Re: Tier I Directive  
378 Truck Stop, Hwy 378 West, Saluda, SC  
UST Permit # 07960; Cost Agreement # 37564; MWA # UMW-23283  
Release Reported October 3, 1974  
Edgefield County

Dear Frank Wilkerson:

The Underground Storage Tank (UST) Management Division has reviewed the file for this site and has determined the next scope of work is a Tier I Assessment. The assessment should be conducted in accordance with the Tier I Assessment guidance document and in compliance with all applicable regulations. All shallow wells are to be installed with screen intervals that bracket the water table. The Tier I assessment document and appendices may be obtained from our website at [http://www.scdhec.gov/environment/lwm/html/ustguidance\\_docs.htm](http://www.scdhec.gov/environment/lwm/html/ustguidance_docs.htm).

Our records indicate that a contractor has not been selected to perform assessment activities at this facility. Please indicate your choice of contractor on the enclosed Owner/Operator Information Sheet. The enclosed form should be completed and returned to the Program to my attention within **fifteen days** of the date of this letter. A list of South Carolina certified contractors is enclosed for your convenience.

The Division has pre-approved a total of \$11,230.00 for implementation of the Tier I Assessment. The total includes costs for completion of up to 75 feet of permanent monitoring well footage. Additional monitoring well footage can be billed at the SUPERB allowable rate of \$38 per foot provided that the cost is pre-approved by the Division. Please note that in addition to the sample analyses required in the Tier I Guidance Document, all initial assessment activities are now required to include analyses for lead and EDB as directed in the October 10, 2003 SUPERB Allowable Costs Document. **Also, if any drinking water wells are located within 1000 feet of the UST system, a water sample shall be obtained from the well(s) and analyzed for the appropriate parameters.**

You or your contractor can submit an invoice for direct billing from the State Underground Petroleum Environmental Response Bank (SUPERB) Account. Please note that all applicable South Carolina certification requirements apply to the laboratory services, well installation, and report preparation. All site rehabilitation activities must be performed and submitted by a South Carolina Certified Underground Storage Tank Site Rehabilitation Contractor.

**The assessment report and invoice are due within sixty (60) days from the date of this letter.** If the invoice is not submitted within one hundred and twenty (120) days from the date of this letter, monies allocated to pay for the work will be uncommitted. This means that invoices for the scope of work submitted after the 120-day deadline will not be processed for payment until all other committed funds are paid or monies become available.

Implementation of the Tier I Assessment may proceed immediately upon receipt of this correspondence. Approval to install three permanent monitoring wells is enclosed. Please note that applicable South Carolina certification requirements regarding laboratory services, well installation, and report preparation must be satisfied. Also note that only EPA Method 8260B will be accepted for analysis of volatile organic hydrocarbons except EDB must be analyzed under EPA Method 8011 for the lower detection limit. Any site rehabilitation activity associated with the UST release must be performed by a SCDHEC-certified site rehabilitation contractor as required by R.61-98. According to Section IV.C.1 of the SUPERB Site Regulations and Fund Access Regulations, R.61-98, all plans, reports, invoices, and other documents relating to site rehabilitation activities which have been prepared or approved by a certified contractor shall be signed by the certified contractor and bear his certification number.

The Department grants pre-approval for transportation of virgin petroleum impacted soil and groundwater from the referenced site to a permitted treatment facility. There can be no spillage or leakage in transport. All investigation-derived waste (IDW) must be properly contained and labeled prior to disposal. IDW should not be stored on-site longer than ninety (90) days. A copy of the disposal manifest and/or acceptance letter from the receiving facility that clearly designates the quantity received must be included as an appendix to the report. If the COC concentrations, based on laboratory analysis, are below Risk Based Screening Levels (RBSLs), please contact the project manager for approval to dispose of soil and/or groundwater on site. The SUPERB Account will not reimburse for transportation or treatment of soil and/or groundwater with concentrations below RBSLs.

On all correspondence regarding this site, please reference UST Permit # 07960. If you have any questions concerning this correspondence, please call at (803) 896-6633. I can also be reached by email at [ridglect@dhec.sc.gov](mailto:ridglect@dhec.sc.gov) or by fax at (803) 896-6245.

Sincerely,

Cathleen Ridgley, Hydrogeologist

### Monitoring Well Approval

**Approval is hereby granted to: Wilkerson Fuel Company**  
**Facility: 378 Truck Stop, Hwy 378 W, Saluda, SC**  
**UST Permit Number: 07960**  
**County: Edgefield**

This approval is for the installation of three (3) groundwater monitoring wells. The monitoring wells are to be installed in the approved locations. Monitoring wells are to be installed following the South Carolina Well Standards, R.61-71, and the applicable guidance documents.

**Please note that R.61-71 requires the following:**

1. All wells shall be drilled, constructed, and abandoned by a South Carolina certified well driller per R.61-71.D.1.
2. All monitoring wells shall be labeled as required by R.61-71.H.2.c.
3. A Water Well Record Form or other form provided or approved by the Department shall be completed and submitted to the Department within 30 days after well completion or abandonment unless another schedule has been approved by the Department. The form should contain the "as-built" construction details and all other information required by R.61-71.H.1.f
4. All analytical data and water levels obtained from each monitoring well shall be submitted to the Department within 30 days of receipt of laboratory results unless another schedule has been approved by the Department as required by R.61-71.H.1.d.
5. If any of the information provided to the Department changes, notification to Cathleen Ridgley the project manager (tel: (803) 896-6633 or e-mail: [ridglect@scdhec.sc.gov](mailto:ridglect@scdhec.sc.gov)) shall be provided a minimum of twenty-four (24) hours prior to well construction as required by R.61-71.H.1.a.
6. All temporary monitoring wells shall be abandoned within 5 days of borehole completion using appropriate methods as required by R.61-71.H.4.c. All other wells shall be properly developed per R.61-71.H.2.d.
7. Departmental approval is required prior to abandonment of all monitoring wells as required by R.61-71.H.1.a.

This approval is pursuant to the provisions of Section 44-55-40 of the 1976 South Carolina Code of Laws and R.61-71 of the South Carolina Well Standards and Regulations, dated April 26, 2002. A copy of this approval should be on the site during well installation.

**Date of Issuance: January 14, 2010**

**Approval #: UMW-23283**

Re: Laboratory Analyses Approval  
Bid # IFB-33871-05/29/08-EMW, PO #4500011309

Dear Ms. Spencer:

Under the terms and conditions of the referenced bid package, analytical sampling has been approved for the referenced facilities. The facilities have been assigned individual Cost Agreement (CA) numbers as listed below. Please reference the CA number and Purchase Order #4500011309 on the appropriate invoice submitted for payment against the facility. SCDHEC personnel will perform the sampling.

| UST Permit # | Facility        | Analyses-Groundwater           | CA #  | Bottles (Y/N) | Date Needed |
|--------------|-----------------|--------------------------------|-------|---------------|-------------|
| 06456        | Newberry County | 1-BTEXMN, DCA, EDB, Oxygenates | 40300 | N             | ----        |

WILKERSON FUEL COMPANY INC  
P O BOX 2835  
ROCK HILL SC 29732-4835

SEP 11 2015

Re: **Groundwater Sampling Directive**  
378 Truck Stop, 731 Hwy 378, Edgefield, SC  
UST Permit # 07960; CA# 50870  
Release reported October 3, 1974  
Site Specific Work Plan received September 3, 2015  
Edgefield County

Dear Mr. Wilkerson:

The Underground Storage Tank (UST) Management Division of the South Carolina Department of Health and Environmental Control (Agency) has reviewed and approved the referenced Site Specific Work Plan (SSWP) submitted on your behalf by Environmental Compliance Services, Inc. The next appropriate scope of work at the site is a comprehensive groundwater sampling event. All work should be conducted in accordance with the most recent revision of the UST Quality Assurance Program Plan (QAPP), Environmental Compliance Services, Inc.'s approved SSWP and Annual Contractor Quality Assurance Plan (ACQAP), and in compliance with all applicable regulations. A copy of the current revision of the Agency UST QAPP is available at <http://www.scdhec.gov/Environment/LW/UST/ReleaseAssessmentClean-up/QualityAssurance/>.

Groundwater sampling activities at the site should begin immediately upon receipt of this letter. Cost agreement # 50870 has been approved for the amount shown on the enclosed cost agreement form for sampling of all monitoring wells, water supply wells, or surface water locations associated with the referenced release. Groundwater samples should be collected and analyzed for BTEX, naphthalene, MtBE, 1,2 DCA, 8 oxygenates, and EDB.

**The Contractor must provide the UST Project Manager with a Project Status Report on a weekly basis via e-mail or notify the UST Project Manager via email 4 days prior to initiation of any site rehabilitation activity(ies). If there are any changes or conflicts with the date(s) of site activities, the UST Project Manager must be contacted within 24 hours of those changes.**

**The Monitoring Report, contractor checklist (QAPP Appendix K), and invoice are due within 60 days from the date of this letter.** The report submitted at the completion of these activities should include the required information outlined in the QAPP. Please note that all applicable South Carolina certification requirements apply to the services and report preparation. All site rehabilitation activities must be performed and submitted by a South Carolina Certified Underground Storage Tank Site Rehabilitation Contractor.

Environmental Compliance Services, Inc. can submit an invoice for direct payment from the State Underground Petroleum Environmental Response Bank (SUPERB) Account for pre-approved costs. By law, the SUPERB Account cannot compensate any costs that are not pre-approved. Please note that applicable South Carolina certification requirements regarding laboratory services and report preparation must be satisfied. If the invoice is not submitted within 120 days from the date of this letter, monies allocated to pay this invoice will be uncommitted. This means that the invoice will not be processed for payment until all other committed funds are paid or monies become available.

Please note that Sections 44-2-110(4) and 44-2-130 of the SUPERB Statute state that no costs will be allowed unless prior approval from the Agency is obtained. If for any reason additional tasks will be completed, these additional tasks and the associated cost must be pre-approved by the Agency for the cost to be paid. The Agency reserves the authority to pay only for work properly performed and/or technically justified and will only pay rates in accordance with established criteria. Further, the Agency reserves the right to question and/or reject costs if deemed unreasonable and the right to audit project records at any time during the project or after completion of work.

Please note, if unnecessary dilutions are completed resulting in reporting limits of individual chemicals of concern (CoC) in excess of Risk-Based Screening Levels (RBSLs), the data cannot be used. In those cases, the Division may deny payment for any non-detect analysis where the reporting limit exceeds the RBSL. The UST Management Division encourages the use of 'J' values as necessary so the appropriate action can be determined for a release.

The Agency grants pre-approval for transportation of virgin petroleum impacted soil and groundwater from the referenced site to a permitted treatment facility. The transport and disposal must be conducted in accordance with the QAPP. If the CoC concentrations based on laboratory analysis are below RBSLs, please contact the project manager for approval to dispose of soil and/or groundwater on site. The SUPERB Account will not reimburse for transportation or treatment of soil and/or groundwater with concentrations below RBSLs.

On all correspondence regarding this site, please reference UST Permit # 07960. If you have any questions regarding this correspondence, please contact me by telephone at (803) 898-0610, by fax at (803) 898-0673, or by e-mail at [hetricml@dhec.sc.gov](mailto:hetricml@dhec.sc.gov).

Sincerely,

Matthew L. Hetrick, Hydrogeologist

## 1.0 INTRODUCTION

This report presents the results of the groundwater sampling activities conducted at the 378 Truck Stop site between November 9 and 13, 2015. The activities were conducted in accordance with the Underground Storage Tank (UST) Quality Assurance Program Plan (QAPP) Revision 2.0, and Cost Agreement Number 50870 as approved by the South Carolina Department of Health and Environmental Control (SCDHEC) in correspondence dated September 11, 2015.

### 1.1 SITE INFORMATION

**UST Facility Name:** 378 Truck Stop  
**UST Permit Number:** 07960  
**Facility Address:** 731 Highway 378  
Edgefield, South Carolina  
**Telephone Number:** Unknown

### 1.2 UST OWNER/OPERATOR

**Name:** Wilkerson Fuel Company, Inc.  
**Address:** Post Office Box 2835  
Rock Hill, South Carolina  
**Telephone Number:** (803) 324-4080

### 1.3 PROPERTY OWNER INFORMATION

**Name:** Gail and Barbara Whitmer  
**Address:** 1226 Highway 378 East  
Edgefield, South Carolina 29824  
**Telephone Number:** Unknown

### 1.4 DHEC CERTIFIED UST SITE REHABILITATION CONTRACTOR INFORMATION

**Name:** Environmental Compliance Services, Inc. (ECS)  
**Address:** 2764 Pleasant Road #11420  
Fort Mill, South Carolina 29708 -7299  
**Telephone Number:** (800) 627-0493  
**Certification Number:** 358

### 1.5 SITE HISTORY

**UST Permit:** 07960  
**Site Name:** 378 Truck Stop  
**Date Release Reported to SCDHEC:** October 3, 1974, date confirmed July 8, 1996  
**Estimated Quantity of Product Released:** Not reported  
**Cause of Release:** UST system  
**SC RBCA Classification Code:** 2AA

**UST Permit #07960**

| <b>UST #</b> | <b>Size (gallons)</b> | <b>Product</b> | <b>Date Installed</b> | <b>Status</b>        | <b>Date Closed</b> |
|--------------|-----------------------|----------------|-----------------------|----------------------|--------------------|
| 1            | 550                   | Diesel         | Unknown               | Abandoned by Removal | 1/1/1987           |
| 2            | 1,000                 | Gasoline       | Unknown               | Abandoned by Removal | 1/1/1987           |
| 3            | 2,000                 | Gasoline       | Unknown               | Abandoned by Removal | 1/1/1987           |

The site was not in use at the time of the corrective action and groundwater sampling activities summarized in this report. An abandoned building was present onsite during our visits associated with the site activities. A concrete slab was located directly to the east of, and abutting, the onsite building. A release at the site was reported on October 3, 1974 and was confirmed on July 8, 1996. Reportedly, one 550-gallon diesel UST, one 1,000-gallon gasoline UST, one 2,000-gallon UST, their associated piping, and dispensers were removed from the site on January 1, 1987. The site did not contain USTs at the time of this report. A Site Locus map showing surrounding properties has been included as **Figure 1**. A Site Plan has been included as **Figure 2**.

**1.6 REGIONAL GEOLOGY/HYDROGEOLOGY**

The area is located in the Carolina Terrane of the Piedmont Physiographic Province. The Carolina Terrane consists of upper Precambrian to Cambrian greenschist facies metasedimentary and metavolcanic rocks intruded by numerous granitic and gabbroic plutons ranging in age from 265 to 650 million years. A mantle of residual soil and saprolite is reported to typically overlie the crystalline rocks of the Carolina Terrane. The thickness of the mantle ranges from approximately six to 60 feet, although it apparently is absent in places and thicker than 60 feet in others. The surface layers are reported to be composed chiefly of sandy clay. The clay content of most saprolites typically ranges from 10 to 25 percent, with some containing as little as three percent and others as much as 70 percent.

The mantle that covers the underlying fractured bedrock in most places provides an intergranular medium through which recharge into, and discharge of water from, the fractured rocks commonly occur. As a result, groundwater flow has been reported to occur within a composite two-media system. The top of the system has been the water table surface, which has been typically located within the saprolite. The fractured bedrock is expected to generally grade downward into unfractured rock below a depth of approximately 300 feet. The base of the groundwater system is therefore indistinct.

## **2.0 RECEPTOR SURVEY & SITE DATA**

### **2.1 RECEPTOR SURVEY**

A receptor survey was conducted within a 1,000 foot radius of the subject site during the May 2010 Tier I assessment activities. The 378 Truck Stop site was located in a predominantly residential area in Edgefield County. Properties directly surrounding the site were open fields. Nearby properties were mainly open fields and residences. A volunteer fire department station was located on the corner of Highway 378 and Faulkner Mountain Road.

At the time of the May 2010 Tier II, municipal water was not provided to the area. Multiple private water supply wells were identified during the Tier I receptor survey and were subsequently plotted on a site vicinity map. A comprehensive survey which included the private water supply wells, conducted during Tier II assessment activities, resulted in multiple changes to the site vicinity map.

### **2.2 SITE GEOLOGY/HYDROGEOLOGY**

During the Tier I the project area was underlain at shallow depths by light brown silt and silty clay. Rock and partially weathered rock were encountered below the silt and clay at varying depths throughout the study area. Partially weathered rock was first encountered at depths ranging from approximately 26 feet below land surface (bls) (07960-MW18 and 07960-MW27) to 50 feet bls (07690-TW9) across the subject area. Overall, partially weathered rock was first encountered at or below a depth of 30 feet bls onsite and in locations south of the site. Partially weathered rock was first encountered at more shallow depths in locations west, southwest, and southeast of the site. Rock was first encountered at depths ranging from approximately 30 feet bls (07960-MW8) to 68 feet bls (07690-TW3) across the subject area. The depths to rock observed during shallow monitoring well installation varied from approximately 30 feet bls to 39 feet bls. Overall, rock was encountered a bit deeper onsite and south of the site as compared to other areas (north, east, west, southwest, and southeast). Depths to rock were observed at shallower depths (between 32 and 35 feet bls) during telescoping well installation in areas southwest and southeast of the site, as compared to telescoping wells installed onsite and in areas south of the site. The largest discrepancy was observed at telescoping well 07690-TW3, located southwest of the site, where rock was not encountered until a depth of 68 feet bls.

The percentages of gravel, sand, and silt/clay in a soil sample collected during Tier I well installation activities from monitoring well 07960-MW3 at a depth of 40 feet below grade were 10.0%, 39.8%, and 50.1%, respectively. The percentages of gravel, sand, silt, and clay in a soil sample collected during Tier II well installation activities from 07960-MW12 at a depth of 30 feet below grade were 4.1%, 27.5%, 50.7%, and 17.7%, respectively. A soil sample was proposed for collection during installation of monitoring well 07690-TW5 at a depth within the well's screened interval. This sample was subsequently collected at a depth of 55 feet below grade. Following discussions with SCDHEC, the sample was not submitted for laboratory grain size analysis, as this sample consisted mainly of pulverized rock particles from the well drilling process.

### 3.0 ASSESSMENT INFORMATION

#### 3.1 SOIL ASSESSMENT

Soil assessment was not required for the scope of work outlined in the September 11, 2015 directive.

#### 3.2 GROUNDWATER FIELD SCREENING

Groundwater field screening was not required for the scope of work outlined in the September 11, 2015 directive.

#### 3.3 MONITORING WELL INFORMATION

Monitoring wells installation was not required for the scope of work outlined in the September 11, 2015 directive.

##### 3.3.1 Water Level Measurements

Forty-one monitoring wells (07960-MW1 through 07960-MW31, 07960-TW1 through 07960-TW9, and 07960-RW1) were gauged for depths to groundwater and total well depths on November 9, 2015.

The groundwater elevations measured in the shallow monitoring wells, relative to a temporary benchmark ranged from 89.25 feet (07960-MW17) to 72.16 feet (07960-MW8). Based on these data, the groundwater flow direction beneath the site was generally toward the northwest in the northern portion of the site, and to the south in the central portion of the site. Groundwater mounds with radial groundwater flow are located near 07960-MW1 and 07960-MW17. A groundwater low is located near 07960-MW8.

The horizontal hydraulic gradient was estimated based on the change in hydraulic head per unit distance, calculated by using the formula  $i = (h_2 - h_1)/d$ , referenced from the “EPA On-line Tools for Site Assessment Calculation” website. In this calculation,  $i$  is the gradient,  $h$  is the hydraulic head at the up gradient monitoring well ( $h_1$ ) and down gradient monitoring well ( $h_2$ ), and  $d$  is the distance between the down gradient monitoring well and the up gradient monitoring well. The horizontal hydraulic gradient was 0.0108 ft/ft between monitoring wells 07960-MW3 and 07960-MW26, and 0.0621 ft/ft between monitoring wells 07960-MW1 and 07960-MW20. Historical groundwater elevation data is presented in **Table 2**. A groundwater elevation map for site monitoring wells is included as **Figure 5**.

The groundwater elevations in adjacent (paired) shallow and telescoping monitoring wells were used to calculate the vertical gradient. The vertical gradient was calculated using the formula  $dh/dl = (h_2 - h_1) / (z_2 - z_1)$ , referenced from the “EPA On-line Tools for Site Assessment Calculation” website. In this calculation, the vertical hydraulic gradient is the difference in head divided by the vertical distance of mid-points of the screened intervals between wells. The vertical hydraulic gradient between monitoring well pair 07960-MW3 and 07960-TW2 was 0.05478 ft/ft in the downward direction. The vertical hydraulic gradient between monitoring well pair 07960-MW16 and 07960-TW6 was 0.007025 ft/ft in the upward direction.

### 3.3.2 Water Sampling and Analyses

Forty-one monitoring wells (07960-MW1 through 07960-MW31, 07960-TW1 through 07960-TW9, and 07960-RW1) were purged and sampled between November 9 and 12, 2015. Shallow monitoring wells were purged and sampled using a new, disposable polyethylene bailer while wearing new, disposable nitrile gloves. Monitoring wells 07960-TW1 through 07960-TW9 were purged using a decontaminated submersible pump, new lanyard, disposable polyethylene tubing while wearing new, disposable nitrile gloves. Purging was accomplished by removing three to five well volumes and in-field groundwater quality parameters were stabilized or until the well was bailed dry and allowed to recharge.

Granular Activated Carbon (GAC) units have been installed at 07960-WSW1 and 07960-WSW8 to remove dissolved petroleum hydrocarbon compounds from drinking water.

Seventeen water supply well samples (07960-WSW1 Pre GAC, 07960-WSW1 Post GAC, 07960-WSW2, 07960-WSW3, 07960-WSW4, 07960-WSW5, 07960-WSW6, 07960-WSW7, 07960-WSW8 Pre GAC, 07960-WSW8 Post GAC, 07960-WSW9, 07960-WSW10, 07960-WSW11, 07960-WSW12, 07960-WSW13, 07960-WSW14, and 07960-WSW15) were purged and sampled on November 10, 2015. Water supply wells were purged for approximately 10 minutes with in-place pumps and samples were collected from building exterior spigots.

Groundwater samples collected were containerized in laboratory-prepared glass bottles, packed on ice, and transported to Pace Analytical Services, Inc. (Huntersville, NC), a South Carolina certified laboratory. Standard chain-of-custody procedures were maintained, as documented in **Appendix B**.

A duplicate sample identified as 07960-Dup1 was collected from 07960-MW31 within 5 minutes of 07960-MW31 groundwater sample collection. A duplicate sample identified as 07960-Dup2 was collected from 07960-MW12 within 5 minutes of 07960-MW12 groundwater sample collection. A duplicate sample identified as 07960-Dup 3 was collected from 07960-MW3 within 5 minutes of 07960-MW3 groundwater sample collection. Duplicate samples were assigned a unique identification name with no time listed on the chain of custody to avoid potential laboratory analytical bias. The duplicate samples were identified in the field book. Three field blanks were also collected, one each day, during water sampling activities for quality assurance and quality control. Four sets of trip blanks, one set for each cooler, were included for quality assurance and quality control.

Sixty-seven water samples (41 monitoring wells, 17 private water supply well samples, three duplicates, four field blanks, and two trip blanks) were analyzed for benzene, toluene, ethylbenzene, total xylenes (collectively referred to as BTEX compounds), naphthalene, 1,2-dichloroethane (1,2-DCA), methyl tertiary butyl ether (MTBE), tertiary amyl alcohol (TAA), tertiary amyl methyl ether (TAME), tertiary butyl alcohol (TBA), tertiary butyl formate (TBF), diisopropyl ether (DIPE), ethanol, ethyl tertiary butyl ether (ETBE), and 3,3-dimethyl-1-butanol by Environmental Protection Agency (EPA) Method 8260. Sixty-five water samples (41 monitoring wells, 17 private water supply well samples), three duplicates, and four field blanks) were analyzed for ethylene dibromide (EDB) by EPA Method 8011.

### 3.3.3 Groundwater Analytical Data

Analytical results were compared to the Risk-Based Screening Levels (RBSLs), as defined in Appendix D of SCDHEC, Bureau of Land and Waste Management, UST Management Division, Programmatic QAPP, Revision 3.0, May 2015, Table D1: *RBSLs for Groundwater* and the Action

Levels (ALs), as defined in Appendix D of SCDHEC, Bureau of Land and Waste Management, UST Management Division, Programmatic QAPP, Revision 3.0, May 2015, Table D2: *Action Levels for Groundwater (Oxygenates)*.

Groundwater samples collected from monitoring wells 07960-MW1, 07960-MW2, 07960-MW3, 07960-MW7, 07960-MW12, 07960-MW13, 07960-MW16, 07960-MW22, 07960-MW29, 07960-MW30, 07960-MW31, 07960-RW1, and 07960-TW1 were reported with one or more select dissolved petroleum hydrocarbon constituents above their respective RBSL/AL.

Compounds reported above their respective RBSL/AL included benzene, toluene, ethylbenzene, total xylenes, naphthalene, EDB, 1,2-DCA, and/or TAA .

Dissolved petroleum hydrocarbons were not detected in excess of their respective RBSL/ALs in the water supply wells, field blanks, or trip blanks from this groundwater sampling event. Compound 1,2-DCA was detected in 07960-WSW1 Pre GAC, but not Post GAC.

Historical groundwater analytical data for dissolved petroleum constituents are presented in **Table 3**. Groundwater quality maps based on the November 2015 data are included as **Figure 4A** (for shallow monitoring wells) and **Figure 4B** (private water supply wells and deep telescoping wells). Groundwater Sampling Field Data Sheets have been included in **Appendix B**. The laboratory reports for groundwater samples collected during this assessment are included in **Appendix B**. A quality assurance and quality control evaluation is also included in **Appendix B**.

#### 3.3.4 Aquifer Characterization

Aquifer characteristic determinations were not required for the scope of work outlined in the September 11, 2015 directive.

### 3.4 INVESTIGATIVE DERIVED WASTE

Investigative derived waste (IDW) generated during these activities was placed in 55-gallon drums for disposal by a licensed facility. A copy of the disposal manifest is included as **Appendix G**.

## **4.0 SUMMARY CONCLUSIONS AND RECOMMENDATIONS**

### **4.1 SUMMARY**

- Forty-one monitoring wells (07960-MW1 through 07960-MW31, 07960-TW1 through 07960-TW9, and 07960-RW1) were gauged for depths to groundwater and total well depths on November 9, 2015.
- Forty-one monitoring wells (07960-MW1 through 07960-MW31, 07960-TW1 through 07960-TW9, and 07960-RW1) were purged and sampled between November 9 and 12, 2015.
- Groundwater samples collected from monitoring wells 07960-MW1, 07960-MW2, 07960-MW3, 07960-MW7, 07960-MW12, 07960-MW13, 07960-MW16, 07960-MW22, 07960-MW29, 07960-MW30, 07960-MW31, 07960-RW1, and 07960-TW1 were reported with one or more select dissolved petroleum hydrocarbon constituents above their respective RBSL/AL.
- Seventeen water supply well samples (07960-WSW1 Pre GAC, 07960-WSW1 Post GAC, 07960-WSW2, 07960-WSW3, 07960-WSW4, 07960-WSW5, 07960-WSW6, 07960-WSW7, 07960-WSW8 Pre GAC, 07960-WSW8 Post GAC, 07960-WSW9, 07960-WSW10, 07960-WSW11, 07960-WSW12, 07960-WSW13, 07960-WSW14, and 07960-WSW15) were purged and sampled on November 10, 2015.
- There was no free product observed in the wells gauged on November 10, 2015.

### **4.2 CONCLUSIONS**

- Groundwater flow direction beneath the site was generally toward the northwest in the northern portion of the site, and to the south in the central portion of the site. Groundwater mounds with radial groundwater flow are located near 07960-MW1 and 07960-MW17. A groundwater low is located near 07960-MW8.
- The presence of benzene, 1,2-DCA, and TAA in excess of RBSL/ALs in 07960-TW1 indicates that the vertical definition of the dissolved petroleum hydrocarbon plume has not been defined in that area.
- Compound 1,2-DCA was detected in 07960-WSW1 Pre GAC, but not Post GAC indicating that the GAC unit is effective in removing dissolved petroleum hydrocarbons from this well.

### **4.3 RECOMMENDATIONS**

- ECS recommends conducting a 96-hour AFVR event targeting 07960-MW22, which has the highest concentration of dissolved petroleum hydrocarbons.
- ECS recommends the installation of an additional telescoping well near 07960-TW1 to define the vertical extent of the dissolved petroleum hydrocarbon plume.

## 5.0 LIMITATIONS

This report has been prepared for the exclusive use of Wilkerson Fuel Company for specific application to the referenced site in Edgefield County, South Carolina. The assessment was conducted based on the scope of work and level of effort desired by the SCDHEC and with resources adequate only for that scope of work. Our findings have been developed in accordance with generally accepted standards of geology and hydrogeology practices in the State of South Carolina, available information, and our professional judgment. No other warranty is expressed or implied.

The data that are presented in this report are indicative of conditions that existed at the precise locations sampled and at the time the samples were collected. Additionally, the data obtained from samples would be interpreted as being meaningful with respect to parameters indicated in the laboratory report. No additional information can logically be inferred from these data.

Certain data contained in this report were not obtained under the supervision of ECS. Although the accuracy of these data cannot be verified, for the purposes of this report, ECS assumes that they are correct.

### 5.1 DATA VERIFICATION

The Project Verifier/Quality Assurance Manager has reviewed this report and provided any additional comments if applicable in **Appendix K**.

Notes:

Elevations relative to a temporary benchmark with an assumed datum of 100.00 feet above mean sea level; data reported in feet.

Groundwater elevations adjusted for the presence of free product, where present, with an assumed density of 0.75 g/cm<sup>3</sup>.

May 2010 survey data collected by Environmental Compliance Services, Inc. during Tier I assessment activities.

Subsequent October and December 2010 survey data provided by Pittman Professional Land Surveying.

07960-MW20 installed with a 3 ft stickup riser.

Notes: Results reported in µg/L.  
 Analyses for BTEX compounds, MTBE, naphthalene, and 1,2-DCA, ethanol and the oxygenates by EPA Method 8260B; EDB by EPA Method 8011; total lead by EPA Method 6010.  
 <= Less than the reporting limit specified in the laboratory report.  
 Concentrations in **BOLD** face type exceeded the RBSL / AL.  
 NR - Analyses not requested.  
 J - Estimated value below the laboratory reporting limit.  
 RBSL - Risk-Based Screening Levels as defined in Appendix D of SCDHEC, Bureau of Land and Waste Management, UST Management Division, Programmatic QAPP, Revision 3.0, May 2015, Table D1: RBSLs for Groundwater  
 AL - Action Levels as defined in Appendix D of SCDHEC, Bureau of Land and Waste Management, UST Management Division, Programmatic QAPP, Revision 3.0, May 2015, Table D2: Action Levels for Groundwater (Oxygenates).

**General Notes:**

All locations, dimensions, and property lines depicted on this plan are approximate. This information should not be used for construction or land conveyance purposes.

All concentrations are measured in micrograms per liter (ug/L).

Groundwater samples collected on 11/9/15 & 11/12/15.

Above concentrations represent May 2001 Risk-Based Screening Levels & August 2008 Action Levels. Concentrations in bold face type exceeded the RBS/Action Level.

<1.0 - Less than the laboratory specified reporting limit.

J - Estimated value between the method detection limit and the laboratory reporting limit.

ND - Conc Not Detected

- (88.45) Groundwater Elevation
- (80.81) Telescoping Wells Groundwater Elevation
- Water Table Contour (Obtain where Inferred)
- 76' Flow Direction Indicator

**General Notes:**

All locations, dimensions, and property lines depicted on this plan are approximate. This plan should not be used for construction or land conveyance purposes.

Groundwater elevations are relative to a temporary benchmark, with an assumed datum of 100.00 feet above mean sea level.

Groundwater elevations are based on measurements made on 11/9/15.

Water table contours and flow directions assume homogeneous, isotropic aquifer conditions and horizontal flow.

Fluctuations in the level of the water table may occur due to factors not accounted for at the time of measurement.

Water table contours are interpolated between data points and inferred in other areas.

Telescoping Wells Groundwater Elevation was not used to determine groundwater flow

RE: Project: 378 TRUCK STOP 14-214210  
Pace Project No.: 92276154

Dear Noelle France:

Enclosed are the analytical results for sample(s) received by the laboratory on November 13, 2015. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

Analyses were performed at the Pace Analytical Services location indicated on the sample analyte page for analysis unless otherwise footnoted.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Taylor Ezell  
taylor.ezell@pacelabs.com  
Project Manager

## QUALIFIERS

Project: 378 TRUCK STOP 14-214210

Pace Project No.: 92276154

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether, Styrene, and Vinyl chloride.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### LABORATORIES

PASI-C Pace Analytical Services - Charlotte

### ANALYTE QUALIFIERS

- D6 The relative percent difference (RPD) between the sample and sample duplicate exceeded laboratory control limits.
- L0 Analyte recovery in the laboratory control sample (LCS) was outside QC limits.
- L3 Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples. Results unaffected by high bias.
- M0 Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.
- M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
- P5 The EPA or method required sample preservation degrades this compound, therefore acceptable recoveries may not be achieved in sample matrix spikes.
- S4 Surrogate recovery not evaluated against control limits due to sample dilution.

### REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,  
without the written consent of Pace Analytical Services, Inc..

Document Name: **Sample Condition Upon Receipt (SCUR)**

Document Number:  
**F-CHR-CS-003-rev.16**

Document Revised: May 10, 2010

Page 1 of 2\*

Issuing Authority:

Pace Huntersville Quality Office

Client Name: FCS

\* Page 2 of 2 is for Internal Use Only

Courier:  Fed Ex  UP  USP  Clier  Commercial  Pace  Other \_\_\_\_\_

Custody Seal on Cooler/Box Present:  yes  no Seals intact:  yes  no

Packing Material:  Bubble Wrap  Bubble Bags  None  Other \_\_\_\_\_

Thermometer Used: IR Gun T1402 Type of Ice: Wet Blue None  Samples on ice, cooling process has begun

Temp Correction Factor **T1402** No Correction

Corrected Cooler Temp.: 3.2 °C

Biological Tissue is Frozen: Yes No N/A

Date and Initials of person examining contents: AP (11/13/16)

Temp should be above freezing to 6°C

RE: Project: 378 Truck Stop  
Pace Project No.: 92276240

Dear Noelle France:

Enclosed are the analytical results for sample(s) received by the laboratory on November 16, 2015. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

Analyses were performed at the Pace Analytical Services location indicated on the sample analyte page for analysis unless otherwise footnoted.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Taylor Ezell  
taylor.ezell@pacelabs.com  
Project Manager

## QUALIFIERS

Project: 378 Truck Stop  
Pace Project No.: 92276240

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether, Styrene, and Vinyl chloride.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### LABORATORIES

PASI-C Pace Analytical Services - Charlotte

### ANALYTE QUALIFIERS

D6 The relative percent difference (RPD) between the sample and sample duplicate exceeded laboratory control limits.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

P5 The EPA or method required sample preservation degrades this compound, therefore acceptable recoveries may not be achieved in sample matrix spikes.

S4 Surrogate recovery not evaluated against control limits due to sample dilution.

| This is to certify that all non-hazardous material removed from above location has been received and will be disposed of in accordance with applicable local, state and federal regulations in the following manner: (1) Petroleum products are blended into a beneficial reusable fuel for use in large industrial burners. (2) Waste waters are to be treated with polymers, pH adjusters, and a flocculant, then flows through a dissolved air flotation system for pretreatment separation, then into the CMUD sanitation sewer system under permit IUP#5012. (3) Sludges from treatment systems are hauled to E.P.A. approved facilities for proper disposal. Manifest and certificate of disposal are on file. (4) Our treatment system operates on a first in, first out basis and product should be processed within seven days. |   |                 |                              |

Data Verification Checklist

## Contractor Checklist

For each report submitted to the UST Management Division, the contractor will be required to verify that all data elements for the required scope of work have been provided. For items not required for the scope of work, the N/A box should be checked. For items required and not completed or provided, the No box should be checked and a thorough description of the reason must be provided.

| Item # | Item   | Yes | No | N/A |
|--------|--|-----|----|-----|
| 1      | Is Facility Name, Permit #, and address provided?  | ✓   |    |     |
| 2      | Is UST Owner/Operator name, address, & phone number provided?  | ✓   |    |     |
| 3      | Is name, address, & phone number of current property owner provided?   | ✓   |    |     |
| 4      | Is the DHEC Certified UST Site Rehabilitation Contractor's Name, Address, telephone number, and certification number provided?             | ✓   |    |     |
| 5      | Is the name, address, telephone number, and certification number of the well driller that installed borings/monitoring wells provided?     |     |    | ✓   |
| 6      | Is the name, address, telephone number, and certification number of the certified laboratory(ies) performing analytical analyses provided? | ✓   |    |     |
| 7      | Has the facility history been summarized?  | ✓   |    |     |
| 8      | Has the regional geology and hydrogeology been described?  | ✓   |    |     |
| 9      | Are the receptor survey results provided as required?  |     |    | ✓   |
| 10     | Has current use of the site and adjacent land been described?  | ✓   |    |     |
| 11     | Has the site-specific geology and hydrogeology been described?   |     |    | ✓   |
| 12     | Has the primary soil type been described?  |     |    | ✓   |
| 13     | Have field screening results been described?   |     |    | ✓   |
| 14     | Has a description of the soil sample collection and preservation been detailed?  |     |    | ✓   |
| 15     | Has the field screening methodology and procedure been detailed?   |     |    | ✓   |
| 16     | Has the monitoring well installation and development dates been provided?  |     |    | ✓   |
| 17     | Has the method of well development been detailed?  |     |    | ✓   |
| 18     | Has justification been provided for the locations of the monitoring wells?   |     |    | ✓   |
| 19     | Have the monitoring wells been labeled in accordance with the UST QAPP guidelines?   | ✓   |    |     |
| 20     | Has the groundwater sampling methodology been detailed?  | ✓   |    |     |
| 21     | Have the groundwater sampling dates and groundwater measurements been provided?  | ✓   |    |     |
| 22     | Has the purging methodology been detailed?   | ✓   |    |     |
| 23     | Has the volume of water purged from each well been provided along with measurements to verify that purging is complete?                    | ✓   |    |     |
| 24     | If free-product is present, has the thickness been provided?   |     |    | ✓   |
| 25     | Does the report include a brief discussion of the assessment done and the results?   |     |    | ✓   |
| 26     | Does the report include a brief discussion of the aquifer evaluation and results?  |     |    | ✓   |
| 27     | Does the report include a brief discussion of the fate & transport models used?  |     |    | ✓   |

| Item # | Item   | Yes | No | N/A |
|--------|--|-----|----|-----|
| 28     | Are the site-conceptual model tables included? (Tier 1 Risk Evaluation)  |     |    | ✓   |
| 29     | Have the exposure pathways been analyzed? (Tier 2 Risk Evaluation)   |     |    | ✓   |
| 30     | Have the SSTLs for each compound and pathway been calculated? (Tier 2 Risk Evaluation)   |     |    | ✓   |
| 31     | Have recommendations for further action been provided and explained?   | ✓   |    |     |
| 32     | Has the soil analytical data for the site been provided in tabular format? (Table 1)   |     |    | ✓   |
| 33     | Has the potentiometric data for the site been provided in tabular format? (Table 2)  | ✓   |    |     |
| 34     | Has the current and historical laboratory data been provided in tabular format?  | ✓   |    |     |
| 35     | Have the aquifer characteristics been provided and summarized on the appropriate form?   |     |    | ✓   |
| 36     | Have the Site conceptual model tables been included? (Tier 1 Risk Evaluation)  |     |    | ✓   |
| 37     | Has the topographic map been provided with all required elements? (Figure 1)   | ✓   |    |     |
| 38     | Has the site base map been provided with all required elements? (Figure 2)   | ✓   |    |     |
| 39     | Have the CoC site maps been provided? (Figure 3 & Figure 4)  | ✓   |    |     |
| 40     | Has the site potentiometric map been provided? (Figure 5)  | ✓   |    |     |
| 41     | Have the geologic cross-sections been provided? (Figure 6)   |     |    | ✓   |
| 42     | Have maps showing the predicted migration of the CoCs through time been provided? (Tier 2 Risk Evaluation)                             |     |    | ✓   |
| 43     | Has the site survey been provided and include all necessary elements? (Appendix A)   |     |    | ✓   |
| 44     | Have the sampling logs, chain of custody forms, and the analytical data package been included with all required elements? (Appendix B) | ✓   |    |     |
| 45     | Is the laboratory performing the analyses properly certified?  | ✓   |    |     |
| 46     | Has the tax map been included with all necessary elements? (Appendix C)  |     |    | ✓   |
| 47     | Have the soil boring/field screening logs been provided? (Appendix D)  |     |    | ✓   |
| 48     | Have the well completion logs and SCDHEC Form 1903 been provided? (Appendix E)   |     |    | ✓   |
| 49     | Have the aquifer evaluation forms, data, graphs, equations, etc. been provided? (Appendix F)   |     |    | ✓   |
| 50     | Have the disposal manifests been provided? (Appendix G)  | ✓   |    |     |
| 51     | Has a copy of the local zoning regulations been provided? (Appendix H)   |     |    | ✓   |
| 52     | Has all fate and transport modeling been provided? (Appendix I)  |     |    | ✓   |
| 53     | Have copies of all access agreements obtained by the contractor been provided? (Appendix J)  |     |    | ✓   |
| 54     | Has a copy of this form been attached to the final report and are explanations for any missing or incomplete data been provided?       | ✓   |    |     |

- \* SSTL for Benzene in MW-1, MW-7, RW-1, and TW-1 will revert to solubility limits for benzene
- \* SSTL for Toluene in all wells will revert to solubility limit for Toluene: 26,540 ug/L. 44,390 ug/L
- \* SSTL for Ethylbenzene in all wells will revert to solubility limit for Ethylbenzene: 3,700 ug/L.
- \* SSTL for Xylenes in all wells will revert to solubility limit for Xylenes: 21,680 ug/L.
- \* SSTL for MtBE in MW-1, RW-1, and TW-1 will revert to solubility limit for MtBE: 173,000 ug/L.
- \* SSTL for Naphthalene in MW-1, MW-2, MW-3, MW-7, MW-16, MW-29, RW-1, and TW-1 will revert to solubility limit for Naphthalene: 6,700 ug/L.

Re: **Site-Specific Work Plan Directive for GAC sampling**  
378 Truck Stop, 731 Hwy. 378, Edgefield, SC  
**UST Permit # 07960**  
Release reported October 3, 1974  
Monitoring Report received December 15, 2015  
Edgefield County

Dear Mr. Lowder:

The Underground Storage Tank (UST) Division of the South Carolina Department of Health and Environmental Control (Agency) has reviewed the referenced report. The report indicates the presence of chemicals of concern (CoCs) in the groundwater.

To ensure a clean source of drinking water, in accordance with Section 280.65 of the South Carolina Underground Storage Tank Control Regulations, implementation of a Granular Activated Carbon (GAC) Unit sampling and filter change event as outlined in the UST Quality Assurance Program Plan (QAPP) is necessary. This scope of work should be conducted on the Gordon Residence water supply well located at 724 Hwy. 378, Edgefield, SC, and at the Scurry Residence water supply well located at 730 Hwy. 378, Edgefield, SC, in accordance with the UST QAPP and in compliance with all applicable regulations. Mr. Sydney Gordon can be contacted at telephone number (803) 637-5266 and Ms. Hattie Scurry can be contacted at telephone number (803) 637-5793. Pre-and post- GAC samples should be collected prior to the filter change and analyzed for BTEX, Naphthalene, MTBE, 1,2-DCA, the Oxygenates, Ethanol, and EDB. A duplicate sample and field and trip blanks should be included. The Site-Specific Work Plan must be prepared using the format as outlined on-line at <http://www.scdhec.gov/Environment/LW/UST/ReleaseAssessmentClean-up/QualityAssurance/>

Please complete and submit the Site-Specific Work Plan and Cost Agreement to the UST Division within fifteen (15) days of the date of this letter. Every component may not be necessary to complete the above scope of work. The State Underground Petroleum Environmental Response Bank (SUPERB) Account allowable cost for each component is included on the Assessment Component Cost Agreement Form. Please note that technical and financial pre-approval from the Agency must be issued before work begins.

On all correspondence regarding this site, please reference UST Permit #07960. If you have question or need additional information, feel free to contact me by telephone at (803) 898-0610, by fax at (803) 898-0673, or by e-mail to [hetricml@dhec.sc.gov](mailto:hetricml@dhec.sc.gov).

Sincerely,

Matthew L. Hetrick, Hydrogeologist

Mr. Hetrick,

Please find the attached Site Specific Work Plan and example chain of custody for pre and post granular activated carbon filter (GAC) sampling. These GACs are associated with the Gordon and Scurry residences located outside Edgefield, SC. The sampling will take place prior to a carbon filter change. If you have any questions or concerns please feel free to contact Emerald, Inc. at 803-469-5454.

Sincerely,

Free Phase Product:                      Gallons

**Additional Details For This Scope of Work**

For example, list wells to be sampled, wells to be abandoned/repared, well pads/bolts/caps to replace, details of AFVR event, etc.

The subject site (378 Truck Stop) is located at 731 US Highway 378 outside Edgefield, SC. Two nearby water supply well (Gordon and Scurry Wells) have been impacted by petroleum contamination. The Gordon well (724 US Hwy 378) and Scurry well (730 US Hwy 378) have been attached to a granular activated carbon filter (GAC) to aid in removal of petroleum contaminants. Prior to a carbon change of the GAC units, samples will be collected before filtering and after passing through the GAC filter (before entering residence). The duplicate sample will be collected from the Pre-GAC sampling port of the Scurry Well. This work will be conducted under Solicitation #IFB-54200005822-5/3/13-EMW and PO #4600346242. The samples will be collected after opening the spigot for approximately 10 minutes or until the well pump turns on. Samples will be collected by allowing the well water to pour directly into laboratory supplied sampling containers.

**Compliance With Annual Contractor Assurance Plan (ACQAP)**

**Yes** Laboratory as indicated in ACQAP (Yes/No) If no, indicate laboratory information below.

Name of Laboratory: \_\_\_\_\_

1. Attach a copy of the relevant portion of the USGS topographic map showing the site location.

2. Prepare a site base map. This map must be accurately scaled, but does not need to be surveyed. The map must include the following:

- |                                    |   |
|------------------------------------|---|
| North Arrow                        | Proposed monitoring well locations                                      |
| Location of property lines         | Legend with facility name and address, UST permit number, and bar scale |
| Location of buildings              | Streets or highways (indicate names and numbers)                        |
| Previous soil sampling locations   | Location of all present and former ASTs and USTs                        |
| Previous monitoring well locations | Location of all potential receptors                                     |
| Proposed soil boring locations     |   |

3. Assessment Component Cost Agreement, SCDHEC Form D-3664

## CHAIN-OF-CUSTODY / Analytical Request Document

The Chain-of-Custody is a LEGAL DOCUMENT. All relevant fields must be completed accurately.

Re: Notice to Proceed-GAC Change and Groundwater Sample Collection  
378 Truck Stop, 731 Hwy. 378, Edgefield, SC  
**UST Permit # 07960; CA #51972 & (PACE CA # 51973)**  
IFB-5400005822-5/3/13-EMW; PO #4600444865  
Site-Specific Work Plan received February 4, 2016  
Edgefield County

Dear Mr. Lowder:

Under the terms and conditions of the referenced contract, collection of pre- and post- GAC unit groundwater samples has been approved for the Gordon residence located at 724 US Hwy 378, Edgefield, SC and the Scurry Residence located at 730 Hwy. 378, Edgefield, SC. The contact persons for these residences are Mr. Gordon and Ms. Hattie Scurry. They can be reached at (803) 637-5266 and (803) 637-5793 respectively. The pre and post GAC unit groundwater samples should be collected and submitted to Pace Analytical Services for analysis.

This facility has been assigned individual Cost Agreement (CA) numbers as listed above. Please reference the **CA #51972 and PO # 4600444865** on the invoice submitted for payment for the sampling. CA #51973 has been approved for Pace Analytical Services for sample analyses. Emerald Inc. should complete the work in accordance with the contract specifications and established schedule. The work must be conducted as outlined in the UST Quality Assurance Program Plan (QAPP) and in compliance with all applicable regulation. A GAC Unit Installation and Maintenance record should be submitted within thirty (30) days from the date of Notice to Proceed.

On all correspondence or inquiries regarding this directive, please reference UST Permit # 07960, CA #51972, and CA #51973. If you have any questions or need further assistance, please contact me at (803) 898-0610 or by email at [hetricml@dhec.sc.gov](mailto:hetricml@dhec.sc.gov).

RE: Project: 07960/51973 378 TRUCK STOP  
Pace Project No.: 92287090

Dear Mr. Bryant:

Enclosed are the analytical results for sample(s) received by the laboratory on February 18, 2016. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

Analyses were performed at the Pace Analytical Services location indicated on the sample analyte page for analysis unless otherwise footnoted.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Trey Carter  
treycarter@pacelabs.com  
Project Manager

## QUALIFIERS

Project 07960/51973 378 TRUCK STOP  
Pace Project No : 92287090

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot  
ND - Not Detected at or above adjusted reporting limit.  
J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.  
MDL - Adjusted Method Detection Limit.  
PQL - Practical Quantitation Limit  
RL - Reporting Limit  
S - Surrogate  
1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration  
Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values  
LCS(D) - Laboratory Control Sample (Duplicate)  
MS(D) - Matrix Spike (Duplicate)  
DUP - Sample Duplicate  
RPD - Relative Percent Difference  
NC - Not Calculable.  
SG - Silica Gel - Clean-Up  
U - Indicates the compound was analyzed for, but not detected.  
Acid preservation may not be appropriate for 2 Chloroethylvinyl ether, Styrene, and Vinyl chloride.  
A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260  
N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.  
Pace Analytical is TNI accredited Contact your Pace PM for the current list of accredited analytes.  
TNI - The NELAC Institute

### LABORATORIES

PASI-C Pace Analytical Services - Charlotte

### ANALYTE QUALIFIERS

L0 Analyte recovery in the laboratory control sample (LCS) was outside QC limits.  
L3 Analyte recovery in the laboratory control sample (LCS) exceeded QC limits Analyte presence below reporting limits in associated samples. Results unaffected by high bias.  
M0 Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits  
M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.  
P5 The EPA or method required sample preservation degrades this compound, therefore acceptable recoveries may not be achieved in sample matrix spikes

**REPORT OF LABORATORY ANALYSIS**

This report shall not be reproduced, except in full,  
 without the written consent of Pace Analytical Services, Inc

Document Name:  
**Sample Condition Upon Receipt(SCUR)**  
 Document No.:  
**F-CHR-CS-003-rev.17**

Document Revised: 26OCT2015  
 Page 1 of 2  
 Issuing Authority:  
 Pace Huntersville Quality Office

Sample Condition  
 Upon Receipt

Client Name: SCDHEC

Project #: **WO# : 92287090**

Courier:  Fed Ex  UPS  USPS  Client  
 Commercial  Pace  Other: \_\_\_\_\_

Custody Seal on Cooler/Box Present?  Yes  No      Seals Intact?  Yes  No

Packing Material:  Bubble Wrap  Bubble Bags  None  Other: \_\_\_\_\_

Thermometer Used:  T1505

Type of Ice:  Wet  Blue  None  Samples on ice, cooling process has begun

Cooler Temp Corrected (°C): 1.4  
 Temp should be above freezing to 6°C      Correction Factor: 0.0 °C

Biological Tissue Frozen?  Yes  No  N/A  
 Date and Initials of Person Examining Contents: AP 2-18-16

USDA Regulated Soil (  N/A, water sample)

Did samples originate in a quarantine zone within the United States: CA, NY, or SC (check maps)?  
 Yes  No

Did samples originate from a foreign source (internationally, including Hawaii and Puerto Rico)?  
 Yes  No

If Yes to either question, fill out a Regulated Soil Checklist and include with SCUR/COC paperwork.

RE: Project: COUNTRY STORE 07960/51970  
Pace Project No.: 92288878

Dear Mr. Bryant:

Enclosed are the analytical results for sample(s) received by the laboratory on March 04, 2016. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

Analyses were performed at the Pace Analytical Services location indicated on the sample analyte page for analysis unless otherwise footnoted.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Trey Carter  
treycarter@pacelabs.com  
Project Manager

## QUALIFIERS

Project: COUNTRY STORE 07960/51970  
Pace Project No 92288878

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot  
 ND - Not Detected at or above adjusted reporting limit  
 J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.  
 MDL - Adjusted Method Detection Limit  
 PQL - Practical Quantitation Limit  
 RL - Reporting Limit.  
 S - Surrogate  
 1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270 The result for each analyte is a combined concentration  
 Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.  
 LCS(D) - Laboratory Control Sample (Duplicate)  
 MS(D) - Matrix Spike (Duplicate)  
 DUP - Sample Duplicate  
 RPD - Relative Percent Difference  
 NC - Not Calculable  
 SG - Silica Gel - Clean-Up  
 U - Indicates the compound was analyzed for, but not detected  
 Acid preservation may not be appropriate for 2 Chloroethylvinyl ether, Styrene, and Vinyl chloride  
 A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.  
 N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270 The result reported for each analyte is a combined concentration.  
 Pace Analytical is TNI accredited Contact your Pace PM for the current list of accredited analytes  
 TNI - The NELAC Institute.

### LABORATORIES

PASI-C Pace Analytical Services - Charlotte

### ANALYTE QUALIFIERS

L0 Analyte recovery in the laboratory control sample (LCS) was outside QC limits.  
 L3 Analyte recovery in the laboratory control sample (LCS) exceeded QC limits Analyte presence below reporting limits in associated samples Results unaffected by high bias  
 M0 Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.  
 M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.  
 P5 The EPA or method required sample preservation degrades this compound, therefore acceptable recoveries may not be achieved in sample matrix spikes  
 R1 RPD value was outside control limits.  
 S3 Surrogate recovery exceeded laboratory control limits. Analyte presence below reporting limits in associated samples Results unaffected by high bias  
 S4 Surrogate recovery not evaluated against control limits due to sample dilution

Document Name:  
**Sample Condition Upon Receipt (SCUR)**  
 Document No.:  
**F-CHR-CS-003-rev.18**

Document Revised: 18FEB2016  
 Page 1 of 2  
 Issuing Authority:  
 Pace Huntersville Quality Office

Page 2 of 2 for Internal Use ONLY

Sample Condition Upon Receipt

Client Name: SC PHFC

Project #: **WO# : 92288878**

Courier:  Fed Ex  UPS  USPS  Client  
 Commercial  Pace  Other: \_\_\_\_\_

Custody Seal Present?  Yes  No    Seals Intact?  Yes  No

Packing Material:  Bubble Wrap  Bubble Bags  None  Other: \_\_\_\_\_

Thermometer:  T1505  \_\_\_\_\_    Type of Ice:  Wet  Blue  None  Samples on ice, cooling process has begun

Correction Factor: 0.0°C    Cooler Temp Corrected (°C): 3.3    Biological Tissue Frozen?  Yes  No  N/A

USDA Regulated Soil (  N/A, water sample)

Did samples originate in a quarantine zone within the United States: CA, NY, or SC (check maps)?  
 Yes  No

Did samples originate from a foreign source (internationally, including Hawaii and Puerto Rico)?  Yes  No

Date/Initials Person Examining Contents: AP 3/4/16

Re: Contractor of Choice  
Wilkerson Fuel Company  
South Carolina Department of Health  
and Environmental Control  
SUBERB Sites

To Whom it May Concern:

The purpose of this correspondence is to notify the South Carolina Department of Health and Environmental Control's (SCDHEC) Underground Storage Tank Section of Wilkerson Fuel Company's (Wilkerson) change in contractor of choice. Effective immediately, Wilkerson selects Geological Resources, Inc. (GRI) as its site rehabilitation for all future work scopes for its SUPERB qualified sites. A listing of sites and associated UST Permit numbers are listed below.

GRI is a SCDHEC registered Site Rehabilitation Contractor (#74). Please be advised that no financial or familial relationship exist between Wilkerson and GRI. Further, Wilkerson requests that payment be made directly to the contractor.

| Site Name         | UST Permit No. | County     |
|-------------------|----------------|------------|
| Pop's Corner      | 02015          | Cherokee   |
| 378 Truck Stop    | 07960          | Edgefield  |
| Black's Grocery   | 07961          | Saluda     |
| Quick C #106      | 09343          | York       |
| Wayne's BP        | 09431          | Dillon     |
| Lawson's BP       | 06999          | Orangeburg |
| Former Crown #664 | 02874          | Dillon     |
| JW Bailey         | 02854          | Dillon     |

All future SUPERB related correspondence pertaining to the referenced sites should be copied to GRI.

Sincerely,

A handwritten signature in black ink, appearing to read "Kim Gwyn", with a long, sweeping horizontal flourish extending to the right.

Re: **Site-Specific Work Plan (SSWP) Directive for Groundwater Sampling**  
378 Truck Stop, 731 Hwy 378, Edgefield, SC  
UST Permit # 07960  
Release Reported October 03, 1974  
Edgefield County

Dear Mr. Wilkerson:

The Underground Storage Tank (UST) Management Division of the South Carolina Department of Health and Environmental Control (Agency) recognizes your commitment to continue work at this site using Geological Resources, Inc., as your contractor. The next appropriate scope of work at the site is a comprehensive groundwater sampling event.

The groundwater sampling event should be conducted in accordance with the most recent revision of the Annual Contractor Quality Assurance Plan (AQAP), Geological Resources, Inc Annual Contractor Quality Assurance Plan (ACQAP), and in compliance with all applicable regulations. Groundwater samples should be collected from all monitoring wells, water supply wells, or surface water locations associated with the referenced release and analyzed for BTEX + Naphth + MtBE, 1,2-DCA, 8 oxygenates and EDB. All monitoring wells will need to be purged. A copy of the current revision of the Agency QAPP for the UST Management Division is available at <http://www.scdhec.gov/Environment/LW/UST/ReleaseAssessmentClean-up/QualityAssurance/>.

Your contractor must complete the QAPP Contractor addendum or the Site Specific Work Plan (SSWP) if your contractor has an approved ACQAP. The QAPP or SSWP and Cost Proposal must be submitted within 30 days from the date of this letter. The State Underground Petroleum Environmental Response Bank (SUPERB) Account allowable cost for each component is included on the Assessment Component Cost Agreement Form. **Please note that technical and financial preapproval from the Agency must be issued before work begins.**

On all correspondence concerning this site, please reference **UST Permit #07960**. If there are any questions concerning this project, please contact me at (803) 898-7705 or by email at [Johnsoal@dhec.sc.gov](mailto:Johnsoal@dhec.sc.gov).

Sincerely,

Austin Johnson, Hydrogeologist

731 Highway 378  
Edgefield, Edgefield County  
UST Permit No. 07960  
GRI Project No. 4422

Dear Mr. Johnson:

Attached is a Site Specific Work Plan for approved ACQAP and the associated Assessment Component Cost Agreement for the above referenced site in Edgefield, Edgefield County, South Carolina.

Please contact me at (704) 845-4010 or by e-mail at [wsb@geologicalresourcesinc.com](mailto:wsb@geologicalresourcesinc.com) if you have questions or comments concerning this matter.

Sincerely,

W. Scott Ball  
Senior Project Manager

Site-Specific Work Plan for Approved ACQAP
Underground Storage Tank Management Division

To: Austin Johnson (SCDHEC Project Manager)
From: Scott Ball (Contractor Project Manager)
Contractor: Geological Resources, Inc. UST Contractor Certification Number: 74

Facility Name: 378 Truck Stop UST Permit #: 07960
Facility Address: 731 Highway 378, Edgefield, Edgefield County, SC
Responsible Party: Wilkerson Fuel Company Phone: (803) 324-4080
RP Address: PO Box 2835, Rock Hill, SC 29732
Property Owner (if different): Old Truck Stop, LLC
Property Owner Address: 102 Faulkner Mountain Road, Edgefield, SC 29824
Current Use of Property: Vacant, unoccupied

Scope of Work (Please check all that apply)

- IGWA, Tier I, Tier II, Monitoring Well Installation, Groundwater Sampling, GAC, Other

Analyses (Please check all that apply)

Groundwater/Surface Water:

- BTEXNMDCA (8260B), Oxygenates (8260B), EDB (8011), PAH (8270D), Lead, 8 RCRA Metals, TPH, pH, BOD, Nitrate, Sulfate, Other, Methane, Ethanol, Dissolved Iron

Soil:

- BTEXN, PAH, 8 RCRA Metals, Oil & Grease (9071), TPH-DRO (3550B/8015B), TPH-GRO (5030B/8015B), Grain Size, TOC

Air:

- BTEXN

Sample Collection (Estimate the number of samples of each matrix that are expected to be collected.)

Soil 18 Water Supply Wells Air 2 Field Blank
40 Monitoring Wells Surface Water 3 Duplicate 2 Trip Blank

Field Screening Methodology

Estimate number and total completed depth for each point, and include their proposed locations on the attached map.
# of shallow points proposed: NA Estimated Footage: feet per point
# of deep points proposed: Estimated Footage: feet per point
Field Screening Methodology:

Permanent Monitoring Wells

Estimate number and total completed depth for each well, and include their proposed locations on the attached map.
# of shallow wells: NA Estimated Footage: feet per point
# of deep wells: NA Estimated Footage: feet per point
# of recovery wells: NA Estimated Footage: feet per point
Monitoring Well development method (consistent with SOP):
Comments, if warranted:

UST Permit #: 07960 Facility Name: 378 Truck Stop

**Implementation Schedule** (Number of calendar days from approval)

Field Work Start-Up: 15 days from approval Field Work Completion: 20 days from approval  
Report Submittal: 60 days from approval # of Copies Provided to Property Owners: 1

**Aquifer Characterization**

Pump Test:  Slug Test:  (Check one and provide explanation below for choice)

NA  
\_\_\_\_\_  
\_\_\_\_\_

**Investigation Derived Waste Disposal**

Soil: \_\_\_\_\_ Tons Purge Water: 300 Gallons  
Drilling Fluids: \_\_\_\_\_ Gallons Free-Phase Product: \_\_\_\_\_ Gallons

**Additional Details For This Scope of Work**

For example, list wells to be sampled, wells to be abandoned/repared, well pads/bolts/caps to replace, details of AFVR event, etc.

Sample monitoring wells MW-1 through MW-31 and TW-1 through TW-9.

All monitoring wells will be purged prior to sample collection and pH, temperature, specific conductivity, dissolved oxygen and turbidity readings collected. Two duplicates, one field blank and one trip blank will be submitted.

MW samples collected will be submitted for analyses of BTEX, MTBE, naphthalene, 1, 2-DCA and 8 oxygenates by Method 8260 EDB by Method 8011. 15 water supply wells (WSW-1 pre- and post, WSW-2 through WSW-7, WSW-8 pre- and post-, WSW-9 through WSW-15, WSWX. Samples will be analyzed for BTEX, MTBE, naphthalene, 1, 2-DCA by 524.4, 8 oxygenates by 8260 and EDB by 504.1. One sample will be duplicated and one field blank will be collected. One trip blank will be submitted.

**Compliance With Annual Contractor Quality Assurance Plan (ACQAP)**

Yes Laboratory as indicated in ACQAP? (Yes/No) If no, indicate laboratory information below.

Name of Laboratory: \_\_\_\_\_  
SCDHEC Certification Number: \_\_\_\_\_  
Name of Laboratory Director: \_\_\_\_\_

NA Well Driller as indicated in ACQAO? (Yes/No) If no, indicate driller information below.

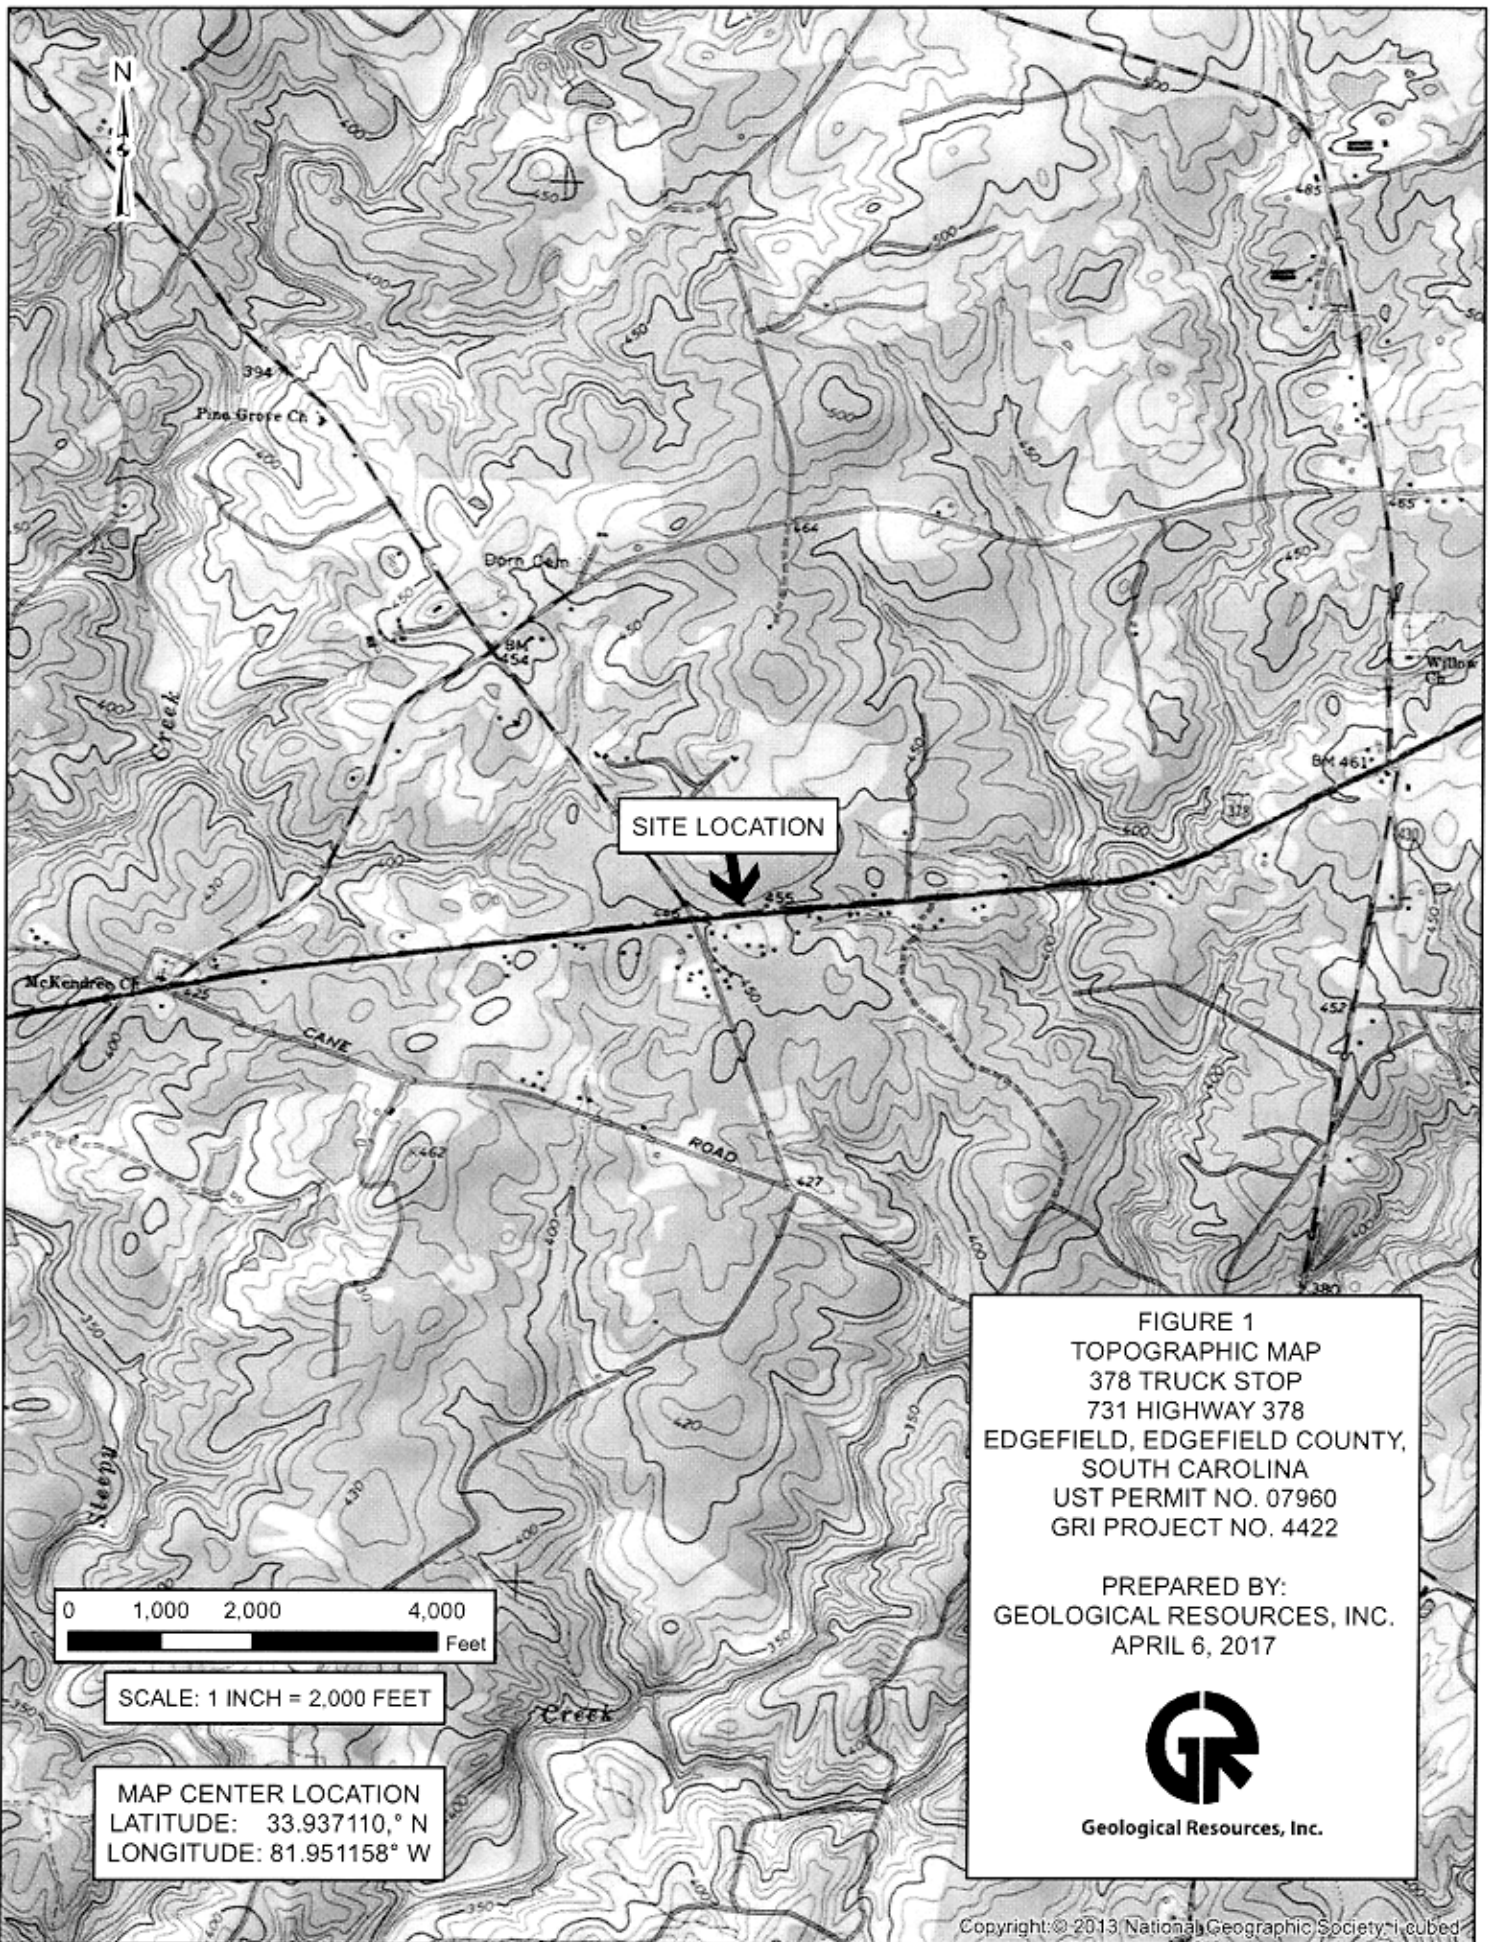

Name of Well Driller: \_\_\_\_\_  
SCLLR Certification Number: \_\_\_\_\_

NA Other variations from ACQAP. Please describe below.

**Attachments**

1. Attach a copy of the relevant portion of the USGS topographic map showing the site location.
2. Prepare a site base map. This map must be accurately scaled, but does not need to be surveyed. The map must include the following:  
North Arrow Proposed monitoring well locations  
Location of property lines Legend with facility name and address, UST permit number, and bar scale  
Location of buildings Streets or highways (indicate names and numbers)  
Previous soil sampling locations Location of all present and former ASTs and USTs  
Previous monitoring well locations Location of all potential receptors  
Proposed soil boring locations
3. Assessment Component Cost Agreement, SCDHEC Form D-3664

**Re: Groundwater Sampling Directive**  
378 Truck Stop, 731 Highway 378, Edgefield, SC  
UST Permit # 07960; CA# 55161  
Release reported October 3, 1974  
Site-Specific Work Plan received June 7, 2017  
Edgefield County

Dear Mr. Wilkerson:

The Underground Storage Tank (UST) Management Division of the South Carolina Department of Health and Environmental Control (DHEC) has reviewed the referenced Site-Specific Work Plan (SSWP) submitted on your behalf by Geological Resources Inc. The next appropriate scope of work at the site is a comprehensive groundwater sampling event. All work should be conducted in accordance with Geological Resources, Inc approved SSWP and Annual Contractor Quality Assurance Plan (ACQAP), and in compliance with all applicable regulations. A copy of the current revision of DHEC UST QAPP is available at <http://www.scdhec.gov/Environment/LW/UST/ReleaseAssessmentClean-up/QualityAssurance/>.

Groundwater sampling activities at the site should begin immediately upon receipt of this letter. Cost agreement # 55161 has been approved for the amount shown on the enclosed cost agreement form for sampling of all monitoring wells associated with the referenced release. Groundwater samples should be collected and analyzed for BTEX, naphthalene, MtBE, 1,2 DCA, EDB and 8 oxygenates.

**The Contractor must provide the UST Project Manager with a Project Status Report on a weekly basis via e-mail or notify the UST Project Manager via email 4 days prior to initiation of any site rehabilitation activity(ies). If there are any changes or conflicts with the date(s) of site activities, the UST Project Manager must be contacted within 24 hours of those changes.**

**The Monitoring Report, contractor checklist (QAPP Appendix K), and invoice are due within 60 days from the date of this letter.** The report submitted at the completion of these activities should include the required information outlined in the ACQAP. Please note that all applicable South Carolina certification requirements apply to the services and report preparation. All site rehabilitation activities must be performed and submitted by a South Carolina Certified Underground Storage Tank Site Rehabilitation Contractor.

Geological Resources, Inc can submit an invoice for direct payment from the State Underground Petroleum Environmental Response Bank (SUPERB) Account for pre-approved costs. By law, the SUPERB Account cannot compensate any costs that are not pre-approved. Please note that applicable South Carolina certification requirements regarding laboratory services and report preparation must be satisfied. If the invoice is not submitted within 120 days from the date of this letter, monies allocated to pay this invoice will be uncommitted. This means that the invoice will not be processed for payment until all other committed funds are paid or monies become available.

Please note that Sections 44-2-110(4) and 44-2-130 of the SUPERB Statute state that no costs will be allowed unless prior approval from DHEC is obtained. If for any reason additional tasks will be completed, these additional tasks and the associated cost must be pre-approved by DHEC for the cost to be paid. DHEC reserves the authority to pay only for work properly performed and/or technically justified and will only pay rates in accordance with established criteria.

Further, DHEC reserves the right to question and/or reject costs if deemed unreasonable and the right to audit project records at any time during the project or after completion of work.

Please note, if unnecessary dilutions are completed resulting in reporting limits of individual chemicals of concern (CoC) in excess of Risk-Based Screening Levels (RBSLs), the data cannot be used. In those cases, the Division may deny payment for any non-detect analysis where the reporting limit exceeds the RBSL. The UST Management Division encourages the use of 'J' values as necessary so the appropriate action can be determined for a release.

DHEC grants pre-approval for transportation of virgin petroleum impacted soil and groundwater from the referenced site to a permitted treatment facility. The transport and disposal must be conducted in accordance with the ACQAP. If the CoC concentrations based on laboratory analysis are below RBSLs, please contact the project manager for approval to dispose of soil and/or groundwater on site. The SUPERB Account will not reimburse for transportation or treatment of soil and/or groundwater with concentrations below RBSLs.

On all correspondence regarding this site, please reference UST Permit # 07960. If you have any questions regarding this correspondence, please contact me by telephone at (803) 898-7705, by fax at (803) 898-0673, or by e-mail at [Johnsoal@dhec.sc.gov](mailto:Johnsoal@dhec.sc.gov).

Sincerely,

Austin Johnson, Hydrogeologist  
Corrective Action Section

## OIL IDENTIFICATION: STATE OF THE ART

F. K. Kawahara and E. C. Julian\*

### BACKGROUND

Petroleum and its products enter the environment through accidental discharge of wastes, mistakes in the transfer of oil to and from tankers, shipwrecks, and the purging of cargo tanks by sea water treatment. The manufacturing or processing industry and the transportation industry are the main producers of oily wastes. Other sources are individually owned automobiles, boats, and airplanes. The deleterious effects of oil pollutants on the environment are well known — extensive damage to shorelines and beaches, destruction of marine life and the presence in water of toxic agents, noxious odors, and tastes.

As industrial activity continues to expand, the problem of both chronic oil pollution and large, catastrophic spills will occur more and more frequently. Thus, the ability to identify and characterize spilled oil samples in order to determine their source is becoming extremely important. The task is quite difficult, however, since samples are often highly complex mixtures containing several petroleum products. Severe weathering further complicates the matter by superimposing composition and chemical changes to the samples.

Measuring the concentrations of various components and physical and chemical properties of these samples has been the major approach to identification. Such an approach will include the measurements of major components, minor components, trace elements, spectral properties, and physical properties. A final identification step may involve data treatment and the use of statistical methods in data analysis.

\*Both Dr. Kawahara (Group Leader, 513-684-2939) and Mr. Julian (Research Chemist, 513-684-2985) are with the Oil Identification group of the Analytical Quality Control Laboratory.

### STATE OF THE ART

*Sampling Considerations and Treatment.* Oil samples collected from the environment may possess a number of disadvantages. A sample may contain large amounts of water and debris, it may be rather small, and it may have been weathered for some time before collection. Almost all methods will require that the sample be separated from the debris and water before applying any test. All samples, reference and spilled, should be subjected to distillation to 280°C in order to attain uniformity of composition of nonvolatiles.<sup>2,1</sup>

*Physical Bulk Properties.* Physical bulk properties such as asphaltene content, wax content, the congealing point of the wax, and specific gravity should be determined, if possible. These methods, together with others, have been reviewed.<sup>9,21</sup>

*Chemical Bulk Properties.* Chemical bulk properties may serve as a method of sample screening. For example, sulfur and nitrogen analyses are particularly helpful. Two methods, the oxygen flask technique and x-ray fluorescence analysis technique, may be applied to the determination of sulfur. The nitrogen content may be determined by a micro-Kjeldahl or microcoulometric technique. According to Brunnock et al.,<sup>6</sup> the sulfur content in crude oils shows a loss during weathering of about 15 percent. In spite of this loss, oil samples may be classified as "high sulfur" (more than 2% by weight), "medium sulfur" (1%-2% by weight), or "low-sulfur" (less than 1% by weight). There is little information on the effects of weathering on nitrogen content.<sup>32</sup>

*Spectral Properties.* The use of infrared spectroscopy for petroleum identification has been described.<sup>17,19</sup> This method was used for the first identification and characterization case handled by the National Environmental Research Center, Cincinnati, Ohio. The situation involved the large, heavy, residual fuel oil and asphalt

UST Docket

112T

spill that extended 45 miles from Wilmette, Ill., to Gary, Ind., and that contaminated Lake Michigan waters and beaches during September and October 1967.

Samples of beach materials and of lake water were collected from the oil spill area, and the Analytical Quality Control Laboratory (AQCL) of NERC developed a rapid analytical method utilizing infrared spectroscopy to analyze these heavy petroleum products (for which the evaporative effects are negligible). The unknown samples were determined to be a mixture of asphalt and No. 6 fuel oil, and the mixture was coupled to source samples of an industrial asphalt and No. 6 fuel oil.

Mattson<sup>23</sup> proposed the internal reflection technique to improve the reproducibility of the infrared spectra. In our opinion the condition of his sample, the presence of water, and the variable geometry of the sand surfaces will prevent attainment of reproducible sample area, and thus the spectra would not be reproducible. This opinion is in contrast to Adlard's statement.<sup>1</sup> A study of the possibility of using infrared spectroscopy for the remote sensing and identification of waterborne oil slicks has been made.<sup>24</sup>

Freearde et al.<sup>10</sup> and Thruston and Knight<sup>29</sup> have applied ultraviolet (uv) fluorescence spectroscopy to identify pollutants. Freearde<sup>10</sup> dissolved the cleaned-up sample in cyclohexane, subjected the solution to uv excitation at different wavelengths and obtained emission fluorescence spectra. Thruston and Knight<sup>29</sup> added three levels of sample concentration to the previous system. By this procedure, four pollutant samples were shown to have the same origin, with confirmation by elemental and infrared ratio analyses.

Mass spectrometry has been widely used for determining components in petroleum fractions since the molecular weight of the injected material is provided if the parent ion appears. The coupling of the gas chromatograph with the mass spectrometer has been especially helpful.<sup>13</sup> A review of published work on this coupling is available.<sup>31</sup> An application of the use of a high-resolution mass spectrometer for the group analysis of complex, unfractionated petroleum distillates was published by Gallegos et al.<sup>12</sup> The use of these high resolution measurements also makes it possible to estimate the contents of paraffins, monocycloparaffins, dicycloparaffins, etc., in a series of petroleum fractions, and to distinguish the types of aromatic and heterocyclic compounds present.

*Component Separation Techniques.* A number of component separation techniques based on chromatography have contributed to the identification of oily pollutants. Work done by Shuldiner in 1951,<sup>28</sup> paper chromatography followed by inspection of the chromatogram under uv light, is relevant today and applies to current problems.<sup>15,22</sup>

The use of column absorption chromatography was illustrated by Rosen and Middleton<sup>27</sup> who used silica gel columns for separating pollutants into fractions that were then examined by infrared spectroscopy.

Another chromatographic technique, gel permeation chromatography, has been applied to the fractionation of asphalt constituents. Altgelt<sup>3</sup> fully describes the preparation of the gel, column design, and sample preparation. One major peak is noted.

Another technique termed radial chromatography<sup>14</sup> has shown merit in comparing petroleum products. This technique combines capillary analysis and circular chromatography.

Gas-liquid chromatography (GLC), often used with high resolution and temperature programming, is a common method for separating materials into their components.<sup>2,21</sup> In a case of beach pollution<sup>26</sup> or oil leaks,<sup>7</sup> identification of petroleum sources illustrated applications of GLC for liquids at ambient temperature.

"Dual fingerprints" of the materials being studied may be obtained with chromatograph using dual detectors.<sup>2,16</sup> Brunnock et al.<sup>6</sup> used the n-paraffin components of crude oils as a kind of fingerprint for identification. GLC can also produce a simulated distillation pattern by means of an ASTM procedure.<sup>4</sup> The hydrocarbons C<sub>20</sub> through C<sub>35</sub> show typical distributions as related to various specific crude oil sources. With straight run No. 1 and No. 2 fuel oils, components are so similar qualitatively and quantitatively that identification by measuring n-paraffins is not useful for enforcement purposes.

Many chemical elements at trace levels<sup>5</sup> are contained in all crude oils and fuel oils. Because vanadium and nickel are present in the majority of crude oils and show considerable differences from one oil to another, both elements have been used as identification guides. The necessity for ashing the sample before the determination can lead to losses of these elements and may cause uncertain inferences. Several methods such as atomic absorption, x-ray fluorescence, emission spectroscopy and neutron activation vary in advantages and disadvantages. Adlard<sup>1</sup> considers the multitrace element technique the most definitive single method for identifying pollutant samples because the large number of parameters should produce characteristic correlations unique to the reference samples. Also, since these trace elements are found in the high boiling part of the oil, weathering should not have any effect on the ratios of these elements; but this is not always true as all trace elements are not bound in the stable form as chelates of porphyrin.

AQCL has developed a new and powerful method<sup>18</sup> to identify lube oils and asphalts. It is based on preparing certain volatile derivatives of weak acids and

mercaptans present in the samples and analyzing them by GLC with an electron capture detector. The method results in distinctive and characteristic patterns in the chromatograms of the heavier, non-volatile lube oils and asphalts. This is the first successful application of gas chromatography to analyses of heavy lube oils and asphaltic materials.

*Techniques of Data Treatment and Mathematical Statistics.* It has often been desirable to transform raw data before any analysis of the data is performed.<sup>3,2</sup> As an example, the use of ratios of absorbance in infrared spectroscopy offsets the effects produced by variation in sample film thickness.<sup>30,17</sup>

Using the technique of multivariate statistical analysis, all of the random variables may be analyzed simultaneously through the use of large computer systems and their attendant statistical packages.<sup>8</sup> At AQCL, the technique of data transformation and linear discriminant function analysis has been applied to infrared absorbance ratios.<sup>20</sup> As a result, asphalts and No. 6 fuel oils have been correctly classified with an average probability over both groups of 0.999. When a high probability is attained for the true classification of many samples from many groups, the potential of the multivariate procedure for identification of oil spills is recognized.

## WHAT IS NEEDED

Much research needs to be done in the area of characterization and identification of highly complex mixtures containing several petroleum products. Examinations of simple mixtures of products of diverse physical and chemical properties, such as light gasoline and heavy asphalt, have usually resulted in identity and characterization when preceded by resolution to the individual products. However, a mixture of two similar petroleum products (asphalt and another asphalt, for example) presents unusual difficulty. Since products of companies have somewhat similar properties, advanced statistical analyses of multi-instrumental techniques will be necessary in correlating the maze of data parameters for obtaining maximum information.

Efforts should be directed toward studies of the long-term effects of crude oils, petroleum products, and oily effluents on the ecology. After the wreck of the Torrey Canyon (1967), Freearde<sup>11</sup> detected in 1969 an accumulation of hydrocarbons in plankton obtained from the English Channel. There is danger that spilled oil may result in a buildup of polynuclear hydrocarbons in marine food-chains. Fish, marine mammals, and sea birds may eventually accumulate these hydrocarbons and

other synergistic materials on a long-term basis. Thus, suitable studies are needed to differentiate mineral (fossil) oils from the biogenic oils. Some work has been initiated in this area.

Recent findings by Thor Heyerdahl and the U.S. Research Ship Atlantic II show that Atlantic and Mediterranean areas are polluted by oil globules and monomolecular oil film. Ottway<sup>25</sup> discloses that the amount of light absorbed by this oceanic pollution would have a noticeable effect on photosynthesis and would on a long-term basis, affect the atmospheric gas balance. Thus, studies should be conducted on the physical and chemical effects of oils — the rates of gas diffusion through oil films of varying types and thicknesses, for example.

The chemical, toxicological, and biological fate of crude oils and products is also an area for more research. The duration of the oil spill (as indicated by products of autooxidation and by ratios of certain elements) and losses from evaporation and solubilization should be studied in detail and depth with a great variety of petroleum product fractions. Aged samples in fresh and salt water, in ground and runoff water, and in swamp water probably vary widely in composition after exposure, even though the temperature, light, rate of evaporation, etc., are held constant.

A number of promising and effective methods of oil identification have been made available, as shown by the present state of the art. However, the great complexity produced by multiple oil spills and the covering of old oil spills with new ones will require even more sophisticated and effective means of identification. In addition, the toxicity problems will provide subjects to study for a long time to come.

10-1-74

Called Cody.

Reg Massey can go with me to the area on  
Thursday, 10-3-74 to conduct sample study.

10-1-74

Dwight says he can run 6 or 7 on Monday.  
Ann Smythe will be there if he isn't.

9-24-74

Cody and Massey in Columbia today.  
Reg says any day next week is O.K. with  
him to visit the site and conduct a  
study.

# GAS IN PRIVATE WELLS (Edgefield Co.)

9-20-74

Call from Jim Cody.  
returned call at 11:30.

Cody says we have to do something about the gasoline in the private wells near service station 5 mi. east of 378/25 intersection in Edgefield Co.

Will check on it and call back.

Discussed this with Bob Gross, Cliff Hawkins, Noel Hurley, & Tom Kurimcak. No definite opinions. Sloway says should be handled by Sanitation.

Gross - referred to Heriot.

Hawkins - took me to Hurley.

Hurley - called lab to find out what they can do.

Tom Kurimcak - later.

9-23

Bill Miller's opinion is to make a site inspection and get the facts down. Then possibly special studies and/or compliance can get involved.

Memo for file

one well 120'

Between + of 378 and 25 ~ 5 mi toward Saluda.  
wells are slightly upslope from station.

Lab says it's not gasoline definitely but some  
petroleum distillate.

Re: Gasoline in private wells on U.S. 378 approx. eleven  
miles West of Saluda. S.C. in Edgefield County

A preliminary study of conditions existing in the referenced area was conducted on October 3, 1974 with Reginald Massey, Environmental Quality Control Office, Greenwood, S.C.

Eight wells were surveyed and seven samples collected. The tabulated results of the well survey are enclosed.

Sample analyses will be submitted at a later date. Samples from well I will be analyzed to try to determine the brand of gasoline. Others will be tested for the presence of petroleum.

The predominate rock type is grayish-brown, fine grained laminated argillite of the Carolina Slate Belt with foliation running approximately North-east-Southwest. In the road cut on U.S. 378 a few joints are visible cutting across foliation at various angles. According to well driller, ~~Earl~~ Coleman, who drilled most of the wells, the color of the argillite changes to blue-gray at approximately 25 feet in this area.

**Subject:** Gasoline in private wells on U. S. 378 approximately eleven miles west of Saluda, S. C. Edgefield County

**Date:** October 16, 1974

As per our conversations follow receipt of your October 7, 1974, memo concerning the above referenced items, it may be possible to identify the source by sample comparison. Samples of oil from the wells and from the nearby service station (with underground storage) could be analyzed to see if they are the same. John Owenby may be able to do this work for you. If not, Dennis Revel at EPA's Athens Lab does this type of sample work during spills in order to identify the discharger.

I did contact Allan Bartlett, E.P.A. Emergency Response Team member, Atlanta, who stated that oil will maintain its integrity underground for distances up to 100 yards. At greater distances, biodegradation and chemical alteration makes comparison impossible.

If I may be of further assistance, let me know. I am interested in learning what you come up with.

Edgefield County

**Date:** October 16, 1974

As per our conversations follow receipt of your October 7, 1974, memo concerning the above referenced items, it may be possible to identify the source by sample comparison. Samples of oil from the wells and from the nearby service station (with underground storage) could be analyzed to see if they are the same. John Owenby may be able to do this work for you. If not, Dennis Revel at EPA's Athens Lab does this type of sample work during spills in order to identify the discharger.

I did contact Allan Bartlett, E.P.A. Emergency Response Team member, Atlanta, who stated that oil will maintain its integrity underground for distances up to 100 yards. At greater distances, biodegradation and chemical alteration makes comparison impossible.

If I may be of further assistance, let me know. I am interested in learning what you come up with.

Gas in private wells, Edgefield Co.  
Memo for file

10-31-74

Called Southern Pump and Tank  
779-8090

No simple chemical test.  
Their Charlotte office has equipment to do a  
~~Open~~ "tank tightness test" which requires  
special equipment and takes ~ 2 days.

Call E. M. Beaver or Don Sheets in Charlotte.  
704-596-4373 for info.

Mr. William F. Scurry

12-30-74  
6-7 years - Mrs. Coleman put well in.

August 1974 started - not been 7  
into since.

12 30 74

Mr. Anderson's has cleared up somewhat.  
(well behind trailers)

No trouble with well at trailers

No trouble with house across from  
Anderson residence.

Only 2 has had trouble - Only Scurry  
and Anderson

✓ Wells at store across street  
have had trouble - 1958-59 had  
to stop cooking (used to be grill).

Gas tanks at store at same time of  
trouble at store.

✓ Total of 9 property (subdivision)

115  
Rt 2 Edgefield

Petroleum in private wells in Edgefield Co.

1-7-75 - Called Cody. He says Anderson well is getting better. Scurry worse. Scurry well has never been checked before.

Truck stop was built in '54. Had gas in their wells in '59. Put in new tanks. Aug. '74 showed in Scurry. Anderson before that.

Scurry is planning civil suit if we'll back him up.

Scurry well is 6 yrs. old.

Joe Mogg (Johnson Well Screen)

James L. Cody, D. E.  
Box 797  
Greenwood, S. C. 29646

Dear Jim:

Attached is a copy of the laboratory results from the samples we collected on February 19, 1975. There is no doubt that Mr. Anderson's well contained regular gasoline. The chromatograms from his well and the one from the truck stop match almost perfectly. The crucial question that we are faced with is how did the petroleum product get into the well?

I contacted Dennis Revel, Petroleum Analyst with EPA in Athens, and Denny Dobbs, a member of the Emergency Response Team, EPA, Atlanta, and they could not shed any light as to how we might trace the source. Both Mr. Dobbs and Mr. Revel indicated that there was nothing they could do. Late yesterday afternoon I was able to contact the District Manager with Phillips 66 and he indicated that possibly their construction crew could do some testing and determine if the tanks were leaking. I am hoping this may prove fruitful. I will let you know as soon as I hear from them. In the meantime, I guess we will have to wait.

If you have any questions, please let me know.

Yours truly,

## SOUTH CAROLINA DEPARTMENT OF HEALTH AND ENVIRONMENTAL CONTROL

E. KENNETH AYCOCK, M.D., M.P.H., COMMISSIONER  
J. MARION SIMS BUILDING — 2600 BULL STREET  
COLUMBIA, SOUTH CAROLINA 29201

January 5, 1976

Mr. W. F. Scurry  
Route 2, Box 115  
Edgefield, S. C. 29824

Dear Mr. Scurry: ←

*File: Edgefield.*

This letter is in reference to the gasoline that is in your well which has existed for several months. As you recall, I visited with you on February 20, 1975, and collected some samples for analyses. The samples did contain some gasoline. Our laboratories reported the gasoline as Phillips 66 regular. This is the same type product sold by Mr. Fulmer from the station across the street, but the information is not conclusive enough to say that is the point of origin.

I have worked on the problem for quite some time. The following is a list of persons and accomplishments:

- 2/20/75 Called P&O Oil Company in Saluda and talked with the secretary. She promised to have Mr. Odom call me. P&O is the distributor that services Mr. Fulmer's station.
- 2/21/75 Mr. Odom called and said he had talked with the operator, Mr. Fulmer, and the operator had indicated that he was not losing any gasoline.
- 2/24/75 Called and talked with Dennis Revel, E.P.A., Athens, Georgia, and he did not give me any encouragement on testing for gasoline in well water. He did recommend that I contact Jack Stonebreaker, also of E.P.A.
- 2/24/75 Called Jack Stonebreaker of E.P.A. and he was out, so I talked with George Moein and he said he would kick the idea around and get back in touch with me.
- 2/24/75 Denny Dobbs of E.P.A. (same office as above) called and said the present oil spill law does not cover gasoline in underground water. He suggested I contact Phillips 66 District representative.
- 2/24/75 Called and talked with the Phillips 66 District Representative, Jerry Rhoades, and he promised to get in touch with his construction crew and see what could be done, then get back in touch with me.

Letter to Mr. Scurry

Page 2

January 5, 1976

- 3/6/75 Called and talked with Jerry Rhoades since I had not heard from him and he said he had sent Mr. Fulmer some information on how to check for leaks. He also stated that his office did not plan to do any further testing.
- 3/6/75 Checked with P&O Oil Company and they said they had checked Mr. Fulmer's station on February 26, 1975, and did not find any water in the gasoline tanks. I asked them to check the other tanks.
- 3/13/75 Called P&O Oil Company and the secretary stated the driver of the delivery truck had checked the other tanks and did not find any water in them either. Also, requested the amount delivered to Mr. Fulmer.
- 3/25/75 Called Truck Stop and asked to speak with Mr. Fulmer. His son stated he was not in.
- 3/26/75 Sent letter to P&O Oil Company, requesting the amount of petroleum products delivered to the 378 Truck Stop from September 1, 1974, to present time.
- 3/30/75 Received the information that I requested in the above letter.
- 4/7/75 Called and talked with Willy Fulmer. He stated he had been away from the station for some time. I asked him to furnish me with records to indicate the amounts of gasoline sold. He said he would try to find them and that he was tired of people harassing him.
- 4/7/75 Called and talked with Dave Gaskins of Southern Pump & Tank Company and explained the problem I was having. He promised to send me some information describing a method for testing underground tanks.
- 4/11/75 I received Mr. Gaskins' letter. The cost of doing leak testing on the underground tanks was approximately \$300.00.
- 5/6/75 Called Mr. Fulmer again and he was out.
- 5/28/75 Called Mr. Fulmer again and he was out.

Having made the last two calls without any contact, I realized that Mr. Fulmer was avoiding me and did not intend to co-operate by sending me the pumping records that I requested.

Letter to Mr. Scurry

Page 3

January 5, 1976

At this point I let the issue drop because I do not have any legal authority to demand his records, nor do we have any legal authority to make him test his tanks.

I think your best and quickest course of action is through the courts. You should contact your lawyer and get his advice on the matter.

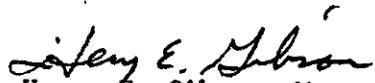

This office does not have the funds to do the leak testing or we would do it. Of all the various things I found out, this would be the most expedient and probably the most economical in the long run.

An alternate suggestion would be to get a pump and pump the well out for a period of 3-5 days, then let the water accumulate and see if the gasoline appears again. This Agency does not have a pump large enough to do this.

I apologize for the long delay in notifying you because I had high hopes of solving the problem.

If you have any questions, or need any of the data that I have, please contact me.

Yours truly,

  
Henry E. Gibson, Manager  
Special Services Section  
Division of District Services

SOUTH CAROLINA DEPARTMENT OF HEALTH AND ENVIRONMENTAL CONTROL

Environmental Quality Control  
Upper Savannah District  
P.O. Box 797  
Greenwood, South Carolina 29646

APR 13 1977

MEMORANDUM

TO: Lewis Shaw, Director  
Water Supply Division

FROM: Reginald E. Massey *Rem*  
Upper Savannah

SUBJECT: Gasoline contamination of private wells

I am enclosing copies of our correspondence in regard to gasoline contamination of at least two private wells in Edgefield County. As you can see, we were never able to definitely pinpoint the source of contamination. Henry Gibson was not able to make the companies involved pressure test the underground storage tanks. While this pressure test would not conclusively prove or disprove that the gasoline in the wells is coming from these tanks, it would prove whether or not he is losing gasoline. One fact not emphasized in this correspondence is that the diner at the truck stop was closed about 1957 or 1958 due to the same problem with their wells.

One of the families involved has again contacted the county health department and submitted a sample which our lab reported as 100% hydrocarbon.

Is there not some way through the Safe Drinking Water Act that we can force the oil company to pressure test the tanks to prove that they are not leaking gas? So much time and money have been spent trying to solve this problem that it is ridiculous not to be able to take the final step towards its determination. I am hesitant about going down to check on the situation again if we won't be able to follow through with some type of action.

Please let me know your feelings about this at your earliest convenience.

MEMORANDUM

TO: Steve Thomas  
Compliance Division, Wastewater

FROM: William T. Lavender, Jr. *WTL*  
Surveillance, Enforcement, and  
Technical Assistance Section  
Water Supply Division

SUBJECT: Gasoline Contamination of Private Wells

As per our conversation I am enclosing copies of correspondence forwarded to me from Reggie Massey.

As far as the State Safe Drinking Water Act is concerned, I don't feel that the Water Supply Division has any jurisdiction over this matter since it relates solely to private wells and not to a public water supply. However, after a cursory review of the South Carolina Pollution Control Act, I do feel that some jurisdiction may exist under this law.

I am relying on Section 13 of the Act that makes it unlawful for a person to discharge into the environment. Section 1(20) defines environment to include waters. Section 1(2) defines water to include "all bodies of surface or underground water, natural or artificial, public or private...."

Although the State may have a cause of action under this Act, any damages these individuals incur personally will not be compensated by this action. As we discussed, it does appear that some action would lie with these individuals against the person or persons responsible for any contamination.

By copy of this memorandum, I am advising Reggie Massey that you will take this matter under consideration.

MEMORANDUM

June 20, 1977

TO: William T. Lavender, Jr.  
Surveillance, Enforcement and Technical  
Assistance Section  
Water Supply Division

FROM: Stephen C. Thomas, Manager *ST*  
Enforcement Section  
Compliance/Enforcement/NPDES  
Administration Division

SUBJECT: Gasoline Contamination of Private Wells

The matter referenced in your April 28, 1977 memo, has been considered. Prior to proceeding in a unique area described in documentation provided, I requested legal opinions as to our jurisdiction in such matters. It was the opinion of the Compliance/Enforcement Division Director and Assistant Attorney General that jurisdiction does exist under the Pollution Control Act for the State of South Carolina.

A verbal opinion was also provided indicating that evidence to show that the gasoline holding tanks were actually leaking gasoline was not available. Reference R. E. Massey's statement of April 13, 1977:

"...we were never able to definitely pinpoint the source of contamination."

Russell W. Sherer's statement of October 16, 1974:

"...Allan Bartlett, EPA Emergency Response Team member ...stated that oil will maintain its integrity underground ...up to 100 yards. At greater distances biodegradation and chemical alteration makes comparison impossible."

And Henry Gibson's February 25, 1975 and January 5, 1976 letters:

"...The crucial question that we are faced with is how did the petroleum product get into the well."

"...the information is not conclusive enough to say that is the point of origin (that meaning Mr. Fulmer's tanks)."

At this point the evidence available is not conclusive in determining the tanks

William T. Lavender, C

Page 2

June 20, 1977

are leaking. If evidence proving leakage from the gas storage tanks can be produced a much stronger case for violations of Section 63-195.12(13a) can be presented.

## 1.0 INTRODUCTION

This report presents the results of comprehensive ground water sampling activities conducted on August 29 through 31, 2017 at the former 378 Truck Stop site, located at 731 U.S. Highway 378, Edgefield, Edgefield County, South Carolina (**Figure 1**). The activities were conducted in accordance with the Groundwater Sampling Directive dated July 27, 2017 from the South Carolina Department of Health and Environmental Control (SCDHEC). The purpose of the activities was to obtain current ground water quality data for the site. The site is currently vacant and contains an abandoned building previously used as a truck stop and petroleum retail facility. Adjacent properties are currently used for residential purposes.

A release from the UST system was reported to the SCDHEC in October 1974 and confirmed in July 1996. Reportedly, one 550-gallon diesel UST, one 1,000-gallon gasoline UST and one 2,000-gallon gasoline UST as well as associated product piping and dispensers were removed from the site in January 1997. No USTs are currently in use at the site. Both Tier I and Tier II site assessments have been conducted at the site. To date, a total of 31 Type II monitoring wells (MW-1 through MW-31) and nine telescoping monitoring wells (TW-1 through TW-9) have been installed at the site and surrounding properties. A total of 16 water supply wells (WSW-1 through WSW-15 and WSW-X) have been identified within a 500-foot radius of the source area. Both AFVR and ground water sampling events have reportedly been conducted at the site since completion of the Tier II activities in 2010.

The last comprehensive ground water sampling event conducted at the site occurred in July 2014. Contaminants of concern (COCs) above their respective risk-based screening levels (RBSLs) have been reported in several monitoring wells at the site. This report summarizes the August 2017 ground water monitoring results.

**3.0 GROUND WATER QUALITY**

Thirty one Type III monitoring wells (MW-1 through MW-31) and nine telescoping monitoring wells (TW-1 through TW-9) were gauged on August 29, 2017. All monitoring wells were purged and sampled on August 30 and 31, 2017. In addition, water supply wells WSW-1 through WSW-5, WSW-7 through WSW-15 and WSW-X were sampled on August 31, 2017. Please note that water supply well WSW-6 was out-of-service and could not be sampled. In addition, water supply wells WSW-1 and WSW-8 both contained granular activated carbon filters. Therefore, both pre-treatment and post-treatment samples were collected from these wells. The depths to ground water in the Type III monitoring wells during the August 29, 2017 gauging event ranged from 19.54 to 35.91 feet below the top of casings. Ground water elevations in the Type III monitoring wells relative to a temporary benchmark with an assumed datum of 100.00 feet ranged from 70.59 to 77.78 feet. Based on this data, ground water flow across the area was generally toward the southwest. The depths to ground water in the telescoping monitoring wells during the August 29, 2017 gauging event ranged from 18.42 to 28.93 feet below the top of casings. Ground water elevations in the telescoping monitoring wells relative to a temporary benchmark with an assumed datum of 100.00 feet ranged from 71.70 to 79.71 feet. Based on this data, ground water flow across the

area in the telescoping wells was generally toward the southwest. The horizontal hydraulic gradient across the site determined from the Type III monitoring wells was approximately 0.008 feet per foot. The vertical hydraulic gradient calculated for paired wells MW-1/TW-1, MW-3/W-2, MW-9/TW-3, MW-10/TW-4, MW-12/TW-5, MW-16/TW-6, MW-17/TW-7, MW-19/TW-8 and MW-26/TW-9 were approximately 0.070 feet per foot downward, 0.011 feet per foot upward, 0.017 feet per foot upward, 0.055 feet per foot upward, 0.007 feet per foot upward, 0.010 feet per foot downward, 0.108 feet per foot upward, 0.003 feet per foot upward and 0.009 feet per foot downward, respectively. A Site Map showing the locations of the monitoring wells and the structures on-site has been included as **Figure 2**. Summaries of ground water elevation data for the August 2017 sampling event are presented in **Table 1**. Potentiometric Surface Maps for the Type III monitoring wells and the telescoping monitoring wells based on the August 2017 gauging data have been included as **Figures 3 and 4**.

Laboratory analyses were performed on the ground water samples collected from the monitoring wells during the August 2017 sampling event for BTEX, MTBE, naphthalene, 1,2-dichloroethane (1,2-DCA) and eight oxygenates using EPA Method 8260B and EDB using EPA Method 8011. Laboratory analyses were performed on the ground water samples collected from the water supply wells during the August 2017 sampling event for BTEX, MTBE, naphthalene and 1,2-DCA using EPA Method 524.2, 8 oxygenates using EPA Method 8260B and EDB using EPA Method 504.1 Concentrations of BTEX constituents, naphthalene, 1,2-DCA and/or EDB that exceeded the RBSLs were reported in the ground water samples collected from MW-1, MW-2, MW-3, MW-7, MW-12, MW-13, MW-22, MW-29, MW-30, MW-31, TW-1 and TW-2. Concentrations of the oxygenates TAA and/or TBA that exceeded the action levels were reported in the samples collected from MW-1, MW-3, MW-7, MW-12, MW-13, MW-22, MW-29, MW-30, MW-31, TW-1 and TW-2. Detectable concentrations of benzene, ethylbenzene, xylenes, MTBE and/or 1,2-DCA were reported in the samples collected from water supply wells WSW-1 pre-treatment, WSW-1 post-treatment, WSW-3, WSW-8 pre-treatment, WSW-8 post-treatment, WSW-9, WSW-10, WSW-11, WSW-12 and WSW-14. However, none of the reported concentrations exceeded the RBSLs. Concentrations of oxygenates TAA and/or TBA were reported in the samples collected from water supply well WSW-1 pre-treatment, WSW-1 post-treatment, WSW-3, WSW-8 pre-treatment and WSW-8 post-treatment. However, none of the reported concentrations exceeded the action levels. A Ground Water Quality Map based on data from the August 2017 sampling event has been included as **Figure 5**. Summaries of ground water analytical results are presented in **Table 2** and **Table 3**. A complete laboratory analytical report has been included as **Appendix A**. Field Data Information Sheets are attached as **Appendix B**. Historical ground water elevation data and historical ground water quality data have been included as **Appendix C**. Approximately 228.78 gallons of purge water was generated

during the sampling event. The purge water was transported to a licensed facility for disposal. A copy of the Disposal Manifest has been included as **Appendix D**.

#### **4.0 QA/QC**

Monitoring well gauging, purging and sampling was conducted in general accordance with the SCDHEC Programmatic QAPP and the approved site specific Contractor Addendum. All wells were purged and sampled with dedicated disposable bailers. All field measurement equipment was properly decontaminated between sampling locations. Duplicate samples from monitoring wells MW-3 and MW-13 (MW-3 DUP A and MW-13 DUP B) and from WSW-1 pre-treatment (WSW-1 (pre) DUP C), one monitoring well field blank and one water supply well field blank were collected during the sampling activities. Laboratory provided trip blanks for the monitoring well and water supply well samples were included in the sample coolers. Laboratory results for each sample and their respective duplicate sample showed the same compounds at similar concentrations. No detectable concentrations of requested method constituents were reported in the field blanks or trip blanks. All applicable items on the Contractor Checklist were reviewed and verified. A copy of the Contractor Checklist is included as **Appendix E**.

#### **5.0 CONCLUSIONS AND RECOMMENDATIONS**

- Thirty one Type III monitoring wells, nine telescoping monitoring wells and 15 water supply wells were gauged, purged and/or sampled between August 29 and 31, 2017.
- Ground water flow in the Type III monitoring wells and telescoping monitoring wells across the site was generally towards the southwest. The horizontal hydraulic gradient across the site was approximately 0.008 feet per foot. The vertical hydraulic gradient calculated for paired Type III and telescoping monitoring wells varied from 0.108 feet per foot upward for MW-17/TW-7 to 0.070 feet per foot downward for MW-1/TW-1.
- Concentrations of BTEX constituents, naphthalene, 1,2-DCA and/or EDB that exceeded the RBSLs were reported in the ground water samples collected from MW-1, MW-2, MW-3, MW-7, MW-12, MW-13, MW-22, MW-29, MW-30, MW-31, TW-1 and TW-2. Concentrations of oxygenates TAA and/or TBA that exceeded the action levels were reported in the samples collected from MW-1, MW-3, MW-7, MW-12, MW-13, MW-22, MW-29, MW-30, MW-31, TW-1 and TW-2. Detectable concentrations of benzene, ethylbenzene, xylenes, MTBE and/or 1,2-DCA were reported in the samples collected from water supply wells WSW-1 pre-treatment, WSW-1 post-treatment, WSW-3, WSW-8 pre-treatment, WSW-8 post-treatment, WSW-9, WSW-10, WSW-11, WSW-12 and WSW-14. However, none of the reported concentrations exceeded

the RBSLs. Concentrations of oxygenates TAA and/or TBA were reported in the samples collected from water supply well WSW-1 pre-treatment, WSW-1 post-treatment, WSW-3, WSW-8 pre-treatment and WSW-8 post-treatment. However, none of the reported concentrations exceeded the action levels.

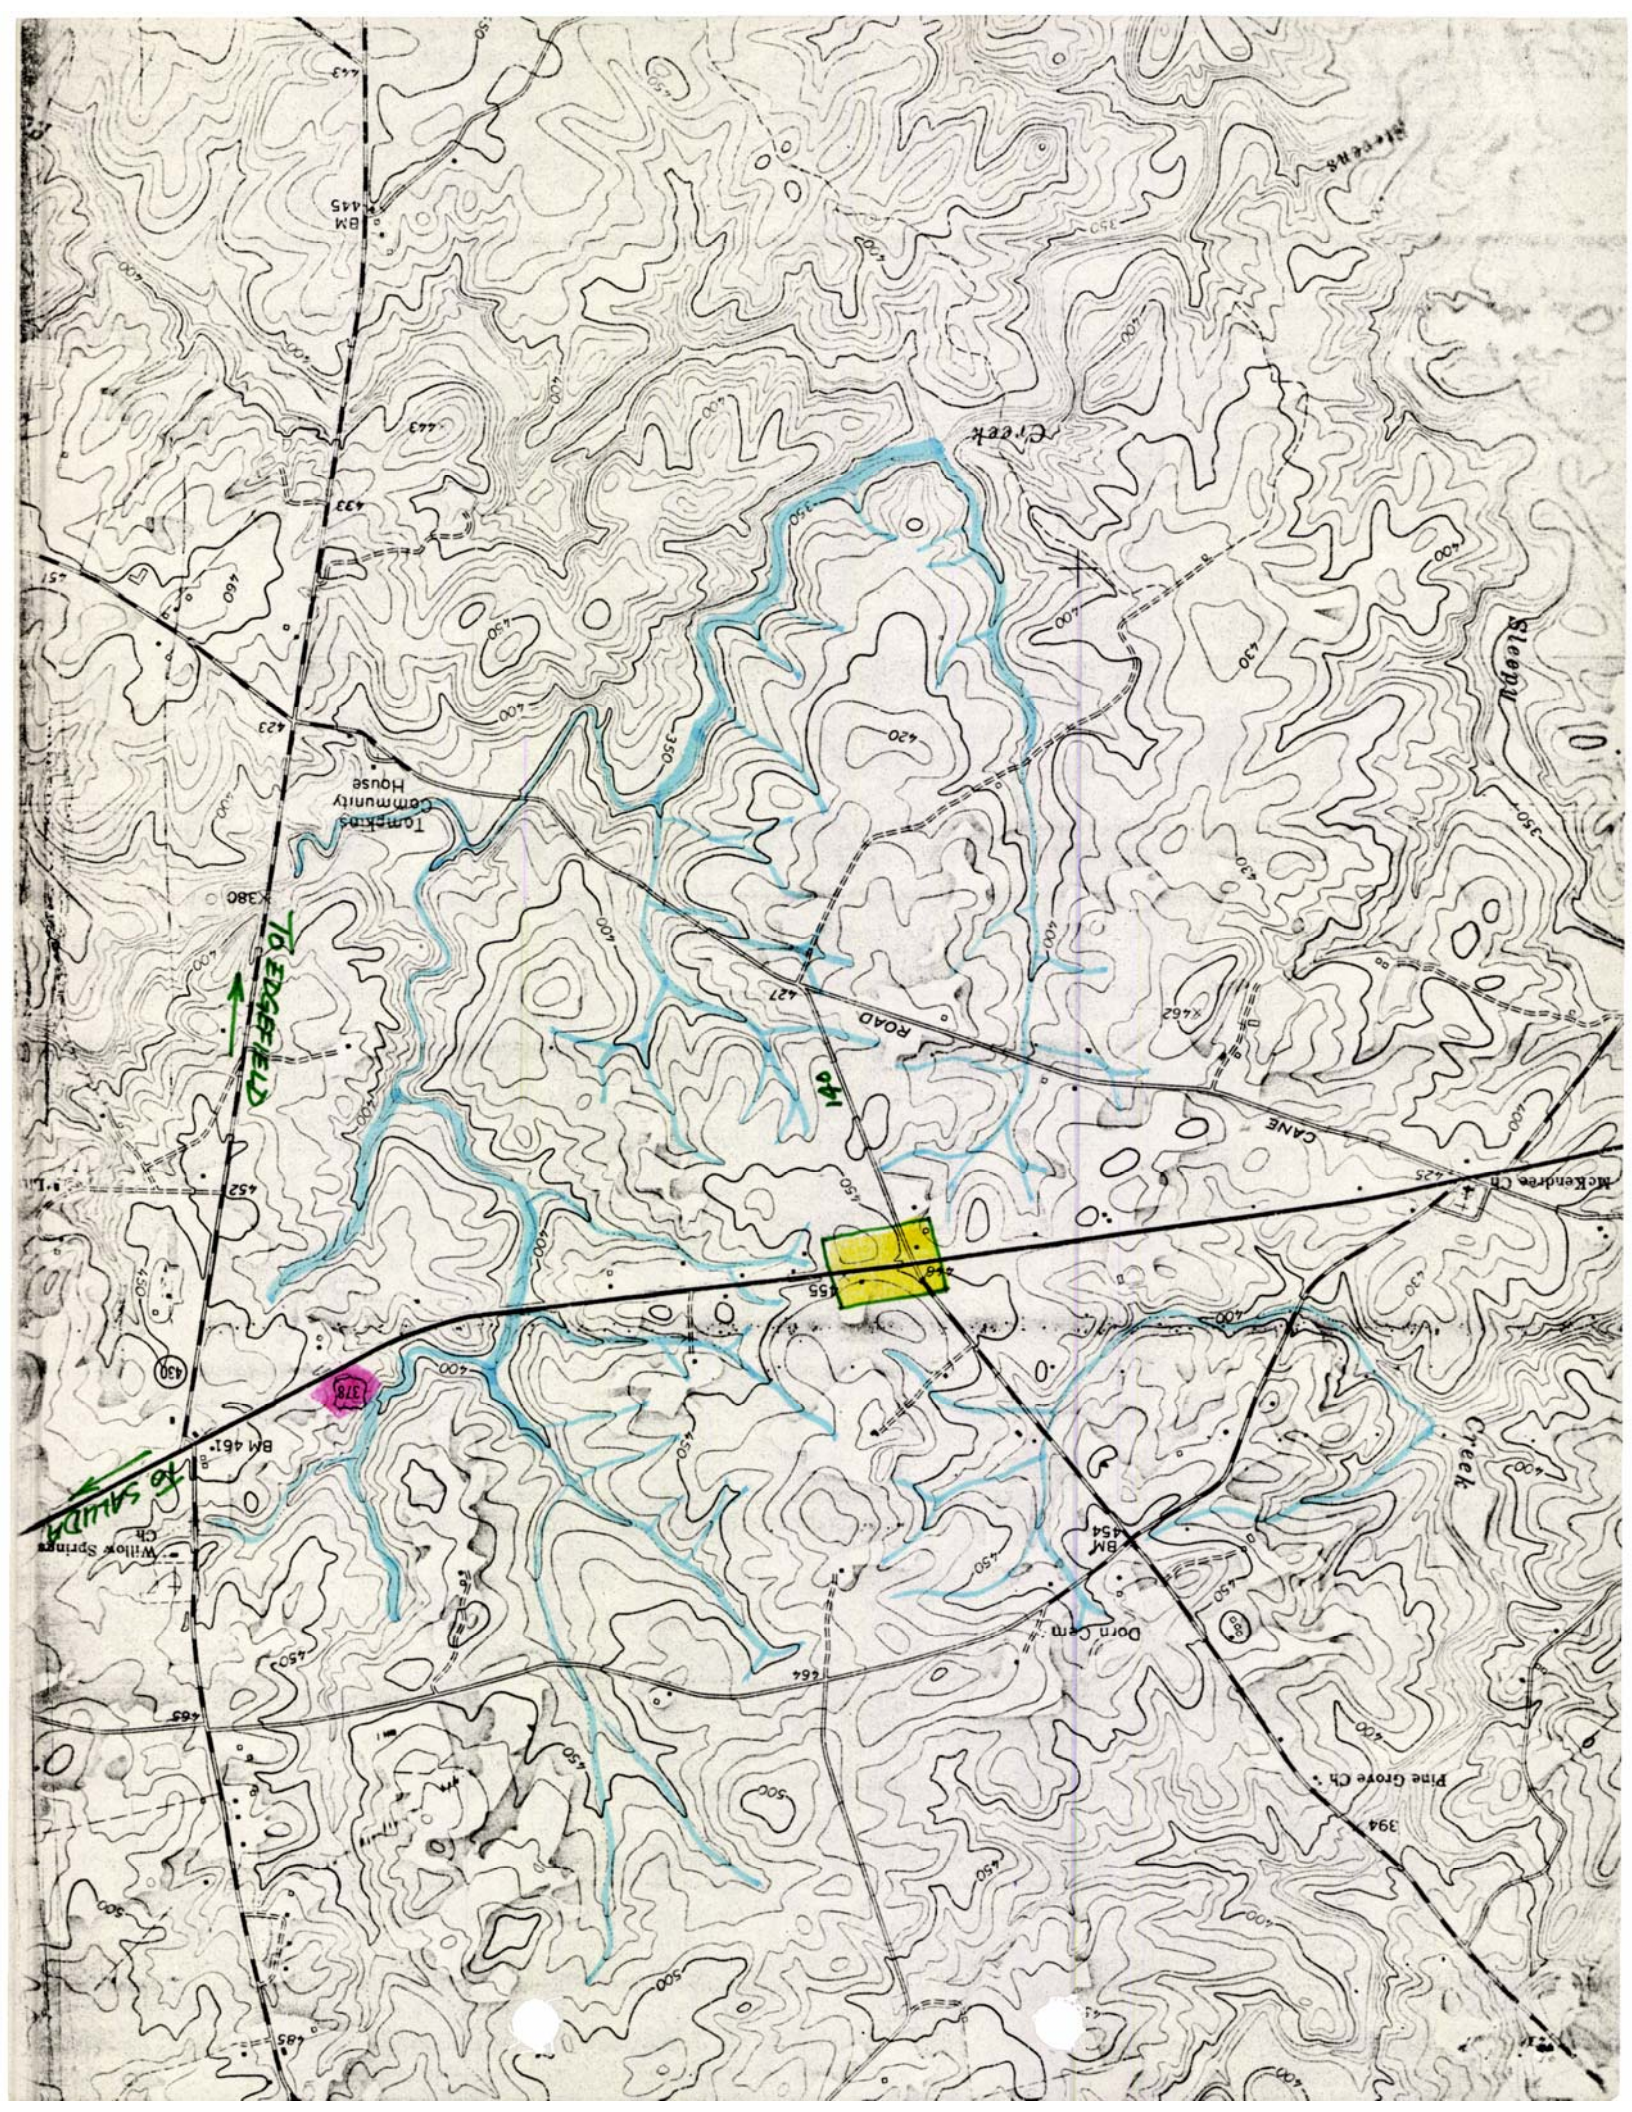

- GRI makes the following recommendations:
  - Due to the presence of water supply wells in the area, ground water sampling events should continue at the site.
  - AFVR events should be conducted on monitoring wells MW-1, MW-3, MW-7, MW-12, MW-13 and MW-22 to reduce the dissolved-phase contaminant concentrations in those wells.

## **6.0 LIMITATIONS**

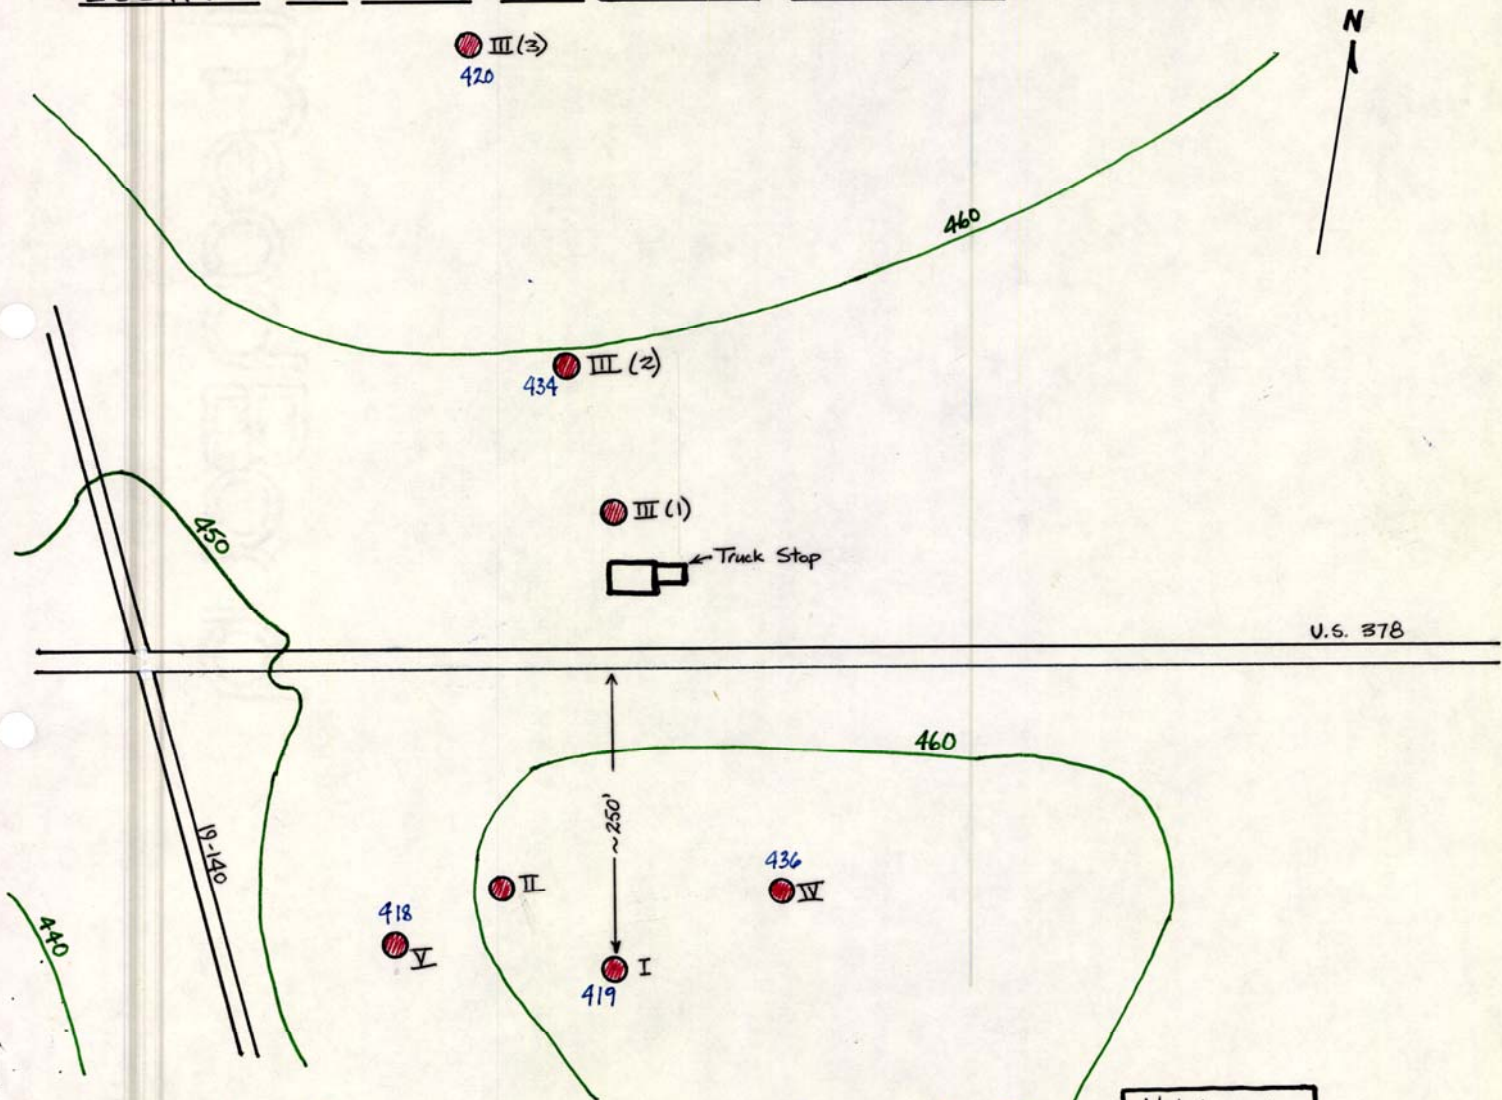

This report has been prepared for the exclusive use of Wilkerson Oil Company and the SCDHEC for specific application to the referenced site in Edgefield County, South Carolina. The assessment was conducted based on the scope of work and level of effort specified by the SCDHEC and with resources adequate only for that scope of work. Our findings have been developed in accordance with generally accepted standards of geology and hydrogeology practices in the State of South Carolina, available information, and our professional judgment. No other warranty is expressed or implied.

The data that are presented in this report are indicative of conditions that existed at the precise locations sampled and at the time the samples were collected. In addition, the data obtained from samples would be interpreted as being meaningful with respect to parameters indicated in the laboratory report. No additional information can logically be inferred from these data. Please note that certain information contained in this report was not obtained under the direct supervision of GRI personnel. Therefore, GRI cannot verify the accuracy of this information. However, for the purpose of this report, GRI assumes the information is correct.

Notes:

- Monitoring well samples analyzed for BTEX constituents, MTBE, naphthalene & 1,2-DCA by Method 8260B and EDB by Method 8011; results reported in µg/l.
- Water supply well samples analyzed for BTEX constituents, MTBE, naphthalene & 1,2-DCA by Method 524.2 and EDB by Method 504.1; results reported in µg/l.
- Concentrations in bold face type exceeded the RBSLs.
- RBSL: Risk-Based Screening Levels.
- J: Estimated value
- NS: Not sampled.
- NR: Analysis not requested.

**Notes:**

- Analyses for selected oxygenates by EPA Method 8260B; results reported in µg/l.
- <: Less than the method detection limit specified in the laboratory report.
- J: Estimated concentrations less than the Reporting Limit but greater than or equal to the Method Detection Limit.
- NS: Not sampled.
- NE: Not established.

### Technical Report for

GRI (Geological Resources Inc.)

378 Truck Stop; 731 Hwy 378, Edgefield, SC

07960/4422

SGS Accutest Job Number: FA47290

Sampling Dates: 08/29/17 - 08/31/17

Report to:

GRI (Geological Resources Inc.)

[wsb@geologicalresourcesinc.com](mailto:wsb@geologicalresourcesinc.com)

ATTN: Scott Ball

Total number of pages in report: **210**

Test results contained within this data package meet the requirements of the National Environmental Laboratory Accreditation Program and/or state specific certification programs as applicable.

| 2037-26-5  | Toluene-D8            | 107%   |        | 85-112% |
| 460-00-4   | 4-Bromofluorobenzene  | 105%   |        | 83-118% |

ND = Not detected      MDL = Method Detection Limit  
 RL = Reporting Limit  
 E = Indicates value exceeds calibration range

J = Indicates an estimated value  
 B = Indicates analyte found in associated method blank  
 N = Indicates presumptive evidence of a compound

## Case Narrative Accutest Lot Number: SI06031

4

This Report of Analysis contains the analytical result(s) for the sample(s) listed on the Sample Summary following this Case Narrative. The sample receiving date is documented in the header information associated with each sample.

All results listed in this report relate only to the samples that are contained within this report.

Sample receipt, sample analysis, and data review have been performed in accordance with the most current approved NELAC standards, the Shealy Environmental Services, Inc. ("Shealy") Quality Assurance Management Plan (QAMP), standard operating procedures (SOPs), and Shealy policies. Any exceptions to the NELAC standards, the QAMP, SOPs or policies are qualified on the results page or discussed below.

If you have any questions regarding this report please contact the Shealy Project Manager listed on the cover page.

| Yes <input type="checkbox"/>  | No <input type="checkbox"/>            | NA <input checked="" type="checkbox"/>       |
| 3. If temperature of any cooler exceeded 6.0°C, was Project Manager Notified? PM was Notified by: phone / email / face-to-face (circle one).  |  |  |
| Yes <input checked="" type="checkbox"/>   | No <input type="checkbox"/>            | NA <input type="checkbox"/>                  |
| 4. Is the commercial courier's packing slip attached to this form?  |  |  |
| Yes <input checked="" type="checkbox"/>   | No <input type="checkbox"/>            |  |
| 5. Were proper custody procedures (relinquished/received) followed?   |  |  |
| Yes <input checked="" type="checkbox"/>   | No <input type="checkbox"/>            |  |
| 6. Were sample IDs listed on the COC?   |  |  |
| Yes <input checked="" type="checkbox"/>   | No <input type="checkbox"/>            |  |
| 7. Were sample IDs listed on all sample containers?   |  |  |
| Yes <input checked="" type="checkbox"/>   | No <input type="checkbox"/>            |  |
| 8. Was collection date & time listed on the COC?  |  |  |
| Yes <input checked="" type="checkbox"/>   | No <input type="checkbox"/>            |  |
| 9. Was collection date & time listed on all sample containers?  |  |  |
| Yes <input checked="" type="checkbox"/>   | No <input type="checkbox"/>            |  |
| 10. Did all container label information (ID, date, time) agree with the COC?  |  |  |
| Yes <input checked="" type="checkbox"/>   | No <input type="checkbox"/>            |  |
| 11. Were tests to be performed listed on the COC?   |  |  |
| Yes <input checked="" type="checkbox"/>   | No <input type="checkbox"/>            |  |
| 12. Did all samples arrive in the proper containers for each test and/or in good condition (unbroken, lids on, etc.)?   |  |  |
| Yes <input checked="" type="checkbox"/>   | No <input type="checkbox"/>            |  |
| 13. Was adequate sample volume available?   |  |  |
| Yes <input type="checkbox"/>  | No <input checked="" type="checkbox"/> | NA <input checked="" type="checkbox"/>       |
| 14. Were all samples received within 1/2 the holding time or 48 hours, whichever comes first?   |  |  |
| Yes <input checked="" type="checkbox"/>   | No <input checked="" type="checkbox"/> | NA <input type="checkbox"/>                  |
| 15. Were any samples containers missing/excess (circle one) samples Not listed on COC?  |  |  |
| Yes <input checked="" type="checkbox"/>   | No <input type="checkbox"/>            | NA <input type="checkbox"/>                  |
| 16. Were bubbles present > "pea-size" (1/4" or 6mm in diameter) in any VOA vials?   |  |  |
| Yes <input type="checkbox"/>  | No <input type="checkbox"/>            | NA <input checked="" type="checkbox"/>       |
| 17. Were all DRO/metals/nutrient samples received at a pH of < 2?   |  |  |
| Yes <input type="checkbox"/>  | No <input type="checkbox"/>            | NA <input checked="" type="checkbox"/>       |
| 18. Were all cyanide samples received at a pH > 12 and sulfide samples received at a pH > 9?  |  |  |
| Yes <input type="checkbox"/>  | No <input type="checkbox"/>            | NA <input checked="" type="checkbox"/>       |
| 19. Were all applicable NHD/TKN/cyanide/phenol/BNA (< 0.5mg/L) samples free of residual chlorine?   |  |  |
| Yes <input type="checkbox"/>  | No <input type="checkbox"/>            | NA <input checked="" type="checkbox"/>       |
| 20. Were collection temperatures documented on the COC for NC samples?  |  |  |
| Yes <input type="checkbox"/>  | No <input type="checkbox"/>            | NA <input checked="" type="checkbox"/>       |
| 21. Were client remarks/requests (i.e. requested dilutions, MS/MSD designations, etc...) correctly transcribed from the COC into the comment section in LIMS?   |  |  |
| Yes <input type="checkbox"/>  | No <input checked="" type="checkbox"/> |  |
| 22. Was the quote number used taken from the container label?   |  |  |
| Yes <input type="checkbox"/>  | No <input checked="" type="checkbox"/> |  |
| Sample Preservation (Must be completed for any sample(s) incorrectly preserved or with headspace.)  |  |  |
| Sample(s) _____ were received incorrectly preserved and were adjusted accordingly in sample receiving with _____ (H <sub>2</sub> SO <sub>4</sub> , HNO <sub>3</sub> , HCl, NaOH) using SR # _____                 |  |  |
| Sample(s) <u>All HCl vials have bubbles</u> were received with bubbles > 6 mm in diameter.  |  |  |
| Sample(s) _____ were received with TRC > 0.5 mg/L (If #21 is No) and were adjusted accordingly in sample receiving with sodium thiosulfate (Na <sub>2</sub> S <sub>2</sub> O <sub>3</sub> ) with Shealy ID: _____ |  |  |
| SC Drinking Water Project Sample(s) pH verified to be < 2 by _____ Date: _____  |  |  |
| Sample(s) _____ were Not received at a pH of < 2 and were adjusted accordingly using SR# _____  |  |  |
| Sample labels applied by: <u>RF</u> Date: <u>9/6/17</u>   |  |  |

Comments: WSW-9 only had 4 HCl + 2 for EDB SO4, used 4 HCl for TB

### SGS Accutest Sample Receipt Summary

Job Number: FA47290

Client: GRI

Project: 378 TRUCK STOP

Date / Time Received: 9/1/2017 10:30:00 AM

Delivery Method: FED EX

Airbill #'s: 8110 6225 2982

Therm ID: IR 1; Therm CF: -0.2; # of Coolers: 3  
 Cooler Temps (Raw Measured) °C: Cooler 1: (3.4); Cooler 2: (3.6); Cooler 3: (4.0);  
 Cooler Temps (Corrected) °C: Cooler 1: (3.2); Cooler 2: (3.4); Cooler 3: (3.8);

**Cooler Information**

|                             | Y                                   | or | N                        |
|-----------------------------|-------------------------------------|----|--------------------------|
| 1. Custody Seals Present    | <input checked="" type="checkbox"/> |    | <input type="checkbox"/> |
| 2. Custody Seals Intact     | <input checked="" type="checkbox"/> |    | <input type="checkbox"/> |
| 3. Temp criteria achieved   | <input checked="" type="checkbox"/> |    | <input type="checkbox"/> |
| 4. Cooler temp verification | IR Gun                              |    |                          |
| 5. Cooler media             | Ice (Bag)                           |    |                          |

**Sample Information**

|   | Y                                   | or | N                                   | N/A                                 |
|---|-------------------------------------|----|-------------------------------------|-------------------------------------|
| 1. Sample labels present on bottles                 | <input checked="" type="checkbox"/> |    | <input type="checkbox"/>            |                                     |
| 2. Samples preserved properly                       | <input checked="" type="checkbox"/> |    | <input type="checkbox"/>            |                                     |
| 3. Sufficient volume/containers recvd for analysis: | <input type="checkbox"/>            |    | <input checked="" type="checkbox"/> |                                     |
| 4. Condition of sample                              | Broken / Leaking                    |    |                                     |                                     |
| 5. Sample recvd within HT                           | <input checked="" type="checkbox"/> |    | <input type="checkbox"/>            |                                     |
| 6. Dates/Times/IDs on COC match Sample Label        | <input checked="" type="checkbox"/> |    | <input type="checkbox"/>            |                                     |
| 7. VOCs have headspace                              | <input checked="" type="checkbox"/> |    | <input type="checkbox"/>            | <input type="checkbox"/>            |
| 8. Bottles received for unspecified tests           | <input type="checkbox"/>            |    | <input checked="" type="checkbox"/> |                                     |
| 9. Compositing instructions clear                   | <input type="checkbox"/>            |    | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |
| 10. Voa Soil Kits/Jars received past 48hrs?         | <input type="checkbox"/>            |    | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |
| 11. % Solids Jar received?                          | <input type="checkbox"/>            |    | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |
| 12. Residual Chlorine Present?                      | <input type="checkbox"/>            |    | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |

**Trip Blank Information**

|                                | Y                                   | or | N                        | N/A                      |
|--------------------------------|-------------------------------------|----|--------------------------|--------------------------|
| 1. Trip Blank present / cooler | <input checked="" type="checkbox"/> |    | <input type="checkbox"/> | <input type="checkbox"/> |
| 2. Trip Blank listed on COC    | <input checked="" type="checkbox"/> |    | <input type="checkbox"/> | <input type="checkbox"/> |
|                                | W                                   | or | S                        | N/A                      |
| 3. Type Of TB Received         | <input checked="" type="checkbox"/> |    | <input type="checkbox"/> | <input type="checkbox"/> |

**Misc. Information**

Number of Encores: 25-Gram \_\_\_\_\_ 5-Gram \_\_\_\_\_ Number of 5035 Field Kits: \_\_\_\_\_ Number of Lab Filtered Metals: \_\_\_\_\_  
 Test Strip Lot #: pH 0-3 230315 pH 10-12 219813A Other: (Specify) \_\_\_\_\_  
 Residual Chlorine Test Strip Lot #: \_\_\_\_\_

Comments: SAMPLE #1-43 REC'D 2- VIALS FOR EDB. SAMPLE #52 HAS 1- EDB VIAL BROKEN. SAMPLE #53 4- VOC VIALS AND 1- EDB HAVE HEADSPACE. SAMPLE #56 1- VIAL FOR EACH ANALYSIS REC'D EMPTY; 3- VOC VIALS AND 1- EDB VIAL HAS HEADSPACE.

| YSI 63 (pH, Specific Conductivity, Temperature) | <u>138100013</u>    | pH 4.0: <u>A</u> or N      pH 7.0: <u>X</u> or N      pH 10.0: <u>X</u> or N      S.C.: <u>X</u> or N |  |  |  |
| YSI 55 (Dissolved Oxygen)                       | <u>138100017</u>    | <u>X</u> or N   |  |  |  |
| LaMotte (Turbidity) HA0130002                   | <u>16030C048060</u> | 0.0 NTU: <u>X</u> or N      1.0 NTU: <u>X</u> or N      10.0 NTU: <u>X</u> or N                       |  |  |  |

**Well Information**

Well ID: -M0-24      Well Diameter (ft.): 2"      Conversion Factor (C): 1' well = 0.047, 2' well = 0.16, 4' well = 0.652      Method of Purging/Sample Collection: X Bailer      Pump

MW     IW     RW     Other \_\_\_\_\_      Screened Interval (ft.): 23 to 38      Total Well Depth (TWD) (ft.): 38.55  
 Private WSW     Public WSW

Depth to Free Product (DFP) (ft.): -      Depth to Groundwater (DGW) (ft.): 25.01      Free Product Thickness (ft.): -  
 Length of water column (LWC = TWD - DGW) (ft.): 13.54      1 casing volume (CV = LWC x C) (gals.): 2.16      3 casing volumes (3 x CV) (gals.): 6.49

**Purging Data**
