OMW-1 is 0.60 feet.

### 6.3.2 Free Product Bail-Down Recovery Rate Estimates

Free product recovery measurements gathered from a bail-down test may also be used to estimate free product recovery rates which are necessary to properly design a free product recovery remediation system. The USEPA has identified a methodology to estimate the initial free product recovery rate from bail-down data that is applicable to skimming type recovery systems, as follows:

> Prepare a recovery time versus measured free product thickness table of the bail-down field data (*Table 8, Appendix I, Free Product Recovery Rate for OMW-1*).

- Multiply the maximum free product thickness recovery data times 80% (value in feet).
- Interpolate a recovery time value to the 80% maximum thickness value (value in minutes).
- Compute the gallons per foot of free product thickness in the well screen using the equation:

  $(\pi) \times (\text{well radius in ft})^2 \times (7.48\ \text{gal/ft}^3) = \text{gallons per foot.}$

- Compute average recovery rate to 80% recovery using the equation:
- (80% max. thickness) x (gallons per foot of free product thickness ÷ interpolated recovery time value) = gallons per minute or gal/day.

The USEPA publication notes that this method is most appropriate where the free product recharge rate is "slow" relative to the rate of ground water recharge. The USEPA defines "slow" as a matter of "a few minutes." Based on the referenced method, the free product recovery rate calculated for OMW-1 is approximately 6.12 gallons per day. The calculations are presented in *Table 8, Appendix I, Free Product Recovery Rate for OMW-1.*

### 6.4 Dissolved Phase Results

Seventeen permanent ground water monitoring wells and three potable water wells were sampled to evaluate the potential for dissolved phase hydrocarbon impact to ground water. [The farthest downgradient water (the Jerry McCullough water well) analytical results are not included but will be provided under separate cover when available]. The analytical results are summarized in *Table 6, Appendix I, Water Analytical Results (µg/L),* for the December 1, 1997, sampling event. Several hydrocarbon constituents were detected above their Tier I RBSL concentrations for ground water, and are highlighted on *Table 6.*

The isoconcentration maps of dissolved phase hydrocarbon impact in ground water are found in *Appendix II*, for the following constituents:

- *Benzene Concentrations in Ground Water in Upper Unconfined Horizon, Map 7.*
- *Toluene Concentrations in Ground Water in Upper Unconfined Horizon, Map 8.*
- *Ethylbenzene Concentrations in Ground Water in Upper Unconfined Horizon, Map 9.*
- *Total Xylenes Concentrations in Ground Water in Upper Unconfined Horizon, Map 10.*
- *Naphthalene Concentrations in Ground Water in Upper Unconfined Horizon, Map 11.*
- *MTBE Concentrations in Ground Water in Upper Unconfined Horizon, Map 12.*

The data indicate that dissolved phase impact continues to pose a potential threat to human health and the environment both on and off site`. The concentrations of various COC exceed their RBSLs in monitoring wells OMW-1 through MW-6, MW-9, MW-10, and MW-12 through MW-14, and the Crawford Property water well (CPWW). Currently, the Crawford property water well is not in use since the residence it serves is unoccupied DHEC was notified by phone about the impacted water well at the time the analytical results were reviewed (December 22, 1997).

The analytical results for the December 1, 1997 sample procured from OMW-1 seem to be anomalous when compared to the concentrations observed in the sample procured during the IGWA and when compared to current concentrations observed in the monitoring wells surrounding OMW-1. In addition, the presence of free product on the well does not support the low concentrations of dissolved constituents observed in the December analytical results. Consequently, the analytical results were not strictly honored in projecting the areal distributions of COC in ground water. The presence of free product is regarded as clear confirmation that the well is within the area of impact.

The analytical results also revealed lead in each ground water sample procured from the site. The concentrations observed were between 4 ug/l and 23 ug/l. The ubiquitous presence of lead in all samples (including these from upgradient wells with no

petroleum hydrocarbon impact) seems to indicate the influence of background lead present.

# 7.0 DELINEATION

## 7.1 Horizontal Delineation

See *Map 7* through *Map 12* for the known and estimated horizontal extent of COC in soil and ground water media.

## 7.2 Vertical Delineation

See Cross-sections on *Map 13* and *Map 14* for the known and estimated vertical extent of COC impact in ground water.

# 8.0 TIER I AND TIER II RISK EVALUATION

Exposure Pathway Summary tables are presented in this section of the Rapid Assessment Report. The tables detail exposure potentials based on the current and potential future land use. The Exposure Pathways process assesses the following media for potential exposure:

- Air
- Surficial soil
- Surface water
- Subsurface soil
- Ground water

## Site Conceptual Model - CURRENT LAND USE

| Media (for exposure) | Exposure Route | Pathway Selected for Evaluation? (Yes or No) | Exposure point or Reason for Non-Selection | Data Requirements (If pathway selected) |
|---|---|---|---|---|
| Air | Inhalation | Yes ____ No __X__ | -COC were identified in the soil and ground water media, but only at depths well below the surface. | |
| | Explosion Hazard | Yes ____ No __X__ | | |
| Ground Water | Ingestion | Yes __X__ No ___ | -Potable water well located approximately 240 feet downgradient of source area is impacted with benzene above RBSL. -On-site building appears to be located above area of ground water impact. | COC concentrations in water well. |
| | Dermal Contact | Yes __X__ No ____ | | |
| | Volatile Inhalation | Yes __X__ No ____ | | |
| Surface Water | Ingestion | Yes ____ No __X__ | -No surface water bodies were identified within 1000 feet of the source area. - No pathway exists at present. | |
| | Dermal Contact | Yes ____ No __X__ | | |
| | Volatile Inhalation | Yes ____ No __X__ | | |
| Surficial Soil | Ingestion | Yes ____ No __X__ | -Surficial soil was not sampled, but the investigation results indicate that impact is restricted to deeper horizons. | |
| | Dermal Contact | Yes ____ No __X__ | | |
| | Volatile Inhalation | Yes ____ No __X__ | | |
| | Leaching to Ground Water | Yes ____ No __X__ | | |
| Subsurface Soil | Ingestion | Yes ____ No __X__ | -Depth to impact is 8 feet below surface grade and deeper, thus subsurface soil is not expected to pose an ingestion or dermal exposure pathway. -No buildings are located above the area of highest soil COC concentrations. -Benzene, toluene, ethylbenzene, total xylenes and naphthalene concentrations in soil exceed calculated site-specific soil leachability target levels. | - COC concentrations in soil and site specific parameters |
| | Dermal Contact | Yes ____ No __X__ | | |
| | Volatile Inhalation | Yes ____ No __X__ | | |
| | Leaching to Ground Water | Yes __X__ No ____ | | |

## Site Conceptual Model - FUTURE LAND USE

| Media (for exposure) | Exposure Route | Pathway Selected for Evaluation? (Yes or No) | Exposure point or Reason for Non-Selection | Data Requirements (If pathway selected) |
|---|---|---|---|---|
| Air | Inhalation | Yes ____ No X | -COC were identified in the soil and ground water media, but only at depths well below the surface. | |
| | Explosion Hazard | Yes ____ No X | | |
| Ground Water | Ingestion | Yes X No ____ | -Downgradient water well is already impacted with COC above RBSL. | - COC concentrations in ground water and site specific parameters |
| | Dermal Contact | Yes X No ____ | | |
| | Volatile Inhalation | Yes X No ____ | | |
| Surface Water | Ingestion | Yes ____ No X | -No surface water bodies were identified within 1000 feet of the source area. | |
| | Dermal Contact | Yes ____ No X | | |
| | Volatile Inhalation | Yes ____ No X | | |
| Surficial Soil | Ingestion | Yes ____ No X | -Surficial soil was not sampled, but the investigation results indicate that impact is restricted to deeper horizons. | |
| | Dermal Contact | Yes ____ No X | | |
| | Volatile Inhalation | Yes ____ No X | | |
| | Leaching to Ground Water | Yes ____ No X | | |
| Subsurface Soil | Ingestion | Yes ____ No X | -Depth to impact is 8 to 12 feet below surface grade, thus subsurface soil is not expected to pose an ingestion or dermal exposure pathway. | |
| | Dermal Contact | Yes ____ No X | | |
| | Volatile Inhalation | Yes ____ No X | -No building or structure is located over area of highest soil impact. | |
| | Leaching to Ground Water | Yes X No ____ | -Benzene and naphthalene concentrations in soil exceed calculated site specific soil leachability target levels. | - COC concentrations in soil and site specific parameters |

### 8.1 Air

There is no evidence to indicate that air represents a potential exposure pathway, because the COC have been identified only in the subsurface soil and ground water media. However, air has not been sampled and analyzed at the site.

### 8. 2 Surficial Soil

There is no evidence to indicate that surface soil represents a potential exposure pathway, because the COC have been identified only in the subsurface soil and ground water media.

### 8.3 Surface Water

Surface water was not identified during the potential receptor survey at the Crawford's Country Store, or within 1,000 feet of the site with the exception of a small lake or pond approximately 1,000 feet upgradient of the site. Therefore, there is no evidence to indicate that surface water represents a potential exposure pathway, because COC have been identified only in the subsurface soil and ground water media.

### 8. 4 Subsurface Soil

The Tier I RBSLs for sandy soils were exceeded, based on the analytical results for benzene and naphthalene (see Section 6.2). Therefore, a Tier II Risk Evaluation for COC is required.

#### 8.4.1 Tier II Soil Evaluation

The potential for residual benzene, toluene, ethylbenzene, total xylenes and naphthalene in the soil to impact ground water at the site was evaluated using a soil-leaching model (Risk Based Corrective Action for Petroleum Releases, January 1998). The results, which are presented in *Appendix VI*, indicate that benzene, toluene, ethylbenzene, total xylenes and naphthalene exceed calculated site-specific target levels and may continue to pose a continuing source to dissolved phase impact.

## 8.5 Ground Water

Concentrations of benzene, toluene, ethylbenzene, total xylenes, MTBE, and naphthalene were detected in ground water at concentrations greater than their South Carolina Tier I RBSLs (see Section 6.4). Therefore, a Tier II Risk Evaluation for COC concentrations present in ground water is required.

In addition, the concentrations for benzene were compared to the Tier I RBSL data presented in the "Example Tier I RBSL Look-up Table," ASTM E 1739-95, "Standard Guide for Risk-Based Corrective Action Applied at Petroleum Release Sites." Based on this comparison, benzene concentrations in ground water exceed ASTM Tier I RBSLs for vapor intrusion from ground water to buildings and enclosed spaces. At present, there is one building (the Crawford's Store) located above the area of the contaminant plume with the highest COC concentrations; therefore, a current pathway potential exists for COC vapor intrusion to buildings. This potential pathway is addressed in section 8.5.1.2.

### 8.5.1 Ground Water Tier II Evaluation

#### 8.5.1.1 Fate and Transport Modeling

A SOLUTE fate and transport model was developed to assess potential plume migration and natural attenuation. A site specific, one-dimensional ground water fate and transport model was performed utilizing the ONED-1 program in SOLUTE. Dissolved phase benzene, toluene, ethylbenzene, total xylenes, MTBE and naphthalene were evaluated individually (these three analyses constitute the COC at this site).

SOLUTE was developed to provide an analytic solution to the advection-dispersion equation assuming a non-conservative (possibly decaying) tracer. A non-conservative tracer is a chemical that can be sorbed onto soil particles in the flow path of the chemical. As the constituent is sorbed, less of it remains in the dissolved phase to be transported farther downgradient. If a tracer can decay, it is implied that natural processes of biodegradation and natural attenuation need to be accounted for in solving the transport equations. There are certain inherent assumptions involved in using an analytic model.

For instance, analytic models are valid only for uniform ground water flow through a homogeneous, isotropic medium, where the density and viscosity of the flowing fluid is constant over time and space. Such conditions may or may not actually exist at any given site. In essence, one-dimensional analytic models generally provide a "first cut," order-of-magnitude approximation for the fate and transport of the dissolved chemicals in the subsurface.

The input parameters for the SOLUTE fate and transport model assume a long-duration source, consistent with the results of the soil leachability model. In addition, the following input parameters were used:

- Chemical half-lives referenced in the Handbook of Environmental Degradation Rates.
- Retardation factors calculated from TOC analysis.
- Highest concentrations of COC detected at the site, from MW-2, MW-3, MW-4, and MW-9.

The results of the modeling indicate that each COC will naturally attenuate to concentrations that are below their RBSLs within the following distances from the respective monitoring well with the highest concentration:

- Benzene: 1350 feet.
- Toluene: 230 feet.
- Ethylbenzene: 75 feet.
- Total Xylenes: 65 feet.
- MTBE: 810 feet.
- Naphthalene: 240 feet.

As predicted, the Crawford's water well has been impacted, and the McCullough water well is predicted to be impacted by benzene and MTBE in approximately 10 years.

### 8.5.1.2. Site Specific Volatilization Model

To further evaluate the potential human health risk due to volatilization of benzene in ground water, a site specific volatilization model for ground water was developed. The model input parameters include:

- The equations used to develop the Tier I Risk Based Screening Levels (RBSLs) which are presented in ASTM E 1739-95, "Standard Guide for Risk-Based Corrective Action Applied at Petroleum Release Sites." (Specifically, Table X2.1 in Appendix X2.)

- The exposure parameters presented in Tables X2.2 and X2.3 in Appendix X2 of ASTM E 1739-95.

- The volatilization factors, leaching factors, and effective diffusion coefficients presented in Appendix X2 of ASTM E 1739-95.

- Soil, building, surface, and subsurface values presented in Appendix X2 of ASTM E 1739-95, with the exception of the following site specific values:

  -Thickness of the vadose zone: 452.2 centimeters.
  -Depth to ground water: 457.2 centimeters.
  -Ground water Darcy Velocity: 1755 centimeters per year.
  -Soil Bulk Density: 1.64 grams per cubic centimeter.
  -Total soil porosity: 0.42 cubic centimeter per cubic centimeter.
  -Estimated residual water content: 0.09 cubic centimeter – water/cubic centimeter.

The results of the site specific risk model are presented in *Appendix VI, Site Specific Volatilization Model* of this Rapid Assessment report. The model results indicate the following with regard to a potential human health risk due to benzene vapors:

- The highest benzene concentrations detected in groundwater (9.9 mg/l) at the site, for the MW-2 sample, exceed the calculated site specific RBSLS for vapor intrusion of benzene into enclosed spaces (0.0943 mg/l).

* Based on the ASTM RBCA model.
* excel spreadsheet

### 8.5.1.3 Site Specific Target Levels / Points of Compliance

Site Specific Target Levels (SSTLs) have been calculated for the COC in ground water from MW-2, to protect the Crawford Property water well from impact above RBSL concentrations using the inverse of Domenico's equation. The input parameters and model output are summarized in *Appendix VI.* The SSTLs for MW-2 are as follows:

MW-2 SSTLs

- Benzene-84.3 ug/l
- Toluene-16,852 ug/l
- Ethylbenzene-11,797 ug/l.
- Total Xylenes-168,523 ug/l
- MTBE-674 ug/l
- Naphthalene-421 ug/l

The downgradient vertical distribution of the plume should be further evaluated to establish an effective point of compliance. The lack of impacted ground water in MW-13, directly upgradient of the impacted Crawford Property water well, may suggest that the plume is "sinking" below MW-13, possibly due to past use of the water well drawing contamination downward (as previously noted, the residence is not occupied and the well is not currently used). Discrete interval ground water sampling and analysis within the vicinity of the Crawford Property water well would facilitate design and location of a monitoring well to serve as a point of compliance to protect the McCullough water well. Construction details of the Crawford or McCullough wells are not known by the property owners.

MW-7 is recommended as an upgradient compliance point to protect and assess potential plume migration towards the onsite drinking water well. The recommended SSTLs for MW-7 are the SC RBSL for ground water.

# 9.0 CONCLUSIONS AND RECOMMENDATIONS

## 9.1 Conclusions

During December, 1997, MM&A performed a Rapid Assessment to further assess the Crawford's Country Store site, as directed by the South Carolina Department of Health and Environmental Control (DHEC). Based on the data obtained from the Rapid Assessment activities, the area of highest soil and dissolved phase impact appears to be localized around the former UST basin.

The soil analytical results indicate that benzene, toluene, ethylbenzene, total xylenes and naphthalene are present above RBSLs, and soil leachability results indicate that they may continue to be a source of dissolved phase impact in ground water.

Free product was encountered in ground water monitoring wells OMW-1, MW-2, and MW-3. A bail-down procedure performed on OMW-1 indicates that there is approximately 0.60 feet of free product in the formation adjacent to OMW-1, and the estimated recovery rate for the free product in the well is approximately 6.12 gallons per day.

The ground water analytical results indicate that dissolved phase concentrations of benzene, toluene, ethylbenzene, total xylenes, MTBE, naphthalene, and lead exceed TIER I RBSLs. Three potable water sources were identified, one approximately 170 feet upgradient of the source area, and the others approximately 230 feet and 1,000 feet downgradient of the source area. A sample procured from the nearest downgradient water well (Crawford Property water well) revealed detectable concentrations of benzene, toluene, total xylenes, MTBE and lead. Concentrations of benzene and lead in this sample exceed South Carolina RBSL. Results of sampling of the more distal supply well are pending and will be submitted under separate cover when available. Fate and transport modeling indicates that COC will naturally attenuate over time between 65 feet and 1350 feet of the source area, which is beyond the property line.

### 9.2 Recommendations

Based on the data obtained from the Rapid Assessment work activities, the following recommendations are made:

- Employ active remediation to remove free product present in monitoring wells OMW-1, MW-2, and MW-3.
- Continue monitoring to assess current COC concentrations in ground water, and update fate and transport modeling.
- Determine the well depth and casing depth of the Crawford Property residence well.
- Determine if the plume is "sinking" within the area of MW-13 to facilitate the proper construction and location of a monitoring well to serve as an effective point of compliance.
- Provide an alternate water supply to the Crawford Property residence (and the McCullough well if analytical results indicate impact, although not expected).

BDL-BELOW DETECTION LIMIT

## LEGEND

- OMW-1 – SHALLOW MONITORING WELL LOCATION INSTALLED BY ENVIRO-TEST SERVICES ON 5/7/97
- MW-10 – SHALLOW MONITORING WELL LOCATION INSTALLED BY MM&A ON 11/19/97 THROUGH 11/21/97
- DMW-17 – TELESCOPING MONITORING WELL LOCATION ON 11/19/97 THROUGH 11/21/97
- WW – DOMESTIC WATER SUPPLY WELL
- FENCE
- MTBE CONCENTRATION >200,000 µg/L
- MTBE CONCENTRATION 100,000-200,000 µg/L
- MTBE CONCENTRATION 40-100,000 µg/L
- RISK BASED SCREENING LEVEL (RBSL - 40 µg/L)

NOTE: The location and dimensions of features shown on this map have been derived from various sources and supplemented by field measurements. Though sufficient for its intended purpose, no claim is made as to the degree of accuracy of this drawing.

Water Sampling Field Data Record Sheet

Technician(s): Jim Owrey  Location No.: MW-15

Job No.: A89128  Blank No.:

Time:  Date(s): 12-1-97

Additional notes (especially weather) on back . yes / no

WELL DATA:

Type Water Pipe: PVC  Diameter Water Pipe: 2"

Condition of Guard Pipe, Lock, Water Pipe, Etc.:

Measured from:

Depth of Well: 25  Top of Guard Pipe:

Depth of Water: 5.1  Top of Water Pipe: ✓

Height of Water: 19.9  Top of Ground:

Volume of Water in Well: 3.18 (Y = 3.14 r2h)

2" = .16 gal/ft, 4" = .65 gal/ft

EVACUATION DATA:

✓ Bailer  Pump  Airlift  Other

Volume Removed or Time Pumped:

~ 6.5 gallons

Equipment Cleaned: ✓ Field  Lab

✓ Distilled Water  Sample Water  AKONOX  Other

SAMPLING DATA:  Date Sampled: 12-1-97  Time:

Color:  Odor:

# Water Sampling Field Data Record Sheet

Technician(s): JIM OWREY
Location No.: OMW-1
Job No.: A89128
Blank No.:
Time:
Date(s): 12-1-97
Additional notes (especially weather) on back. yes / no

WELL DATA:

Type Water Pipe: PVC
Diameter Water Pipe: 2"
Condition of Guard Pipe, Lock, Water Pipe, Etc.:

Measured from:
Depth of Well: 21.7
Top of Guard Pipe:
Depth of Water: 17.13
Top of Water Pipe: ✓
Height of Water: 4.57
Top of Ground:
Volume of Water in Well: .7312 (Y = 3.14 r2h)
2" = .16 gal/ft, 4" = .65 gal/ft

EVACUATION DATA:

✓ Bailer ____ Pump ____ Airlift ____ Other
Volume Removed or Time Pumped:
~ 2.5 gallons

Equipment Cleaned: ✓ Field ____ Lab
✓ Distilled Water ____ Sample Water AKONOX Other

SAMPLING DATA:

Date Sampled: 12-1-97 Time:
Color: Odor:
pH
Dissolved O2
Temperature
Conductivity uMHOS/cm
Samples Collected:

| Preservative | Volume | Parameters | Filtered | Iced | Lab No. |
|---|---|---|---|---|---|
| HCl | 40ml | BTEX NAPMTBE | | | |
| HCl | 40ml | EDB | | | |
| HNO3 | 250ml | Lead | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

# Water Sampling Field Data Record Sheet

Technician(s): Jim Owrey  Location No.: MW-12

Job No.: A89128  Blank No.:

Time:  Date(s): 12-1-97

Additional notes (especially weather) on back . yes / no

WELL DATA:

Type Water Pipe: PVC  Diameter Water Pipe: 2"

Condition of Guard Pipe, Lock, Water Pipe, Etc.:

Measured from:

Depth of Well: 25  Top of Guard Pipe:

Depth of Water: 17.03  Top of Water Pipe: ✓

Height of Water: 7.97  Top of Ground:

Volume of Water in Well: 1.27 . (V = 3.14 r2h)

2" = .16 gal/ft, 4" = .65 gal/ft

EVACUATION DATA:

✓ Bailer  Pump  Airlift  Other

Volume Removed or Time Pumped:

~ 4 gallons

Equipment Cleaned:  ✓ Field  Lab

✓ Distilled Water  Sample Water  AKONOX  Other

SAMPLING DATA:  Date Sampled: 12-1-97  Time:

Color:  Odor:

| | | | | | |
|---|---|---|---|---|---|
| pH | | | | | |
| Dissolved O2 | | | | | |
| Temperature | | | | | |
| Conductivity uMHOS/cm | | | | | |

Samples Collected:

| Preservative | Volume | Parameters | Filtered | Iced | Lab No. |
|---|---|---|---|---|---|
| HCl | 40ml | BTEX NAPMTBE | | | |
| HCl | 40ml | EDB | | | |
| HNO3 | 250ml | Lead | | | |
| | | | | | |

# HYDROLOGIC, INC.

December 11, 1997

**REPORTING:**

MARSHAL MILLER & ASSOC.
P.O. BOX 848
BLUEFIELD, VA 24605

**INVOICING:**

MARSHAL MILLER & ASSOC.
P.O. BOX 848
BLUEFIELD, VA 24605

**PROJECT NUMBER:** K9722962C

**DATE COMPLETED:** December 11, 1997
**DATE RECEIVED:** December 5, 1997

**PROJECT DESCRIPTION:**

A89128--19 water samples were received and analyzed for BTEX + NAPHTHALENE + MTBE and EDB.

Enclosed is the laboratory report for the project described above. If you have any questions or if we can be of further assistance, please feel free to contact Jack Hale, Jr. at 1-800-728-2251. We appreciate your business and look forward to serving you again soon.

Respectfully,

Walter Hogg
Laboratory Director

P.O. BOX 848
BLUEFIELD, VA 24605

**INVOICING:**

MARSHALL MILLER & ASSOC.
P.O. BOX 848
BLUEFIELD, VA 24605

**PROJECT NUMBER:** K9722080C

**DATE COMPLETED:** November 25, 1997
**DATE RECEIVED:** November 15, 1997

**PROJECT DESCRIPTION:**

A89128--10 soil samples were received and analyzed as follows: 10 8020-BTEX + NAPHTHALENE, 10 8270-PAH, and 1 3550-TPH.

Enclosed is the laboratory report for the project described above. If you have any questions or if we can be of further assistance, please feel free to contact Jack Hale, Jr. at 1-800-728-2251. We appreciate your business and look forward to serving you again soon.

Respectfully,

Walter Hogg
Laboratory Director

## Soil, Building, Surface, and Subsurface Parameters

NOTE: See X2.10 for justification of parameter selection.

| Parameters | Definitions (Units) | Residential | Commercial/Industrial | User Specified |
|---|---|---|---|---|
| d | Lower depth of surficial soil zone (cm) | 100 cm | 100 cm | 100 cm |
| ER | Enclosed - space air exchange rate (L/s) | 0.00014 $s^{-1}$ | 0.00023 $s^{-1}$ | 0.00014 $s^{-1}$ |
| $f_{oc}$ | Fraction of organic carbon in soil (g - C/g - soil) | 0.01 | 0 | 0.01 |
| $h_{cap}$ | Thickness of capillary fringe (cm) | 5 cm | 5 cm | 5 cm |
| $h_v$ | Thickness of vadose zone (cm) | 295 cm | 452.2 cm | 295 95 |
| I | Infiltration rate of water through soil (cm/year) | 30 cm | 30 cm/year | 30 cm |
| $L_B$ | Enclosed space volume/infiltration area ratio (cm) | 200 cm | 300 cm | 200 cm |
| $L_{crack}$ | Enclosed - space foundation or wall thickness (cm) | 15 cm | 15 cm | 15 cm |
| $L_{GW}$ | Depth to ground water = hcap + hv (cm) | 300 cm | 457.2 cm | 300 cm |
| $L_s$ | Depth to subsurface soil sources (cm) | 100 cm | 100 cm | 100 cm |
| $P_e$ | Particulate emission rate ($g/m^2$ - s) | 6.90E-14 | 6.90E-14 | 6.90E-14 |
| $U_{air}$ | Wind speed aove ground surface in ambient ixing zone (cm/s) | 225 cm/s | 225 cm/s | 225 cm/s |
| $U_{gw}$ | Ground water Darcy velocity (cm/s) | 2500 cm/year | 1755 cm/year | 2500 cm/year |
| W | Width of source area parallel to wind, or ground water flow direction (cm) | 1500 cm | 1500 cm | 150 cm |
| $\delta_{air}$ | Ambient air mixing zone height (cm) | 200 cm | 200 cm | 200 cm |
| $\delta_{gw}$ | Ground water mixing zone thickness (cm) | 200 cm | 200 cm | 200 cm |
| $\eta$ | Areal fraction of cracks in foundations/walls ($cm^2$ - $cracks/cm^2$ - total area) | 0.01 $cm^2$ - $cracks/cm^2$ - total area | 0.01 $cm^2$ - $cracks/cm^2$ - total area | 0.01 $cm^2$ - $cracks/cm^2$ - total area |
| $\theta_{acap}$ | Volumetric air content in capillary fringe soil ($cm^3$ - $air/cm^3$ - soil) | 0.038 $cm^3$ - $air/cm^3$ - soil | 0.038 $cm^3$ - $air/cm^3$ - soil | 0.038 $cm^3$ - $air/cm^3$ - soil |
| $\theta_{acrack}$ | Volumetric air content in foundation/wall cracks ($cm^3$ - $air/cm^3$ total volume) | 0.26 $cm^3$ - $air/cm^3$ total volume | 0.26 $cm^3$ - $air/cm^3$ total volume | 0.26 $cm^3$ - $air/cm^3$ total volume |
| $\theta_{as}$ | Volumetric air content in vadose zone soils ($cm^3$ - $air/cm^3$ - soil) | 0.26 $cm^3$ - $air/cm^3$ - soil | 0.26 $cm^3$ - $air/cm^3$ - soil | 0.26 $cm^3$ - $air/cm^3$ - soil |
| $\theta_T$ | Total soil porosity ($cm^3/cm^3$ - soil) | 0.38 $cm^3/cm^3$ - soil | 0.42 $cm^3/cm^3$ - soil | 0.38 $cm^3/cm^3$ - soil |
| $\theta_{wcap}$ | Volumetric water content in capillary fringe soils ($cm^3$ - H2O/$cm^3$ - soil) | 0.342 $cm^3$ - H2O/$cm^3$ - soil | 0.342 $cm^3$ - H2O/$cm^3$ - soil | 0.342 $cm^3$ - H2O/$cm^3$ - soil |
| $\theta_{wcrack}$ | Volumetric water content in foundation/wall cracks ($cm^3$ - H2O/$cm^2$ total volu | 0.12 $cm^3$ - H2O/$cm^3$ - total volume | 0.12 $cm^3$ - H2O/$cm^3$ - total volume | 0.12 $cm^3$ - H2O/$cm^3$ - total volume |
| $\theta_{ws}$ | Volumetric water content in vadose zone soils ($cm^3$ - H2O/$cm^3$ - soil) | 0.12 $cm^3$ - H2O/$cm^3$ - soil | 0.09 $cm^3$ - H2O/$cm^3$ - soil | 0.12 $cm^3$ - H2O/$cm^3$ - soil |
| $\rho_s$ | Soil bulk density (g - soil/$cm^3$ - soil) | 1.7 $g/cm^3$ | 1.64 $g/cm^3$ | 1.7 $g/cm^3$ |
| $\tau$ | Averaging time for vapor flux (s) | 7.88E+08 s | 7.88E+08 s | 9.46E+08 s |

MARSHALL MILLER & ASSOCIATES

## Volatilization Factors, Leaching Factor, and Effective Diffusion Coefficients

| Parameters | Definitions (Units) | Residential | Commercial/Industrial | User Specified |
|---|---|---|---|---|
| $k_s$ | Soil - water sorption coefficient (g - H2O/g - soil) | 0.38 foc * Koc | 0 foc * Koc | 0.955 foc * Koc |
| $VF_{wesp}$ | Ground water - enclosed - space vapors | 0.016457068 | 0.005229743 | 0.017956303 |
| $VF_{wamb}$ | Ground water - ambient (outfoor) vapors | 2.70885E-05 | 2.05316E-05 | 2.78128E-06 |
| $VF_{as}$ | Surficial soils - ambient air (vapors) | 7.1912E-06 | 6.93739E-06 | 5.99013E-07 |
| $VF_{p}$ | Surficial soils - ambient air(particulates) | 2.3E-12 | 2.3E-12 | 2.3E-13 |
| $VF_{samb}$ | Subsurface soils - ambient air | 0.001099104 | 0.00485388 | 5.88748E-05 |
| $VF_{sesp}$ | Subsurface soil - enclosed - space vapors | 0.07358896 | 0.1318952 | 0.039419887 |
| $LF_{sw}$ | Subsurface soils - ground water | 0.170513815 | 1.266057312 | 0.00830105 |
| $D_{eff\ s}$ | Effective diffusion coefficient in soil based on vapor-phase concentration | 0.007257629 | 0.005940903 | 0.005930881 |
| $D_{eff\ crack}$ | Effective diffusion coefficient through foundation cracks | 0.007257629 | 0.005941053 | 0.005930881 |
| $D_{eff\ cap}$ | Effective diffusion coefficient through capillary fringe | 2.17324E-05 | 1.779E-05 | 1.49801E-05 |
| $D_{eff\ ws}$ | Effective diffusion coefficient between ground water and soil surface | 0.001108164 | 0.001280053 | 0.000782235 |
| $C_{sat\ s}$ | Soil concentration at which dissolved pore-water and vapor phases become saturated | 0 | 0 | 0 |

## Risk-Based Screening Level (RBSLs) Carcinogenic Effects

| Parameters | Definitions (Units) | Residential | Commercial/Industrial | User Specified |
|---|---|---|---|---|
| $RBSL_{air\ (indoors)}$ | Air inhalation (a) | 3.92E-01 | 4.93E-01 | #DIV/0! |
| $RBSL_{air\ (outdoors)}$ | Air inhalation (a) | 2.94E-01 | 4.93E-01 | #DIV/0! |
| $RBSL_{w}$ | Ground water ingestion (potable ground water supply only) (b) | 2.94E-03 | 9.87E-03 | #DIV/0! |
| $RBSL_{w}$ | Ground water (c) enclosed space (indoor) vapor inhalation (d) | 2.38E-02 | 9.43E-02 | #DIV/0! |
| $RBSL_{w}$ | Ground water (c) ambient (outdoor) vapor inhalation (d) | 1.45E+01 | 2.40E+01 | #DIV/0! |
| $RBSL_{s}$ | Surficial soil ingestion of soil, inhalation of vapors and particulates, and dermal contact (b) | 1.82E+01 | 3.69E+01 | #DIV/0! |
| $RBSL_{s}$ | Subsurface soil (c) ambient (outdoor) vapor inhalation (d) | 2.67E-01 | 1.02E-01 | #DIV/0! |
| $RBSL_{s}$ | Subsurface soil (c) enclosed space (indoor) vapor inhalation (d) | 3.72E+01 | 2.62E+01 | #DIV/0! |
| $RBSL_{s}$ | Subsurface soil (c) leaching to ground water (d) | 1.72E-02 | 7.79E-03 | #DIV/0! |

(a) Note that all RBSL values should be compared with thermodynamic partioning limits, such as solubility levels, maximmum vapor concentrations, etc. If a RBSL exceds the relevant partioning limit, this is an indication that the selected risk or hazard level will never be reached or exceeded for that chemical and the selected exposure scenario.

(b) Screening levels for these media based on other considerations (for example, aesthetic, background levels, environmental resource protection, etc.) can be derived with these equations by substituting the selected target level for RBSL(air) or RBSL(w) appearing in these equations.

(c) These equations are based on Ref(1).

(d) These equations simply define the "cross-media partioning factors," VF(μ) and LF(aw)

MARSHALL MILLER & ASSOCIATES

## Risk-Based Screening Level (RBSLs) Noncarcinogenic Effects (a)

| Parameters | | Definitions (Units) | Residential | Commercial/Industrial | User Specified |
|---|---|---|---|---|---|
| $RBSL_{air}$ | indoor | Air inhalation (a) | 0.00E+00 | 0.00E+00 | 1.41E+03 |
| $RBSL_{air}$ | outdoor | Air inhalation (a) | 0.00E+00 | 0.00E+00 | 1.06E+03 |
| $RBSL_{w}$ | | Ground water ingestion (potable ground water supply only) (b) | 0.00E+00 | 0.00E+00 | 3.65E+00 |
| $RBSL_{w}$ | | Ground water (c) enclosed space (indoor) vapor inhalation (d) | 0.00E+00 | 0.00E+00 | 7.86E+01 |
| $RBSL_{w}$ | | Ground water (c) ambient (outdoor) vapor inhalation (d) | 0.00E+00 | 0.00E+00 | 5.07E+05 |
| $RBSL_{s}$ | | Surficial soil ingestion of soil, inhalation of vapors and particulates, and dermal contact (b) | #DIV/0! | #DIV/0! | 4.08E+04 |
| $RBSL_{s}$ | | Subsurface soil (c) ambient (outdoor) vapor inhalation (d) | 0.00E+00 | 0.00E+00 | 1.68E+08 |
| $RBSL_{s}$ | | Subsurface soil (c) enclosed space (indoor) vapor inhalation (d) | 0.00E+00 | 0.00E+00 | 3.58E+01 |
| $RBSL_{s}$ | | Subsurface soil (c) leaching to ground water (d) | 0.00E+00 | 0.00E+00 | 4.40E+02 |

(a) Note that all RBSL values should be compared with thermodynamic partioning limits, such as solubility levels, maximmum vapor concentrations, etc. If a RBSL exceds the relevant partioning limit, this is an indication that the selected risk or hazard level will never be reached or exceeded for that chemical and the selected exposure scenario.

(b) Screening levels for these media based on other considerations (for example, aesthetic, background levels, environmental resource protection, etc.) can be derived with these equations by substituting the selected target level for RBSL(air) or RBSL(w) appearing in these equations.

(c) These equations are based on Ref(1).

(d) These equations simply define the "cross-media partioning factors," VF($\mu$) and LF(aw)

# Leachability Results and Conclusions

## South Carolina Department of Health and Environmental Control (DHEC)
## Bureau of Underground Storage Tank Management

**Site Data**

Facility Name Crawford's Country Store Site ID # 12335

Chemical of Concern (Benzene, Naphthalene, etc.): Benzene

(Please use a separate form for each Chemical of Concern that exceeds the RBSL in soil).

**Chemical Specific Data**

| | | | | |
|---|---|---|---|---|
| Biodegradation half-life period | 16 | days | $t_{1/2}$ | Refer to |
| Soil/water partitioning coefficient | 81 | mg/L | $K_{oc}$ | Table |
| Henry's law constant | 0.226 | | $H^9$ | C2 |

**Results**

| | | | | Equation Set | Step |
|---|---|---|---|---|---|
| Total organic carbon content | 0 | decimal % | $f_{cs}$ | I | 1 |
| Air filled porosity | 0.33 | decimal % | f | I | 2 |
| Leachate concentration | 43.83 | mg/L | $C_w$ | I | 3 |
| Infiltration time | 54786 | seconds | t | II | 1 |
| Velocity of water | 1724.89 | ft/yr | $V_w$ | II | 2 |
| Soil/water distribution coefficient | 0 | mL/g | $K_d$ | III | 1 |
| CoC percolation rate | 1724.89 | ft/yr | $V_c$ | III | 2 |
| Time to reach groundwater | 0.6 | days | $T_c$ | IV | 1 |
| Concentration to protect groundwater | 0.0051 | mg/L | $C_p$ | IV | 2 |
| Site specific target level | 3.91 E-3 | mg/kg | $C_{sstl}$ | V | |

**Conclusions**

Does concentration of CoC in soil exceed SSTL? Yes X No _____

Risk of human exposure due to contaminated soil? Yes _____ No X

**SOUTH CAROLINA DEPARTMENT OF HEALTH AND ENVIRONMENTAL CONTROL**
**BID NUMBER: SB-9570-12/02/99-TC**

---

**PURPOSE and SCOPE OF WORK**

The Division of Underground Storage Tank (UST) Management of the South Carolina Department of Health and Environmental Control (DHEC) is seeking services to perform corrective action of a petroleum release from a regulated underground storage tank site in accordance with defined remediation goals. The objective is to remove free product AND/OR reduce the levels of chemicals of concern (CoC) in the ground water and subsurface soil to or below defined site specific target levels (SSTLs). All bidders must be South Carolina Certified Class I Site Rehabilitation Contractors. The scope of work defined in this bid invitation is to be implemented at Crawfords Country Store (UST Permit #12335), 5870 Hwy. 28 N., Abbeville, South Carolina for the release reported on December 3, 1991.

**SPECIAL CONDITIONS**

1. CONTRACT PERIOD: The contract will be effective from date of award until the corrective action is complete as described in this contract.

2. This contract is for corrective action at only one (1) site in South Carolina. Compensation from the SUPERB Account is not considered a state contract for purposes of procurement or subject to state bid requirements in accordance with Section 44-2-130(D) of the SUPERB Act.

3. AWARD: Award will be made to a South Carolina Certified UST Site Rehabilitation Contractor based on the total cost of corrective action to SSTLs and removal or abandonment of assessment and rehabilitation items. The proposed implementation schedule to achieve the remediation goals, the removal of all equipment and abandonment of wells, (including pre-existing wells), trenches, etc. installed by the contractor, and the proposed remediation technology(ies) or method(s) must protect public health and the environment and be eligible for permitting by DHEC. The total cost, methods, and estimated time to complete the contract must also be advantageous to the State of South Carolina.

4. REASONABLE BID: DHEC reserves the right to reject any and all bids that appear to be above the customary and reasonable cost for the same scope of work in a similar geologic setting.

5. Contractor must agree to make positive efforts to use women and minority owned businesses and individuals.

6. AMENDMENTS: All amendments to this solicitation will be in writing from the DHEC Procurement Officer indicated on page one of this solicitation. DHEC will not be legally bound by any amendment or interpretation that is not in writing.

7. QUESTIONS: Questions or requests for information must be submitted in writing and received by 5:00 P.M.,November 9, 1999. After this date, no further questions will be addressed. A written response will be mailed to all requestors of the bid package. The questions may be faxed to Tripp Clark, fax number (803) 898-3505.

8. **NOTE . . . THE ONLY OFFICIAL CONTACT PERSON AT DHEC DURING THE BIDDING AND AWARDING PROCESS IS THE PROCUREMENT OFFICER INDICATED ON PAGE ONE OF THIS SOLICITATION. BIDDING CONTRACTORS ARE NOT TO CONTACT DHEC PERSONNEL LOCATED OUTSIDE THE BUREAU OF BUSINESS MANAGEMENT.**

9. The contractor will be required to treat the area where the petroleum chemicals of concern are above site-specific target levels (see figure #2). Verification that interim corrective action goals have been met will be based upon ground-water quality samples collected from monitoring wells OMW-1, MW-2, MW-3, MW-4, MW-5, MW-7, MW-8, MW-9, MW-10, MW-11, MW-12, MW-13, MW-14, MW-15, DMW-17, and water wells CLS-WW, and CP-WW. Verification that final corrective goals have been met will be based upon ground-water quality samples collected from all existing monitoring wells (including water wells CLS-WW and CP-WW), and additional verification wells and verification soil borings to be installed at locations designated by SCDHEC (see specification #10 for more detail).

SOUTH CAROLINA DEPARTMENT OF HEALTH AND ENVIRONMENTAL CONTROL
BID NUMBER: SB-9570-12/02/99-TC

10. REPORTS: Deliver the reports to: SCDHEC, Division of UST Management, ATTN: **H. Reed Corley**, 2600 Bull Street, Columbia, SC 29201. A minimum of two (2) copies of each plan and two (2) copies of each report must be delivered to the above address. Based on permitting and other requirements, an engineering report, UIC permits, air modeling forms or NPDES Permits may be required. Please contact the Department for the exact number of copies of each document to be submitted.

11. INVOICING: Invoices will be submitted to: SCDHEC, Division of UST Management, ATTN: Financial Section, 2600 Bull Street, Columbia, SC 29201, using the Department's Corrective Action (CA) Bid Invoice form. The initial invoice must be received at the above address within four months of CAP approval or funds will be uncommitted as required by the Section 44-2-40(B) of the SUPERB Act. If funds are uncommitted the submitted invoice will be held until funding is available. Payment to the contractor will be a pay for performance system as follows:

A. Payment of forty percent (40%) of the total bid price will be made within 90 days of operation of the remediation system or implementation of corrective action as described in the approved corrective action plan (CAP), subject to the limitations of Section 44-2-40 of the SUPERB Act. The implementation should be documented in the first corrective action monitoring report.

B. Payment of thirty-five percent (35%) of the total bid price will be made based on removal of free product to .01 foot as verified in monitoring wells OMW-1, MW-2, MW-3, and MW-10 and achieving interim CoC mass reduction goals at the site as verified in monitoring wells OMW-1, MW-2, MW-3, MW-4, MW-5, MW-7, MW-8, MW-9, MW-10, MW-11, MW-12, MW-13, MW-14, MW-15, DMW-17, and water wells CLS-WW, and CP-WW. Payment will be made for interim goals of 25, 50, and 75 percent reduction of <u>total</u> CoC mass by the implementation of corrective action. **NOTE: Payment cannot be based on laboratory analyses for any well that has been used for injection unless that well has returned to ambient conditions.** The CoC mass requiring reduction is as follows:

CoC mass in parts per billion (mg/l) based on 08/05/99, sampling: (CoC may increase or decrease in the future)

** Contains free phase product (OMW-1 {1.05 ft.}, MW-2 {2.29 ft.}, MW-3 {1.01 ft.}, and MW-10 {1.01 ft.}) initial mass based on maximum solubility limits

\+ Sample collected December 1997

(1) 25 percent total mass reduction will be achieved when free product has been removed to .01 foot from OMW-1, MW-2, MW-3, and MW-10, and one-quarter of the initial BTEX, MTBE, and Naphthalene mass from monitoring wells OMW-1, MW-2, MW-3, MW-4, MW-5, MW-7, MW-8, MW-9, MW-10, MW-11, MW-12, MW-13, MW-14, MW-15, DMW-17, and water wells CLS-WW, and CP-WW is removed compared to the SSTLs. The following formula will be used to calculate the percent total mass reduction: total mass above SSTLs from initial sampling less total mass above SSTLs from subsequent sampling divided by total mass above SSTLs from initial sampling. Payment of 10 percent (10%) of the total bid price will be made upon verification (see Specifications item 10 for the method of verification) of at least one-quarter of the total CoC mass above SSTLs is removed.

(2) 50 percent total mass reduction will be achieved when one-half of the initial BTEX, MTBE, and Naphthalene mass from monitoring wells OMW-1, MW-2, MW-3, MW-4, MW-5, MW-7, MW-8, MW-9, MW-10, MW-11, MW-12, MW-13, MW-14, MW-15, DMW-17, and water wells CLS-WW, and CP-WW is removed as compared to the SSTLs. The formula outlined in item 11. B. (1) will be used. Payment of 10 percent (10%) of the total bid price will be made upon verification (see Specifications item 10 for the method of verification) of at least one-half of the total CoC mass above SSTLs is removed.

(3) 75 percent total mass reduction will be achieved when three-quarters of the initial BTEX, MTBE, and Naphthalene mass from monitoring wells OMW-1, MW-2, MW-3, MW-4, MW-5, MW-7, MW-8, MW-9, MW-10, MW-11, MW-12, MW-13, MW-14, MW-15, DMW-17, and water wells CLS-WW, and CP-WW is removed as compared to the SSTLs. The formula outlined in item 11 B (1) will be used. Payment of 15 percent (15%) of the total bid price will be made upon verification (see Specifications item 10 for the method of verification) of at least three-quarters of the total CoC mass above SSTLs is removed.

C. **The final 25 percent (25%) of the total bid price will be paid upon: 1) verification that the thickness of free product does not exceed .01 foot and the levels of CoC do not exceed the site-specific target levels (SSTLs) defined in item 11.C. at any point in the area of concern (see figure #2). Verification that the SSTLs have been met will be based upon ground-water quality samples collected from all existing monitoring wells, additional verification wells, and soil quality samples from verification soil borings to be installed at locations designated by DHEC (see specification #10 for more detail); and 2) all remediation and assessment items installed by the contractor (e.g., wells [including preexisting wells], trenches, etc.) are removed from the site or properly abandoned.** The SSTLs are as follows:

Site Specific Target Levels (SSTLs) in parts per billion (mg/l)

| Well | Benzene | Toluene | Ethylbenzene | Xylenes | MTBE | Naphthalene |
|---|---|---|---|---|---|---|
| OMW-1 | 5 | 1,000 | 700 | 10,000 | 40 | 25 |
| MW-2 | 5 | 1,000 | 700 | 10,000 | 40 | 25 |
| MW-3 | 5 | 1,000 | 700 | 10,000 | 40 | 25 |
| MW-4 | 5 | 1,000 | 700 | 10,000 | 40 | <5** |
| MW-5 | 5 | 1,000 | 700 | 10,000 | 40 | 25 |
| MW-7 | <1** | <1** | <1** | <1** | <1** | <1** |
| MW-8 | <1** | <1** | <1** | <1** | <1** | <1** |
| MW-9 | 5 | 1,000 | 700 | 10,000 | 40 | 25 |
| MW-10 | 5 | 1,000 | 700 | 10,000 | 40 | 25 |
| MW-11 | <1** | <1** | <1** | <1** | 7* | <5** |
| MW-12 | 5 | 260* | <200** | <200** | 40 | 25 |
| MW-13 | 3* | <1** | <1** | <1** | 40 | <5** |
| MW-14 | 5 | 7* | 1* | 23* | 40 | 5* |
| MW-15 | 3* | 6* | 1* | 6* | 27* | <5** |
| DMW-17 | <1** | <1** | <1** | <1** | <1** | <1** |
| CLS-WW | <1** | <1** | <1** | <1** | <1** | <1** |
| CP-WW | 5 | <1** | <1** | 10* | 35* | <5** |
| Total | 61 | 7,280 | 5,109 | 70,245 | 473 | 209 |

* Laboratory analysis is less than calculated SSTLs; therefore, SSTL mass is set equal to laboratory mass.

** Laboratory analysis is below detection limits; therefore, SSTL mass is set equal to detection limits.

Soil CoC mass is parts per billion (ug/kg) based on 11/10/97, sampling: (CoC mass may increase or decrease in the future)

| Soil Boring | Benzene | Toluene | Ethylbenzene | Xylenes | Naphthalene |
|---|---|---|---|---|---|
| SB-1 | 26 | 19 | <5 | 18 | 7 |

## SOUTH CAROLINA DEPARTMENT OF HEALTH AND ENVIRONMENTAL CONTROL
## BID NUMBER: SB-9570-12/02/99-TC

* Laboratory analysis is less than calculated SSTLs; therefore, SSTL mass is set equal to laboratory mass.

** Laboratory analysis is below detection limits; therefore, SSTL masss is set equal to detection limits.

1. NOTIFICATION FOR FAILURE TO PERFORM: If the contractor fails to meet any specification of corrective action as outlined in this document, DHEC will notify the contractor by certified letter of the deficiency (ies). If the contractor does not correct the deficiency(ies) within 30 days, the contractor will be in breach of contract and the bid award may be voided by DHEC. DHEC will notify the contractor by certified letter that the bid award is void and any invoices are payable upon review and approval of DHEC. If the contractor corrects the deficiency(ies) within 30 days, the bid award will continue. Please note contractor-owned items used on-site for the contract that are destroyed by acts of nature, improper maintenance or handling, theft or vandalism will not be replaced or reimbursed by the SUPERB fund. The accepted bid will be final and will not be increased or cancelled for any reason (e.g., unanticipated iron fouling of a system, wells clogging because of biological activity or sediments, increased subcontractor costs, loss of utilities, modification to the system to meet the remediation goals, etc.) with the exception of unforeseen geologic circumstances or identification of additional CoC from another release.

2. SITE SPECIFIC DETAILS: A brief technical summary of the release, including a location map and specifics of existing wells, is attached. The detailed technical file will be available for review through the Freedom of Information (FOI) Office located on the third floor of the Sims Building, 2600 Bull Street, Columbia, SC. **Review of the detailed technical file is not mandatory; however, bidders are strongly encouraged to review the file to ensure a complete understanding of the contract requirements. The successful bidder will be responsible for all information included in the technical file.** Appointments to view the technical file may be scheduled on weekdays between the hours of 8:30 A.M. to 5:00 P.M. by calling the SCDHEC Freedom of Information Office at (803) 898-3882. Please request file #12335.

3. **The contractor will submit a CAP within 30 days of Statement of Award notification from the Bureau of Business Management in accordance with Specification item 2.** The implementation of the CAP will be initiated immediately upon Departmental approval of the CAP and all associated permit(s), and in accordance with the schedule presented in the bid. A performance bond or irrevocable standby letter of credit, equal to the award price, will be required by DHEC. The issuing institution for an irrevocable standby letter of credit must be an entity that has the authority to issue letters of credit in South Carolina and whose letter-of-credit operations are regulated and examined by a federal or state agency. The original performance bond or irrevocable standby letter of credit will be submitted to the Division of UST Management, Attn: Chris Doll, within 30 days of award. The performance bond or irrevocable standby letter of credit will specify that the SUPERB Account will be the recipient of any forfeiture.

4. **MINIMUM REQUIREMENTS: Corrective action will be considered complete once the levels of CoC in the area of concern (see figure #2) are verified to be at or below the SSTLs listed in item 11.C., and removal or abandonment of all remediation and assessment items installed by the contractor (e.g., wells [including preexisting wells], trenches, etc.). See Specification #10 for the method of verification.** All rehabilitation activities associated with a UST release must be performed by a SCDHEC certified Class I site rehabilitation contractor as required by R. 61-98. All corrective action plans and reports must be sealed by a Professional Engineer or Professional Geologist registered in the State of South Carolina. All engineering reports, drawings and plans must be sealed by a Professional Engineer registered in the State of South Carolina. All laboratory analysis for CoC must be performed by a SC certified laboratory. All monitoring, verification, injection, or recovery wells must be installed and abandoned by a SC certified well driller. All applicable certification, training, permits, applications, and fees associated with well installation; injection, discharge, treatment, or transportation of ground water, air, or soil; construction or operation of a remediation system; and any other action requiring a permit are the responsibility of the contractor. Any required business or occupation license and occupational safety and health training (e.g., OSHA) as defined by the laws and regulations of the United States of America, State of South Carolina, county or city is also the responsibility of the contractor. The terms and conditions of all applicable permits will be met. Any contaminated ground water, soil, or construction material must be properly transported and disposed of, or treated at an approved facility with prior approval from DHEC. Any costs for utilities construction and service (electric, telephone, sewer, etc.) required by the corrective action are the responsibility of the contractor.

**SPECIFICATIONS for CORRECTIVE ACTION**

The successful contractor must meet the following specifications as required by the proposed treatment method(s) or corrective action technology(ies):

1. Submit a CAP bid proposal. The proposal will outline in general terms an approach to achieve the remediation goals (e.g., reduction of each CoC to SSTL). The proposal must outline the following:

   A. A description of the proposed treatment method(s) or technology(ies) for corrective action.

   B. The total cost (in thousands of dollars) to complete site rehabilitation to meet the remediation goals and to remove or abandon all assessment and remediation items installed as part of corrective action.

   C. The estimated amount of time in months to complete site rehabilitation to meet the remediation goals, install verification wells, and remove or abandon all assessment and remediation items installed as part of corrective action.

2. Complete and submit a detailed CAP (three copies) for the release at Crawford's Country Store, 5870 Hwy. 28 N., Abbeville, South Carolina **within 30 days of Statement of Award notification by the Bureau of Business Management. NOTE: *Use of monitoring well(s) for injection purposes is not allowed.*** A condition of the plan may include installation of additional recovery, sparge, compliance, or injection wells. The plan must define all active (pump and treat, sparge, vapor extraction, excavation of impacted soils, bioremediation, etc.) and passive (intrinsic remediation, monitoring, etc.) corrective action method(s) proposed to reduce CoC to SSTLs. It must be shown, by use of scientific models, computations, or discussion, how each CoC will be reduced to the SSTL for each remediation method proposed for the release. Any assumptions used in a model will be listed or shown, as well as, appropriate references. Intrinsic corrective action will require monitoring to verify remediation. General construction details will be included (e.g., install four additional recovery wells, construct a compliance point, install four air injection wells, excavate 3,000 cubic yards of impacted soils, etc.) as well as details of well abandonment and equipment removal. A remediation timetable including abandonment of wells and removal of equipment will be included with the CAP. The Division of UST Management will review the CAP and initiate a public notice period for a maximum of 30 days. The contractor must obtain a copy of the applicable portion of the tax map. This map will depict the location of the facility,

and all impacted properties, and all properties located adjacent to the impacted properties. The names and addresses of the owners of each of these properties will be provided. The contractor may be required to attend or provide input at a public meeting upon request by DHEC. Any CAP amendments and modifications arising from public notice must be submitted within 15 days of notification by DHEC. The CAP and any amendments or modifications must be sealed by a qualified Professional Engineer or Geologist registered in the State of South Carolina. The owner/operator, Frank Crawford, will be consulted and will approve the location of the corrective action system. If permanent, the system must be enclosed in a fenced area or small building. The initial invoice must be received at the above address within four months or funds will be uncommitted as required by the SUPERB Act. If funds are uncommitted this invoice will be held until funding is available.

An initial monitoring report documenting CoC concentrations in all wells and potentiometric conditions prior to start up (including verification of system operation or CAP implementation) must be submitted to the Division of UST Management within 45 days after award. Sampling for the initial monitoring report must occur prior to system startup.

Based on naturally occurring conditions, the dissolved concentration of petroleum chemicals of concern (CoC) will increase or decrease. For the purposes of this contract, the total CoC mass for the wells included in the bid package may reasonably increase up to 150 percent or decrease as much as 50 percent. If the total CoC concentration in all wells listed in Special Condition 11.B. increases more than 150 percent based on this initial sampling or if measurable free product that has not been previously documented in any report is detected during the initial sampling event, the contractor may request in writing that the award be canceled. **If either of these conditions occurs, the contractor will contact the UST project manager within two days of problem identification and will submit written documentation within five days of notification.** The contractor will be reimbursed for one personnel mobilization to collect samples, one sample collection and one analytical fee each monitoring well sampled as outlined in SUPERB Allowable Costs, plus $6,000 for all other costs incurred (e.g., CAP preparation, obtaining performance bond, business license). The contract will be canceled and the performance bond will be returned to the company. If the total CoC concentration in all wells listed in Special Condition 11.B. decreases more than 50 percent based on this initial sampling the DHEC may cancel the award. If the corrective action system is started or treatment is performed, the contractor will be required to complete the contract unless geological conditions change or another release is confirmed. See special condition 12. If the contract is canceled by DHEC, the contractor will be notified by certified letter and an invoice for the above outlined items shall be submitted within 20 days from the date of the certified letter canceling the contract.

3. Complete and submit all applications for permits (injection, NPDES, BAQC modeling form, thermal treatment, construction, etc.; 3 copies) and an engineering report (ER; 4 copies) with the CAP. Any required permit changes or corrections will be submitted within 15 days of notification by DHEC. The ER and any ER amendments and modifications, must be sealed by a Professional Engineer registered in the State of South Carolina. After review of the CAP and all permit applications by DHEC, the Division of UST Management will issue a notice to proceed with CAP implementation.

   Implementation of the corrective action plan before the completion of the public notice process and approval of all permits by DHEC is not authorized. If premature implementation occurs, the Department will not reimburse those costs from the SUPERB Account, and the bid award will be reduced by that amount. If the Department agrees with early implementation to better protect human health in an emergency and provides approval in writing, early implementation without any reduction to the bid amount will be authorized.

4. Implement the CAP within 30 days of receipt of notice to proceed and any required permit to construct. Disruption to the owner/operator's normal business will be kept to a minimum. Upon completion of any required construction, DHEC will inspect the system and issue a permit to operate.

5. Gain access to the adjacent property to sample monitoring wells and to install any corrective action equipment, as required.

6. Initiate system startup within 15 days of receipt of the permit to operate. Remediation as defined in the CAP and ER will begin upon system startup. **If any problem with CAP implementation occurs, the contractor will contact the UST project manager within 24 hours of problem identification and will submit written documentation within five days of notification.** ***Note: The application of corrective action technologies can result in the mobilization and possible increase in the thickness of free phase product or elevated CoC concentrations in the monitoring wells.***

7. Complete and submit a corrective action monitoring report (first quarterly due within 90 days of the date of the permit to operate and quarterly thereafter) 3 copies plus one copy for any DHEC Bureau that issued a permit) on a quarterly basis. The corrective action monitoring reports must include:

   A. A narrative portion that documents current site conditions and system effectiveness in achieving the remediation goals (e.g., free product removal, reducing CoC to the SSTLs) as outlined in the CAP. Any system down time and the associated reason(s) will be included in the report.

   B. Conclusions and recommendations based on the reported data.

   C. Ground-water laboratory analytical data for all monitoring wells in the following format (additional parameters such as dissolved oxygen may be required; do not sample wells containing free product):

Analytical Data (mg/l)

| Monitoring Well | Date | Benzene | Toluene | Ethylbenzene | Xylenes | MTBE | Naphthalene |
|---|---|---|---|---|---|---|---|
| MW-1 | 7/15/97<br>10/15/97 | 145<br>140 | 200<br>190 | 146<br>140 | 1,000<br>900 | 170<br>50 | 47<br>165 |
| MW-2 | 7/15/97<br>10/15/97 | 580<br>480 | 800<br>690 | 300<br>257 | 1,000<br>912 | 60<br>50 | 20<br>19 |

   D. Ground-water potentiometric data for all monitoring wells in the following format:

Ground water Data (feet)

| Monitoring Well | Date | TOC Elevation | TOC to GW | TOC to FP | FP Thickness | GW Elevation |
|---|---|---|---|---|---|---|
| MW-1 | 7/15/97<br>10/15/97 | 98.0<br>98.0 | 17.54<br>17.90 | | | 80.46<br>80.10 |
| MW-2 | 7/15/97<br>10/15/97 | 100.0<br>100.0 | 20.50<br>21.50 | 20.47<br>21.48 | 0.03<br>0.02 | 79.50<br>78.50 |

E. A ground-water elevation contour map of the site based on current ground-water potentiometric data.

F. A CoC map based upon current ground-water laboratory analytical data. The ground-water data should be adjacent to the relevant monitoring well using the following format (additional parameters such as dissolved oxygen may be required):

MW - Number
Benzene (mg/l)
Toluene (mg/l)
Ethylbenzene (mg/l)
Xylenes (mg/l)
MTBE (mg/l)
Naphthalene (mg/l)

G. A copy of the DHEC approval letter and manifests for any contaminated soil and ground-water removed from the site for treatment and/or disposal.

H. Additional data required by permits (e.g., air analyses, wastewater effluent analyses and amounts, etc.). The data should be reported on a form or in a format specified in the permits, and attached to the monitoring report as an addendum.

All rehabilitation activities associated with the UST release must be performed by a SCDHEC Certified Site Rehabilitation Contractor. All air, soil, and ground-water analyses must be performed by a South Carolina certified laboratory. The corrective action monitoring report must be sealed by a Professional Engineer or Geologist registered in the State of South Carolina. All monitoring wells associated with the release will be sampled on a quarterly basis for the first year. Thereafter, the number of wells sampled may be reduced and/or the interval between corrective action monitoring reports may be lengthened upon clear demonstration of CoC reduction, unless restricted by permit requirements. DHEC may require data to be reported on a form or in a specific format. The contractor will be provided with the proper report forms and format prior to system startup. The contractor will be notified of any revisions to the report forms or format 90 days prior to the due date for the corrective action monitoring report.

8. Collect one (1) ground-water sample per monitoring event for all monitoring wells associated with the release. Each well should be purged prior to sampling. Purging is considered complete once the ground-water temperature and pH have stabilized. Sampling logs should note all temperature and pH measurements, as well as the location and type of each sample submitted for laboratory analysis. Each ground-water sample will be collected in accordance with established QA/QC protocol and submitted to a certified laboratory for analysis. The ground-water samples must be analyzed for the following parameters:

| Analyte | Analytical Method* | Reporting Limit (mg/l) |
|---|---|---|
| BTEX | 8260B/5030B | 5 |
| Naphthalene | 8260B/5030B | 5 |
| MTBE | 8260B/5030B | 5 |

*or EPA equivalent method that can achieve the same reporting level

The soil samples must be analyzed for the following parameters:

| Analyte | Analytical Method* | Reporting Limit (mg/kg) |
|---|---|---|
| BTEX | 8260B/5030B | 5 |
| Naphthalene | 8260B/5030B | 5 |

*or EPA equivalent method that can achieve the same reporting level

Additional samples (air, groundwater, effluent, soil) required by permits must be collected in accordance with established QA/QC protocol and submitted to a certified laboratory for analysis. The samples will be analyzed for parameters stipulated in the permits. Sampling and analytical data for each sample (e.g., field sampling logs, chain of custody forms, certificates of analysis, and the lab certification number) will be included in the corrective action monitoring report.

9. Properly dispose of all contaminated soil and ground water generated during the implementation of the CAP and installation of verification wells and soil borings. DHEC must approve the disposal facility selected for treatment and disposal of the free product and contaminated soil and ground water. The owner/operator of the facility is considered the generator for any contaminated soil and ground water. The contractor must document all disposal of free product and contaminated soil and ground water in the corrective action monitoring report.

10. Verification for the removal of free product will be conducted by SCDHEC personnel with an interface probe. If the remediation technology is in-situ (e.g., pump and treat, air sparging, vapor extraction): suspend operation of the system once the remediation goals for all CoC have been maintained for a period of 30 days. Samples are to be taken after one (1) quarter or after all CoC levels have reached equilibrium and again after a second quarter. Along with the parameters listed in Specification #8, the ground-water samples should also be sampled for the following parameters:

| Analyte | Analytical Method* | Reporting Limit (mg/l) |
|---|---|---|
| Dissolved Oxygen | SM4500-O G | 500 |
| Ferrous Iron | SM3500-Fe D | 30 |
| Methane | Kerr Method | 1000 |
| Nitrate | 9056/9210 | 100 |
| Sulfate | 9038/9056 | 1000 |

*or EPA equivalent method that can achieve the same reporting level

If sample results indicate that the remediation goals are not sustained, the contractor must submit a corrective action status report (3 copies) that outlines the deficiency(ies) and offers recommendations for achieving the remediation goals with a revised timetable. Modifying and restarting of the system will be directed by DHEC. The system will operate until all remediation goals are again maintained for a period of 30 days. Operation of the system will then be suspended again and samples taken to verify that remediation goals are sustained. This cycle of activity, including status reports, will be repeated until all CoC levels remain below SSTLs for all wells listed in Special Conditions item 11 C for two (2) consecutive quarters. **Three (3)** verification wells and **three (3)** verification soil borings may then be installed at locations designated by DHEC. Costs for verification well and soil boring installation are considered part of this bid price. Each well and soil boring will be sampled in accordance with Specifications item 8 and the analyses compared to the calculated SSTLs for the CoC at that well and soil boring location. If the laboratory analyses are at or below the SSTLs, corrective action will be considered complete. If any analysis is above the SSTL, the corrective action will not be considered complete, and the activity cycle described above must be repeated until all CoC levels remain below SSTLs for those wells and soil borings listed in Special Conditions item 11 C. Split or duplicate samples may be collected by DHEC **(or its subcontractors)** to verify achievement of remediation goals. **At least two weeks**

**notice will be provided to DHEC prior to mobilizing to the site for sampling to verify attainment of remediation goals.** Costs for transportation and analysis of split or duplicate samples will be paid by DHEC.

or

If the remediation technology is a single event (e. g. excavation of impacted soils, vacuum enhanced recovery): collect sufficient samples as outlined in the CAP to verify the reduction of CoC to the remediation goals. The contractor may be required to install and sample **three (3)** verification wells and **three (3)** verification soil borings at locations designated by DHEC. If the levels of CoC in all samples are at or below SSTLs, corrective action will be considered complete. If the level of any CoC is above the SSTL, additional corrective action will be required. The contractor will submit one (1) corrective action status report to document the reduction of CoC to the remediation goals. Split or duplicate samples will be collected **by DHEC (or its subcontractors)** to verify achievement of remediation goals. **At least two weeks notice will be provided to DHEC prior to mobilizing to the site for sampling to verify attainment of remediation goals.** Costs for transportation and analysis of split or duplicate samples will be paid by DHEC.

11. Disassemble and remove the remediation system and all associated remediation items including utilities from the site within 60 days of notification by DHEC that the remediation goal for the release associated with the UST(s) at the site has been achieved. Disruption to the owner/operator's normal business will be kept to a minimum.

12. Properly abandon all wells (including preexisting wells), borings, trenches, and piping/utility runs installed by the contractor as part of corrective action within 60 days of notification by DHEC that the remediation goal for the release associated with the UST(s) at the site has been achieved. The abandonment will be in accordance with South Carolina Well Standards and Regulations R. 61-71 and accepted industry standards for abandonment of trenches and piping/utility runs. Disruption to the property owner's normal business will be kept to a minimum. The contractor must notify DHEC of the method of well abandonment and final disposal of any free product and contaminated soil or ground water. The contractor will return the site to the condition prior to corrective action (e.g., asphalt paved areas will be repaved with asphalt, concrete areas will be replaced with concrete, grass areas will have soil replaced to the original grade and reseeded or sodded with grass, etc.).

BIDDING SCHEDULE

**The total cost in dollars to treat the area of concern (see figure #2) such that the thickness of free product does not exceed .01 foot and the levels of CoC do not exceed the site-specific target levels (SSTLs) defined in item 11.C. at any point, complete all associated monitoring and post-remediation verification, prepare all plans, reports, and correspondence; obtain and meet all terms and conditions of all required permits and licenses; design, install, monitor, operate, maintain, and when completed, properly abandon or remove all assessment and remediation items installed as part of corrective action; provide evidence of performance bond; and other items outlined in this bid invitation for the Crawford's Country Store, (UST Permit # 12335), 5870 Hwy. 28 N., Abbeville, South Carolina is:**

$ _____

**SOUTH CAROLINA DEPARTMENT OF HEALTH AND ENVIRONMENTAL CONTROL**
**BID NUMBER: SB-9570-12/02/99-TC**

---

**OTHER CRITERIA**

Please respond to the following questions that have been designed to verify your corrective action qualifications:

1. The corrective action method(s) or technology (ies) that will be proposed in the CAP will be (list all active and/or intrinsic methods or technologies for remediation of the aquifer; attach additional pages(s) as required):

   _____

   _____

   _____

   _____

2. The estimated time in months to complete the corrective action from the date of bid award, corrective action goals are met, and all corrective action items are removed from the site or properly abandoned is approximately _____ months. This time assumes all submitted plans and reports will be reviewed by DHEC within 30 days of receipt.

**BID ACCEPTANCE and DELIVERY STATEMENT**

In compliance with the bid solicitation and subject to all conditions thereof, the contractor offers and agrees, if this bid is accepted within _____ days from date of bid opening, to furnish any or all items/services quoted at the prices set forth.

## SOUTH CAROLINA DEPARTMENT OF HEALTH AND ENVIRONMENTAL CONTROL
## BID NUMBER: SB-9570-12/02/99-TC

# PLEASE READ THE FOLLOWING CAREFULLY PRIOR TO COMPLETING BID

## INSTRUCTIONS TO BIDDERS

DISCUSSIONS AND NEGOTIATIONS: By submission of a bid, bidder agrees that during the period following issuance of this solicitation and prior to notification of intent or award of a contract, the bidder shall not discuss this procurement with any party except members of the DHEC Procurement Division or other parties designated in this solicitation. Bidder shall not discuss or attempt to negotiate with the using area or program any aspects of the procurement without prior approval of the DHEC Procurement Division Buyer responsible for the procurement. Infractions may result in rejection of the violator's bid.

1. Unless otherwise required herein, only one signed copy of the invitation to bid is required.
2. Bids "faxed" directly to the DHEC Procurement Office will not be accepted or considered for award.
3. Bids, amendments thereto or withdrawal request must be received by the time advertised for bid opening. It is the bidder's sole responsibility to insure that these documents are received by the person (or office) at the time indicated in this solicitation document. Any withdrawal request received after the time of the bid opening shall be governed by DHEC Underground Storage Tank Environmental Remediation Procedures.
4. When specifications or descriptive papers are submitted with the bid submission, enter bidder's name thereon.
5. Submit your signed bid on this form. Show the bid number on the envelope as instructed. DHEC assumes no responsibility for unmarked or improperly marked envelopes. All envelopes received showing a bid number are placed directly under locked security until the date and time of opening. Do not include more than one bid invitation per envelope. If directing any other correspondence, address the envelope to the Procurement Officer but do not include the bid number on the envelope since it does not include your bid.
6. Bidders must clearly mark as "CONFIDENTIAL" each part of their bid which they consider to be proprietary information that could be **exempt from disclosure** under Section 30-4-40, Code of Laws of South Carolina 1976 (1986 Cum. Supp.; Freedom of Information Act) If any part is designated as confidential, there must be attached to that part an explanation of how this information fits within one or more categories listed in Section 30-4-40. DHEC reserves the right to determine whether this information should be exempt from disclosure and no legal action may be brought against the State, DHEC or its agents for its determination in this regard.
7. By submission of a bid, **you are guaranteeing** that all goods and services meet the requirements of this solicitation during the contract period.
8. Tie bids will be resolved as outlined in DHEC Underground Storage Tank Environmental Remediation Procedures.
9. **Do not include any taxes** that DHEC may be required to pay in the bid price. Upon submission of a bid by a state agency, the Procurement Officer will compute a 5% sales and use tax to the non-state agency bids when applicable (service and labor excluded) in determining the low bidder. This procedure conforms with the SC Tax Commission Sales and Use Tax Regulation 117-174-.95.
10. **Correction of errors on this bid form:** All prices and notations should be printed in ink or typewritten. Errors should be crossed out corrections entered and initialed by the person signing the bid. Erasures or use of typewriter correction fluid may be cause for rejection. No bid shall be altered or amended after the time specified for the bid opening.
11. **Ambiguous bids** which are uncertain as to terms, delivery, quantity or compliance with this solicitation may be rejected or otherwise disregarded.
12. Any bidder desiring to exercise a grievance may do so under section IV of DHEC Underground Storage Tank Environmental Remediation Procedures. All correspondence should be directed to the Director of Procurement Services, Bureau of Business Management, 2600 Bull Street, Columbia, SC 29201.
13. **Failure to respond** to three consecutive bid notices may result in removal of bidder's name from the mailing list.

## GENERAL PROVISIONS

14. DHEC reserves the right to reject any and all bids, and to cancel this solicitation.
15. **Unit prices will govern** over extended prices unless otherwise stated in this solicitation.
16. **Prohibition of Gratuities:** Amended section 8-13-420 of the 1976 Code of Laws of South Carolina States: "Whoever gives or offers to any public official or public employee any compensation, including a promise of future employment, to influence his action, vote, opinion or judgement as a public official or public employee or such public official solicits or accepts such compensation to influence his action, vote, opinion or judgement shall be subject to the punishment as provided by Section 16-9-210 and Section 16-9-220. The provision of this section shall not apply to political contributions unless such contributions are conditioned upon the performance of specific action of the person accepting such contribution nor shall they prohibit a parent, grand-parent or relative from making a gift to a child, grandchild or other close relative for love and affection except as hereafter provided".
17. **Bidder's Qualification:** Bidders must, upon request of DHEC, furnish satisfactory evidence of their ability to furnish products or services in accordance with the terms and conditions of these specifications. DHEC reserves the right to make the final determination as to the bidder's ability to provide the products or services requested herein.

# SOUTH CAROLINA DEPARTMENT OF HEALTH AND ENVIRONMENTAL CONTROL
## BID NUMBER: SB-9570-12/02/99-TC

18. **Bidder's Responsibility:** Each bidder shall fully acquaint himself with conditions relating to the scope and restrictions attending th execution of the work under the conditions of this solicitation. It is expected that this will sometimes require on-site observation. Th failure or omission of a bidder to acquaint himself with existing conditions shall in no way relieve him of any obligation with respect to th bid or to the subsequent contract.
19. **Amendments:** All amendments to and interpretations of this solicitation shall be in writing from the DHEC Procurement Office. Neith DHEC or the Procurement Officer shall be legally bound by any amendment or interpretation that is not in writing.
20. **Award Criteria:** Award shall be as indicated herein to the lowest responsible and responsive bidder whose bid meets the requiremen and criteria set forth in this solicitation. Award may take longer than fourteen days. A copy of the award notice should be posted on th Procurement Bulletin Board located at 2600 Bull Street in the Aycock Building directly across from the Personnel Division and next to th Bureau of Business Management Procurement Services Division.
21. **Rejection:** DHEC reserves the right to reject any bid that contains prices for individual items or services that are unreasonable whe compared to the same or other bids if the rejection is in the best interest of the State.
22. **Competition:** This solicitation is intended to promote competition. If the language, specifications, terms and conditions, or an combination thereof restricts or limits the requirements in this solicitation to a single source, it shall be the responsibility of the intereste bidders to notify the DHEC Procurement Office in writing so as to be received five days prior to the opening date. Notification may b "faxed" to the DHEC Procurement Office, (803) 734-4874. The solicitation may or may not be changed but a review of such notificatio will be made prior to award.
23. **Order of Precedence:** In the event of inconsistency between provisions of this solicitation, the inconsistency shall be resolved by givir precedence in the following order; (A) the bidding schedule, (B) the specifications, (C) general conditions, (D) special provisions c special conditions of the contract whether incorporated by reference or otherwise, and (E)instruction to bidders.

### GENERAL CONDITIONS

24. **Contract Administration:** Questions or problems arising after award of this solicitation/contract shall be directed to the DHE Procurement Office, 2600 Bull Street, Columbia, SC, 29201. Reference the solicitation and contract number.
25. **Default:** In case of default by the contractor, DHEC reserves the right to purchase any or all items in default in the open market, chargir the contractor with any additional costs. The defaulting contractor shall not be considered a responsible bidder until the assessed charg has been satisfied.
26. **Save Harmless:** (This General Condition does not apply to solicitations for service requirements). The successful bidder shall indemni and save harmless the State of South Carolina and DHEC and all its officers, agents and employees from all suits or claims of ar character brought by reason of infringing on any patent, trade mark or copyright. The bidder shall have no liability to DHEC if such pater trade mark or copyright infringement or claim is based upon the bidder's use of material furnished to the bidder by the State.
27. **Publicity Releases:** By submission of a bid, the contractor agrees not to refer to award of this contract in commercial advertising in suc a manner as to state or imply that the products or services provided are endorsed or preferred by DHEC or user.
28. **Tax Credit Availability:** Bidders interested in income tax credit availability by subcontracting with Certified Minority Firms should conta the Office of Minority Business Assistance, 1205 Pendleton Street, Columbia, SC, 29201. (803-734-0562)
29. **Affirmative Action:** The successful bidder will take affirmative action in complying with all Federal and State requirements concernir fair employment and employment of the handicapped, and concerning the treatment of all employees, without regard or discriminatic by reason of race, color, religion, sex, national origin or physical handicap.
30. **Assignment:** Unless otherwise indicated in this solicitation, no contract or its provisions may be assigned, sublet, subcontracted, c transferred without the prior written consent of the DHEC Procurement Office.
31. **Termination:** Any contract resulting from this solicitation may be terminated by DHEC by providing a thirty day advance notice in writir to the successful contractor.
32. **Non-Appropriations:** Any contract entered into by DHEC resulting from this solicitation shall be subject to cancellation without damag or further obligation when funds are not appropriated or otherwise made available to support continuation of performance in a subseque fiscal period or appropriated year.
33. **Convenience:** In the event that this contract is terminated or canceled upon request and for the convenience of DHEC without th required thirty days advance written notification, then DHEC shall negotiate reasonable applicable termination costs.
34. **Cause:** Any contract resulting from this solicitation may be terminated without advance notice by DHEC for cause, default or negligenc on the part of the successful contractor.
35. **S.C. Law Clause:** Upon award of a contract under this bid, the person/partnership, association or corporation to whom the award is mac must comply with the laws of South Carolina which require such person or entity to be authorized and/or licensed to do business with th State. Notwithstanding the fact that applicable statutes may exempt or exclude the successful bidder from requirements that it b authorized and/or licensed to do business in this State. By submission of a bid, the bidder agrees to subject himself to the jurisdiction ar process of the courts of the State of South Carolina as to all matters and disputes arising or to arise under the contract and th performance thereof, including any questions as to the liability for taxes, licenses or fees levied by the State of South Carolina.
36. **Quality of Product:** (This general condition does not apply to solicitations for printing or service requirements.) Unless otherwis indicated in this solicitation, it is understood and agreed that any item offered or shipped as a result of this solicitation shall be new ar in first class condition, that all containers shall be new and suitable for storage or shipment, and that prices include standard commerci

packaging. If items that are other than new (i.e., remanufactured or refurbished) are desired to be bid, the bidder must obtain writte permission to bid such items at least five days in advance of the bid opening date. Written permission must be obtained from the DHE Procurement Office.

37. **Compliance with Federal Requirements:** S.C. State or Federal requirements that are more restrictive shall be followed in bidding awarding and performance of this contract.
38. **Drug-Free Workplace:** Required by Section 44-107-10 (Drug Free Work-Place Act) of the SC Code of Laws, 1976, as amended. B submission of a bid, the bidder certifies that he will comply with all aspects of the Drug-Free Workplace Act and will not engage in th unlawful manufacture, distribution, dispensation, possession or use of a controlled substance in the performance of this contract. Thi certification also applies to any individual or firm employed by the contractor.
39. **Confidentiality Policy:** The successful contractor agrees to abide by DHEC's policy of confidentiality which states in part that a information as to personal facts and circumstances given or made available to employees and/or contractors of DHEC in administratio of programs shall be held confidential and shall not be divulged without the express written consent of the individual(s) to which it pertains
40. **Item Substitution:** No substitution of items will be allowed on any purchase made from the awarded contract without written permissio from the DHEC Procurement Office.
41. **Outside Contractor Program:** If applicable to scope of contract, contracted employees working on DHEC properties are entitled t information about hazardous chemicals present at DHEC; and DHEC's personnel are entitled to information about hazardous chemical brought to the facilities by contractors. In order to assure continued compliance with the Hazard Communication Standards whil contractors are on DHEC property and to control potential compliance obligations under the Superfund Amendments and Re-authorizatio Act, it is DHEC's policy to:
    A. Obtain written assurance that the contractor's employees have been trained to understand the hazards of the chemicals at DHE and how to use appropriate personal protective equipment. All personal protective equipment and training required for th contractor's employees will be provided by the contractor at the contractor's expense. (This includes SC State General Service employees).
    B. Require the contractor to notify the DHEC Bureau of Business Management or the appropriate DHEC unit Director whe introducing hazardous chemicals into DHEC work areas, which may harmfully expose DHEC employees. If the contractor introducing such hazardous chemicals into any DHEC facility or onto DHEC property, the contractor shall provide the DHE Division of Procurement Services or the DHEC unit Director copies of the Material Safety Data Sheets (MSDS) for thos chemicals. The DHEC Division of Procurement Services or the DHEC unit Director should provide appropriate information t the DHEC employees before the contractor(s) enter any DHEC facility with chemicals.
    C. DHEC reserves the right to refuse to allow any contractor to bring any chemical onto DHEC property. DHEC also reserves th right to refuse to allow any contractor to bring certain quantities of chemicals on DHEC property.
42. Any written assurances, MSDS's, or correspondence required must be submitted prior to beginning any aspect of the contract.
43. **Travel:** As applicable, reimbursement to contractors for travel expenses will be made in accordance with regulations established for Sta employee travel and in accordance with guidelines established by DHEC.

## SPECIAL PROVISIONS

44. **FOB Destination:** All deliveries shall be FOB Destination. It is agreed by the parties hereto that delivery by the contractor to the comm carrier does not constitute delivery to the State. Any claim for loss or damage shall be between the contractor and the carrier. Bi received otherwise may be subject to rejection.
45. **Shipping/Delivery Charges:** Unless otherwise indicated in the "Special Conditions", any applicable shipping, delivery, assembly installation charges are to be indicated on the bidding schedule herein.
46. **Specifications:** The specifications listed herein are not to be considered restrictive to one source of supply. However, items offered m be equal in quality and performance. The bidder to include with his bid supporting product data sufficient for DHEC to determine equali and acceptability. DHEC reserves the right to reject any offering in which the items offered are considered unsatisfactory in any manne DHEC will determine if minor deviations from the listed features or performance are acceptable.
47. **Confidentiality:** The Contractor and all contracting employees shall not discuss, disclose, release, divulge or otherwise communicat any confidential information as to personal facts and circumstances observed or overheard while performing work pursuant to this contra The Contractor and all contracting employees, their agents, personal representatives and assigns, shall be fully liable and accountab for any resulting damage or injury to any person, institution or DHEC.

PROGRAM

**UNDERGROUND STORAGE TANK (UST) OWNER/OPERATOR LEAD INFORMATION SHEET**

## 1. CONTRACTOR OF CHOICE

As the UST Owner/Operator of UST Permit # 12335, I would like to use the contractor or person(s)* listed below and request that they represent me for: (check one)

( ) Initial Groundwater Assessment
( ) Other (please specify)_____
(X) all future assessments scopes. **

Name of Contractor/Person(s): Midlands Environmental Consultants, Inc.

Address: 235-B Dooley Road, Lexington, SC 29073

Telephone Number: (803) 808-2043

Note: Site rehabilitation activities must be performed by a SCDHEC Certified Site Rehabilitation Contractor in accordance with R.61-98.

* indicate if the person listed is your own employee

** if you would like the contractor to perform all future assessment activities at this and/or other facilities that have confirmed releases, please provide a list of all sites on your letterhead and provide the information requested in items 2 and 3 below within the context of the letter.

## 2. FINANCIAL OR FAMILIAL RELATIONSHIP

Does a financial or familial relationship, as defined below, exist between you and the contractor/person that you listed above? _____ Yes _X_ No (please initial) ✓

Financial Relationship: A connection or association through a material interest of sources of income which exceed five percent of annual gross income from a business entity.

Familial Relationship: A connection or association by family or relatives, in which a family member or relative has a material interest. Family or relatives include: father, mother, son, daughter, brother, sister, uncle, aunt, first cousin, nephew, niece, husband, wife, father-in-law, mother-in-law, son-in-law, daughter-in-law, stepfather, stepmother, stepson, stepdaughter, stepbrother, stepsister, half brother, half sister, grandparent, grandchild, great grandchild, step grandparent, step great grandparent, step grandchild, step great grandchild, or fiancee.

## 3. PAYMENT

You can pay the contractor and, upon the submittal of the canceled check (or a notarized statement from the contractor), be compensated from the SUPERB Account, or have payment issued directly from us to the contractor.

I request that payment be made to me after I have paid the contractor. _____ Yes _____ No (please initial)
I request that payment be made directly to the contractor. _X_ Yes _____ No (please initial) fc

Note: All costs must receive prior financial approval from the Department regardless of payment option.

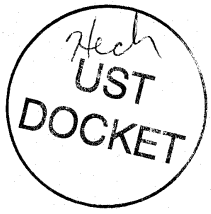
Subject: Report of Monitoring Well Installation,
Groundwater Sampling and Chemical Analyses
Crawford's Country Store
5870 S.C. Highway 28 North
Antreville, South Carolina
SCDHEC Site ID# 12335, CA # 41318
MECI Project Number 11-3327
Certified Site Rehabilitation Contractor UCC-0009



Dear Mr. Padgett,

Midlands Environmental Consultants Inc. (MECI) is pleased to submit the attached Report of Monitoring Well Installation, Groundwater Sampling, and Chemical Analyses for the referenced site. This report describes assessment activities conducted at the site in general accordance with South Carolina Department of Health and Environmental Control (SCDHEC) guidelines.

**PROJECT INFORMATION**

The subject site (Crawford's Country Store) is located at 5870 S.C. Highway 28 North in Antreville, Abbeville County, South Carolina (see Figure 1). The subject site is currently an active gasoline service station and convenience store. Previously, the subject site maintained one 2,000 gallon gasoline underground storage tank (UST), one 1,000 gallon kerosene UST, one 560 gallon diesel UST, one 8,000 gallon gasoline UST, and one 10,000 gallon gasoline UST. The former UST's were removed from the ground in October of 1991. The South Carolina Department of Health and Environmental Control (SCDHEC) reported a release of petroleum product in December of 1991 and confirmed the release in March of 1993. Currently, the subject site maintains one 3,000 gallon diesel UST, one 6,000 gallon off-road diesel UST, one 6,000 gallon premium gasoline UST, one regular unleaded gasoline UST, and one 10,000 gallon regular unleaded gasoline UST.

Post Office Box 854, Lexington SC 29071 • 235-B Dooley Road, Lexington, SC 29073
Telephone: (803) 808-2043 • fax: (803) 808-2048

The above information is based on reports and correspondence obtained from SCDHEC files and MECI field notes.

## FIELD EXPLORATION

Field exploration conducted at the site included:

- construction of six monitoring wells;
- groundwater sampling and chemical analysis;
- water supply well sampling and chemical analysis; and
- a comprehensive survey of subject site (See Figure 2).

The monitoring well locations were selected based on SCDHEC project manager instructions, existing site conditions, and drilling accessibility.

## MONITORING WELL INSTALLATION

On May 11 and 12, 2011, six single cased, watertable bracketing monitoring wells were installed at the subject site. These monitoring wells (MW-18, MW-19, MW-20, MW-21, MW-22, and MW-23) were installed by Geologic Exploration, of Statesville, North Carolina (S.C. Driller Certification: Danny Summers #B 01430). The wells were installed using an ATV-mounted drilling rig employing 7.5-inch outer diameter hollow-stem augers to construct the borehole. These monitoring wells were installed to better define the contaminant plume. The following table presents select well installation details.

| Well Number | Screened Interval (ft) | Total Depth (ft) |
|---|---|---|
| **MW-18** | 7.0-17.0 | 17.0 |
| **MW-19** | 15.0-25.0 | 25.0 |
| **MW-20** | 17.0-27.0 | 27.0 |
| **MW-21** | 15.0-25.0 | 25.0 |
| **MW-22** | 19.0-29.0 | 29.0 |
| **MW-22** | 13.0-23.0 | 23.0 |

The soils encountered during drilling activities consisted of fine to medium grained sandy silts and silts of the Piedmont Province. Representative portions of soil samples were screened with a Photo Ionization Detector (PID) and classified by MECI personnel. Soil samples were collected from drill cuttings produced during the installation of the monitoring wells installed in conjunction with the subject assessment. Test boring records showing soil descriptions and screening result are attached.

Based on PID readings and lack of access to spread soils onsite, soil cuttings were transported to Waste Management/Richland Landfill, Elgin, SC by MECI. A total of 2.36 tons was disposed of in this manner. A disposal manifest for these soils is attached at the end of this report.

Following completion of the wells, the wells were developed by bailing until they were determined to be functioning properly and turbidity was reduced. Test Boring Records showing soil descriptions and monitoring well installation details are attached. The drummed purge water was treated by MECI personnel using a granular activated carbon drum. A total of one (1) drum of purge/development water was disposed of in this manner. A disposal manifest for the drummed purge water is attached at the end of this report.

## SITE SURVEY

Following monitoring well installation, a comprehensive survey was conducted by Construction Support Services of Columbia, SC (Jay S. Joshi PLS# 14811) dated May 24, 2011 (see Figure 2) to locate the vertical and horizontal positions of the monitoring wells and relevant structures.

## MONITORING WELL SAMPLING AND CHEMICAL ANALYSES

On May 16, 2011, MECI personnel collected groundwater samples from twelve (12) monitoring wells at the subject site. Purging was completed by bailing at least three well volumes of water from the well or until pH, conductivity, dissolved oxygen stabilized to within 10%, whichever occurred first. Field measurements of pH, conductivity, dissolved oxygen, dissolved carbon dioxide, and water temperature were obtained before well sampling process. Monitoring wells OMW-1 and MW-3 contained a noticeable petroleum sheen and field measurements were not obtained prior to sampling. Monitoring well MW-13 has a destroyed manhole and bent casing, it was sampled with the aid of a 1"-bailer and field measurements were not obtained. The well cap for MW-8 was not functioning properly, and was replaced. During this sampling event, MW-6 and MW-15 could not be located with the aid of a metal detector. However, during the comprehensive survey at the subject site, MW-15 was located. Table 1 presents the results of the field measurements obtained. The wells were sampled in accordance with SCDHEC guidelines.

Groundwater samples obtained were sent to Pace Analytical Services, Inc. of Huntersville, NC (SCDHEC Laboratory Certification #99006) for analysis.

The following sampling matrix contains well development and requested analyses for each well:

| Monitoring Well | Purge | No Purge | Gauge Only | BTEX, Naphthalene, MTBE (EPA Method 8260-B) | EDB (EPA Method 8011) | 1,2 DCA (EPA Method 8260-B) | 8 Oxygenates (EPA Method 8260-B) | Total Lead (EPA Method 6010) | Sulfate (EPA Method 375.2) | Nitrate (EPA Method 353.2) | Methane (RSK Method) | PAH's (EPA Method 8270) | Ferrous Iron (Field Test) |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | | | | Analyte Sampled | | | | | | | | | |
| **OMW-1** | | X | | X | X | X | X | X | | | | | |
| **MW-1R** | | | X | | | | | | | | | | |

| **MW-23** | X | | | X | X | X | X | X | | | | | |

**Notes: BTEX = benzene, toluene, ethylbenzene, & total xylenes MTBE=methyl tertiary butyl ether 1,2 DCA = 1,2 dicloroethane**
**PAH = polycyclic aromatic hydrocarbons**

The results of the laboratory analyses are summarized in Table 2, Table 3, and presented in the attached laboratory reports.

## WATER SUPPLY WELL SAMPLING AND CHEMICAL ANALYSIS

On May 16, 2011, MECI personnel sampled two (2) water supply wells (CLS-WW and CP-WW2). Water supply well CLS-WW was sampled for BTEX, Naphthalene, MTBE, 1,2-DCA, 8-oxygenates (EPA Method 8260B), and EDB (EPA Method 8011). During sampling of CP-WW2, MECI personnel was unable to properly purge the water supply well due to power to the pump not being connected. MECI was able to obtain one vial during the sampling of CP-WW2 and had the sample analyzed for BTEX, Naphthalene, MTBE, 1,2-DCA and 8-oxygenates (EPA Method 8260B). The following matrix contains well status, owner(s), and tax map identification numbers:

| Water Supply Well Number | Well Owner | Abbeville County Tax Map Number: | Notes: | Well Status |
|---|---|---|---|---|
| CLS-WW | Harold F. Crawford | 046-00-00-080 | 5870 S.C. Highway 28 N | Active |
| CP-WW | H. Franklin Crawford | 046-00-00-049 | 5846 S.C. Highway 28 N | Inactive |
| CP-WW2 | H. Franklin Crawford | 046-00-00-049 | 5846 S.C. Highway 28 N | Inactive |

## GROUNDWATER ANALYTICAL RESULTS

Groundwater samples obtained from the monitoring wells were analyzed for dissolved phase petroleum constituents. During the subject sampling event, free phase petroleum product was detected in MW-1R at a thickness of 0.11 feet. The analytical results indicate petroleum impact to the surficial aquifer, with highest dissolved concentrations being detected in the area of OMW-1 and MW-13R. Dissolved total BTEX concentrations range from levels below detection limits (BDL) to 79,840 micrograms per liter in OMW-1. Dissolved MTBE concentrations range from below detection limits to 15,600 micrograms per liter in monitoring well MW-13R. Dissolved EDB concentrations range from below detection limits to 9.9 micrograms per liter in OMW-1. The results of the analyses for each monitoring well and specific parameters are listed on Table 2, Table 3, and provided in the attached laboratory reports.

## WATER SUPPLY WELL ANALYTICAL RESULTS

The water supply well samples obtained from CLS-WW and CP-WW2 were analyzed by Pace Analytical, Inc. for petroleum constituents. MECI was unable to obtain samples from CP-WW due to the residence being vacant and power currently not being connected to the water supply well. As discussed above, one vial was obtained from CP-WW2. However, MECI personnel noted that the water supply (CP-WW2) was unable to be properly purged due to no power being connected to the well. Analytical results do not indicate petroleum impact to the water supply wells. The results of the analyses are presented on Table 2, Table 3, and in the attached laboratory reports.

## ASSESSMENT SUMMARY

Groundwater elevation data for the May 16, 2011 gauging event was plotted, and points of equal elevation were interpolated between the monitoring wells. A groundwater contour map of the surficial aquifer was thus prepared and is presented on Figure 3. Current groundwater elevation data reveals a groundwater flow direction to the southeast toward Spur Creek.

During the subject sampling event, free phase petroleum product was detected in MW-1R at a thickness of 0.11 feet. The analytical results indicate petroleum impact to the surficial aquifer, with highest dissolved concentrations being detected in the area of OMW-1 and MW-13R. Dissolved total BTEX concentrations range from levels below detection limits (BDL) to 79,840 micrograms per liter in OMW-1. Dissolved MTBE concentrations range from below detection limits to 15,600 micrograms per liter in MW-13R. Dissolved EDB concentrations range from below detection limits to 9.9 micrograms per liter in OMW-1. Figure 4 depicts graphically the concentrations of Total BTEX (indicator for plume migration) dissolved in the groundwater at the site. Figure 5 depicts graphically the concentrations of MTBE dissolved in the groundwater at the site.

The contaminant plume at the subject site is currently not defined. MECI recommends additional field screening and monitoring wells down gradient of MW-22, to the west across S.C. Highway 28, and to south of MW-21. Additionally, MECI recommends conducting a series of AFVR events on OMW-1, MW-1R, MW-2, MW-3, MW-10, and MW-13R to remove free phase petroleum product and to reduce dissolved CoC concentrations.

## QUALIFICATIONS OF REPORT

The activities and evaluative approaches used in this assessment are consistent with those normally employed in hydrogeological assessment and waste management projects of this type. Our

evaluation of site conditions has been based on our understanding of the site, project information provided to us, and data obtained in our exploration. The general subsurface conditions utilized in our evaluation have been based on interpretation of subsurface data between borings. Content of this report is intended for the sole use by the South Carolina Department of Health and Environmental Control, under mutually agreed upon terms and conditions. If other parties wish to rely on this report please contact MECI prior to their use of this information so that a mutual understanding and agreement of the terms and conditions of our services can be established.

Midlands Environmental appreciates the opportunity to offer our professional environmental services to you on this project. Please feel free to contact us at 803-808-2043 if you have any immediate questions or comments.

Sincerely,
**Midlands Environmental Consultants, Inc.**

LEGEND AND ABBREVIATIONS:

- MW = MONITORING WELL
- BM = BENCHMARK
- TPED = TELEPHONE PEDESTAL
- SDMH = STORM DRAIN MAN HOLE
- SSMH = SANITARY SEWER MAN HOLE
- TMH = TELEPHONE MAN HOLE
- WM = WATER METER
- WV = WATER VALVE
- FH = FIRE HYDRANT
- SP = SIGNAL POLE
- PP = POWER POLE
- LP = LIGHT POLE
- GM = GAS METER
- GV = GAS VALVE
- UST = UNDERGROUND STORAGE TANK
- USTF = UNDERGROUND STORAGE TANK FILL
- USTV = UNDERGROUND STORAGE TANK VENT
- GTCB = GRATE TOP CATCH BASIN
- SIGN = SIGN
- RCP = REINFORCED CONCRETE PIPE
- VAC = AIR VACUUM
- WW = WATER SUPPLY WELL
- FD = FUEL DISPENSER
- DD = DIESEL DISPENSER
- KD = KEROSENE DISPENSER
- —E— = OVERHEAD POWER LINE
- —G— = GAS LINE
- —T— = UNDERGROUND TELEPHONE LINE
- —W— = WATER LINE
- = WOOD LINE
- —X— = HOG WIRE FENCE LINE
- —UE— = UNDERGROUND POWER LINE

SOUTH CAROLINA REGISTERED LAND SURVEYOR No. 14811 JAY S. JOSHI

SOUTH CAROLINA CONSTRUCTION SUPPORT SERVICES No. C02425 CERTIFICATE OF AUTHORIZATION

THIS PARCEL MAY BE SUBJECT TO EASEMENT AND/OR RIGHT-OF-WAYS NOT SHOWN. FINAL RESULTS, CONCLUSIVE OF TITLE SEARCH

NOTE:
NOT FOR THE PURPOSE OF RECORDATION AT COUNTY, COURTHOUSE OR THE CONVEYANCE OF PROPERTY.

NOTE:
I HEREBY CERTIFY THAT THE FIELD WORK, CALCULATIONS, AND DRAFTING WERE DONE UNDER MY DIRECT SUPERVISION.

COMPREHENSIVE SITE SKETCH OF

# CRAWFORD'S COUNTRY STORE

5870 S.C. HIGHWAY 28 NORTH
ABBEVILLE, ABBEVILLE COUNTY, SC
SCDHEC SITE ID #12335
PREPARED FOR

## MIDLANDS ENVIRONMENTAL CONSULTANTS, INC.

| | | |
| *Indicate Water Bearing Zones (Use a 2nd sheet if needed) | | |

**5. REMARKS:**
MW-18 BENTONITE SEAL FROM 3.0 TO 5.0 FT.

**6. TYPE:** ☐ Mud Rotary ☐ Jetted ☐ Bored ☐ Dug ☐ Air Rotary ☐ Driven ☐ Cable tool ☑ Other AUGER

**7. PERMIT NUMBER:** 12335

**8. USE:**
☐ Residential ☐ Public Supply ☐ Process ☐ Irrigation ☐ Air Conditioning ☐ Emergency ☐ Test Well ☑ Monitor Well ☐ Replacement

**9. WELL DEPTH** (completed) Date Started: 05/11/11
17.0 ft. Date Completed: 05/12/11

**10. CASING:** ☑ Threaded ☐ Welded
Diam.: 2 INCH
Type: ☑ PVC ☐ Galvanized ☐ Steel ☐ Other
2.0 in. to 7.0 ft. depth
_____ in. to _____ ft. depth
Height: Above ☐ Below ☐
Surface 0.0 ft.
Weight _____ lb./ft.
Drive Shoe? ☐ Yes ☐ No

**11. SCREEN:**
Type: SCH 40 PVC Diam.: 2 INCH
Slot/Gauge: .010 Length: 10.0 FEET
Set Between: 7.0 ft. and 17.0 ft.
_____ ft. and _____ ft.
NOTE: MULTIPLE SCREENS USE SECOND SHEET
Sieve Analysis ☐ Yes (please enclose) ☑ No

**12. STATIC WATER LEVEL** 9.0 ft. below land surface after 24 hours

**13. PUMPING LEVEL** Below Land Surface.
_____ ft. after _____ hrs. Pumping _____ G.P.M.
Pumping Test: ☐ Yes (please enclose) ☐ No
Yield: _____

**14. WATER QUALITY**
Chemical Analysis ☐ Yes ☐ No Bacterial Analysis ☐ Yes ☐ No
Please enclose lab results.

**15. ARTIFICIAL FILTER** (filter pack) ☑ Yes ☐ No
Installed from 5.0 ft. to 17.0 ft.
Effective size 1.43 Uniformity Coefficient 1.30

**16. WELL GROUTED?** ☑ Yes ☐ No
☑ Neat Cement ☐ Bentonite ☐ Bentonite/Cement ☐ Other _____
Depth: From 0.0 ft. to 3.0 ft.

**17. NEAREST SOURCE OF POSSIBLE CONTAMINATION:** ____ ft. ____ direction
Type _____
Well Disinfected ☐ Yes ☐ No Type: _____ Amount: _____

**18. PUMP:** Date installed: _____ Not installed ☐
Mfr. Name: _____ Model No.: _____
H.P. _____ Volts _____ Length of drop pipe ___ ft. Capacity ___ gpm
TYPE: ☐ Submersible ☐ Jet (shallow) ☐ Turbine ☐ Jet (deep) ☐ Reciprocating ☐ Centrifugal

RE: Project: CRAWFORD'S COUNTRY STORE
Pace Project No.: 9294372

Dear Mr. Shane:
Enclosed are the analytical results for sample(s) received by the laboratory on May 17, 2011. The results relate only to the samples included in this report. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

Analyses were performed at the Pace Analytical Services location indicated on the sample analyte page for analysis unless otherwise footnoted.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Renee Spencer

## QUALIFIERS

Project: CRAWFORD'S COUNTRY STORE
Pace Project No.: 9294372

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is NELAP accredited. Contact your Pace PM for the current list of accredited analytes.

### LABORATORIES

| | |
|---|---|
| PASI-A | Pace Analytical Services - Asheville |
| PASI-C | Pace Analytical Services - Charlotte |

### ANALYTE QUALIFIERS

| | |
|---|---|
| 1g | Relative percent difference between results from each column was greater than 40% due to matrix interference. The higher of the two results was reported. |
| B- | Analyte detected in method blank but was not detected in the associated samples. |
| E | Analyte concentration exceeded the calibration range. The reported result is estimated. |
| L3 | Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples. Results unaffected by high bias. |
| M0 | Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits. |
| P5 | The EPA or method required sample preservation degrades this compound, therefore acceptable recoveries may not be achieved in sample matrix spikes. |
| R1 | RPD value was outside control limits. |
| S4 | Surrogate recovery not evaluated against control limits due to sample dilution. |

Re: Treatment of Purge Water
Crawford's Country Store
Antreville, South Carolina
SCDHEC Site ID Number 12335
MECI Project Number 11-3327

To Whom it May Concern;

Midlands Environmental Consultants, Inc. is providing the following letter as certification that treatment of the referenced purge water complied with the conditions of "Proposed Conditions for Use of Portable Activated Carbon Units for the Treatment of Small Volumes of Petroleum Hydrocarbon Contaminated Groundwater", as described in the following:

Applicability:

Groundwater treated was obtained as a result development of wells and sampling.

Conditions:

1. The purge/bail water from all wells is mixed before usage of the Activated Carbon Unit.
2. No free-product was detected in any of the purge water drums.
3. Analytical results of from well sampling show average concentrations of petroleum hydrocarbon constituents less than 5000 parts per billion (ppb) Benzene and less than 20,000 ppb total BTEX.
4. The existing carbon pack will be replaced/reactivated every 5,000 gallons.
5. Record of usage is maintained by Contractor.
6. Any and all recommendations and conditions issued by the Manufacturer have been adhered to.
7. Any and all recommendations and conditions (even on a site by site basis) issued by the SCDHEC must be adhered to.

Post Office Box 854, Lexington SC 29071 • 235-B Dooley Road, Lexington, SC 29073
Telephone: (803) 808-2043 • fax: (803) 808-2048

All purge waters were treated on-site using an up-flow treatment drum loaded with 30 pounds of activated carbon. Carbon will be loaded to a maximum of 3 pounds of total organic compounds or 5,000 gallons of development/purge water, whichever occurs first.

**One 55-gallon drum was treated on May 16, 2011 at the referenced site.**

**A total of one (1) 55-gallon drum was treated at the referenced site.**

Midlands Environmental also tracks cumulative organic compounds adsorbed on the activated carbon to ensure the capacity of carbon mass is not over-charged. This data is available upon request.

Should you have any questions or comments, please contact the undersigned.

Sincerely,
Midlands Environmental Consultants, Inc.

Courtney M. Sanders
Staff Biologist

ANTREVILLE SC 29620

Re: Water supply well inquiry
Crawford's County Store, 5870 SC-28 North, Antreville, SC
UST Permit #12335
Release reported December 3, 1991
Abbeville County

Dear Mr. Crawford:

As you are aware, petroleum chemicals of concern (CoC) were detected in your water supply well designated CP-WW in 1998. As a result, the Division fit the well with a granulated activated carbon (GAC) filter as an interim measure to reduce CoC to acceptable levels. In October 2000, the Division replaced CP-WW with CP-WW2. CP-WW was taken out of service but was not properly abandoned.

According to a recent sampling event conducted by your contractor, CP-WW2 does not contain any detectable CoC. However, CP-WW could not be sampled due to no power being connected to the pump. Several monitoring wells located immediately upgradient from CP-WW (MW-13, MW-13R, and MW-22) show highly elevated CoC levels. Accordingly, there is a high potential that the well remains impacted by CoC. Since the inactive well is still considered to be a receptor, your plans for future use are a critical factor in cleanup of the release at Crawford's Store. Therefore, please complete the attached form and return it to my attention as soon as possible. Your cooperation is greatly appreciated.

On all correspondence regarding this site, please reference UST Permit #12335. If you have any questions, please feel free to contact me by telephone at (803) 896-6398, by fax at (803) 896-6245, or by e-mail at padgetjp@dhec.sc.gov.

Sincerely,

Joel P. Padgett, P.G., Geologist/Hydrologist

UST DOCKET 9 Tech

Re: Aggressive fluid and vapor recovery (AFVR) directive
Crawford's Country Store, 5870 SC-28 North, Antreville, SC
UST Permit #12335; CA #41829
Release reported December 3, 1991
Abbeville County

Dear Mr. Crawford:

The Underground Storage Tank (UST) Management Division of the South Carolina Department of Health and Environmental Control (SCDHEC) recognizes your commitment to continue work at this site using Midlands Environmental Consultants, Inc. as your contractor. The next scope of work is to conduct two aggressive fluid and vapor recovery (AFVR) events on monitoring wells MW-1R, MW-3, and OMW-1 (manifolded together) to remove free-phase product (FP) and reduce concentrations of chemicals of concern (CoC) in groundwater. The events should be spaced a minimum of one month apart to allow equilibrium conditions to reestablish. Off-gas treatment will be necessary.

Cost Agreement (CA) #41829 has been approved in the amount shown on the enclosed cost agreement form for the AFVR events. AFVR activities may proceed immediately upon receipt of this letter. The report submitted at the completion of the event should include the following items:

- A narrative portion that documents the contractor name, field personnel present, general site conditions, general weather conditions including ambient air temperature, date, and start/stop times.
- A brief description of the completed work scope and any relevant descriptions pertaining to the data tables.
- A table summarizing the airflow (in CFM) and volatile air emissions concentrations collected from the stack of the truck **before off-gas treatment** on thirty-minute time intervals through each eight-hour each event or through an eight-hour period per day for each extended event. The table will also identify the recovery well or wells.
- A table summarizing magnehelic gauge measurements on thirty-minute time intervals through each eight-hour event or through an eight-hour period per day for each extended event. The gauges must be installed on the recovery well or wells and on immediately surrounding wells.
- The total volume of water recovered in gallons.

- The total volume of free-phase product recovered in gallons (typically measured with a product/water interface device inserted into the top of the tanker at the completion of the event and then converted to an approximate volume).
- The total weight of petroleum removed as vapor in pounds. This is calculated based on the airflow rate and the concentration of vapor.
- A table documenting the free-product thickness in each well before and after each AFVR event.
- A scaled base map depicting the location of the recovery well or wells and immediately surrounding wells equipped with magnehelic gauges.

The drop tube or "stinger" should initially be installed six inches below the free-phase product or installed at the water table interface if free-phase product is not present. After the first two hours of the AFVR event, the depth of the stinger should be adjusted to obtain the highest petroleum vapor recovery. The depth should be periodically readjusted throughout the event to maintain maximum vapor recovery. Groundwater recovery should not exceed four gallons per minute at any time during the event. The overall goal is to maximize the recovery of free-phase product and petroleum vapors in the capillary fringe and minimize the recovery of groundwater.

Midlands can submit an invoice for direct billing from the State Underground Petroleum Environmental Response Bank (SUPERB) Account. Please note that all applicable South Carolina certification requirements apply to the AFVR activities and report preparation. All site rehabilitation activities must be performed and submitted by a South Carolina-Certified Underground Storage Tank Site Rehabilitation Contractor.

An AFVR report and invoice are due within 90 days from the date of this letter. Interim invoices may not be submitted for this scope of work. If the invoice is not submitted within 120 days from the date of this letter, monies allocated to pay this invoice will be uncommitted. This means that the invoice will not be processed for payment until all other committed funds are paid or monies become available.

Please note that Sections 44-2-110(4) and 44-2-130 of the SUPERB Statute state that no costs will be allowed unless prior approval from the SCDHEC is obtained. If for any reason additional tasks will be completed, these additional tasks and the associated cost must be pre-approved by the Department for the cost to be paid. SCDHEC reserves the authority to pay only for work properly performed and/or technically justified and will only pay rates in accordance with established criteria. Further, SCDHEC reserves the right to question and/or reject costs if deemed unreasonable and the right to audit project records at any time during the project or after completion of work.

The Division grants pre-approval for transportation of up to 5,000 gallons of free-phase product and petroleum-contaminated groundwater from the referenced facility to a permitted treatment facility. The product and groundwater must be properly stored in labeled containers and must be accepted by the approved treatment facility. There can be no spillage or leakage in transport. A copy of the disposal manifest or acceptance letter from the receiving facility that clearly designates the quantity received must be included with the report.

On all correspondence concerning this facility, please reference UST Permit #12335. If there are any questions concerning this project, feel free to contact me by telephone at (803) 896-6398, by fax at (803) 896-6245, or by e-mail at padgetjp@dhec.sc.gov.

Sincerely,

Re: System and Well Abandonment
Pay for Performance Projects at Sites 00781, 02382, 04102, 06851, 09413, 12335, 15971, 16090
$H_2O$ Environmental, Inc.

Dear Mr. Gillespie:

In correspondence from the Department dated March 2, 2007, Groundwater & Environmental Services (GES) was directed to remove and abandon the remediation systems at the sites listed below.

| Permit # | Site Name | Remove and Abandon Treatment System | Abandon Monitoring Wells |
|---|---|---|---|
| 04102 | City of Greenville | X | X |
| 00781 | SCDOT Bamberg Maintenance | X | |
| 02382 | Black's 66 | X* | X |
| 06851 | Spinx | X | |
| 09413 | Gaulden's Grocery | X | X |
| 15971 | Nesmith Well Contamination | X | |
| 16090 | Fmr Ellison's (Owens Well) | X | |
| 12335 | Crawford's Store | X | |

* Contact Mr. Tommy Keels at G&K Tank Services (803-799-0054) to pick up this trailer.

In accordance with the terms and conditions of the PfP contracts, you were to remove your equipment from the listed facilities, abandon the remediation well, piping, electrical service, etc., and restore the sites to the conditions prior to corrective action (e.g., asphalt paved areas will be repaved with asphalt, concrete areas will be replaced with concrete, grass areas will have soil replaced to the original grade and reseeded or sodded with grass, etc.). The monitoring wells were also to be abandoned in accordance with the contract terms and conditions at the facilities indicated in the table above.

UST PROGRAM
DOCKETING # _____

In response to your letter dated September 27, 2007 Department staff have conducted site inspections at the listed sites to verify compliance with the abandonment directive. As a result of these inspections the following deficiencies were noted:

| Permit # | Site Name | |
|---|---|---|
| 04102 | City of Greenville | Well pads/covers left in place |
| 00781 | SCDOT Bamberg Maintenance | Well pads left in place |
| 02382 | Black's 66 | Well pads/covers left in place |
| 06851 | Spinx | Well pads left in place |
| 09413 | Gaulden's Grocery | Well pads left in place (MW-1, -1R, -4, -4R, DW-1)<br>Well covers left in place (MW-8, -8R) |
| 16090 | Fmr Ellison's (Owens Well) | Well pads left in place |
| 12335 | Crawford's Store | Well pads left in place |

Your performance bonds will be returned as soon as completion of these activities has been verified by DHEC staff.

Please feel free to contact me at (803) 8966249 if you have any questions or need additional information.

Sincerely,

Christopher S. Doll, P.G., Manager
