Notes:

1. Elevations relative to a temporary benchmark with an assumed datum of 100.00 feet above mean sea level; data reported in feet.
2. Groundwater elevations adjusted for the presence of free product, where present, with an assumed density of 0.75 g/cm<sup>3</sup>.
3. May 2010 survey data collected by Environmental Compliance Services, Inc. during Tier I assessment activities.
4. Subsequent October and December 2010 survey data provided by Pittman Professional Land Surveying.
5. 07960-MW20 installed with a 3 ft stickup riser.

Notes:

1. Analyses for BTEX compounds, MTBE, naphthalene, and 1,2-DCA by EPA Method 8260B; analyses for EDB by EPA Method 8011; analyses for total lead by EPA Method 6010.
2. Concentrations in bold face type exceeded the May 2001 Risk-Based Screening Level.
3. < = Less than the reporting limit specified in the laboratory report.
4. NA - Analyses not requested.
5. J - Estimated value below the laboratory reporting limit.
6. 07960 - TW10 did not produce enough water and was subsequently abandoned following sample collection.
7. 07960-WSW1 GAC installed on 11/18/10.
8. 07960-WSW8 GAC installed on 11/12/10.
9. Risk Based Action Levels are defined in the South Carolina Department of Health and Environmental Control (SCDHEC), Bureau of Land and Waste Management, Underground Storage Tank Program, May, 15, 2001, South Carolina Risk Based Corrective Action for Petroleum Releases.

Notes:

1. Analyses for eight oxygenates by EPA Method 8260B.
2. < = Less than the reporting limit specified in the laboratory report.
3. Concentrations in bold face exceed the 2008 SCDHEC Action Level.
4. J = Estimated value below the laboratory reporting limit.
5. 07960 - TW10 did not produce enough water and was subsequently abandoned following sample collection.
6. 07960-WSW1 GAC installed on 11/18/10.
7. 07960-WSW8 GAC installed on 11/12/10.
8. The ALs are defined in SCDHEC, Department of Health and Environmental Control, Bureau of Land and Waste Management, Underground Storage Tank Program, October 22, 2008, Certification of the Oxygenate Compounds.

FACILITY

**APPENDIX E**  
**Contractor Checklist**

**Contractor Checklist**

For each report submitted to the UST Management Division, the contractor will be required to verify that all data elements for the required scope of work have been provided. For items not required for the scope of work, the N/A box should be checked. For items required and not completed or provided, the No box should be checked and a thorough description of the reason must be provided.

| Item # | Item   | Yes | No | N/A |
|--------|--|-----|----|-----|
| 1      | Is Facility Name, Permit #, and address provided?  | X   |    |     |
| 2      | Is UST Owner/Operator name, address, & phone number provided?  | X   |    |     |
| 3      | Is name, address, & phone number of current property owner provided?   | X   |    |     |
| 4      | Is the DHEC Certified UST Site Rehabilitation Contractor's Name, Address, telephone number, and certification number provided?             | X   |    |     |
| 5      | Is the name, address, telephone number, and certification number of the well driller that installed borings/monitoring wells provided?     |     |    | X   |
| 6      | Is the name, address, telephone number, and certification number of the certified laboratory(ies) performing analytical analyses provided? | X   |    |     |
| 7      | Has the facility history been summarized?  | X   |    |     |
| 8      | Has the regional geology and hydrogeology been described?  |     |    | X   |
| 9      | Are the receptor survey results provided as required?  |     |    | X   |
| 10     | Has current use of the site and adjacent land been described?  | X   |    |     |
| 11     | Has the site-specific geology and hydrogeology been described?   |     |    | X   |
| 12     | Has the primary soil type been described?  |     |    | X   |
| 13     | Have field screening results been described?   |     |    | X   |
| 14     | Has a description of the soil sample collection and preservation been detailed?  |     |    | X   |
| 15     | Has the field screening methodology and procedure been detailed?   |     |    | X   |
| 16     | Has the monitoring well installation and development dates been provided?  |     |    | X   |
| 17     | Has the method of well development been detailed?  |     |    | X   |
| 18     | Has justification been provided for the locations of the monitoring wells?   |     |    | X   |
| 19     | Have the monitoring wells been labeled in accordance with the UST QAPP guidelines?   |     |    | X   |
| 20     | Has the groundwater sampling methodology been detailed?  | X   |    |     |
| 21     | Have the groundwater sampling dates and groundwater measurements been provided?  | X   |    |     |
| 22     | Has the purging methodology been detailed?   | X   |    |     |
| 23     | Has the volume of water purged from each well been provided along with measurements to verify that purging is complete?                    | X   |    |     |
| 24     | If free-product is present, has the thickness been provided?   |     |    | X   |
| 25     | Does the report include a brief discussion of the assessment done and the results?   | X   |    |     |
| 26     | Does the report include a brief discussion of the aquifer evaluation and results?  |     |    | X   |
| 27     | Does the report include a brief discussion of the fate & transport models used?  |     |    | X   |

| Item # | Item   | Yes | No | N/A |
|--------|--|-----|----|-----|
| 28     | Are the site-conceptual model tables included? (Tier 1 Risk Evaluation)  |     |    | X   |
| 29     | Have the exposure pathways been analyzed? (Tier 2 Risk Evaluation)   |     |    | X   |
| 30     | Have the SSTLs for each compound and pathway been calculated? (Tier 2 Risk Evaluation)   |     |    | X   |
| 31     | Have recommendations for further action been provided and explained?   | X   |    |     |

**Re: Aggressive fluid and vapor recovery (AFVR) directive  
378 Truck Stop, 731 Highway 378, Edgefield, SC  
UST Permit #07960; CA #56178  
Release reported October 03, 1974  
Edgefield County**

Dear Mr. Wilkerson:

On behalf of the South Carolina Department of Health and Environmental Control (DHEC), the Underground Storage Tank (UST) Management Division recognizes your commitment to continue work at this site using Geological Resources, Inc. The next appropriate remedial activity is to continue aggressive fluid and vapor recovery (AFVR) to reduce ground-water concentrations of chemicals of concern (CoC). Please have your contractor conduct two 96-hour AFVR events on monitoring wells MW-1, MW-3 and MW-7 the second on MW-22 and MW-12. The events must be conducted in accordance with your contractors Annual Contractor Quality Assurance Plan (ACQAP). A copy of QAPP Revision 3.1 is available at [http://www.scdhec.gov/Environment/docs/DHEC%20UST%20QAPP\\_Rev-3.1\(2\).pdf](http://www.scdhec.gov/Environment/docs/DHEC%20UST%20QAPP_Rev-3.1(2).pdf).

**Please notify the UST Management Division prior to commencing AFVR at the site. The stingers must be advanced to a target depth of based on the historical low water table within the first 8 hours of the event. Thereafter, the stingers should be adjusted to achieve the highest vapor recovery while maintaining dewatering of the smear zone. Off-gas treatment will be necessary.**

Cost Agreement (CA) #56178 has been approved in the amount shown on the enclosed cost agreement form for the AFVR event. Please note that all applicable South Carolina certification requirements apply to the report preparation. Further, all site rehabilitation activities must be performed and submitted by a South Carolina-Certified Underground Storage Tank Site Rehabilitation Contractor.

An AFVR report and invoice are due within 90 days from the date of this letter. Your contractor may directly bill the State Underground Petroleum Environmental Response Bank (SUPERB) Account. Interim invoices may not be submitted for this scope of work. If the invoice is not submitted within 120 days from the date of this letter, monies allocated to pay this invoice will be uncommitted. This means that the invoice will not be processed for payment until all other committed funds are paid or monies become available.

Sections 44-2-110(4) and 44-2-130 of the SUPERB Statute state that no costs will be allowed unless prior approval from DHEC is obtained. If for any reason additional tasks will be completed, these additional tasks and the associated cost must be pre-approved by DHEC.

in order for the costs to be paid. DHEC reserves the authority to pay only for work properly performed and/or technically justified and will only pay rates in accordance with established criteria. Further, DHEC reserves the right to question and/or reject costs if deemed unreasonable and the right to audit project records at any time during the project or after completion of work.

The UST Management Division grants pre-approval for transportation of petroleum-contaminated, investigative-derived waste (IDW) from the referenced site to a permitted treatment/disposal facility. The transport and disposal must be conducted in accordance with QAPP Revision 3.1.

On all correspondence concerning this facility, please reference UST Permit #07960. If there are any questions concerning this project, feel free to contact me by telephone at (803) 898-7705, by fax at (803) 898-0673, or by e-mail at [johnson@dhec.sc.gov](mailto:johnson@dhec.sc.gov).

Sincerely,

Austin Johnson

MEMORANDUM GROUND-WATER  
PROTECTION DIVISION

TO: Jim Hess  
Bureau of Drinking  
Water Protection

FROM: Billy Outpre  
Upper Savannah District  
SUBJECT: UST location /

DATE: 3-19-90

contaminated wells - Edgely  
County

In a recent conversation with Reggie Massey of this office, he reminded me of a situation which he was made aware of many years ago. This situation was discovered prior to the regulation of USTs by the state or federal government. At one time, this office also contacted others within DHEC to try to resolve the problem of contaminated wells in this area. See attached documentation.

I went to the location on February 9, 1990. The person at the store at the time told me that the underground tanks were no longer in operation; however, Mr. Massey told me that he believes the tanks are in operation. The person at the store in February told me the tanks are owned by a

MEMORANDUM

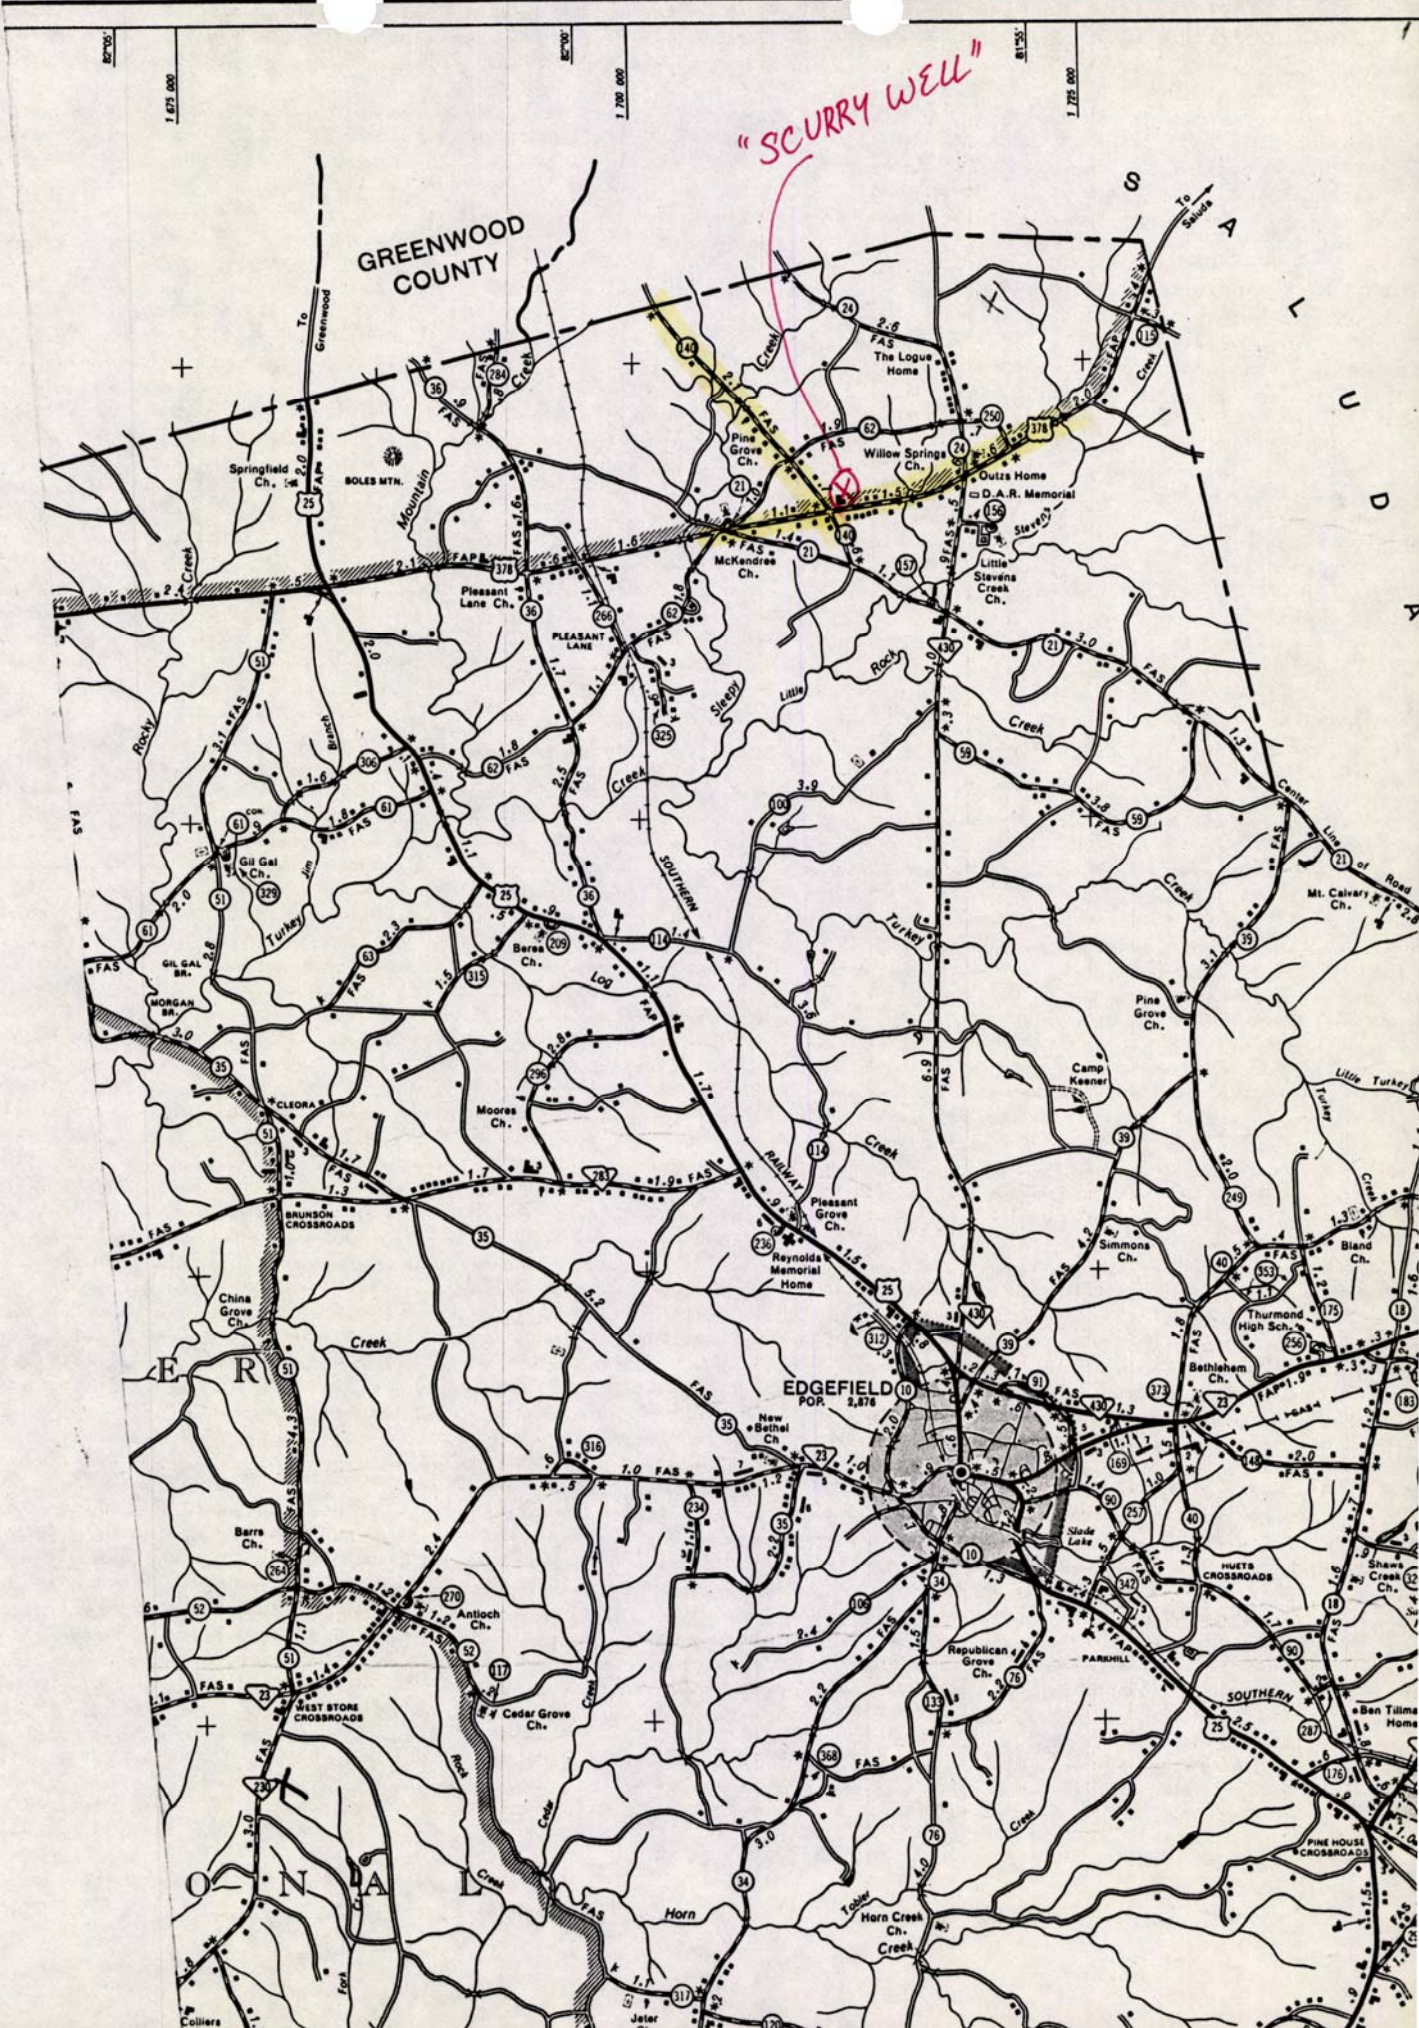

CONTINUATION PAGE # 1

TO: Jim Hess (3-19-90)

Jolly Owdom. After several phone  
calls, I found that Mr. Owdom can  
be contacted by calling Covari's Phillips 66  
in Edgefield at 637-5440 (736 Augusta  
Road) during the day and can be  
contacted at home at 637-6796 or  
Route 2, Box 74, Edgefield. With other  
more immediate work to do, it is  
difficult to find time to fully follow-  
up on this problem in the near future  
If your personnel could assist in follow-up  
on this problem, it will be greatly  
appreciated.

The ~~problem's~~ problem's source is  
within 100 yards of the intersection  
of SR 140 and Hwy 378 at the location  
shown on the attached map.

Re: AFVR Report  
378 Truck Stop  
731 Highway 378  
Edgefield, Edgefield County, South Carolina  
UST Permit #07960  
Cost Agreement #56178  
GRI Project No. 4422

Dear Mr. Johnson:

This report presents the results of AFVR activities conducted in March 2018 at the above referenced site. The activities were conducted in general accordance with the requirements outlined in correspondence from the SCDHEC dated February 5, 2018 and addressed to Mr. Frank Wilkerson. The purpose of the activities was to remove free product and/or dissolved phase contaminants from monitoring wells MW-1, MW-3, MW-7, MW-12 and MW-22. Monitoring wells MW-2, MW-4, MW-21, MW-29, MW-13, MW-14, MW-15 and MW-30 were used as an observation wells during the events.

The following Figures, Tables and Appendix have been included:

Figure 1: Site Location Map  
Figure 2: Site Map

Table 1A: AFVR Event Chronology (3/5/18 – 3/9/18)  
Table 1B: AFVR Event Chronology (3/9/18 – 3/13/18)  
Table 2: AFVR Event Gauging Data

Appendix A: AFVR Reports, Calculations, Disposal Manifests/Stick Readings, Tank Charts

GRI personnel visited the site to obtain right-to-enter agreements from the current property owners on February 19, 2018.

The AFVR contractor, Hazmat Emergency Response and Remediation, Inc. (HERR), arrived on-site on March 5, 2018 to conduct the first of two 96-hour AFVR events at the site. The AFVR event was conducted on monitoring wells MW-1, MW-3 and MW-7. General weather conditions were sunny/fair

UST Permit #07960

with an ambient air temperature of approximately 55°F at the time of system start-up. No free product was observed in monitoring wells MW-1, MW-3 or MW-7 prior to system startup. Fluid recovery activities using a vacuum truck with a maximum vacuum rating of 25 in. Hg and a capacity of 325 cubic feet per minute were conducted for 96 hours on MW-1, MW-3 and MW-7. During the course of the event, the vacuum at the well ranged from 20 to 22 in. Hg. Please note that the vacuum truck was equipped with an activated charcoal filter for off-gas treatment of vapor phase hydrocarbons. A total of 5,796 gallons of liquid was removed during the event. Based on data collected during the AFVR event, an estimated total of 14.0266 pounds (approximately 2.24 gallons) of product was removed in the vapor phase. No measurable free product was present in the tanker or the vacuumed wells at the conclusion of the event.

The AFVR contractor, HERR began the second 96-hour AFVR event at the site on March 9, 2018. The AFVR event was conducted on monitoring wells MW-12 and MW-22. General weather conditions were sunny/fair with an ambient air temperature of approximately 56°F at the time of system start-up. No free product was observed in monitoring wells MW-12 or MW-22 prior to system startup. Fluid recovery activities using a vacuum truck with a maximum vacuum rating of 25 in. Hg and a capacity of 325 cubic feet per minute were conducted for 96 hours on MW-12 and MW-22. During the course of the event, the vacuum at the well remained steady at 25 in. Hg. Please note that the vacuum truck was equipped with an activated charcoal filter for off-gas treatment of vapor phase hydrocarbons. A total of 1,263 gallons of liquid was removed during the event. Based on data collected during the AFVR event, an estimated total of 5.3911 pounds (approximately 0.86 gallons) of product was removed in the vapor phase. No measurable free product was present in the tanker or the vacuumed wells at the conclusion of the event.

Please do not hesitate to contact the undersigned at (704) 845-4010 if you have any questions or comments concerning this project.

Sincerely,

Re: Site Name: Former 378 Truck Stop  
Edgefield, SC  
UST Permit #: 07960

Scott,

Hazmat Emergency Response and Remediation, Inc. (HERR) completed one 96 hour Aggressive Fluid Vapor Recovery (AFVR) event at the above site on March 5-9, 2018. Included is the documentation for the event. The 96 hour event was conducted on monitoring wells MW-1, MW-3, and MW-7.

If you have any questions, please do not hesitate to contact our office.

Sincerely,

Marc Cox  
HERR Project Manager

Former 378 Truck Stop  
Edgefield, SC  
March 5-9, 2018

### **AFVR**

HERR mobilized personnel and equipment to Former 378 Truck Stop on 3/5/18. The ambient temperature was 55 deg F and weather conditions were sunny/fair. The depths to product and water were measured prior to and subsequent to the AFVR event. Stinger depth was lowered at six inch intervals starting at the water table interface until the target depth was reached (See attached data). Personnel from Geological Resources, Inc. (GRI) were on site to supervise the event.

The 96 Hour AFVR event was conducted using a Global Vacuum Liquid Ring Pump with off gas treatment through a vapor phase granular activated carbon scrubber. The vacuum unit is capable of providing 325 CFM at 25 inches of mercury.

### **Pollutant Mass Removal**

Total weight of 14.0266 pounds of petroleum in the vapor phase (total non-methane organic emissions) was removed during the 96 hour AFVR event. This amount is based on data collected during the AFVR event (see attached data sheets)

### **Liquid Disposal**

Approximately 5,796 gallons of petroleum contact water was collected during the AFVR event (See attached disposal manifest)

## **APPENDICES**

- A. AFVR FIELD NOTES**
- B. POLLUTANT MASS REMOVAL DATA SHEET**
- C. LIQUID DISPOSAL MANIFEST**

Total Emission in pounds:

14.0266

## **Pollutant Mass Removal Calculations**

$Q_{std} = (1 - \text{water vapor}) * \text{velocity} * (\text{PI} * (\text{diameter}/24)^2) * (528 \text{degrees R}/(\text{Temp} + 460))$

$\text{PPMg} = \text{PPM measured} * K$

$\text{Cg:m} = \text{PPMg} * (\text{Mg}/K3)$

$\text{Cg} = \text{Cg:m} * 62.43\text{E-}09 \text{ lb-m}^3/\text{mg-ft}^3$

$\text{PMRg} = \text{Cg} * Q_{std} * 60 \text{ min/hr}$

$\text{PMR} = \text{PMRg} * ((T2 - T1)/60)$

$Q_{std} = \text{Flow at DSCFM}$

**Vacuum** = The level of vacuum being applied should be recorded from the vacuum truck tank (inches of Hg)

**Velocity** = rate at which air flow is measured at the blower discharging pipe (anemometer)

**Cross Sectional Area** = area in ft<sup>2</sup> of discharge stack

**Relative Humidity** = The % relative humidity of the air stream exiting from the blower discharge piping

**Water Vapor in %** = Pounds of water/ pound of dry air, derived from the psychrometric chart (temp vs relative humidity)

**PPM** = PPM measurements taken with an OVA/ PID at the blower discharge piping

**K** = Number of carbons in calibration gas: K=1

**PPMg** = PPMv, Volumetric concentration as gasoline emission, dry basis at STP

**Cg:m** =mg/dsm<sup>3</sup>, mass concentration of gasoline emission

**Mg** = 128 mg/mg-mole, molecular weight of gasoline

**K3** = 24.07 dsm<sup>3</sup>/1E6 mg-mole, mass to volume conversion factor at STP

**Cg** = lb/dcsf, mass concentration of gasoline emission, dry basis at STP

**PMRg** = lb/hr, pollutant mass removal rate of gasoline emission

**PMR** = pollutant mass removal of gasoline emission over time

**APPENDIX C**

**LIQUID DISPOSAL MANIFEST**

# NON-HAZARDOUS WASTE MANIFEST

Please print or type (Form designed for use on elite (12 pitch) typewriter)

Re: Site Name: Former 378 Truck Stop  
Edgefield, SC  
UST Permit #: 07960

Scott,

Hazmat Emergency Response and Remediation, Inc. (HERR) completed one 96 hour Aggressive Fluid Vapor Recovery (AFVR) event at the above site on March 9-13, 2018. Included is the documentation for the event. The 96 hour event was conducted on monitoring wells MW-12 and MW-22.

If you have any questions, please do not hesitate to contact our office.

Sincerely,

Marc Cox  
HERR Project Manager

Former 378 Truck Stop  
Edgefield, SC  
March 9-13, 2018

### **AFVR**

HERR mobilized personnel and equipment to Former 378 Truck Stop on 3/9/18. The ambient temperature was 56 deg F and weather conditions were sunny/fair. The depths to product and water were measured prior to and subsequent to the AFVR event. Stinger depth was lowered at six inch intervals starting at the water table interface until the target depth was reached (See attached data). Personnel from Geological Resources, Inc. (GRI) were on site to supervise the event.

The 96 Hour AFVR event was conducted using a Global Vacuum Liquid Ring Pump with off gas treatment through a vapor phase granular activated carbon scrubber. The vacuum unit is capable of providing 325 CFM at 25 inches of mercury.

### **Pollutant Mass Removal**

Total weight of 5.3911 pounds of petroleum in the vapor phase (total non-methane organic emissions) was removed during the 96 hour AFVR event. This amount is based on data collected during the AFVR event (see attached data sheets)

### **Liquid Disposal**

Approximately 1,263 gallons of petroleum contact water was collected during the AFVR event (See attached disposal manifest)

## **APPENDICES**

- A. AFVR FIELD NOTES**
- B. POLLUTANT MASS REMOVAL DATA SHEET**
- C. LIQUID DISPOSAL MANIFEST**

**APPENDIX A**

**AFVR FIELD NOTES**

Total Emission in pounds:

5.3911

## **Pollutant Mass Removal Calculations**

$Q_{std} = (1 - \text{water vapor}) * \text{velocity} * (\text{PI} * (\text{diameter}/24)^2) * (528 \text{degrees R}/(\text{Temp} + 460))$

$\text{PPMg} = \text{PPM measured} * K$

$\text{Cg:m} = \text{PPMg} * (\text{Mg}/K3)$

$\text{Cg} = \text{Cg:m} * 62.43\text{E-}09 \text{ lb-m}^3/\text{mg-ft}^3$

$\text{PMRg} = \text{Cg} * Q_{std} * 60 \text{ min/hr}$

$\text{PMR} = \text{PMRg} * ((T2 - T1)/60)$

$Q_{std} = \text{Flow at DSCFM}$

**Vacuum** = The level of vacuum being applied should be recorded from the vacuum truck tank (inches of Hg)

**Velocity** = rate at which air flow is measured at the blower discharging pipe (anemometer)

**Cross Sectional Area** = area in ft<sup>2</sup> of discharge stack

**Relative Humidity** = The % relative humidity of the air stream exiting from the blower discharge piping

**Water Vapor in %** = Pounds of water/ pound of dry air, derived from the psychrometric chart (temp vs relative humidity)

**PPM** = PPM measurements taken with an OVA/ PID at the blower discharge piping

**K** = Number of carbons in calibration gas: K=1

**PPMg** = PPMv, Volumetric concentration as gasoline emission, dry basis at STP

**Cg:m** =mg/dsm<sup>3</sup>, mass concentration of gasoline emission

**Mg** = 128 mg/mg-mole, molecular weight of gasoline

**K3** = 24.07 dsm<sup>3</sup>/1E6 mg-mole, mass to volume conversion factor at STP

**Cg** = lb/dcsf, mass concentration of gasoline emission, dry basis at STP

**PMRg** = lb/hr, pollutant mass removal rate of gasoline emission

**PMR** = pollutant mass removal of gasoline emission over time

**APPENDIX C**

**LIQUID DISPOSAL MANIFEST**

# NON-HAZARDOUS WASTE MANIFEST

Please print or type (Form designed for use on elite (12 pitch) typewriter)

NON-HAZARDOUS WASTE

MEMORANDUM  
GROUND-WATER  
PROTECTION DIVISION

TO: Jim Hess  
Bureau of Drinking Water  
PROTECTION - EQC

FROM: R. W. Massey  
Upper Savannah EQC

SUBJECT: UST location /

DATE: 3-30-90

contaminated wells / Edgefield County

I have received a copy of Billy Dupre's memo to you dated 3-19-90 regarding an unresolved groundwater contamination investigation conducted many years ago. Billy's memo indicated that I thought that the facility was still selling gasoline. I stopped by to talk with Mrs. W. F. Scurry who lives directly across the highway from the station. She reported that the station is no longer selling gas and that the underground tanks had been removed.

Mrs. Scurry also reported that their well was still contaminated with petroleum, but that it appears to be oil rather than gasoline. She felt that the oil might be coming from a pit on the station's property where waste oil is reported to be disposed.

Re: Scurry/Anderson Well Contamination (PCAS 6786)  
Hydrocarbon Contamination of Local Wells  
Edgefield County

Dear Ms. Griffith:

The South Carolina Department of Health and Environmental Control (SCDHEC) has reviewed analytical results on file which report free product in the Anderson water supply well (ground-water sample collected February 19, 1975) and 20 to 40 parts per million gasoline in the Scurry water supply well (ground-water sample collected December 2, 1975). In addition, a March 30, 1990 memo from the Upper Savannah EQC District Office indicates continued hydrocarbon impact to the Scurry well. These two wells are located on Highway 378 across from the 378 Truck Stop, Saluda SC.

*30 Day EXTENT  
to 24 Aug 90  
11 July 90 PNB*

Based upon this information, the ground-water contamination problems at this site require an in-depth investigation (Section 280.65(4) of the South Carolina Underground Storage Tank Control Regulations). Please submit an assessment plan, on or before July 20, 1990 that will determine the extent (horizontal and vertical) and severity of contamination at the site for Departmental review and approval. This plan (2 copies) must be certified by a South Carolina registered Professional Geologist with experience in ground-water investigations and should include, but not be limited to, the following:

- 1) List of topics that will be included in the assessment report including a brief summary of events and actions taken;
- 2) Scaled base map which shows topography, major highways, surrounding land use, nearby private and public water supply wells;
- 3) Scaled site map displaying the location of underground storage tanks with associated piping, underground utilities, and proposed monitoring well locations for the shallow aquifer (three triangulated wells minimum) and deep aquifer (one minimum);
- 4) Monitor well installation methods, sampling methods, and analytical protocol;

Commissioner: Michael D. Jarrett Board: Henry S. Jordan MD, Chairman John B. Pate, MD, Vice Chairman William E. Applegate, III, Secretary  
Toney Graham, Jr., MD John H. Burriss Richard E. Jabbour, DDS Currie B. Spivey, Jr.

P & O Oil Company  
May 30, 1990  
Page 2

- 5) Information regarding current use of any nearby wells, drillers logs (if available), and the approximate depth to the water table at the site;
- 6) A proposal to conduct water quality tests on the nearby domestic wells; and,
- 7) An implementation schedule.

Please include a brief history of the underground storage tanks at this site as well as any available tank test results or environmental sample data.

On all correspondence concerning this site, please reference PCAS 6786. If there are any questions concerning this project, please call me at (803) 734-4665.

Sincerely,

Paul M. Bergstrand, Hydrogeologist

Re: Scurry/Anderson Well Contamination (PCAS 6786)  
Hydrocarbon Contamination of Local Wells - Edgefield County

Dear Mr. Bergstrand:

Copy of your letter of May 30 with reference to alleged contamination of the captioned well has been received by Wilkerson Fuel Co., Inc. Wilkerson Fuel purchased P & O Oil Company in 1986. Wilkerson Fuel maintained meter readings on product sold on the premises and is convinced that no leaks occurred from underground tanks during our occupancy of the property. It is our understanding that there was an alleged leak on the premises approximately fifteen years ago. The property in question is owned by Mr. Jolly Owdom. Wilkerson Fuel is a tenant of Mr. Owdom.

At the time of the alleged leak some fifteen years ago, Federated Mutual Insurance Company, Mr. Owdom's insurance carrier, assumed responsibility. Your letter has been referred to Federated, and we are awaiting their response.

It is the position of Wilkerson Fuel Co., Inc. that any contamination from underground tanks occurred prior to our acquisition of P & O Oil Company and is the responsibility of either Mr. Owdom, owner of the property, or his insurance carrier, Federated. We will advise you of the response we receive from Federated Mutual Insurance Company.

Very truly yours,

  
W. David Bratton, President

RE: Project: 378 TRUCK STOP 07960  
Pace Project No.: 9281530

Dear Ms. Thoma:

Enclosed are the analytical results for sample(s) received by the laboratory on November 05, 2010. The results relate only to the samples included in this report. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

Analyses were performed at the Pace Analytical Services location indicated on the sample analyte page for analysis unless otherwise footnoted.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

*Erin Waters*

## QUALIFIERS

Project: 378 TRUCK STOP 07960  
Pace Project No.: 9281530

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is NELAP accredited. Contact your Pace PM for the current list of accredited analytes.

### LABORATORIES

PASI-C Pace Analytical Services - Charlotte

### ANALYTE QUALIFIERS

P5 The EPA or method required sample preservation degrades this compound, therefore acceptable recoveries may not be achieved in sample matrix spikes.

Re: Scurry/Anderson Well Contamination (PCAS 6786)  
Assessment Plan Extension  
Edgefield County

Dear Mr. Bratton:

Your request for an extension for the August 24, 1990 deadline has been approved. Please submit the assessment plan on or before October 30, 1990. This is a second deadline extension for this site. Failure to submit the requested plan by the revised due date may result in the initiation of enforcement action.

On all correspondence concerning this site, please reference PCAS 6786. If you have any questions regarding the above, please call me at (803) 734-4665.

Sincerely,

Paul M. Bergstrand, Hydrogeologist  
Ground Water Protection Division  
Bureau of Drinking Water Protection

RE: Scurry/Anderson Well Contamination (PCAS 6786)  
Hydrocarbon Contamination of Local Wells - Edgefield County

Dear Mr. Bergstrand:

W. David Bratton, President of Wilkerson Fuel Co., Inc., has requested that I respond to your letter dated September 7, 1990 with reference to alleged contamination of wells in Edgefield County, South Carolina. In your letter you request that Wilkerson Fuel submit an Assessment Plan on or before October 30, 1990.

Wilkerson Fuel Co., Inc., has contacted Federated Insurance Company, the insurer of P & O Oil Company, Inc., with reference to the alleged contamination and any insurance coverage available under the policy. Federated has responded by letter dated September 24, 1990, copy of which is enclosed.

Wilkerson Fuel supplied gasoline to the subject station from 1986 to 1987 and maintained a perpetual inventory of the product until tanks were removed in 1987. No leaks occurred during this time.

The alleged contamination apparently occurred in 1975, at which time the property was owned by Mr. Odom, to the best of Mr. Bratton's knowledge. Mr. Bratton also advises me that he is informed that Mr. Odom was aware of the alleged contamination in 1975 or 1976, at which time he drilled a new well.

It is the position of Wilkerson Fuel Co., Inc. that any contamination to surrounding property from gasoline leaks at the subject station, if any, occurred approximately 15 years ago when the station was owned and operated by Mr. Odom, that Mr. Odom took action to correct the problem and that any Assessment Plan required to be submitted should be

UST Docket 121J

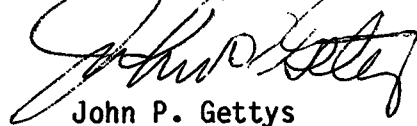

Paul M. Bergstrand  
Page 2  
October 5, 1990

submitted by Mr. Odom.

Wilkerson Fuel Co., Inc. has never owned the subject premises and has occupied the property as a tenant of Mr. Odom only since 1986. Wilkerson Fuel Co., Inc. will be happy to cooperate in any way that it can in resolving this matter; however, as a tenant only for the past 4 years, Wilkerson Fuel does not feel that it should bear the responsibility of submitting the requested assessment plan for an alleged leak that occurred in or about 1975.

Very truly yours,

John P. Gettys

CERTIFIED MAIL/RETURN RECEIPT REQUESTED

LOSS LOCATION: 378 Truck Stop, Saluda, SC  
CLAIM NUMBER: 63Z-850  
OUR INSURED: P & O Oil Company, Inc.

We have received additional information relating to coverage for the above-listed claim. From 11/1/74 to 11/1/75 P & O Oil Company, Inc. carried a Special Multi - Peril (SMP) policy with Federated Mutual. Liability coverage in this policy is contained on Form MLB-200 (1/73), which states:

"I. COVERAGE C -- BODILY INJURY AND  
PROPERTY DAMAGE LIABILITY:

The Company will pay on behalf of the insured all sums which the insured shall become legally obligated to pay as damages because of bodily injury or property damage to which this insurance applies, caused by an occurrence and arising out of the ownership, maintenance or use of the insured premises and all operations necessary or incidental to the business of the named insured conducted at or from the insured premises and the Company shall have the right and duty to defend any suit against the insured seeking damages on account of such bodily injury or property damage, even if any of the allegations of the suit are groundless, false or fraudulent, and may make such investigation and settlement of any claim or suit as it deems expedient, but the Company shall not be obligated to pay any claim or judgment or to defend any suit after the applicable limit of the Company's liability has been exhausted by payment of judgments or settlements."

This is further reiterated in Form MLB-202 (1/73), which states:

"I. COVERAGE -- BODILY INJURY AND PROPERTY DAMAGE LIABILITY

The Company will pay on behalf of the insured all sums which the insured shall become legally obligated to pay as damages because of

Insured: P & O Oil Company, Inc.

Page 2

bodily injury or property damage to which this insurance applies, caused by an occurrence, and the Company shall have the right and duty to defend any suit against the insured seeking damages on account of such bodily injury or property damage, even if any of the allegations of the suit are groundless, false or fraudulent, and may make such investigation and settlement of any claim or suit as it deems expedient, but the Company shall not be obligated to pay any claim or judgment or to defend any suit after the applicable limit of the Company's liability has been exhausted by payment of judgments or settlements."

As noted above, this coverage form covers "bodily injury" and "property damage". Recent South Carolina court decisions have held that government mandated clean up (i.e. DHEC directives) is not considered "property damage" under the terms of a liability policy.

As noted in the Form MLB-200 (1/73) and Form MLB-202 (1/73), coverage applies only to "bodily injury" or "property damage", caused by an "occurrence". These terms are defined on Form OKP175(40)-X-D (Rev. 1/73), as follows:

"'bodily injury' means bodily injury, sickness or disease sustained by any person which occurs during the policy period, including death at any time resulting therefrom;

'occurrence' means an accident, including continuous or repeated exposure to conditions, which results in bodily injury or property damage neither expected nor intended from the standpoint of the insured;

'property damage' means (1) physical injury to or destruction of tangible property which occurs during the policy period, including the loss of use thereof at any time resulting therefrom, or (2) loss of use of tangible property which has not been physically injured or destroyed provided such loss of use is caused by an occurrence during the policy period."

Additionally, coverage is further defined in the exclusions section of the policy, as below:

## "Exclusions

This insurance does not apply

- (f) to bodily injury or property damage arising out of the discharge, dispersal, release or escape of smoke, vapors, soot, fumes, acids,

# FEDERATED INSURANCE

September 24, 1990

Claim No: 63X-850

Insured: P & O Oil Company, Inc.

Page 3

alkalis, toxic chemicals, liquids or gases, waste materials or other irritants, contaminants or pollutants into or upon land, the atmosphere or any water course or body of water; but this exclusion does not apply if such discharge, dispersal, release or escape is sudden and accidental;"

The policy agrees to pay for "bodily injury" or "property damage" caused by an "occurrence". In this particular situation, we have no indications that there was an "occurrence" during the policy period. Further, neither "bodily injury" or "property damage" has arisen as a result of any such "occurrence". For these reasons, Federated Mutual is unable to provide any coverage for the cost to remediate this site or provide any defense for actions arising from this matter.

The investigation of this matter by Federated Mutual shall not be construed as an admission of liability or as a waiver of any coverage defense or limitation that is available to it according to the provision of its insurance policy or that is available to it by operation of law. In addition to the policy or defense discussed, other defenses may be available to Federated Mutual by operation of law. Federated Mutual reserves any legal and policy defenses it may have in connection with this matter, whether stated or not in this letter. Further, Federated Mutual reserves its right to modify its coverage position at any time upon receipt of additional information.

If you have any questions after reviewing this letter, please feel free to contact us.

Re: Scurry/Anderson Well contamination (PCAS 6786)  
Report of Well Contamination  
Edgefield County

Mr. Bratton:

The South Carolina Department of Health and Environmental Control (SCDHEC) has reviewed our file which included the analytical results of the ground-water samples collected April 13, 1977 and the original report of a contaminated private well.

Based on the documentation available (copy enclosed), this office considers Wilkerson Fuel Company, Inc. to be the tank owners and as such are responsible for taking corrective action as per SC UST Regulations (280.65 (4)). Previous correspondence from this office requested an assessment plan from you. SCDHEC anticipated the assessment report for the above referenced site on October 30, 1990. To date, no plan has been received. Furthermore, correspondence of October 5, 1990 from J.P. Gettys indicates your unwillingness to assume responsibility.

This office is preparing to initiate a corrective action utilizing Federal Trust funds while determining who is financially responsible for clean-up. This action is being taken because:

1. There is a necessity to protect human health and to protect the environment; and,
2. A) A responsible party (RP) has not been identified; or,  
B) the known RP has failed or refused to comply with the requirements from this office; or,  
C) the RP does not have the financial means to cover associated costs.

UST Docket 1227

Mr. Bratton  
November 14, 1990  
Page 2

Federal Trust fund regulations require cost recovery of all funds expended by this office from the RP, once identified.

On all correspondence concerning this site, please reference PCAS 6786. If you have any questions regarding the above, please call me at (803) 734-4665.

Sincerely,

Paul M. Bergstrand, Hydrogeologist

MEMORANDUM

TO: File

FROM: Cynde Devlin, Hydrogeologist <sup>CD</sup>

RE: Site Visit to Scurry Well Contamination, Edgefield County  
On Highway 378, 5 miles east of S.C. 25

DATE: July 25, 1991

The writer and Paul Bristol (Central Midlands EQC) visited the above referenced site in response to complaints of contaminated drinking water. Directly across the street from Mrs. Hattie Scurry is a restaurant/gasoline station owned by Mr. Jolly Owdom. Mrs. Scurry told us that there used to be a pit at the station where they dumped waste oil but it had been covered over. Inspection of this area did not show obvious contamination on the surface. An area further east of the pit did show waste oil contamination on the ground. Directly behind the building is an old 4 inch well. Inspection of this well indicated that the well was no longer in use and appeared to be filled in to approximately 20 feet below surface. Adjacent to the well was a 10 foot section of PVC pipe which had a spigot on one end and the other end disappeared into the ground. Clear water with no odor came out when turned on, however, water pressure was low and the flow of water stopped after about 10 minutes. The source of the water could not be located. The direction in which the pipe ran was underground into the woods behind the building.

Mrs. Scurry said that the station had shut down approximately a year ago. It appeared to the writer and Mr. Bristol that the station was being prepared to reopen due repairs being made to the building and new walkway that had just been poured on the front of the building.

The writer and Mr. Bristol also spoke to Mr. Carl Coates who lives behind Mrs. Scurry. Mr. Coates said he had no problem with his water. He had a new well drilled a couple of years ago which is approximately 200 feet deep. Inspection of his old well showed that the well had been filled with garbage to within approximately 5 feet of the surface. Mr. Coates indicated that the old well was also approximately 200 feet deep. Mr. Carl Coates said that the his sister had contamination in her well but her house had since burned down and she had moved away. His brother, Mr. George Coates, now lives there and has drilled a new well. Mr. George Coates pointed out the old well to us which is surrounded by a cement pad and covered by an old pot top. Inspection of the well could not determine the depth or contents.

LUS

**To Be Completed By Collector:**

Date Collected 1-8-92  
 Time Collected 15:05 - 15:40  
 Collected By G. Withycombe

**Public Water System Information:**  
 (If Applicable)

Name Scurry Well  
 System Number \_\_\_\_\_

**Sample Type:**

Initial  
 Repeat  
 Main Clearance

**Analysis Requested:**

Total Coliform  
 Fecal Coliform  
 HPC  
 \_\_\_\_\_

**Mailing Address:**

Name Greg Withycombe  
 Address Ground Water Protection Division  
 City \_\_\_\_\_ State \_\_\_\_\_ Zip \_\_\_\_\_  
 County Edgefield Telephone No. 935-6302

**PLEASE NOTE:**  
 THIS REPORT REPRESENTS THE BACTERIOLOGICAL QUALITY OF THE WATER SAMPLE SUBMITTED TO THE DHEC LABORATORY.  
 IT DOES NOT REPRESENT APPROVAL OF WATER SYSTEM CONSTRUCTION OR APPROVAL FOR REAL ESTATE LOANS.

Location: Scurry Well Sink

System Name: \_\_\_\_\_

Location Code: \_\_\_\_\_

CHECK ANALYSIS GROUP (A) OR INDIVIDUAL ANALYSES (B) REQUESTED

A. ANALYSIS GROUP:

- Base-Neutral / Acid Extractables (Investigation)
- Controlled Fluoridation (Routine)
- Herbicides (Investigation)
- Hydrocarbons (Investigation)
- Nitrate (Routine)
- Pesticides (Investigation)
- Private Routine
- Public Complete (Investigation)
- Public Complete (New Source)
- Public Complete (Routine)
- Public Complete + Organics (Routine)
- Trihalomethanes (Routine)
- Volatile Organic Compounds (Investigation)
- Volatile Organic Compounds (Routine - Regulated Compounds Only)
- Volatile Organic Compounds (Routine - Regulated and Unregulated Compounds)
- Other: BTEX

B. INDIVIDUAL ANALYSES:

- Alkalinity
- Aluminum
- Ammonia
- Arsenic
- Barium
- Cadmium
- Calcium
- Chloride
- Chromium
- Color
- Copper
- Cyanide
- Fluoride
- Hardness
- Hydrogen Sulfide
- Iron
- Lead
- MBAS
- Magnesium
- Manganese
- Mercury
- Nickel
- Nitrate
- Nitrite
- Oil & Grease
- pH
- Phenol
- Phosphorus
- Potassium
- Silver
- Sodium
- Sulfate
- Total Dissolved Solids
- Total Organic Carbon
- Total Solids
- Turbidity
- Zinc
- Other: \_\_\_\_\_
- Other: \_\_\_\_\_

DISTRICT ANALYSES:

TDS \_\_\_\_\_ mg/l  
Turbidity \_\_\_\_\_ N.T.U.  
Color \_\_\_\_\_ C.U.  
pH \_\_\_\_\_  
Alkalinity \_\_\_\_\_ mg/l  
Other: \_\_\_\_\_  
\_\_\_\_\_ mg/l

COMMENTS:

REQUEST FOR CHEMICAL AND PHYSICAL ANALYSIS OF DRINKING WATER

Sample Number: 010992 0357

Charge Code: LUS

Collected By: G Withycombe

System No.: \_\_\_\_\_

County: Edge Field

Date Collected: 01/08/92

Military Time Collected: 1540

SAMPLE DESCRIPTION:

Source ID: \_\_\_\_\_

Sample Type: [ ] C [ ] P [ ] D [ ] R [ ] F [ ] S [ ] M [ ] W [ ] SS

Location: Scurry Well Head

System Name: \_\_\_\_\_

Location Code: \_\_\_\_\_

CHECK ANALYSIS GROUP (A) OR INDIVIDUAL ANALYSES (B) REQUESTED

A. ANALYSIS GROUP:

- [ ] Base-Neutral / Acid Extractables (Investigation)
[ ] Controlled Fluoridation (Routine)
[ ] Herbicides (Investigation)
[ ] Hydrocarbons (Investigation)
[ ] Nitrate (Routine)
[ ] Pesticides (Investigation)
[ ] Private Routine
[ ] Public Complete (Investigation)
[ ] Public Complete (New Source)
[ ] Public Complete (Routine)
[ ] Public Complete + Organics (Routine)
[ ] Trihalomethanes (Routine)
[ ] Volatile Organic Compounds (Investigation)
[ ] Volatile Organic Compounds (Routine - Regulated Compounds Only)
[ ] Volatile Organic Compounds (Routine - Regulated and Unregulated Compounds)

Other: BTEK

B. INDIVIDUAL ANALYSES:

- [ ] Alkalinity
[ ] Aluminum
[ ] Ammonia
[ ] Arsenic
[ ] Barium
[ ] Cadmium
[ ] Calcium
[ ] Chloride
[ ] Chromium
[ ] Color
[ ] Copper
[ ] Cyanide
[ ] Fluoride
[ ] Hardness
[ ] Hydrogen Sulfide
[ ] Iron
[ ] Lead
[ ] MBAS
[ ] Magnesium
[ ] Manganese
[ ] Mercury
[ ] Nickel
[ ] Nitrate
[ ] Nitrite
[ ] Oil & Grease
[ ] pH
[ ] Phenol
[ ] Phosphorus
[ ] Potassium
[ ] Silver
[ ] Sodium
[ ] Sulfate
[ ] Total Dissolved Solids
[ ] Total Organic Carbon
[ ] Total Solids
[ ] Turbidity
[ ] Zinc
[ ] Other:
[ ] Other:

DISTRICT ANALYSES:

TDS \_\_\_\_\_ mg/l
Turbidity \_\_\_\_\_ N.T.U.
Color \_\_\_\_\_ C.U.
pH \_\_\_\_\_
Alkalinity \_\_\_\_\_ mg/l

REQUEST FOR CHEMICAL AND PHYSICAL ANALYSIS OF DRINKING WATER

Sample Number: 0205920396 Charge Code: L U S

Collected By: DAVID PAYNE - DHER

System No.: \_\_\_\_\_

County: EDGEFIELD

Date Collected: 9/2/02/05

Military Time Collected: 1300

SAMPLE DESCRIPTION:

Source ID: \_\_\_\_\_

Sample Type: [ ] C [ ] P [ ] V [ ] D [ ] R [ ] [ ] F [ ] S [ ] M [ ] W

Location: SCURRY RESIDENCE - WELL

System Name: \_\_\_\_\_

Location Code: \_\_\_\_\_

CHECK ANALYSIS GROUP (A) OR INDIVIDUAL ANALYSES (B) REQUESTED

A. ANALYSIS GROUP:

- [ ] Base-Neutral / Acid Extractables (Investigation)
[ ] Controlled Fluoridation (Routine)
[ ] Herbicides (Investigation)
[ ] Hydrocarbons (Investigation)
[ ] Nitrate (Routine)
[ ] Pesticides (Investigation)
[ ] Private Routine
[ ] Public Complete (Investigation)
[ ] Public Complete (New Source)
[ ] Public Complete (Routine)
[ ] Public Complete + Organics (Routine)
[ ] Trihalomethanes (Routine)
[X] Volatile Organic Compounds (Investigation)
[ ] Volatile Organic Compounds (Routine - Regulated Compounds Only)
[X] Volatile Organic Compounds (Routine - Regulated and Unregulated Compounds)
[ ] Other: \_\_\_\_\_

B. INDIVIDUAL ANALYSES:

- [ ] Alkalinity
[ ] Aluminum
[ ] Ammonia
[ ] Arsenic
[ ] Barium
[ ] Cadmium
[ ] Calcium
[ ] Chloride
[ ] Chromium
[ ] Color
[ ] Copper
[ ] Cyanide
[ ] Fluoride
[ ] Hardness
[ ] Hydrogen Sulfide
[ ] Iron
[ ] Lead
[ ] MBAS
[ ] Magnesium
[ ] Manganese
[ ] Mercury
[ ] Nickel
[ ] Nitrate
[ ] Nitrite
[ ] Oil & Grease
[ ] pH
[ ] Phenol
[ ] Phosphorus
[ ] Potassium
[ ] Silver
[ ] Sodium
[ ] Sulfate
[ ] Total Dissolved Solids
[ ] Total Organic Carbon
[ ] Total Solids
[ ] Turbidity
[ ] Zinc
[ ] Other: \_\_\_\_\_
[ ] Other: \_\_\_\_\_

DISTRICT ANALYSES:

TDS \_\_\_\_\_ mg/l
Turbidity \_\_\_\_\_ N.T.U.
Color \_\_\_\_\_ C.U.
pH \_\_\_\_\_
Alkalinity \_\_\_\_\_ mg/l
Other: \_\_\_\_\_ mg/l

## MEMORANDUM

TO: Bob Hutchinson  
Groundwater Protection  
Columbia

FROM: Nichelle Allen  
Upper Savannah

DATE: October 14, 1993

SUBJECT: situation at an old  
truck stop on Hwy 378 in  
Edgefield County

Attached please find information regarding a situation brought to my attention concerning hydrocarbon contaminated wells and an old Truck stop on Hwy 378 which is now being used as a convenience store (is operating with no water)

cc: Scott McLinnis; Groundwater Protection, Drinking Water

John Kneese; Groundwater Protection, UST section  
District Facility file  
Reading File

RECEIVED

OCT 20 1993

Groundwater Protection  
Division

MEMORANDUM

CONTINUATION PAGE # 2

TO: Bob Hutchinson

- 1) late 1950's: diner at this truck stop was forced to close b/c of gasoline contamination in the well
- 2) mid 1970's: at least two property owners (Scurry and Anderson) accross street from truck stop experienced well contamination, Anderson well was sampled and contained 100% hydrocarbon, new well drilled
- 3) 1990: Scurry well sampled, contaminated and new well drilled; old well later was resampled and found to be clear
- 4) 1990: unsure of tank owner, an 11/90 letter from Paul Bergstrand states DHEC considers Wilkerson Fuel of Rock Hill, SC to be tank owners.  
land owner is a Mr. Jolly Owdom of Edgefield
- 5) 1993: Convenience store operator contacts Reggie Massey of Upper Savannah, has no water wants to use an existing well on the old truck stop property where convenience store is now located

MEMORANDUM

CONTINUATION PAGE # 3

TO: Bob Hutchinson

6) 1993: Reggie Massey visited site to examine above mentioned well. States that when opened well house  $\approx$  300' behind store petroleum vapor was very strong, baled the well, water smelled sour and stagnant and he noticed at least  $\frac{1}{4}$  of an inch of some liquid floating on top of the water.

7) What is the next step?

\* Scurry/Anderson Well property is already a Trust Fund site (#15972, Scott McInnis), but the old truck stop site hasn't been examined to my knowledge.

\* the UST's are not there any longer, were removed  $\approx$  within last seven years

**Memorandum**

**To:** Bob Hutchinson  
**From:** Chuck Hightower *CH*  
**Date:** September 12, 2002  
**Re:** Scurry Well Contamination

In the latter part of 1974, District Services was informed of a contaminated drinking water well located across the road from the 378 Truck Stop. The UST Program took the project and assigned it tracking number 15972. Later, a determination was made that the contamination most likely came from leaking underground storage tanks located at the truck stop, permit number 07960. The project was closed out under 15972 but never entered nor worked under 07960. The error has now been realized and an amnesty release has been posted against 07960. As soon as the project is assigned to the Corrective Action Division, I recommend that the drinking water of the nearby residents be examined.

UST Docket 186 T

MEMORANDUM

To: File *SM*

From: Scott McInnis, Hydrogeologist  
Federal Section

Re: Scurry Well, Site # 15972  
Identification of Source for Petroleum Contamination  
Edgefield County

Date: July 8, 1996

Sampling activities performed by the Federal Section have identified Site # 07960 as the most likely source of contamination. This site is located across the U.S. Highway 378 from the impacted water supply wells.

A ground-water sample was collected from a monitoring well MW-1 at Site # 07960 (378 Truck Stop). Analysis of this sample detected Benzene, Toluene, Ethylbenzene and Xylene at 4,010 ug/l, 1,440 ug/l, 166 ug/l and 5,490 ug/l, respectively.

This site is being transferred to the Technical Section.

cc: Joanne Cooper, Technical Section

RIGHT OF ENTRY

I, Jolly Owdom, certify that I am the legal owner/authorized representative for (owner) of the property at 12 mi West SALUDA, Hwy 378. I have either witnessed the planned location(s) on site or have been provided with a sketch map indicating the location(s) of the work to be performed. Permission is hereby granted to the South Carolina Department of Health and Environmental Control (SCDHEC) and its agents to enter the referenced property for the following purposes:

1) Drilling an exploratory boring, or installation of a temporary well or piezometer. This work will be properly abandoned upon completion, and no permanent effects shall remain on site.

NAME (Please Print):

SIGNATURE:

WITNESS:

DATE: Mo Day Year

2) Installing 2 monitoring/recovery well(s). I understand that these wells will be a permanent fixture of the property. Additionally, SCDHEC or its agents will access the property at reasonable times for measurement and/or collection of samples.

---

**From:** Travis M. Williams  
**To:** Anderson, Connie J.  
**Date:** 9/13/02 1:34 PM  
**Subject:** Site Number 15972

---

This is the Scurry Well Site. The source of the contamination for this well is thought to be from site # 07960. To get a sense of what exactly is going on, I'm going to visit the site to see if the Scurry Well is still present and to see if any monitoring wells are present on site 07960. If wells are present, I will sample them to see what kind of concentrations we have. Just wanted to let you know what was going to be done. Site 15972 can be changed to read only anytime. Thanks.

Travis

NOV 12 2010

MR FRANK WILKERSON  
WILKERSON FUEL COMPANY INC  
P O BOX 2835  
ROCK HILL SC 29732-4835

Re: Granular Activated Carbon (GAC) Unit Installation  
378 Truck Stop, 731 Hwy 378, Edgefield, SC  
UST Permit # 07960, Cost Agreement # 40512  
Release reported October 3, 1974  
Water Supply Well sampled on November 4, 2010  
Edgefield County

Dear Mr. Wilkerson:

The Underground Storage Tank (UST) Division of the South Carolina Department of Health and Environmental Control sampled Sidney Gordon's water supply well at 724 Hwy 378 East in Edgefield on November 4, 2010. 1,2-Dichloroethane (1,2-DCA) was detected above its risk-based screening level (RBSL) in the water sample. Other low detections of petroleum chemicals of concern (CoC) were also detected in the water; however, their concentrations were well below their RBSLs. A copy of the laboratory analysis is enclosed for your information. The presence of 1,2-DCA requires that a Granular Active Carbon Unit (GAC) be installed and the water supply well is to be re-sampled immediately after its installation. **A report providing proof of the GAC unit is installed, and laboratory analytical results before and after the GAC for the water supply well is due on or before November 26, 2010.**

Environmental Compliance Services, Inc. can submit an invoice for direct billing from the State Underground Petroleum Environmental Response Bank (SUPERB) Account. Please note that all applicable South Carolina certification requirements apply to the laboratory services, well installation, and report preparation. All site rehabilitation activities must be performed and submitted by a South Carolina Certified Underground Storage Tank Site Rehabilitation Contractor.

On all correspondence concerning this site, please reference UST permit # 07960. If there are any questions concerning this project, please contact me at (803) 896-6633, by fax at (803) 896-6245, or e-mail me at [ridglect@dhec.sc.gov](mailto:ridglect@dhec.sc.gov).

Sincerely,

Cathleen Ridgley, Hydrogeologist

Re: Laboratory Analyses  
Bid # SB-19780-6/11/02-EMW, PO # 416276

Dear Ms. Howard:

Under the terms and conditions of the referenced bid package, analytical sampling has been approved for the referenced facility. The facility has been assigned an individual Cost Agreement (CA) number as listed below. Please reference the CA number and Purchase Order #416276 on the appropriate invoice submitted for payment against the facility. SCDHEC personnel will perform the sampling on November 14, 2002.

| UST Permit # | County | Analyses-Groundwater      | CA #    | Bottles (Y/N) | Date Needed |
|--------------|--------|---------------------------|---------|---------------|-------------|
| 07960        | Saluda | 4-BTEX, Naph, MTBE (8260) | 17332:P | Y             | Routine     |

If you have any questions or need further assistance, please contact me at (803) 896-6669 or (800) 826-5435 (within SC only).

Sincerely,

Travis Williams, Hydrogeologist

Date: November 27, 2002

Verbal approval was given to PACE Analytical Services on November 14, 2002 to analyze four groundwater samples for BTEX, Napthalene, and MtBE under the terms and conditions of Bid #SB-19780-6/11/02-EMW. Sampling was performed by UST Program staff to ensure that a private drinking water well had not been impacted by a petroleum release and to obtain current data regarding the release. The tested drinking water well was a replacement well that was installed several years ago utilizing Federal Trust money at UST Permit #15972. The original well had been impacted by the petroleum release. Site #07960 was subsequently determined to be the source of the petroleum contamination. As the well had not been sampled in several years, it was crucial to obtain current analytical data to make sure there is no current impact to human health.

Client Project ID: 378 Truck Stop/07960/17332:P

Dear Ms. Thoma:

Enclosed are the analytical results for sample(s) received by the laboratory on November 15, 2002. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

If you have any questions concerning this report please feel free to contact me.

Sincerely,

Sherri Stabel

**PARAMETER FOOTNOTES**

Dilution factor shown represents the factor applied to the reported result and reporting limit due to changes in sample preparation, dilution of the extract, or moisture content

- ND Not detected at or above adjusted reporting limit
- NC Not Calculable
- J Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit
- MDL Adjusted Method Detection Limit
- (S) Surrogate
- [1] Compound concentration exceeds the calibration range of the instrument (CLP E-Flag).
- [2] The surrogate and/or spike recovery was outside acceptance limits.

**Date:** 12/16/2010 10:43 AM  
**Subject:** Additional Information on 1,2-DCA  
**CC:** Moye, Donna; Rowe, Donna H.

---

Mr. Gordon, below you will find some links to toxicological information on 1,2-dichloroethane (also known as ethylene dichloride, or abbreviated "1,2-DCA"). I know that you have done a good bit of research and you may well already be familiar with these web sites. The Tox Fact Sheet link under the Agency for Toxic Substances and Disease Registry (ATSDR) site provides a good summary. I found it interesting that 1,2-DCA was historically used in small amounts in household cleaning agents, pesticides and wallpaper/carpet glue.

If after looking over this information you have any additional questions, I would be more than happy to talk with you. I will be out of the office all week next week, but back on December 27. I wish you and yours a safe, happy and healthy Holiday Season.

**Agency for Toxic Substances and Disease Registry landing page for 1,2-DCA:**  
<http://www.atsdr.cdc.gov/substances/toxsubstance.asp?toxid=110>

**"Summary:** 1,2-Dichloroethane, also called ethylene dichloride, is a manufactured chemical that is not found naturally in the environment. It is a clear liquid and has a pleasant smell and sweet taste. The most common use of 1,2-dichloroethane is in the production of vinyl chloride which is used to make a variety of plastic and vinyl products including polyvinyl chloride (PVC) pipes, furniture and automobile upholstery, wall coverings, housewares, and automobile parts. It is also used to as a solvent and is added to leaded gasoline to remove lead."

**US Environmental Protection Agency landing page for 1,2-DCA (another name for 1,2-dichloroethane is ethylene dichloride):** <http://www.epa.gov/ttnatw01/hlthef/di-ethan.html>

"Sources and Potential Exposure

- Inhalation of ethylene dichloride in the ambient or workplace air is generally the main route of human exposure. The compound may be released during its production, storage, use, transport, and disposal. (1)
- Exposure may also occur through the consumption of contaminated water. But usually ethylene dichloride will evaporate quickly into the air from the water or soil. (1)
- The average levels of ethylene dichloride in the air of seven urban locations in 1980-1981 ranged from 0.1 to 1.5 parts per billion (ppb). (1)

## Donna Moye - Fwd: 378 Truck Stop DHEC Meeting

---

**From:** Fran Marshall  
**To:** Moye, Donna; Rowe, Donna H.  
**Date:** 12/16/2010 11:03 AM  
**Subject:** Fwd: 378 Truck Stop DHEC Meeting

---

I forgot to cc y'all on this one that I sent to Mr. Gordon yesterday.

Fran W. Marshall, J.D., M.S.P.H.  
SC DHEC State Toxicologist  
2600 Bull Street, Room 2673  
Columbia, South Carolina 29201  
803.898.9197

>>> Fran Marshall 12/15/2010 2:00 PM >>>

Mr. Gordon, it was a pleasure to speak with you on Monday night at the public meeting regarding the assessment of the groundwater contamination around the former 378 truck stop. First, again, my condolences concerning the death of your mother. I was also sorry to learn of your health issues and certainly wish you continuing improving health.

I am sorry not to get back with you sooner, but I was out of the office all day yesterday. I am still compiling some information for you on 1,2 DCA. I know that you have done a lot of research and you may well have all of the information that I will send.

I hope to have the information to you by tomorrow around lunchtime. I just wanted to let you know that I have not forgotten. In the interim, this is a really good web site from the National Library of Medicine about chemicals in the environment. I don't believe that this site will contain much toxicity information on 1,2, DCA, but it does have some good information generally. Here is the link: <http://toxtown.nlm.nih.gov/>

Again, it was a pleasure to meet with you. I will send you some additional information tomorrow.

Regards,

Fran W. Marshall, J.D., M.S.P.H.

RE: Project: 378 TRUCK STOP  
Pace Project No.: 9280235

Dear Ms. Dupuis:

Enclosed are the analytical results for sample(s) received by the laboratory on October 20, 2010. The results relate only to the samples included in this report. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

Inorganic Wet Chemistry and Metals analyses were performed at our Pace Asheville laboratory and Organic testing was performed at our Pace Huntersville laboratory unless otherwise footnoted. All Microbiological analyses were performed at the laboratory where the samples were received.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kevin Herring

## QUALIFIERS

Project: 378 TRUCK STOP  
Pace Project No.: 9280235

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is NELAP accredited. Contact your Pace PM for the current list of accredited analytes.

### LABORATORIES

PASI-A Pace Analytical Services - Asheville  
PASI-C Pace Analytical Services - Charlotte

### ANALYTE QUALIFIERS

E Analyte concentration exceeded the calibration range. The reported result is estimated.  
L3 Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples. Results unaffected by high bias.  
M0 Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.  
P5 The EPA or method required sample preservation degrades this compound, therefore acceptable recoveries may not be achieved in sample matrix spikes.  
R1 RPD value was outside control limits.  
S0 Surrogate recovery outside laboratory control limits.  
S3 Surrogate recovery exceeded laboratory control limits. Analyte presence below reporting limits in associated samples. Results unaffected by high bias.  
S4 Surrogate recovery not evaluated against control limits due to sample dilution.

### Gasoline Additives

During WWI, it was discovered that you can add a chemical called tetraethyl lead to gasoline and significantly improve its octane rating. Cheaper grades of gasoline could be made usable by adding this chemical. This led to the widespread use of "ethyl" or "leaded" gasoline. Unfortunately, the side effects of adding lead to gasoline are:

- Lead clogs a catalytic converter and renders it inoperable within minutes.
- The Earth became covered in a thin layer of lead, and lead is toxic to many living things (including humans).

When lead was banned, gasoline got more expensive because refineries could not boost the octane ratings of cheaper grades any more. Airplanes are still allowed to use leaded gasoline, and octane ratings of 115 are commonly used in super-high-performance piston airplane engines (jet engines burn kerosene, by the way).

Another common additive is MTBE. MTBE is the acronym for methyl tertiary butyl ether, a fairly simple molecule that is created from methanol.

MTBE gets added to gasoline for two reasons:

1. It boosts octane.
2. It is an oxygenate, meaning that it adds oxygen to the reaction when it burns. Ideally, an oxygenate reduces the amount of unburned hydrocarbons and carbon monoxide in the exhaust.

MTBE started getting added to gasoline in a big way after the Clean Air Act of 1990 went into effect. Gasoline can contain as much as 10 percent to 15 percent MTBE. The main problem with MTBE is that it is thought to be carcinogenic and it mixes easily with water. If gasoline containing MTBE leaks from an underground tank at a gas station, it can get into groundwater and contaminate wells. Of course, MTBE isn't the only thing getting into the groundwater when a tank leaks – so is gasoline and a host of other gasoline additives.

According to this page at the EPA:

Although there is no established drinking-water regulation, USEPA has issued a drinking-water advisory of 20 to 40 micrograms per liter (µg/L) on the basis of taste and odor thresholds. This advisory concentration is intended to provide a large margin of safety for noncancer effects and is in the range of margins typically provided for potential carcinogenic effects.

The most likely thing to replace MTBE in gasoline is ethanol – normal alcohol. It is somewhat more expensive than MTBE, but it is not a cancer threat.

# Consumer Factsheet on: ETHYLENE DIBROMIDE

## List of Contaminants

As part of the Drinking Water and Health pages, this fact sheet is part of a larger publication:  
**National Primary Drinking Water Regulations**

This is a factsheet about a chemical that may be found in some public or private drinking water supplies. It may cause health problems if found in amounts greater than the health standard set by the United States Environmental Protection Agency (EPA).

## **What is EDB and how is it used?**

Ethylene dibromide (EDB) is a colorless, heavy organic liquid with a mildly sweet chloroform-like odor. Ethylene dibromide is mainly used in anti-knock gasoline mixtures, particularly in aviation fuel. Other uses include: as a solvent for resins, gums, and waxes; in waterproofing preparations; in making dyes and drugs; and as a pesticide for grains and fruit.

The list of trade names given below may help you find out whether you are using this chemical at home or work.

## **Trade Names and Synonyms:**

EDB  
Glycol dibromide  
Bromofume  
Dowfume W 85  
Aadibroom  
Iscobrome-D  
Nefis  
Pestmaster  
EDB-85  
Soilbrom  
Soilfume  
Kopfume

## **Why is EDB being Regulated?**

In 1974, Congress passed the Safe Drinking Water Act. This law requires EPA to determine safe levels of chemicals in drinking water which do or may cause health problems. These non-enforceable levels, based solely on possible health risks and exposure, are called Maximum Contaminant Level Goals.

The MCLG for EDB has been set at zero because EPA believes this level of protection would not cause any of the potential health problems described below.

Based on this MCLG, EPA has set an enforceable standard called a Maximum Contaminant Level (MCL). MCLs are set as close to the MCLGs as possible, considering the ability of public water systems to detect and remove contaminants using suitable treatment technologies.

The MCL has been set at 0.05 parts per billion (ppb) because EPA believes, given present technology and resources, this is the lowest level to which water systems can reasonably be required to remove this contaminant should it occur in drinking water.

These drinking water standards and the regulations for ensuring these standards are met, are called National Primary Drinking Water Regulations. All public water supplies must abide by these regulations.

## **What are the Health Effects?**

Short-term: EPA has found EDB to potentially cause the following health effects when people are exposed to it at levels above the MCL for relatively short periods of time: damage to the liver, stomach, and adrenal glands, along with significant reproductive system toxicity, particularly the testes.

Long-term: EDB has the potential to cause the following effects from a lifetime exposure at levels above the MCL: damage to the respiratory system, nervous system, liver, heart, and kidneys; cancer.

## **How much EDB is produced and released to the environment?**

EDB is released during the use, storage, and transport of leaded gasoline, as well as during any spills; from its former use as a pesticide; wastewater and emissions from processes and waste waters of the chemical industries that use it.

From 1987 to 1993, according to the Toxics Release Inventory EDB releases to land and water totalled over 3,000 lbs. These releases were primarily from petroleum refineries. The largest of these releases occurred in California and Missouri.

## **What happens to EDB when it is released to the environment?**

When spilled on land or applied to land during soil fumigation, ethylene dibromide may leach to groundwater. Its persistence can vary greatly from soil to soil, from a few weeks to as much as 19 years.

EDB released to water will mainly evaporate. It can be degraded by microbes and chemical reaction in some types of groundwater. It does not tend to accumulate in aquatic life.

## **How will EDB be Detected in and Removed from My Drinking Water?**

The regulation for EDB became effective in 1992. Between 1993 and 1995, EPA required your water supplier to collect water samples every 3 months for one year and analyze them to find out if EDB is present above 0.01 ppb. If it is present above this level, the system must continue to monitor this contaminant.

If contaminant levels are found to be consistently above the MCL, your water supplier must take steps to reduce the amount of EDB so that it is consistently below that level. The following treatment methods have been approved by EPA for removing EDB: Granular activated charcoal.

## **How will I know if EDB is in my drinking water?**

If the levels of EDB exceed the MCL, 0.05 ppb, the system must notify the public via newspapers, radio, TV and other means. Additional actions, such as providing alternative drinking water supplies, may be required to prevent serious risks to public health.

## Drinking Water Standards:

Mclg: zero

Mcl: 0.05 ppb

## EDB Releases to Water and Land, 1987 to 1993 (in pounds):

|  | Water        | Land         |

## Learn more about your drinking water!

EPA strongly encourages people to learn more about their drinking water, and to support local efforts to protect and upgrade the supply of safe drinking water. Your water bill or telephone book's government listings are a good starting point.

Your local water supplier can give you a list of the chemicals they test for in your water, as well as how your water is treated.

Your state Department of Health/Environment is also a valuable source of information.

For help in locating these agencies or for information on drinking water in general, call: EPA's Safe Drinking Water Hotline: (800) 426-4791.

For additional information on the uses and releases of chemicals in your state, contact the: Community Right-to-Know Hotline: (800) 424-9346

## Technology Transfer Network

# Ethylene Dichloride (1,2-Dichloroethane)

107-06-2

## **Hazard Summary-Created in April 1992; Revised in January 2000**

Exposure to low levels of ethylene dichloride can occur from breathing ambient or workplace air. Inhalation of concentrated ethylene dichloride vapor can induce effects on the human nervous system, liver, and kidneys, as well as respiratory distress, cardiac arrhythmia, nausea, and vomiting. Chronic (long-term) inhalation exposure to ethylene dichloride produced effects on the liver and kidneys in animals. No information is available on the reproductive or developmental effects of ethylene dichloride in humans. Decreased fertility and increased embryo mortality have been observed in inhalation studies of rats. Epidemiological studies are not conclusive regarding the carcinogenic effects of ethylene dichloride, due to concomitant exposure to other chemicals. Following treatment by gavage (experimentally placing the chemical in the stomach), several tumor types were induced in rats and mice. EPA has classified ethylene dichloride as a Group B2, probable human carcinogen.

Please Note: Ethylene dichloride is also known as 1,2-dichloroethane. The main sources of information for this fact sheet are EPA's Integrated Risk Information System (IRIS), which contains information on the carcinogenic effects of ethylene dichloride including the unit cancer risk for inhalation exposure, and the Agency for Toxic Substances and Disease Registry's (ATSDR's) Toxicological Profile for 1,2-Dichloroethane.

## **Uses**

Ethylene dichloride is primarily used in the production of vinyl chloride as well as other chemicals. It is used in solvents in closed systems for various extraction and cleaning purposes in organic synthesis. It is also added to leaded gasoline as a lead scavenger. (1)

It is also used as a dispersant in rubber and plastics, as a wetting and penetrating agent. (1)

It was formerly used in ore flotation, as a grain fumigant, as a metal degreaser, and in textile and PVC cleaning. (1)

## **Sources and Potential Exposure**

Inhalation of ethylene dichloride in the ambient or workplace air is generally the main route of human exposure. The compound may be released during its production, storage, use, transport, and disposal. (1)

Exposure may also occur through the consumption of contaminated water. But usually ethylene dichloride will evaporate quickly into the air from the water or soil. (1)

The average levels of ethylene dichloride in the air of seven urban locations in 1980-1981 ranged from 0.1 to 1.5 parts per billion (ppb). (1)

## Assessing Personal Exposure

Breath samples may be used to determine whether or not someone has been recently exposed to ethylene dichloride. (1)

## Health Hazard Information

### Acute Effects:

Acute inhalation exposure of humans to ethylene dichloride can affect the nervous system, with effects including narcosis, nausea, and vomiting. (1)

An occupationally exposed man died from cardiac arrhythmia after acute (short-term) inhalation exposure to very high levels of ethylene dichloride. (1)

Cardiac arrhythmia, pulmonary edema, bronchitis, hemorrhagic gastritis and colitis, depression, and changes in the brain tissue have been reported in humans that ingested large amounts of ethylene dichloride. (1)

Effects reported in animals exposed by inhalation are similar to those for humans. (1)

Clouding of the cornea and eye irritation have been observed in animals and are thought to be the result of vapor contact with the eyes. (1)

Acute animal tests in rats, mice, and rabbits have demonstrated ethylene dichloride to have moderate acute toxicity from inhalation or dermal exposure and moderate to high acute toxicity from oral exposure. (2)

### Chronic Effects (Noncancer):

No information is available on the chronic effects of ethylene dichloride.

Chronic inhalation exposure to ethylene dichloride produced effects on the liver and kidneys in animals. (1)

Some studies have reported changes in the liver and kidneys and effects on the immune system and central nervous system in animals chronically exposed by ingestion. (1)

EPA has not established a Reference Dose (RfD) or a Reference Concentration (RfC) for ethylene dichloride. (3)

ATSDR has established an intermediate oral minimal risk level (MRL) of 0.2 milligram per kilogram body weight per day (mg/kg/d) based on kidney effects in animals. The MRL is an estimate of the daily human exposure to a hazardous substance that is likely to be without appreciable risk of adverse noncancer health effects over a specified duration of exposure. Exposure to a level above the MRL does not mean that adverse health effects will occur. The MRL is intended to serve as a screening tool. (1)

ATSDR has established a chronic inhalation MRL of 0.8 milligrams per cubic meter (mg/m<sup>3</sup>) (0.2 parts per million [ppm]) based on liver effects in animals and an acute inhalation MRL of 0.8 mg/m<sup>3</sup> (0.2 ppm) based on immunological effects in animals. (1)

The California Environmental Protection Agency (CalEPA) has established a chronic reference exposure level of 0.4 mg/m<sup>3</sup> for ethylene dichloride based on liver effects in rats. The CalEPA reference exposure level is a concentration at or below which adverse health effects are not likely to occur. (5)

### Reproductive/Developmental Effects:

No information is available on the reproductive or developmental effects of ethylene dichloride in humans.

Decreased fertility and increased embryo mortality have been observed in inhalation studies of rats. (1)

### Cancer Risk:

Epidemiological occupational studies could not link exposure to ethylene dichloride specifically with excess cancer incidence. (1)

An increased incidence of colon and rectal cancer in men over 55 years of age exposed to ethylene dichloride in the drinking water has been reported. However, the study population was concomitantly exposed to other chemicals. (1)

Following treatment by gavage (experimentally placing the chemical in the stomach), several tumor types (including increased incidences of forestomach squamous-cell

carcinomas, circulatory system hemangiosarcomas, mammary adenocarcinoma, alveolar/bronchiolar adenomas, endometrial stromal polyps and sarcomas, and hepatocellular carcinomas) were induced in rats and mice. (1,3,4)

An increased incidence of lung papillomas has been reported in mice after topical application. (1,3)

EPA has classified ethylene dichloride as a Group B2, probable human carcinogen. (3) EPA uses mathematical models, based on human and animal studies, to estimate the probability of a person developing cancer from breathing air containing a specified concentration of a chemical. EPA calculated an inhalation unit cancer risk estimate of  $2.6 \times 10^{-5} (\mu\text{g}/\text{m}^3)^{-1}$ . EPA estimates that, if an individual were to continuously breathe air containing ethylene dichloride at an average of  $0.04 \mu\text{g}/\text{m}^3$  ( $4 \times 10^{-5} \text{mg}/\text{m}^3$ ) over his or her entire lifetime, that person would theoretically have no more than a one-in-a-million increased chance of developing cancer as a direct result of breathing air containing this chemical. Similarly, EPA estimates that breathing air containing  $0.4 \mu\text{g}/\text{m}^3$  ( $4 \times 10^{-4} \text{mg}/\text{m}^3$ ) would result in not greater than a one-in-a-hundred thousand increased chance of developing cancer, and air containing  $4.0 \mu\text{g}/\text{m}^3$  ( $4 \times 10^{-3} \text{mg}/\text{m}^3$ ) would result in not greater than a one-in-ten thousand increased chance of developing cancer. For a detailed discussion of confidence in the potency estimates, please see IRIS. (3)

## Physical Properties

1,2-Dichloroethane is a common synonym for ethylene dichloride.

The chemical formula for ethylene dichloride is  $\text{C}_2\text{H}_4\text{Cl}_2$ , and its molecular weight is 98.96 g/mol. (1)

Ethylene dichloride occurs as a colorless, oily, heavy liquid that is slightly soluble in water. (1)

Ethylene dichloride has a pleasant chloroform-like odor, with an odor threshold of 6-10 ppm. (1)

The vapor pressure for ethylene dichloride is 64 mm Hg at 20 °C, and its log octanol/water partition coefficient (log  $K_{ow}$ ) is 1.48. (1)

## Conversion Factors:

*To convert concentrations in air (at 25°C) from ppm to  $\text{mg}/\text{m}^3$ :  $\text{mg}/\text{m}^3 = (\text{ppm}) \times (\text{molecular weight of the compound}) / (24.45)$ . For ethylene dichloride:  $1 \text{ ppm} = 4.05 \text{ mg}/\text{m}^3$ . To convert concentrations in air from  $\mu\text{g}/\text{m}^3$  to  $\text{mg}/\text{m}^3$ :  $\text{mg}/\text{m}^3 = (\mu\text{g}/\text{m}^3) \times (1 \text{ mg}/1,000 \mu\text{g})$ .*

## Health Data from Inhalation Exposure

### 1,2-Dichloroethane

**ACGIH TLV**--American Conference of Governmental and Industrial Hygienists' threshold limit value expressed as a time-weighted average; the concentration of a substance to which most workers can be exposed without adverse effects.

**LC<sub>50</sub> (Lethal Concentration<sub>50</sub>)**--A calculated concentration of a chemical in air to which exposure for a specific length of time is expected to cause death in 50% of a defined experimental animal population.

**NIOSH REL**--National Institute of Occupational Safety and Health recommended exposure limit; NIOSH-recommended exposure limit for an 8- or 10-h time-weighted-average exposure and/or ceiling.

**OSHA PEL**--Occupational Safety and Health Administration's permissible exposure limit expressed as a time-weighted average; the concentration of a substance to which most workers can be exposed without adverse effect averaged over a normal 8-h workday or a 40-h workweek.

**OSHA PEL ceiling value**--OSHA's permissible exposure limit ceiling value; the concentration of a substance that should not be exceeded at any time.

The health and regulatory values cited in this factsheet were obtained in December 1999.

<sup>a</sup>Health numbers are toxicological numbers from animal testing or risk assessment values developed by EPA.

<sup>b</sup>Regulatory numbers are values that have been incorporated in Government regulations, while advisory numbers are nonregulatory values provided by the Government or other groups as advice. OSHA numbers are regulatory, whereas NIOSH and ACGIH numbers are

advisory.

<http://www.epa.gov/ttn/atw/hlthef/di-ethan.html>

<sup>c</sup>The NOAEL is from the critical study used as the basis for the CalEPA chronic reference exposure level.

<sup>d</sup>These cancer risk estimates were derived from oral data and converted to provide the estimated inhalation risk.

## Unregulated

You are here: [Water](#) » [Drinking Water](#) » [Drinking Water Contaminants](#) » [Unregulated](#) » MTBE (methyl-t-butyl ether)in Drinking Water

# MTBE (methyl-t-butyl ether)in Drinking Water

- **On this page**
  - [What is MTBE](#)
  - [How does MTBE contaminate water supplies?](#)
  - [How do I know if I have MTBE in my water?](#)
  - [How can I remove MTBE from my water?](#)
  - [What is the Office of Water doing to address MTBE concerns?](#)
    - [Blue Ribbon Panel](#)
    - [MTBE and the Safe Drinking Water Act](#)
    - [Research](#)
    - [Occurance](#)
  - [Additional EPA links on MTBE](#)
  - [Other MTBE related links to MTBE](#)

### What is MTBE?

MTBE is a member of a group of chemicals commonly known as fuel oxygenates. Oxygenates are added to fuel to increase its oxygen content. MTBE is used in gasoline throughout the United States to reduce carbon monoxide and ozone levels caused by auto emissions. MTBE replaces the use of lead as an octane enhancer since 1979. For additional information, please go to [EPA's general MTBE site](#).

### How does MTBE contaminate water supplies?

Releases of MTBE to ground and surface water can occur through [leaking underground storage tanks](#) and pipelines, spills, emissions from marine engines into lakes and reservoirs, and to some extent from air deposition.

### How do I know if I have MTBE in my water?

You can determine if your water contains MTBE the following ways. If your drinking water is supplied by a public water system, you can contact the system directly and ask whether they monitor for MTBE and what levels, if any, have been detected. In 2001, public water systems serving most of the population were required to monitor for MTBE. If you have a private well, your local health department may be able to tell you if MTBE has been found in water in your area.

If you want to get your water tested, call the Safe Drinking Water Hotline (800-426-4791) or visit our [certified labs page](#) to get the phone number for the office in your state that certifies drinking water laboratories.

### How can I remove MTBE from my water?

Public water systems can use existing technologies such as air stripping, granular activated carbon (GAC), and advanced oxidation to remove MTBE contamination. Some home treatment units can also remove MTBE in tap water. The EPA does not certify the effectiveness of home treatment units since it only regulates public water supplies.

The following are links to information on home treatment units: [EPA Disclaimer](#)

- [NSF International](#) has a respected certification program for home treatment systems. They do certify home treatment systems for MTBE and other regulated contaminants.
- Another source of information on home treatment devices is the [Water Quality Association](#).
- [The Underwriters Laboratories, Inc.](#) website also provides further insight into home treatment devices.

### What is the Office of Water doing to address MTBE concerns?

Due to its widespread use, reports of MTBE detections in the nation's ground and surface water supplies are increasing. The Office of Water is actively involved in identifying the issues and addressing the concerns over the potential presence of MTBE in our water supplies. The Office of Water is participating in MTBE projects in the following areas:

#### Blue Ribbon Panel

EPA established a panel of leading experts in the fields of public health, the scientific community, automotive fuels, water utilities, and local and State environmental officials to focus on the issues posed by the continued use of MTBE and other oxygenates in gasoline. The panel's charge was to:

- look at the role of oxygenates in meeting clean air standards;
- evaluate its efficiency and other alternatives;
- assess the behavior of oxygenates in the environment;
- review known health effects;
- look at the cost of production and use and the product's availability;
- study causes of ground and drinking water contamination from motor vehicle fuels;
- and examine cleanup technologies for water and soil.

In September 1999, the panel released its final report on the findings and recommendations on how best to ensure public health and environmental protection while maintaining clean air and water benefits.

- [Blue Ribbon Panel Web site](#)

# Gasoline additive

From Wikipedia, the free encyclopedia

**Gasoline additives** increase gasoline's octane rating or act as corrosion inhibitors or lubricants, thus allowing the use of higher compression ratios for greater efficiency and power, however some carry heavy environmental risks. Types of additives include metal deactivators, corrosion inhibitors, oxygenates and antioxidants.

The Clean Air Act was put into place in January 1995 in the United States of America as part of the efforts of the Environmental Protection Agency. This act requires deposit control additives (DCAs) be added to all gasolines. This type of additive is a detergent additive that acts as a cleansing agent in small passages in the carburetor or fuel injectors. This in turn serves to ensure a consistent air and fuel mixture that will contribute to better gas mileage.

## Additives

- Hybrid compound blends
  - Combustion catalyst: an organometallic compound which lowers the ignition point of fuel in the combustion chamber reducing the temperature burn from 1200 degrees to 800 degree F
  - Catalyst additives prolongs engine life and increases fuel economy
  - Burn rate modifier increases the fuel burn time, resulting in an increased fuel efficiency
  - Polymerization increases fuel ignition surface area resulting in increased power from ignition
  - Stabilizer/demulsifier/dispersant: prolongs life of fuel and prevents water contamination
  - Corrosion inhibitor prevents corrosion of tank and fuel system
  - Deposit control additives, acting as detergents, clean the engine
- Oxygenates
  - Alcohols:
    - Methanol (MeOH)
    - Ethanol (EtOH)
    - Isopropyl alcohol (IPA)
    - *n*-butanol (BuOH)
    - Gasoline grade *t*-butanol (GTBA)
  - Ethers:
    - Methyl tert-butyl ether (MTBE) Now outlawed in many states for road use.
    - Tertiary amyl methyl ether (TAME)
    - Tertiary hexyl methyl ether (THEME)
    - Ethyl tertiary butyl ether (ETBE)
    - Tertiary amyl ethyl ether (TAEE)
    - Diisopropyl ether (DIPE)
- Antioxidants, stabilizers
  - Butylated hydroxytoluene (BHT)
  - 2,4-Dimethyl-6-tert-butylphenol
  - 2,6-Di-tert-butylphenol (2,6-DTBP)
  - p-Phenylenediamine
  - Ethylene diamine

## Cathleen T. Ridgley - PPB Analogy

---

**From:** Susan B. Fulmer  
**To:** Ridgley, Cathleen T.  
**Date:** 12/10/2010 12:26 PM  
**Subject:** PPB Analogy

---

One part per billion is equivalent to about 3 seconds out of a century. (I pulled this from wiki-pedia).

Other options (from <http://www.waterontheweb.org/resources/conversiontables.html>)

### **One-Part-Per-Billion**

one 4-inch hamburger in a chain of hamburgers circling the earth at the equator 2.5 times  
one silver dollar in a roll of silver dollars stretching from Detroit to Salt Lake City  
one kernel of corn in a 45-foot high, 16-foot diameter silo  
one sheet in a roll of toilet paper stretching from New York to London  
one second of time in 32 years

### **And also from Neal Stephenson (1995. Zodiak , Bantam Books)**

1 ppb (part-per-billion) = a drop in a railroad tanker car

I'd go with either a time analogy, the silo, or the tanker car. Distances might be hard for some people to visualize.

## **Twenty Five (25) Elements of a Comprehensive Risk and Crisis Communication Plan**

**Dr. Vincent T. Covello**  
**Center for Risk Communication**

(Adapted from Hyer RN, Covello VT. *Effective Media Communication during Public Health Emergencies: A WHO Handbook*, WHO/CDS/2005.31, World Health Organization, Geneva, 2005,  
[www.who.int/csr/resources/publications/WHO\\_CDS\\_2005\\_31/en/](http://www.who.int/csr/resources/publications/WHO_CDS_2005_31/en/) or [www.amazon.com](http://www.amazon.com))

- 1) Identify all anticipated scenarios for which risk, crisis, and emergency communication plans are needed, including worst cases and low probability, high consequence events
- 2) Describe and designate staff roles and responsibilities for different risk, crisis, or emergency scenarios
- 3) Designate who in the organization is responsible and accountable for leading the crisis or emergency response
- 4) Designate who is responsible and accountable for implementing various crisis and emergency actions
- 5) Designate who needs to be consulted during the process
- 6) Designate who needs to be informed about what is taking place
- 7) Designate who will be the lead communication spokesperson and backup for different scenarios
- 8) Identify procedures for information verification, clearance, and approval
- 9) Identify procedures for coordinating with important stakeholders and partners (for example, with other organizations, emergency responders, law enforcement, elected officials, and provincial, and federal government agencies)
- 10) Identify procedures to secure the required human, financial, logistical, and physical support and resources (such as people, space, equipment and food) for communication operations during a short, medium and prolonged event (24 hours a day, 7 days a week if needed)
- 11) Identify agreements on releasing information and on who releases what, when, and how policies and procedures regarding employee contacts from the media
- 12) Include regularly checked and updated media contact lists (including after-hours news desks)
- 13) Include regularly checked and updated partner contact lists (day and night)
- 14) Identify schedule for exercises and drills for testing the communication plan as part of larger preparedness and response training
- 15) Identify subject-matter experts (for example, university professors) willing to collaborate during an emergency, and develop and test contact lists (day and night); know their perspectives in advance
- 16) Identify target audiences
- 17) Identify preferred communication channels (for example, telephone hotlines, radio announcements, news conferences, Web site updates, and faxes) to communicate with the public, key stakeholders and partners

- 18) Include message maps for core, informational, and challenge questions
- 19) Include message maps with answers to frequently asked and anticipated questions from key stakeholders, including key internal and external audiences
- 20) Include holding statements for different anticipated stages of the crisis
- 21) Include fact sheets, question-and-answer sheets, talking points, maps, charts, graphics, and other supplementary communication materials
- 22) Include a signed endorsement of the communication plan from the organization's director
- 23) Include procedures for posting and updating information on the organization's Web site
- 24) Include communication task checklists for the first 2, 4, 8, 12, 16, 24, 48 hours, and 72 hours
- 25) Include procedures for evaluating, revising, and updating the risk and crisis communication plan on a regular basis

## Checklist for Risk Communication Fact Sheets

The following checklist should be considered when developing fact sheets.

### ***Plan your fact sheet***

- Know your audience
  - Who are you trying to reach?
  - What does your audience want to know?
- Identify your purpose
  - Why do you want to distribute a fact sheet?
  - What would you like your audience to know?

### ***Make it easy for people to find the information they want***

- Provide answers for the questions people are asking in the right format
  - What is happening related to my concerns or issues?
  - How does this affect me?

### ***Use understandable text and illustrations***

- Keep it as simple as possible
- Avoid using jargon
- Cut down on use of acronyms and define the ones you do use
- Use illustrations instead of tables and charts full of data
- Focus on the big picture – don't use too many details

### ***Use as few numbers as possible. If you need to use numbers, then consider:***

- Remember that numbers are not second nature to most people
- Be aware of the numerator effect
- Consider using an analogy to explain small amounts and relate numbers to something familiar (e.g., ppm = 1 inch in 16 miles or ppb = 1 second in 32 years)
- Whole numbers and fractions are better than decimal points
- If you must use a scientific notation, explain it first, then be consistent ( $10^{-5}$  vs.  $1 \times 10^{-5}$ )
- Explain inverse relationships (e.g., billion > million but ppb < ppm)

### ***Design a visually-appealing and user friendly fact sheet***

- Use visual illustrations, graphics, and photos as much as possible
- Use bullets instead of long paragraphs of text
- Break up text by using a question & answer format or by using representative headings

### ***Make it easy for people to provide feedback or request more information***

- Provide a point of contact
- Provide other resources of information

**GUARANTEE TEMPLATE**

Use when asked to guarantee an event or outcome

**Steps**

- Indicate that the question is about the future
- Indicate that the past and the present help predict the future
- Bridge to known facts, processes or actions

**Example:** (1) "You've asked me for a guarantee, to promise something about the future; (2) The best way I know to talk about the future is to talk about what we know from the past and the present; (3) And what we know is..." **OR**

"What I can guarantee [assure; promise; tell you] is..."

**YES/NO TEMPLATE**

Use when asked a yes/no question that cannot be answered yes or no

**Steps**

- Indicate you have been asked a yes/no question
- Indicate it would be difficult to answer the question yes or no
- Indicate why it would be difficult to answer the question yes or no
- Respond to the underlying concern

**IDK (I DON'T KNOW) TEMPLATE**

Use when you don't know, can't answer, or aren't best source

**Steps**

- Repeat the question (without negatives)
- Say "I wish I could answer that"; or "My ability to answer is limited by ...;" or "I don't know"
- Say why you can't answer
- Provide a follow up with a deadline
- Bridge to what you can say

**Example:** (1) "You've asked me about...; (2) I wish I could answer...; (3) We're still looking into it; (4) I expect to be able to tell you more by ...; (5) What I can tell you is..."

**FALSE ALLEGATION TEMPLATE**

Use when responding to a hostile question, false allegation, or criticism

**Steps**

- Repeat/paraphrase the question without repeating the negative; repeat instead the opposite; the underlying value or concern, or use more neutral language
- Indicate the issue is important
- Indicate what you have done, are doing, or will do to address the issue

**Example:** (1) "You've raised a serious question about "x"; (2) "x" is important to me; (3) We are doing the following to address "x."

**27/9/3 TEMPLATE**

Use when responding to any high stress or emotionally charged question

**Recommendation: Be brief and concise in your first response: no more than 27 words, 9 seconds, and 3 messages**

**PRIMACY/RECENCY TEMPLATE**

Use when responding to any high stress or emotionally charged question

**Recommendation: Provide the most important items or points first and last**

**RULE OF 3 TEMPLATE**

Use when responding to any high stress or emotionally charged question

**Recommendation: Provide no more than three messages, ideas, or points at a time**

**Example:** My three main points are: (1) ...; (2)....; and (3)....

**Basic Risk Communication/Message Mapping Templates\***

*Use these templates to create effective messages in high concern situations*

**CCO TEMPLATE**

Use when asked a question with high-emotion

Steps:

- Compassion
- Conviction
- Optimism

**Example:** (1) "I am very sorry to hear about...."; (2) I believe that...;(3) In the future, I believe that ....

**"WHAT IF" TEMPLATE**

Use when asked a low probability "what if, what might happen" question

Steps:

- Repeat the question (without negatives)
- Bridge to "what is"
- State what you know factually

**Example:** (1) "You've asked me what might happen if...."; (2) I believe there is value to talk about what is, what we know now; (3) And what we know is..."

-----  
\*Source: Dr. Vincent T. Covello , Center for Risk Communication, Copyright 2009

**BRIDGING TEMPLATES**

Use when you want to return to your key points or redirect the communication

1. "And what's most important to know is..."
2. "However, what is more important to look at is..."
3. "However, the real issue here is..."
4. "And what this all means is..."
5. "And what's most important to remember is ..."
6. "With this in mind, if we look at the bigger picture..."
7. "With this in mind, if we take a look back..."
8. "If we take a broader perspective, ..."
9. "If we look at the big picture..."
10. "Let me put all this in perspective by saying..."
11. "What all this information tells me is..."
12. "Before we continue, let me take a step back and repeat that..."
13. "Before we continue, let me emphasize that..."
14. "This is an important point because..."
15. "What this all boils down to is..."

**1N=3P TEMPLATE (ONE NEGATIVE EQUALS THREE POSITIVES) /BAD NEWS TEMPLATE**  
Use when breaking bad news or stating a negative

**Recommendation:** Balance one bad news or negative message with a least three or more positive, constructive, or solution oriented messages

**AGL-4 TEMPLATE (AVERAGE GRADE LEVEL MINUS FOUR TEMPLATE)**

Use when responding to any high stress or emotionally charged question

**Recommendation:** Provide information at four or more grade levels below the average grade level of the audience.

## The 103 Most Frequently Asked Questions at Environmental Clean Up and Hazardous Waste Sites

Vincent T. Covello, Ph.D.  
Center for Risk Communication  
August, 2008  
Copyright 2008

### **Health Risk Concerns**

1. Am I at risk from the contamination?
2. What are the risks to my children?
3. What are the risks to my pets?
4. What are the impacts to natural habitat (i.e., fish and other species)?
5. Can my children and pets play in the soil?
6. What health effects can I expect to see if I've been exposed to site contaminants?
7. What are the short-term effects?
8. What are the long-term effects?
9. I have a recent health problem (i.e., headaches, rashes, etc.) that I never had before; could the site contamination have caused this problem?
10. Have any health problems been reported so far?
11. How many people have become ill as a result of the site?
12. Are you going to test residents for exposure?
13. Can you set up a temporary, local health center or clinic where we can be tested?
14. I'm pregnant (or planning to be). Will the contaminants affect my unborn child?
15. Is it safe to garden in my yard?
16. Is it safe to eat vegetables grown in my garden?
17. Is it safe to drink the water?
18. Will you provide us with bottled water?
19. Is it safe to bath or shower in the water?
20. Is it safe to water our lawns with the potentially contaminated water?
21. Is it safe to mow our lawns if the soil underneath is potentially contaminated?
22. Is it safe to use the river for fishing and other recreational purposes?
23. Is it safe to eat the fish?
24. What's being done right now to protect mine and my family's health?
25. Will capping the site protect my health?
26. How serious is the contamination?
27. What happens if my ventilation system shuts down?
28. Can I get sick from breathing the air?

### **Investigation/Data Concerns**

1. Where did the contamination come from?
2. How bad is the problem?
3. How much contamination is there?
4. Is the contamination moving and, if so, in what direction?
5. Are there any other contaminants beside the ones we were told about?

6. How can you be sure there are no other contaminants?
7. Will you conduct testing/sampling to make sure the soil in my yard is free of contaminants?
8. How will you decide where to sample and where not to sample?
9. Who determines what levels of contamination are considered "safe"?
10. Why don't you clean up all of the contamination, instead of allowing some to remain?
11. How do you know whether my drinking water is contaminated?
12. How do you know whether my yard has contaminated soil?
13. How do you know that it's safe to breathe the air?
14. How do you know whether it's safe to go fishing?
15. Why hasn't my well been sampled?
16. Why have some people received bottled water and not others?
17. Can I see the results of the testing you've done on my property?
18. Can I see the results of testing you've done on other properties in the neighborhood?
19. Do I have to give you access to sample my property?
20. What if I refuse access to my property?
21. Do I need to be home and take time off work while you're sampling my property?
22. I'm moving into the area; can I see the results of sampling that's been done?
23. Who will be doing the sampling?
24. How can we be sure the sampling data is accurate?
25. How can we be sure that future sampling won't find things that you didn't find now?
26. Can you guarantee the accuracy of the sampling results?

### **Cleanup Concerns**

1. How exactly are you going to clean up the site?
2. Why was this particular cleanup method chosen over other options?
3. How long will the cleanup take?
4. When are you going to start the cleanup?
5. Who is going to perform the cleanup?
6. What process was used (or will be used) to select contractors to perform the cleanup?
7. How will cleanup performance be monitored or evaluated?
8. How much will the cleanup cost?
9. Who will pay for the cleanup?
10. Will my tax dollars have to pay to address this problem that someone else caused?
11. Can taxpayers be reimbursed?
12. How will you know when everything is "clean"?
13. Why are you going to just "cap" everything and leave the contamination there?
14. Why not dig up the contamination?
15. Is dredging safe?
16. Won't dredging just 'stir up' things and contaminate the water even more?
17. What if the cleanup doesn't work?
18. Can you guarantee that all of the contamination will be removed?
19. How will my quality of life be affected during the cleanup (i.e., noise, traffic, odors, etc.)?
20. After you finish the cleanup, then what? (what happens next?)
21. After the cleanup, will you continue to test to make sure it's still working?

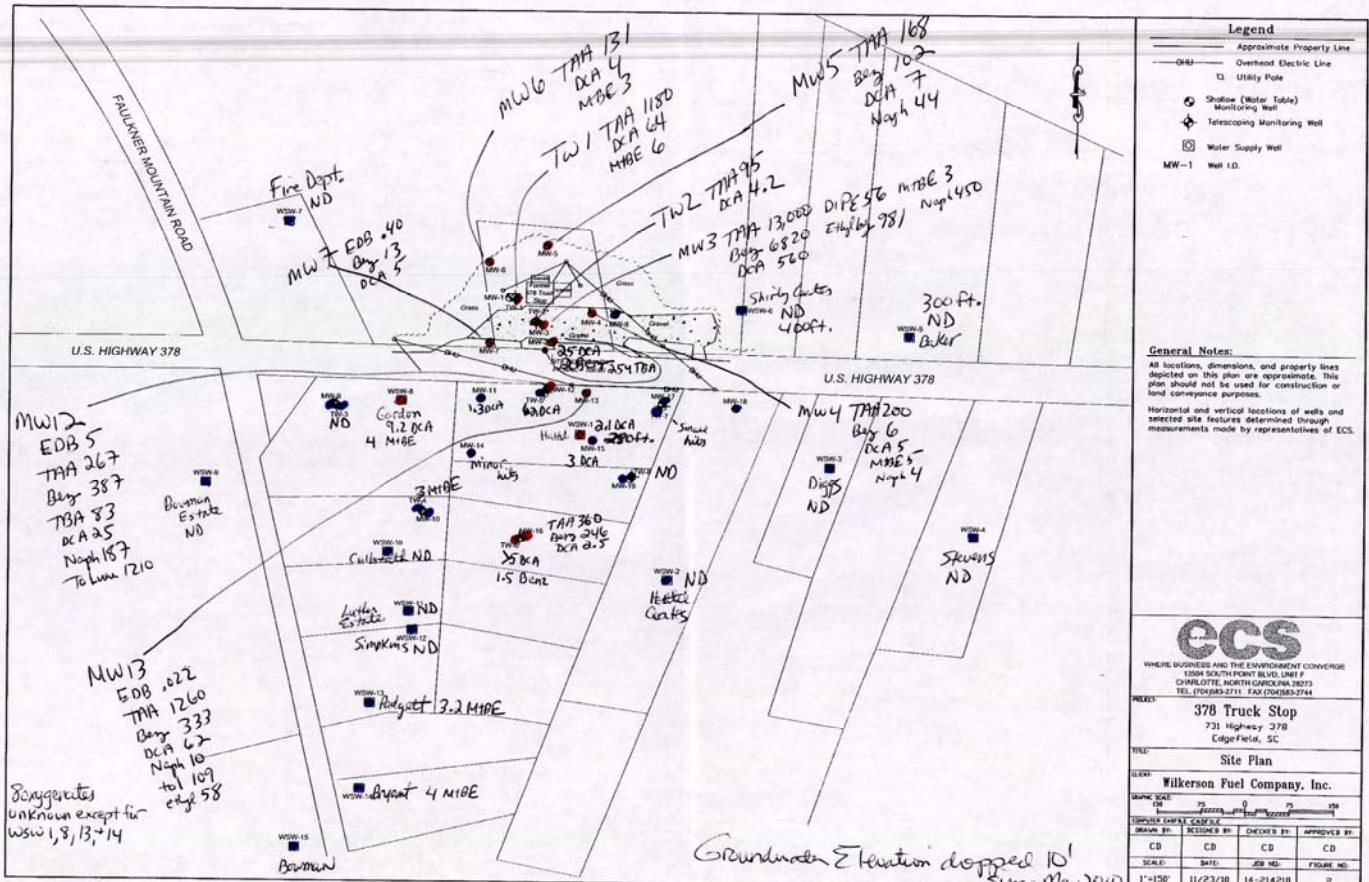

22. What happens if my water (or soil, etc.) is still contaminated after the cleanup?

### **Communication Concerns**

1. Why did it take you so long to tell us about the contamination?
2. How can I trust what you're telling me about the site?
3. How can I trust what you're telling me about my safety?
4. What happens if you find high concentrations of contaminants near my home – how will I know?
5. How will I be informed of what's going on?
6. Will you share the testing data with residents?
7. Will you let us know if something unexpected happens during the cleanup and things get worse?
8. Is there someone local residents can talk to if we have questions or concerns?
9. Where can I get more information about this site?
10. Where can I get more information about similar sites that have already been cleaned up?
11. If a cleanup plan is selected that residents disagree with, is there an appeal process?
12. How will you address public comments?
13. Will you address ALL of the public comments?
14. How do you decide which comments NOT to address?
15. If the majority of residents disagree with how EPA [or other agency] is planning to cleanup the site, will EPA [or other agency] change its mind?
16. There's another site down the road; can you tell me what's going on there?
17. When you first discovered there MIGHT be a problem, why didn't you tell us then?

### **Economic Concerns**

1. If soil is excavated from my yard, will I receive financial assistance to replace plants and shrubbery?
2. My property value has decreased because of the site contamination problem. Will I be compensated for this?
3. I'm concerned that cost will be the driving force behind the agency's selected cleanup option; does community opinion really matter?
4. I was told residents might have to relocate during the site cleanup. Who will pay for my moving costs? What about other expenses I may be forced to incur (i.e., costs of transporting my children to school because they won't be able to take the bus, or daily food costs because I won't have access to my stove and refrigerator, etc.)
5. The site has placed a "negative stigma" on our community that may affect potential investors, developers, or homeowners; what will be done about this?
6. Will this keep our community from developing?
7. Can we get jobs helping with the cleanup?
8. If we can't eat the fish anymore because of health risks, can you give us a food subsidy?
9. Do you have enough money to cover the cleanup costs?
10. What if you discover the cleanup is going to cost more than estimated, what happens then?

Willerson's phone #.

Meeting w/ all next week.

Health concerns (physical exams +  
seeking compensation. <sup>blood work</sup>)

Permanent solution for clean water.

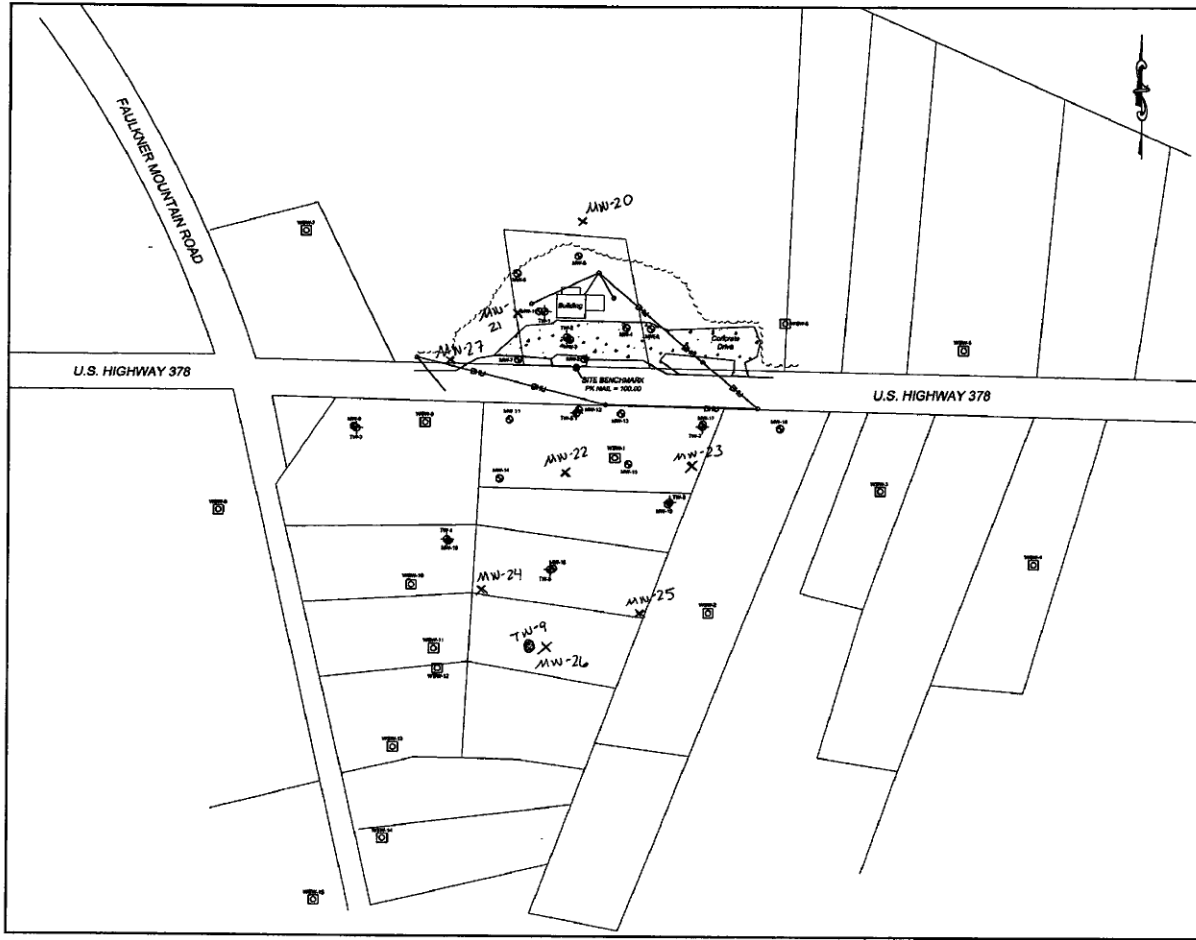

Mr. Gordon thought his well was deepest.  
Bubbles in standing water.

Meeting 378 Truck Stop  
November 17, 2010 | 1-3:00

Donna Rowe  
Donna Mays  
Chris Melluskey.

- 1) Site visit on November 18 to meet  
Hattie Saun / ELS  
Pattij GAC or  
Tommy, also.
- 2) Tell residents  
if they notice any smell / taste  
call us.
- 3) Write clear letters to other well  
owners.
- 4) Make a map showing contamination;
- 5) Explain D/O lines contractor.
- 6) Ask Saun who correspond w/ her.
- 7) Where does Frank live?
- 8) other receptors.

## **Cathleen T. Ridgley - Re: Meeting at 378 Truck Stop In Friday**

---

**From:** Donna H. Rowe  
**To:** Ridgley, Cathleen T.  
**Date:** 11/17/2010 9:30 PM  
**Subject:** Re: Meeting at 378 Truck Stop In Friday

---

Thanks! See you at 10!

My cell phone # is (864) 982-4389.

Donna H. Rowe, M.A., C.M.  
Regional Community Liaison  
South Carolina DHEC - EQC Regions 1 & 2

We Must Learn to Understand One Another  
"Conflicts always occur. It is in the  
resolution of conflicts that human beings stand out.  
Every conflict can and should be calmed by  
talking about and understanding one another's needs."  
--Susan Polis Schutz

>>> Cathleen T. Ridgley 11/17/10 5:10 PM >>>  
Donna,

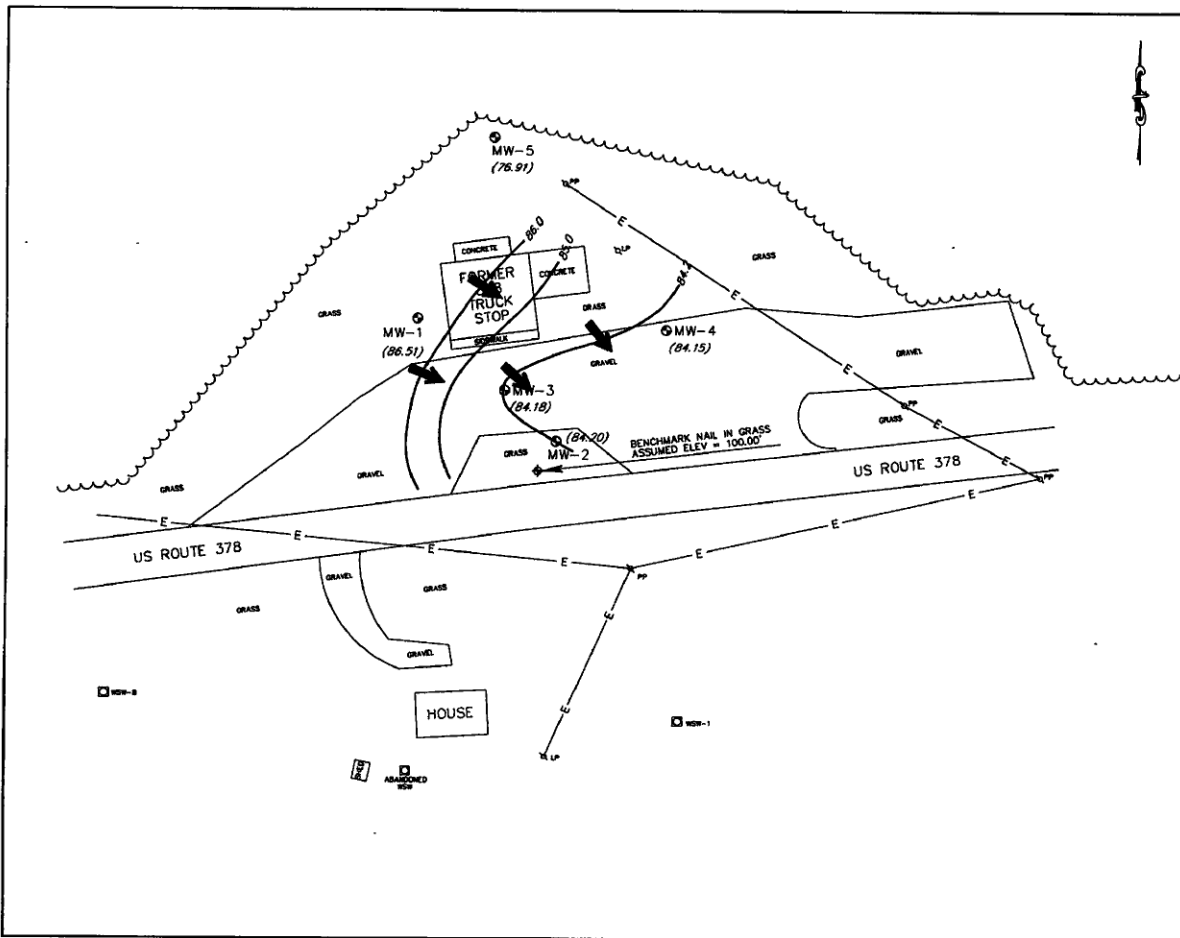

I am e-mailing you to confirm our meeting with Hattie Scurry and Sidney Gordon tomorrow at 10:00. I spoke with both. We'll go to Ms. Scurry's place first. I haven't written the letters yet (to the well owners whose water was clean), but I thought maybe we could drop by each one and give a verbal okay and tell them a letter is on the way (Friday is my AWS day and I'm running out of time).  
My cell number is: 803-727-5307.  
Thanks,

Cathleen Ridgley  
Hydrogeologist  
SCDHEC-Bureau of Land & Waste Mgmt.  
803/896-6633  
Fax: 803/896-6245

**APPENDICES**

**Legend**

- Overhead Electric Line
- Utility Pole
- ⊕ Monitoring Well
- ⊗ Water Supply Well
- (73.71) Groundwater Elevation
- 90.00 Water Table Contour (Dashed where Inferred)
- ➔ Flow Direction Indicator

**General Notes:**

All locations, dimensions, and property lines depicted on this plan are approximates. This plan should not be used for construction or land conveyance purposes.

Horizontal and vertical locations of wells and selected site features determined through measurements made by representatives of ECS.

Groundwater elevations are relative to a temporary benchmark with an assumed datum of 100.00 feet above mean sea level.

Groundwater elevations are based on measurements made on May 25, 2010.

Water table contours and flow directions assume homogeneous, isotropic aquifer conditions and horizontal flow.

Fluctuations in the level of the water table may occur due to factors not accounted for at the time of measurement.

Water table contours are interpolated between data points and inferred in other areas.

## **1.0 INTRODUCTION**

### **1.1 Background**

This report presents results of Tier II assessment activities conducted at the former 378 Truck Stop facility (UST permit number 07960) located at 731 Highway 378 in Edgefield, South Carolina (Figure 1). Activities were conducted in accordance with the South Carolina Department of Health and Environmental Control (SCDHEC) directive dated August 16, 2010, which included cost agreement number 39645.

The site was not in use at the time of this assessment. An abandoned building was present onsite during our visits associated with the Tier II assessment activities. A concrete slab was located directly to the east of, and abutting, the onsite building.

A release at the site was reported on October 3, 1974 and was confirmed on July 8, 1996. Reportedly, one 550-gallon diesel, one 1,000-gallon gasoline, and one 2,000-gallon gasoline underground storage tanks (USTs) and their associated piping and dispensers were removed from the site on January 1, 1987. The site did not contain USTs at the time of this assessment.

### **1.2 Regional Geology/Hydrogeology**

The sedimentary formations of the Coastal Plain range in age from Late Cretaceous to Recent. They consist, for the most part, of unconsolidated sand, clay, gravel, marl, and limestone which have been deposited on a surface of granite, schist, and gneiss similar to, and a continuation of, the rocks underlying the adjoining Piedmont province. Some coquinas have been silicified to form so-called buhrstones and some clays hardened into siltstones. Considered en masse, the formations of the Coastal Plain may be classified as having a monoclinial or acinal structure, and they rest on rocks of a much older crystalline complex. The unconsolidated rocks occur as wedges of sand, clay, marl, and limestone. Underlying the unconsolidated sediments are "crystalline" rocks consisting of granite, gneiss, schist, and a series of volcanics. Fault troughs or grabens were formed in these pre-Mesozoic rocks during Triassic time, into which were deposited ferruginous and carbonaceous sands and clays. These sediments were subsequently injected by diabase dikes and sills.

### **1.3 Receptor Survey Results**

A receptor survey was conducted within a 1,000 foot radius of the subject site during the May 2010 Tier I assessment activities. The 378 Truck Stop site was located in a predominantly residential area in

Edgefield County (Figure 1). Properties directly surrounding the site were open fields. Nearby properties were mainly open fields and residences. A volunteer fire department station was located on the corner of Highway 378 and Faulkner Mountain Road.

Municipal water was not provided to the area. Multiple private water supply wells were identified during the Tier I receptor survey and were subsequently plotted on a site vicinity map. A comprehensive survey which included the private water supply wells, conducted during Tier II assessment activities, resulted in multiple changes to the site vicinity map. The identified water supply wells are listed below along with location information.

| Description of Receptor                                | Receptor Address                             | Distance/Direction from Site         |
|--|--|--------------------------------------|
| Private Water Supply Well (labeled WSW-1)              | 730 Hwy 378 East, Edgefield, SC 29824        | Approximately 205 ft SSE of the site |
| Private Water Supply Well (labeled WSW-2)              | 736 Hwy 378 East, Edgefield, SC 29824        | Approximately 500 ft SSE of the site |
| Private Water Supply Well (labeled WSW-4)              | 752 Hwy 378 East, Edgefield, SC 29824        | Approximately 830 ft SE of the site  |
| Private Water Supply Well (labeled WSW-5)              | 745 Hwy 378, Edgefield, SC 29824             | Approximately 630 ft E of the site   |
| Private Water Supply Well (labeled WSW-6)              | 741 Hwy 378, Edgefield, SC 29824             | Approximately 348 ft E of the site   |
| Private Water Supply Well (labeled WSW-7)              | 719 Hwy 378, Edgefield, SC 29824             | Approximately 455 ft WNW of the site |
| Private Water Supply Well (labeled WSW-8)              | 724 Hwy 378 East, Edgefield, SC 29824        | Approximately 268 ft SW of the site  |
| Private Water Supply Well (labeled WSW-9)              | 71 Faulkner Mountain Rd, Edgefield, SC 29824 | Approximately 625 ft SW of the site  |
| Private Water Supply Well (labeled WSW-10)             | 68 Faulkner Mountain Rd, Edgefield, SC 29824 | Approximately 470 ft SSW of the site |
| Private Water Supply Well (labeled WSW-11)             | 66 Faulkner Mountain Rd, Edgefield, SC 29824 | Approximately 545 ft SSW of the site |
| Private Water Supply Well (labeled WSW-12)             | 64 Faulkner Mountain Rd, Edgefield, SC 29824 | Approximately 572 ft SSW of the site |
| Private Water Supply Well (labeled WSW-13)             | 64 Faulkner Mountain Rd, Edgefield, SC 29824 | Approximately 716 ft SSW of the site |
| Private Water Supply Well (labeled WSW-14)             | 54 Faulkner Mountain Rd, Edgefield, SC 29824 | Approximately 857 ft SSW of the site |
| Private Water Supply Well (labeled WSW-15)             | 57 Faulkner Mountain Rd, Edgefield, SC 29824 | Approximately 990 ft SSW of the site |
| Disconnected Private Water Supply Well (labeled WSW-3) | 744 Hwy 378 East, Edgefield, SC 29824        | Approximately 554 ft ESE of the site |
| Disconnected private water supply well                 | unknown                                      | Approximately 615 ft NNW of the site |
| Disconnected private water supply well                 | 724 Hwy 378 East, Edgefield, SC 29824        | Approximately 444 ft SW of the site  |

|  |                                       |                                     |
|--|---------------------------------------|-------------------------------------|
| Disconnected private water supply well | 730 Hwy 378 East, Edgefield, SC 29824 | Approximately 189 ft S of the site  |
| Disconnected private water supply well | 732 Hwy 378 East, Edgefield, SC 29824 | Approximately 352 ft S of the site  |
| Disconnected private water supply well | 758 Hwy 378 East, Edgefield, SC 29824 | Approximately 678 ft SE of the site |

Underground telephone lines ran along the south side of Highway 378 and turned towards the southwest to the residences located on the south side of Highway 378, as shown in Figure 3.

The applicable portion of the Edgefield County Tax Map has been included as Figure 2. Property owner's names and addresses of land in the vicinity of the subject site are summarized in Table 1 and are keyed to Figure 2. A scaled Site Plan has been included as Figure 3. The Surveyed Map on which Figure 3 was based has been included as Appendix F.

## 2.0 ASSESSMENT INFORMATION

### 2.1 Site specific geology and hydrogeology

The project area was underlain at shallow depths by light brown silt and silty clay. Rock and partially weathered rock were encountered below the silt and clay at varying depths throughout the study area. Partially weathered rock was first encountered at depths ranging from approximately 26 feet (MW-18 and MW-27) to 50 feet (TW-9) across the subject area. Overall, partially weathered rock was first encountered at or below a depth of 30 feet below grade onsite and in locations south of the site. Partially weathered rock was first encountered at more shallow depths in locations west, southwest, and southeast of the site. Rock was first encountered at depths ranging from approximately 30 feet (MW-8) to 68 feet (TW-3) across the subject area. The depths to rock observed during shallow monitoring well installation varied from approximately 30 feet to 39 feet below grade. Overall, rock was encountered a bit deeper onsite and south of the site as compared to other areas (north, east, west, southwest, and southeast). Depths to rock were observed at shallower depths (between 32 feet and 35 feet below grade) during telescoping well installation in areas southwest and southeast of the site, as compared to telescoping wells installed onsite and in areas south of the site. The largest discrepancy was observed at telescoping well TW-3, located southwest of the site, where rock was not encountered until a depth of 68 feet below grade.

The percentages of gravel, sand, and silt/clay in a soil sample collected during Tier I well installation activities from monitoring well MW-3 at a depth of 40 feet below grade were 10.0%, 39.8%, and 50.1%, respectively. The percentages of gravel, sand, silt, and clay in a soil sample collected during Tier II well

installation activities from MW-12 at a depth of 30 feet below grade were 4.1%, 27.5%, 50.7%, and 17.7%, respectively. A soil sample was proposed for collection during installation of monitoring well TW-5 at a depth within the well's screened interval. This sample was subsequently collected at a depth of 55 feet below grade. Following discussions with SCDHEC, the sample was not submitted for laboratory grain size analysis, as this sample consisted mainly of pulverized rock particles from the well drilling process.

Depths to groundwater were measured in wells MW-1 through MW-19 and TW-1 through TW-8 on October 18, 2010. Depths to groundwater measured in the shallow monitoring wells ranged from 22.02 feet (MW-18) to 30.79 feet (MW-16). Water table elevations in the shallow monitoring wells ranged from 64.52 feet (MW-9) to 75.47 feet (MW-1) relative to a temporary benchmark with an assumed datum elevation of 100.00 feet above mean sea level. Additional monitoring wells were installed on November 29 through December 3, 2010 and were subsequently gauged on December 6, 2010. Depths to groundwater measured in these additional shallow monitoring wells ranged from 28.48 feet (MW-27) to 41.77 feet (MW-20). Well MW-20 was installed with a three foot stickup riser. However, when this three foot difference was considered, well MW-20 still showed the deepest water table reading of the wells gauged on December 6, 2010. Water table elevations in the additional shallow monitoring wells ranged from 66.83 feet (MW-24) to 70.75 feet (MW-23) relative to a temporary benchmark with an assumed datum elevation of 100.00 feet above mean sea level. The shallow groundwater elevations obtained in October 2010 were contoured to develop a groundwater flow map. Due to a significant change in water table elevations between October and December, the data obtained in December 2010 could not be integrated into this map. Based on the October 2010 shallow monitoring well data, groundwater flow in the surficial aquifer was generally toward the south, southwest, and northeast. The horizontal hydraulic gradients were approximately 0.009 feet per foot (ft/ft) towards the south from well MW-3 to well MW-16, 0.031 ft/ft towards the southwest from well MW-1 to well MW-9, and 0.014 ft/ft towards the northeast from well MW-1 to well MW-5. The Groundwater Elevation Map with posted October and December 2010 shallow monitoring well data and contoured October 2010 data has been included as **Figure 4**. A summary of groundwater elevation data has been presented in **Table 3**.

Depths to groundwater measured on October 18, 2010 in the telescoping monitoring wells ranged from 25.39 feet (TW-3) to 50.90 feet (TW-7). Water table elevations in the telescoping monitoring wells ranged from 47.23 feet (TW-7) to 73.93 feet (TW-5) relative to a temporary benchmark with an assumed datum elevation of 100.00 feet above mean sea level. However, based on the range of the telescoping

well groundwater elevations, it is possible that the water table was not stabilized at the time of measurement. It is also possible that the source of groundwater in some of the telescoping wells may have been from rock fractures and the measured depths to water did not represent the true water table. Subsequent gauging data may help determine the reason for this potential discrepancy. Additional monitoring wells were installed on November 29 through December 3, 2010 and were subsequently gauged on December 6, 2010. The depth to groundwater measured in additional telescoping monitoring well TW-9 was 28.96 feet and the water table elevation was 67.96 feet relative to a temporary benchmark with an assumed datum elevation of 100.00 feet above mean sea level. The deep groundwater elevations obtained in October 2010 were contoured to develop a groundwater flow map. Due to a significant change in water table elevations between October and December, the data obtained in December 2010 could not be integrated into this map. Based on the October 2010 telescoping monitoring well data, groundwater flow in the deep aquifer was generally toward the southwest and east. The horizontal hydraulic gradients were approximately 0.043 ft/ft towards the southwest from well TW-1 to well TW-4 and 0.131 ft/ft towards the east from well TW-5 to well TW-7. The Groundwater Elevation Map with posted October and December 2010 telescoping monitoring well data and contoured October 2010 data has been included as **Figure 5**. A summary of groundwater elevation data has been presented in **Table 3**.

Slug tests were performed on monitoring wells MW-2 and MW-3 during Tier I assessment activities conducted in May 2010. Calculated hydraulic conductivities ranged from 0.1091 feet/day to 0.1778 feet/day. Slug tests were performed on monitoring wells MW-12 and MW-17 during Tier II assessment activities. The hydraulic conductivities estimated from the slug tests were 0.5359 feet per day (MW-12) and 0.2019 feet per day (MW-17). Raw data and graphs from the slug tests conducted during the Tier II assessment activities have been included as **Appendix G**.

## **2.2 Monitoring Well Installation**

Due to repeated drilling refusal and depth to rock encountered during Tier I assessment activities, groundwater field screening was not conducted prior to well installation during Tier II assessment activities. Therefore, monitoring well locations and termination depths were proposed at onsite and offsite positions in an effort to horizontally and vertically delineate dissolved phase contamination in the groundwater and to serve as compliance points between the site and local private water supply wells. Multiple proposed drilling locations were adjusted in the field for the presence of utilities, trees, buildings, and other obstructions. Drilling and installation of shallow monitoring wells MW-6 through

MW-19 and telescoping monitoring wells TW-1 through TW-8 occurred from October 4 through 15, 2010.

Soil samples were proposed for collection during the installation of shallow monitoring wells MW-6 through MW-8 to continue delineation of the sorbed contamination identified during Tier I assessment activities. Samples were collected every five feet during well installation activities and screened in the field for volatile organic compounds with a Photo-Ionization Detector (PID). The soil sample from each location that displayed the highest PID reading above the water table was submitted for laboratory analysis of BTEX compounds (benzene, toluene, ethylbenzene, and xylenes) and naphthalene using EPA Method 8260B. While installing wells MW-12 and MW-13, a petroleum odor was observed in the soil at a depth of 20 feet below grade. Grab samples were collected and screened with a PID. The results were provided to SCDHEC, who requested the samples be submitted for laboratory analysis of BTEX compounds and naphthalene using EPA Method 8260B. The soil laboratory reports are included in **Appendix C** and the data is provided in **Table 2**.

Based on observations from the Tier I well installation activities, shallow wells MW-6 through MW-19, installed during the Tier II assessment, were drilled to 35 feet or 40 feet depending on apparent topographic elevation changes throughout the area. Due to known water table fluctuations (depth to water in the pre-existing wells dropped by approximately 10 feet since the May 2010 Tier I assessment), the shallow wells were installed with 15 foot screen sections to ensure the water table would be bracketed by the screened interval in the future. Each well was monitored for depths to water prior to completion and final depths were determined by these water table measurements. The completed depths of the shallow wells ranged from 35 feet to 40 feet below grade. Telescoping monitoring wells TW-1 through TW-8 were installed and paired with shallow monitoring wells MW-1, MW-3, MW-9, MW-10, MW-12, MW-16, MW-17, and MW-19. Following discussions with SCDHEC, the proposed telescoping well's termination depth of 80 feet was adjusted based on observed depth to rock. Outer casing depths were based on depth to rock and/or the total depth of the telescoping well's shallow well pair to ensure sufficient vertical separation between the two monitoring points. As directed by SCDHEC, inner casings were installed eight feet below the well's outer casing depth. Telescoping wells TW-1 through TW-8 were installed to total depths ranging from 58 feet to 80 feet below grade, and were constructed with five foot screened sections.

Following installation, each well was developed until the purged water was free of sediment or until the well was purged dry. A comprehensive site survey was conducted on October 26, 2010 and a complete site plan was prepared.

Groundwater samples were collected from the monitoring wells and telescoping wells on October 18 and 19, 2010. Following receipt of the groundwater analytical results, SCDHEC directed the installation of additional shallow and telescoping monitoring wells. Nine shallow monitoring wells (MW-20 through MW-28) and one telescoping monitoring well (TW-9) were successfully installed on November 29 through December 3, 2010. Following well installation, each well was developed until the purged water was free of sediment or until the well was purged dry. One additional proposed shallow well could not be installed without removal of trees in a wooded area. Following a discussion with SCDHEC, it was decided that this well could be omitted from this scope of work. An additional telescoping monitoring well (TW-10) was installed to a depth of 80 feet below grade in the proposed location near shallow well MW-24. Two days following installation, this well had produced less than one foot of water. As directed by SCDHEC, groundwater samples were collected from the well and the boring was subsequently abandoned due to insufficient water for well completion.

The completed depths of shallow wells MW-20 through MW-28 ranged from 35 feet to 42 feet below grade, depending on changes in groundwater and topographic elevations. Each shallow monitoring well was installed with a 15 foot screened section. Competent rock was not encountered during installation of telescoping well TW-9. The outer casing was therefore installed to a depth of 72 feet below grade and the inner casing was installed to the proposed depth of 80 feet below grade. Telescoping well TW-9 was installed with a five foot screened section. Rock was encountered at a depth of 35 feet below grade during installation of telescoping well TW-10. Water was not encountered while drilling the inner casing to a depth of 80 feet. Due to insufficient water in the boring, this well was abandoned after a grab groundwater sample was collected.

Well logs developed during completion of the monitoring wells have been included as **Appendix A**. The driller's well construction records for the monitoring wells have been included as **Appendix B**. Soil cuttings and wastewater generated during monitoring well installation and development activities were placed in 55-gallon drums and staged onsite for subsequent transport to a licensed facility for disposal. The disposal manifests are included as **Appendix H**.

On December 9, 2010, a professional surveyor incorporated the newly installed wells into the pre-existing survey. A complete site plan was prepared and is included as **Figure 3**. The Surveyed Map on which **Figure 3** was based has been included as **Appendix F**.

### **2.3 Groundwater Sampling**

A comprehensive groundwater gauging and sampling event was conducted on October 18 and 19, 2010. Samples were collected from monitoring wells MW-2 through MW-19 and TW-1 through TW-8. Samples were also collected from water supply wells WSW-1 through WSW-15. A groundwater sample was not collected from pre-existing monitoring well MW-1 due to the presence of free product.

Additional monitoring wells MW-20 through MW-28 and TW-9 were gauged and sampled on December 6, 2010. A grab sample was also collected from telescoping well TW-10 on December 2, 2010 before it was abandoned.

Each monitoring well was sampled using a new, disposable 1 ½-inch diameter 1-liter capacity PVC bailer attached to a nylon cord. Prior to sample collection, new wells MW-6 through MW-28 and TW-1 through TW-9 were developed and purged by removal of at least three well casing volumes of water, wherever possible. Pre-existing monitoring well MW-2 was also purged prior to sample collection, as the construction of this well was unknown and it could not be verified whether the water table was bracketed by the screened interval. Pre-existing monitoring wells MW-3 through MW-5 were not purged prior to sampling, as the water table in these wells was bracketed by the screened interval of each well. Each water supply well was purged at the sample location for approximately 10 minutes prior to sample collection. Measurements of pH, conductivity, temperature, oxidation reduction potential, turbidity, and dissolved oxygen were recorded prior to purging and after removal of each well casing volume. Field information was transcribed onto SCDHEC Field Sampling Summary Sheets which are included as **Appendix D**.

After collection, the groundwater samples were placed into an iced cooler and delivered to Pace Analytical of Huntersville, NC. Pace analyzed the groundwater samples from wells MW-2 through MW-28 and TW-1 through TW-9 for BTEX compounds, MTBE, naphthalene, 1,2-DCA, and eight oxygenates using EPA Method 8260B and EDB using EPA Method 8011. The groundwater samples collected from newly installed monitoring wells MW-6 through MW-28 and TW-1 through TW-9 were also analyzed for total lead using EPA Method 6010. The grab sample collected from TW-10 was analyzed for BTEX

compounds, MTBE, naphthalene, 1,2-DCA, and eight oxygenates using EPA Method 8260B and EDB using EPA Method 8011. There was insufficient water to collect a lead sample from TW-10. Pace analyzed the groundwater samples from water supply wells WSW-1 through WSW-15 for BTEX compounds, MTBE, naphthalene, and 1,2-DCA using EPA Method 8260B and EDB using EPA Method 8011. The laboratory analytical reports have been included in **Appendix E**. Tabular results have been included in **Table 4** and **Table 5**. A map displaying contaminants of concern data has been included as **Figure 6**. A map displaying eight oxygenates data has been included as **Figure 7**.

Purge water generated during groundwater sampling activities was placed in 55-gallon drums and staged onsite for subsequent transport to a licensed facility for disposal. The disposal manifests are included as **Appendix H**.

The October 19, 2010 private water supply well analytical data was forwarded to SCDHEC upon receipt on October 26, 2010. Concentrations of contaminants of concern were reported above laboratory reporting limits in several of the water supply well samples. The water supply wells with concentrations above laboratory reporting limits were re-sampled by SCDHEC to verify the results obtained by ECS. Based on the results, SCDHEC directed ECS to install Granular Activated Carbon (GAC) units on water supply wells WSW-1 and WSW-8. GAC units were installed on water supply wells WSW-1 and WSW-8 on November 18, 2010 and November 12, 2010, respectively. Following installation, pre-GAC and post-GAC groundwater samples were collected. Additional information pertaining to the GAC installations and subsequent sampling can be found in the individual reports associated with these field activities, each dated November 23, 2010.

As directed by SCDHEC, ECS collected groundwater samples from water supply wells WSW-2 through WSW-4, WSW-6, WSW-7, WSW-9 through WSW-12, and WSW-15 for analysis of eight oxygenates using EPA Method 8260B on December 8, 2010 to complete the well's data sets. Samples were not collected from water supply wells WSW-1 and WSW-8, as eight oxygenates data had been obtained during the GAC installation sampling. Samples were not collected from water supply wells WSW-13 and WSW-14, as eight oxygenates data had been obtained from these wells during the verification sampling conducted by SCDHEC. A groundwater sample could not be collected from water supply well WSW-5 for analysis of eight oxygenates on December 8, 2010, as the well pump had been disconnected but not removed from the well. A sign in front of the residence indicated that the home was for sale. Due to unseasonably cold temperatures, multiple sample locations were frozen on the day of sampling. A sample

was collected from water supply well WSW-2 after plumbers cut open frozen pipes for repairs. Sufficient water was obtained from the broken pipes for sample collection. A sample was collected from indoor plumbing from water supply well WSW-9 due to frozen outdoor piping. Samples were collected from wells WSW-11, WSW-12, and WSW-15 at spigots attached to the respective homes, as the sample ports on the holding tanks were frozen. The laboratory analytical report from the eight oxygenates sampling has been included in **Appendix E**. Tabular results have been included in **Table 5**. A map displaying eight oxygenates data has been included as **Figure 7**.

## **2.4 Groundwater Quality**

### Contaminants of Concern

Concentrations of benzene were reported above the SCDHEC May 2001 Risk Based Screening Level (RBSL) in the groundwater samples collected from monitoring wells MW-3 through MW-5, MW-7, MW-12, MW-13, MW-16, and MW-22. Concentrations of toluene were reported above the RBSL in the groundwater samples collected from monitoring wells MW-12 and MW-22. Concentrations of ethylbenzene were reported above the RBSL in the groundwater samples collected from monitoring wells MW-3 and MW-22. A concentration of total xylenes was reported above the RBSL in the groundwater sample collected from monitoring well MW-22. Concentrations of naphthalene were reported above the RBSL in the groundwater samples collected from monitoring wells MW-3, MW-5, MW-12, and MW-22. Concentrations of 1,2 DCA were reported above the RBSL in the groundwater samples collected from monitoring wells MW-2, MW-3, MW-5, MW-12, MW-13, MW-22, MW-24, MW-27, TW-1, and TW-6, and water supply well WSW-8 (pre-GAC installation). Concentrations of EDB were reported above the RBSL in the groundwater samples collected from monitoring wells MW-3, MW-7, MW-12, and MW-22. A concentration of total lead was reported above the RBSL in the groundwater sample collected from monitoring well MW-22.

Concentrations of benzene were reported below the RBSL in the groundwater samples collected from monitoring wells MW-2 and TW-6. Concentrations of toluene were reported below the RBSL in the groundwater samples collected from monitoring wells MW-3, MW-7, MW-13, MW-16, TW-2, and TW-7. Concentrations of ethylbenzene were reported below the RBSL in the groundwater samples collected from monitoring wells MW-5, MW-7, MW-12 through MW-14, and MW-16. Concentrations of total xylenes were reported below the RBSL in the groundwater samples collected from monitoring wells MW-2, MW-3, MW-5, MW-7, MW-12 through MW-14, MW-16, TW-2, and TW-7. Concentrations of MTBE were reported below the RBSL in the groundwater samples collected from monitoring wells MW-3

through MW-6, TW-1, and TW-4, and water supply wells WSW-8 (pre-GAC installation), WSW-13, and WSW-14. Concentrations of naphthalene were reported below the RBSL in the groundwater samples collected from monitoring wells MW-4 and MW-13, and abandoned telescoping monitoring well TW-10. Concentrations of 1,2 DCA were reported below the RBSL in the groundwater samples collected from monitoring wells MW-4, MW-6, MW-7, MW-11, MW-15, MW-16, TW-2, and TW-5, and water supply well WSW-1 (pre-GAC installation). A concentration of EDB was reported below the RBSL in the groundwater sample collected from monitoring well MW-13. A concentration of total lead was reported below the RBSL in the groundwater sample collected from monitoring well MW-17.

Concentrations of the requested method constituents were not reported above the laboratory reporting limits or method detection limits in the groundwater samples collected from monitoring wells MW-8 through MW-10, MW-18 through MW-21, MW-23, MW-25, MW-26, MW-28, TW-3, TW-8, and TW-9, and water supply wells WSW-2 through WSW-7, WSW-9 through WSW-12, and WSW-15.

#### Eight Oxygenates

Concentrations of TAA were reported above the SCDHEC 2008 Action Level in the groundwater samples collected from monitoring wells MW-3, MW-12, MW-13, MW-16, MW-22, and TW-1, and water supply well WSW-8 (pre-GAC installation).

A concentration of DIPE was reported below the Action Level in the groundwater sample collected from monitoring well MW-3. Concentrations of TBA were reported below the Action Level in the groundwater samples collected from monitoring wells MW-2, MW-3, and MW-12. Concentrations of TAA were reported below the Action Level in the groundwater samples collected from monitoring wells MW-4 through MW-6, and TW-2.

Concentrations of the requested method constituents were not reported above the laboratory reporting limits or method detection limits in the groundwater samples collected from monitoring wells MW-7 through MW-11, MW-14, MW-15, MW-17 through MW-21, MW-23 through MW-28, and TW-3 through TW-9, abandoned telescoping monitoring well TW-10, and water supply wells WSW-1 through WSW-4, WSW-6, WSW-7, WSW-9 through WSW-12, and WSW-15.

A summary of the Chemicals of Concern (CoC) data has been included as Table 4. A summary of the oxygenate data has been included as Table 5. A groundwater quality map showing the contaminants of

concern based on the October through December 2010 data has been included as **Figure 6**. A groundwater quality map showing the eight oxygenates based on the October through December 2010 data has been included as **Figure 7**. Groundwater sampling field data sheets from the October and December 2010 sampling events have been included as **Appendix D**. Complete reports of laboratory analyses of groundwater samples collected during the October and December 2010 sampling events, along with chain-of-custody documentation, have been included in **Appendix E**. The disposal manifests are included as **Appendix H**.

### **3.0 CONCLUSIONS AND RECOMMENDATIONS**

Based on the findings of the Tier II assessment at the 378 Truck Stop site, the following conclusions and recommendations are presented:

- Multiple private water supply wells were identified within 1,000 feet of the site and a few were found to be impacted. Due to the potential for concentration fluctuations over time, and because municipal water is not currently available in the area, groundwater from the water supply wells should be closely monitored to protect human health.
- The monitoring wells installed during this Tier II assessment appear to have delineated the dissolved phase contamination. Contaminants of concern seem to be moving primarily towards the south, which is in agreement with the estimated shallow groundwater flow direction. However, some water may be moving with rock fractures. Fracture analysis may be warranted in the future to better understand groundwater flow in the area, particularly in the deeper wells.
- Additional assessment may be required at the residence located across the street from the subject site (730 Highway 378). Dissolved concentrations reported in the groundwater samples collected from shallow monitoring well MW-22 were the highest of any well associated with the monitoring network.
- Remedial efforts in the form of Aggressive Fluid/Vapor Recovery (AFVR) events are recommended to reduce dissolved concentrations in groundwater while a more comprehensive remedial strategy is developed for the site that is protective of human health.

### **4.0 LIMITATIONS**

This report has been prepared for the exclusive use of Wilkerson Fuel Company, Inc. for specific application to the referenced site in Edgefield, South Carolina. The assessment was conducted based on the scope of work and level of effort desired by the client and with resources adequate only for that scope of work. Our findings have been developed in accordance with generally accepted standards of geology

and hydrogeology practices in the State of South Carolina, available information, and our professional judgment. No other warranty is expressed or implied.

The data that are presented in this report are indicative of conditions that existed at the precise locations sampled and at the time the samples were collected. Additionally, the data obtained from samples would be interpreted as being meaningful with respect to parameters indicated in the laboratory report. No additional information can logically be inferred from these data.

Notes:

1. Soil samples collected every 5 vertical ft during installation of shallow groundwater monitoring wells. Sample depth from each location that displayed the highest PID reading above the water table was submitted for laboratory analysis.
2. Less than the laboratory reporting limit.
3. Estimated value between the method detection limit and laboratory reporting limit.
4. Soil samples collected during installation of shallow groundwater monitoring wells due to observed odor and subsequent PID readings.
5. May 2001 SCDHEC Risk Based Screening Level for sandy soils.

**Notes:**

1. Elevations relative to a temporary benchmark with an assumed datum of 100.00 feet above mean sea level; data reported in feet.
2. Groundwater elevations adjusted for the presence of free product, where present, with an assumed density of 0.75 g/cm<sup>3</sup>.
3. May 2010 survey data collected by Environmental Compliance Services, Inc. during Tier I assessment activities.
4. Subsequent October and December 2010 survey data provided by Pittman Professional Land Surveying.
5. MW-20 installed with a 3 ft stickup riser.

**TABLE 4**

Notes:

1. Analyses for BTEX compounds, MTBE, naphthalene, and 1,2-DCA by EPA Method 8260B; analyses for EDB by EPA Method 8011; analyses for total lead by EPA Method 6010.
2. Concentrations in bold face type exceeded the May 2001 Risk-Based Screening Level.
3. Less than the reporting limit specified in the laboratory report.
4. Analyses not requested.
5. Estimated value below the laboratory reporting limit.
6. TW-10 did not produce enough water and was subsequently abandoned following sample collection.
7. WSW-1 GAC installed on 11/18/10.
8. WSW-8 GAC installed on 11/12/10.
9. May 2001 Risk-Based Screening Level.

Notes:

1. Analyses for eight oxygenates by EPA Method 8260B.
2. Less than the reporting limit specified in the laboratory report.
3. Concentrations in bold face exceed the 2008 SCDHEC Action Level.
4. Estimated value below the laboratory reporting limit.
5. TW-10 did not produce enough water and was subsequently abandoned following sample collection.
6. WSW-1 GAC installed on 11/18/10.
7. WSW-8 GAC installed on 11/12/10.
8. Action Levels based on SCDHEC Revision 1 dated 8/22/08.

# Community Meeting

## Former 378 Truck Stop Groundwater Investigation

December 13, 2010

*Promoting and protecting the health of the public and the environment.*

Clara Hunter, Commissioner

# Purpose of Meeting

◆ To inform you of activities being conducted in this area to assess a gasoline release from the former truck stop.

◆ Activities include:

- ◆ The sampling of all drinking water wells in the area for petroleum or gasoline chemicals.
- ◆ The installation and sampling of monitoring wells to determine the extent of these chemicals in the groundwater.

*Promoting and protecting the health of the public and the environment.*

Clare Hunter, Commissioner

# What is gasoline?

- 
- ✦ **Gasoline contains over 150 chemicals.**
  - ✦ **Gasoline floats on water as a free product and some of it dissolves and moves with the groundwater.**
  - ✦ **Chemicals found in gasoline include Benzene, Toluene, Ethylbenzene, Xylenes, and Naphthalene.**
  - ✦ **Other chemicals added to gasoline include oxygenates (unleaded gas) and lead scavengers (leaded gas; not in use anymore).**

# Sampling of Drinking Wells

- Gasoline chemicals were first reported in the groundwater in the 1970s.
- DHEC funded the installation of new drinking wells for the owners whose wells contained gasoline, and monitored these wells to ensure clean drinking water.
- 15 drinking water wells were sampled in May 2010. No gasoline chemicals were detected in these wells.
- In October 2010, gasoline chemicals were reported in drinking water wells.

# Investigation Activities

---

- ✦ **The installation of monitoring wells has to be conducted in separate events due to the geology underlying the site.**
- ✦ **A total of 35 monitoring wells (26 shallow; 9 deep) have been installed and sampled at the site so far.**
- ✦ **Additional monitoring wells may need to be installed depending on the lab data we receive from the 9 most recently installed monitoring wells.**

*Promoting and protecting the health of the public and the environment.*

# Monitoring Wells

# Future Activities

- ✦ Continue to sample all drinking wells.
- ✦ Sample monitoring wells and install more if necessary.
- ✦ Provide you copies of all reports of findings.
- ✦ Maintain GAC units and install additional ones if necessary.
- ✦ Listen to community concerns and respond to complaints about water taste or odor.
- ✦ Explore cleanup options.

**From:** Christine Dupuis <cdupuis@ecsconsult.com>  
**To:** "Cathleen T. Ridgley" <RIDGLECT@dhec.sc.gov>  
**Date:** 12/9/2010 2:11 PM  
**Subject:** 378 Truck Stop, UST Permit #07960

---

Ms. Ridgley,

I'm trying to put together an updated map for 378 Truck Stop and wanted to let you know of a few changes. It looks like I may have given you an older version of the adjacent property owners table. Based on the survey map, I'm now not sure who owns WSW-6. It's almost right on the property line dividing Gail Whitmer and Shirley Coates. Also, WSW-13 was moved on the map between where the tech had originally plotted it compared to when the surveyor surveyed it in. This well is actually on Mr. Simpkins property (along with WSW-12). Lastly, while we were onsite yesterday, the tech noted that the property where WSW-5 is located is now in foreclosure. A sample could not be collected from this well yesterday as power to the pump has been disconnected. The new owner of this property is 21st Mortgage Company in Knoxville, TN.

I apologize for the confusion with this. I've been trying to keep up to date with all of the information but it looks like I fell behind a bit.

# **Community Meeting**

## **Former 378 Truck Stop**

### **Groundwater Investigation**

**December 13, 2010**

## Purpose of Meeting

---

- ✦ **To inform you of activities being conducted in this area to assess a gasoline release from the former truck stop.**
- ✦ **Activities include:**
  - ◆ **The sampling of all drinking water wells in the area for petroleum or gasoline chemicals.**
  - ◆ **The installation and sampling of monitoring wells to determine the extent of these chemicals in the groundwater.**

## What is gasoline?

- 
- ✧ Gasoline contains over 150 chemicals.
  - ✧ Gasoline floats on water as a free product and some of it dissolves and moves with the groundwater.
  - ✧ Chemicals found in gasoline include Benzene, Toluene, Ethylbenzene, Xylenes, and Naphthalene.
  - ✧ Other chemicals added to gasoline include oxygenates (unleaded gas) and lead scavengers (leaded gas; not in use anymore).

## **Sampling of Drinking Wells**

---

- ✧ **Gasoline chemicals were first reported in the groundwater in the 1970s.**
- ✧ **DHEC funded the installation of new drinking wells for the owners whose wells contained gasoline, and monitored these wells to ensure clean drinking water.**
- ✧ **15 drinking water wells were sampled in May 2010. No gasoline chemicals were detected in these wells.**
- ✧ **In October 2010, gasoline chemicals were reported in drinking water wells.**

# Drinking Water Wells

# GAC Unit

## Investigation Activities

---

- ✦ **The installation of monitoring wells has to be conducted in separate events due to the geology underlying the site.**
- ✦ **A total of 35 monitoring wells (26 shallow; 9 deep) have been installed and sampled at the site so far.**
- ✦ **Additional monitoring wells may need to be installed depending on the lab data we receive from the 9 most recently installed monitoring wells.**

## Monitoring Wells

## **Future Activities**

---

- \* Continue to sample all drinking wells.**
- \* Sample monitoring wells and install more if necessary.**
- \* Provide you copies of all reports of findings.**
- \* Maintain GAC units and install additional ones if necessary.**
- \* Listen to community concerns and respond to complaints about water taste or odor.**
- \* Explore cleanup options.**

## Community Meeting

**Make plans to attend a Community Meeting!**

**WHEN:** Monday, December 13, 2010

**TIME:** 6:00 P.M.

**WHERE:** McKendree Methodist Church  
565 Highway 378 East  
Edgefield, SC

**PURPOSE:** During this meeting, S.C. Department of Health and Environmental Control (DHEC) staff will be discussing issues and plans related to the old Highway 378 Truck Stop, which is located at 731 Highway 378 East, Edgefield. If you know of other citizens in the immediate area who might be interested in this information, please invite them to attend as well.

If you would like further information concerning this meeting, please call Donna Rowe in DHEC's Greenwood EQC Office at (864) 223-0333.

Notes:

1. Elevations relative to a temporary benchmark with an assumed datum of 100.00 feet above mean sea level; data reported in feet.
2. Groundwater elevations adjusted for the presence of free product, where present, with an assumed density of 0.75 g/cm<sup>3</sup>.
3. May 2010 survey data collected by Environmental Compliance Services, Inc. during Tier I assessment activities.
4. Subsequent October and December 2010 survey data provided by Pittman Professional Land Surveying.
5. MW-20 installed with a 3 ft stickup riser.

Notes:

- Analyses for BTEX compounds, MTBE, naphthalene, and 1,2-DCA by EPA Method 8260B; analyses for EDB by EPA Method 8011; analyses for total lead by EPA Method 6010.
- Concentrations in bold face type exceeded the May 2001 Risk-Based Screening Level.
- Less than the reporting limit specified in the laboratory report.
- Analyses not requested.
- Estimated value below the laboratory reporting limit.
- TW-10 did not produce enough water and was subsequently abandoned following sample collection.
- WSW-1 GAC installed on 11/18/10.
- WSW-8 GAC installed on 11/12/10.
- May 2001 Risk-Based Screening Level.

Notes:

1. Analyses for eight oxygenates by EPA Method 8260B.
2. Less than the reporting limit specified in the laboratory report.
3. Concentrations in bold face exceed the 2008 SCDHEC Action Level.
4. Estimated value below the laboratory reporting limit.
5. TW-10 did not produce enough water and was subsequently abandoned following sample collection.
6. WSW-1 GAC installed on 11/18/10.
7. WSW-8 GAC installed on 11/12/10.
8. Action Levels based on SCDHEC Revision 1 dated 8/22/08.

# **Edgefield County Water & Sewer Authority**

North Side/ West side Water Service Study

September 2011

- 
- Over the years , there has been a desire for a public water supply in the Northern and Western sections of Edgefield County. From late 2007 through 2009, Edgefield County Water and Sewer Authority along with Edgefield County, met with State and Federal Representatives to explore options in providing water to these two areas.

During the course of these meetings, it was decided that a water service study of these two areas should be performed. The cost of this study was \$75,000, with \$29,500 coming from S.C. Dept. of Commerce funds, and \$45,500 being funded by Edgefield County Water and Sewer Authority. The Federal Government had promised funds through USDA, but as of 2011 had still contributed nothing to the study.

## SCOPE OF STUDY

- Area Planning to describe the growth potential of the planning areas & the projected population increase
- Project Planning to determine a service area with the highest population density & establish the current and projected number of homes
- Design criteria to establish water lines sizes
- Water Supply Alternatives – Edgefield, McCormick or community wells
- Capital Cost estimates
- Management Considerations

# North Side Planning Area

# North Side Service Area

# Planning Area vs. Service Area

- There were 169 homes in the planning area
- There were 92 homes in the service area
- The current maximum daily demand would be 36,720 gallons per day. In 20 years, the projected maximum daily demand would be 43,335 gallons per day.

# Line Sizing

- Line sizes were determined using SCDHEC and AWWA standards to provide adequate pressure and fire flow to the services areas
- Line sizes would be 8" and 10" to provide fire protection

## Source Alternatives

- Three water supply alternatives were considered during the course of the study
- Edgefield County Water & Sewer (via HWY 430)
- McCormick County Water (via HWY 378)
- Community Well System – Wells drilled in the North Side area to supply a stand alone distribution system

# Cost Comparison

| Water Supply Source | Demand    | Construction Cost | Non-Construction Cost | Total Cost Estimate |
|---------------------|-----------|-------------------|-----------------------|---------------------|
| ECW&SA              | Fire Flow | \$2,934,990       | \$733,748             | <b>\$3,668,738</b>  |
| McCormick County    | Fire Flow | \$2,871,640       | \$722,910             | <b>\$3,594,550</b>  |

# Customer Costs

| Water Supply Alternatives | Capital Cost | Total Monthly Operating Income | Monthly Charge (1) | Monthly Charge (2) |
|---------------------------|--------------|--------------------------------|--------------------|--------------------|
| ECW&SA – FD               | \$3,668,738  | -\$6,058                       | \$281.90           | \$3.13             |
| McCormick County– FD      | \$3,594,550  | -\$7,683                       | \$293.68           | \$3.26             |

Total Monthly Operating Income = revenue minus O&M expenses minus depreciation  
 Monthly Charge (1) = charge (operating income minus debt service cost) per service area customer  
 Monthly Charge (2) = charge (operating income minus debt service cost) per Authority customer  
 DD = Domestic Demand ; FD = Fire Flow Demand

# Operation and Maintenance

- The previous costs do not include operation and maintenance costs for this new line. It is estimated that annual costs would be between \$100,000 and \$125,000 per year

## Supplying the Whole Northside?

- ECWSA independently investigated servicing water to as many roads as possible in the Northside.
- Including as many roads as possible increased the house count to 213, but also dramatically increased the cost of the project to almost \$10,000,00

## Hurdles in Supplying Water to the NorthSide

### Costs – Who can pay for it?

- ECWSA – The Authority is not in the financial position to extend water to the North Side and/or West Side of the county at this time. Extending this amount of water line would not only place a long term burden on the Authority for capital costs, our O&M costs would rise significantly due to amount of new line we would have to maintain

## Hurdles in Supplying Water to the NorthSide

### Costs – Who can pay for it?

- State Government – There are a few loan programs available through the State, but no grants large enough to begin a project of this size
- Federal Government – Most grants available through the Federal Government require a 45% match. Also, the Authority applied for 5 straight years for earmark funds through Congressman Barrett's office and Sen. Graham's office with no results

## **1.0 INTRODUCTION**

### **1.1 Background**

This report presents results of Tier II assessment activities conducted at the former 378 Truck Stop facility (UST permit number 07960) located at 731 Highway 378 in Edgefield, South Carolina (**Figure 1**). Activities were conducted in accordance with the South Carolina Department of Health and Environmental Control (SCDHEC) directive dated August 16, 2010, which included cost agreement number 39645.

The site was not in use at the time of this assessment. An abandoned building was present onsite during our visits associated with the Tier II assessment activities. A concrete slab was located directly to the east of, and abutting, the onsite building.

A release at the site was reported on October 3, 1974 and was confirmed on July 8, 1996. Reportedly, one 550-gallon diesel, one 1,000-gallon gasoline, and one 2,000-gallon gasoline underground storage tanks (USTs) and their associated piping and dispensers were removed from the site on January 1, 1987. The site did not contain USTs at the time of this assessment.

### **1.2 Regional Geology/Hydrogeology**

The sedimentary formations of the Coastal Plain range in age from Late Cretaceous to Recent. They consist, for the most part, of unconsolidated sand, clay, gravel, marl, and limestone which have been deposited on a surface of granite, schist, and gneiss similar to, and a continuation of, the rocks underlying the adjoining Piedmont province. Some coquinas have been silicified to form so-called buhrstones and some clays hardened into siltstones. Considered en masse, the formations of the Coastal Plain may be classified as having a monoclinical or acinal structure, and they rest on rocks of a much older crystalline complex. The unconsolidated rocks occur as wedges of sand, clay, marl, and limestone. Underlying the unconsolidated sediments are "crystalline" rocks consisting of granite, gneiss, schist, and a series of volcanics. Fault troughs or grabens were formed in these pre-Mesozoic rocks during Triassic time, into which were deposited ferruginous and carbonaceous sands and clays. These sediments were subsequently injected by diabase dikes and sills.

### **1.3 Receptor Survey Results**

A receptor survey was conducted within a 1,000 foot radius of the subject site during the May 2010 Tier I assessment activities. The 378 Truck Stop site was located in a predominantly residential area in

Edgefield County (**Figure 1**). Properties directly surrounding the site were open fields. Nearby properties were mainly open fields and residences. A volunteer fire department station was located on the corner of Highway 378 and Faulkner Mountain Road.

Municipal water was not provided to the area. Multiple private water supply wells were identified during the Tier I receptor survey and were subsequently plotted on a site vicinity map. A comprehensive survey which included the private water supply wells, conducted during Tier II assessment activities, resulted in multiple changes to the site vicinity map. The identified water supply wells are listed below along with location information.

| <b>Description of Receptor</b>                         | <b>Receptor Address</b>                      | <b>Distance/Direction from Site</b>  |
|--|--|--------------------------------------|
| Private Water Supply Well (labeled WSW-1)              | 730 Hwy 378 East, Edgefield, SC 29824        | Approximately 205 ft SSE of the site |
| Private Water Supply Well (labeled WSW-2)              | 736 Hwy 378 East, Edgefield, SC 29824        | Approximately 500 ft SSE of the site |
| Private Water Supply Well (labeled WSW-4)              | 752 Hwy 378 East, Edgefield, SC 29824        | Approximately 830 ft SE of the site  |
| Private Water Supply Well (labeled WSW-5)              | 745 Hwy 378, Edgefield, SC 29824             | Approximately 630 ft E of the site   |
| Private Water Supply Well (labeled WSW-6)              | 741 Hwy 378, Edgefield, SC 29824             | Approximately 348 ft E of the site   |
| Private Water Supply Well (labeled WSW-7)              | 719 Hwy 378, Edgefield, SC 29824             | Approximately 455 ft WNW of the site |
| Private Water Supply Well (labeled WSW-8)              | 724 Hwy 378 East, Edgefield, SC 29824        | Approximately 268 ft SW of the site  |
| Private Water Supply Well (labeled WSW-9)              | 71 Faulkner Mountain Rd, Edgefield, SC 29824 | Approximately 625 ft SW of the site  |

| Private Water Supply Well (labeled WSW-13)             | 64 Faulkner Mountain Rd, Edgefield, SC 29824 | Approximately 716 ft SSW of the site |
| Private Water Supply Well (labeled WSW-14)             | 54 Faulkner Mountain Rd, Edgefield, SC 29824 | Approximately 857 ft SSW of the site |
| Private Water Supply Well (labeled WSW-15)             | 57 Faulkner Mountain Rd, Edgefield, SC 29824 | Approximately 990 ft SSW of the site |
| Disconnected Private Water Supply Well (labeled WSW-3) | 744 Hwy 378 East, Edgefield, SC 29824        | Approximately 554 ft ESE of the site |
| Disconnected private water supply well                 | unknown                                      | Approximately 615 ft NNW of the site |
| Disconnected private water supply well                 | 724 Hwy 378 East, Edgefield, SC 29824        | Approximately 444 ft SW of the site  |

|  |                                       |                                     |
|--|---------------------------------------|-------------------------------------|
| Disconnected private water supply well | 730 Hwy 378 East, Edgefield, SC 29824 | Approximately 189 ft S of the site  |
| Disconnected private water supply well | 732 Hwy 378 East, Edgefield, SC 29824 | Approximately 352 ft S of the site  |
| Disconnected private water supply well | 758 Hwy 378 East, Edgefield, SC 29824 | Approximately 678 ft SE of the site |

Underground telephone lines ran along the south side of Highway 378 and turned towards the southwest to the residences located on the south side of Highway 378, as shown in **Figure 3**.

The applicable portion of the Edgefield County Tax Map has been included as **Figure 2**. Property owner's names and addresses of land in the vicinity of the subject site are summarized in **Table 1** and are keyed to **Figure 2**. A scaled Site Plan has been included as **Figure 3**. The Surveyed Map on which **Figure 3** was based has been included as **Appendix F**.

## 2.0 ASSESSMENT INFORMATION

### 2.1 Site specific geology and hydrogeology

The project area was underlain at shallow depths by light brown silt and silty clay. Rock and partially weathered rock were encountered below the silt and clay at varying depths throughout the study area. Partially weathered rock was first encountered at depths ranging from approximately 26 feet (MW-18 and MW-27) to 50 feet (TW-9) across the subject area. Overall, partially weathered rock was first encountered at or below a depth of 30 feet below grade onsite and in locations south of the site. Partially weathered rock was first encountered at more shallow depths in locations west, southwest, and southeast of the site. Rock was first encountered at depths ranging from approximately 30 feet (MW-8) to 68 feet (TW-3) across the subject area. The depths to rock observed during shallow monitoring well installation varied from approximately 30 feet to 39 feet below grade. Overall, rock was encountered a bit deeper onsite and south of the site as compared to other areas (north, east, west, southwest, and southeast). Depths to rock were observed at shallower depths (between 32 feet and 35 feet below grade) during telescoping well installation in areas southwest and southeast of the site, as compared to telescoping wells installed onsite and in areas south of the site. The largest discrepancy was observed at telescoping well TW-3, located southwest of the site, where rock was not encountered until a depth of 68 feet below grade.

The percentages of gravel, sand, and silt/clay in a soil sample collected during Tier I well installation activities from monitoring well MW-3 at a depth of 40 feet below grade were 10.0%, 39.8%, and 50.1%, respectively. The percentages of gravel, sand, silt, and clay in a soil sample collected during Tier II well

installation activities from MW-12 at a depth of 30 feet below grade were 4.1%, 27.5%, 50.7%, and 17.7%, respectively. A soil sample was proposed for collection during installation of monitoring well TW-5 at a depth within the well's screened interval. This sample was subsequently collected at a depth of 55 feet below grade. Following discussions with SCDHEC, the sample was not submitted for laboratory grain size analysis, as this sample consisted mainly of pulverized rock particles from the well drilling process.

Depths to groundwater were measured in wells MW-1 through MW-19 and TW-1 through TW-8 on October 18, 2010. Depths to groundwater measured in the shallow monitoring wells ranged from 22.02 feet (MW-18) to 30.79 feet (MW-16). Water table elevations in the shallow monitoring wells ranged from 64.52 feet (MW-9) to 75.47 feet (MW-1) relative to a temporary benchmark with an assumed datum elevation of 100.00 feet above mean sea level. Additional monitoring wells were installed on November 29 through December 3, 2010 and were subsequently gauged on December 6, 2010. Depths to groundwater measured in these additional shallow monitoring wells ranged from 28.48 feet (MW-27) to 41.77 feet (MW-20). Well MW-20 was installed with a three foot stickup riser. However, when this three foot difference was considered, well MW-20 still showed the deepest water table reading of the wells gauged on December 6, 2010. Water table elevations in the additional shallow monitoring wells ranged from 66.83 feet (MW-24) to 70.75 feet (MW-23) relative to a temporary benchmark with an assumed datum elevation of 100.00 feet above mean sea level. The shallow groundwater elevations obtained in October 2010 were contoured to develop a groundwater flow map. Due to a significant change in water table elevations between October and December, the data obtained in December 2010 could not be integrated into this map. Based on the October 2010 shallow monitoring well data, groundwater flow in the surficial aquifer was generally toward the south, southwest, and northeast. The horizontal hydraulic gradients were approximately 0.009 feet per foot (ft/ft) towards the south from well MW-3 to well MW-16, 0.031 ft/ft towards the southwest from well MW-1 to well MW-9, and 0.014 ft/ft towards the northeast from well MW-1 to well MW-5. The Groundwater Elevation Map with posted October and December 2010 shallow monitoring well data and contoured October 2010 data has been included as **Figure 4**. A summary of groundwater elevation data has been presented in **Table 3**.

Depths to groundwater measured on October 18, 2010 in the telescoping monitoring wells ranged from 25.39 feet (TW-3) to 50.90 feet (TW-7). Water table elevations in the telescoping monitoring wells ranged from 47.23 feet (TW-7) to 73.93 feet (TW-5) relative to a temporary benchmark with an assumed datum elevation of 100.00 feet above mean sea level. However, based on the range of the telescoping

well groundwater elevations, it is possible that the water table was not stabilized at the time of measurement. It is also possible that the source of groundwater in some of the telescoping wells may have been from rock fractures and the measured depths to water did not represent the true water table. Subsequent gauging data may help determine the reason for this potential discrepancy. Additional monitoring wells were installed on November 29 through December 3, 2010 and were subsequently gauged on December 6, 2010. The depth to groundwater measured in additional telescoping monitoring well TW-9 was 28.96 feet and the water table elevation was 67.96 feet relative to a temporary benchmark with an assumed datum elevation of 100.00 feet above mean sea level. The deep groundwater elevations obtained in October 2010 were contoured to develop a groundwater flow map. Due to a significant change in water table elevations between October and December, the data obtained in December 2010 could not be integrated into this map. Based on the October 2010 telescoping monitoring well data, groundwater flow in the deep aquifer was generally toward the southwest and east. The horizontal hydraulic gradients were approximately 0.043 ft/ft towards the southwest from well TW-1 to well TW-4 and 0.131 ft/ft towards the east from well TW-5 to well TW-7. The Groundwater Elevation Map with posted October and December 2010 telescoping monitoring well data and contoured October 2010 data has been included as **Figure 5**. A summary of groundwater elevation data has been presented in **Table 3**.

Slug tests were performed on monitoring wells MW-2 and MW-3 during Tier I assessment activities conducted in May 2010. Calculated hydraulic conductivities ranged from 0.1091 feet/day to 0.1778 feet/day. Slug tests were performed on monitoring wells MW-12 and MW-17 during Tier II assessment activities. The hydraulic conductivities estimated from the slug tests were 0.5359 feet per day (MW-12) and 0.2019 feet per day (MW-17). Raw data and graphs from the slug tests conducted during the Tier II assessment activities have been included as **Appendix G**.

## **2.2 Monitoring Well Installation**

Due to repeated drilling refusal and depth to rock encountered during Tier I assessment activities, groundwater field screening was not conducted prior to well installation during Tier II assessment activities. Therefore, monitoring well locations and termination depths were proposed at onsite and offsite positions in an effort to horizontally and vertically delineate dissolved phase contamination in the groundwater and to serve as compliance points between the site and local private water supply wells. Multiple proposed drilling locations were adjusted in the field for the presence of utilities, trees, buildings, and other obstructions. Drilling and installation of shallow monitoring wells MW-6 through

MW-19 and telescoping monitoring wells TW-1 through TW-8 occurred from October 4 through 15, 2010.

Soil samples were proposed for collection during the installation of shallow monitoring wells MW-6 through MW-8 to continue delineation of the sorbed contamination identified during Tier I assessment activities. Samples were collected every five feet during well installation activities and screened in the field for volatile organic compounds with a Photo-Ionization Detector (PID). The soil sample from each location that displayed the highest PID reading above the water table was submitted for laboratory analysis of BTEX compounds (benzene, toluene, ethylbenzene, and xylenes) and naphthalene using EPA Method 8260B. While installing wells MW-12 and MW-13, a petroleum odor was observed in the soil at a depth of 20 feet below grade. Grab samples were collected and screened with a PID. The results were provided to SCDHEC, who requested the samples be submitted for laboratory analysis of BTEX compounds and naphthalene using EPA Method 8260B. The soil laboratory reports are included in **Appendix C** and the data is provided in **Table 2**.

Based on observations from the Tier I well installation activities, shallow wells MW-6 through MW-19, installed during the Tier II assessment, were drilled to 35 feet or 40 feet depending on apparent topographic elevation changes throughout the area. Due to known water table fluctuations (depth to water in the pre-existing wells dropped by approximately 10 feet since the May 2010 Tier I assessment), the shallow wells were installed with 15 foot screen sections to ensure the water table would be bracketed by the screened interval in the future. Each well was monitored for depths to water prior to completion and final depths were determined by these water table measurements. The completed depths of the shallow wells ranged from 35 feet to 40 feet below grade. Telescoping monitoring wells TW-1 through TW-8 were installed and paired with shallow monitoring wells MW-1, MW-3, MW-9, MW-10, MW-12, MW-16, MW-17, and MW-19. Following discussions with SCDHEC, the proposed telescoping well's termination depth of 80 feet was adjusted based on observed depth to rock. Outer casing depths were based on depth to rock and/or the total depth of the telescoping well's shallow well pair to ensure sufficient vertical separation between the two monitoring points. As directed by SCDHEC, inner casings were installed eight feet below the well's outer casing depth. Telescoping wells TW-1 through TW-8 were installed to total depths ranging from 58 feet to 80 feet below grade, and were constructed with five foot screened sections.

Following installation, each well was developed until the purged water was free of sediment or until the well was purged dry. A comprehensive site survey was conducted on October 26, 2010 and a complete site plan was prepared.

Groundwater samples were collected from the monitoring wells and telescoping wells on October 18 and 19, 2010. Following receipt of the groundwater analytical results, SCDHEC directed the installation of additional shallow and telescoping monitoring wells. Nine shallow monitoring wells (MW-20 through MW-28) and one telescoping monitoring well (TW-9) were successfully installed on November 29 through December 3, 2010. Following well installation, each well was developed until the purged water was free of sediment or until the well was purged dry. One additional proposed shallow well could not be installed without removal of trees in a wooded area. Following a discussion with SCDHEC, it was decided that this well could be omitted from this scope of work. An additional telescoping monitoring well (TW-10) was installed to a depth of 80 feet below grade in the proposed location near shallow well MW-24. Two days following installation, this well had produced less than one foot of water. As directed by SCDHEC, groundwater samples were collected from the well and the boring was subsequently abandoned due to insufficient water for well completion.

The completed depths of shallow wells MW-20 through MW-28 ranged from 35 feet to 42 feet below grade, depending on changes in groundwater and topographic elevations. Each shallow monitoring well was installed with a 15 foot screened section. Competent rock was not encountered during installation of telescoping well TW-9. The outer casing was therefore installed to a depth of 72 feet below grade and the inner casing was installed to the proposed depth of 80 feet below grade. Telescoping well TW-9 was installed with a five foot screened section. Rock was encountered at a depth of 35 feet below grade during installation of telescoping well TW-10. Water was not encountered while drilling the inner casing to a depth of 80 feet. Due to insufficient water in the boring, this well was abandoned after a grab groundwater sample was collected.

Well logs developed during completion of the monitoring wells have been included as **Appendix A**. The driller's well construction records for the monitoring wells have been included as **Appendix B**. Soil cuttings and wastewater generated during monitoring well installation and development activities were placed in 55-gallon drums and staged onsite for subsequent transport to a licensed facility for disposal. The disposal manifests are included as **Appendix H**.

On December 9, 2010, a professional surveyor incorporated the newly installed wells into the pre-existing survey. A complete site plan was prepared and is included as **Figure 3**. The Surveyed Map on which **Figure 3** was based has been included as **Appendix F**.

### **2.3 Groundwater Sampling**

A comprehensive groundwater gauging and sampling event was conducted on October 18 and 19, 2010. Samples were collected from monitoring wells MW-2 through MW-19 and TW-1 through TW-8. Samples were also collected from water supply wells WSW-1 through WSW-15. A groundwater sample was not collected from pre-existing monitoring well MW-1 due to the presence of free product.

Additional monitoring wells MW-20 through MW-28 and TW-9 were gauged and sampled on December 6, 2010. A grab sample was also collected from telescoping well TW-10 on December 2, 2010 before it was abandoned.

Each monitoring well was sampled using a new, disposable 1 ½-inch diameter 1-liter capacity PVC bailer attached to a nylon cord. Prior to sample collection, new wells MW-6 through MW-28 and TW-1 through TW-9 were developed and purged by removal of at least three well casing volumes of water, wherever possible. Pre-existing monitoring well MW-2 was also purged prior to sample collection, as the construction of this well was unknown and it could not be verified whether the water table was bracketed by the screened interval. Pre-existing monitoring wells MW-3 through MW-5 were not purged prior to sampling, as the water table in these wells was bracketed by the screened interval of each well. Each water supply well was purged at the sample location for approximately 10 minutes prior to sample collection. Measurements of pH, conductivity, temperature, oxidation reduction potential, turbidity, and dissolved oxygen were recorded prior to purging and after removal of each well casing volume. Field information was transcribed onto SCDHEC Field Sampling Summary Sheets which are included as **Appendix D**.

After collection, the groundwater samples were placed into an iced cooler and delivered to Pace Analytical of Huntersville, NC. Pace analyzed the groundwater samples from wells MW-2 through MW-28 and TW-1 through TW-9 for BTEX compounds, MTBE, naphthalene, 1,2-DCA, and eight oxygenates using EPA Method 8260B and EDB using EPA Method 8011. The groundwater samples collected from newly installed monitoring wells MW-6 through MW-28 and TW-1 through TW-9 were also analyzed for total lead using EPA Method 6010. The grab sample collected from TW-10 was analyzed for BTEX

compounds, MTBE, naphthalene, 1,2-DCA, and eight oxygenates using EPA Method 8260B and EDB using EPA Method 8011. There was insufficient water to collect a lead sample from TW-10. Pace analyzed the groundwater samples from water supply wells WSW-1 through WSW-15 for BTEX compounds, MTBE, naphthalene, and 1,2-DCA using EPA Method 8260B and EDB using EPA Method 8011. The laboratory analytical reports have been included in **Appendix E**. Tabular results have been included in **Table 4** and **Table 5**. A map displaying contaminants of concern data has been included as **Figure 6**. A map displaying eight oxygenates data has been included as **Figure 7**.

Purge water generated during groundwater sampling activities was placed in 55-gallon drums and staged onsite for subsequent transport to a licensed facility for disposal. The disposal manifests are included as **Appendix H**.

The October 19, 2010 private water supply well analytical data was forwarded to SCDHEC upon receipt on October 26, 2010. Concentrations of contaminants of concern were reported above laboratory reporting limits in several of the water supply well samples. The water supply wells with concentrations above laboratory reporting limits were re-sampled by SCDHEC to verify the results obtained by ECS. Based on the results, SCDHEC directed ECS to install Granular Activated Carbon (GAC) units on water supply wells WSW-1 and WSW-8. GAC units were installed on water supply wells WSW-1 and WSW-8 on November 18, 2010 and November 12, 2010, respectively. Following installation, pre-GAC and post-GAC groundwater samples were collected. Additional information pertaining to the GAC installations and subsequent sampling can be found in the individual reports associated with these field activities, each dated November 23, 2010.

As directed by SCDHEC, ECS collected groundwater samples from water supply wells WSW-2 through WSW-4, WSW-6, WSW-7, WSW-9 through WSW-12, and WSW-15 for analysis of eight oxygenates using EPA Method 8260B on December 8, 2010 to complete the well's data sets. Samples were not collected from water supply wells WSW-1 and WSW-8, as eight oxygenates data had been obtained during the GAC installation sampling. Samples were not collected from water supply wells WSW-13 and WSW-14, as eight oxygenates data had been obtained from these wells during the verification sampling conducted by SCDHEC. A groundwater sample could not be collected from water supply well WSW-5 for analysis of eight oxygenates on December 8, 2010, as the well pump had been disconnected but not removed from the well. A sign in front of the residence indicated that the home was for sale. Due to unseasonably cold temperatures, multiple sample locations were frozen on the day of sampling. A sample

was collected from water supply well WSW-2 after plumbers cut open frozen pipes for repairs. Sufficient water was obtained from the broken pipes for sample collection. A sample was collected from indoor plumbing from water supply well WSW-9 due to frozen outdoor piping. Samples were collected from wells WSW-11, WSW-12, and WSW-15 at spigots attached to the respective homes, as the sample ports on the holding tanks were frozen. The laboratory analytical report from the eight oxygenates sampling has been included in **Appendix E**. Tabular results have been included in **Table 5**. A map displaying eight oxygenates data has been included as **Figure 7**.

## 2.4 Groundwater Quality

### Contaminants of Concern

Concentrations of benzene were reported above the SCDHEC May 2001 Risk Based Screening Level (RBSL) in the groundwater samples collected from monitoring wells MW-3 through MW-5, MW-7, MW-12, MW-13, MW-16, and MW-22. Concentrations of toluene were reported above the RBSL in the groundwater samples collected from monitoring wells MW-12 and MW-22. Concentrations of ethylbenzene were reported above the RBSL in the groundwater samples collected from monitoring wells MW-3 and MW-22. A concentration of total xylenes was reported above the RBSL in the groundwater sample collected from monitoring well MW-22. Concentrations of naphthalene were reported above the RBSL in the groundwater samples collected from monitoring wells MW-3, MW-5, MW-12, and MW-22. Concentrations of 1,2 DCA were reported above the RBSL in the groundwater samples collected from monitoring wells MW-2, MW-3, MW-5, MW-12, MW-13, MW-22, MW-24, MW-27, TW-1, and TW-6, and water supply well WSW-8 (pre-GAC installation). Concentrations of EDB were reported above the RBSL in the groundwater samples collected from monitoring wells MW-3, MW-7, MW-12, and MW-22. A concentration of total lead was reported above the RBSL in the groundwater sample collected from monitoring well MW-22.

Concentrations of benzene were reported below the RBSL in the groundwater samples collected from monitoring wells MW-2 and TW-6. Concentrations of toluene were reported below the RBSL in the groundwater samples collected from monitoring wells MW-3, MW-7, MW-13, MW-16, TW-2, and TW-7. Concentrations of ethylbenzene were reported below the RBSL in the groundwater samples collected from monitoring wells MW-5, MW-7, MW-12 through MW-14, and MW-16. Concentrations of total xylenes were reported below the RBSL in the groundwater samples collected from monitoring wells MW-2, MW-3, MW-5, MW-7, MW-12 through MW-14, MW-16, TW-2, and TW-7. Concentrations of MTBE were reported below the RBSL in the groundwater samples collected from monitoring wells MW-3

through MW-6, TW-1, and TW-4, and water supply wells WSW-8 (pre-GAC installation), WSW-13, and WSW-14. Concentrations of naphthalene were reported below the RBSL in the groundwater samples collected from monitoring wells MW-4 and MW-13, and abandoned telescoping monitoring well TW-10. Concentrations of 1,2 DCA were reported below the RBSL in the groundwater samples collected from monitoring wells MW-4, MW-6, MW-7, MW-11, MW-15, MW-16, TW-2, and TW-5, and water supply well WSW-1 (pre-GAC installation). A concentration of EDB was reported below the RBSL in the groundwater sample collected from monitoring well MW-13. A concentration of total lead was reported below the RBSL in the groundwater sample collected from monitoring well MW-17.

Concentrations of the requested method constituents were not reported above the laboratory reporting limits or method detection limits in the groundwater samples collected from monitoring wells MW-8 through MW-10, MW-18 through MW-21, MW-23, MW-25, MW-26, MW-28, TW-3, TW-8, and TW-9, and water supply wells WSW-2 through WSW-7, WSW-9 through WSW-12, and WSW-15.

#### Eight Oxygenates

Concentrations of TAA were reported above the SCDHEC 2008 Action Level in the groundwater samples collected from monitoring wells MW-3, MW-12, MW-13, MW-16, MW-22, and TW-1, and water supply well WSW-8 (pre-GAC installation).

A concentration of DIPE was reported below the Action Level in the groundwater sample collected from monitoring well MW-3. Concentrations of TBA were reported below the Action Level in the groundwater samples collected from monitoring wells MW-2, MW-3, and MW-12. Concentrations of TAA were reported below the Action Level in the groundwater samples collected from monitoring wells MW-4 through MW-6, and TW-2.

Concentrations of the requested method constituents were not reported above the laboratory reporting limits or method detection limits in the groundwater samples collected from monitoring wells MW-7 through MW-11, MW-14, MW-15, MW-17 through MW-21, MW-23 through MW-28, and TW-3 through TW-9, abandoned telescoping monitoring well TW-10, and water supply wells WSW-1 through WSW-4, WSW-6, WSW-7, WSW-9 through WSW-12, and WSW-15.

A summary of the Chemicals of Concern (CoC) data has been included as **Table 4**. A summary of the oxygenate data has been included as **Table 5**. A groundwater quality map showing the contaminants of

concern based on the October through December 2010 data has been included as **Figure 6**. A groundwater quality map showing the eight oxygenates based on the October through December 2010 data has been included as **Figure 7**. Groundwater sampling field data sheets from the October and December 2010 sampling events have been included as **Appendix D**. Complete reports of laboratory analyses of groundwater samples collected during the October and December 2010 sampling events, along with chain-of-custody documentation, have been included in **Appendix E**. The disposal manifests are included as **Appendix H**.

### **3.0 CONCLUSIONS AND RECOMMENDATIONS**

Based on the findings of the Tier II assessment at the 378 Truck Stop site, the following conclusions and recommendations are presented:

- Multiple private water supply wells were identified within 1,000 feet of the site and a few were found to be impacted. Due to the potential for concentration fluctuations over time, and because municipal water is not currently available in the area, groundwater from the water supply wells should be closely monitored to protect human health.
- The monitoring wells installed during this Tier II assessment appear to have delineated the dissolved phase contamination. Contaminants of concern seem to be moving primarily towards the south, which is in agreement with the estimated shallow groundwater flow direction. However, some water may be moving with rock fractures. Fracture analysis may be warranted in the future to better understand groundwater flow in the area, particularly in the deeper wells.
- Additional assessment may be required at the residence located across the street from the subject site (730 Highway 378). Dissolved concentrations reported in the groundwater samples collected from shallow monitoring well MW-22 were the highest of any well associated with the monitoring network.
- Remedial efforts in the form of Aggressive Fluid/Vapor Recovery (AFVR) events are recommended to reduce dissolved concentrations in groundwater while a more comprehensive remedial strategy is developed for the site that is protective of human health.

### **4.0 LIMITATIONS**

This report has been prepared for the exclusive use of Wilkerson Fuel Company, Inc. for specific application to the referenced site in Edgefield, South Carolina. The assessment was conducted based on the scope of work and level of effort desired by the client and with resources adequate only for that scope of work. Our findings have been developed in accordance with generally accepted standards of geology

and hydrogeology practices in the State of South Carolina, available information, and our professional judgment. No other warranty is expressed or implied.

The data that are presented in this report are indicative of conditions that existed at the precise locations sampled and at the time the samples were collected. Additionally, the data obtained from samples would be interpreted as being meaningful with respect to parameters indicated in the laboratory report. No additional information can logically be inferred from these data.

Notes:

1. Soil samples collected every 5 vertical ft during installation of shallow groundwater monitoring wells. Sample depth from each location that displayed the highest PID reading above the water table was submitted for laboratory analysis.
2. Less than the laboratory reporting limit.
3. Estimated value between the method detection limit and laboratory reporting limit.
4. Soil samples collected during installation of shallow groundwater monitoring wells due to observed odor and subsequent PID readings.
5. May 2001 SCDHEC Risk Based Screening Level for sandy soils.

Notes:

1. Elevations relative to a temporary benchmark with an assumed datum of 100.00 feet above mean sea level; data reported in feet.
2. Groundwater elevations adjusted for the presence of free product, where present, with an assumed density of 0.75 g/cm<sup>3</sup>.
3. May 2010 survey data collected by Environmental Compliance Services, Inc. during Tier I assessment activities.
4. Subsequent October and December 2010 survey data provided by Pittman Professional Land Surveying.
5. MW-20 installed with a 3 ft stickup riser.

Notes:

1. Analyses for BTEX compounds, MTBE, naphthalene, and 1,2-DCA by EPA Method 8260B; analyses for EDB by EPA Method 8011; analyses for total lead by EPA Method 6010.
2. Concentrations in bold face type exceeded the May 2001 Risk-Based Screening Level.
3. Less than the reporting limit specified in the laboratory report.
4. Analyses not requested.
5. Estimated value below the laboratory reporting limit.
6. TW-10 did not produce enough water and was subsequently abandoned following sample collection.
7. WSW-1 GAC installed on 11/18/10.
8. WSW-8 GAC installed on 11/12/10.
9. May 2001 Risk-Based Screening Level.

Notes:

1. Elevations relative to a temporary benchmark with an assumed datum of 100.00 feet above mean sea level; data reported in feet.
2. Groundwater elevations adjusted for the presence of free product, where present, with an assumed density of 0.75 g/cm<sup>3</sup>.
3. May 2010 survey data collected by Environmental Compliance Services, Inc. during Tier I assessment activities.
4. Subsequent October and December 2010 survey data provided by Pittman Professional Land Surveying.
5. MW-20 installed with a 3 ft stickup riser.

Notes:

1. Analyses for BTEX compounds, MTBE, naphthalene, and 1,2-DCA by EPA Method 8260B; analyses for EDB by EPA Method 8011; analyses for total lead by EPA Method 6010.
2. Concentrations in bold face type exceeded the May 2001 Risk-Based Screening Level.
3. Less than the reporting limit specified in the laboratory report.
4. Analyses not requested.
5. Estimated value below the laboratory reporting limit.
6. TW-10 did not produce enough water and was subsequently abandoned following sample collection.
7. WSW-1 GAC installed on 11/18/10.
8. WSW-8 GAC installed on 11/12/10.
9. May 2001 Risk-Based Screening Level.

Notes:

1. Analyses for eight oxygenates by EPA Method 8260B.
2. Less than the reporting limit specified in the laboratory report.
3. Concentrations in bold face exceed the 2008 SCDHEC Action Level.
4. Estimated value below the laboratory reporting limit.
5. TW-10 did not produce enough water and was subsequently abandoned following sample collection.
6. WSW-1 GAC installed on 11/18/10.
7. WSW-8 GAC installed on 11/12/10.
8. Action Levels based on SCDHEC Revision 1 dated 8/22/08.

**SUMMARY of SLUG TEST ANALYSES**

SOUTH CAROLINA  
Department of Health and Environmental Control (DHEC)

**Site Data**

SITE ID #: 07960 COUNTY: Edgefield  
FACILITY NAME: 378 Truck Stop

**Slug Data**

See Appendix G Table \_\_\_\_\_ Figure \_\_\_\_\_ for a list of all data measurements. (water level logs, etc.) (Complete as appropriate).

Water Level Recovery Data was measured by InSitu LevelTroll  
(Hermit Data Logger, Manually with Water Level Indicator, etc.) (List Method)

Complete the following table for each well tested.  
COMPLETE A SECOND SHEET IF MORE THAN FOUR WELLS ARE TESTED.

|  |              |              |  |  |
|--|--------------|--------------|--|--|
| Slug Test Conducted in well(s) Number        | <b>MW-12</b> | <b>MW-17</b> |  |  |
| Initial Rise/Drawdown in well (feet)         | 1.636        | 2.356        |  |  |
| Radius of Well Casing (feet)                 | 0.08         | 0.08         |  |  |
| Effective Radius of Well (feet)              | 0.26         | 0.26         |  |  |
| Static Saturated Aquifer Thickness (feet)    | 10.37        | 11.26        |  |  |
| Length of Well Screen (feet)                 | 15           | 15           |  |  |
| Static Height of Water Column in Well (feet) | 0.49         | 0.35         |  |  |

**Calculations**

See Appendix G Table \_\_\_\_\_ Figure \_\_\_\_\_ for calculations. (Complete as appropriate).

The method for aquifer calculations was Bouwer-Rice (i.e. Bouwer-Rice, Cooper, etc.)

Calculated values by well were as follows:

|                                       |              |              |  |  |
|---------------------------------------|--------------|--------------|--|--|
| Slug Test Conducted in well(s) number | <b>MW-12</b> | <b>MW-17</b> |  |  |
| Hydraulic Conductivity (ft/day)       | 0.5359       | 0.2019       |  |  |

Thickness of the aquifer used to calculate MW-12 hydraulic conductivity was 10.37 feet.  
The aquifer is \_\_\_\_\_ confined \_\_\_\_\_ semi-confined X water table.

Thickness of the aquifer used to calculate MW-17 hydraulic conductivity was 11.26 feet.  
The aquifer is \_\_\_\_\_ confined \_\_\_\_\_ semi-confined X water table.

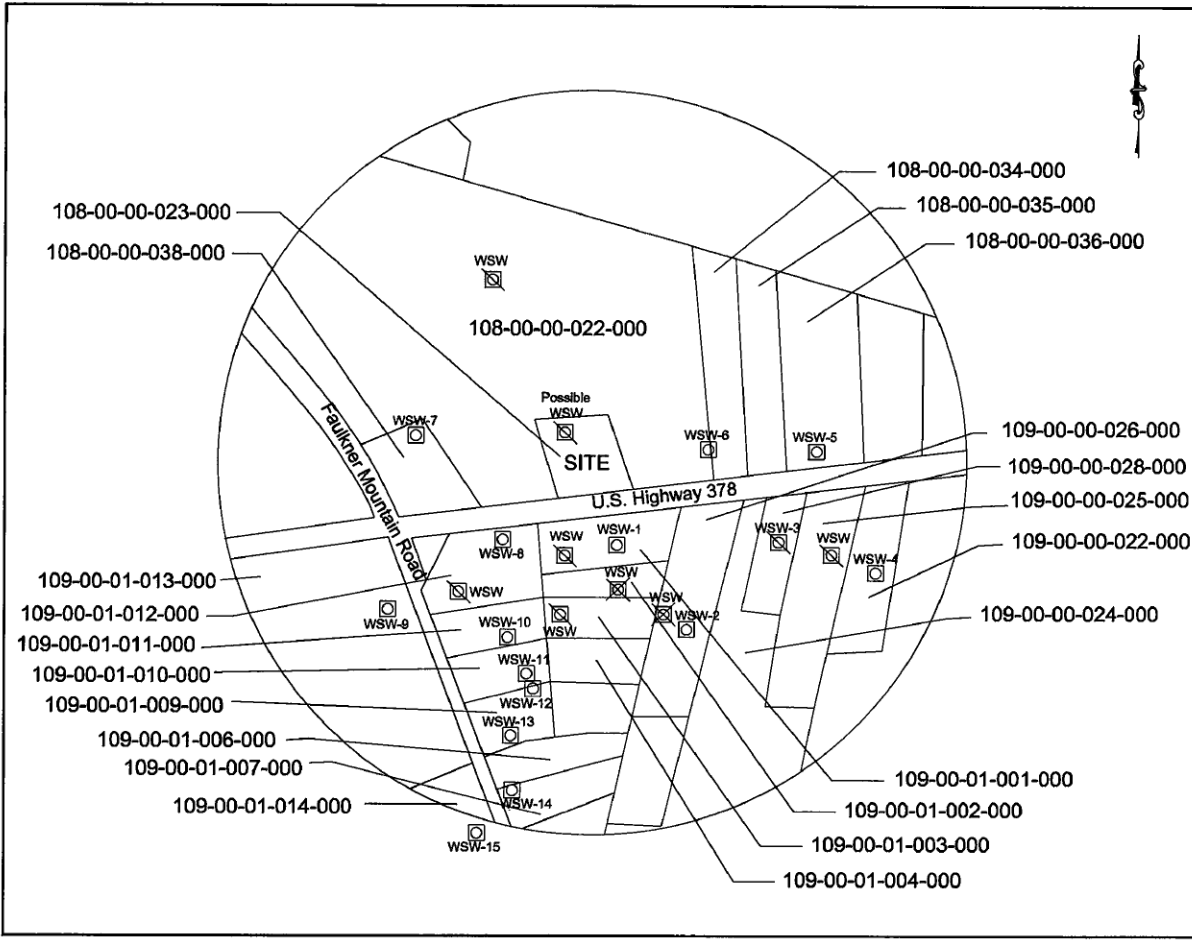

The estimated seepage velocity is 22.01 & 8.29 feet/year based on  
a hydraulic conductivity of 0.5359 ft/day & 0.2019 ft/day a hydraulic gradient of 0.009 ft/ft and  
a porosity of 8 percent for a SILT soil (list type).

**General Notes:**

All locations, dimensions, and property lines depicted on this plan are approximate. This plan should not be used for construction or land conveyance purposes.

Groundwater elevations are relative to a temporary benchmark with an assumed datum of 100.00 feet above mean sea level.

Groundwater elevations are based on measurements made in August 2011.

Water table contours and flow directions assume homogeneous isotropic aquifer conditions and horizontal flow.

Fluctuations in the level of the water table may occur due to factors not accounted for at the time of measurement.

Water table contours are bisected between data points and inferred in other areas.

This report presents the results of Aggressive Fluid/Vapor Recovery (AFVR) and groundwater sampling activities conducted by Environmental Compliance Services, Inc. (ECS) in March through May 2011 at the 378 Truck Stop site (**Figure 1** and **Figure 2**). These activities were conducted in accordance with Cost Agreement No. 41112 as approved by the South Carolina Department of Health and Environmental Control (SCDHEC) in correspondence dated March 2, 2011. The following Tables, Figures, and Appendices are attached:

- Table 1: Summary of Groundwater Elevation Data Aggressive Fluid/Vapor Recovery Events
- Table 2: Summary of Aggressive Fluid/Vapor Recovery Information
- Table 3: Summary of Adjacent Property Owners and Addresses
- Table 4: Summary of Groundwater Elevation Data
- Table 5: Summary of Groundwater Analytical Data – Chemicals of Concern

#### **Site Information**

The site was not in use at the time of our March through May 2011 field activities. An abandoned building was present onsite during our visits associated with the AFVR and groundwater sampling activities. A concrete slab was located directly to the east of, and abutting, the onsite building.

A release at the site was reported on October 3, 1974 and was confirmed on July 8, 1996. Reportedly, one 550-gallon diesel, one 1,000-gallon gasoline, and one 2,000-gallon gasoline underground storage tanks (USTs) and their associated piping and dispensers were removed from the site on January 1, 1987. The site did not contain USTs at the time of our 2011 activities.

#### **AFVR Event – March 16, 2011**

An AFVR event was performed at monitoring well MW-1 on March 16, 2011 by A&D Environmental and Industrial Services, Inc. (A&D) with activity monitoring provided by Brentley McNeill of ECS. Prior to the start of the event, the depths to free product and groundwater were measured in shallow monitoring well MW-1. Free product was measured in well MW-1 at a depth of 25.53 feet below top of casing (TOC). Groundwater was measured in MW-1 at a depth of 25.55 feet below TOC. Monitoring wells MW-3, MW-7, and MW-21 were used to obtain gauging data and vacuum radius of influence measurements. This AFVR event consisted of one vacuum truck extracting fluids and vapors from monitoring well MW-1 for approximately eight hours. Measurements of vacuum, air velocity, temperature, and off-gas concentration readings were collected at 15-minute intervals during the first two hours and at 30-minute intervals during the remainder of the event.

The truck vacuum readings averaged 20 inches of mercury over the course of the event. The air velocity rates averaged 4,096 ft/minute from the discharge stack over the course of the event. The organic vapor concentrations recovered from monitoring well MW-1 were measured at the truck's discharge stack using the Bacharach TLV Sniffer, and averaged 12 parts per million (ppm) during the event. The stinger was adjusted multiple times throughout the course of the event to maximize vapor recovery. However, minimal change in the TLV readings was observed. The exhaust stack gas temperatures averaged 182.5 degrees Fahrenheit. Measured depth to groundwater in monitoring well MW-1 at the conclusion of the AFVR event was 28.58 feet below TOC. Measured depth to groundwater 20 minutes post-AFVR was 28.58 feet below TOC. Free product was not detected in monitoring well MW-1 during post-AFVR measurements. A summary of groundwater elevation data collected during AFVR activities is presented in **Table 1**. A summary of free product and AFVR data collected from monitoring well MW-1 during AFVR activities is presented in **Table 2**.

The total estimated amount of petroleum products removed as a vapor, based on eight hours of organic vapor measurements and using a conversion factor of 1.02 for benzene, was 0.15 pounds (0.02 gallons). Approximately 233 gallons of liquid were removed from monitoring well MW-1 during the March 16, 2011 AFVR event. Of the 233 gallons removed, there was no measurable free product detected. Field data sheets, emissions calculations and the disposal manifest for the March 16, 2011 AFVR event are included in **Appendix A**.

### **Well Gauging and Sampling**

Shallow monitoring wells MW-1 through MW-28 and telescoping monitoring wells TW-1 through TW-9 were gauged for depths to groundwater on April 19, 2011. Depths to groundwater measured in the shallow monitoring wells ranged from 15.71 feet (MW-18) to 37.72 feet (MW-20). Groundwater elevations in the shallow monitoring wells, relative to a temporary benchmark with an assumed datum of 100.00 feet above mean sea level, ranged from 70.70 (MW-9) to 80.38 (MW-28). Based on these data, shallow groundwater generally flowed towards the southwest, south, and north away from the subject site. The horizontal hydraulic gradient measured in the southwestern direction from MW-28 to MW-9 was approximately 0.017 feet per foot. The horizontal hydraulic gradient measured in the southern direction from MW-3 to MW-22 was approximately 0.006 feet per foot. The horizontal hydraulic gradient measured in the northern direction from MW-1 to MW-20 was approximately 0.036 feet per foot. A summary of groundwater elevation data is presented in **Table 4**. A Shallow Groundwater Elevation Map based on the April 2011 data has been included as **Figure 3**.

Depths to groundwater measured in the telescoping monitoring wells ranged from 16.83 feet (TW-7) to 27.11 feet (TW-4). Groundwater elevations in the telescoping monitoring wells, relative to a temporary benchmark with an assumed datum of 100.00 feet above mean sea level, ranged from 71.50 (TW-3) to 81.30 (TW-7). Based on these data, deep groundwater generally flowed towards the west away from the subject site. The horizontal hydraulic gradient measured in the western direction from TW-7 to TW-3 was approximately 0.018 feet per foot. A summary of groundwater elevation data is presented in **Table 4**. A Deep Groundwater Elevation Map based on the April 2011 data has been included as **Figure 4**.

Shallow monitoring wells MW-3 through MW-12, MW-14, MW-15, MW-20, MW-22, MW-24, and MW-27 were sampled without purging in May 2011, as the water table in these wells was bracketed by the screened interval of each well. Shallow monitoring wells MW-1, MW-2, MW-13, MW-16 through MW-19, MW-21, MW-23, MW-25, MW-26, and MW-28, and telescoping wells TW-1 through TW-9

were purged prior to sampling in May 2011, as the water table in these wells was not bracketed by the screened interval of each well or the screened interval was unknown. Water samples were collected in April and May 2011 from private water supply wells WSW-1 pre-GAC, WSW-1 post-GAC, WSW-2 through WSW-4, WSW-6, WSW-7, WSW-8 pre-GAC, WSW-8 post-GAC, WSW-9 through WSW-11, and WSW-13 through WSW-15. Each water supply well was purged at the sample location for approximately 10 minutes prior to sample collection. Samples could not be collected from private water supply wells WSW-5 and WSW-12 as the power to the well pumps was disconnected but the pumps were still in place in the wells. Water supply well information has been included as **Table 3**.

Additional information pertaining to site conditions and field personnel on site during the sampling event can be found in the Groundwater Sampling Field Data Sheets provided as **Appendix B**. The groundwater samples collected from the monitoring wells and water supply wells were analyzed for BTEX constituents (benzene, toluene, ethylbenzene, total xylenes), methyl-tert-butyl-ether (MTBE), 1,2 DCA, oxygenates, and naphthalene using EPA Method 8260B, and 1,2- Dibromoethane (EDB) using EPA Method 8011.

#### **Chemicals of Concern**

Concentrations of benzene were reported above the SCDHEC May 2001 Risk Based Screening Level (RBSL) in the groundwater samples collected from monitoring wells MW-1, MW-3, MW-4, MW-7, MW-12, MW-13, MW-16, and MW-22. A concentration of toluene was reported above the RBSL in the groundwater sample collected from monitoring well MW-22. Concentrations of ethylbenzene were reported above the RBSL in the groundwater samples collected from monitoring wells MW-1, MW-3, and MW-22. A concentration of total xylenes was reported above the RBSL in the groundwater sample collected from monitoring well MW-22. Concentrations of naphthalene were reported above the RBSL in the groundwater samples collected from monitoring wells MW-1, MW-3, MW-7, and MW-12. Concentrations of 1,2 DCA were reported above the RBSL in the groundwater samples collected from monitoring wells MW-2, MW-3, MW-7, MW-12, MW-13, and TW-1. Concentrations of EDB were reported above the RBSL in the groundwater samples collected from monitoring wells MW-1, MW-3, MW-7, MW-12, MW-13, and MW-22.

Concentrations of toluene were reported below the RBSL in the groundwater samples collected from monitoring wells MW-1, MW-3, MW-7, MW-12, MW-13, MW-16, and TW-2. Concentrations of ethylbenzene were reported below the RBSL in the groundwater samples collected from monitoring wells MW-4, MW-7, MW-12, MW-13, and MW-16. Concentrations of total xylenes were reported below the RBSL in the groundwater samples collected from monitoring wells MW-1, MW-3, MW-4, MW-7, MW-8, MW-12, MW-13, and MW-16. A concentration of MTBE was reported below the RBSL in the groundwater sample collected from monitoring well TW-1. Concentrations of naphthalene were reported below the RBSL in the groundwater samples collected from monitoring wells MW-4, MW-8, MW-13, and MW-16. Concentrations of 1,2 DCA were reported below the RBSL in the groundwater samples collected from monitoring wells MW-24, MW-27, and TW-6, and water supply well WSW-8 (pre-GAC).

Concentrations of the requested method constituents were not reported above the laboratory reporting limits or method detection limits in the groundwater samples collected from monitoring wells MW-5, MW-6, MW-9 through MW-11, MW-14, MW-15, MW-17 through MW-21, MW-23, MW-25, MW-26, MW-28, TW-3 through TW-5, and TW-7 through TW-9, and water supply wells WSW-1 pre-GAC, WSW-1 post-GAC, WSW-2 through WSW-4, WSW-6, WSW-7, WSW-8 post-GAC, WSW-9 through WSW-11, and WSW-13 through WSW-15.

### **Eight Oxygenates**

Concentrations of TAA were reported above the SCDHEC 2008 Action Level in the groundwater samples collected from monitoring wells MW-3, MW-7, MW-8, MW-13, MW-16, and TW-1.

A concentration of DIPE was reported below the Action Level in the groundwater sample collected from monitoring well TW-1. A concentration of TBA was reported below the Action Level in the groundwater sample collected from monitoring well MW-2. A concentration of TAA was reported below the Action Level in the groundwater sample collected from monitoring well MW-2.

Concentrations of the requested method constituents were not reported above the laboratory reporting limits or method detection limits in the groundwater samples collected from monitoring wells MW-1, MW-4 through MW-6, MW-9 through MW-12, MW-14, MW-15, MW-17 through MW-28, and TW-2 through TW-9, and water supply wells WSW-1 pre-GAC, WSW-1 post-GAC, WSW-2 through WSW-4, WSW-6, WSW-7, WSW-8 pre-GAC, WSW-8 post-GAC, WSW-9 through WSW-11, and WSW-13 through WSW-15.

A summary of the Chemicals of Concern (CoC) data has been included as **Table 5**. A summary of the oxygenate data has been included as **Table 6**. A groundwater quality map showing the contaminants of concern based on the April and May 2011 data has been included as **Figure 5**. A groundwater quality map showing the eight oxygenates based on the April and May 2011 data has been included as **Figure 6**. Groundwater sampling field data sheets from the April and May 2011 sampling event have been included as **Appendix B**. Complete reports of laboratory analyses of groundwater samples collected during the April and May 2011 sampling event, along with chain-of-custody documentation, have been included in **Appendix C**.

### **Investigative Derived Waste**

Investigative derived waste (IDW) generated during the groundwater sampling activities was placed in 55-gallon drums for disposal by a licensed facility. The drums were left onsite and a request for pickup and disposal of the drummed IDW was generated upon completion of the groundwater sampling activities. A copy of the disposal manifest for the drums of purged well water will be forwarded SCDHEC upon our receipt.

### **Conclusions and Recommendations**

The average organic vapor concentration recovered from monitoring well MW-1 during the March AFVR event was 12 ppm. However, product was not detected in this well during post-AFVR gauging one month later during the April 2011 groundwater sampling event. Also, the dissolved concentrations reported in monitoring well MW-1 during the April 2011 groundwater sampling event were relative compared to other impacted site wells and when considering this well has historically contained product. Therefore, AFVRs may be a viable remedial option at this site.

Based on the results of the April 2011 groundwater sampling event, elevated dissolved concentrations exist in monitoring wells onsite and south of the site. AFVR events are recommended to help reduce these concentrations in wells MW-1, MW-3, MW-7, MW-12, MW-13, MW-16, and MW-22. A comprehensive groundwater sampling event is recommended following the AFVR events to determine current conditions and determine the efficacy of the remedial efforts.

Notes:

1. Aggressive Fluid/Vapor Recovery (AFVR) events using vacuum trucks provided by A&D Environmental and Industrial Services, Inc.
2. Duration of the AFVR event at well location.
3. Cross-sectional area of exhaust stack is 0.19 sq. ft.
4. Total Volatized in gallons = Air emissions in pounds/(6.25 lbs./gal.)
5. Total Free Product as Fluid is obtained from disposal manifest and/or correspondence with subcontractors from each AFVR event.
6. Total Free Product Recovered = Total Free Product Volatized + Total Free Product as Fluid.

Notes:

1. Soil samples collected every 5 vertical ft during installation of shallow groundwater monitoring wells. Sample depth from each location that displayed the highest PID reading above the water table was submitted for laboratory analysis.
2. Less than the laboratory reporting limit.
3. Estimated value between the method detection limit and laboratory reporting limit.
4. Soil samples collected during installation of shallow groundwater monitoring wells due to observed odor and subsequent PID readings.
5. May 2001 SCDHEC Risk Based Screening Level for sandy soils.

|         | 4/19/11       |                              | --                         | 21.14                      | --                          | 75.78                                    |                 |                        |

Notes:

1. Elevations relative to a temporary benchmark with an assumed datum of 100.00 feet above mean sea level; data reported in feet.
2. Groundwater elevations adjusted for the presence of free product, where applicable, with an assumed density of 0.75 g/cm<sup>3</sup>.
3. May 2010 survey data collected by Environmental Compliance Services, Inc. during Tier I assessment activities.
4. Subsequent October and December 2010 survey data provided by Pittman Professional Land Surveying.
5. MW-20 installed with a 3 ft stickup riser.

Notes:

1. Analyses for BTEX compounds, MTBE, naphthalene, and 1,2-DCA by EPA Method 8260B; analyses for EDB by EPA Method 8011; analyses for total lead by EPA Method 6010.
2. Concentrations in bold face type exceeded the May 2001 Risk-Based Screening Level.
3. Less than the reporting limit specified in the laboratory report.
4. Analyses not requested.
5. Estimated value below the laboratory reporting limit.
6. May 2001 Risk-Based Screening Level.

Notes:

1. Analyses for 8 oxygenates by EPA Method 8260B.
2. Less than the reporting limit specified in the laboratory report.
3. Concentrations in bold face exceed the 2008 SCDHEC Action Level.
4. Estimated value below the laboratory reporting limit.
- 5 Action Levels based on SCDHEC Revision 1 dated 8/22/08

Notes:

1. Analyses for BTEX compounds, MTBE, naphthalene, and 1,2-DCA by EPA Method 8260B; analyses for EDB by EPA Method 8011; analyses for total lead by EPA Method 6010.
2. Concentrations in bold face type exceeded the May 2001 Risk-Based Screening Level.
3. Less than the reporting limit specified in the laboratory report.
4. Analyses not requested.
5. Estimated value below the laboratory reporting limit.
6. TW-10 did not produce enough water and was subsequently abandoned following sample collection.
7. WSW-1 GAC installed on 11/18/10.
8. WSW-8 GAC installed on 11/12/10.
9. May 2001 Risk-Based Screening Level.

Notes:

1. Analyses for eight oxygenates by EPA Method 8260B.
2. Less than the reporting limit specified in the laboratory report.
3. Concentrations in bold face exceed the 2008 SCDHEC Action Level.
4. Estimated value below the laboratory reporting limit.
5. TW-10 did not produce enough water and was subsequently abandoned following sample collection.
6. WSW-1 GAC installed on 11/18/10.
7. WSW-8 GAC installed on 11/12/10.
8. Action Levels based on SCDHEC Revision 1 dated 8/22/08.

- Flow Direction Indicator

**General Notes:**

All locations, dimensions, and property lines depicted on this plan are approximate. This plan should not be used for construction or land conveyance purposes.

Groundwater elevations are relative to a temporary benchmark with an assumed datum of 100.00 feet above mean sea level.

Groundwater elevations are based on measurements made on April 19, 2011.

Water table contours and flow directions assume homogenous, isotropic aquifer conditions and horizontal flow.

Fluctuations in the level of the water table may occur due to factors not accounted for at the time of measurement.

Water table contours are interpolated between data points and inferred in other areas.

**General Notes:**

All locations, dimensions, and property lines depicted on this plan are approximate. This plan should not be used for construction or land conveyance purposes.

All concentrations are measured in micrograms per liter (ug/L).

Groundwater samples collected in April and May 2011.

Above concentrations represent May 2001 Risk-Based Screening Levels; Concentrations in bold face type exceeded the RBSL.

J - Estimated value between the method detection limit and the laboratory reporting limit.

<1.0 - Less than the reporting limit specified in the laboratory report.

NR - Not Requested.

NS - Not Sampled.

WSW-1 and WSW-8 data represent pre-treatment concentrations.

**Date:** 10/26/2010 4:20 PM  
**Subject:** 378 Truck Stop, UST Permit #07960  
**Attachments:** info for DHEC 10-26-10.xls; 378 Truck Stop Site Vicinity Map.pdf

Hi Ms. Ridgley,

Attached is an excel file and map for the WSW verification sampling. The excel file has 2 sheets: the first shows all of the property owner info and the ones that are affected are in bold, the second sheet lists all the WSW data. Outside the print area of the first sheet lists where the WSW samples were collected (locations of the spigots).

Hope this helps,

Christine

P.S. Just a heads up that I'm not sure if we've fully delineated the plume. It looks like the southernmost shallow well has benzene. I'm putting together all of the data we've obtained so far and, if it looks like we aren't done, I'll let you know before I complete the report.

**Date:** 10/26/2010 3:53 PM  
**Subject:** 378 Truck Stop, UST Permit #07960

---

Ms. Ridgley,

I just left you a phone message regarding 378 Truck Stop. I just wanted to report some of the GW data that's coming in on PacePort. This data isn't finalized/reviewed yet but it generally doesn't change between what is shown online compared to what is provided in the final report.

There are a few concentrations of MTBE and 1,2 DCA above laboratory reporting limits in 4 of the private water supply wells. One of these has a concentration above the RBSL for 1,2 DCA (the remaining 1,2 DCA and MTBE concentrations are below RBSLs). The concentrations overall are low but because municipal water is not provided to the area I wanted to report it as soon as possible. Please let me know what, if any, other information you would like me to provide. I'm putting together a table right now which I can provide if you would like.

Thank you,  
Christine

Notes:

1. Elevations relative to a temporary benchmark with an assumed datum of 100.00 feet above mean sea level; data reported in feet.
2. Groundwater elevations adjusted for the presence of free product, where present, with an assumed density of 0.75 g/cm<sup>3</sup>.
3. May 2010 survey data collected by Environmental Compliance Services, Inc. during Tier I assessment activities.
4. Subsequent survey data provided by Pittman Professional Land Surveying.

**Date:** 11/2/2010 8:54 AM  
**Subject:** 378 Truck Stop, UST Permit #07960  
**Attachments:** 378 Truck Stop site vicinity map with approx. well locations 11-2-10.pdf; Tables.xls

Ms. Ridgley,

I received the completed lab report for 378 Truck Stop this morning. A map with approximate well locations is attached along with tables of the GW data. Based on the data shown, it's possible that the samples for MW-2 and MW-5 were switched. I would suggest a re-sample to verify the results.

Well MW-16, located furthest south and ~370 ft from the site, had a benzene concentration of 246 ug/L. TW-1, located onsite and installed to a depth of ~63 ft had a 1,2 DCA concentration of 64.2 ug/L and a TAA concentration of 1,180 ug/L.

Please let me know if you would like us to continue the assessment at this time or complete the report as is.

Thank you,

Christine

## **TIMELINE OF EVENTS RECORDED IN TECHNICAL FILE #07960**

- **1954 - Truck Stop built Phillips 66 (P & O Oil Co. Odom Operator: Fulmer)**
- **1959 - Truck Stop WSWs had gas in their wells**
- **1969 – Scurry WSW installed**
  
- **8/1974 – Note: 10 Homes have gas in their wells. Need help.**
  
- **10/3/174 - 8 WATER SUPPLY WELLS were surveyed & 7 sampled  
Anderson, Scurry, Gordon, & 2 gas station wells sampled  
Culbreath and other gas station well (filled w/garbage) not sampled  
All well depths between 452 & 468 ft. deep**
  
- **2/1975 - Analytical report – Anderson, Culbreath, Scurry Sampling  
Anderson Old Well has free product (100% gasoline, which matches Phillips  
66 sample)**
  
- **12/1975 – Scurry Well Sampled (0 – 40 ppm gasoline)**
- **12/30/74 – NOTE in file: Only 2 (wells have problems –Anderson & Scurry)**
  
- **1/7/75- Anderson well better; Scurry worse (Scurry planning a civil law suit)**
  
- **1/5/76- 01/1976 - DHEC letter to W. F. Scurry (DHEC recommends legal action  
to get leak testing done at Phillips Station/No funds available from DHEC:  
DHEC tried, but never received tank testing results done by Mr. Fulmer)**
  
- **4/1977 – DHEC memo (well owner gets water sampled twice (100%  
hydrocarbon; DHEC seeks help internally)**
  
- **6/1977 Memo: DHEC & Attny. General decision that DHEC did not have  
jurisdiction under Pollution Control Act for SC – “More Proof needed for  
determination of contaminant source”**
  
- **7/1977 –Mr. Gordon reports that his well has a taste/odor.**
  
- **1/1984 – Scurry well sampled. No volatile organics detected.**
- **1/1986 – 3 USTs registered.**
  
- **11/1988 – Wilkerson Fuel Company writes letter to DHEC – tanks were  
reported as purchased & removed.**
  
- **3/1990 Memo to Jim Hess – States Gas station is source of well contamination &  
Odom will not respond. Store operator states Odom is owner of tanks.**

- **4/1990 Scurry reports to DHEC that their well is still contaminated, but with oil not gas.**
- **5/1990 – DHEC (Trust Section of GW Protection Div.) asks P & O Oil Co. for an assessment plan based on results of the two 1975 Analytical reports.**  
**Report due date of 7/1990 is extended to 8/1990 and again to 9/1990 after Wilkerson Oil asks for extension due to ownership dispute betwn. Odom Oil and Wilkerson Fuel Co. Wilkerson Oil files claim with P&O Oil Co.'s Insurance Co. (Federated Insurance). The claim is denied 9/1990, because release occurred before policy went into effect.)**  
**10/1990 – Wilkerson Oil hires attorney (Wilkerson Oil supplied gas to facility from 1986 to 1987; never owned property)**  
**11/1990 DHEC names Wilkerson Oil as an 'unwilling' RP; Trust funds will be used for assessment to determine RP.**
- **6/1991 – DHEC memo to file (Site Visit):**  
**Restaurant & gas station owned by Jolly Odom.**  
**Ms. Scurry mentions a former waste oil pit used by station & that station had shut down in 1990**  
**Carl Coates (lives behind Scurry) drilled new well 1988? (200 ft)**  
**Old well filled w/garbage**  
**Coates sister's house burned down (her well was contaminated & found covered up with cement) George Coates now lives at this location and dug new well**
- **8/1991 – 9 WSWs sampled (Metals, BTEX, VOCs)**  
**Scurry, Coley, Webb, Roadside Scurry, G. Coates, Culbreath, Gordon Nicholson, & C Coates. Roadside Scurry well has hit (Benzene 11ppb)**  
**Other wells ND**
- **9/1991 – Scurry well Sampled twice:**

|                       |                       |
|-----------------------|-----------------------|
| 4.8 ppb 1,2- DCA      | 19.2 ppb benzene      |
| 1.67 ppb ethylbenzene | 3.7 1,2-DCA           |
| 4.3 ppb toluene       | 1.69 ppb ethylbenzene |
| 5.6 ppb naphthalene   |                       |
- **1/1992 – Scurry well-head & sink sampled:**

|                   |                                      |
|-------------------|--------------------------------------|
| <b>Well-head:</b> | <b>bromodichloromethane 193 ppb</b>  |
|                   | <b>chloroform 231 ppb</b>            |
|                   | <b>dibromochloromethane 66 ppb</b>   |
| <b>Sink:</b>      | <b>bromodichloromethane 12.1 ppb</b> |
|                   | <b>n-butyl benzene 1.5 ppb</b>       |
|                   | <b>chloroform 12.7 ppb</b>           |
|                   | <b>dibromochloromethane 8.8 ppb</b>  |

- **2/1992 – Scurry well & house sampled again**  
**Same constituents at less concentrations in both samples w/ addition of 2ppb toluene in both samples**
  
- **10/1993 – Memo to GW Protection Div. (Columbia) from DHEC (Greenwood)**  
**#15972 Scurry/Anderson Wells Trust Fund Site; however 378 Truck Stop not assessed (?)**  
  
**Two MWs installed on Truck Stop Property 45 ft. deep/ depth to GW 25.8 ft.**  
  
**First mention that a new well drilled on Scurry property in 1990.**  
  

|                               |                             |
|-------------------------------|-----------------------------|
| <b>MW1: 4,010 ppb benzene</b> | <b>MW2: 135 ppb benzene</b> |
| <b>1,440 ppb toluene</b>      | <b>54 ppb toluene</b>       |
| <b>166 ethylbenzene</b>       | <b>13.7 ethylbenzene</b>    |
| <b>5,490 xylene</b>           | <b>54.7 xylene</b>          |

**Jolly Odom signs right-of-entry form**
  
- **7/1996 – DHEC Memo to File**  
**(#07960) Truck Stop Identified as source of Scurry Well contamination**
  
- **1999 – Note in EFIS database Regulatory/Compliance files for #07960 purged**
  
- **9/2002 – DHEC memo to Bob Hutchinson from Chuck Hightower:**  
**1974 District informed of contaminated wells**  
**UST Program assigns #15972**  
**Project closed under #15972, but NEVER entered under #07960**  
**Recommends all drinking wells in area be examined.**
  
- **11/2002: Travis Williams visits site, which is now a church**  
**MW-1 & -2 & WSW-1 sampled**  
**MW-1: 1400 ppb benzene**  
**1000 ppb ethylbenzene**  
**ND MtBE**  
**230 ppb naphthalene**  
**420 ppb toluene**  
**4700 ppb xylenes**  
**420 ppb toluene**  
**depth to water 28.1 ft.**  
**MW-2: ND for BTEX (depth to water 26 ft.)**  
**WSW-1: ND for BTEX (Scurry's new drinking well-installed in 1990)**  
**No other WSWs sampled**

- **Ranked in EFIS database as 4B in Saluda County (should have been ranked a 2BB in Edgefield County.**
- **9/8/2009: #07960 Reassigned to Cathleen Ridgley UST Assessment PM for Edgefield County after a site visit by Minda Johnson (Saluda Co. Assessment PM).**
  - Technical File Review by Cathleen Ridgley**
  - EFIS database: Release reported 10/3/1974 & confirmed 7/8/1996**
  - Site re-ranked by Cathleen Ridgley as a 2BB.**
- **2/1/2010: Tier I Assessment Directive sent to Wilkerson Fuel Co.**
  - Sample MW-1 and -2; Install 3 additional shallow monitoring wells**
  - Conduct 8 soil borings**
- **5/4/2010 Wilkerson Fuel Co. chooses ECS, Inc. as site rehabilitation contractor.**
- **6/24/2010 Tier I Assessment report received from ECS, Inc.**
  - Depth to water approximately 15 feet for monitoring wells**
  - MW-1 has 0.04 ft of Free Product**
  - MW-2 & -3 Petroleum Chemicals > RBSLs**
  - 6 of the 8 soil borings Petroleum chemicals > RBSL**
  - SB-6 hottest sample**
  - 20 WSWs identified within 1,000 ft. of truck stop facility**
  - (Hattie Scurry & Sidney Gordon each have an abandoned WSW, also)**
  - 6 of the WSWs reported as “disconnected”; but 1 of the 6 able to be sampled**
  - Total of 15 WSWs were sampled for BTEX, N, MtBE, lead, EDB (all ND)**
- **8/4/2010 Tier II Assessment Plan received from ECS, Inc.**
- **8/16/10 Tier II Assessment Directive sent to Wilkerson Fuel Co.**
- **10/26/10 Cathleen receives call from ECS**
  - GW elevation dropped approximately 10 feet**
  - Analytical data from sampling of 15 WSWs**
    - Petroleum impact Sidney Gordon, Hattie Scurry, Ida Bryant, Ulysess Padgett WSWs**
    - Sidney Gordon WSW 1,2-DCA > RBSL**
- **11/4/10 Cathleen re-samples all 4 impacted WSWs for confirmation of impact**
  - Samples analyzed for 8 oxygenates, BTEX, Naph., MtBE, EDB, 1,2-DCA**
- **11/9/10 Lab report received confirming impact of 4 WSWs**
  - Cathleen Re-ranks release to a ‘1’**

SLIDE 1:

INTRODUCE MYSELF

My name is Cathleen Ridgley.

I am a hydrogeologist that works for the Dept. of Health & Env. Control – DHEC for short.

Some of you know me already. I have met personally with some of you.

SLIDE 2:

Purpose of Meeting is to inform you of activities going on in your neighborhood,

And:

With the help of other DHEC employees, answer any questions and address any concerns you may have.

DHEC directed the owner of the former underground storage tanks To conduct activities to assess the extent of a gasoline release that occurred when these tanks were still in the ground.

The tank owner hired Environmental Compliance Services, or ECS for short to conduct the work.

These Assessment Activities include the sampling of all drinking water wells for gasoline related chemicals in the area.

And:

The installation of monitoring wells. Groundwater is then sampled to see where gasoline chemicals are in the groundwater; how far out horizontally and how deep these chemicals have traveled in the groundwater.

SLIDE 3:

First, I want to briefly talk about what gasoline is.

Gasoline is made up of over 150 chemicals.

Some of these chemicals are listed on the slide.

Chemicals present can give us an idea of whether or not the gas was leaded or unleaded helping us determine a time frame of when the release may have occurred.

Gasoline floats on water while some mixes with the groundwater.

SLIDE 4:

Sampling of  
Drinking wells

Gasoline was first detected in the groundwater in the 1970s.

In response to the release, DHEC sampled drinking water wells in the area and funded the drilling of new drinking water wells for owners whose wells had gasoline chemicals in it.

In October of this year, DHEC received a report that gasoline chemicals relating to the underground storage tanks that existed at the former truck stop had impacted drinking water wells in the area.

15 drinking wells were sampled in May of this year. Some wells could not be sampled since the property was vacant and the wells disconnected.

No gasoline chemicals were found in any of the wells.

In October of this year, the wells were sampled again.  
4 of the 15 wells showed low levels of gasoline chemicals in them.

SLIDE 5:

Here is a map showing you the site and location of drinking wells that were sampled.

The former truck stop is located here.

The blue wells contained no gasoline chemicals.

The green wells contained very minute levels of a gasoline chemical called MtBE.

2 of the wells, depicted in red, had levels of a gasoline chemical that was higher, or very close to, its standard level for drinking water.

The name of that chemical is 1,2-DCA.

Other gasoline chemicals: TAA, TBA, DIPE, as well as MtBE were detected at very low, or safe levels, in the red wells.

I have provided you with a fact sheet of all gasoline chemicals detected in the drinking wells for your information.

In response to these findings, DHEC contacted the owners of the wells and provided them with the results even if their wells had no gasoline chemicals in them.

DHEC informed the owner of this red well to use bottled water since 1,2-DCA was detected over its safe drinking standard.

DHEC directed the contractor to install granular activated carbon, or GAC units on the red wells to ensure safe drinking water again.

SLIDE 6

Here is a picture of a GAC unit. I'm sure you've noticed them recently.

SLIDE 7:

DHEC is also directing the installation of monitoring wells in the area as I'm sure you've seen or heard the drill rig in the area.

These monitoring wells allow us to collect samples of groundwater to be tested for gasoline chemicals and monitor any changes in their concentrations over time.

By the way, the black drums in the area contain the soil dug up and the water produced from installing and sampling these wells. The contractor will be removing them from the area soon.

A total of 26 shallow wells and 9 deep monitoring wells were installed so far.

More wells may be necessary depending on the sampling results of the most recently installed wells.

SLIDE 8:

Here is a map showing you the locations of these monitoring wells in relationship to the locations of drinking wells and the source of the release, the former truck stop.

The circles are shallow wells and the triangles are deep wells.

The blue wells are wells that contain no gasoline chemicals or chemicals that are below their safe drinking standards.

The red wells contain gasoline chemicals above their safe standard levels.

The orange well, if you can see it, has free product in it.

We are still waiting for the results of the monitoring wells depicted in green.

SLIDE 9:

Future Activities:

What does DHEC plan to do?

Determine if more monitoring wells are necessary to define the extent of gasoline chemicals in the groundwater. I should be receiving the results of the sampling of those 9 wells this week.

Continue to direct the sampling of all drinking wells in the area. I am expecting another report this week.

Continue to direct the maintenance of GAC units and install additional ones if necessary.

Listen and act on any concerns you may have as far as any odors or tastes in your water.

Explore additional cleanup options.

What can you do to help? If you know how deep your drinking well is, please let us know. It will greatly help in our assessment of groundwater in the area.

SLIDE 10: Now, I would like to introduce to you your local DHEC contacts, Chris McCluskey and Donna Rowe. Their contact information is here.

SLIDE 11: Feel free to also contact myself, and if I am not available, my supervisor Chris Doll, or our public outreach contact, Donna Moyer.

SLIDE 12: Are there any questions or comments?

Re: **Site Specific Work Plan Request for GAC Change and Groundwater Sample Collection**  
378 Truck Stop, 731 Highway 378, Edgefield, SC  
UST Permit #07960  
Release reported October 3, 1974  
Edgefield County

Dear Mr. Lowder:

The Underground Storage Tank (UST) Division of the South Carolina Department of Health and Environmental Control (DHEC) has reviewed the referenced report. The report indicates the presence of chemicals of concern (CoCs) in the groundwater.

To ensure a clean source of drinking water, in accordance with Section 280.65 of the South Carolina Underground Storage Tank Control Regulations, implementation of a Granular Activated Carbon (GAC) Unit sampling and filter change event as outlined in the current revision of the UST Quality Assurance Program Plan (QAPP) is necessary. This scope of work should be conducted on the Scurry Residence water supply well located at 730 Highway 378 East, Edgefield, SC, and on the Gordon Residence water supply well located at 724 Highway 378 East, Edgefield, SC in accordance with the UST QAPP and in compliance with all applicable regulations. Pre-and post- GAC samples should be collected prior to the filter change and analyzed for BTEX, MTBE, Naphthalene, 1, 2-DCA, 8 Oxygenates, Ethanol, and EDB. Analyses should be in accordance with Appendix F of the QAPP to include duplicate samples, field and trip blanks. A copy of the DHEC QAPP for the UST Management Division is available at

<http://www.scdhec.gov/Environment/LW/UST/ReleaseAssessmentClean-up/QualityAssurance>.

**Please complete and submit the Site-Specific Work Plan and Cost Proposal to the UST Division within fifteen (15) days of the date of this letter.** Every component may not be necessary to complete the above scope of work. The State Underground Petroleum Environmental Response Bank (SUPERB) Account allowable cost for each component is included on the Assessment Component Cost Agreement Form. Please note that technical and financial pre-approval from DHEC must be issued before work begins.

On all correspondence regarding this site, please reference UST Permit #07960. If you have questions or need additional information, feel free to contact me by telephone at (803) 898-0634, by fax at (803) 898-0673, or by e-mail to kuhnkm@dhec.sc.gov.

Sincerely,

Kimberly Kuhn, Hydrogeologist

Site Specific Work Plan  
378 Truck Stop  
731 Highway 378  
Edgefield, South Carolina  
SCDHEC Site ID #07960

Mrs. Kuhn,

Please find the attached Site Specific Work Plan, proposed costs and example chain of custody for Granular Activated Carbon (GAC) filter change and sampling. These GACs are associated with the Scurry residence located at 730 Highway 378 East and Gordon residence located at 724 Highway 378 East in Edgefield, SC. If you have any questions or concerns please feel free to contact Emerald, Inc. at 803-469-5454.

Sincerely,

A handwritten signature in black ink, appearing to read "William C. McClary".

William C. McClary, P.G.  
Project Manager

**Additional Details For This Scope of Work**

For example, list wells to be sampled, wells to be abandoned/repared, well pads/bolts/caps to replace, details of AFVR event, etc.

The subject site (378 Truck Stop) is located at 731 Highway 378 outside Edgefield, SC. Two nearby water supply wells (Scurry and Gordon) have been impacted by petroleum contamination. Each water supply well (WSW) has been attached to granular activated carbon (GAC) filters to aid in removal of petroleum contaminants. Prior to conducting a carbon change, Emerald, Inc. will collect samples from the Scurry and Gordon WSWs before filtering (Pre GAC) and after passing through the filter (Post GAC). The duplicate sample will be collected from the Scurry Pre-GAC sampling port. This work will be conducted under Solicitation IFB-5400011271-4/28/16-EMW and PO #4600491068. The samples will be collected after opening the spigot for approximately 10 minutes or until the well pump turns on. Samples will be collected by allowing the well water to pour directly into laboratory supplied sampling containers.

**Compliance With Annual Contractor Quality Assurance Plan (ACQAP)**

\_\_\_\_ Laboratory as indicated in ACQAP? (Yes/No) If no, indicate laboratory information below.

Name of Laboratory: \_\_\_\_\_  
SCDHEC Certification Number: \_\_\_\_\_  
Name of Laboratory Director: \_\_\_\_\_

\_\_\_\_ Well Driller as indicated in ACQAP? (Yes/No) If no, indicate driller information below.

Name of Well Driller: \_\_\_\_\_  
SCLLR Certification Number: \_\_\_\_\_

\_\_\_\_ Other variations from ACQAP. Please describe below.

**Attachments**

1. Attach a copy of the relevant portion of the USGS topographic map showing the site location.
2. Prepare a site base map. This map must be accurately scaled, but does not need to be surveyed. The map must include the following:  
North Arrow Proposed monitoring well locations  
Location of property lines Legend with facility name and address, UST permit number, and bar scale  
Location of buildings Streets or highways (indicate names and numbers)  
Previous soil sampling locations Location of all present and former ASTs and USTs  
Previous monitoring well locations Location of all potential receptors  
Proposed soil boring locations
3. Assessment Component Cost Agreement, SCDHEC Form D-3664

**Appendix B**  
**Example Chain of Custody**

## CHAIN-OF-CUSTODY / Analytical Request Document

The Chain-of-Custody is a LEGAL DOCUMENT. All relevant fields must be completed accurately.

**Re: Notice to Proceed-GAC Change and Groundwater Sample Collection**  
378 Truck Stop, 731 Highway 378, Edgefield, SC  
UST Permit #07960; Emerald CA #56412; Pace CA #56413  
FB-5400011271-4/28/16-EMW; PO #4600603935  
Site-Specific Work Plan received May 21, 2018  
Edgefield County

Dear Mr. Lowder:

Under the terms and conditions of the referenced contract, collection of pre- and post- GAC unit groundwater samples has been approved for the Surry residence located at 730 Highway 378 East and Gordon residence located at 724 Highway 378 East. The pre- and post- GAC unit groundwater samples should be collected and submitted to Pace Analytical Services for analysis.

This facility has been assigned individual Cost Agreement (CA) numbers as listed above. Please reference the CA #56412 and PO #4600603935 on the invoice submitted for payment. Emerald, Inc. should complete the work in accordance with the contract specifications and established schedule. The work must be conducted as outlined in the UST Quality Assurance Program Plan (QAPP) and in compliance with all applicable regulation. A GAC Unit Installation and Maintenance record should be submitted within **thirty (30) days** from the date of Notice to Proceed.

On all correspondence or inquiries regarding this directive, please reference UST Permit #07960, Emerald CA #56412, and Pace CA #56413. If you have any questions or need further assistance, please contact me at (803) 898-0634 or by email at [kuhnkm@dhec.sc.gov](mailto:kuhnkm@dhec.sc.gov).

Sincerely,

Kimberly Kuhn, Hydrogeologist

Re: Laboratory Analyses Approval  
 (Analytical) Bid #IFB-5400012961-04/06/17-EMW; PO #4600623823

Dear Mr. Carter:

Under the terms and conditions of the referenced bid package, analytical sampling has been approved for the referenced facility. The facility has been assigned an individual Cost Agreement (CA) number as listed below. Please reference the CA number and Purchase Order #4600603886 on the appropriate invoice submitted for payment against the facility.

| UST Number # | Facility       | Vials Needed (Y/N) | Monitoring Well (Analyses-Groundwater)          | CA #  |
|--------------|----------------|--------------------|---|-------|
| 07960        | 378 Truck Stop | N                  |   | 57353 |
|              |                |                    | <b>Water Supply Well (Analyses-Groundwater)</b> |       |
|              |                |                    | 504.1, 524.2, and 8260B                         |       |

If you have any questions or need further assistance, please contact Robert Dunn at (803) 898-0671 or [dunnra@dhec.sc.gov](mailto:dunnra@dhec.sc.gov).

Re: **SSWP Directive for an Additional Assessment**  
378 Truck Stop, 731 Hwy 378, Edgefield, SC  
UST Permit #07960  
Release reported October 03, 1974  
Groundwater Sampling Report received October 16, 2017  
Edgefield County

Dear Mr. Wilkerson:

The Underground Storage Tank (UST) Management Division of the South Carolina Department of Health and Environmental Control (DHEC) has reviewed the referenced report submitted by Geological Resources, Inc. The report documents petroleum chemicals in the soil groundwater above Risk-Based Screening Levels (RBSLs).

To determine what risk the referenced release may pose to human health and the environment, and in accordance with Section 280.65 of the South Carolina Underground Storage Tank Control Regulations, implementation of an Additional Assessment is necessary to assess the vertical extent of contamination offsite. The Additional Assessment must be conducted in accordance with the most recent revision of the UST Quality Assurance Program Plan (QAPP) and in compliance with all applicable regulations. A copy of the UST QAPP is available at <http://www.scdhec.gov/Environment/LW/UST/ReleaseAssessmentCleanup/QualityAssurance/>.

**Your contractor must complete the Site-Specific Work Plan (SSWP). The SSWP and Cost Proposal must be submitted within 30 days from the date of this letter.** Every component may not be necessary to complete the above scope of work. The State Underground Petroleum Environmental Response Bank (SUPERB) Account allowable cost for each component is included on the Assessment Component Cost Agreement Form. **Please note that approval from DHEC must be issued before work begins.**

On all correspondence regarding this site, please reference UST Permit #07960. Should you have any questions regarding this correspondence, please feel free to contact me at (803) 898-0592, fax me at (803) 898-0673, or e-mail me at [patterkc@dhec.sc.gov](mailto:patterkc@dhec.sc.gov).

Sincerely, 

Kyle Patterson, Hydrogeologist  
Assessment & Unregulated Petroleum Section  
Underground Storage Tank Management Division

Re: Recent Laboratory Results for Your Supply Well  
378 Truck Stop, 731 Hwy 378 East, Edgefield, SC  
UST Permit # 07960  
Groundwater Laboratory Analysis received November 8, 2010  
Edgefield County

Dear Mr. Gordon:

As you are aware, Environmental Compliance Services, Inc. (ECS) is conducting an environmental assessment at the referenced facility. As a part of that assessment your potable well was sampled and an elevated level of 1,2 dichloroethane (1,2-DCA) was detected. The Underground Storage Tank (UST) Division, in order to verify the results, sampled your potable well on November 4, 2010. The laboratory results confirm the sample collected from your potable well is impacted by 8.7 ug/L of 1,2-DCA, which is above its risk-based screening level (RBSL) of 5 ug/L. There were also very low detections of tert-Amyl Alcohol (tAA), Diisopropyl ether (DIPE), and Methyl-tert-butyl ether (MtBE) in the water. These detections were well below their action levels or RBSLs. The RBSL for tAA is 240 ug/L and the RBSL for DIPE is 150 ug/L. The RBSL for MtBE is 40 ug/L. I have attached the analytical report (your well is depicted as WSW-8) and the fact sheets for 1,2-DCA and MtBE, which were taken from the U.S. Department of Health and Human Services, Public Health Service Agency for Toxic Substances and Disease Registry. There were no fact sheets available for DIPE and tAA. I spoke with you on the phone on November 9, 2010, and you confirmed that you had received the e-mail stating the above-mentioned information.

Based on the possible health affects of 1,2-DCA, the UST Division recommends that you continue to use bottled water as your source of water until the Granular Activated Carbon (GAC) Unit is installed on your well and the water running through it tested. As I stated in my e-mail to you dated November 9, 2010, the GAC Unit will be installed on your well on Friday, November 12, 2010. The State Underground Petroleum Environmental Response Bank (SUPERB) Account will pay costs associated with the installation and testing of the GAC Unit and will reimburse you for the costs of the bottled water. Please save all your receipts for reimbursement.

In order to further define the extent of petroleum chemicals of concern (CoC), the UST Division is currently directing ECS to install several additional monitoring wells. Your potable well will be sampled periodically in order to ensure the water running through the GAC Unit is free of petroleum CoC. As with previous assessment activities, you will not be responsible for any costs associated with rehabilitation activities, and you will be provided a copy of the report of findings.

Your continued cooperation is appreciated. On all correspondence regarding this site, please reference UST permit number 07960. Please feel free to contact me at (803) 896-6633, if you have questions or need additional information.

Sincerely,

Cathleen Ridgley, Hydrogeologist  
Assessment Section  
Underground Storage Tank Division

RE: Project: 378 Truck Stop 07960/56413  
Pace Project No.: 92389337

Dear Robert Dunn:

Enclosed are the analytical results for sample(s) received by the laboratory on June 21, 2018. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Trey Carter
